Contents

1- ISAM CLI	1
1.1 History	2
1.2 Preface	143
1.3 CLI Commands	144
1.4 Nodes	146
1.5 Parameters	147
1.6 Filters	150
1.7 Printers	151
1.8 Getting help	152
1.9 The CLI Prompt	153
1.10 Entering CLI Commands	154
1.11 CLI Backward Compatibility	155
1.12 Phase Out Strategy Obsolete Commands and/or Parameters	157
1.13 Command Phase Out Announcement Release	158
2- Environment Configuration Commands	159
2.1 Environment Configuration Command Tree	160
2.2 Environment Configuration Command	161
3- Alarm Configuration Commands	163
3.1 Alarm Configuration Command Tree	164
3.2 Alarm Log Configuration Command	166
3.3 Alarm Entry Configuration Command	168
3.4 Alarm Filter Configuration Command	223
3.5 Alarm Suppression Filter Configuration Command	278
3.6 Alarm Delta Log Configuration Command	280
3.7 Customizable Alarm Profile Configuration Command	282
3.8 HGU TR069 Customizable Alarm Configuration Command	287
4- Trap Configuration Commands	288
4.1 Trap Configuration Command Tree	289
4.2 Trap Definition Configuration Command	292
4.3 Trap Manager Configuration Command	295
4.4 Trap Manager Configuration Command	300
5- Equipment Configuration Commands	305
5.1 Equipment Configuration Command Tree	306
5.2 Rack Configuration Command	309
5.3 Shelf Configuration Command	310
5.4 Slot Configuration Command	312
5.5 Applique Configuration Command	315
5.6 Protection Group Configuration Command	317
5.7 Protection Element Configuration Command	318
5.8 External-link-host Configuration Commands	320
5.9 Host Shelf SFP Configuration Commands	322
5.10 SFP/XFP Diagnostics configuration Command	324
5.11 Sfp RSSI Configuration Command	327
5.12 2xE1/DS1 CLOCK configuration Command	332
5.13 2xE1/DS1 Pseudo Wire TDM Interface configuration Command	334
5.14 2xE1/DS1 Pseudo Wire TDM SFP configuration Command	336

5.15 2xE1/DS1 Framer configuration Command	339
5.16 2xE1/DS1 Line Interface Unit SFP configuration Command	343
5.17 NE Configuration Command	346
5.18 Environment Monitoring Configuration Command	347
5.19 Configure Fan Tray parameters	348
5.20 Configure Board Auto Replan feature	349
6- Gpon ONT Configuration Commands	350
6.1 Gpon ONT Configuration Command Tree	351
6.2 ONT Interface Configuration Command	354
6.3 NGPON2 Rogue Onu Prevention Configuration Commands	363
6.4 GPON GEM port performance monitoring Configuration Commands	365
6.5 ONT-SIDE TC-layer Performance Monitoring Counter Thresholds Configuration Command for ONT	367
6.6 Multicast TC-layer Performance Monitoring Command for ONT	369
6.7 Fec TC-layer Performance Monitoring Command for ONT	371
6.8 GPON port Aggregate Ethernet performance monitoring Configuration Commands	373
6.9 XGPON tc-layer port performance monitoring Configuration Commands	375
6.10 XGPON physical-layer port performance monitoring Configuration Commands	377
6.11 GPON ONT software delay activation control Configuration Commands	379
6.12 GPON ONT CPU Load Performance Monitoring Configuration Command	381
6.13 GPON ONT Memory Usage Performance Monitoring Configuration Command	383
6.14 ONT Card Configuration Command	385
6.15 ONT Software Control Configuration Command	388
6.16 GPON ONT software delay activation control Configuration Commands	390
6.17 ONT Interface Configuration Command	391
6.18 ONT GIS Configuration Command	393
6.19 ONT xgpon Configuration Command	395
7- Epon ONT Configuration Commands	397
7.1 Epon ONT Configuration Command Tree	398
7.2 EONT Interface Configuration Command	401
7.3 Epon Ont RSSI Configuration Command	405
7.4 Epon Ont Management Configuration Command	409
7.5 Epon Ont Ethernet Configuration Command	411
7.6 Epon Ont Ethernet Auto-Negotiation Configuration Command	415
7.7 Epon Ont LLID Configuration Command	419
7.8 Epon Ont RMS Configuration Command	421
7.9 EONT Software Control Configuration Command	423
8- Port Protection Configuration Commands	425
8.1 Port Protection Configuration Command Tree	426
8.2 Port Protection Configuration Command	427
9- xDSL Configuration Commands	429
9.1 xDSL Configuration Command Tree	431
9.2 xDSL Common Service Profile Configuration Command	440
9.3 xDSL Common Spectrum Profile Configuration Command	444
9.4 xDSL Artificial Noise Downstream Configuration Command	450
9.5 xDSL Spectrum Profile for ADSL/ADSL2 Configuration Command	452
9.6 xDSL Spectrum Profile for RE-ADSL2 Configuration Command	455
9.7 xDSL Spectrum Profile for ADSL2 Plus Configuration Command	457
9.8 ADSL2-plus Custom PSD shape Configuration Command	461
9.9 xDSL Spectrum Profile for VDSL Configuration Command	463
9.10 VDSL Ghs Tones Transmission Power Control Configuration Command	470
9.11 VDSL Custom PSD shape Downstream Configuration Command	472
9.12 VDSL Custom RX PSD shape Upstream Configuration Command	474

9.13 VDSL Power Back Off Configuration Command	476
9.14 xDSL Spectrum Profile for VDSL2 Configuration Command	477
9.15 VDSL2 Custom PSD shape Downstream Configuration Command	483
9.16 VDSL2 Custom PSD shape Upstream Configuration Command	485
9.17 VDSL2 Custom RX PSD shape Upstream Configuration Command	487
9.18 VDSL2 Virtual Noise Downstream Configuration Command	489
9.19 VDSL2 Virtual Noise Upstream Configuration Command	491
9.20 VDSL2 Power Back Off Configuration Command	493
9.21 xDSL DPBO Profile Configuration Command	495
9.22 xDSL DPBO Mode Independent Custom PSD Mask Configuration Command	497
9.23 xDSL DPBO Exchange PSD Mask Configuration Command	499
9.24 xDSL RTX Profile Configuration Command	501
9.25 xDSL Vectoring Profile Configuration Command	506
9.26 xDSL Sos Profile Configuration Command	509
9.27 xDSL Vectoring Control Entity Profile Configuration Command	512
9.28 xDSL Legacy UPBO Profile Configuration Command	515
9.29 xDSL Board Configuration Command	518
9.30 xDSL Board Vectoring Fallback Configuration Command	521
9.31 Xdsl Auto Port Reset Configurations	524
9.32 xDSL Vectoring Processing Board Configuration Command	526
9.33 xDSL Line Configuration Command	528
9.34 xDSL Line TCA Threshold Configuration Command	534
9.35 xDSL Per Line Override Configuration Command	537
9.36 xDSL Override Noise Psd Shape Downstream Configuration Command	544
9.37 xDSL Override Noise Psd Shape Upstream Configuration Command	546
9.38 xDSL INS Near End Configuration Command	548
9.39 xDSL INS Far End Configuration Command	550
10- Gpon xDSL Configuration Commands	552
10.1 Gpon xDSL Configuration Command Tree	553
10.2 Gpon xDSL Common Service Profile Configuration Command	556
10.3 Gpon xDSL Common Spectrum Profile Configuration Command	559
10.4 Gpon xDSL Spectrum Profile for VDSL Configuration Command	562
10.5 Gpon xDSL Spectrum Profile for VDSL2 Configuration Command	564
10.6 VDSL2 Custom PSD shape Downstream Configuration Command	567
10.7 VDSL2 Custom PSD shape Upstream Configuration Command	569
10.8 ONT VDSL2 Virtual Noise Downstream Configuration Command	571
10.9 ONT VDSL2 Virtual Noise Upstream Configuration Command	573
10.10 Gpon xDSL Line Configuration Command	575
10.11 Xdsl ONT Uni Physical Layer Configuration Command	580
10.12 Xdsl ONT Uni Layer 2 Configuration Command	583
10.13 Gpon xDSL DPBO Profile Configuration Command	585
10.14 Gpon xDSL DPBO Mode Independent Custom PSD Mask Configuration Command	587
10.15 Gpon xDSL DPBO Exchange PSD Mask Configuration Command	589
10.16 Gpon xDSL ONT Configuration Command	591
10.17 Gpon xDSL Common Rtx Profile Configuration Command	593
11- xDSL System Configuration Commands	596
11.1 xDSL System Configuration Command Tree	597
11.2 xDSL System Automatic Port Reset Configuration Command	598
12- ATM Configuration Commands	599
12.1 ATM Configuration Command Tree	600
12.2 ATM PVC Configuration Command	601
12.3 IPOA X-connect L2 interworking port Configuration Command	603
13- Interface Management Configuration Commands	605

13.1 Interface Management Configuration Command Tree	606
13.2 Network Interface Configuration Command	607
13.3 Extend Interface Configuration Command	613
13.4 Interface Alarm Configuration Command	614
13.5 Interface Sliding-Window Traffic Statistics Command	616
13.6 Cage mode configuration Command	617
14- Error Configuration Commands	619
14.1 Error Configuration Command Tree	620
14.2 Error Log Configuration Command	621
15- System Configuration Commands	622
15.1 System Configuration Command Tree	624
15.2 System Configuration Command	628
15.3 Configure system LEDs	632
15.4 System SNTP Configuration Command	633
15.5 System SNTP Server Table Configuration Command	634
15.6 System SNTP Server Table Configuration Command	635
15.7 System daylight saving time Configuration Command	636
15.8 System daylight saving time Configuration Command	637
15.9 System daylight saving time Configuration Command	638
15.10 System Loop ID Syntax Configuration Command	655
15.11 Maximum Lt Link Speed Configuration Command	658
15.12 System ONT Configuration Command	659
15.13 Epon System PM Configuration Command	661
15.14 System Synchronous Interface Timing Clock Configuration Command	662
15.15 System Clock Bits Mode Configuration Command	665
15.16 System Clock Source Priority Configuration Command	666
15.17 System Clock ToD Sources Priority Configuration Command	668
15.18 NTR PTP Configuration Command	670
15.19 NTR Clock Transmission Protocol Configuration Command	672
15.20 System Synchronous InterfaceTiming Clock Switching Mode configuration Command	674
15.21 NTR Acceptable Clock Master Configuration Command	675
15.22 PTP Slave Port DataSet Configuration Command	676
15.23 PTP Default Dataset Configuration Command	678
15.24 PTP Master Port DataSet Profile Configuration Command	680
15.25 PTP master port Configuration Commands	682
15.26 System Clock Synchronous Source port Configuration Command	685
15.27 PTP L2 port Configuration Commands	687
15.28 Clock ToD Parameters Configuration Command	689
15.29 1PPS ToD Interface Parameters Configuration Command	691
15.30 1PPS ToD Serial Parameters Configuration Command	693
15.31 ToD Holdover Specification Configuration Command	695
15.32 System Clock Synchronous Status Message Configuration Command	696
15.33 System Clock Synchronous Source port Configuration Command	699
15.34 System Clock Force Reference Configuration Command	701
15.35 SSMOut Configuration Command for synce ports	702
15.36 SSMOut Configuration Command for XDSL ports	704
15.37 T4 D-PLL Configuration Command	706
15.38 Synce Configuration Command for FELT-B ports	708
15.39 ALS State Configuration Command	710
15.40 Configure system auto-switch	711
15.41 ZTP (Zero Touch Provision) State Configuration Command	712
15.42 System Relay ID Syntax Configuration Command	713
15.43 FIPS Configuration Command	715
15.44 NT SFTP Server Configuration Command	716
15.45 NT SFTP Server Credentials Configuration Command	717

16- Security Configuration Commands	718
16.1 Security Configuration Command Tree	720
16.2 Security Banner Configuration Command	726
16.3 Operator Configuration Command	728
16.4 Profile Configuration Command	731
16.5 Default Profile Configuration Command	738
16.6 SNMP View Configuration Command	745
16.7 Security SNMP Community Configuration Command	747
16.8 Security SNMPv3 Group Configuration Command	750
16.9 Security SNMPv3 User Configuration Command	753
16.10 Security SNMPv3 User-Group Configuration Command	756
16.11 SNMP Notify View Configuration Command	758
16.12 Security SNMP Notification Profile Configuration Command	760
16.13 Security SNMP Notification Profile Filter Configuration Command	762
16.14 Security SNMP Element Manager Configuration Command	764
16.15 Security RADIUS Client Configuration Command	766
16.16 Security RADIUS Authentication Server Configuration Command	767
16.17 Security RADIUS Accounting Server Configuration Command	769
16.18 Security RADIUS Dynamic Authorization Client Configuration Command	771
16.19 Security RADIUS Policy Configuration Command	773
16.20 Security RADIUS Server Configuration Command	775
16.21 Security TACACS+ Client Configuration Command	777
16.22 Security TACACS+ Authentication Server Configuration Command	778
16.23 Security TACACS+ Authorization Server Configuration Command	780
16.24 Security TACACS+ Accounting Server Configuration Command	782
16.25 Security TACACS+ Policy Configuration Command	784
16.26 Security Tacacs+ Server Configuration Command	785
16.27 Security Domain Configuration Command	787
16.28 Security Connection Profile Configuration Command	789
16.29 Security Connection Policy Configuration Command	790
16.30 Security 802.1x PAE System Configuration Command	791
16.31 Security 802.1x Port Authentication Configuration Command	792
16.32 Security 802.1x Extension, Port Authentication Configuration Command	795
16.33 Security 802.1x Port Configuration Command	798
16.34 Security Password Policy Configuration Command	800
16.35 File Transfer Configure Command	802
16.36 file Transfer server Configure Commands	803
16.37 file Transfer server Configure Commands	805
16.38 PM File Upload Configure Command	807
16.39 5-min CDR File Upload Configure Command	810
16.40 Lawful Intercept Split Management Configuration Command	812
16.41 MAC Filter Configuration Command	813
16.42 NT slot Security Configuration Command	815
17- Secure Shell Configuration Commands	816
17.1 Secure Shell Configuration Command Tree	817
17.2 SSH Server Configuration Command	818
17.3 Secure Shell User Configuration Command	820
17.4 Secure Shell Access Configuration Command	821
17.5 Secure Shell SFTP User Configuration Command	824
18- Transaction Configuration Commands	826
18.1 Transaction Configuration Command Tree	827
18.2 Transaction Configuration Command	828
19- SYSLOG Configuration Commands	829

19.1 SYSLOG Configuration Command Tree	830
19.2 Syslog Configuration Commands	831
19.3 SYSLOG Destination Configuration command	832
19.4 SYSLOG Route Configuration Command	835
20- Software Management Configuration Commands	838
20.1 Software Management Configuration Command Tree	839
20.2 Software Replacement Mode Configuration Command	840
20.3 Software Management Overall Software Package Configuration Command	841
20.4 Database Automatic Activation Configure Command	845
21- QoS Configuration Commands	847
21.1 QoS Configuration Command Tree	849
21.2 QoS Configuration Command	856
21.3 QoS 802.1P Class-to-Queue Mapping Configuration Command	858
21.4 QoS Dsl Control Pkt Policer Configuration Command	860
21.5 QoS Nni Control Pkt Policer Configuration Command	862
21.6 QoS DSCP-to-Dot1P Alignment for L3 Forwarded Traffic Configuration Command	863
21.7 QoS Queue Profile Configuration Command	864
21.8 QoS Scheduler Node Profile Configuration Command	867
21.9 QoS CAC Profile Configuration Command	869
21.10 QoS Single Dot1P Marker Configuration Command	871
21.11 QoS Single DSCP Marker Configuration Command	872
21.12 QoS DSCP Contract Table Marker Configuration Command	873
21.13 QoS DSCP Contract Table Code-point Configuration Command For DSCP-contract	874
21.14 QoS Dot1P and DSCP Contract Table Marker Configuration Command	875
21.15 DSCP Contract Table Codepoint Configuration Command For D1p-dscp-contract	876
21.16 QoS Dot1P and Single DSCP Marker Configuration Command	877
21.17 QoS Dot1P Alignment Marker Configuration Command	878
21.18 QoS Dot1P Remark Table Marker Configuration Command	880
21.19 QoS Dot1P Remark Table Dot1p-value Configuration Command For Dot1P-Remark	881
21.20 QoS Policer Profile Configuration Command	882
21.21 QoS L2 Filter Profile Configuration Command	886
21.22 QoS L3 Filter Profile Configuration Command	888
21.23 QoS Policy Action Profile Configuration Command	891
21.24 QoS Policy Profile Configuration Command	893
21.25 QoS Session Profile Configuration Command	895
21.26 QoS Session Upstream Policy List Configuration Command	899
21.27 QoS Session Downstream Policy List Configuration Command	900
21.28 QoS Session remote Upstream Policy List Configuration Command	901
21.29 QoS Session Remote Downstream Policy List Configuration Command	902
21.30 QoS AggrQueuesConfig Profile Configuration Command	903
21.31 QoS Shaper Profile Configuration Command	912
21.32 QoS Bandwidth Profile Configuration Command	914
21.33 QoS IngressQoS Profile Configuration Command	916
21.34 QoS Rate Limit Profile Configuration Command	920
21.35 QoS DSCP to Pbit Mapping Profile Configuration Command	923
21.36 QoS DSCP to Pbit Mapping Profile Configuration Command	924
21.37 QoS DSCP to Tc Mapping Profile Configuration Command	925
21.38 QoS DSCP to Tc Mapping Profile Configuration Command	926
21.39 QoS Policer Per Tc Profile Configure	927
21.40 QoS Policer Per Tc Profile Configure	928
21.41 QoS CoS Threshold Profile Configuration Command	929
21.42 QoS Board-Level Queue and Performance Configuration Command	931
21.43 QoS Queue Threshold Crossing Alarm Configuration Command	933
21.44 QoS DSL Link Configuration Command	937
21.45 QoS LIM Queue Configuration Command	939
21.46 QoS ShdSL Link Configuration Command	941
21.47 QoS LIM Queue (SHDSL) Configuration Command	943

21.48 QoS Interface Configuration Command	945
21.49 QoS Interface Queue Configuration Command	952
21.50 QoS Interface Upstream Queue Configuration Command	956
21.51 QoS Interface Remote Downstream Queue Configuration Command	961
21.52 QoS Line Control Packets Rate Limit Configuration Command	965
21.53 P-bit Based Scheduling For SC Forwarder Cross Connect/Residential Bridge Configuration Command	967
21.54 QoS system level Up Control Packet DSCP/Pbit marking, TC mapping Configuration Command	969
21.55 QoS system level Dn Control Packet DSCP/Pbit marking, TC mapping Configuration Command	971
21.56 QoS handling of upstream protocols(ARP, PPPoE, DHCPv4/v6,ND and MLD) for DSL LT Configuration Command	973
22- VLAN Configuration Commands	974
22.1 VLAN Configuration Command Tree	975
22.2 VLAN General Configuration Command	977
22.3 Virtual MAC Configuration Command	978
22.4 VLAN Configuration Command	979
22.5 VLAN Filtering Database Configuration Command	990
22.6 VLAN Port Filtering Database Configuration Command	993
22.7 VLAN Protocol-based Configuration Command	996
22.8 Vlan Pbit Traffic Counter Configuration Command	999
22.9 Vlan Priority Regeneration Profile Configuration Command	1002
23- VLAN Tpid Configuration Commands	1004
23.1 VLAN Tpid Configuration Command Tree	1005
23.2 VLAN General Configuration Command	1006
24- Bridge Configuration Commands	1007
24.1 Bridge Configuration Command Tree	1008
24.2 Bridge General Configuration Command	1010
24.3 Bridge Port Configuration Command	1011
24.4 Bridge Port to VLAN Association Configuration Command	1018
24.5 L2 Static User Ip Address Configuration Command	1026
24.6 L2 Static User Ipv6 Address Configuration Command	1028
25- VLAN Tpid Configuration Commands	1030
25.1 VLAN Tpid Configuration Command Tree	1031
25.2 VLAN General Configuration Command	1032
26- VLAN Tpid Configuration Commands	1034
26.1 VLAN Tpid Configuration Command Tree	1035
26.2 VLAN General Configuration Command	1036
27- Li_VLAN Configuration Commands	1038
27.1 Li_VLAN Configuration Command Tree	1039
27.2 li_vlan Li Configuration Command	1040
28- ARP-RELAY Configuration Commands	1041
28.1 ARP-RELAY Configuration Command Tree	1042
28.2 Arp-Relay Statistics Configuration Command	1043
29- IGMP Configuration Commands	1046

29.1 IGMP Configuration Command Tree	1047
29.2 IGMP Channel Configuration Command	1049
29.3 IGMP Channel Permission Package Members Configuration Command	1054
29.4 IGMP Channel Preview Package Members Configuration Command	1057
29.5 IGMP Package Bitmaps Configuration Command	1060
29.6 IGMP System Configuration Command	1062
29.7 IGMP System CDR Type Configuration Command	1066
29.8 IGMP Vlan System Configuration Command	1067
29.9 IGMP Multicast Vlan Translation Command	1068
29.10 IGMP Multicast Pon Vlan Translation Command	1069
29.11 Igmp Multicast Service Context Configuration Command	1070
30- Multicast Configuration Commands	1071
30.1 Multicast Configuration Command Tree	1072
30.2 Multicast General Group Configuration Command	1074
30.3 General Multicast Package Members Configuration Command	1076
30.4 Multicast Capacity Configuration Command	1077
30.5 Multicast Channel Configuration Command	1078
30.6 Multicast Channel Package Members Configuration Command	1080
30.7 Multicast Channel Configuration Command	1081
30.8 Multicast Channel Package Members Configuration Command	1084
30.9 Multicast Ipv6 Channel Configuration Command	1085
30.10 Multicast Channel Package Members Configuration Command	1088
30.11 Multicast Monitoring Source Configuration Command	1089
30.12 Multicast Monitoring Channel Configuration Command	1090
30.13 Multicast Static Branch Configuration Command	1091
31- PPPoX-Relay Configuration Commands	1094
31.1 PPPoX-Relay Configuration Command Tree	1095
31.2 PPPoX Cross-connect Global Configuration Command	1096
31.3 PPPoX Cross-connect Engine Configuration Command	1098
31.4 PPPoX Cross-connect Engine Monitoring Configuration Command	1100
31.5 PPPCC Engine TCA Threshold Configuration Command	1101
31.6 PPPoX Cross-connect Client Port Configuration Command	1103
31.7 PPPoX Cross-connect Client Port Monitoring Configuration Command	1106
32- PPPoE Configuration Commands	1109
32.1 PPPoE Configuration Command Tree	1110
32.2 PPPoE Profile Configuration Command	1111
32.3 PPPoE Client Interface Configuration Command	1113
33- PPPoEL2STATS Configuration Commands	1116
33.1 PPPoEL2STATS Configuration Command Tree	1117
33.2 Pppoe-L2 Statistics Configuration Command	1118
34- DHCP Relay Configuration Commands	1121
34.1 DHCP Relay Configuration Command Tree	1122
34.2 DHCP Relay User Port Configuration Command	1123
34.3 DHCP v6 Relay User Port Configuration Command	1126
35- XDSL Bonding Configuration Commands	1129
35.1 XDSL Bonding Configuration Command Tree	1130
35.2 XDSL Bonding Assembly Level Configuration Command	1132
35.3 xDSL Bonding Group Profile Configuration Command	1134
35.4 xDSL Bonding Group Rtx Profile Configuration Command	1137
35.5 xDSL Bonding Configuration Command	1141

35.6 xDSL Bonding Configuration Command	1143
35.7 xDSL Bonding Board Configuration Command	1144
35.8 xDSL Bonding Board Vectoring Fallback Configuration Command	1145
36- CPE Remote Configuration Commands	1147
36.1 CPE Remote Configuration Command Tree	1148
36.2 CPE Remote Management System Configuration Commands	1149
36.3 CPE Manager Configuration Command	1150
36.4 CPE IPProxy Session Configuration Command	1151
37- SHDSL Configuration Commands	1152
37.1 SHDSL Configuration Command Tree	1153
37.2 SHDSL Span Configuration Command	1155
37.3 SHDSL Unit Configuration Command	1160
37.4 SHDSL Segment Configuration Command	1162
38- IMA Configuration Commands	1164
38.1 IMA Configuration Command Tree	1165
38.2 IMA Group Configuration Commands	1166
38.3 IMA Link Configuration Commands	1168
39- L2CP Configuration Commands	1169

193.8 Techsupport management Command	7100
193.9 Techsupport Generate On Demand Command	7101
193.10 Techsupport Clear On Demand Command	7103
193.11 FIPS Command	7104
194- UDP/SSH debug Management Commands	7105
194.1 UDP/SSH debug Management Command Tree	7106
194.2 Forced Disconnect UDP/SSH debug Command	7107
195- Trouble-Shooting Management Commands	7108
195.1 Trouble-Shooting Management Command Tree	7109
195.2 Trouble-shooting Interface Management Commands	7110
196- Trouble-Shooting Management Commands	7113
196.1 Trouble-Shooting Management Command Tree	7114
196.2 Trouble-shooting Pon Interface Management Commands	7115
197- Trouble-Shooting Management Commands	7117
197.1 Trouble-Shooting Management Command Tree	7118
197.2 Trouble-shooting pbit counter Interface Management Commands	7119
198- Trouble-Shooting Management Commands	7122
198.1 Trouble-Shooting Management Command Tree	7123
198.2 Trouble-shooting color counter Interface Management Commands	7124
199- Voice Ont Management Commands	7127
199.1 Voice Ont Management Command Tree	7128
199.2 Voice Megaco Database Management Command	7130
199.3 Voice Megaco Equipment Admin Commands	7131
199.4 Voice Megaco Termination Lock Management Command	7132
199.5 Voice Megaco Secondary Termination Lock Management Command	7134
199.6 Voice Megaco Media Gateway Lock Management Command	7136
199.7 Voice Sip L1 Transport Statistics Commands	7138
199.8 Voice POTS Diagnostics Management Command	7139
199.9 Voice POTS Pull-Break Management Command	7142
199.10 Voice SIP Pull-Break Management Command	7144
199.11 GPON Voip Configuration Management Command	7146
200- MSTP Management Commands	7148

200.1 MSTP Management Command Tree	7149
200.2 MSTP Port Management Command	7150
201- Distributed Service Management Commands	7151
201.1 Distributed Service Management Command Tree	7152
201.2 APIPE-PVC Statistics Command	7153
202- Pon Management Commands	7154
202.1 Pon Management Command Tree	7155
202.2 Pon Bit Error Statistics Commands	7156
202.3 PON Rogue Test Diagnostic Command	7158
202.4 PON Utilization PM Reset Command	7160
202.5 PON Peak Utilization PM Reset Command	7162
202.6 Pon RangeNumMismatch Alarm Reset Commands	7164
202.7 Ont on Given Pon Reboot Commands	7166
203- Channel Pair Management Commands	7168
203.1 Channel Pair Management Command Tree	7169
203.2 NGPON2 Rogue Test Diagnostic Command	7170
203.3 Channel Pair Utilization PM Reset Command	7172
203.4 Channel Pair Peak Utilization PM Reset Command	7173
203.5 Pon RangeNumMismatch Alarm Reset Commands	7174
203.6 NGPON2 Rogue Ont Reboot Command	7175
204- CESUNI Management Commands	7176
204.1 CESUNI Management Command Tree	7177
204.2 CESUNI Loopback Management Command	7178
205- CFM Management Commands.	7180
205.1 CFM Management Command. Tree	7181
205.2 Unicast Loopback message Management Command	7182
205.3 CFM Multicast Loopback Management Command	7186
205.4 CFM Linktrace management command	7188
205.5 Linktrace message Management Command	7189
205.6 CFM Single Ended Synthetic Loss Measurement message Management Command	7195
205.7 Single Ended Synthetic Loss Measurement message Management Command	7196
206- Protection Group Management Commands	7199
206.1 Protection Group Management Command Tree	7200
206.2 Protection Group Switchover Management Command	7201
207- Efm Oam Management Command	7203
207.1 Efm Oam Management Command Tree	7204
207.2 Efm Oam Interface Management Command	7205
208- Epon Management Command	7207
208.1 Epon Management Command Tree	7208
208.2 Epon Ont Ethernet Reautodetect Management Command	7209
209- Iphost Management Command.	7210
209.1 Iphost Management Command. Tree	7211
209.2 Iphost ping test Management Command	7212

210- LineTest Management Commands	7215
210.1 LineTest Management Command Tree	7216
210.2 MELT reset Status Command	7217
210.3 MELT Selftest Status Command	7218
211- BER LineTest Configuration Commands	7219
211.1 BER LineTest Configuration Command Tree	7220
211.2 E1 BER test command	7221
212- Dual-Parenting Protection Group Management Commands	7223
212.1 Dual-Parenting Protection Group Management Command Tree	7224
212.2 Dual-Parenting Protection Group Management Command	7225
213- Dual-Parenting Protection Group Switchover Management Commands	7226
213.1 Dual-Parenting Protection Group Switchover Management Command Tree	7227
213.2 Dual-Parenting Protection Group Switchover Management Command	7228
214- Equipment Management Commands	7230
214.1 Equipment Management Command Tree	7231
214.2 Equipment Management Command	7232
214.3 Slot Management Command	7233
214.4 Slot Management Command	7235
215- ONT Management Command	7237
215.1 ONT Management Command Tree	7238
215.2 ONT Interface Management Command	7239
215.3 ONT Card Management Command	7241
215.4 ONT Software Control Management Command	7243
215.5 ONT Software Version Management Command	7244
215.6 ONT Data Store Management Command	7245
215.7 ONT Reboot via SN Management Command	7247
216- EONT Management Command	7248
216.1 EONT Management Command Tree	7249
216.2 Epon ONT reboot command	7250
216.3 Epon Ont Software Management Command	7251
216.4 Epon Ont LLID Loopback Command	7252
216.5 EONT Software Version Management Command	7253
217- Protection Group Management Commands	7254
217.1 Protection Group Management Command Tree	7255
217.2 Protection Group NT switchover Command	7256
218- Ethernet Management Commands	7257

218.2 Ethernet Management Command	7259
218.3 Ethernet Statistics Commands	7260
218.4 Epon Ont Ethernet Reautodetect Command	7261
218.5 Gpon Ont Ethernet loopback Command	7262
219- Bridge Management Commands	7264
219.1 Bridge Management Command Tree	7265

219.2 Learned Unicast MAC Address Management Command	7266
219.3 VLAN Management Command	7269
220- Trap Management Commands	7270
220.1 Trap Management Command Tree	7271
220.2 Trap Manager Management Command	7272
221- Interface Management commands	7273
221.1 Interface Management commands Tree	7274
221.2 Interface Troubleshooting Ethernet Statistics Commands	7275
222- DHCP Management Command	7276
222.1 DHCP Management Command Tree	7277
222.2 DHCP Relay User Port Management Command	7278
222.3 DHCP Relay User Port Management Command	7281
223- ARP-RELAY statistics Management Commands	7284
223.1 ARP-RELAY statistics Management Command Tree	7285
223.2 Arp-relay statistics Management Command	7286
224- Transport Management Commands	7289
224.1 Transport Management Command Tree	7290
224.2 IP Net-to-media Management Command	7291
225- SNTP Management Commands	7292
225.1 SNTP Management Command Tree	7293
225.2 SNTP Management Command	7294
226- Transactions Management Commands	7295
226.1 Transactions Management Command Tree	7296
226.2 Transaction Configuration Management Command	7297
227- Security Management Commands	7298
227.1 Security Management Command Tree	7299
227.2 Security 802.1x Port Authentication Management Command	7300
228- Security Management Commands	7302
228.1 Security Management Command Tree	7303
228.2 Security 802.1x Port Authentication Management Command	7304
229- Debug commands	7306
229.1 Debug commands Tree	7307
229.2 Debug commands	7308
230- Remote debug Commands	7309
230.1 Remote debug Command Tree	7310
230.2 Remote debug	7311
230.3 Remote debug ONT	7312
231- TcpDump Command	7314
231.1 TcpDump Command Tree	7315

231.2 TcpDump Command	7316
231.3 tcpdump tool	7317
231.4 tcpdump tool	7318
231.5 tcpdump tool	7319
232- Clear Commands	7320
232.1 Clear Command Tree	7321
232.2 Clear Command	7322
233- IHUB Commands	7323
234- Global And Environmental Commands	7329
234.1 History Command	7330
234.2 Echo Command	7331
234.3 Telnet Command	7332
234.4 Telnet AI Command	7333
234.5 Exec Command	7334
234.6 Sleep Command	7336
234.7 Tree Command	7337
234.8 Write Command	7338
234.9 Logout Command	7339
234.10 Help Command	7340
234.11 Info Command	7341
234.12 Exit Command	7344
234.13 Back Command	7345
234.14 Delete Command	7346
234.15 In Command	7347
234.16 Configure Command	7348
234.17 Action Command	7350
234.18 Show Command	7351
234.19 Recursive Show Command	7352
234.20 Sample Command	7353
234.21 Poll Command	7354
234.22 Debug Command	7355
234.23 Sysfil Command	7356
235- CLI Filters	7357
235.1 Count Filter	7358
235.2 Match Filter	7359
235.3 Tee Filter	7361
235.4 Tee Config Filter	7362
236- CLI Printers	7363

1- ISAM CLI

1.1 History	1-2
1.2 Preface	1-143
1.3 CLI Commands	1-144
1.4 Nodes	1-146
1.5 Parameters	1-147
1.6 Filters	1-150
1.7 Printers	1-151
1.8 Getting help	1-152
1.9 The CLI Prompt	1-153
1.10 Entering CLI Commands	1-154
1.11 CLI Backward Compatibility	1-155
1.12 Phase Out Strategy Obsolete Commands and/or Parameters	1-157
1.13 Command Phase Out Announcement Release	1-158

1.1 History

This history section enumerates the CLI commands which are new, modified or removed between any two subsequent releases. No details are provided within this section. The command description, syntax and parameters for each new and modified command is in the Command Syntax section of the respective command in the CLI Command Guide. To know the difference between e.g R4.6 and R4.5, review the delta's of the releases R4.5.01 versus R4.5 and R4.5.02 versus R4.5.01 and R4.6 versus R4.5.02.

Command delta R6.2.04ng versus R6.2.04na

Modified Commands
configure voice sip isdn-nsm-prof (adding area code in CgPN for PRA terminating call and set TON for terminating calls)
configure voice sip termination (support Auto-answer with DTMF sending)
New Commands
configure voice sip call-query (allows the operator to manage the sip call query session)
show voice sip call-query (shows the status of call query session)
show voice sip call-query-result (shows the result of call query session)

Command delta R6.2.04na versus R6.2.04n

Modified Commands
admin voice sip l1-trans-statistics (renamed old parameter from l1-transport-statistic to l1-trans-statistics)
configure voice sip cas-timer-prof (renamed presense-fw-sig to presence-fw-sig, dely-dial-min-dur to delay-dial-min, dely-dial-max-dur to delay-dial-max, rg-recall-min-dur to reg-recall-min, rg-recall-max-dur to reg-recall-max)
configure voice sip ne-board cap-id (renamed old parameter cap to cap-id)
configure voice sip network-element cap-id (renamed old parameter cap to cap-id)
configure voice sip phys-itf (DID Channel Bank support for E1/T1 access)
configure voice sip statistics (removed parameter l1-trans-stats)
show voice sip cas-sig-prof (DID Channel Bank support for E1/T1 access)
show voice sip cas-timer-prof (DID Channel Bank support for E1/T1 access)
show voice sip l1-trans-statistics (renamed old parameter from l1-transport-statistic to l1-trans-statistics)
show voice sip ne-board (renamed old parameter cap to cap-id, network-element to ne-id)
New Commands
configure voice sip cas-sig-prof (DID Channel Bank support for E1/T1 access)
show voice sip cas-sig-prof (DID Channel Bank support for E1/T1 access)

Command delta R6.2.04n versus R6.2.04

Modified Commands

configure alarm entry (add alarm board-shelf-mismatch and softDSP co-existing with RPNI-E (norpniewithsoftdsp))
configure alarm filter filterid (updated alarm list)
configure trap manager (cleanup unused parameters)
configure trap v6manager (cleanup unused parameters)
configure voice sip lineid-syn-prof (Channel Bank support for E1/T1 access)
configure voice sip pri-cas-tksg-term (cleanup obsolete parameters)
show alarm query name (updated alarm list)
show alarm query plug-in-unit-ext (new alarm board-shelf-mismatch)
show alarm query sip-plugin-unit (new alarm for no rpni-e with soft dsp)
show voice sip pri-cas-tksg-term ()

New Commands

admin voice sip l1-trans-statistics (support cross NIAT-A LT with using centralized solution)
configure voice sip cap (support cross NIAT-A LT with using centralized solution)
configure voice sip cas-timer-prof (Channel Bank support for E1/T1 access)
configure voice sip ne-board (support cross NIAT-A LT with using centralized solution)
configure voice sip network-element (support cross NIAT-A LT with using centralized solution)
configure voice sip phys-itf (PRI support improvements)
show voice sip cas-timer-prof (Channel Bank support for E1/T1 access)
show voice sip l1-trans-statistics (support cross NIAT-A LT with using centralized solution)
show voice sip ne-board (support cross NIAT-A LT with using centralized solution)
show voice sip phys-itf (PRI support improvements)
show voice sip tksg (parameter tksg replaces tksg-ds0-status and tksg-op-data)

Removed Commands

show voice sip tksg-ds0-status (parameter tksg replaces tksg-ds0-status)
show voice sip tksg-op-data (parameter tksg replaces tksg-op-data)

Command delta R6.2.04 versus R6.2.03

Modified Commands

admin pon ber-stats (add support for up to 25G capable PON boards)
admin pon clear-alarm (add support for up to 25G capable PON boards)
admin pon diagnostic (add support for up to 25G capable PON boards)

admin pon reboot-all-ont (add support for up to 25G capable PON boards)
admin pon utilization (add support for up to 25G capable PON boards)
admin trouble-shooting pon interface (add support for up to 25G capable PON boards)
configure alarm entry (add alarm for LT backplane datalink failure ONT host IP allocation, ONT CRC error and TCA alarms)
configure alarm filter filterid (updated alarm list)
configure cfm domain association (update values for CCM interval)
configure channel-pair interface (upstream throughput improvements on XGS-PON/MPM)
configure equipment ont interface (add support for up to 25G capable PON boards)
configure interface cage (add value not-set for cage mode)
configure interface port (add support for up to 25G capable PON boards)
configure pon interface (upstream throughput improvements on XGS-PON/MPM)
configure qos interface (add support for up to 25G capable PON boards)
configure qos tca queue (add support for up to 25G capable PON boards)
configure system sync-if-timing ptp l2-ptp-port (support xfp modules for Ethernet clock interface)
configure system sync-if-timing ptp mstr-port-ds-prof (support 1588v2 multicast MAC address on FANT-F)
configure system sync-if-timing ptp slave-port-dataset (support 1588v2 multicast MAC address on FANT-F)
configure trap definition (update for Board Auto Plan feature)
configure trap manager (update for Board Auto Plan feature)
configure trouble-shooting pon statistics interface (add support for up to 25G capable PON boards)
configure trouble-shooting pon statistics threshold interface (add support for up to 25G capable PON boards)
show alarm query ellid (add support for up to 25G capable PON boards)
show alarm query epon (add support for up to 25G capable PON boards)
show alarm query name (updated alarm list)
show alarm query olt-gen (add support for up to 25G capable PON boards)
show alarm query olt-pon-tc-tca (add support for up to 25G capable PON boards)
show alarm query olt-pon-util-tca (add support for up to 25G capable PON boards)
show alarm query ont-iphost (ONT KPI improvements (OLT side))
show alarm query ont-l2uni-eth-tca (ONT KPI improvements (OLT side))
show alarm query otdr (add support for up to 25G capable PON boards)
show alarm query plug-in-unit (add alarm for LT backplane datalink failure)
show interface port (add support for up to 25G capable PON boards)
show interface stack (add support for up to 25G capable PON boards)
show interface test (add support for up to 25G capable PON boards)
show mcast pon-active-groups (add support for up to 25G capable PON boards)
show pon ber-stats (add support for up to 25G capable PON boards)

show pon cfg-download (add support for up to 25G capable PON boards)
show pon interface fec-tc-layer current-interval (add support for up to 25G capable PON boards)
show pon interface mcast-tc-layer current-interval (add support for up to 25G capable PON boards)
show pon interface mcast-tc-layer previous-interval (add support for up to 25G capable PON boards)
show pon interface phy-layer current-interval (add support for up to 25G capable PON boards)
show pon interface tc-layer current-interval (add support for up to 25G capable PON boards)
show pon interface tc-layer previous-interval (add support for up to 25G capable PON boards)
show pon interface xg-tc-layer current-interval (add support for up to 25G capable PON boards)
show pon interface xg-tc-layer previous-interval (add support for up to 25G capable PON boards)
show pon optics (add support for up to 25G capable PON boards)
show pon pon-diagnostics (add support for up to 25G capable PON boards)
show pon sfp-inventory (add support for up to 25G capable PON boards)
show pon sw-download (add support for up to 25G capable PON boards)
show pon utilization cur-intvl-top-ont-rx (add support for up to 25G capable PON boards)
show pon utilization cur-intvl-top-ont-tx (add support for up to 25G capable PON boards)
show pon utilization current-interval (add support for up to 25G capable PON boards)
show pon utilization previous-interval (add support for up to 25G capable PON boards)
show pon utilization prv-intvl-top-ont-rx (add support for up to 25G capable PON boards)
show pon utilization prv-intvl-top-ont-tx (add support for up to 25G capable PON boards)
show qos bandwidth-profile (add support for up to 25G capable PON boards)
show qos interface-bandwidth (add support for up to 25G capable PON boards)
show qos statistics color-queue current-15min (add support for up to 25G capable PON boards)
show qos statistics color-queue prev-15min (add support for up to 25G capable PON boards)
show qos statistics queue current-15min (add support for up to 25G capable PON boards)
show qos statistics queue prev-15min (add support for up to 25G capable PON boards)
show trouble-shooting pon statistics interface (add support for up to 25G capable PON boards)

New Commands

configure mcast-control mc-pon-vlan-xlate (Missing mc-pon-vlan-xlate node)
show alarm current ont-tca (ONT KPI improvements (OLT side))
show alarm log ont-tca (ONT KPI improvements (OLT side))
show alarm query ont-tca (ONT KPI improvements (OLT side))
show alarm snap-shot ont-tca (ONT KPI improvements (OLT side))
show equipment ont status twenty-five-g (add support for up to 25G capable PON boards)

Commands or commands with parameters for future use, not supported yet

admin channel-pair peak-utilization (add PON Utilization PM Counter to capture unicast microbursts)
admin pon peak-utilization (add PON Utilization PM Counter to capture unicast microbursts)

show channel-pair peak-utilization (add PON Utilization PM Counter to capture unicast microbursts)
show channel-pair peak-utilization cur-intvl-top-ont-rx (add PON Utilization PM Counter to capture unicast microbursts)
show channel-pair peak-utilization cur-intvl-top-ont-tx (add PON Utilization PM Counter to capture unicast microbursts)
show channel-pair peak-utilization current-interval (add PON Utilization PM Counter to capture unicast microbursts)
show channel-pair peak-utilization previous-interval (add PON Utilization PM Counter to capture unicast microbursts)
show channel-pair peak-utilization prv-intvl-top-ont-rx (add PON Utilization PM Counter to capture unicast microbursts)
show channel-pair peak-utilization prv-intvl-top-ont-tx (add PON Utilization PM Counter to capture unicast microbursts)
show pon peak-utilization (add PON Utilization PM Counter to capture unicast microbursts)
show pon peak-utilization cur-intvl-top-ont-rx (add PON Utilization PM Counter to capture unicast microbursts)
show pon peak-utilization cur-intvl-top-ont-tx (add PON Utilization PM Counter to capture unicast microbursts)
show pon peak-utilization current-interval (add PON Utilization PM Counter to capture unicast microbursts)
show pon peak-utilization previous-interval (add PON Utilization PM Counter to capture unicast microbursts)
show pon peak-utilization prv-intvl-top-ont-rx (add PON Utilization PM Counter to capture unicast microbursts)
show pon peak-utilization prv-intvl-top-ont-tx (add PON Utilization PM Counter to capture unicast microbursts)

Command delta R6.2.03 versus R6.2.02

Modified Commands
admin system fips (OpenSSL upgrade to 1.1.1.d. Command obsoleted on FANT-G.)
configure alarm entry (new alarms e1t1itf-recv-ais, e1t1itf-recv-los, e1t1itf-recv-rai and new alarm internal-clk-fail for FANT-G Oscillator failure)
configure alarm entry (support alarm olt-gen-ddr-fault)
configure alarm filter filterid (updated alarm list)
configure bridge port vlan-id (improve IOP with ZTE ONT)
configure equipment ont interface (support auto-match value for planned-us-rate ONT parameter for combo-PON)
configure equipment ont interface (updated default fec-up for gpon ONT on mpm)
configure equipment slot (support 40GBase-KR4)
configure interface cage (support MPM combo mode)
configure qos tca queue (removed obsolete parameter value lbackpl-lin)
configure system (support 40GBase-KR4)

configure system fips (OpenSSL upgrade to 1.1.1.d. Command obsoleted on FANT-G.)
configure system sync-if-timing ptp link-port-compensation (support FWLT-C)
configure system sync-if-timing ssmout-synce (support FWLT-C)
configure system sync-if-timing synce (support FWLT-C)
configure voice sip manipulate-rule (update mechanism to set the system under priority mode and call duration)
configure voice sip termination (update parameter definition for display-name)
configure qos interface (removed obsolete parameter value ltbackpl-lin)
show alarm query name (updated alarm list)
show alarm query sync (new alarm internal-clk-fail for FANT-G Oscillator failure)
show linetest single lineid-ext-rept (support NIAT-A SIP PRI)
show qos interface-bandwidth (removed obsolete parameter value ltbackpl-lin)
show qos statistics color-queue current-15min (removed obsolete parameter value ltbackpl-lin)
show qos statistics color-queue prev-15min (removed obsolete parameter value ltbackpl-lin)
show qos statistics queue current-15min (removed obsolete parameter value ltbackpl-lin)
show qos statistics queue prev-15min (removed obsolete parameter value ltbackpl-lin)
show system license (add license for FGUT-A upgradable GPON LT card for 10G PON evolution)
show system license-usage (add license for FGUT-A upgradable GPON LT card for 10G PON evolution)
show voice sip redundancy-node ext-redundancy-state (support NIAT-A SIP PRI)
show voice sip termination (update mechanism to set the system under priority mode and call duration)

New Commands

configure voice sip pri-cas-tksg-puid (one PRI interface to support multiple PRI groups)
configure voice sip pri-cas-tksg-term (one PRI interface to support multiple PRI groups)
configure voice sip tksg (one PRI interface to support multiple PRI groups)
configure voice sip user-to-user-prof (UUS3 Signaling convey between ISDN Q.931 and SIP)
show alarm current e1t1-interface (one PRI interface to support multiple PRI groups)
show alarm log e1t1-interface (one PRI interface to support multiple PRI groups)
show alarm snap-shot e1t1-interface (one PRI interface to support multiple PRI groups)
show system license-usage (show license usage for FGUT-A upgradable GPON LT card for 10G PON evolution)
show voice sip pri-cas-tksg-puid (one PRI interface to support multiple PRI groups)
show voice sip pri-cas-tksg-term (one PRI interface to support multiple PRI groups)
show voice sip tksg-ds0-status (one PRI interface to support multiple PRI groups)
show voice sip tksg-op-data (one PRI interface to support multiple PRI groups)
show voice sip user-to-user-prof (UUS3 Signaling convey between ISDN Q.931 and SIP)

Commands or commands with parameters for future use, not supported yet

configure equipment ont interface (show additional info on ONT status)
--

```
show ont-info (show additional info on ONT status)
```

Command delta R6.2.02 versus R6.2.01

Modified Commands
admin ethernet statistics (support backplane LT link on FELT-C)
admin interface trouble-shooting ethernet statistics (support backplane LT link on FELT-C)
admin pon (x-pon prefix is used for XGSPON ports for all boards)
admin trouble-shooting pon interface (x-pon prefix is used for XGSPON ports for all boards)
configure alarm entry (NIAT-A LT ISDN PRI SIP alarms to interop with SIP server, FELT-B 40GBase-KR4 backplane alarm. Alarm olt-gen-ddr-fault not supported yet)
configure alarm filter filterid (updated alarm list)
configure interface port (x-pon prefix is used for XGSPON ports for all boards)
configure linetest single ltparm test-name (parameter values e1-remotelb e1-ploadlb e1-locallb e1-cablelb renamed to remotelb ploadlb locallb cablelb)
configure link-agg group (support FELT-C Cross-IWF LAG)
configure pon interface (x-pon prefix is used for XGSPON ports for all boards)
configure qos interface (support backplane LT link on FELT-C)
configure qos interface (x-pon prefix is used for XGSPON ports for all boards)
configure qos tca queue (support backplane LT link on FELT-C)
configure qos tca queue (x-pon prefix is used for XGSPON ports for all boards)
configure system security ssh access (support debugkernel on FANT-G and FANT-H)
configure system sync-if-timing ptp l2-ptp-port (update for timing sync on FANT-H)
configure trouble-shooting pon statistics (x-pon prefix is used for XGSPON ports for all boards)
configure xdsl board vect-fallback rtx-profile (RTX profile index value range extended to 1024)
configure xdsl rtx-profile (RTX profile index value range extended to 1024)
show alarm query (x-pon prefix is used for XGSPON ports for all boards)
show alarm query name (updated alarm list)
show alarm query olt-gen (alarm olt-gen-ddr-fault not supported yet)
show efm-oam peer-oam-info (P2P LT 802.3ah, Ethernet in the First Mile, extension with dying gasp state)
show equipment ont status pon (x-pon prefix is added for all boards for XGSPON ports)
show equipment ont status pon (x-pon prefix is used for XGSPON ports for all boards)
show ethernet etherstats (support backplane LT link on FELT-C)
show interface (x-pon prefix is used for XGSPON ports for all boards)
show interface trouble-shooting ethernet statistics (support backplane LT link on FELT-C)
show mcast pon-active-groups (x-pon prefix is used for XGSPON ports for all boards)
show pon (x-pon prefix is used for XGSPON ports for all boards)
show pon (x-pon prefix is used for XGSPON ports for all boards)

show qos interface-bandwidth (support backplane LT link on FELT-C)
show qos interface-bandwidth (x-pon prefix is used for XGSPON ports for all boards)
show qos statistics (x-pon prefix is used for XGSPON ports for all boards)
show qos statistics color-queue current-15min (support backplane LT link on FELT-C)
show qos statistics color-queue prev-15min (support backplane LT link on FELT-C)
show qos statistics queue current-15min (support backplane LT link on FELT-C)
show qos statistics queue prev-15min (support backplane LT link on FELT-C)
show trouble-shooting pon statistics interface (x-pon prefix is used for XGSPON ports for all boards)
show xdsl vect-disturber-list downstream (alternative disturberlist reporting)

New Commands

show alarm current fcs-exceed (add FELT-B 40GBase-KR4 backplane alarm)
show alarm log fcs-exceed (add FELT-B 40GBase-KR4 backplane alarm)
show alarm query fcs-exceed (add FELT-B 40GBase-KR4 backplane alarm)
show alarm snap-shot fcs-exceed (add FELT-B 40GBase-KR4 backplane alarm)
show equipment ont status x-pon (x-pon prefix is added for all boards for XGSPON ports)
show link-agg resource board-iwf-info (support FELT-C Cross-IWF LAG)
show link-agg resource group (support FELT-C Cross-IWF LAG)
show link-agg resource iwf-group-info (support FELT-C Cross-IWF LAG)
show software-mngt upload-download-info (new command node to display actual available space in /Sw/ and /Ont/Sw/)
show system shub cpu-packet ratelimit (protect SHUB systems against DoS attacks)

Removed Commands

configure mcast channel (Note: do not use this command, is has been replaced by configure mcast chn)
--

Commands or commands with parameters for future use, not supported yet

configure equipment ont interface (auto-match value for planned-us-rate ONT parameter is not supported yet)
show linetest single lineid-ext-rept (NIAT-A SIP PRI CHT T1 not supported yet, parameters renamed)

Command delta R6.2.01 versus R6.2

Modified Commands

admin ethernet port (support PON Remote loopback control on ONT UNI, OLT part)
admin ethernet statistics (support backplane LT link on FELT-C)
admin interface trouble-shooting ethernet statistics (support backplane LT link on FELT-C)
admin system cpu-load (support ntio-1 qsf alarm)
configure alarm entry (support for Threshold Crossing Alarms)

configure alarm filter filterid (list of alarms updated)
configure bridge port (support compliance to OMCI Spec for XGS PON ONTs, support parameter value filtervlanandpbit)
configure bridge port vlan-id (support compliance to OMCI Spec for XGS PON ONTs, support parameter value usacceptframetype)
configure ethernet ont l2 pm-collect-ext (support OMCI PM and multicast status monitoring extensions)
configure l2uni ont performance-monitor pm-collect-ext (support OMCI PM and multicast status monitoring extensions)
configure qos interface (support backplane LT link on FELT-C)
configure qos tca queue (support backplane LT link on FELT-C)
configure system sync-if-timing ptp (update for timing sync on FANT-H)
configure system sync-if-timing ptp l2-ptp-port (update for timing sync on FANT-H)
configure system sync-if-timing ptp link-port-compensation (update for timing sync on FANT-H)
configure system sync-if-timing ptp ptp-domain (update for timing sync on FANT-H)
configure system sync-if-timing ptp slave-port-dataset (update for timing sync on FANT-H)
configure system sync-if-timing ptp tx-protocol (update for timing sync on FANT-H)
configure system sync-if-timing ref-order (update for timing sync on FANT-H)
configure system sync-if-timing ssm (update for timing sync on FANT-H)
configure system sync-if-timing tod-ref-order (update for timing sync on FANT-H)
configure tc-layer ont-side (support OMCI PM and multicast status monitoring extensions)
configure veip ont l2 pm-ext (support OMCI PM and multicast status monitoring extensions)
configure voice ont mgc-config (update for security profile ID and msg format in MEGACO config)
configure xdsl spectrum-profile vdsl (updated help text, a998ds35 added)
configure xdsl vce-profile (updated help text, a998ds35 added)
show alarm query ihub-link (support ntio-1 qsfm alarm)
show alarm query ihub-link (support ntio-1 qsfm alarm)
show alarm query ihub-tca (update for TR069 service mismatch adding ONT info for XGS-PON)
show alarm query name (support for Threshold Crossing Alarms)
show alarm query tr069serv (support ntio-1 qsfm alarm)
show equipment ont status pon (improved display values for XGS-PON interface under Combo mode)
show ethernet etherstats (support backplane LT link on FELT-C)
show ethernet ont loopback-info (support PON Remote loopback control on ONT UNI, OLT part)
show interface trouble-shooting ethernet statistics (support backplane LT link on FELT-C)
show l2uni ont mcast-subscriber (support OMCI PM and multicast status monitoring extensions)
show l2uni ont mcast-subscriber active-groups (support OMCI PM and multicast status monitoring extensions)
show l2uni ont mcast-subscriber general (support OMCI PM and multicast status monitoring extensions)
show l2uni ont performance-data-ext (support OMCI PM and multicast status monitoring extensions)
show l2uni ont performance-data-ext current-interval (support OMCI PM and multicast status monitoring extensions)

extensions)
show l2uni ont performance-data-ext previous-interval (support OMCI PM and multicast status monitoring extensions)
show pon ber-stats (improved display values for XGS-PON interface under Combo mode)
show pon cfg-download (improved display values for XGS-PON interface under Combo mode)
show pon sw-download (improved display values for XGS-PON interface under Combo mode)
show qos interface-bandwidth (support backplane LT link on FELT-C)
show qos statistics color-queue current-15min (support backplane LT link on FELT-C)
show qos statistics color-queue prev-15min (support backplane LT link on FELT-C)
show qos statistics queue current-15min (support backplane LT link on FELT-C)
show qos statistics queue prev-15min (support backplane LT link on FELT-C)
show system cpu-load (support ntio-1 qsfp alarm)
show system show system memory-usage (support ntio-1 qsfp alarm)
show system sync-ptp-currmaster (update for timing sync on FANT-H)
show system sync-ptp-slaveport (update for timing sync on FANT-H)
show tc-layer ont-side (support OMCI PM and multicast status monitoring extensions)
show voice ont mgc-agent statistics current-15min (support compliance to OMCI Spec for XGS PON ONTs)
show voice sip isdn-cas-cls-puid (update to show the status of every PUID)
show voice sip isdn-cas-term (update to show the status of every ISDN PRA or CAS R2 termination port)

New Commands

admin equipment applique (support applique restart via CLI)
configure system lt-link-tca-thresholds (support for Threshold Crossing Alarms)
configure system ptp (update for timing sync on FANT-H)
show software-mngt upload-download-dir (command to display the space in /Sw and /ONT/Sw)
show system lt-link-tca-thres (support for Threshold Crossing Alarms)

Command delta R62 versus R6.1.01

Modified Commands

admin pon ber-stats (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
admin pon clear-alarm (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
admin pon diagnostic (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
admin pon utilization (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
admin trouble-shooting pon interface (parameter pon-leg removed, x-pon prefix introduced to identify the

configure bridge port vlan-id (parameter value usacceptframetype not supported yet)
configure equipment diagnostics sfp (introduction of SFP1, SFP2, XFP1, XFP2 prefixes, for clean support of multi-channel PON optics)
configure equipment ont interface (L2 Bridge configuration adapted to IOP requirement)
configure equipment ont pm (command not supported yet)
configure equipment slot (added new input board types to allow pre-provisioning and introduced operational-mode parameter for PON boards that support several modes of operation)
configure equipment slot (new command to disable anti theft protection)
configure interface cage (introduced operational-mode parameter for PON boards that support several modes of operation)
configure interface cage (parameter oper-mode renamed to operational-mode)
configure interface port (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
configure mcast-control system (corrected v6-src-ip-address help info)
configure pon interface (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
configure qos interface (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
configure qos tca queue (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
configure system (update for softdsp feature)
configure system security (ISAM Copper and Fiber : RADIUS accounting for CLI operators)
configure trap manager (support anti theft protection)
configure trap v6manager (support anti theft protection)
configure trouble-shooting pon statistics interface (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
configure trouble-shooting pon statistics threshold interface (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
configure voice ont pots (parameters transmit-path nominal-feed-vol not supported yet)
configure voice sip isdn-cas-term (update for NIAT-A: number screening and number mapping)
show alarm query ellid (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show alarm query epon (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show alarm query olt-gen (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show alarm query olt-pon-tc-tca (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show alarm query olt-pon-util-tca (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show alarm query ont-iphost (parameter ont-ip-host-file not supported yet)
show alarm query otdr (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)

interface under MPM mode)
show equipment diagnostics sfp (introduction of SFP1, SFP2, XFP1, XFP2 prefixes, for clean support of multi-channel PON optics)
show equipment diagnostics sfp-threshold (introduction of SFP1, SFP2, XFP1, XFP2 prefixes, for clean support of multi-channel PON optics)
show equipment ont operational-data (show MAC learning depth and last restart reason)
show equipment ont pm (command not supported yet)
show equipment ont pm ont-side (command not supported yet)
show equipment ont pm ont-side current-interval (command not supported yet)
show equipment ont pm ont-side previous-interval (command not supported yet)
show equipment transceiver-inventory (introduction of SFP1, SFP2, XFP1, XFP2 prefixes, for clean support of multi-channel PON optics)
show interface port (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show interface stack (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show interface test (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show mcast pon-active-groups (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface fec-tc-layer current-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface mcast-tc-layer current-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface mcast-tc-layer previous-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface phy-layer current-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface tc-layer current-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface tc-layer previous-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface xg-tc-layer current-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon interface xg-tc-layer previous-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon optics (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon pon-diagnostics (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon sfp-inventory (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon utilization cur-intvl-top-ont-rx (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)

show pon utilization cur-intvl-top-ont-tx (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon utilization current-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon utilization previous-interval (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon utilization prv-intvl-top-ont-rx (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show pon utilization prv-intvl-top-ont-tx (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show qos interface-bandwidth (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show qos statistics color-queue current-15min (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show qos statistics color-queue prev-15min (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show qos statistics queue current-15min (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show qos statistics queue prev-15min (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)
show trouble-shooting pon statistics interface (parameter pon-leg removed, x-pon prefix introduced to identify the XGS-PON interface under MPM mode)

New Commands

admin channel-pair reboot-all-ont (force an OLT-triggered reboot of 10G PON ONUs, individual or bulk, via standard PLOAM)
admin equipment ont sernum (force an OLT-triggered reboot of 10G PON ONUs, individual or bulk, via standard PLOAM)
admin pon reboot-all-ont (force an OLT-triggered reboot of 10G PON ONUs, individual or bulk, via standard PLOAM)
admin software-mngt iacm (PERSLOSS escalation evolution for VULA Uplinks to restore AMS connection)
admin software-mngt iacm database (PERSLOSS escalation evolution for VULA Uplinks to restore AMS connection)
admin software-mngt iacm database oam-save-protected (PERSLOSS escalation evolution for VULA Uplinks to restore AMS connection)
configure system security hash-control (encrypt password with same key across systems)
show mcast chpair-active-groups (show Multicast Channel Pair Active Groups Status)
show software-mngt oam-save-protected (PERSLOSS escalation evolution for VULA Uplinks to restore AMS connection)

Commands or commands with parameters for future use, not supported yet

admin ethernet port (command not supported yet)
configure bridge port (parameter value filtervlanandpbit not supported yet)
configure equipment replan (command not supported yet)

configure ethernet ont l2 pm-collect-ext (command not supported yet)
configure l2uni ont performance-monitor pm-collect-ext (command not supported yet)
configure veip ont l2 pm-ext (command not supported yet)
show ethernet ont loopback-info (command not supported yet)
show l2uni ont mcast-subscriber (command not supported yet)
show l2uni ont mcast-subscriber active-groups (command not supported yet)
show l2uni ont mcast-subscriber general (command not supported yet)
show l2uni ont performance-data-ext (command not supported yet)
show l2uni ont performance-data-ext current-interval (command not supported yet)
show l2uni ont performance-data-ext previous-interval (command not supported yet)

Command delta R6.1.01 versus R6.1

Modified Commands
configure alarm entry (support FPM depletion, vect-no-gain-at-initialarm and board-reset-prot)
configure alarm filter filterid (support FPM depletion, vect-no-gain-at-initialarm and board-reset-prot)
configure equipment shelf (configure shelf to work in gpon-managed-ngpon mode)
configure ethernet line mau (support electrical 100Mbps auto-negotiation capability)
configure system (FELT-B Uplink: SyncE with SSM_QL support and IEEE 1588 ToD TC)
configure system security (updated source-address parameter)
configure system sync-if-timing ptp link-port-compensation (FELT-B Uplink: SyncE with SSM_QL support and IEEE 1588 ToD TC)
configure system sync-if-timing sync (FELT-B Uplink: SyncE with SSM_QL support and IEEE 1588 ToD TC)
configure system syslog (Syslog RFC5424 support, new parameters version and time-format)
show alarm query ihub-l2forward (improved alarm logging on FANT-H)
show alarm query name (support FPM depletion alarm)
show alarm query plug-in-unit (enable board-reset-protection alarm)
show alarm query sync (FELT-B Uplink: SyncE with SSM_QL support and IEEE 1588 ToD TC)
show alarm query vect-board (support new alarm vect-no-gain-at-init)
show system syslog-file (Syslog RFC5424 support)
show voice sip isdn-cas-itf (updated display parameters)
show xdsl operational-data far-end line (new reporting of VDSL2 FDPS support by XTU-R)
New Commands
admin software-mngt ls-migration (command to support migration to Lightspan)
admin software-mngt ls-migration download server-ip (command to support migration to Lightspan)
configure mcast ipv6-chn (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)

configure mcast ipv6-chn src-ipv6-addr (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control channel (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control channel fullview-packages (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control channel preview-packages (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control ipv4 (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control ipv4 vlan (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control ipv6 (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control ipv6 vlan (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control mc-vlan-xlate (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control mcast-svc-context (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control package (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control system (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure mcast-control system cdr-type (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
configure system sync-if-timing bits-bind (FELT-B Uplink: SyncE with SSM_QL support and IEEE 1588 ToD TC)
configure system sync-if-timing ptp l2-ptp-port (FELT-B Uplink: SyncE with SSM_QL support and IEEE 1588 ToD TC)
configure voice sip cas-nsm-prof (NIAT-A: support number screening and number mapping CAS R2-SIP)
show mcast ipv6-active-groups (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control channel (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control channel counter (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control channel miscellaneous (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control channel protocol (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)

show mcast-control ipv4 (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control ipv4 grp-to-package (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control ipv4 module-mcast-channel (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control ipv4 package-to-src (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control mcast-svc-context (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control module (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control module counter (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control module miscellaneous (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control module time (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show mcast-control system (support a subset of IPv6 MLDv1/v2 proxying for IPv6 multicast services: UNI, Service Context and Fast Leave)
show software-mngt ls-migration (command to support migration to Lightspan)
show voice sip cas-nsm-prof (NIAT-A: support number screening and number mapping CAS R2-SIP)
show voice sip e1itf-bchannel-status (ISDN-CAS: reporting of B channel status and oos reporting)

Commands or commands with parameters for future use, not supported yet

admin ethernet statistics (new parameter value lt-link not supported yet)
admin interface trouble-shooting ethernet statistics (new parameter value lt-link not supported yet)
configure equipment slot (parameter operational-mode not supported yet)
configure interface cage (cage mode not supported yet)
configure qos interface (new parameter value lbackpl-link not supported yet)
configure qos tca queue (new parameter value lbackpl-link not supported yet)
show ethernet etherstats (new parameter value lt-link not supported yet)
show interface trouble-shooting ethernet statistics (new parameter value lt-link not supported yet)
show qos interface-bandwidth (new parameter value lbackpl-link not supported yet)
show qos statistics color-queue current-15min (new parameter value lbackpl-link not supported yet)
show qos statistics color-queue prev-15min (new parameter value lbackpl-link not supported yet)
show qos statistics queue current-15min (new parameter value lbackpl-link not supported yet)
show qos statistics queue prev-15min (new parameter value lbackpl-link not supported yet)

Command delta R6.1 versus R6.0.01

Modified Commands
configure alarm entry (support lag degrade alarm)
configure alarm filter filterid (updated alarm list)
configure bridge port (FELT-B: Port mirroring improvement)
configure bridge port vlan-id (FGLT-B/NGPON2 LT: Advanced QoS remarking rules for S+C forwarders)
configure debug-trace protocol-trace (enhanced syslog messages)
configure ethernet line mau (support UTP 10G full duplex on RANT-C)
configure qos profiles session (support parameter ds-schedule-tag to support traffic classification according to the inner VLAN QoS per bridge port)
configure system max-lt-link-speed (adding 25G and 50G option in max-lt-link-speed)
configure system max-lt-link-speed (support FANT-H: parameter value one-hunderd-gb supported)
configure system port-group (support QSFP ports)
configure system security cdr-pm-file upload (update PM file upload configuration)
configure system security filetransfer server (RSA public/private-key support)
configure system security filetransfer serverv6 (RSA public/private-key support)
configure system security pmfile upload (update PM file upload configuration)
configure system security snmp user (support for secure hash algorithms)
configure system security ssh server-profile (support ECDH Key exchange algorithm)
configure system security ssh sftp-user (RSA public/private-key support)
configure system syslog destination (local syslog persistent during power cycle)
configure system syslog route (enhanced syslog messages)
configure voice lsa-server emergency-service dn (remove duplicate nt parameter value)
configure voice lsa-server instance (remove duplicate nt parameter value)
configure voice lsa-server system (remove duplicate nt parameter value)
configure voice sip isdn-cas-term (NIAT-A: number screening and number mapping DSS1-SIP)
configure voice sip user-agent-ap slot-id (remove duplicate nt parameter value)
configure xdsl vp-board (range increase of resource parameter vp-link to support up to 16 VP-LT links per VP-card)
show alarm current vect-board (range increase of display parameter vp-link-index to support up to 16 VP-LT links per VP-card)
show alarm log vect-board (range increase of display parameter vp-link-index to support up to 16 VP-LT links per VP-card)
show alarm query ihub-link (support QSFP ports)
show alarm query ihub-tca ()
show alarm query link-agg (support lag degrade alarm)
show alarm query name (support lag degrade alarm)
show alarm snap-shot (range increase of display parameter vp-link-index to support up to 16 VP-LT links per VP-card)
show qsfp-port-mode (support QSFP ports)

show security cdr-pm-file upload (update PM file upload configuration)
show system license (adding 25gbps and 50gbps option)
show system license (support FANT-H: parameter 100gbps-lt supported)
show voice sip redundancy-node ext-redundancy-state (remove duplicate nt parameter value)
show voice sip redundancy-node redundancy-state (remove duplicate nt parameter value)
show voice sip user-agent-ap (remove duplicate nt parameter value)
show xdsl vect-carrier-data far-end (range increase of display and command parameter vgr-link to support up to 16 VP-LT links per VP-card)
show xdsl vect-carrier-data near-end (range increase of display and command parameter vgr-link to support up to 16 VP-LT links per VP-card)
show xdsl vect-group (range increase of resource parameter vgr-link to support up to 16 VP-LT links per VP-card)
show xdsl vp-board (range increase of resource parameter vp-link to support up to 16 VP-LT links per VP-card)

New Commands

admin system security ssh generate-auth-key (RSA public/private-key support)
configure system nt-sftp (SFTP server for ZTP on NT)
configure system nt-sftp user-name (SFTP server for ZTP on NT)
configure voice sip isdn-nsm-prof (NIAT-A: number screening and number mapping DSS1-SIP)
show security ssh auth-key (RSA public/private-key support)
show security ssh auth-key-status (RSA public/private-key support)
show voice sip isdn-nsm-prof (NIAT-A: number screening and number mapping DSS1-SIP)
show voice sip profiles (NIAT-A: number screening and number mapping DSS1-SIP)
show voice sip ua-ip-info (get ip info values from User-agent)

Commands or commands with parameters for future use, not supported yet

configure system security mgmt-ipv4-addr (parameter mgmt-ipv4-addr not supported yet)
configure voice sip redundancy (new parameters fail-obs-timer fg-intv-503 time-thrsh-503 nbr-thrsh-503 not supported yet)
configure voice sip register (new parameter init-reg-delay not supported yet)

Command delta R6.0.01 versus R6.0

Modified Commands

admin dual-parenting (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
admin dual-parenting protection-group switchover (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
admin software-mngt oswp (Software Load Validation)
configure alarm entry (alarm for MELT board reset, network-power-loss and hw-fault)

configure alarm filter filterid (updated alarm list)
configure channel-group id subchannel-group id (update parameter mcatt-encrypt fot downstream multicast GEM encryption mode)
configure dual-parenting (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
configure dual-parenting local-node (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
configure dual-parenting peer-node (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
configure dual-parenting protection-group (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
configure generic-pon ont (ONT pre-provisioning using Serial Number authentication - auto unlock ONT Administrative State)
configure ipv6-antispoofing (support IPv6 anti-spoofing based on the full IPv6 address)
configure ipv6-antispoofing slot (support IPv6 anti-spoofing based on the full IPv6 address)
configure pon interface (parameter pon-leg not supported)
configure qos profiles policy-action (QoS enhancements)
configure qos profiles session (QOS enhancements)
configure software-mngt oswp (Software Load Validation)
configure system pon-ont (ONT pre-provisioning using Serial Number authentication - auto unlock ONT Administrative State)
configure system security source-address (proper selection of source-IP for FTP IPv4 and IPv6)
configure system sync-if-timing ssmout-synce (support QSFP ports)
configure system sync-if-timing synce (support QSFP ports)
configure system syslog route msg-type (Syslog improvements)
configure vlan (removed not supported parameter mac-auto-delete)
configure voice lsa-server emergency-service (support lsa server hosted at VVPS-A board)
configure voice lsa-server instance (support lsa server hosted at VVPS-A board)
configure voice lsa-server system (support lsa server hosted at VVPS-A board)
configure voice sip isdn-cas-term (support crc4 configuration for isdn-cas-term)
configure voice sip server (support SIP over TLS)
configure voice sip transport (support SIP over TLS)
configure voice sip vsp (support SIP over TLS)
configure xdsl rtx-profile (increase bonded group and RTX profiles)
configure xdsl spectrum-profile vdsl2 (support VDSL Long Range)
configure xdsl-bonding board vect-fallback (increase bonded group and RTX profiles)
configure xdsl-bonding group (increase bonded group and RTX profiles)
configure xdsl-bonding group-rtx-profile (increase bonded group and RTX profiles)
match (update match CLI filter decription)
show alarm query eqpt-holder-ext (support new alarms network-power-loss and hw-fault)

show alarm query ihub-link (improved alarm reporting QSFP)
show alarm query ihub-tca (improved alarm reporting QSFP)
show alarm query name (updated alarm list)
show alarm query plug-in-unit-ext (alarm for MELT board reset)
show dual-parenting (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
show dual-parenting protection-group (support cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
show system license (support VDSL Long Range)

New Commands

admin igmp debug version (IGMP Join/leave Debug Management)
admin software-mngt tls-cafile (support SIP over TLS)
admin system security manager release-lock-cli (login security control enhancements)
configure qos dn-ctrl-pkt (QoS enhancements)
configure qos profiles dscp-tc (QoS enhancements, support to add or delete dscp to tc profile)
configure qos profiles dscp-tc codepoint (QoS enhancements)
configure qos up-ctrl-pkt (QoS enhancements)
configure system security slot debug-usb (FANT-G Micro USB Ability to enable and disable through CLI)
show software-mngt sw-load-valid (Software Load Validation)
show software-mngt sw-load-valid file-status (Software Load Validation)
show software-mngt sw-load-valid oswp-root-certificate (Software Load Validation)
show software-mngt sw-load-valid oswp-status (Software Load Validation)
show software-mngt tls-cafile (support SIP over TLS)
tcpdump (TCPDump tool for FANT-G)
tcpdump show (TCPDump tool for FANT-G)
tcpdump start vlan (TCPDump tool for FANT-G)
tcpdump stop (TCPDump tool for FANT-G)

Removed Commands

admin bridge unicast-mac-address port (not supported command removed)
configure bridge port vlan-id eligible-to-learn (not supported command removed)

Commands or commands with parameters for future use, not supported yet

admin pon ber-stats (parameter pon-leg not supported)
admin pon clear-alarm (parameter pon-leg not supported)
admin pon diagnostic (parameter pon-leg not supported)
admin pon utilization (parameter pon-leg not supported)
admin trouble-shooting pon interface (parameter pon-leg not supported)

configure channel-pair interface (parameter onu-prov-mode not supported yet)
configure equipment ont interface (parameter template-name not supported yet)

show interface stack (parameter pon-leg not supported)
show interface test (parameter pon-leg not supported)
show mcast pon-active-groups (parameter pon-leg not supported)
show pon interface fec-tc-layer current-interval (parameter pon-leg not supported)
show pon interface mcast-tc-layer current-interval (parameter pon-leg not supported)
show pon interface mcast-tc-layer previous-interval (parameter pon-leg not supported)
show pon interface phy-layer current-interval (parameter pon-leg not supported)
show pon interface tc-layer current-interval (parameter pon-leg not supported)
show pon interface tc-layer previous-interval (parameter pon-leg not supported)
show pon interface xg-tc-layer current-interval (parameter pon-leg not supported)
show pon interface xg-tc-layer previous-interval (parameter pon-leg not supported)
show pon optics (parameter pon-leg not supported)
show pon pon-diagnostics (parameter pon-leg not supported)
show pon sfp-inventory (parameter pon-leg not supported)
show pon utilization cur-intvl-top-ont-rx (parameter pon-leg not supported)

show pon utilization cur-intvl-top-ont-tx (parameter pon-leg not supported)
show pon utilization current-interval (parameter pon-leg not supported)
show pon utilization previous-interval (parameter pon-leg not supported)
show pon utilization prv-intvl-top-ont-rx (parameter pon-leg not supported)
show pon utilization prv-intvl-top-ont-tx (parameter pon-leg not supported)
show qos interface-bandwidth (parameter pon-leg not supported)
show qos statistics color-queue current-15min (parameter pon-leg not supported)
show qos statistics color-queue prev-15min (parameter pon-leg not supported)
show qos statistics queue current-15min (parameter pon-leg not supported)
show qos statistics queue prev-15min (parameter pon-leg not supported)
show qsfp-port-mode (qsfp-port-mode not supported yet)
show trouble-shooting pon statistics interface (parameter pon-leg not supported)

Command delta R6.0 versus R5.8.01

Modified Commands
admin equipment slot (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
admin system techsupport (techsupport feature supported on 7302 ISAM FD)
admin xdsl-line (Auto-switching improvement)
configure alarm entry (alarms for Auto-switching improvement, PON integrity, line reinitialization TCA, Cross-LT LAG extension)
configure alarm filter filterid (updated alarm list)
configure bridge port vlan-id (UNI Support in FELT-B)
configure cfm domain association mep y1731ais (FELT-B downlink port: Link Loss Forwarding, auto shut down bridge port on MEP)
configure channel-group id (Channel Profiles, Burst Profiles and System Profile PLOAM compliance on NG-PON2 OLT)
configure equipment protection-element (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
configure equipment slot (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
configure linetest cluster (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, updated xvps cluster range)
configure link-agg group (FELT-B redundancy 8+8, configures switchover in a cross-LT LAG)
configure mcast capacity (UNI Support in FELT-B)
configure system security operator (prompt with Warning and request for confirmation before command execution)
configure system security snmp community (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add vvpsa context)
configure system security snmp group security-level (NVPS-C: support Multi-core NT card (FANT-F and

NANT-E) as server board, add vvpsa context)
configure system security snmp manager (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add vvpsa context)
configure vlan (allow the operator to control automatic clearing of MAC entries)
configure vlan id (updated DHCPv6 behavior)
configure voice cluster (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, updated xvps cluster range)
configure voice ont mgc-config (update for OMCI Spec for XGS PON ONTs)
configure voice sip isdn-cas-term (support line Hunting over multiple E1 PRI links on NIAT)
configure voice sip isdn-cas-term (updated parameter names for TermHuntingWay)
configure voice sip server (implement UDPswTCP and udp_tcp cross check function)
configure voice sip transport (implement UDPswTCP and udp_tcp cross check function)
configure xdsl board (support to configure the allowed vectoring class)
configure xdsl line tca-line-threshold (support of G.fast/VDSL line reinitialization TCA)
debug-command current-cpu-core-load (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
debug-command current-cpu-load (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
debug-command error-info (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
debug-command temperature (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
environment (environment setting to set number of lines displayed)
show alarm query auto-switch (alarms for Auto-switching improvement)
show alarm query channel-pair (PON Data Path Integrity alarm)
show alarm query custom-ext-alarm (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query ellid (removed not supported parameter values epon eont ellid euni, new value pon:leg not supported yet)
show alarm query epon (removed not supported parameter values epon eont ellid euni, new value pon:leg not supported yet)
show alarm query ihub-link (detailed alarm when AI link is down)
show alarm query ihub-tca (detailed alarm when AI link is down)
show alarm query megaco-media-gw (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query name (updated alarm list)
show alarm query ont (enabled alarm ont-gen-tod-mismatch)
show alarm query otdr (removed not supported parameter values epon eont ellid euni, new value pon:leg not supported yet)
show alarm query plug-in-unit (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query plug-in-unit-ext (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as

server board, add virtual LT board index)
show alarm query sfpe1t1-clock (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query sfpe1t1-framer (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query sfprssi (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query sip-plugin-unit (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query sip-user-agent (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query sw-mgmt (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query traffic-overflow (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show alarm query xdsl-tca (support of G.fast/VDSL line reinitialization TCA)
show equipment protection-element (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show equipment slot (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, add virtual LT board index)
show interface port (removed not supported parameter values epon eont ellid euni, new value pon:leg mpm not supported yet)
show interface stack (removed not supported parameter values epon eont ellid euni, new value pon:leg not supported yet)
show interface test (removed not supported parameter values epon eont ellid euni, new value pon:leg not supported yet)
show link-aggr port-info (FELT-B redundancy 8+8, shows switchover in a cross-LT LAG)
show system techsupport (techsupport feature supported on 7302 ISAM FD)
show voice cluster (NVPS-C: support Multi-core NT card (FANT-F and NANT-E) as server board, updated xvps cluster range)

New Commands

admin bridge unicast-mac-address port (delete all MACs learned on bridge port from the filtering database)
configure alarm suppression filterid (configurable suppression for BDINIT/BDMISSING Alarms)
configure bridge port vlan-id eligible-to-learn (802.1x Mac Based Authentication additional requirements support)
configure bridge port vlan-id eligible-to-learn unicast-mac (802.1x Mac Based Authentication additional requirements support)
configure equipment ont interface cpu-load (performance KPI support)
configure equipment ont interface memory-usage (performance KPI support)
configure generic-pon alarmflag (enable to re-define the PONLOS for broken trunk fiber)
configure generic-pon dpinteg-threshold (PON Data Path Integrity alarm threshold)
configure interface statistics (support Sliding-Window Traffic Statistics)

configure tc-layer (GEM port network CTP performance monitoring history data)
configure tc-layer ont-side (GEM port network CTP performance monitoring history data)
configure voice sip isdn-cas-cls-puid (support line Hunting over multiple E1 PRI links on NIAT)
show alarm current link-agg (alarms for Cross-LT LAG extension)
show alarm log link-agg (alarms for Cross-LT LAG extension)
show alarm query link-agg (alarms for Cross-LT LAG extension)
show alarm snap-shot link-agg (alarms for Cross-LT LAG extension)
show alarm snap-shot olt-gen (enable olt-gen alarm display)
show equipment ont cpu-load (performance KPI support)
show equipment ont cpu-load current-interval (performance KPI support)
show equipment ont cpu-load previous-interval (performance KPI support)
show equipment ont memory-usage (performance KPI support)
show equipment ont memory-usage current-interval (performance KPI support)
show equipment ont memory-usage previous-interval (performance KPI support)
show interface statistics (support Sliding-Window Traffic Statistics)
show tc-layer (GEM port network CTP performance monitoring history data)
show tc-layer ont-side (GEM port network CTP performance monitoring history data)
show tc-layer ont-side current-interval (GEM port network CTP performance monitoring history data)
show tc-layer ont-side previous-interval (GEM port network CTP performance monitoring history data)
show voice sip isdn-cas-cls-puid (support line Hunting over multiple E1 PRI links on NIAT)
show voice sip isdn-cas-itf (support line Hunting over multiple E1 PRI links on NIAT)

Commands or commands with parameters for future use, not supported yet

admin dual-parenting (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
admin dual-parenting protection-group switchover (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
admin pon ber-stats (legacy parameter value leg not supported yet)
admin pon clear-alarm (legacy parameter value leg not supported yet)
admin pon diagnostic (legacy parameter value leg not supported yet)
admin pon utilization (legacy parameter value leg not supported yet)
admin software-mngt trigger-reborn (trigger reborn reformation)
admin trouble-shooting pon interface (legacy parameter value leg not supported yet)
configure dual-parenting (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
configure dual-parenting local-node (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
configure dual-parenting peer-node (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
configure dual-parenting protection-group (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)

configure equipment ont interface (parameter value 1.25g not supported yet)
configure interface port (legacy parameter value leg not supported yet)
configure ipv6-antispoofing (IPv6 anti-spoofing based on the full IPv6 address)
configure ipv6-antispoofing slot (IPv6 anti-spoofing based on the full IPv6 address)
configure pon interface (legacy parameter value leg not supported yet)
configure qos interface (legacy parameter value leg not supported yet)
configure qos tca queue (legacy parameter value leg not supported yet)
configure system max-lt-link-speed (new parameter value one-hundred-gb not supported yet)
configure system sync-if-timing ptp (new parameter profile not supported yet)
configure trouble-shooting pon statistics interface (legacy parameter value leg not supported yet)
configure trouble-shooting pon statistics threshold interface (legacy parameter value leg not supported yet)
show alarm query olt-gen (legacy parameter value leg not supported yet)
show alarm query olt-pon-tc-tca (legacy parameter value leg not supported yet)
show alarm query olt-pon-util-tca (legacy parameter value leg not supported yet)
show dual-parenting (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
show dual-parenting protection-group (Cross-shelf Type-B protection for GPON between two ISAM FX OLTs)
show mcast pon-active-groups (legacy parameter value leg not supported yet)
show pon interface fec-tc-layer current-interval (legacy parameter value leg not supported yet)
show pon interface mcast-tc-layer current-interval (legacy parameter value leg not supported yet)
show pon interface mcast-tc-layer previous-interval (legacy parameter value leg not supported yet)
show pon interface phy-layer current-interval (legacy parameter value leg not supported yet)
show pon interface tc-layer current-interval (legacy parameter value leg not supported yet)
show pon interface tc-layer previous-interval (legacy parameter value leg not supported yet)
show pon interface xg-tc-layer current-interval (legacy parameter value leg not supported yet)
show pon interface xg-tc-layer previous-interval (legacy parameter value leg not supported yet)
show pon optics (legacy parameter value leg not supported yet)
show pon pon-diagnostics (legacy parameter value leg not supported yet)
show pon sfp-inventory (legacy parameter value leg not supported yet)
show pon utilization cur-intvl-top-ont-rx (legacy parameter value leg not supported yet)
show pon utilization cur-intvl-top-ont-tx (legacy parameter value leg not supported yet)
show pon utilization current-interval (legacy parameter value leg not supported yet)
show pon utilization previous-interval (legacy parameter value leg not supported yet)
show pon utilization prv-intvl-top-ont-rx (legacy parameter value leg not supported yet)
show pon utilization prv-intvl-top-ont-tx (legacy parameter value leg not supported yet)
show qos interface-bandwidth (legacy parameter value leg not supported yet)
show qos statistics color-queue current-15min (legacy parameter value leg not supported yet)

show qos statistics color-queue prev-15min (legacy parameter value leg not supported yet)
show qos statistics queue current-15min (legacy parameter value leg not supported yet)
show qos statistics queue prev-15min (legacy parameter value leg not supported yet)
show system license (new parameter value 100gbps-lt not supported yet)
show trouble-shooting pon statistics interface (legacy parameter value leg not supported yet)

Command delta R5.8.01 versus R5.8

Modified Commands
admin system techsupport (default changed from disable to enable)
configure alarm entry (alarm raised at various degrees of flash card degradation or failure, new alarms packet-loss remote-packet-loss no-dsp-resource for SIP PRI: Enhancements (Nx64) pseudo-wire)
configure alarm filter filterid (updated alarm list)
configure channel-group id subchannel-group id (support multiple Subchannel Groups (channel partitions) per Channel Group on NG-PON2 [OLT part])
configure channel-pair interface (U-NGPON throughput improvements and testing with XGS Dual Rate N1 and N2 OLT optics)
configure pon interface (updated range for parameter tconts-per-frame)
configure qos profiles bandwidth (update DBRu parameter setting)
configure system security snmp community (DPoE and DOCSIS related parameters removed)
configure system security snmp group (DPoE and DOCSIS related parameters removed)
configure system sync-if-timing ptp default-dataset (obsolete parameter clock-identity removed)
configure system sync-if-timing ssmout-ltport (support SSM QL over 10G PON card with XGS-PON mode)
configure system syslog route msg-type (dump Syslog file support)
configure voice lsa-server emergency-service (support the standalone SIP emergency call support for PRI access)
configure voice sip isdn-cas-term (support SIP User Authentication on AKA-MD5 per RFC 3310, CAS/R2 enhancements)
configure voice sip manipulate-rule (ISAMV SIP: CAS/R2 enhancements)
configure voice sip redundancy (NIAT ISDN PRI redundancy, to enable/disable forced failover timer function, auto-srv-fo-tmr renamed to auto-srv-fo-timer)
configure voice sip termination (support SIP User Authentication on AKA-MD5 per RFC 3310)
show alarm query eqpt-supplemental (alarm raised at various degrees of flash card degradation or failure)
show alarm query ihub-link (improved filtering via alarm type)
show alarm query ihub-tca (improved filtering via alarm type)
show alarm query name (updated alarm list)
show alarm query plug-in-unit-ext (support new alarm mgnt-type-mismatch)
show system sync-ptp-client (display improvements)

New Commands

admin equipment protection-group (support NT forced switchover on FANT-F FANT-G and NANT-E)
clear sliding-win-stats (support sliding window statistics feature for uplink ports)
configure system security snmp-slot-numbering (support LT index numbering)
configure system sliding-win-stats (support sliding window statistics feature for uplink ports)
configure voice pseudo-wire (SIP PRI: Enhancements (Nx64) pseudo-wire)
show alarm current pseudo-wire (SIP PRI: Enhancements (Nx64) pseudo-wire)
show alarm log pseudo-wire (SIP PRI: Enhancements (Nx64) pseudo-wire)
show alarm snap-shot pseudo-wire (SIP PRI: Enhancements (Nx64) pseudo-wire)
show system autoboot-config (show timestamps from autoboot.tim file)
show system cf-usage (show the status of the flash card, degradation or failure)
show system sliding-win-stats (support sliding window statistics feature for uplink ports)
show test-oam (support Two-Way Active Measurement Protocol Light (TWAMP Light) responder feature)
show voice pseudo-wire (SIP PRI: Enhancements (Nx64) pseudo-wire)
show voice pseudo-wire-src-port (SIP PRI: Enhancements (Nx64) pseudo-wire)

Commands or commands with parameters for future use, not supported yet

configure channel-pair interface deact-ont-tca (alarms on number of deactivated ONUs per PON not supported yet)
configure channel-pair interface deact-ont-tca threshold-number (alarms on number of deactivated ONUs per PON not supported yet)
configure channel-pair interface deact-ont-tca threshold-percent (alarms on number of deactivated ONUs per PON not supported yet)
configure pon interface deact-ont-tca (alarms on number of deactivated ONUs per PON not supported yet)
configure pon interface deact-ont-tca threshold-number (alarms on number of deactivated ONUs per PON not supported yet)
configure pon interface deact-ont-tca threshold-percent (alarms on number of deactivated ONUs per PON not supported yet)
configure software-mngt oswp (new parameter on-schedule-time not supported yet)
configure system (new parameter arp-tca-threshold not supported yet)
show alarm query channel-pair chpr-deact (alarms on number of deactivated ONUs per PON not supported yet)
show software-mngt oswp (new display items on-schedule-time not supported yet)

Command delta R5.8 versus R5.7.01

Modified Commands

admin software-mngt database (IPv6 Management)
admin system fips (support FIPS 140-2 CAPABLE)

admin system techsupport (default for parameter doactivate changed to enable)
configure alarm entry (cleanup unsupported alarms network-power-loss, hw-fault,ont-ploam-loss-frame, sfu-ploam-loss-frame, soho-ploam-loss-frame, mdu-ploam-loss-frame, olt-gen-pon-prot-na, olt-gen-pon-prot-act. New alarm ont-ip-host-file, tod-reference-fail. Alarms on number of deactivated ONUs per PON not supported yet.)
configure alarm filter filterid (Alarm list updated)
configure bridge port (support full TPID translation FELT-B VULA uplink)
configure bridge port vlan-id (C-VLAN p-bit marking on S-VLAN tunnel Cross-Connect)
configure bridge port vlan-id (policer instance sharing across multiple VLAN Ports on the same Bridge Port with groupid)
configure channel-group id subchannel-group id (parameter cpi and extended range for scg-id to 4 not supported yet)
configure channel-pair interface (configure TCA alarms for U-NGPON: BER period and thresholds)
configure equipment slot (modified parameter capab-profile)
configure ethernet line mau (support for 2.5GBase SFP. Note: in order to support smooth migration from 1G to 2.5 cases, it is proposed to use 1000baselxfid for newly qualified(R58) optics 3FE47061AA and AB)
configure interface alarm (support alarm interface type ds1)
configure l2uni ont performance-monitor (support 64-Bit counter via standard OMCI)
configure linetest cluster ltparm test-name (SIP: add capability to initiate via CLI/AMS (SNMP) a voice call to the destination number)
configure linetest cluster ltsession (SIP: add capability to initiate via CLI/AMS (SNMP) a voice call to the destination number)
configure linetest single ltparm test-name (SIP: add capability to initiate via CLI/AMS (SNMP) a voice call to the destination number)
configure linetest single ltsession (SIP: add capability to initiate via CLI/AMS (SNMP) a voice call to the destination number)
configure pon interface (parameter pon-speed can be used to configure the planned PON speed)
configure qos interface (improvement for Qos Interface parameter)
configure qos tca (index) queue (improvement for Qos Interface parameter)
configure software-mngt database (IPv6 Management)
configure software-mngt oswp (IPv6 Management)
configure software-mngt sw-replacement-mode (ISSU (In Service Software Upgrade) of 7360 FX, leveraging on Type-B redundancy [GPON/XGS-PON])
configure system fips (support FIPS 140-2 CAPABLE)
configure system loop-id-syntax (note: ONT and OntMAC are only limited to EPON and not usable for GPON)
configure system security default-profile (allow to create a new user with lldp-med priviledge)
configure system security profile (allow to create a new user with lldp-med priviledge)
configure system security snmp community (IPv6 Management)
configure system security snmp manager (IPv6 Management)
configure system syslog destination (IPv6 Management)

configure tr069serv ont (support VEIP on 10G OLT full parity with GPON)
configure trap definition (IPv6 Management)
configure trap manager (IPv6 Management)
configure veip ont l2 (support 64-Bit counter via standard OMCI)
configure voice sip dnserver (support Voice IPv6 Management and SIP common voice package IPv6)
configure voice sip isdn-cas-term (ISAMV NIAT: SIP CAS/R2 support)
configure voice sip manipulate-rule (digit manipulation system-level rule support and migration)
configure voice sip server (support Voice IPv6 Management and SIP common voice package IPv6)
configure voice sip termination (ISAM-V SIP: capability to enable or disable Decadic Dialing per port or line)
configure voice sip user-agent (support Voice IPv6 Management and SIP common voice package IPv6)
configure voice sip user-agent-ap slot-id (support Voice IPv6 Management and SIP common voice package IPv6)
configure voice sip vsp (support Voice IPv6 Management and SIP common voice package IPv6)
show alarm query eqpt-holder-ext (cleanup unsupported alarms network-power-loss hw-fault)
show alarm query mdm-ploam (cleanup unsupported alarm mdm-ploam-loss-frame)
show alarm query name (updated supported alarm list)
show alarm query olt-gen (cleanup unsupported alarms olt-gen-pon-prot-na olt-gen-pon-prot-act, add alarms olt-gen-sfp-mism, not supported yet: olt-gen-deact-high-tca olt-gen-deact-low-tca)
show alarm query ont-ploam (cleanup unsupported alarm ont-ploam-loss-frame)
show alarm query ont-voip (support query of ont services alarms)
show alarm query sfu-ploam (cleanup unsupported alarm sfu-ploam-loss-frame)
show alarm query sync (support new alarms holdover tod-reference-fail)
show equipment transceiver-inventory (support for 2.5GBase SFP)
show ethernet mau (support for 2.5GBase SFP)
show interface alarm (support alarm interface type ds1)
show linetest cluster lineid-ext-rept (SIP: add capability to initiate via CLI/AMS (SNMP) a voice call to the destination number)
show linetest single lineid-ext-rept (SIP: add capability to initiate via CLI/AMS (SNMP) a voice call to the destination number)
show pon unprovision-onu (add actual-us-rate to show the actual upstream rate)
show qos interface-bandwidth (improvement for Qos Interface parameter)
show qos statistics color-queue current-15min (improvement for Qos Interface parameter)
show qos statistics color-queue prev-15min (improvement for Qos Interface parameter)
show qos statistics queue current-15min (improvement for Qos Interface parameter)
show qos statistics queue prev-15min (improvement for Qos Interface parameter)
show software-mngt upgrade-plan (ISSU (In Service Software Upgrade) of 7360 FX, leveraging on Type-B redundancy [GPON/XGS-PON])
show software-mngt upgrade-status (ISSU (In Service Software Upgrade) of 7360 FX, leveraging on Type-B redundancy [GPON/XGS-PON])

show system fips (support FIPS 140-2 CAPABLE)
show system license ("add ""Local Stand Alone and Emergency call"" license")
show trap manager (IPv6 Management)
show voice sip isdn-cas-term (support Voice IPv6 Management and SIP common voice package IPv6)
show voice sip redundancy-node (support Voice IPv6 Management and SIP common voice package IPv6)
show voice sip server (support Voice IPv6 Management and SIP common voice package IPv6)
show voice sip termination (support Voice IPv6 Management and SIP common voice package IPv6)

New Commands

configure ai (enabling ai commands)
configure ai application (enabling ai commands)
configure ai platform (enabling ai commands)
configure ai platform virtualplatform (enabling ai commands)
configure system security cpu-protection (protocol rate limiting for DoS protection)
configure system security filetransfer serverv6 (IPv6 Management)
configure system security mgmt-ipv6-addr (IPv6 Management)
configure system sntp server-table ipv6-address (IPv6 Management)
configure trap v6manager (IPv6 Management)
show ai (enabling ai commands)
show ai application (enabling ai commands)
show ai platform (enabling ai commands)
show ai platform-application (enabling ai commands)
show alarm query ont-ani (enabling ont-ani alarm display)
show ip (IPv6 management over iHUB)
show l2uni ont performance-data-64bit (support 64-Bit counter via standard OMCI)
show l2uni ont performance-data-64bit current-interval (support 64-Bit counter via standard OMCI)
show l2uni ont performance-data-64bit previous-interval (support 64-Bit counter via standard OMCI)
show sntp server-tablev6 (IPv6 Management)
show system security cpu-protection (protocol rate limiting for DoS protection)
show system sync-ptp-client (extend clock trace info)
show system sync-ptp-currmaster (extend clock trace info)
show system sync-ptp-inmasters (extend clock trace info)
show system sync-ptp-mstrport (extend clock trace info)
show system sync-ptp-mstrprofile (extend clock trace info)
show system sync-ptp-slaveport (extend clock trace info)
show trap v6manager (IPv6 Management)

show system sync-if-timing-ntp (replaced by show system sync-ntp-slaveport)

Commands or commands with parameters for future use, not supported yet

admin equipment ont interface (parameter optitrans-disable-time not supported yet)
configure equipment ont interface delay-act (command not supported yet)
configure equipment ont interface onu-tssi-detect (command not supported yet)
configure equipment ont pm-collect (command not supported yet)
configure equipment ont sw-ctrl delay-act (command not supported yet)
configure system sync-if-timing ssmout-ltport (parameter ng2 not supported yet)
configure voice ont pots (parameters transmit-path nominal-feed-vol not supported yet)
configure voice sip redundancy (parameter auto-srv-fo-tmr not supported yet)
show alarm query channel-pair (alarm chpr-deact-hightca and chpr-deact-lowtca not supported yet)
show alarm query mdu-sup (alarm mdu-opti-malfunc not supported yet)
show alarm query ont (alarm ont-opti-malfunc not supported yet)
show alarm query ont-iphost (parameter ont-ip-host-file not supported yet)
show alarm query plug-in-unit-ext (support new alarm mgnt-type-mismatch)
show alarm query sfu-sup (alarm sfu-opti-malfunc not supported yet)
show alarm query soho-sup (alarm soho-opti-malfunc not supported yet)
show equipment ont xg-mgmt (command not supported yet)
show equipment ont xg-mgmt ont-side (command not supported yet)
show equipment ont xg-mgmt ont-side current-interval (command not supported yet)

show equipment ont xg-mgmt ont-side previous-interval (command not supported yet)

Command delta R5.7.01 versus R5.7

Modified Commands
admin cfm mclbm (command node definition updated)
admin channel-pair diagnostic (support channel-pair for alien ONU detection on XGS-PON)
admin port-protection activate (Type-B protection support on XGS-PON)
admin system techsupport gen-on-demand (corrections in the CLI interface to support nt-b)
configure alarm entry (add CAS R2 Channel alarms, support LLDP alarms and for mismatch between actual and planned upstream rate, qsf alarm)
configure alarm filter filterid (Alarm list updated)
configure equipment slot (support for 24port xDSL)
configure ethernet ont (Power over Ethernet enhancements)
configure interface port (update port parameters display)
configure linetest single ltparm test-name (update ISAM-V NIAT-A CAS R2 specification and update input parameters for R2 loopback test)
configure linetest single ltsession (update ISAM-V NIAT-A CAS R2 specification)
configure port-protection paired-port (Type-B protection support on XGS-PON)
configure trap definition (add support for SW Upgrade Finished trap)
configure voice cluster equipment termination (ISAM-V: support per line configuration of dialed digit manipulation rules and per line configurable line signal)
configure voice sip cas-r2-timer (update ISAMv NIAT-A CAS R2 specification)
configure voice sip isdn-cas-term (ISAM-V: support per line configuration of dialed digit manipulation rules)
configure voice sip manipulate-rule (ISAM-V: support per line configuration of dialed digit manipulation rules)
configure voice sip termination (ISAM-V: support per line configuration of dialed digit manipulation rules and per line configurable line signal)
show alarm current e1-sip-termination (support CAS/R2 for NIAT-A SIP ETSI)
show alarm log e1-sip-termination (support CAS/R2 for NIAT-A SIP ETSI)
show alarm query bulk-sync (Type-B protection support on XGS-PON)
show alarm query channel-pair (support channel-pair for alien ONU detection on XGS-PON)
show alarm query mdu-gen (add alarm for mismatch between actual and planned upstream rate)
show alarm query mdu-sup (update alarm list, Power over Ethernet enhancements alarm mdu-sup-poe-over-yell supported)
show alarm query name (alarm list updated)
show alarm query ont (Power over Ethernet enhancements alarm ont-poe-overload-yell supported)
show alarm query ont-gen (add alarm for mismatch between actual and planned upstream rate)
show alarm query protection-group (Type-B protection support on XGS-PON)

show alarm query sfu-gen (add alarm for mismatch between actual and planned upstream rate)

show alarm query sfu-sup (updated alarm list, Power over Ethernet enhancements alarm sfu-sup-poe-over-yell supported)

show alarm query soho-sup (updated alarm list, Power over Ethernet enhancements alarm soho-sup-poe-over-yell supported)

show alarm snap-shot e1-sip-termination (support CAS/R2 for NIAT-A SIP ETSI)

show channel-pair diagnostic (support channel-pair for alien ONU detection on XGS-PON)

show equipment capab-profile (support for 24port xDSL)

show equipment transceiver-inventory (support new longer reach bidirectional optics)

show ethernet ont operational-data (Power over Ethernet enhancements)

show linetest single lineid-ext-rept (update ISAM-V NIAT-A CAS R2 specification and update input parameters for R2 loopback test)

show port-protection (Type-B protection support on XGS-PON)

New Commands

admin cfm mclbm domain lbm-tlv-type (add McLbm TlvType parameter for user to configure the mclbm message TLV part)

configure lldp-med (support LLDP-MED (Link Layer Discovery Protocol-Media Endpoint Discovery) phase 2 (OLT part))

configure lldp-med media-policy (support LLDP-MED (Link Layer Discovery Protocol-Media Endpoint Discovery) phase 2 (OLT part))

configure lldp-med port (support LLDP-MED (Link Layer Discovery Protocol-Media Endpoint Discovery) phase 2 (OLT part))

configure voice extline (support ISAMv SIP Analog Extension Line Service)

show alarm current cas-r2-channel (ISAM-V: SIP: R2: NIAT-A: ETSI: support cas-r2-channel alarm)

show alarm current lldpmed (support LLDP-MED (Link Layer Discovery Protocol-Media Endpoint Discovery) phase 2 (OLT part))

show alarm log cas-r2-channel (ISAM-V: SIP: R2: NIAT-A: ETSI: support cas-r2-channel alarm)

show alarm log lldpmed (support LLDP-MED (Link Layer Discovery Protocol-Media Endpoint Discovery) phase 2 (OLT part))

show alarm query lldpmed (support LLDP-MED (Link Layer Discovery Protocol-Media Endpoint Discovery) phase 2 (OLT part))

show alarm snap-shot cas-r2-channel (ISAM-V: SIP: R2: NIAT-A: ETSI: support cas-r2-channel alarm)

show alarm snap-shot lldpmed (support LLDP-MED (Link Layer Discovery Protocol-Media Endpoint Discovery) phase 2 (OLT part))

show voice extline (support ISAMv SIP Analog Extension Line Service)

Commands or commands with parameters for future use, not supported yet

configure li_vlan vlan-id (command not supported)

configure pon interface (parameter pon-speed not supported yet)

configure software-mngt sw-replacement-mode (command not supported yet)

show software-mngt upgrade-plan (command not supported yet)

```
show software-mngt upgrade-status (command not supported yet)
```

Command delta R5.7 versus R5.6.01

Modified Commands
admin system security ssh generate-key (SSH security improvements, upgrade openssl and default key pair removal)
admin trouble-shooting pbit interface (support enabling pbit counter on VLAN port level)
configure alarm entry (sip-isdnpratermination alarms replaced by e1-sip-termination, add alarm to see if CPE is not supporting 35b, alien and poe alarms not supported yet)
configure alarm filter filterid (supported alarm list updated)
configure equipment shelf (introduction of new 7362 ISAM SF-8GW product, renamed ngpon_port_reduced to ngpon-port-reduced)
configure ethernet ont (support ability to display 2.5G SFP ONT link speed)
configure interface port (port-type redefined)
configure qos profiles queue (Increase configurable queue size on fiber LTs)
configure system security ssh server-profile (SSH security improvements, upgrade openssl and default key pair removal)
configure system sync-if-timing ptp master-port (none' option removed from MasterPortProfile)
configure system sync-if-timing ptp ptp-domain (removal of the CLI cmd support of FANTG PTP port 2)
configure system sync-if-timing ptp slave-port-dataset (removal of the CLI cmd support of FANTG PTP port 2)
configure system sync-if-timing ptp tx-protocol (removal of the CLI cmd support of FANTG PTP port 2)
configure system sync-if-timing ssmout-synce (ToD sync redundancy support)
configure system sync-if-timing synce (ToD sync redundancy support)
configure trouble-shooting pbit statistics interface (support enabling pbit counter on VLAN port level)
configure voice sip isdn-cas-term (support CAS/R2 for NIAT-A SIP ETSI)
configure voice sip lineid-syn-prof (support CAS/R2 for NIAT-A SIP ETSI)
configure xdsl rtx-profile (min Impulse Noise Protection shine/rein Dn/Up with a subcarrier spacing of 8.625 KHz supported in annexC)
configure xdsl service-profile (min Impulse Noise Protection shine/rein Dn/Up with a subcarrier spacing of 8.625 KHz supported in annexC)
show interface port (updated interface port display)
show alarm (supported alarm list updated)
show alarm query name (supported alarm list updated)
show efm-oam mac-stats (improved Ethernet OAM statistic retrieval)
show equipment slot (support remote inventory for 7360 ISAM FX-8 AC redundant power units)
show equipment transceiver-inventory (new SFP types added)
show ethernet ont operational-data interface (support ability to display 2.5G SFP ONT link speed)
show iphost ont operational-data (retrieve the hostname of the snmp managed MDU)

show mcast active-groups detail (display currently joined HostIP for IGMP control channel)
show security ssh server (SSH security improvements, upgrade openssl and default key pair removal)
show snmp (add display of the boottime of the ISAM)
show system sync-if-timing tod-ref-order prio2 (ToD sync redundancy support)
show system sync-if-timing-master (removal of the CLI cmd support of FANTG PTP port 2)
show system sync-if-timing-ptp (removal of the CLI cmd support of FANTG PTP port 2)
show system sync-if-timing-tod (ToD sync redundancy support)
show voice sip isdn-cas-term (support CAS/R2 for NIAT-A SIP ETSI)
show xdsl failure-status far-end (Alarm for CPE not supporting xdsl 35b mode)

New Commands

clear qos-servicerouter (clear queue statistics on iHub ingress/egress forwarding class)
configure subscriber-mgmt (DHCP server allows allocating a fixed IP to a fixed subscriber or dynamically assigned IP)
configure system sync-if-timing tod holdover-spec (ToD sync redundancy support)
configure voice sip cas-r2-timer (support CAS/R2 for NIAT-A SIP ETSI)
remote-debug (OLT support for remote debug of 3rd party ONT via standard OMCI ME)
remote-debug ont (OLT support for remote debug of 3rd party ONT via standard OMCI ME)
show equipment ont status (single command to show ONU summary info)
show equipment ont status channel-pair (single command to show ONU summary info)
show equipment ont status pon (single command to show ONU summary info)
show security ssh server-key-status (SSH security improvements, upgrade openssl and default key pair removal)
show subscriber-mgmt (DHCP server allows allocating a fixed IP to a fixed subscriber or dynamically assigned IP)

Removed Commands

configure system sync-if-timing ptp ont-master-port (obsolete command replaced by configure system sync-if-timing ptp master-port)
show alarm current sip-isdnpratermination (support CAS/R2 for NIAT-A SIP ETSI, sip-isdnpratermination alarms not supported yet and replaced by e1-sip-termination)
show alarm log sip-isdnpratermination (support CAS/R2 for NIAT-A SIP ETSI, sip-isdnpratermination alarms not supported yet and replaced by e1-sip-termination)
show alarm snap-shot sip-isdnpratermination (support CAS/R2 for NIAT-A SIP ETSI, sip-isdnpratermination alarms not supported yet and replaced by e1-sip-termination)

Commands or commands with parameters for future use, not supported yet

admin channel-pair diagnostic (alien ONU detection on XGS-PON not supported yet)
admin port-protection activate (Type-B protection support on XGS-PON not supported yet)
admin system fips (fips not supported yet)
configure port-protection paired-port (Type-B protection support on XGS-PON not supported yet)

configure snmp-agent ont (NG-PON2 index is not supported yet)
configure system fips (fips not supported yet)
configure system security cdr-pm-file (call records not fully supported)
configure system security cdr-pm-file upload (call records not fully supported)
configure system syslog route msg-type (parameter ont-prov-status not supported yet)
configure trap definition (parameter ont-prov-status and new-ont-alm not supported yet)
configure trap manager (parameter ont-prov-status and new-ont-alm not supported yet)
configure voice ont mgc-agent (H248/Megaco on 10G Cards not supported yet)
configure voice ont service (H248/Megaco on 10G Cards not supported yet)
configure voice sip statistics (support per-node 5-min statistics)
show alarm current e1-sip-termination (support CAS/R2 for NIAT-A SIP ETSI)
show alarm log e1-sip-termination (support CAS/R2 for NIAT-A SIP ETSI)
show alarm query bulk-sync (Type-B protection support on XGS-PON not supported yet)
show alarm query channel-pair (alien ONU detection on XGS-PON not supported yet)
show alarm query mdu-sup (update alarm list, Power over Ethernet enhancements alarm mdu-sup-poe-over-yell not supported yet)
show alarm query ont (Power over Ethernet enhancements alarm ont-poe-overload-yell not supported yet)
show alarm query ont-voip (H248/Megaco on 10G Cards not supported yet)
show alarm query protection-group (Type-B protection support on XGS-PON not supported yet)
show alarm query sfu-sup (updated alarm list, Power over Ethernet enhancements alarm sfu-sup-poe-over-yell not supported yet)
show alarm query soho-sup (updated alarm list, Power over Ethernet enhancements alarm soho-sup-poe-over-yell not supported yet)
show alarm snap-shot e1-sip-termination (support CAS/R2 for NIAT-A SIP ETSI)
show channel-pair diagnostic (alien ONU display on XGS-PON not supported yet)
show port-protection (Type-B protection support on XGS-PON not supported yet)
show security cdr-pm-file (call records not fully supported)
show security cdr-pm-file upload (call records not fully supported)
show system fips (fips not supported yet)
show voice ont pots tc-layer olt-side current-interval (H248/Megaco on 10G Cards not supported yet)
show voice ont pots tc-layer olt-side previous-interval (H248/Megaco on 10G Cards not supported yet)
show voice ont pots tc-layer ont-side current-interval (H248/Megaco on 10G Cards not supported yet)
show voice ont pots tc-layer ont-side previous-interval (H248/Megaco on 10G Cards not supported yet)
show voice ont service (H248/Megaco on 10G Cards not supported yet)
show voice ont voip-vip-prof operational-data input-profile (H248/Megaco on 10G Cards not supported yet)

Command delta R5.6.01 versus R5.6

Modified Commands
admin system techsupport gen-on-demand (added range check for session ID parameter)
admin voice cluster equipment sharedline-port-id (support ISAMV-H248 NPOTS shared lines)
commands using the shelf ID (On 7360 ISAM FX, the number of shelves supported has been increased from 4 to 11. Due to this change, the autocompletion for the shelf parameter has changed (similar to the slot parameter): rack/shelf : for 1/2, auto-completion will work. For 1/1, the operator is to enter / (for shelf 1) or 0 (for shelf 10) or 1 (for shelf 11))
configure alarm entry (new alarms for ethernet ring, H248 NPOTS shared line. E1 alarms)
configure alarm filter filterid (update list of alarms)
configure channel-group id subchannel-group id (updated range parameter values)
configure cmts system (improve the Queue Management on the DPoE ONUs by allocating buffer sizes)
configure e1 line (TDM support for 8 E1 ports on the NSLT-D)
configure equipment external-link-assign (improvement to to restrict the rack/shelf of the SFP)
configure equipment shelf ("XG-PON1 ""only"" mode of operation")
configure interface port (NNI Mode Support on NDLT-G bonded lines)
configure interface port (TDM support for 8 E1 ports on the NSLT-D)
configure linetest cluster ltparm test-name (corrected test parameter description)
configure linetest cluster ltsession (corrected test parameter description)
configure linetest single ltparm test-name (support ISDN PRA loopback parameters (ISDN PRA parameters are still not supported for H.248) and corrected test parameter description)
configure linetest single ltsession (support ISDN PRA loopback parameters (ISDN PRA parameters are still not supported for H.248) and corrected test parameter description)
configure pon interface (add new authentication mode for CMCC)
configure qos profiles bandwidth (DBRu default is enable-if-supported, to improve throughput on upstream PON link, after migration the value is put at disable)
configure qos profiles queue (NNI Mode Support on NDLT-G bonded lines)
configure system (periph-mgmt-ctrl default value set to disable)
configure system security (POL: access control and dynamic VLAN assignment)
configure system security pae ext-authenticator (POL: access control and dynamic VLAN assignment)
configure system sync-if-timing ptp (removed not supported two-step TC mode)
configure trap definition (POL: access control and dynamic VLAN assignment)
configure trap manager (POL: access control and dynamic VLAN assignment)
configure vlan id (POL: access control and dynamic VLAN assignment)
configure voice cluster equipment sharedlineterm (support ISAMV-H248 NPOTS shared lines)
configure voice lsa-server emergency-service (support standalone SIP Emergency Call)
configure voice sip isdn-cas-term (ISAM Voice NIAT-A : assign SIP rules for a termination port)
show alarm query authentication (add authentication alarms)
show alarm query ellid (TDM support for 8 E1 ports on the NSLT-D)
show alarm query epon (TDM support for 8 E1 ports on the NSLT-D)
show alarm query ihub-ipv6 (update for new alarm ihub-ipv6-dup-pd-route)

show alarm query name (update list of alarms)
show alarm query otdr (TDM support for 8 E1 ports on the NSLT-D)
show alarm query sync (corrected pop-up message)
show ani ont video (VZ: Video Rx Management and Alarm Improvement)
show ani ont video-stats (VZ: Video Rx Management and Alarm Improvement)
show cable modem (improve the Queue Management on the DPoE ONUs by allocating buffer sizes)
show equipment external-link-host (improvement to to restrict the rack/shelf of the SFP)
show interface port (TDM support for 8 E1 ports on the NSLT-D)
show interface stack (TDM support for 8 E1 ports on the NSLT-D)
show interface test (TDM support for 8 E1 ports on the NSLT-D)
show linetest cluster ltline (parameter value mta-testing obsoleted due to end of MTA support)
show linetest single lineid-ext-rept (support ISDN PRA parameters (ISDN PRA parameters are still not supported for H.248))
show linetest single ltline (parameter value mta-testing obsoleted due to end of MTA support)
show pon unprovision-onu (add new field to indicate ONT type)
show voice cluster sharedlineterm (support ISAMV-H248 NPOTS shared lines)
show voice cluster termination (parameter value mta-testing obsoleted due to end of MTA support)
show voice isa-emergency (support standalone SIP Emergency Call)
show voice isa-emergency state (support standalone SIP Emergency Call)
show voice sip isdn-cas-term (ISAM Voice NIAT-A : assign SIP rules for a termination port)
show voice sip termination (parameter value mta-testing obsoleted due to end of MTA support)

New Commands

admin e1 (TDM support for 8 E1 ports on the NSLT-D)
admin e1 diagnos-test (TDM support for 8 E1 ports on the NSLT-D)
admin security mac-diag mac-addr (POL: access control and dynamic VLAN assignment)
configure system dst (support Daylight Savings Time)
configure system dst date (support Daylight Savings Time)
configure system dst recurring (support Daylight Savings Time)
show alarm current e1 (TDM support for 8 E1 ports on the NSLT-D)
show alarm current ethernet-ring (support ring with ERPS (G.8032) alarms)
show alarm current secondary-megaco-term (display alarms for shared lines)
show alarm current secondary-sip-term (display alarms for shared lines)
show alarm log e1 (TDM support for 8 E1 ports on the NSLT-D)
show alarm log ethernet-ring (support ring with ERPS (G.8032) alarms)
show alarm log secondary-megaco-term (display alarms for shared lines)
show alarm log secondary-sip-term (display alarms for shared lines)
show alarm query secondary-megaco-term (display alarms for shared lines)

show alarm query secondary-sip-term (display alarms for shared lines)
show alarm snap-shot e1 (TDM support for 8 E1 ports on the NSLT-D)
show alarm snap-shot ethernet-ring (support ring with ERPS (G.8032) alarms)
show alarm snap-shot secondary-megaco-term (display alarms for shared lines)
show alarm snap-shot secondary-sip-term (display alarms for shared lines)
show e1 diagnostest-status (TDM support for 8 E1 ports on the NSLT-D)
show e1-counters (TDM support for 8 E1 ports on the NSLT-D)
show e1-counters current-1day (TDM support for 8 E1 ports on the NSLT-D)
show e1-counters current-interval (TDM support for 8 E1 ports on the NSLT-D)
show e1-counters previous-1day (TDM support for 8 E1 ports on the NSLT-D)
show e1-counters previous-interval (TDM support for 8 E1 ports on the NSLT-D)
show gre (GRE and Routing support on tunnel)
show security pae mac-authenticator (POL: access control and dynamic VLAN assignment)
show security pae mac-diagnostics (POL: access control and dynamic VLAN assignment)
show system dst (sipport Daylight Savings Time)
show system dst date-table (sipport Daylight Savings Time)
show system dst recurring-table (sipport Daylight Savings Time)

Commands or commands with parameters for future use, not supported yet

admin port-protection activate (Type-B protection support on XGS-PON not supported yet)
configure equipment ont gis (MII Universal BB Service: Location Config Data OLT part)
configure generic-pon gis-info (MII Universal BB Service: Location Config Data OLT part)
configure port-protection paired-port (Type-B protection support on XGS-PON not supported yet)
configure system security default-profile (parameter livoice not supported)
configure system security profile (parameter livoice not supported)
configure voice cluster equipment termination li (command not supported)
show equipment ont gis (MII Universal BB Service: Location Config Data OLT part)
show equipment slot (parameters bat-a bat-b not supported yet)
show port-protection (Type-B protection support on XGS-PON not supported yet)

Command delta R5.6 versus R5.5.01

Modified Commands

admin cable modem (support DPOE show commands with IPv6 options)
admin cm uniport (support DPOE show commands with IPv6 options)
admin equipment ont interface (support User Commanded on-the-fly ONU movement)
admin equipment slot (add the restrt-cnt-per-lt counter)
admin equipment slot (add the restrt-cnt-per-lt counter)

admin system techsupport gen-on-demand (added range for techsupport session id parameter)
admin voice cluster equipment port-id (updated portid specification)
configure alarm entry (new alarm no-unpinned-free-ports and ihub-ipv6-dup-pd-route inlet tempera)
configure alarm filter filterid (updated alarm list)
configure cfm domain association (updated specification of InterfaceZeroIndex)
configure cmts ipdr-global (update DPoE Multicast and IPDR)
configure cmts serving-group (DPoE: IPv6 ICMPv6 security improvements)
configure cmts system (DPoE: Prefix Stability Enhancement)
configure equipment ont interface (support User Commanded on-the-fly ONU movement)
configure linetest cluster ltparm test-name (parameters for ISDN PRA not supported yet)
configure linetest single ltparm test-name (parameters for ISDN PRA not supported yet)
configure linetest single ltssession (new parameters isdn-pra-remotelb, isdn-pra-ploadlb, isdn-pra-locallb, isdn-pra-cablelb not supported yet)
configure pon uri-prof (add ability to modify the SIPING Server Network Address Profile (SSNAP))
configure qos interface (identify downstream scheduler reference to prevent improper input)
configure qos profiles policy-action (support NNI Inc. 2 on FELT-B)
configure system (new parameters arp-polling-inter bsnap-state bsnap-server-ip bsnap-server-port not supported yet)
configure system (support alarm generation for LEMI on RANT-A)
configure system security default-profile (update for password timeout for an operator with default-profile)
configure system security snmp manager (context ihub added)
configure system sync-if-timing ptp (update support for TOD over FANT-G)
configure system sync-if-timing ptp accept-master (update support for TOD over FANT-G)
configure system sync-if-timing ptp ptp-domain (update support for TOD over FANT-G)
configure system sync-if-timing ptp slave-port-dataset (parameter values changed from ieee1588-a ieee1588-b to ieee1588-a:1 ieee1588-b:1 ieee1588-a:2 ieee1588-b:2")
configure system sync-if-timing ptp tx-protocol (parameter values changed from ieee1588-a ieee1588-b to ieee1588-a:1 ieee1588-b:1 ieee1588-a:2 ieee1588-b:2")
configure system sync-if-timing ssmout-synce (removed obsolete value none from parameter SynceOutFaceplateNumber)
configure trap manager (support dying gasp feature in software method)
configure vlan id (improved ARP snooping and polling)
configure vlan id (support L2 DHCP relay agent on NNI interfaces in order to support autoconfiguration of a connected node in a daisy chain or ring topology)
configure voice ont uri-prof (add ability to modify the SIPING Server Network Address Profile (SSNAP))
configure voice sip vsp (support SIP INFO DTMF relay function)
configure xdsl-bonding group-assembly-time (introduce new bonding initialization strategy)
configure xdsl-bonding group-profile (introduce new bonding initialization strategy)

show alarm query eqpt-holder-ext (add 7363 ISAM MX temperature inlet alarm)
show alarm query lag (support pinning an S-VLAN to a member uplink when multiple uplinks are present in a LAG)
show alarm query name (updated alarm list)
show cable config-file (support DPOE show commands with IPv6 options)
show cable modem (support DPOE show commands with IPv6 options)
show dpoe onu (support DPOE show commands with IPv6 options)
show dpoe profile pw-class name (support DPOE show commands with IPv6 options)
show dpoe profile vpls-class name (support DPOE show commands with IPv6 options)
show dpoe profile vpn-sg name (support DPOE show commands with IPv6 options)
show dpoe service vpls ip-addr (support DPOE show commands with IPv6 options)
show dpoe service vpws ip-addr (support DPOE show commands with IPv6 options)
show interface cable (support DPOE show commands with IPv6 options)
show linetest single lineid-ext-rept (new parameters isdn-pra-remotelb, isdn-pra-ploadlb, isdn-pra-locallb, isdn-pra-cablelb not supported yet)
show linetest single lline (ISAMV: SIP NPOTs to support shared lines)
show system sync-if-timing-master (update support for TOD over FANT-G)
show system sync-if-timing-ptp (update support for TOD over FANT-G)
show trouble-shooting statistics uni-interface (improved trouble-shooting statistics display)
show voice sip termination (ISAMV: SIP NPOTs to support shared lines)
show xdsl-bonding actual-ptm-init-mode (introduce new bonding initialization strategy)
show xdsl-bonding operational-data link (introduce new bonding initialization strategy)

New Commands

admin trouble-shooting color (support NNI Inc. 2 on FELT-B)
admin trouble-shooting color interface (support NNI Inc. 2 on FELT-B)
admin voice cluster equipment port-id (updated portid specification)
admin voice cluster equipment sharedline-port-id (ISAMV: SIP NPOTs to support shared lines)
clear log (command to clear log id 99 and 100)
configure system relay-id-syntax (support L2 DHCP relay agent on NNI interfaces in order to support autoconfiguration of a connected node in a daisy chain or ring topology)
configure system sync-if-timing ptp link-port-compensation (support IEEE 1588 ToD TC on MOOC Downlink on FELT-B)
configure system sync-if-timing ptp master-port (improved PTP Master port creation with VLAN ID)
configure trouble-shooting color (support NNI Inc. 2 on FELT-B)
configure trouble-shooting color statistics (support NNI Inc. 2 on FELT-B)
configure trouble-shooting color statistics interface (support NNI Inc. 2 on FELT-B)
configure voice cluster equipment sharedlineterm (ISAMV: SIP NPOTs to support shared lines)
configure voice sip manipulate-rule (ISAMV: SIP NPOTs to support shared lines)

configure voice sip sharedline (ISAMV: SIP NPOTs to support shared lines)
show dpoe onu (support DPOE show commands with IPv6 options)
show trouble-shooting color (support NNI Inc. 2 on FELT-B)
show trouble-shooting color statistics (support NNI Inc. 2 on FELT-B)
show trouble-shooting color statistics interface (support NNI Inc. 2 on FELT-B)
show voice cluster sharedlineterm (ISAMV: SIP NPOTs to support shared lines)
show voice sip sharedline (ISAMV: SIP NPOTs to support shared lines)
show xdsl-bonding actual-ptm-init-mode (introduce new bonding initialization strategy)

Commands or commands with parameters for future use, not supported yet

configure cmts li (not supported command)
configure e1 line (TDM support for 8 E1 ports on the NSLT-D Phase 2)
configure interface port (parameter e1-line not supported yet)
configure voice cluster equipment termination li (command not supported)
configure voice lsa-server emergency-service (command not supported)
show alarm query ellid (parameter e1-line not supported yet)
show alarm query epon (parameter e1-line not supported yet)
show alarm query ihub-ipv6 (update for new alarm ihub-ipv6-dup-pd-route)
show alarm query otdr (parameter e1-line not supported yet)
show interface port (parameter e1-line not supported yet)
show interface stack (parameter e1-line not supported yet)
show interface test (parameter e1-line not supported yet)
show voice lsa-emergency (command not supported)
show voice lsa-emergency state (command not supported)

Command delta R5.5.01 versus R5.5

Modified Commands

admin equipment ont interface (allow ISAM to trigger a reboot of an ONU via proprietary PLOAM)
admin software-mngt oswp (enable activation with a default database retaining management link)
admin trouble-shooting pbit interface (updated interface index format)
configure alarm entry (ais-signal, los-signal, rai-signal replaced by new isdn- alarms. New alarms for Ethernet ring and lsa-fo-trigger. Duplicate alarm sem-ups-fail replaced by sem-ups-low-volt, new power alarms)
configure alarm filter filterid (update for alarm changes)
configure bridge port (support configurable Downstream p-bit translation behavior)
configure channel-pair interface (XGS-PON on 7360 ISAM FX including XG-PON1 and dual rate)
configure channel-pair profiles (XGS-PON on 7360 ISAM FX including XG-PON1 and dual rate)
configure equipment external-link-assign (updated index parameter values)

configure equipment ont interface (Flush MAC in LT FDB automatically when ONT is rebooted/power-cycled or when a UNI goes down)
configure equipment ont interface (XGS-PON on 7360 ISAM FX including XG-PON1 and dual rate)
configure equipment slot lt (support for ISAMV ISDN SIP on NIAT-A board)
configure system security (support for configuring the number of CLI sessions and the operator login retry policy)
configure system security domain (support for configuring the number of CLI sessions)
configure system security operator (support for configuring the number of CLI sessions)
configure trouble-shooting pbit statistics (updated interface index format)
configure voice sip lineid-syn-prof (support for ISAMV ISDN SIP on NIAT-A board)
show alarm query eqpt-holder-ext (alarm sem-ups-fail replaced by improved alarm sem-ups-low-volt, new power alarms)
show alarm query name (update for alarm changes)
show alarm query sip-termination (removed obsolete ISDN alarms)
show equipment external-link-host (updated index parameter values)
show equipment ont interface (XGS-PON on 7360 ISAM FX including XG-PON1 and dual rate (note: in this release, it will always report as unknown))
show equipment ont ng2-sw-download (Universal NG-PON: OMCI Pre-Configuration download)
show equipment ont ng2-sw-download channel-group (Universal NG-PON: OMCI Pre-Configuration download)
show system license (support ring with ERPS (G.8032) on uplinks)
show trouble-shooting pbit statistics interface (updated interface index format)
show trouble-shooting pbitstatistics vlanport (updated interface index format)

New Commands

admin software-mngt ihub database oam-save-protected (support for saving the OAM protected interface)
configure e1 (TDM support for 8 E1 ports on the NSLT-D Phase 1)
configure e1 line (TDM support for 8 E1 ports on the NSLT-D Phase 1)
configure shdsl span (TDM support for 8 E1 ports on the NSLT-D not supported yet)
configure voice sip isdn-cas-term (support for ISAMV ISDN SIP on NIAT-A board)
show alarm current sip-isdnpratermination (support for ISAMV ISDN SIP on NIAT-A board)
show alarm log sip-isdnpratermination (support for ISAMV ISDN SIP on NIAT-A board)
show alarm snap-shot sip-isdnpratermination (support for ISAMV ISDN SIP on NIAT-A board)
show e1 (TDM support for 8 E1 ports on the NSLT-D Phase 1)
show e1 line-status (TDM support for 8 E1 ports on the NSLT-D Phase 1)
show equipment ont index (CLI ONT Index Lookup Using Serial Number)
show equipment ont ng2-cfg-download (Universal NG-PON: OMCI Pre-Configuration download)
show equipment ont ng2-cfg-download channel-group (Universal NG-PON: OMCI Pre-Configuration download)
show voice sip isdn-cas-term (support for ISAMV ISDN SIP on NIAT-A board)

Commands or commands with parameters for future use, not supported yet

configure qos profiles policy-action count (multi-service support at ONT for untagged UNI)
configure qos profiles session rem-down-policy (multi-service support at ONT for untagged UNI)
configure qos profiles session rem-up-policy (multi-service support at ONT for untagged UNI)

Command delta R5.5 versus R5.4.01**Modified Commands**

admin interface cable (command description moved from obsoleted DPoE CLI guide to this guide)
configure alarm filter filterid (update for alarm changes)
configure ani ont tca-thresh (update threshold paramter)
configure cfm domain association (support for ERPS on uplinks and Fast CCM feature)
configure cfm y1731pm (no domain (domain-index) association (renamed parameter adminup to admin-up)
configure channel-group id subchannel-group id (support FWLT-A LOID ONU authentication (OLT part))
configure channel-pair interface (support Dynamic Upstream GPON/NG-PON2 CAC)
configure cm classifier name (update source and destination mask definition)
configure cm route-profile (update source and destination mask definition)
configure cm tlv-file (DPoE: Upstream data encryption on 10G PON)
configure cmts filter (update command description)
configure cmts interface (support interval based cable modem qos and service flow throughput rate)
configure cmts pon (DPoE Rogue ONU detection)
configure cmts pon (DPoE: Upstream data encryption on 10G PON)
configure cmts system (configure sending cm events to the Syslog server)
configure equipment ont interface (Configurable Rate Limiting at ONT side, OLT impact)
configure equipment shelf (update mode to support 7362 ISAM DF-16GW)
configure equipment slot (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
configure pon interface (support Dynamic Upstream GPON/NG-PON2 CAC)
configure qos profiles bandwidth (DBA Performance Improvement: DBRu enabled)
configure system sync-if-timing synce (update for NRNT-A CCR check)
configure trap definition (support Dynamic Upstream GPON/NG-PON2 CAC)
configure trap manager (support Dynamic Upstream GPON/NG-PON2 CAC and Zero-touch provisioning)
configure vlan id (add new command for protocol aware of DHCP/PPPOE)
configure voice cluster equipment termination (update Impedance Index)
configure voice sip server (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
configure voice sip termination (update Impedance Index)

configure voice sip user-agent (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
configure voice sip user-agent-ap slot-id (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
configure voice sip vsp (CVP: support Multiple SSP per CDE profile)
configure xdsl ont line (support VDSL2 parameter configuration and reporting over OMCI)
configure xdsl ont rtx-profile (support VDSL2 parameter configuration and reporting over OMCI)
configure xdsl ont spectrum-profile vdsl (support VDSL2 parameter configuration and reporting over OMCI)
show alarm query channel-pair (support Dynamic Upstream GPON/NG-PON2 CAC: support ranging mismatch)
show alarm query name (update for alarm changes)
show alarm query olt-gen (support Dynamic Upstream GPON/NG-PON2 CAC: show and clear ranging mismatch alarm)
show alarm query sip-plugin-unit (not supported parameter value dhcp-unreach removed)
show alarm query traffic-overflow (NT board type added)
show dpoe olt (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe onu (command description moved from obsoleted DPoE CLI guide to this guide)
show interface cable (command description moved from obsoleted DPoE CLI guide to this guide)
show interface dpoe (command description moved from obsoleted DPoE CLI guide to this guide)
show qos interface-bandwidth (support Dynamic Upstream GPON/NG-PON2 CAC)
show system license (ISAM Voice SIP CVP Multiple Voice Service Gateway Licensing)
show voice sip statistics termination current-15min (ISAMv SIP CVP : support additional PM counters at PORT level)
show voice sip statistics termination previous-15min (ISAMv SIP CVP : support additional PM counters at PORT level)
show xdsl ont operational-data far-end line (support VDSL2 parameter configuration and reporting over OMCI)
show xdsl ont operational-data near-end line (support VDSL2 parameter configuration and reporting over OMCI)

New Commands

admin cable modem (DPoE Rogue ONU detection)
admin channel-pair clear-alarm (support Dynamic Upstream GPON/NG-PON2 CAC)
admin cm uniport auto-nego (command description moved from obsoleted DPoE CLI guide to this guide)
admin cmts add-cm-event mac-addr (command description moved from obsoleted DPoE CLI guide to this guide)
admin cmts del-cm-event mac-addr (command description moved from obsoleted DPoE CLI guide to this guide)
admin cmts rogue-onu detection (DPoE Rogue ONU detection)
admin cmts security generate-key (DPoE: Upstream data encryption on 10G PON)
admin cmts vpls (command description moved from obsoleted DPoE CLI guide to this guide)

admin cmts vpls update vpn-id (command description moved from obsoleted DPoE CLI guide to this guide)
admin interface cable (command description moved from obsoleted DPoE CLI guide to this guide)
admin pon clear-alarm (support Dynamic Upstream GPON/NG-PON2 CAC)
configure cfm domain association mep active-remote-mep (support for ERPS on uplinks and Fast CCM feature)
configure system zero-touch-provision (support Zero-touch provisioning)
configure voice lsa-server (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
configure voice lsa-server instance (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
configure voice lsa-server system (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show alarm current sip-user-agent (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show alarm current uplink-ether-sfp (new ethernet SFP alarm)
show alarm log sip-user-agent (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show alarm log uplink-ether-sfp (new ethernet SFP alarm)
show alarm query sip-user-agent (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show alarm query uplink-ether-sfp (support for ethernet uplink SFP alarm)
show alarm snap-shot sip-user-agent (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show alarm snap-shot uplink-ether-sfp (new ethernet SFP alarm)
show cable config-file (command description moved from obsoleted DPoE CLI guide to this guide)
show cable flap-list (command description moved from obsoleted DPoE CLI guide to this guide)
show cable modem cable (command description moved from obsoleted DPoE CLI guide to this guide)
show cmts cm-event-ctrl (command description moved from obsoleted DPoE CLI guide to this guide)
show cmts ipdr (command description moved from obsoleted DPoE CLI guide to this guide)
show cmts ipdr status session (command description moved from obsoleted DPoE CLI guide to this guide)
show cmts mcast (command description moved from obsoleted DPoE CLI guide to this guide)
show cmts mcast gsf id (DPoE multicast display improvements)
show cmts mcast session slot (DPoE multicast display improvements)
show cmts rogue-onu (DPoE Rogue ONU detection)
show cmts security (DPoE: Upstream data encryption on 10G PON)
show cmts vpls (command description moved from obsoleted DPoE CLI guide to this guide)
show cmts vpls update (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe olt (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe onu (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe profile acl grp-id (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe profile pw-class name (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe profile vpls-class name (command description moved from obsoleted DPoE CLI guide to this guide)

show dpoe profile vpn-sg name (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe service v-vpls vpn-id (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe service vpls ip-addr (command description moved from obsoleted DPoE CLI guide to this guide)
show dpoe service vpws ip-addr (command description moved from obsoleted DPoE CLI guide to this guide)
show interface dpoe (command description moved from obsoleted DPoE CLI guide to this guide)
show voice lsa-instance (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show voice lsa-instance state (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show voice lsa-system (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show voice lsa-system state (ISAMv and 7363 ISAM MX: support Local Standalone SIP Server)
show voice sip all (CVP: support Multiple SSP per CDE profile)
show voice sip dhcpsipserver (CVP: support Multiple SSP per CDE profile)
show voice sip sspprofile (CVP: support Multiple SSP per CDE profile)

Commands or commands with parameters for future use, not supported yet

configure qos interface (parameter ds-schedule-tag not supported yet)
configure shdsl span (TDM support for 8 E1 ports on the NSLT-D not supported yet)
configure voice sip isdn-cas-term (new command to configure an ISDN termination)
configure voice sip lineid-syn-prof (parameter isdn-syntax not supported yet)
show alarm query sip-termination (E1 interface alarms ais-signal los-signal rai-signal npt supported yet)
show equipment ont index (CLI ONT Index Lookup Using SN)
show equipment ont ng2-cfg-download (NGPON2 OMCI Pre-Configuration-OLT part)
show equipment ont ng2-cfg-download channel-group (NGPON2 OMCI Pre-Configuration-OLT part)
show equipment ont ng2-sw-download (NGPON2 OMCI Pre-Configuration-OLT part)
show equipment ont ng2-sw-download channel-group (NGPON2 OMCI Pre-Configuration-OLT part)
show qos statistics color-queue (PON UNI extension)
show qos statistics color-queue current-15min (PON UNI extension)
show qos statistics color-queue prev-15min (PON UNI extension)
show voice sip isdn-cas-term (new command to show an ISDN termination)

Command delta R5.4.01 versus R5.4

Modified Commands

admin bridge learned-unicast-mac unicast-mac-address (SIP Voice Support on NG-PON2 (OLT Part))
admin dhcp-relay port-stats (SIP Voice Support on NG-PON2 (OLT Part))
admin equipment ont interface (support for Equipment Protection via Wavelength Mobility on NG-PON2 and add new alarm when dhcpd client can not get ip address)

admin iphost ping dest-ip (SIP Voice Support on NG-PON2 (OLT Part))
admin linetest single-if-index melt-reset (MELT improvements)
admin linetest single-if-index melt-selftest (MELT improvements)
admin security ext-authenticator (SIP Voice Support on NG-PON2 (OLT Part))
admin voice ont pots diagnostics (SIP Voice Support on NG-PON2 (OLT Part))
admin voice ont pots pb-dial-tone (SIP Voice Support on NG-PON2 (OLT Part))
admin voice ont pots sip-dial-tone sip-phone-number (SIP Voice Support on NG-PON2 (OLT Part))
admin voice ont voip-config (SIP Voice Support on NG-PON2 (OLT Part))
configure alarm entry (support for Equipment Protection via Wavelength Mobility on NG-PON2 and add new alarm when dhcpd client can not get ip address)
configure alarm filter filterid (support for Equipment Protection via Wavelength Mobility on NG-PON2)
configure bridge port (SIP Voice Support on NG-PON2 (OLT Part))
configure cfm domain association (Introduction of Maintenance Point on PON LTs : virtual UNI/Bridge port [segment B] on FGLT-B/FWLT-A)
configure cfm domain association (SIP Voice Support on NG-PON2 (OLT Part))
configure cfm domain association mep (SIP Voice Support on NG-PON2 (OLT Part))
configure cm classifier (command parameters marked as optional)
configure cm cm-static (command parameters marked as optional)
configure cm gen-ext (command parameters marked as optional)
configure cm ipv6-classif-pf (command parameters marked as optional)
configure cm oam (command parameters marked as optional)
configure cm route-profile (command parameters marked as optional)
configure cm service-flow (command parameters marked as optional)
configure cm sf-collection (command parameters marked as optional)
configure cm tlv-file (command parameters marked as optional)
configure cm uni-collection (command parameters marked as optional)
configure cm uniprofile (command parameters marked as optional)
configure cmts allowonu (command parameters marked as optional)
configure cmts bundle (command parameters marked as optional)
configure cmts cm-event (command parameters marked as optional)
configure cmts filter (command parameters marked as optional)
configure cmts ipdr (command parameters marked as optional)
configure cmts mesp (command parameters marked as optional)
configure cmts sav (command parameters marked as optional)
configure cmts serving-group (DPoE Multicast Support)
configure cmts serving-group (command parameters marked as optional)
configure cmts ssd (command parameters marked as optional)
configure cmts system (improvement to release CPE IP after ONU reset)

configure cmts vpls-class (command parameters marked as optional)
configure cmts vpn-sg (command parameters marked as optional)
configure dhcp-relay port-stats (SIP Voice Support on NG-PON2 (OLT Part))
configure equipment ont interface (update mobility support for Equipment Protection feature to configure protection channelpair)
configure equipment ont slot (GPON/NG-PON2 NNI feature extension : support for 64 IGMP signaling channels)
configure ethernet line mau (add new mau type 10gbasex)
configure igmp system (add support for unconfigured SSM multicast)
configure interface port (SIP Voice Support on NG-PON2 (OLT Part))
configure iphost ont (SIP Voice Support on NG-PON2 (OLT Part))
configure linetest cluster ltparm test-name (ISAMV SIP Forced ringing test update)
configure linetest single ltparm test-name (support GR909 draw and break dial tone delay)
configure linetest single ltssession (new parameter force-measure to force the MELT measurement even if the SLIC hardware fails)
configure linetest single ltssession session-cmd ownerid timeout-period line-num type-high force-ring-subscrib (ISAMV SIP Forced ringing test update)
configure mcast static branch (SIP Voice Support on NG-PON2 (OLT Part))
configure qos interface (SIP Voice Support on NG-PON2 (OLT Part))
configure qos tca queue (SIP Voice Support on NG-PON2 (OLT Part))
configure system security pae authenticator (SIP Voice Support on NG-PON2 (OLT Part))
configure system security pae ext-authenticator (SIP Voice Support on NG-PON2 (OLT Part))
configure system security pae port (SIP Voice Support on NG-PON2 (OLT Part))
configure system security ssh access (support debugkernel on FANT-G)
configure system security ssh user (improved handling of parameter key)
configure trap definition (support for Equipment Protection via Wavelength Mobility on NG-PON2)
configure trap manager (support for Equipment Protection via Wavelength Mobility on NG-PON2)
configure vlan pbit-statistics port (SIP Voice Support on NG-PON2 (OLT Part))
configure vlan port-protocol (SIP Voice Support on NG-PON2 (OLT Part))
configure vlan unicast-mac vlan-id (SIP Voice Support on NG-PON2 (OLT Part))
configure vlan vlan-port unicast-mac (SIP Voice Support on NG-PON2 (OLT Part))

show voice sip statistics board cur-15min (updated output to show the SIP statistics)
show voice sip statistics board prev-15min (updated output to show the SIP statistics)
show voice sip statistics termination (update for PM counters at port level)
show xdsl operational-data line (new reporting of XDSL line initialization state)
tools perform cfm dual-tag mep domain association (Introduction of Maintenance Point on PON LTs : virtual UNI/Bridge port [segment B] on FGLT-B/FWLT-A)

New Commands

admin linetest single melt-reset (MELT improvements)
admin linetest single melt-selftest (MELT improvements)
admin system techsupport clear-on-demand session (on demand tech support file generation for datapath troubleshooting legacy Fiber LTs)
admin system techsupport gen-on-demand (on demand tech support file generation for datapath troubleshooting legacy Fiber LTs)
configure cmts mcast (DPoE Multicast Support)
configure cmts mcast dgsc (DPoE Multicast Support)
configure cmts mcast group-config (DPoE Multicast Support)
configure cmts mcast group-qos-config (DPoE Multicast Support)
configure cwmp plt (support NAPT and DHCP in redundant mode)
configure dhcp-server (support NAPT and DHCP in redundant mode)
configure nat (support NAPT and DHCP in redundant mode)
show alarm current ont-protection (support for Equipment Protection via Wavelength Mobility on NG-PON2)
show alarm log ont-protection (support for Equipment Protection via Wavelength Mobility on NG-PON2)
show alarm query ont-protection (support for Equipment Protection via Wavelength Mobility on NG-PON2)
show alarm snap-shot ont-protection (support for Equipment Protection via Wavelength Mobility on NG-PON2)
show cmts mcast gsf (DPoE Multicast Support (see the DPoE CLI guide))
show cmts mcast session (DPoE Multicast Support (see the DPoE CLI guide))
show cwmp (support NAPT and DHCP in redundant mode)
show cwmp plt (support NAPT and DHCP in redundant mode)
show linetest single hw-status (MELT improvements)
show linetest single melt-reset (MELT improvements)

show linetest single melt-selftest (MELT improvements)
show nat session (support NAPT and DHCP in redundant mode)
show system sync-if-timing-master (show the detailed information of current PTP master SyncE/SSM-QL Out)

Command delta R5.4 versus R5.3.01

Modified Commands
admin equipment slot (command tree display lined up with actual overrule parameter)
admin security ext-authenticator (support 802.1x on NGPON2 LT)
admin trouble-shooting interface (corrected command description clear-statistics)
admin trouble-shooting pbit interface (corrected command description clear-statistics)
admin trouble-shooting pon interface (corrected command description clear-statistics)
admin voice ont pots diagnostics (improvement for MLT diagnostics test result)
configure alarm entry (new alarms for CLI login failure alarm, Queue Load monitoring)
configure alarm filter filterid (update alarm list)
configure bridge port vlan-id (FELT-B VULA uplink Lightweight TPID support)
configure cfm domain association mep (support of AIS on ONT UNI (OLT part))
configure cm (DPoE command description moved from DPoE CLI command guide to this guide)
configure cmts bundle (New parameter to specify the default serving group in a bundle)
configure cmts l2vpn (update l2vpn CLI help/man info)
configure cmts pon (add support for Type 4 10G EPON optics module with turbo speed mode)
configure cmts pw-class name (updated MTU size range and default value)
configure cmts system (DHCP Lease Query support)
configure cmts vpls-class name (updated MTU size range and default value)
configure equipment diagnostics sfp (support for Next generation NT (FANT-G))
configure equipment rssiprof (support for Next generation NT (FANT-G))
configure equipment rssiprof (support for temperature alarm attributes in SFP RSSI profile)
configure equipment shelf (support no-extended-slots shelf mode)
configure qos interface (update RANT-A/SRNT-E-cac-profile)
configure qos tca queue (support Queue Load monitoring and TCA alarm)
configure system security pae authenticator (support 802.1x on NGPON2 LT)
configure system security pae ext-authenticator (support 802.1x on NGPON2 LT)
configure system security pae port (support 802.1x on NGPON2 LT)
configure system security ssh sftp-user (default parameters defined)
configure vlan id (DHCP/PPPoE made fully transparent when no add or replace options in tag)
configure xdsl board (support Legacy profile for optimized upstream vectoring)
configure xdsl line (support to force vectored lines in fallback mode)

configure xdsl vect-profile (support Legacy profile for optimized upstream vectoring)
show alarm current ont (renamed tod-out-sync to ont-gen-tod-out-sync to line up with config command)
show alarm current qos-queue (support Queue Load monitoring and TCA alarm)
show alarm log qos-queue (support Queue Load monitoring and TCA alarm)
show alarm query ihub-link (support for Next generation NT (FANT-G))
show alarm query ihub-tca (support for Next generation NT (FANT-G))
show alarm query name (new alarms added)
show alarm query qos-queue (support Queue Load monitoring and TCA alarm)
show cable modem (add support for Type 4 10G EPON optics module with turbo speed mode)
show dpoe onu (add support for Type 4 10G EPON optics module with turbo speed mode)
show equipment diagnostics sfp (support for Next generation NT (FANT-G))
show equipment diagnostics sfp-threshold (support for Next generation NT (FANT-G))
show equipment transceiver-inventory (support for Next generation NT (FANT-G))
show qos statistics buffer-overflow (support Queue Load monitoring and TCA alarm)
show qos statistics lt-cos (support Queue Load monitoring and TCA alarm)
show qos statistics queue (support Queue Load monitoring and TCA alarm)
show security pae mac-address (support 802.1x on NGPON2 LT)
show system license (add support for VULA)
show trouble-shooting statistics vlanport bridgeport-id (FELT-B VULA uplink Lightweight TPID support)
show xdsl profiles (support Legacy profile for optimized upstream vectoring)

New Commands

admin system techsupport (manage techsupport information (to determine Root Cause of Fiber LT Resets))
configure bridge port vlan-tpid0 (FELT-B VULA uplink Lightweight TPID support)
configure bridge port vlan-tpid1 (FELT-B VULA uplink Lightweight TPID support)
configure cfm domain association mep y1731ais (support of AIS on ONT UNI (OLT part))
configure ethernet ont cfm (support of AIS on ONT UNI (OLT part))
configure system scalingmode (support for Next generation NT (FANT-G))
configure vlan tpid (FELT-B VULA uplink Lightweight TPID support)
configure xdsl leg-upbo-profile (support Legacy profile for optimized upstream vectoring)
show cfm mep-y1731ais-info (support of AIS on ONT UNI (OLT part))
show cfm mep-y1731ais-info domain (support of AIS on ONT UNI (OLT part))
show system ipv6-prefix-mgmt (added cpu filter ipv6 cli hook)
show system scalingmode (support for Next generation NT (FANT-G))
show system techsupport (manage techsupport information (to determine Root Cause of Fiber LT Resets))

Commands or commands with parameters for future use, not supported yet

configure cfm domain association (parameter mhf-location not supported yet)
configure link-aggr group (new parameter value l2-l3-hybrid-model not supported yet)
configure qos profiles aggrqueuesconfig (restricted command for future use)
configure voice sip termination (new parameter telc-clip-mode not supported yet)
show alarm current eqpt-psu (restricted command for future use)
show alarm log eqpt-psu (restricted command for future use)
show alarm query eqpt-holder-ext (parameters water-seepage-in-box and sealed-box-open restricted use)
show alarm query eqpt-psu (restricted command for future use)
show alarm query ont-lan (new parameter ont-svc-enet-poos not supported yet)
show alarm query ont-pots (new parameter ont-svc-pots-poos not supported yet)
show alarm snap-shot eqpt-psu (restricted command for future use)
show equipment power-supply (restricted command for future use)
show qos profile-usage aggrqueuesconfig (restricted command for future use)

Command delta R5.3.01 versus R5.3

Modified Commands
admin efm-oam interface (EFM OAM remote loopback enhancement, support loopback timeout and parser action configuration)
configure alarm entry (new alarms for Home Gateway Unit (HGU), Alarm notification Failover/Failback, DHCP unreachable, low disk space and IEEE1588 hybrid fail)
configure alarm filter filterid (new alarms added in alarm filter command)
configure cfm domain association (CFM parameter bridge-port extended to support the NG-PON2 numbering scheme)
configure cfm domain association mep (CFM parameter location extended to support the NG-PON2 numbering scheme)
configure cmts (DPoE command description for configure cmts has been moved from the dedicated DPoE CLI command guide to this guide)
configure efm-oam interface (not supported parameters removed)
configure qos interface (support scheduler mode for GPON packets per service)
configure qos profiles shaper (traffic rate limiting per GEM port with CIR support)
configure system sync-if-timing ptp (support IEEE1588 hybrid mode)
configure system sync-if-timing tod-ref-order (support IEEE1588 hybrid mode)
configure vlan id (support actual line rate for DHCPv6)
configure voice cluster equipment termination (update command to enable the voice service per line)
configure xdsl board (vplt-autodiscovery option enable-both-lnk1-lnk2 is not supported yet)
configure xdsl line (support for VDSL2 g993-2-35b)
configure xdsl ont spectrum-profile vdsl2 (VDSL2 Custom PSD shape configuration over OMCI for G-010V-P and G-010V-Q)
configure xdsl spectrum-profile (support for VDSL2 g993-2-35b)

configure xdsl spectrum-profile vdsl (parameter values for VectNadnPlan : b998ade17ds30us35 b998e17ds30us35 b998ade17ds35 b998e17ds35 not supported yet)
configure xdsl spectrum-profile vdsl (removed unused parameter values b998ade17ds30us35 b998e17ds30us35)
configure xdsl vce-profile (parameter values for VectNadnPlan : b998ade17ds30us35 b998e17ds30us35 b998ade17ds35 b998e17ds35 not supported yet)
configure xdsl vce-profile (parameter vce-max-vect-freq not supported yet)
configure xdsl vce-profile (removed unused parameter values b998ade17ds30us35 b998e17ds30us35)
show alarm query mgt-sec-access (improved translation of alarm name of mgmt-sec-access)
show alarm query name (update to support new alarms)
show alarm query sw-mgmt (alarm added for low diskpace)
show efm-oam loopback-info (EFM OAM remote loopback enhancement to retrieve the remote loopback remaining timeout value.)
show system license (support for VDSL2 g993-2-35b)
show xdsl vect-group (support for VDSL2 g993-2-35b)

New Commands

configure alarm hgu-tr069-cust (configuration of Home Gateway Unit (HGU) customized alarms)
configure xdsl ont spectrum-profile vdsl2 cust-psd-pt-down (VDSL2 Custom PSD shape configuration over OMCI for G-010V-P and G-010V-Q)
configure xdsl ont spectrum-profile vdsl2 cust-psd-pt-up (VDSL2 Custom PSD shape configuration over OMCI for G-010V-P and G-010V-Q)
show alarm current hgu-tr069 (show alarms for Home Gateway Unit (HGU) customized)
show alarm current mdu-sup2 (new alarm for RSSI TCA function)
show alarm current ont-ani (new alarm for RSSI TCA function)
show alarm current sfu-sup2 (new alarm for RSSI TCA function)
show alarm current soho-sup2 (new alarm for RSSI TCA function)
show alarm log hgu-tr069 (show alarms for Home Gateway Unit (HGU) customized)
show alarm log mdu-sup2 (new alarm for RSSI TCA function)
show alarm log ont-ani (new alarm for RSSI TCA function)
show alarm log sfu-sup2 (new alarm for RSSI TCA function)
show alarm log soho-sup2 (new alarm for RSSI TCA function)
show alarm query hgu-tr069 (show alarms for Home Gateway Unit (HGU) customized)
show alarm snap-shot hgu-tr069 (show alarms for Home Gateway Unit (HGU) customized)
show alarm snap-shot mdu-sup2 (new alarm for RSSI TCA function)
show alarm snap-shot ont-ani (new alarm for RSSI TCA function)
show alarm snap-shot sfu-sup2 (new alarm for RSSI TCA function)
show alarm snap-shot soho-sup2 (new alarm for RSSI TCA function)

Commands or commands with parameters for future use, not supported yet

configure xdsl ont rtx-profile (VDSL2 parameter configuration and reporting over OMCI not supported yet)
configure xdsl ont line (VDSL2 parameter configuration and reporting over OMCI not supported yet)
show xdsl ont operational-data near-end line (VDSL2 parameter configuration and reporting over OMCI not supported yet)
show xdsl ont operational-data far-end line (VDSL2 parameter configuration and reporting over OMCI not supported yet)

Removed Commands

configure ai (removal of not supported commands for application intelligence)

Command delta R5.3 versus R5.2.01

Modified Commands

admin trouble-shooting interface (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure alarm entry (new alarms for HGU configuration, NGPON2 CMAC Loss of OMCI channel, channelpair and CF error)
configure alarm filter filterid (new alarms added)
configure bridge port (removed invalid values 4092 and 4096 from available range of vlanIds)
configure bridge port vlan-id (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure cfm domain association (removed invalid values 4092 and 4096 from available range of vlanIds)
configure cmts l2vpn (no option is not applicable for l2vpn and removed)
configure equipment diagnostics (no option is not applicable for diagnostics and removed)
configure equipment sfpe1t1 (no option is not applicable for sfpe1t1 and removed)
configure equipment slot (support text based dump and restore)
configure ethernet line (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure ethernet line mau (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure ethernet line tca-line-threshold (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure ipoa/e-iw gateway (removed invalid values 4092 and 4096 from available range of vlanIds)
configure linetest cluster ltsession (parameter value force-ring-subscrib not supported yet)
configure linetest single ltsession (parameter value force-ring-subscrib not supported yet)
configure pon (Allow GPON ONUs to range in the presence of Alien ONUs)
configure ppox-relay cross-connect client-port (removed invalid values 4092 and 4096 from available range of vlanIds)
configure ppox-relay cross-connect engine (removed invalid values 4092 and 4096 from available range of vlanIds)

configure qos (DEI support on NELT-B for color aware queuing and policing)
configure qos interface (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure qos profiles ingress-qos (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure qos profiles policer (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure qos profiles session (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure qos tca queue (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure system security default-profile (restrict access rights for AI config commands)
configure system security filetransfer server (support text based dump and restore of Core 0)
configure system security operator (request to verify Current Password before accepting the change password for existing operators)
configure system security profile (restrict access rights for AI config commands)
configure system security radius acc-server (support text based dump and restore of Core 0)
configure system security radius auth-server (support text based dump and restore of Core 0)
configure system security radius dyn-auth-client (support text based dump and restore of Core 0)
configure system security snmp community (add docsis to SNMP context)
configure system security snmp group (add docsis to SNMP context)
configure system security ssh sftp-user (support text based dump and restore of Core 0)
configure system security tacacs acc-server (support text based dump and restore of Core 0)
configure system security tacacs authen-server (support text based dump and restore of Core 0)
configure system security tacacs author-server (support text based dump and restore of Core 0)
configure trouble-shooting statistics interface (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure vlan id (removed invalid values 4092 and 4096 from available range of vlanIds)
configure vlan unicast-mac (removed invalid values 4092 and 4096 from available range of vlanIds)
configure voice cluster equipment board planned-type (support nvps-c Voice Megaco Equipment Board)
configure voice cluster equipment termination (support enabling H.248 DSL voice service configuration per line)
configure voice cluster ip (porting MDU DHCP for 7363 ISAM MX and 7367 ISAM SX)
configure voice cluster media-gateway (porting MDU DHCP for 7363 ISAM MX and 7367 ISAM SX)
configure voice cluster signal-gateway (ISAMV H.248 obsolete no option removed for Prim/sec/tert/quat ASP IP)
configure voice sip register register-uri (extend the multiple VAG up to 16 VAG on 7363 MX-6/7302 ISAM-V)
configure voice sip transport provider-name udp admin-status (extend the multiple VAG up to 16 VAG on 7363 MX-6/7302 ISAM-V)
configure voice sip user-agent (extend the multiple VAG up to 16 VAG on 7363 MX-6/7302 ISAM-V)

configure voice sip user-agent-ap (extend the multiple VAG up to 16 VAG on 7363 MX-6/7302 ISAM-V)
configure voice sip vsp admin-status (extend the multiple VAG up to 16 VAG on 7363 MX-6/7302 ISAM-V)
configure voice sip vsp domain-name (extend the multiple VAG up to 16 VAG on 7363 MX-6/7302 ISAM-V)
configure xdsl board vect-fallback (support SOS for VDSL2 on vectoring boards)
configure xdsl line (support SOS for VDSL2 on vectoring boards)
configure xdsl service-profile (support SOS for VDSL2 on vectoring boards)
show vlan dup-mac-alarm (removed invalid values 4092 and 4096 from available range of vlanIds)
show vlan fdb-board (removed invalid values 4092 and 4096 from available range of vlanIds)
show equipment ont utilization current-interval (completion of PON Utilization and Threshold for FWLT-A)
show equipment ont utilization previous-interval (completion of PON Utilization and Threshold for FWLT-A)
show mcast pon-active-groups (completion of PON Utilization and Threshold for FWLT-A)
show pon optics (completion of PON Utilization and Threshold for FWLT-A)
show pon pon-diagnostics (completion of PON Utilization and Threshold for FWLT-A)
show qos interface-bandwidth (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
show qos statistics queue current-15min (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
show qos statistics queue prev-15min (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
show system license (add G.FAST and vdsl2-35b-mode licenses)
show xdsl counters far-end line current-interval/current-1day (support SOS for VDSL2 on vectoring boards)
show xdsl counters far-end line previous-interval/previous-1day (support SOS for VDSL2 on vectoring boards)
show xdsl counters near-end line current-interval/current-1day (support SOS for VDSL2 on vectoring boards)
show xdsl counters near-end line previous-interval/previous-1day (support SOS for VDSL2 on vectoring boards)
show xdsl operational-data far-end line (support SOS for VDSL2 on vectoring boards)
show xdsl operational-data near-end line (support SOS for VDSL2 on vectoring boards)
show xdsl profiles (support SOS for VDSL2 on vectoring boards)

New Commands

admin channel-pair utilization (completion of PON Utilization and Threshold for FWLT-A)
admin config-file (support text based dump and restore of Core 0)
admin config-file activate (support text based dump and restore of Core 0)
admin config-file delete (support text based dump and restore of Core 0)

admin config-file download (support text based dump and restore of Core 0)
admin config-file rename (support text based dump and restore of Core 0)
admin config-file save (support text based dump and restore of Core 0)
admin config-file upload (support text based dump and restore of Core 0)
configure channel-pair interface utilization (completion of PON Utilization and Threshold for FWLT-A)
configure channel-pair interface utilization threshold (completion of PON Utilization and Threshold for FWLT-A)
configure cmts ipdr (add IPDR for measurement of traffic data of users)
configure cmts ipdr-global (add IPDR for measurement of traffic data of users)
configure qos profiles cos-threshold (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
configure qos upstr-prot-dsl (enabling QoS handling of upstream protocol for DSL LTs)
configure xdsl sos-profile (support SOS for VDSL2 on vectoring boards)
show alarm current olt-chpr-util-tca (completion of PON Utilization and Threshold for FWLT-A)
show alarm log olt-chpr-util-tca (completion of PON Utilization and Threshold for FWLT-A)
show alarm query (new command tree to add coverage of active alarms information)
show alarm snap-shot olt-chpr-util-tca (completion of PON Utilization and Threshold for FWLT-A)
show channel-pair utilization (completion of PON Utilization and Threshold for FWLT-A)
show channel-pair utilization cur-intvl-top-ont-rx (completion of PON Utilization and Threshold for FWLT-A)
show channel-pair utilization cur-intvl-top-ont-tx (completion of PON Utilization and Threshold for FWLT-A)
show channel-pair utilization current-interval (completion of PON Utilization and Threshold for FWLT-A)
show channel-pair utilization previous-interval (completion of PON Utilization and Threshold for FWLT-A)
show channel-pair utilization prv-intvl-top-ont-rx (completion of PON Utilization and Threshold for FWLT-A)
show channel-pair utilization prv-intvl-top-ont-tx (completion of PON Utilization and Threshold for FWLT-A)
show config-file (support text based dump and restore of Core 0)
show equipment ont software-download (new command to get software-download status of ng2 ONTs per channel-group and subchannel-group basis)
show equipment ont software-download channel-group (new command to get software-download status of ng2 ONTs per channel-group and subchannel-group basis)
show qos bandwidth-profile (new command to report actual QoS bandwidth profile values)
show qos profile-usage cos-threshold (Business/Pre-Aggregation P2P LT variant (FELT-B) - Application limited to VULA uplink)
tee-config (support text based dump and restore of Core 0)

Commands or commands with parameters for future use, not supported yet

configure cfm domain association mep (new parameter equipment not supported yet)

configure linetest cluster ltparm test-name (parameter value bat-imped-discard replaced by force-ring-subscrib)
configure linetest single ltparm test-name (parameter value bat-imped-discard replaced by force-ring-subscrib)
configure system external-leds (command to configure and store system leds status)
configure xdsl board (vpllt-autodiscovery option enable-both-lnk1-lnk2 is not supported yet)
configure xdsl line (parameter g993-2-35b not supported yet)
configure xdsl spectrum-profile (parameter g993-2-35b not supported yet)
configure xdsl spectrum-profile vdsl (parameter values for VectNadnPlan : b998ade17ds30us35 b998e17ds30us35 b998ade17ds35 b998e17ds35 not supported yet)
configure xdsl vce-profile (parameter values for VectNadnPlan : b998ade17ds30us35 b998e17ds30us35 b998ade17ds35 b998e17ds35 not supported yet)
configure xdsl vce-profile (parameter vce-max-vect-freq not supported yet)
show cfm stack (new parameter equipment not supported yet)
show linetest cluster lineid-ext-rept (not used parameter renamed for later use)
show linetest single lineid-ext-rept (not used parameter renamed for later use)
show system license (parameter value vplus not supported)
show xdsl vect-group (extend show vect-group with own2 entry)

Command delta R5.2.01 versus R5.2

Modified Commands
configure alarm entry (add GPON CFM alarm to report ais on CFI interface)
configure alarm entry (support GNSS ToD, SSM-QL from GPON-LT to ONU)
configure alarm filter filterid (add GPON CFM alarm to report ais on CFI interface)
configure alarm filter filterid (support GNSS ToD, SSM-QL from GPON-LT to ONU)
configure cfm domain association (ETH CFM Configurable LTM messages forwarding)
configure cfm domain association (support dual tagged CFM messages when configured for C-VLAN CC)
configure cmts system (enable system switch to turn on/off RIP snooping and change RIP timeout)
configure interface port (IF-MIB counters for POTS (SIP controlled) line interfaces)
configure linetest single ltparm test-name (configure whether termination ringer is detected)
configure linetest single ltssession (updating line test parameters for zener, adding iltf-term-ringer and collective test for NBLT)
configure qos profiles session (OLT configuration for ONT policer)
configure system loop-id-syntax (support S-VLAN in PPPoE and DHCP tag for S+C CC)
configure system security (TACACS+ Operator CLI phase 2 : authentication and authorization)
configure system security operator (option %i added to the prompt configuration to show the system id in the operator prompt)
configure system security pmfile upload (obsolete parameters upload-username and upload-password)

removed)
configure system security profile (option %i added to the prompt configuration to show the system id in the operator profile prompt)
configure system security snmp user (strong encryption for SNMPv3)
configure system security ssh user (range of ssh user key extended from 725 to 1200)
configure system security tacacs (TACACS+ Operator CLI phase 2 : authentication and authorization)
configure system security tacacs policy servers (TACACS+ Operator CLI phase 2 : authentication and authorization)
configure system sync-if-timing ptp default-dataset (support two source type GNSS ToD, SSM-QL from GPON-LT to ONU)
configure system sync-if-timing ptp slave-port-dataset (support ToD configurable time delay compensation)
configure system sync-if-timing ssmout-ltport ssmout-enable (support GNSS ToD, SSM-QL from GPON-LT to ONU)
configure system sync-if-timing tod (support GNSS ToD, SSM-QL from GPON-LT to ONU)
configure system sync-if-timing tod (support ToD configurable leap second handling)
configure system sync-if-timing tod-ref-order (support two source type GNSS ToD, SSM-QL from GPON-LT to ONU)
configure voice sip termination (enlarge accessontimeout maximum value to 900 sec. Change default value to 900 sec.)
configure xdsl spectrum-profile vdsl pbo (updated behaviour of default parametervalue for param-a and param-b, no option removed)
configure xdsl spectrum-profile vdsl2 pbo (updated behaviour of default parametervalue for param-a and param-b, no option removed)
environment prompt (option %i added to the description of the prompt configuration to show the system id in the session prompt)
show cfm ma-config-data domain association (ETH CFM Configurable LTM messages forwarding)
show cfm ma-config-data domain association (support dual tagged CFM messages when configured for C-VLAN CC)
show equipment ont ranging-status channel-group (fix to display ONTs with index larger than 128)
show interface availability (IF-MIB counters for POTS (SIP controlled) line interfaces)
show interface port (IF-MIB counters for POTS (SIP controlled) line interfaces)
show interface stack (IF-MIB counters for POTS (SIP controlled) line interfaces)
show interface test (IF-MIB counters for POTS (SIP controlled) line interfaces)
show linetest single lineid-ext-rept (add linetest to show whether termination ringer is detected)

New Commands

configure alias (DPoE command to create, modify, remove and retrieve alias CLI)
configure qos profiles policer-per-tc (OLT configuration for ONT policer)
configure qos profiles policer-per-tc tc-policer (OLT configuration for ONT policer)
configure system security tacacs authen-server router-instance (TACACS+ Operator CLI phase 2 : authentication and authorization)

configure system security tacacs author-server router-instance (TACACS+ Operator CLI phase 2 : authentication and authorization)
show qos profile-usage policer-per-tc (OLT configuration for ONT policer)
show security tacacs (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs acc-server (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs acc-server state (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs acc-server statistics (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs authen-server (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs authen-server state (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs authen-server statistics (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs author-server (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs author-server state (TACACS+ Operator CLI phase 2 : authentication and authorization)
show security tacacs author-server statistics (TACACS+ Operator CLI phase 2 : authentication and authorization)
show voice sip port-state (SIP (CVP) : support call states in compliance with 163TR26)

Commands or commands with parameters for future use, not supported yet

configure ethernet line (parameter uplink not supported yet)
configure ethernet line mau (parameter value 10gbasesr not supported yet)
configure qos interface (parameter value ltuplink not supported yet)

configure voice ont (improved retrieval of toneset profile)
config vlan id (closing feature gaps between FGLT-B and FGLT-A)
configure qos profiles policer (closing feature gaps between FGLT-B and FGLT-A)
configure pppox-relay cross-connect (closing feature gaps between FGLT-B and FGLT-A)
show voice ont pots operational-data (add new values to VOIP Voice Server Status in OLT)
admin cmts add-cm-event (VCM Event Improvement)
admin cmts del-cm-event (VCM Event Improvement)
show cmts cm-event-ctrl (VCM Event Improvement)

New Commands

configure cm route_profile (add configure cm route-profile cli in core 0)
configure pppoe-client interface (ARP/PPPoE/VLAN GPON 2 parameter types merged into common interface type)
configure xdsl-bonding board (adding bonding vectoring fallback)
configure xdsl-bonding board vect-fallback (adding bonding vectoring fallback)

New Parameters or Parameter Values NOT supported yet

configure alarm entry (alarms hpr-com-fail,chpr-tx-fail,chpr-unprov-ont,chpr-prov-mismatch,chpr-loss-sig,chpr-diagnostic,chpr-loid-conflict,chpr-loid-pv

not supported yet)

configure alarm filter filterid(alarms

hpr-com-fail,chpr-tx-fail,chpr-unprov-ont,chpr-prov-mismatch,chpr-loss-sig,chpr-diagnostic,chpr-loid-conflict,chpr-loid-pv

not supported yet)

Command delta R5.1 versus R5.0.01

Modified Commands

configure cfm domain association mep (supporting LM originator and historical counters for past measurements on VDSL LTs)

configure cfm y1731pm domain association (supporting LM originator and historical counters for past measurements on VDSL LTs)

configure equipment shelf (adding mode that supports NT-B slot that can be used as LT slot)

show equipment shelf (adding mode that supports NT-B slot that can be used as LT slot)

configure linetest cluster ltparm test-name (adding megaco testtypes, GR909 faults testing, fixing dial tone delay)

configure linetest cluster ltsession (adding megaco testtypes, GR909 faults testing, fixing dial tone delay)

show linetest cluster lineid-ext-rept (adding megaco testtypes, GR909 faults testing, fixing dial tone delay)

configure qos dsl-ctrl-pkt-policer (adding option to disable policing of RIP/ARP traffic on data plane in upstream)

configure system (adding support for voice image selection)

configure vlan id (removed obsoleted parameters broadcast-frames and secure-forwarding)

configure voice cluster media-gateway (updating supported MGC types)

configure voice cluster equipment termination (updating supported termination for 270duratelsplitter and 2703splitter)

configure voice sip termination (updating supported termination for 270duratelsplitter and 2703splitter)

show system license (lining up license key counters for TL1 and CLI)

show xdsl config-data-port igmp (remove PON identifiers from the res-ids)

show voice ont pots operational-data detail (adding additional field line-state)

show interface port (updated description of last-chg-opr-stat)

configure equipment applique (adding support for FNIO-A)

show equipment applique (adding support for FNIO-A)

configure equipment rssiprof (difference in ranges provided for parameters tx-pwr and rx-pwr)

configure ethernet ont (configurable behaviour for Ethernet port on PONLOS)

configure veip ont (configurable behaviour for Ethernet port on PONLOS)

configure xdsl ont spectrum-profile (removing unsupported operational modes)

admin voice cluster media-gateway (adding support for Single Node Standalone SOS operation, adding failover to ESA MGC alarm type)

configure alarm entry (adding failover to ESA MGC alarm type)

configure alarm filter filterid (adding failover to ESA MGC alarm type)

New Commands
show equipment planned-resource (showing the actual values of configured hardware resources on boards)
configure qos pbit-scheduling (configuring the p-bit behavior of the S+C vlan forwarding model in both upstream and downstream direction)
configure xdsl-bonding board (adding bonding vectoring fallback for future use)
configure xdsl-bonding board vect-fallback (adding bonding vectoring fallback for future use)
show mcast ont-active-groups (shows the list of active multicast streams per user interface on a particular ONT)
show mcast pon-active-groups (shows the list of active multicast streams per user interface on a particular PON)
admin cmts (adding MEF2.0 CLI nodes on FANT-F core0)
configure cmts mesp (adding MEF2.0 CLI nodes on FANT-F core0)
configure cmts pw-class (adding MEF2.0 CLI nodes on FANT-F core0)
configure cmts vpls-class (adding MEF2.0 CLI nodes on FANT-F core0)
configure cmts vpn-sg (adding MEF2.0 CLI nodes on FANT-F core0)
show cmts (adding MEF2.0 CLI nodes on FANT-F core0)
configure service pw-template (BGP auto-discovery and signaling support for VPLS and EPIPE services)
show dpoe profile (add DPOE CLI node: profile)
show dpoe service (add DPOE CLI node: service)

New commands NOT supported yet
admin channel-pair (changes for channel-pair related commands supporting NGPON2)
admin channel-pair diagnostic (changes for channel-pair related commands supporting NGPON2)
configure channel-group (changes for channel-pair related commands supporting NGPON2)
configure channel-group id (changes for channel-pair related commands supporting NGPON2)
configure channel-group id channel-pair (changes for channel-pair related commands supporting NGPON2)
configure channel-group id subchannel-group (changes for channel-pair related commands supporting NGPON2)
configure channel-group id subchannel-group id (changes for channel-pair related commands supporting NGPON2)
configure channel-group id subchannel-group id channel-pair (changes for channel-pair related commands supporting NGPON2)
configure channel-pair (changes for channel-pair related commands supporting NGPON2)
configure channel-pair interface (changes for channel-pair related commands supporting NGPON2)
configure channel-pair interface fec-tc-layer (changes for channel-pair related commands supporting NGPON2)
configure channel-pair interface mcast-tc-layer (changes for channel-pair related commands supporting NGPON2)
configure channel-pair interface phy-layer (changes for channel-pair related commands supporting NGPON2)

NGPON2)
configure channel-pair interface tc-layer (changes for channel-pair related commands supporting NGPON2)
configure channel-pair interface xg-tc-layer (changes for channel-pair related commands supporting NGPON2)
configure channel-pair profiles (changes for channel-pair related commands supporting NGPON2)
configure channel-pair profiles wavelength-prof (changes for channel-pair related commands supporting NGPON2)
show channel-pair (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface fec-tc-layer (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface fec-tc-layer current-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface mcast-tc-layer (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface mcast-tc-layer current-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface mcast-tc-layer previous-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface phy-layer (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface phy-layer current-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface tc-layer (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface tc-layer current-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface tc-layer previous-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface xg-tc-layer (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface xg-tc-layer current-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair interface xg-tc-layer previous-interval (changes for channel-pair related commands supporting NGPON2)
show channel-pair sfp-inventory (changes for channel-pair related commands supporting NGPON2)

New parameter values for NGPON2 NOT supported yet

admin equipment ont data-store (changes to enable planning, creating and managing NGPON2 interfaces)
admin equipment ont interface (changes to enable planning, creating and managing NGPON2 interfaces)
configure ani ont tca-thresh (changes for commands supporting NGPON2)
configure ani ont video (changes for commands supporting NGPON2)
configure equipment ont interface (changes for commands supporting NGPON2)
configure equipment ont loop (changes for commands supporting NGPON2)

configure interface alarm (changes for commands supporting NGPON2)
configure interface port (changes for commands supporting NGPON2)
configure ntp ont (changes for commands supporting NGPON2)
configure qos interface (changes for commands supporting NGPON2)
configure qos tca queue (changes for commands supporting NGPON2)
configure xdsl ont interface (changes for commands supporting NGPON2)
show ani ont operational-data (changes for commands supporting NGPON2)
show ani ont video (changes for commands supporting NGPON2)
show ani ont video-stats (changes for commands supporting NGPON2)
show equipment ont data-store (changes for commands supporting NGPON2)
show equipment ont ethernet current-interval (changes for commands supporting NGPON2)
show equipment ont ethernet previous-interval (changes for commands supporting NGPON2)
show equipment ont ethernet total (changes for commands supporting NGPON2)
show equipment ont fec-tc-layer olt-side current-interval (changes for commands supporting NGPON2)
show equipment ont fec-tc-layer ont-side current-interval (changes for commands supporting NGPON2)
show equipment ont interface (changes for commands supporting NGPON2)
show equipment ont mcast-tc-layer ont-side current-interval (changes for commands supporting NGPON2)
show equipment ont mcast-tc-layer ont-side previous-interval (changes for commands supporting NGPON2)
show equipment ont operational-data (changes for commands supporting NGPON2)
show equipment ont optics (changes for commands supporting NGPON2)
show equipment ont optics-history (changes for commands supporting NGPON2)
show equipment ont phy-layer olt-side current-interval (changes for commands supporting NGPON2)
show equipment ont pwr-shed (changes for commands supporting NGPON2)
show equipment ont sw-download (changes for commands supporting NGPON2)
show equipment ont tc-layer olt-side current-interval (changes for commands supporting NGPON2)
show equipment ont tc-layer olt-side previous-interval (changes for commands supporting NGPON2)
show equipment ont tc-layer olt-side-on-demand current-interval (changes for commands supporting NGPON2)
show equipment ont tc-layer olt-side-on-demand previous-interval (changes for commands supporting NGPON2)
show equipment ont tc-layer ont-side current-interval (changes for commands supporting NGPON2)
show equipment ont tc-layer ont-side previous-interval (changes for commands supporting NGPON2)
show equipment ont xg-tc-layer olt-side current-interval (changes for commands supporting NGPON2)
show equipment ont xg-tc-layer olt-side previous-interval (changes for commands supporting NGPON2)
show equipment ont xg-tc-layer ont-side current-interval (changes for commands supporting NGPON2)
show equipment ont xg-tc-layer ont-side previous-interval (changes for commands supporting NGPON2)
show interface alarm (changes for commands supporting NGPON2)

show interface port (changes for commands supporting NGPON2, updated description of last-chg-opr-stat)
show interface stack (changes for commands supporting NGPON2)
show interface test (changes for commands supporting NGPON2)
show qos interface-bandwidth (changes for commands supporting NGPON2)
show qos statistics queue current-15min (changes for commands supporting NGPON2)
show qos statistics queue prev-15min (changes for commands supporting NGPON2)

Command delta R5.0.01 versus R5.0

Modified Commands
configure voice cluster media-gateway (new parameter quat-mgc-ip and quat-mgc-udp for IMS Geo Redundancy)
configure voice cluster signal-gateway (new parameter quat-asp-ip and quat-sctp-port for IMS Geo Redundancy)
configure voice sip user-agent-ap slot-id (adding support for NTIO board)
show voice sip redundancy-node ext-redundancy-state (adding support for NTIO board)
show voice sip redundancy-node redundancy-state (adding support for NTIO board)
show voice sip user-agent-ap (adding support for NTIO board)
configure alarm entry (updating alarm list with new alarms, adding power alarms introduced for 7363 ISAM MX and 7367 ISAM SX)
configure alarm filter filterid (updating alarm list with new alarms)
show alarm delta-log indeterminate (updating alarm list with new alarms)
show alarm delta-log warning (updating alarm list with new alarms)
show alarm delta-log minor (updating alarm list with new alarms)
show alarm delta-log major (updating alarm list with new alarms)
show alarm delta-log critical (updating alarm list with new alarms)
configure ethernet line mau (adding supported mau types)
configure qos profiles policer (updating policer profile ranges for MEF certification and MEF Policer rate calculation to include only L2 bytes)
configure vlan id (adding new parameter 'cvlan4095passthru' to forward c-vid 4095 transparently)
show qos statistics buffer-overflow current-1day (removal of obsolete parameter values for 'slotindex')
show vlan bridge-port-fdb (enabling retrieval of mac-addresses learned on uplink lt)
show vlan fdb-board (improved display of dup mac alarm)
show vlan dup-mac-alarm (improved display of dup mac alarm)
configure system security login-banner (expanding Logon banner to 2048 characters)
configure system loop-id-syntax (adding 'LzNVID' as keyword to construct the system loop ID)
show xdsl counters near-end line previous-interval (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl counters near-end line previous-day (adding a timestamp to each PM interval, specifying the

date and time of the start of the PM interval)
show xdsl counters near-end channel previous-interval (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl counters near-end channel previous-day (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl counters far-end line previous-interval (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl counters far-end line previous-day (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl counters far-end channel previous-interval (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl counters far-end channel previous-day (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl imp-noise-sensor near-end previous-interval (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show xdsl imp-noise-sensor far-end previous-interval (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show shdsl segment-counters previous-15min (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show shdsl segment-counters previous-1day (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show shdsl span-counters previous-15min (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
show shdsl span-counters previous-1day (adding a timestamp to each PM interval, specifying the date and time of the start of the PM interval)
configure cmts system (DPoE : removed 'no' for parameter 'system')
configure voice ont mgc-config (improvement to attach sec-uri profile to the mgc-config when using the profile name)
configure voice ont service (increasing parameter length for 'user-name')
show voice ont call-hist (improvement to only allow valid value between 1 and 32)
configure eth-cfm (adding on-demand and proactive performance monitoring compliant with Y.1731 on IHUB system)
show eth-cfm (adding on-demand and proactive performance monitoring compliant with Y.1731 on IHUB system)
show eth-ring (adding RPL owner functionality for G.8032 ERPS on IHUB system)

New Commands

configure cfm y1731pm (adding on-demand and proactive performance monitoring compliant with Y.1731)
configure cfm y1731pm domain association (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm curr-15min-stats (adding on-demand and proactive performance monitoring compliant with Y.1731)

show cfm y1731pm curr-15min-stats domain (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm curr-day-stats (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm curr-day-stats domain (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm prev-15min-stats (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm prev-15min-stats domain (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm prev-day-stats (adding on-demand and proactive performance monitoring compliant with Y.1731)
show cfm y1731pm prev-day-stats domain (adding on-demand and proactive performance monitoring compliant with Y.1731)
admin interface cable (DPoE : adding support more counters and statistics for ONU)
admin trouble-shooting pbit interface (upstream summary and extensive troubleshooting counters per TC)
configure trouble-shooting pbit (upstream summary and extensive troubleshooting counters per TC)
configure trouble-shooting pbit statistics (upstream summary and extensive troubleshooting counters per TC)
configure trouble-shooting pbit statistics interface (upstream summary and extensive troubleshooting counters per TC)
show trouble-shooting pbit statistics interface (Upstream summary and extensive troubleshooting counters per TC)
configure cmts cm-event-ctrl (DPoE : vCM event improvement)
configure system sync-if-timing ptp (adding TimeOfDay functionality, adding parameter 'transport-mode')
configure system sync-if-timing ptp mstr-port-ds-prof (adding TimeOfDay functionality)
configure system sync-if-timing ptp ont-master-port (adding TimeOfDay functionality)
configure system sync-if-timing ptp default-dataset (adding TimeOfDay functionality)
configure system sync-if-timing ptp slave-port-dataset (adding TimeOfDay functionality)
configure system sync-if-timing tod (adding TimeOfDay functionality)
configure system sync-if-timing tod interface (adding TimeOfDay functionality)
configure system sync-if-timing tod serial-param (adding TimeOfDay functionality)
configure system sync-if-timing tod-ref-order (adding TimeOfDay functionality)
show system sync-if-timing-profile (adding TimeOfDay functionality)
show system sync-if-timing-tod (adding TimeOfDay functionality)
configure eth-ring revert-time (adding RPL owner functionality for G.8032 ERPS on IHUB system)
configure eth-ring rpl-node (adding RPL owner functionality for G.8032 ERPS on IHUB system)
configure qos-servicerouter system ingress-storm-ctrl (adding rate-limiting of Broadcast/DLF/Unknown Multicats on IHUB system)
configure qos-servicerouter system egress-storm-ctrl (adding rate-limiting of Broadcast/DLF/Unknown Multicats on IHUB system)

configure service storm-ctrl (adding rate-limiting of Broadcast/DLF/Unknown Multicats on IHUB system)
show qos-servicerouter system ingress-storm-ctrl (adding rate-limiting of Broadcast/DLF/Unknown Multicats on IHUB system)
show qos-servicerouter system egress-storm-ctrl (adding rate-limiting of Broadcast/DLF/Unknown Multicats on IHUB system)

Removed Commands or Commands with removed parameters

configure system sync-if-timing ptp packet-mode (packtet-mode has been replaced by transport-mode)
configure system clock-mgmt (obsolete command, replaced by 'configure system sync-if-timing')

Command delta R5.0 versus R4.6.02

Modified Commands
configure alarm entry (OLT support SIPPING Alarms, ONTalarms, removal of obsolete alarms)
configure cfm domain association mep (support Y.1731 SLM Originator and LM responder on CATAN based VDSL LT's)
show system license (support Y.1731 SLM Originator and LM responder on CATAN based VDSL LT's)
show cfm mep-config-data domain (support Y.1731 SLM Originator and LM responder on CATAN based VDSL LT's)
configure ethernet line tca-line-threshold (extend TCA on Eth Phy PM traffic counters)
configure qos interface (allow vlanport on DSL/ETH interface)
configure qos tca queue (allow vlanport on DSL/ETH interface)
show interface port (improved display parameters as an extension of the interface MIB for the efm interface according to RFC2863)
show qos interface-bandwidth (allow vlanport on DSL/ETH interface)
show qos statistics queue current-15min (allow vlanport on DSL/ETH interface)
show qos statistics queue prev-15min (allow vlanport on DSL/ETH interface)
configure qos profiles policer (the use of 'discard' value for GreenAction is disabled)
configure system security filetransfer server (improved security for operator password)
configure system security pmfile upload (improved security for operator password)
configure system security radius acc-server (name) router-instance (improved security for operator password)
configure system security radius auth-server (name) router-instance (improved security for operator password)
configure system security radius dyn-auth-client (name) router-instance (improved security for operator password)
show xdsl config-data-port pppox-relay (improved response speed)
show xdsl vect-carrier-data far-end (improved value range)
show xdsl vect-carrier-data near-end (improved value range)
configure linetest single ltssession (adding SIP NBLT session busy-overwrite parameter :

"busy-overwrite")
configure system clock-mgmt (clock input failure derived from AIS)
configure vlan id (updated description of parameter 'new-broadcast')
configure voice sip termination (improved security for operator password)
configure voice sip termination (add line signal on remote answer parameter : "linesig-remanswer")
configure voice sip termination (add test access parameters : "testaccessstate", "busyoverwrite" and "accessontimeout")
configure voice sip termination (add line identification parameter (pani-header): "line-id")
configure voice sip digitmap (size of parameter "rule" increased to 100 bytes)
show alarm current ether=tca (extend TCA on Eth Phy PM traffic counters)
show alarm snap-shot ether=tca (extend TCA on Eth Phy PM traffic counters)
show alarm log ether=tca (extend TCA on Eth Phy PM traffic counters)
show config-data-port security-pae (add missing PON types)
show oper-data-port ip-bridge-port (add missing PON types)
configure equipment ont interface (improved security for operator password)
configure pon auth-sec-prof (improved security for operator password)
configure voice ont auth-sec-prof (improved security for operator password)
configure voice ont service (add support for SIPPING Server as a configuration method)
configure voice ont service (improved security for operator password)
configure voice ont voice-sip-port (improved security for operator password)
configure equipment ont interface (decouple ONT SW Planning and Delay Activation)
configure equipment ont interface (support RF programmable filter options for I-241W-T)
configure equipment ont slot (add MoCA support)
show alarm current ont-pots (OLT support SIPPING Alarms)
show alarm snapshot ont-pots (OLT support SIPPING Alarms)
show alarm log ont-pots (OLT support SIPPING Alarms)
show alarm delta-log ont-pots (OLT support SIPPING Alarms)
show alarm current ont-voip (OLT support SIPPING Alarms)
show alarm snapshot ont-voip (OLT support SIPPING Alarms)
show alarm log ont-voip (OLT support SIPPING Alarms)
show alarm delta-log ont-voip (OLT support SIPPING Alarms)
show equipment ont sw-download (decouple ONT SW Planning and Delay Activation)
configure equipment ont sw-ctrl (decouple ONT SW Planning and Delay Activation)
configure system sync-if-timing (clock input failure derived from AIS)
show equipment ont ethernet current-interval (64bit rolling counter for Total/Multicast/Broadcast)
show equipment ont ethernet previous-interval (64bit rolling counter for Total/Multicast/Broadcast)
show ces ont service pseudo-wire currentinterval (OLT support for B-0404G-B new PM and loopback alarms)

show ces ont service pseudo-wire previousinterval (OLT support for B-0404G-B new PM and loopback alarms)
show alarm current ont-ces (OLT support for B-0404G-B new PM and loopback alarms)
show alarm snap-shot ont-ces (OLT support for B-0404G-B new PM and loopback alarms)
show alarm log ont-ces (OLT support for B-0404G-B new PM and loopback alarms)
show alarm delta-log ont-ces (OLT support for B-0404G-B new PM and loopback alarms)
show alarm current ont-pwe (OLT support for B-0404G-B new PM and loopback alarms)
show alarm snap-shot ont-pwe (OLT support for B-0404G-B new PM and loopback alarms)
show alarm log ont-pwe (OLT support for B-0404G-B new PM and loopback alarms)
show alarm delta-log ont-pwe (OLT support for B-0404G-B new PM and loopback alarms)
configure port ethernet (suppress obsolete alarm with new parameter suppress-link-state-alarm : see IHUB interface guide for details)

New Commands

show alarm current mdu-sup (differentiation between ONT alarm types)
show alarm current sfu-sup (differentiation between ONT alarm types)
show alarm current soho-sup (differentiation between ONT alarm types)
show alarm log mdu-sup (differentiation between ONT alarm types)
show alarm log sfu-sup (differentiation between ONT alarm types)
show alarm log soho-sup (differentiation between ONT alarm types)
show alarm snap-shot mdu-sup (differentiation between ONT alarm types)
show alarm snap-shot sfu-sup (differentiation between ONT alarm types)
show alarm snap-shot soho-sup (differentiation between ONT alarm types)
admin cfm single-ended-slm (support Y.1731 SLM Originator and LM responder on CATAN based VDSL LT's)
admin cfm single-ended-slm domain association mep target-mac (support Y.1731 SLM Originator and LM responder on CATAN based VDSL LT's)
configure alarm filter filterid (CLI coverage of TL1 Alarm Filter)
show alarm current spatial (add spatial filter alarm)
show alarm current temporal (add temporal filter alarm)
show alarm log spatial (add spatial filter alarm)
show alarm log temporal (add temporal filter alarm)
show alarm snap-shot spatial (add spatial filter alarm)
show alarm snap-shot temporal (add temporal filter alarm)
configure voice cluster equipment termination tca (Voice QoS threshold TCA (drop rate, jitter, loop delay))
show qos resource-usage (QOS resource usage status (NELT-B HighCap UNI increment))
show qos resource-usage ingress-hw-filter (QOS resource usage status (NELT-B HighCap UNI increment))
admin cm (enable DPoE node on core0)

admin iphost (Support Ping from ONT-OLT part)
admin iphost ping dest-ip (Support Ping from ONT-OLT part)
configure cm uni-collection (add BHN support for DPoE)
configure cm uniprofile (add BHN support for DPoE)
configure cmts cmts-event-ctrl (DPoE data path redundancy)
configure cmts ssd (enable DPoE SSD node on core0)
configure moca (add MoCA support)
configure moca ont cust-info (add MoCA support)
configure moca ont l2 pm (add MoCA support)
configure moca ont phy pm (add MoCA support)
show alarm current ont-moca (add MoCA support)
show alarm current ont-moca-tca (add MoCA support)
show alarm log ont-moca (add MoCA support)
show alarm log ont-moca-tca (add MoCA support)
show alarm snap-shot ont-moca (add MoCA support)
show alarm snap-shot ont-moca-tca (add MoCA support)
show moca (add MoCA support)
show moca ont (add MoCA support)
show moca ont operational-data (add MoCA support)
show moca ont performance-data (add MoCA support)
show moca ont performance-data current-interval (add MoCA support)
show moca ont performance-data previous-interval (add MoCA support)
show equipment ont ethernet total (64bit rolling counter for Total/Multicast/Broadcast)
show voice ont voip-pip-prof (OLT support SIPPING Alarms,added to allow monitoring of the download status for each POTS line)
show voice ont voip-pip-prof operational-data (OLT support SIPPING Alarms)
show voice ont voip-pip-prof operational-data input-profile (OLT support SIPPING Alarms)
show voice ont voip-vip-prof (OLT support SIPPING Alarms,added to allow monitoring of the download status for the VoIP client)
show voice ont voip-vip-prof operational-data (OLT support SIPPING Alarms)
show voice ont voip-vip-prof operational-data input-profile (OLT support SIPPING Alarms)

New commands NOT supported yet

configure system auto-switch (Auto-switching between ATMoADSL and PTMoVDSL)
show alarm current auto-switch (Auto-switching between ATMoADSL and PTMoVDSL)
show alarm log auto-switch (Auto-switching between ATMoADSL and PTMoVDSL)
show alarm snap-shot auto-switch (Auto-switching between ATMoADSL and PTMoVDSL)
configure alarm entry auto-switch-status (Auto-switching between ATMoADSL and PTMoVDSL)

configure alarm filter auto-switch-status (Auto-switching between ATMoADSL and PTMoVDSL)
show alarm delta-log auto-switch-status (Auto-switching between ATMoADSL and PTMoVDSL)
show alarm current table auto-switch (Auto-switching between ATMoADSL and PTMoVDSL)
show alarm log table auto-switch (Auto-switching between ATMoADSL and PTMoVDSL)
show alarm snap-shot table auto-switch (Auto-switching between ATMoADSL and PTMoVDSL)
show equipment planned-resource

Removed Commands or Commands with removed parameters

configure bridge port (removal of obsolete parameters old-tag accept-frame-type)
configure vlan (removal of obsolete parameter pvid-usage)
configure vlan id (removal of obsolete parameters pppoe-relay circuit-id remote-id)

Command delta R4.6.02 versus R4.6.01

Modified Commands

show xdsl vect-carrier-data far-end (improved display of sampling rate)
show xdsl vect-carrier-data near-end (improved display of sampling rate)
configure xdsl-bonding group (2-pair VDSL2 PTM bonding in combination with G.inp)
show xdsl-bonding operational-data group (2-pair VDSL2 PTM bonding in combination with G.inp)
configure system sync-if-timing ref-order (Synchronisation Redundancy for BITS/SyncE/IEEE1588 parameter value "ieee1588" replaced by "ieee1588-a" or "ieee1588-b", restrictions removed)
configure system sync-if-timing ssm-order (Synchronisation Redundancy for BITS/SyncE/IEEE1588 parameter value "ieee1588" replaced by "ieee1588-a" or "ieee1588-b", restrictions removed)
configure system sync-if-timing ptp ptp-domain (Synchronisation Redundancy for BITS/SyncE/IEEE1588 parameter value "ieee1588" replaced by "ieee1588-a" or "ieee1588-b", restrictions removed)
show system sync-if-timing (Synchronisation Redundancy for BITS/SyncE/IEEE1588 parameter value "ieee1588" replaced by "ieee1588-a" or "ieee1588-b", restrictions removed)
configure alarm entry (new alarms for several features)
configure voice ont ring-seq-prof (improvement to configure ring sequence using strings for pattern1)
configure voice ont tone-seq-profile (improvement to configure tone sequence using strings for pattern1)

New Commands

configure xdsl-bonding [no] group-rtx-profile (2-pair VDSL2 PTM bonding in combination with G.inp)
show xdsl-bonding group-rtx-profiles (2-pair VDSL2 PTM bonding in combination with G.inp)
configure cmts cmcert (adding security features for DPoE system)
configure cmts eae-excluded-onu (adding security features for DPoE system)
configure cmts cmts-event (DOCSIS Event Framework phase 2)
configure cmts physical-entity (provides additional DOCSIS OLT MIBs)
configure eth-ring (supporting Ethernet Ring (G.8032))

show eth-ring (supporting Ethernet Ring (G.8032))
show alarm current eth-ring (supporting Ethernet Ring (G.8032))
show alarm log eth-ring (supporting Ethernet Ring (G.8032))
show alarm snapshot eth-ring (supporting Ethernet Ring (G.8032))
configure ethernet ont l2 (redesign cli commands for ont uni (ethernet) l2 threshold crossing alerts)
configure ethernet ont phy (redesign cli commands for ont uni (ethernet) l2 threshold crossing alerts)
configure hpna ont l2 (redesign cli commands for ont uni (hpna) l2 threshold crossing alerts)
configure veip ont l2 (redesign cli commands for ont uni (veip) l2 threshold crossing alerts)
configure xdsl ont line l2 (redesign cli commands for ont uni (xdsl) l2 threshold crossing alerts)
configure xdsl ont line phy (cli commands for ont uni (xdsl) layer threshold crossing alerts)
show interface cable (DPoE DOCSIS Provisioning Framework)

Changed commands NOT supported yet

show alarm current mdu-sup (alarm for future use)
show alarm current sfu-sup (alarm for future use)
show alarm current soho-sup (alarm for future use)
show alarm log mdu-sup (alarm for future use)
show alarm log sfu-sup (alarm for future use)
show alarm log soho-sup (alarm for future use)
show alarm snap-shot mdu-sup (alarm for future use)
show alarm snap-shot sfu-sup (alarm for future use)
show alarm snap-shot soho-sup (alarm for future use)

Command delta R4.6.01 versus R4.6

Modified Commands

show dhcp-relay port-stats vlan (improved response on SLT platform)
show dhcp-relay v6-port-stats vlan (improved response on SLT platform)
show vlan port-15min-stats (improved parameter range display)
show vlan port-prev-day-stats (improved parameter range display)
show vlan previous-15min-stats (improved parameter range display)
show vlan vlan-day-stats (improved parameter range display)
configure alarm entry (support new alarms for different features, improved alarm mechanism specification)
configure alarm log-sev-level (improved alarm mechanism specification)
configure alarm shub entry (improved alarm mechanism specification)
configure trap manager (improved alarm mechanism specification)
show alarm log table (improved alarm mechanism specification)

show alarm current table (improved alarm mechanism specification)
show alarm snap-shot table (improved alarm mechanism specification)
configure bridge port (support bp and vp for uplink port)
configure cfm domain association (ONT CFM SW enhancements)
configure cfm domain association mep (support Y.1731 DM responder)
show cfm mep-config-data domain association mep (support Y.1731 DM responder)
configure system security pmfile upload (automatic PM collection)
admin system security pmfile upload (automatic PM collection)
show equipment shelf detail (retrieve serial Number, ICS and variant of the shelf)
show equipment transceiver-inventory (Report B+/C+ type for GPON SFPs)
show security pmfile upload (automatic PM collection)
show pppoel2-stats vlan (improved response on SLT platform)
configure ces ont service service-nbr (CES SAToP support at ONT)
configure epon profiles filter (EPON CCL profile dimension expanded to 8192)
show epon profiles-usage filter (EPON CCL profile dimension expanded to 8192)
configure voice ont service (XML download over OMCI)
configure cmts vcm-oam (DPoE DOCSIS Provisioning Framework)
configure pon sec-uri-profile (improved profile specification)
configure tr069serv ont (improved profile specification)
configure voice ont mgc-config (improved profile specification)
configure voice ont ringing-profile (improved profile specification)
configure voice ont sec-uri-profile (improved profile specification)
configure voice ont sip-config (improved profile specification)
configure voice ont voice-serv-prof (improved profile specification)
configure voice ont voip-app-service (improved profile specification)
configure voice ont voip-config (improved profile specification)
configure voice ont voip-media-prof (improved profile specification)
configure voice ont tone-event-prof alert-tone (improved profile specification)
configure voice ont tone-event-prof busy-tone (improved profile specification)
configure voice ont tone-event-prof callwait1-tone (improved profile specification)
configure voice ont tone-event-prof callwait2-tone (improved profile specification)
configure voice ont tone-event-prof callwait3-tone (improved profile specification)
configure voice ont tone-event-prof callwait4-tone (improved profile specification)
configure voice ont tone-event-prof confirm-tone (improved profile specification)
configure voice ont tone-event-prof congest-tone (improved profile specification)
configure voice ont tone-event-prof dead-tone (improved profile specification)
configure voice ont tone-event-prof dial-tone (improved profile specification)

configure voice ont tone-event-prof intrusion-tone (improved profile specification)
configure voice ont tone-event-prof msg-wait-tone (improved profile specification)
configure voice ont tone-event-prof release-tone (improved profile specification)
configure voice ont tone-event-prof reorder-tone (improved profile specification)
configure voice ont tone-event-prof ringback-tone (improved profile specification)
configure voice ont tone-event-prof roh-tone (improved profile specification)
configure voice ont tone-event-prof special-dial-tone (improved profile specification)
configure voice ont tone-event-prof special-info-tone (improved profile specification)
configure voice ont tone-event-prof stutter-tone (improved profile specification)
configure voice ont tone-event-prof userdef1-tone (improved profile specification)
configure voice ont tone-event-prof userdef2-tone (improved profile specification)
configure voice ont tone-event-prof userdef3-tone (improved profile specification)
configure voice ont tone-event-prof userdef4-tone (improved profile specification)
configure voice ont voice-port (improved profile specification)
configure voice ont voice-sip-port (improved profile specification)
configure voice ont ringing-profile name (improved setting of ringing profile attributes)

New Commands

admin ethernet statistics (support RMON counters on NELT-B interfaces)
show ethernet etherstats (support RMON counters on NELT-B interfaces)
show cfm slm-responder-stats (SLM Responder on CATAN VDSL LT and NELT-B UNI)
show cfm slm-responder-stats domain (SLM Responder on CATAN VDSL LT and NELT-B UNI)
show vlan port-accumu-stats (support display of accumulate statistics on the bridge port)
show alarm current ihub-tca (support IHUB Threshold Crossing Alert)
show alarm log ihub-tca (support IHUB Threshold Crossing Alert)
show alarm snap-shot ihub-tca (support IHUB Threshold Crossing Alert)
configure cm classifier (DPoE commands for Service Flow provisioning)
configure cm cm-static (DPoE commands for Service Flow provisioning)
configure cm gen-ext (DPoE commands for Service Flow provisioning)
configure cm oam (DPoE commands for Service Flow provisioning)
configure cm service-flow (DPoE commands for Service Flow provisioning)
configure cm sf-collection (DPoE commands for Service Flow provisioning)
configure cm tlv-file (DPoE commands for Service Flow provisioning)
show alarm current ont-ces (CLI support for GPON alarms phase 2)
show alarm current ont-cese1 (CLI support for GPON alarms phase 2)
show alarm current ont-hpna (CLI support for GPON alarms phase 2)
show alarm current ont-mgc (CLI support for GPON alarms phase 2)
show alarm current ont-pwe (CLI support for GPON alarms phase 2)

show alarm current ont-sip-agent-cfg (CLI support for GPON alarms phase 2)
show alarm current ont-video (CLI support for GPON alarms phase 2)
show alarm current ont-video-ani (CLI support for GPON alarms phase 2)
show alarm current ont-voip (CLI support for GPON alarms phase 2)
show alarm current ont-voip-cfg (CLI support for GPON alarms phase 2)
show alarm current ont-xdsl (CLI support for GPON alarms phase 2)
show alarm current ont-xdsl-tca (CLI support for GPON alarms phase 2)
show alarm log ont-ces (CLI support for GPON alarms phase 2)
show alarm log ont-cese1 (CLI support for GPON alarms phase 2)
show alarm log ont-hpna (CLI support for GPON alarms phase 2)
show alarm log ont-mgc (CLI support for GPON alarms phase 2)
show alarm log ont-pwe (CLI support for GPON alarms phase 2)
show alarm log ont-sip-agent-cfg (CLI support for GPON alarms phase 2)
show alarm log ont-video (CLI support for GPON alarms phase 2)
show alarm log ont-video-ani (CLI support for GPON alarms phase 2)
show alarm log ont-voip (CLI support for GPON alarms phase 2)
show alarm log ont-voip-cfg (CLI support for GPON alarms phase 2)
show alarm log ont-xdsl (CLI support for GPON alarms phase 2)
show alarm log ont-xdsl-tca (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-ces (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-cese1 (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-hpna (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-mgc (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-pwe (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-sip-agent-cfg (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-video (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-video-ani (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-voip (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-voip-cfg (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-xdsl (CLI support for GPON alarms phase 2)
show alarm snap-shot ont-xdsl-tca (CLI support for GPON alarms phase 2)
show pon unprovision-onu (CLI support for GPON alarms phase 2)
show system sync-if-timing-ptp (Synchronisation Redundancy for BITS/SyncE/IEEE1588)

Removed Commands or Commands with removed parameters

show alarm current ont-loopdetect-mis (removal of obsolete command)
show alarm log ont-loopdetect-mis (removal of obsolete command)
show alarm snap-shot ont-loopdetect-mis (removal of obsolete command)

configure system snmp manager (improved usage of SNMPv3, dpoe parameter removed)
--

New Commands NOT supported yet

configure xdsl-bonding [no] group-rtx-profile (2-pair VDSL2 PTM bonding in combination with G.inp)
show xdsl-bonding group-rtx-profiles (2-pair VDSL2 PTM bonding in combination with G.inp)

show alarm snap-shot mdu-gen (alarm for future use)
show alarm snap-shot mdu-ploam (alarm for future use)
show alarm snap-shot sfu (alarm for future use)
show alarm snap-shot sfu-gen (alarm for future use)
show alarm snap-shot sfu-ploam (alarm for future use)
show alarm snap-shot soho (alarm for future use)
show alarm snap-shot soho-gen (alarm for future use)
show alarm snap-shot soho-ploam (alarm for future use)

Commands with new parameters or parameter values that are NOT supported yet (commands remain backward compatible with previous releases)

configure xdsl line (new parameter "auto-switch" to switch between ATMoADSL and PTMoVDSL)
configure xdsl-bonding group (2-pair VDSL2 PTM bonding in combination with G.inp)
show xdsl-bonding operational-data group (2-pair VDSL2 PTM bonding in combination with G.inp)
configure equipment ont interface fec-tc-layer (for future use, support XGPON)
configure pon interface (for future use, support XGPON)

Commands with new parameters or parameter values with LIMITED support. (commands are NOT backward compatible with previous releases. Note : configure maximum only one IEEE1588 clock source. In duplex NT mode, this clock source can be configured on either NT-A or NT-B, independently of which one is the active one. The NT that has the clock source configured will pass on the signal to its peer NT)

configure system sync-if-timing ref-order (Synchronisation Redundancy for BITS/SyncE/IEEE1588 parameter value "ieee1588" replaced by "ieee1588-a" or "ieee1588-b")
configure system sync-if-timing ssm-order (Synchronisation Redundancy for BITS/SyncE/IEEE1588 parameter value "ieee1588" replaced by "ieee1588-a" or "ieee1588-b")
configure system sync-if-timing ptp ptp-domain (Synchronisation Redundancy for BITS/SyncE/IEEE1588 parameter value "ieee1588" replaced by "ieee1588-a" or "ieee1588-b")

Command delta R4.6 versus R4.5.02

Modified Commands
configure bridge port [no] vlan-id (implement dedicated downstream voice queue, for VOIP services on both VOIP and VEIP UNI's)
configure cfm domain association [no] mep (Y.1731 SLM Responder on CATAN based VDSL LT's and NELT-B UNI)
configure cfm domain association [no] name (improvement : [no] command removed)
configure equipment sfpe1t1 framer (removal of obsolete loopback parameters)
configure mcast static [no] branch (GPON static Multicast per ONT, add AID for GPON vlan port)
configure qos profiles [no] bandwidth (support for MEF qualification MIB Impact)
configure qos profiles [no] l3-filter (support L3 ACLs in an IPv6 context)
configure system (PPPoE / DHCP customer-id configuration at system level)
configure system pon-ont (SN bundle with LOID or SLID)
configure system security snmp [no] community (DOCSIS Provisioning Framework)
configure system security snmp [no] group (DOCSIS Provisioning Framework)
configure system security snmp [no] manager (DOCSIS Provisioning Framework)
configure voice sip redundancy (Configurable DNS Selection Algorithm)
configure xdsl [no] service-profile (increase the number of service profiles to 1024)
configure xdsl line [no] service-profile (increase the number of service profiles to 1024)
configure xdsl board vect-fallback [no] service-profile (increase the number of service profiles to 1024)
show system license (MPLS ring with sub 50 ms switchover)
show cfm mep-configdata domain (Y.1731 SLM Responder on CATAN based VDSL LT's and NELT-B UNI)
show cfm mep-info domain (improvement : displays each field of a CCM packet)
configure bridge port (Support for Multiple LLID on EPON ONU for DPoE)
configure system (Support for Multiple LLID on EPON ONU for DPoE)
configure qos (Support for Multiple LLID on EPON ONU for DPoE)
configure vlan (Support for Multiple LLID on EPON ONU for DPoE)
configure arp-relay (Support for Multiple LLID on EPON ONU for DPoE)
configure qos interface ellid (Support for Multiple LLID on EPON ONU for DPoE)
configure alarm entry (new alarms for several features)
configure epon profiles [no] filter (improvement : [no] value added for classfandv and classac)
configure equipment eont [no] interface (support for Multiple LLID for ISAM EPON QoS and Forwarding Model)
configure equipment eont interface management (support for Multiple LLID for ISAM EPON QoS and Forwarding Model)
configure equipment ont [no] interface (SN bundle with LOID or SLID and DSCP to pbit alignment for PPPoE frames on GPON LT)
configure system syslog (DOCSIS Provisioning Framework)
configure uni ont video (RF Video service timer configuration)
show equipment ont interface (SN bundle with LOID or SLID)

show epon interface information (OLT supports new MIB interface towards OSS)
show equipment eont llid (support for Multiple LLID on EPON ONU for DPoE)
configure equipment eont interface llid (support for Multiple LLID on EPON ONU for DPoE)
configure ethernet eont port (support for Multiple LLID for ISAM EPON QoS and Forwarding Model)
configure voice ont mgc-config (improvement : parameters "pri-mgcuri-profid" and "sec-mgcuri-profid" changed to required parameters)

Removed Commands or Commands with removed parameters

configure equipment sfpe1t1 global (removal of obsolete loopback commands)
configure alarm entry (removal of obsolete alarms lt-problem and applique-problem)

New Commands

configure cfm slm (Y.1731 SLM Responder on CATAN based VDSL LT's and NELT-B UNI)
show ethernet dot3stats (ether-like counters on NELT-B, replaces show transport ether-ifdot3lt)
show ethernet mau (replaces "show transport ether-ifmault" for NELT-B MAU operational data)
show ethernet sfp (replaces "show transport ether-ifsfp" for NELT-B SFP inventory data)
configure cmts (DPoE DOCSIS Provisioning Framework)
configure cmts [no] allowonu (DPoE DOCSIS Provisioning Framework)
configure cmts [no] bundle (DPoE DOCSIS Provisioning Framework)
configure cmts [no] cert (DPoE DOCSIS Provisioning Framework)
configure cmts [no] class (DPoE DOCSIS Provisioning Framework)
configure cmts [no] cm-event (DPoE DOCSIS Provisioning Framework)
configure cmts [no] diag (DPoE DOCSIS Provisioning Framework)
configure cmts [no] filter (DPoE DOCSIS Provisioning Framework)
configure cmts [no] interface (DPoE DOCSIS Provisioning Framework)
configure cmts [no] l2vpn (DPoE DOCSIS Provisioning Framework)
configure cmts [no] log-level (DPoE DOCSIS Provisioning Framework)
configure cmts [no] oosp (DPoE DOCSIS Provisioning Framework)
configure cmts [no] pon (DPoE DOCSIS Provisioning Framework)
configure cmts [no] sav (DPoE DOCSIS Provisioning Framework)

show alarm snap-shot rsvp (CLI support for GPON alarms)
show alarm snap-shot ont-tc-tca (CLI support for GPON alarms)
show alarm snap-shot ont-veip (CLI support for GPON alarms)
show equipment eont loid-mapping (OLT supports new MIB interface towards OSS)
show equipment eont mac-mapping (OLT supports new MIB interface towards OSS)

New Commands not supported yet

configure xdsl-bonding [no] group-rtx-profile (2-pair VDSL2 PTM bonding in combination with G.inp)
show xdsl-bonding group-rtx-profiles (2-pair VDSL2 PTM bonding in combination with G.inp)

Commands with new parameters or parameter values that are NOT supported yet (commands remain backward compatible with previous releases)

configure xdsl line (new parameter "auto-switch" to switch between ATMoADSL and PTMoVDSL)
configure xdsl-bonding group (2-pair VDSL2 PTM bonding in combination with G.inp)

Command delta R4.5.02 versus R4.5.01

Modified Commands

configure alarm entry (support new alarms for different features)
configure bridge port vlan-id (MAC learning control per vlanport on GPON LT)
configure cfm domain association (CFM Enhancement to support CCM messages)
configure cfm domain association mep (CFM Enhancement to support CCM messages)
show cfm mep-config-data domain (CFM Enhancement to support CCM messages)

show cfm ma-config-data domain (CFM Enhancement to support CCM messages)
configure qos interface upstream-queue (Traffic Rate Limiting per GEM port)
configure qos profiles marker [no] d1p-alignment (support for multiple DSCP to pbit mapping profiles)
configure voice sip [no] termination (ANSI E911 Emergency Call features for SIP)
configure xdsl board (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
configure xdsl vp-board (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
Show alarm log vect-board (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
Show alarm current vect-board (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
Show alarm snap-shot vect-board (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
show xdsl vp-board (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
Show xdsl vect-group (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
Show xdsl failure-status vect-board (vectoring functionality on NRCD-C REM controller board, Cross-DSLAM vectoring)
configure xdsl board vect-fallback (allows fallback mode for configuration not feasible,Cross-DSLAM Vectoring)
show xdsl vect-carrier-data far-end (Cross-DSLAM full vectoring support)
show xdsl vect-carrier-data near-end (Cross-DSLAM full vectoring support)
configure ani ont rssi-profile (ONU RSSI support, only FX-7360 for FANT-F NGLT-A/C FGLT-A)
configure equipment [no] rssiprof (ONU RSSI support, only FX-7360 for FANT-F NGLT-A/C FGLT-A)
configure pon interface (GPON OLT G.988 amd1 compliant ONU LOID authentication)
configure voice ont pots (POTS related VOIP PM feature in VEIP mode)
configure voice ont pots-rtp (POTS related VOIP PM feature in VEIP mode)
configure voice ont pots-call (POTS related VOIP PM feature in VEIP mode)
show voice ont call-hist (POTS related VOIP PM feature in VEIP mode)
show voice ont pots operational-data (POTS related VOIP PM feature in VEIP mode)
show voice ont pots-rtp statistics current-15min (POTS related VOIP PM feature in VEIP mode)
show voice ont pots-call statistics current-15min (POTS related VOIP PM feature in VEIP mode)

Removed Commands or Commands with removed parameters

show system license cci-enabled-mep (replaced by "show system license eth-oam-adv-mon")
show interface port (obsolete parameter value "ethernet" is not applicable in this context)
show interface stack (obsolete parameter value "ethernet" is not applicable in this context)
show interface test (obsolete parameter value "ethernet" is not applicable in this context)

New Commands
admin interface trouble-shooting ethernet statistics (troubleshooting counters on the FD-REM link)
show interface trouble-shooting ethernet statistics (troubleshooting counters on the FD-REM link)
configure cfm domain association remote-mep (CFM Enhancement to support CCM messages)
show alarm current cfm (CFM Enhancement to support CCM messages)
show alarm log cfm (CFM Enhancement to support CCM messages)
show alarm snap-shot cfm (CFM Enhancement to support CCM messages)
show cfm ccm-database (CFM Enhancement to support CCM messages)
show cfm ccm-database domain (CFM Enhancement to support CCM messages)
show cfm mep-info domain (CFM Enhancement to support CCM messages)
show alarm current efm-oam (DSL/ETH LT 802.3ah Critical Event Notification support)
show alarm log efm-oam (DSL/ETH LT 802.3ah Critical Event Notification support)
show alarm snap-shot efm-oam (DSL/ETH LT 802.3ah Critical Event Notification support)
configure pppox-relay cross-connect engine (troubleshooting improvement for PPP Relay with MAC concentration)
show alarm current pppcc-engine-tca (troubleshooting improvement for PPP Relay with MAC concentration)
show alarm log pppcc-engine-tca (troubleshooting improvement for PPP Relay with MAC concentration)
show alarm snap-shot pppcc-engine-tca (troubleshooting improvement for PPP Relay with MAC concentration)
show pppox-relay cross-connect trouble-shooting-cntrs engine curr-15min-stats (troubleshooting improvement for PPP Relay with MAC concentration)
show pppox-relay cross-connect trouble-shooting-cntrs engine curr-1day-stats (troubleshooting improvement for PPP Relay with MAC concentration)
show pppox-relay cross-connect trouble-shooting-cntrs engine prev-15min-stats (troubleshooting improvement for PPP Relay with MAC concentration)
show pppox-relay cross-connect trouble-shooting-cntrs engine prev-1day-stats (troubleshooting improvement for PPP Relay with MAC concentration)
configure qos profiles [no] dscp-pbit (support for multiple DSCP to pbit mapping profiles)
configure qos profiles codepoint (support for multiple DSCP to pbit mapping profiles)
show qos profile-usage dscp-pbit (support for multiple DSCP to pbit mapping profiles)
show system license eth-oam-adv-mon (replaces "show system license cci-enabled-mep")
show voice ont pots-call statistics prev-15min (POTS related VOIP PM feature in VEIP mode)
show voice ont pots-rtp statistics prev-15min (POTS related VOIP PM feature in VEIP mode)
Commands with new parameters or parameter values that are NOT supported yet (commands remain backward compatible with previous releases)
configure xdsl line (new parameter "auto-switch" to switch between ATMoADSL and PTMoVDSL)

Command delta R4.5.01 versus R4.5

Modified Commands

configure alarm entry (new parameter values allowed)
configure bridge [no] port (regeneration profile selection by name)
configure debug-trace [no] protocol-trace (Protocol tracing on NGLT-A/C)
configure equipment eont [no] interface (to configure ONT TPID)
configure equipment eont interface [no] llid (to configure the name of the protocol profile to be mapped on ellid)
configure equipment eont interface llid rate-limit-prof (to configure profile name to be associated)
configure equipment ont [no] slot (commands for NNI feature)
configure igmp [no] channel (to configure IGMP Message rate per IGMP control channel)
configure voice cluster equipment [no] termination (Allows to configure the codec type used at TDM side. Change for feature support ISDN G.711 A-law and u-law terminals)
configure voice sip [no] dialplan (change for feature Digitmap minimum match)
configure voice sip [no] termination (change for feature Hotline (FDC-I) and Warmline (FDC-T) subscriber control by IMS NOTIFY and call waiting, call transfer, call hold, call conference)
configure voice sip redundancy (change for feature Foreground Monitoring Enhancement)
configure voice sip user-agent-ap slot-id (change for feature DHCP Option 82)
configure voice sip vsp (change for feature Subscribe and DHCP Option 82 and Fax/Modem negotiation)
configure voice sip system session-timer (Change for feature Session Timer Refresher)
configure xdsl board (extended with auto-discovery functionality, vectoring processing board in controller slot)
configure xdsl spectrum-profile vdsl2 (New UPBO method or Alternative Electrical Length Estimation Mode)
configure xdsl vp-board vp-link (nbr of vectored lines per vectoring processing board increased, vp-board in controller slot)
configure xdsl [no] vect-profile (introducing new parameters in the vect-profile to configure crosstalk cancellation from legacy lines into G.vector lines in downstream)
show config-data-port bridge-port (for regeneration profile selection)
show system license (adding a new license counter, vectoring-legacy, for the introduction of crosstalk cancellation from legacy lines into G.vector lines in downstream)
show voice sip termination (Show Voice SIP Termination Status)
show xdsl config-data-port bridge-port (for regeneration profile selection)
show xdsl failure-status vect-board (vectoring processing board in controller slot)
show xdsl vect-disturber-list downstream (nbr of vectored lines per vectoring processing board increased, disturber-list parameter modified)
show xdsl vp-board (nbr of vectored lines per vectoring processing board increased, vp-board in controller slot)

Removed Commands

none

New Commands

configure qos nni-ctrl-pkt-policer (to configure OBC policer for NNI port)
configure qos profiles [no] rate-limit (IPv6 protocol policer per LLID on FX 10G/EPON)
configure system auto-laser-shutdown (Configurable ALS)
show alarm current efm-oam (new alarm)
show alarm current ellid (new alarm)
show alarm current eth-cfm (new alarm)
show alarm log efm-oam (new alarm)
show alarm log ellid (new alarm)
show alarm log eth-cfm (new alarm)
show alarm snap-shot efm-oam (new alarm)
show alarm snap-shot ellid (new alarm)
show alarm snap-shot eth-cfm (new alarm)
show qos profile-usage rate-limit (show IPv6 protocol policer)
show vlan prio-regen-name (show regeneration profile selection by name)
show vlan prio-regen-next (show next regeneration profile selection)
show voice sip redundancy-node ext-redundancy-state (change for feature Autonomous fail-over indication)
show xdsl vect-disturber-list upstream (nbr of vectored lines per vectoring processing board increased, disturber-list parameter modified)
show xdsl vect-group (cross-dslam vectoring, vp-board in controller slot)

Commands with new parameters or parameter values that are NOT supported yet (commands remain backward compatible with previous releases)

configure qos profiles marker [no] d1p-alignment

New Commands that are NOT supported yet

configure qos profiles [no] dscp-pbit

configure qos profiles dscp-pbit codepoint

show qos profile-usage dscp-pbit-prof

Command delta R4.5 versus R4.4.02

Modified Commands

configure alarm entry (to configure alarms on E1/DS1 SFP)

configure epon [no] interface ('no interface' possibility added)

configure equipment eont [no] interface (DPoE Link OAM, added parameter alarm-profile and Upmode dpoe)

configure equipment eont [no] sw-ctrl (DPoE Link OAM)

configure equipment eont interface [no] port (adding a parameter to enable/disable the shutdown action of an ONU port ico loopback detection)

configure ethernet eont port [no] filter (parameter type for dot1p modified)
configure ethernet line mau (to configure autoneg capabilities)
configure linetest single ltparm test-name (values for MELT added)
configure linetest single ltsession (Increase test parameters for MELT)
configure voice sip [no] termination (to match CDE splitters schematic change)
show linetest single lineid-ext-rept (Increase test parameters for MELT)
show xdsl vp-board (new display elements)

Removed Commands

admin alarm (removed parameter clr-shub-config-loss)
--

New Commands

admin alarm (new parameter names)
admin display-config (displays the complete ihub configuration)
admin pppoe-client emulation client-id (to start or stop the PPPoE emulation of a specific interface on a PPPoE client)
configure epon alarm [no] flag (to configure the EPON alarm state definition in compliance with the latest CTC specification 2 and 3.0)
configure epon profiles [no] ontalarm (to configure selective ONU alarm reporting on the OLT)
configure equipment ont interface ethernet (New node ethernet has been introduced to enable/disable PON Aggregate Ethernet Performance Monitoring)
configure equipment sfpe1t1 (to configure the E1 service on E1/DS1 SFP)
configure pppoe-client (to configure the emulation interface on a PPPoE client port)
show alarm current eolt-ont-tca (to show DPoE alarms)
show alarm current eont-phyoam (to show DPoE alarms)
show alarm current eont-services-lan (to show DPoE alarms)
show alarm current eont-sw-dl (to show DPoE alarms)
show alarm current epon (to show DPoE alarms)
show alarm current olt-gen (to show DPoE alarms)
show alarm current sfpe1t1-clock (to show the alarm on E1/DS1 SFP)
show alarm current sfpe1t1-framer (to show the alarm on E1/DS1 SFP)
show alarm log epon (to show DPoE alarms)
show alarm log olt-gen (to show DPoE alarms)
show alarm log sfpe1t1-clock (to show the alarm on E1/DS1 SFP)
show alarm log sfpe1t1-framer (to show the alarm on E1/DS1 SFP)
show epon profiles-usage ontalarm (to retrieve the configured ONU alarm control bitmap on the OLT)
show epon unprovision-onu (to show DPoE alarms)
show equipment ont ethernet current-interval (to retrieve ONT-side Ethernet current interval PM data)
show equipment ont ethernet previous-interval (to retrieve ONT-side Ethernet previous interval PM data)

show linetest single busy-status (to show test parameters for MELT)
show linetest single chipsetdata-for-slot (to show test parameters for MELT)
show pppoe-client (to retrieve the emulation details of PPPoE client interface)
show xdsl vect-disturber-list downstream (this command will replace "show xdsl vect-disturbers")

Commands with new parameters or parameter values that are NOT supported yet (commands remain backward compatible with previous releases)

admin efm-oam interface (traffgen-action parameter added)
configure efm-oam interface (new parameters for ethernet traffgen added)
configure equipment [no] rssiprof (new parameter types added for warnings and alarms)
configure equipment eont interface [no] llid (loop-back parameter added)
configure voice cluster equipment termination (parameter values for impedance added)
configure voice sip system session-timer (status enable-uas added)
configure voice sip vsp (subscribe parameters added, reneg-ct-mode value added)
configure xdsl board (vplt-autodiscover parameter added)
configure xdsl [no] vect-profile (introducing new parameters in the vect-profile to configure crosstalk cancellation from legacy lines into G.vector lines in downstream)
show system license (adding a new license counter, vectoring-legacy, for the introduction of crosstalk cancellation from legacy lines into G.vector lines in downstream)
show xdsl vect-carrier-data far-end (disturberline parameter type changed)
show xdsl vect-carrier-data near-end (disturberline parameter type changed)

New Commands that are NOT supported yet

configure equipment eont interface port [no]auto-adv-abili
configure qos profiles [no] rate-limit
configure system lldp
show alarm current ellid
show alarm current eoltrssi
show alarm log eoltrssi
show alarm snap-shot eoltrssi
show alarm snap-shot sfpe1t1-clock
show alarm snap-shot sfpe1t1-framer
show efm-oam int-traff-gen
show qos profile-usage rate-limit
show system lldp
show xdsl vect-disturber-list
show xdsl vect-disturber-list upstream
show xdsl vect-group

Command delta R4.4.02 versus R4.4

Modified Commands
configure epon interface (10G-EPON LT)
configure qos interface epon ext-cac (10G-EPON LT)
configure qos profiles scheduler-node ext-shaper (10G-EPON LT)
configure equipment eont interface (10G-EPON LT)

show qos pcc-rules fwd-port rule (Full CLI support)
show qos profile-usage bandwidth (GPON support)
show qos profile-usage ingress-qos (GPON support)
show qos profile-usage scheduler-node (GPON support)
show qos statistics lt-queue (GPON support)
show qos statistics lt-queue current-15min (GPON support)
show qos statistics lt-queue prev-15min (GPON support)
show qos tc-to-qmap (GPON support)
show trouble-shooting pon (PT Counters)
show trouble-shooting pon statistics (PT Counters)
show trouble-shooting pon statistics interface (PT Counters)
show uni (Full CLI support)
show uni ont (Full CLI support)
show uni ont tc-layer (Full CLI support)
show uni ont tc-layer olt-side (Full CLI support)
show uni ont tc-layer olt-side current-interval (Full CLI support)
show uni ont tc-layer olt-side previous-interval interval-nbr (Full CLI support)
show uni ont tc-layer ont-side (Full CLI support)
show uni ont tc-layer ont-side current-interval (Full CLI support)
show uni ont tc-layer ont-side previous-interval (Full CLI support)
show vlan fdb-board vlan-id (GPON support)
show voice ont (Full CLI support)
show voice ont call-hist call-hist-num (Full CLI support)
show voice ont pots (Full CLI support)
show voice ont pots diagnostics (Full CLI support)
show voice ont pots pb-dial-tone (Full CLI support)
show voice ont pots sip-dial-tone (Full CLI support)
show voice ont pots tc-layer (Full CLI support)
show voice ont pots tc-layer olt-side (Full CLI support)
show voice ont pots tc-layer olt-side current-interval (Full CLI support)

show voice ont pots tc-layer olt-side previous-interval interval-nbr (Full CLI support)
show voice ont pots tc-layer ont-side (Full CLI support)
show voice ont pots tc-layer ont-side current-interval (Full CLI support)
show voice ont pots tc-layer ont-side previous-interval interval-nbr (Full CLI support)
show voice ont service (Full CLI support)
show xdsl ont (Full CLI support)
show xdsl ont carrier-data (Full CLI support)
show xdsl ont carrier-data far-end (Full CLI support)
show xdsl ont carrier-data near-end (Full CLI support)
show xdsl ont counters (Full CLI support)
show xdsl ont counters far-end (Full CLI support)
show xdsl ont counters far-end channel (Full CLI support)
show xdsl ont counters far-end channel current-interval (Full CLI support)
show xdsl ont counters far-end channel previous-interval interval-no (Full CLI support)
show xdsl ont counters far-end line (Full CLI support)
show xdsl ont counters far-end line current-interval (Full CLI support)
show xdsl ont counters far-end line previous-interval interval-no (Full CLI support)
show xdsl ont counters near-end (Full CLI support)
show xdsl ont counters near-end channel (Full CLI support)
show xdsl ont counters near-end channel current-interval (Full CLI support)
show xdsl ont counters near-end channel previous-interval interval-no (Full CLI support)
show xdsl ont counters near-end line (Full CLI support)
show xdsl ont counters near-end line current-interval (Full CLI support)
show xdsl ont counters near-end line previous-interval interval-no (Full CLI support)
show xdsl ont cpe-tuc-inventory (Full CLI support)
show xdsl ont cpe-tur-inventory (Full CLI support)
show xdsl ont failure-status (Full CLI support)
show xdsl ont failure-status far-end (Full CLI support)
show xdsl ont failure-status near-end (Full CLI support)
show xdsl ont operational-data (Full CLI support)
show xdsl ont operational-data far-end (Full CLI support)
show xdsl ont operational-data far-end channel (Full CLI support)
show xdsl ont operational-data far-end line (Full CLI support)
show xdsl ont operational-data near-end (Full CLI support)
show xdsl ont operational-data near-end channel (Full CLI support)
show xdsl ont operational-data near-end line (Full CLI support)
show xdsl ont profiles (Full CLI support)

show xdsl ont xdsl-int (Full CLI support)
show xstp (FD 36p Ethernet LT (NELT-B))
show xstp bridge (FD 36p Ethernet LT (NELT-B))
show xstp instance (FD 36p Ethernet LT (NELT-B))
show xstp port (FD 36p Ethernet LT (NELT-B))
show xstp port-instance (FD 36p Ethernet LT (NELT-B))

Removed Commands

configure mcast src (Fixed multicast VLAN per IGMP channel)
configure mcast src packagemember (Fixed multicast VLAN per IGMP channel)
configure qos profiles scheduler (GPON support)
show qos profile-usage scheduler (GPON support)
show vlan fdb mac ((GPON support)
show bridge port-to-atm-pvc (ISAM-V H248:CLI enhancements)

1.2 Preface

Scope

This user guide describes the Command Line Interface (CLI) commands supported by the Nokia 7302 ISAM, 7330 ISAM FTTN and 7360 ISAM. These commands are used for installation, configuration, management and troubleshooting.

User Profile

The guide is intended for operating personnel (sometimes called craft persons).

The CLI Structure

The ISAM CLI is a command-driven interface accessible via telnet or via the craft terminal.

The CLI can be used to configure and manage ISAM equipment.

1.3 CLI Commands

Command Types

The commands of the CLI language can be divided into two groups: global and environmental commands.

Global commands (such as the **logout** command) can be entered in any context and have the same effect in each context.

Environmental commands (such as the **info** command) can only be entered in some contexts (for example, the **info** command cannot be used in the **show** node) and have a different effect in each context. The purpose of the command (for example, showing the configuration) is the same but the implementation or the generated output is different.

Some commands are also implicit. For example, when you enter only the node name **configure system security snmp community fden**, you run an implicit command that changes your context to the specified node and that creates this node if it did not previously exist.

The available commands are discussed in a separate chapter.

Access Rights

Not every operator can execute every command.

Access to commands is granted via the operator profile.

It is possible that an operator can execute a given command in one context and not in another.

Options and Parameters

Commands can have options and parameters.

Options are special parameters that are context insensitive. For example, you can enter the option **detail** after **info** in any context.

Options must be given at the end of the command preceeding the filter and printer specifications.

Different look and feel for IHUB CLI commands

A multi-core system exists of two CLI parsers. This can result in a different behavior and sometimes a different look and feel, depending on the CLI parser which is handling the command.

This section lists the most important differences in "behavior / look and feel" for the CLI commands listed in the different IHUB CLI guides, compared to the CLI commands listed in this document, and compared to the description of ISAM CLI in the subsections of this chapter.

Command Completion:
command can complete with a root command iso the IHUB command if the characters before the completion are similar to the characters of the root command
no command completion for combined types (e.g. nt-a:sfp:1)
no command completion for parameter alternatives
command completion can cease to work when entering a range

Ranges:
a range allows only decimal numeric values
command execution with numerical ranges will fail when a context change occurred
commands which contain a valid range syntax (no context change), are executed without displaying the different individual commands
Prompt:
dynamic resource-id is not displayed in the prompt
Online Help:
global command <help> not supported for IHUB commands : use <?> or <TAB>
online help not scaled down (not restrictive) depending the installed equipment practice
no online help for combined types
General:
global command <back> returns to the context from which the current level was entered
keystroke <insert> not supported
Info Command:
info command must be executed from within a node, it cannot take an argument
info configure detail command will fetch all the configurations from the IHUB context, irrespective of operator access rights
the output format option "xml" is not applicable, only a textual (=hierarchical) output is supported
Show Command:
the output is tailored depending on the provided parameters
Absolute path:
Cli commands can be executed in any context by specifying the full path from the CLI root. The command may or may not change the current context, depending on whether or not it is a leaf command
IACM command execution after executing "exit" :
IACM command execution can cease to work when the command was entered after executing the "exit" command from within an IHUB context, for which the parent node has both: IACM and IHUB children nodes
Tree Command:
When a tree command is executed in a node who has both :IACM and IHUB subnodes, the indentation in the tree structure gets lost for the IHUB related subnodes

1.4 Nodes

Node Definition

A command definition tree, further abbreviated to "command tree" is a structure of nested command nodes from which CLI commands can be derived. A command node consists of a node name and zero or more resource identifiers. The resource identifiers behave like parameters, but identify a particular resource. For example, **public** in **configure system security snmp community public** is an unnamed resource identifier of the node **community**.

One such command node identifies a context. A CLI command can be derived from a command tree starting from the root node, but a command with the same meaning and impact can also be derived from a lower level node or subnode. The following are examples of equivalent commands:

- **info configure system security snmp community public** in any node.
- **info system security snmp community public** in node **configure**
- **info security snmp community public** in node **configure system**
- **info snmp community public** in node **configure system security**
- **info community public** in node **configure system security snmp**
- **info** in node **configure system security snmp community public**

The root node is the highest level. Directly below the root node are important command nodes such as **configure** and **show**.

Node Creation

A dynamic node is a sub-node of the **configure** node that corresponds to a configurable resource that an operator can create.

An operator can create a dynamic node by navigating to it. The system will automatically create the node. The operator can configure its prompt in such a way that it shows if the operator navigated to an existing or a new node. The ability to create nodes is limited by the access rights of the user.

It is also possible that the system creates additional subnodes in other nodes, for example, in the **show** node due to the creation of a new dynamic node in the **configure** node.

Node Deletion

A dynamic node can be deleted by placing **no** in front of the node name. For example, **configure system security snmp no community public** deletes the specified node and all its subnodes. The ability to delete nodes is limited by the access rights of the operator.

Resource Attributes

The value of resource attributes can be changed by entering the name of the resource attribute followed by the new value. For example, **password plain:secret** sets the value of the resource attribute named **password** to the plain text string **secret**.

Resource attributes can be set to their default value by entering **no** followed by the name of the resource attribute. For example, **no password** sets the value of the resource attribute named **password** to the default value (no password required).

1.5 Parameters

Named and Unnamed Parameters

Parameters are characterised by a name and a type.

Parameters can be named or unnamed.

Named parameters are entered as two tokens: a keyword and a value (for example, **password plain:secret**). Some commands (such as **info**) require only the keyword.

Only the value token is entered for unnamed parameters (for example, **public** in the node name **community public**).

Most options and first resource identifiers are unnamed.

Parameters can be entered in any order. Only unnamed keys must be entered directly after the node name.

Parameter Types

Parameter values belong to a parameter type. Parameter types limit the parameter values to strings that the system can understand.

Parameter types consists of 1 to N fields with separators in between. Each field belongs to a basic type. The separator is in most cases a colon : or a slash /.

The name of parameter types always starts with an uppercase character and can contain an optional domain name. The domain name is separated from the parameter name by ::.

The sequence in which the fields appear can differ in case one of the fields belongs to an enumeration type. For example, if provided some possible values for the parameter type **ExtendedFileName** (the first field is an enumeration field with possible values **file** and **ftp**, *host-name*, *user-name*, *password* and *local-file* are also fields):

- **file:** *local-file*
- **ftp:** *host-name @ user-name : password / local-file*

Parameter types are built by combining 1 to N basic types.

Basic Types

Basic types can be divided in two groups: fixed length basic types and variable length basic types.

Examples of variable length basic types are:

- integers
- printable strings (representing operator chosen names or descriptions)
- SNMP object identifiers
- binary strings

The length of a variable length basic type is in most cases limited. The definition of logical length depends on the basic type: number of characters for printable strings, number of bytes for binary strings, and number of numbers in the object identifier for SNMP object identifiers.

Examples of fixed length basic types are:

- ip-address
- fixed-length printable strings
- enumeration types (limited list of allowed strings)

Basic Type Formatting Rules

Integers can be entered in a decimal format. Large integers can be abbreviated as follows:

- *decimal-number* **k** which is equal to *decimal-number* ***1000** (For example: **3k** is equal to **3000**)
- *decimal-number* **M** which is equal to *decimal-number* ***1000000**
- *decimal-number* **G** which is equal to *decimal-number* ***1000000000**

Binary strings must be entered as: *hex-byte* : *hex-byte* :...: *hex-byte*. *hex-byte* is a number between 0 and 255 in hexadecimal format (all lowercase). For example, **3f:23:ff:b2** is a valid binary string.

Object identifiers and ipv4-addresses must be entered as: *decimal-number* . *decimal-number* *decimal-number*. For example, **128.17.32.45** is a valid object identifier.

The values of all fields may be placed within double quotes. A field separator can never be placed within double quotes. For example, **"1"/"1"** is a valid shelf identifier, but **"1/1"** is not a valid shelf identifier.

A field value can contain multiple double quotes. For example, **"hallo world"** is equivalent to **hallo** " **world** or to **"hallo"** " **world"**.

Printable strings must be placed within double quotes if they contain special characters: double quote **"**, a backslash ****, a question mark **?**, a cross **#**, a space, a tab, a carriage return, or a new line.

The backslash **** is the escape character. The double quote **"** and backslash **** characters must be preceded by the escape character. The **\char** is equivalent to *char* with the following exceptions:

- **\r** : carriage-return
- **\t** : tab
- **\n** : new-line

In some cases it is possible that a command is ambiguous. For example, **info operator detail** can be interpreted in two ways: list the configuration of the operator with the name **detail** or list the configuration of all operators in detail.

The ambiguity is solved by the parser in the following way: if the string contains quotes, it is interpreted as a printable string, otherwise it is interpreted as a keyword. For example, **info operator "detail"** lists the configuration of the operator with the name **detail** and **info operator detail** lists the configuration of all operators in detail.

Syntax Check

The system verifies if each typed character is syntactically correct.

In case the system detects a syntax error, it will position the cursor at the offending character and beep.

This can give strange effects if you are entering characters in the 'insert mode': the invalid characters will shift to the right and any newly entered character will be inserted in front of the faulty characters.

To avoid this strange effect, it is recommended to work in the (default) overwrite mode.

Command Repetition

Values of parameters may contain decimal, hexadecimal or character ranges. These ranges indicate that the concerned command must be repeated a number of times with the different values as specified in the range.

Decimal ranges are entered as [*d*: *start*...*end*] in which *start* and *end* are integers. Example of a decimal range: **lt:1/1/[4...16]**

Hexadecimal ranges are entered as [*h*: *start*...*end*] in which *start* and *end* are hexadecimal numbers. *start* and *end* values may not contain uppercase characters and the number of characters of the first *start* value determines the number of characters to be entered for the following values in the range. Example of a hexadecimal range:

03:06:ff:[h:aa...bd]

Character ranges are entered as [*c*: *start...end*] in which *start* and *end* are characters. *start* and *end* value must belong to the same character class: digit, lowercase or uppercase. Special characters are not allowed. Example of a character range : **operator[c:a...f]**

Ranging is not supported for float values

Ranges have following restrictions:

- One command may only contain 1 range.
- The default range type is decimal. It will be used if the type is not explicitly mentioned with '**d**:', '**h**:' or '**c**:'.
- Subranges can be separated with a comma. For example: **[d:17...19,32,60...62]** will be replaced consecutively with the values 17, 18, 19, 32, 60, 61 and 62.
- Ranges between quotes are not expanded.
- Command completion may refuse to work once a range is entered.
- Execution of command repetition will stop once an iteration in the range fails.

The system sometimes restricts which range type may be used: the system only allows a decimal range where a decimal number can be entered or a hexadecimal range where a hexadecimal number can be entered. It even imposes that the range replaces completely the number. Example: **1[2...3]** is invalid, **[12...13]** must be entered instead. Also the *start* and *end* of the range must fall in the allowed range for the number. Only text strings may contain all types of ranges.

The way the system handles a range depends on the command.

- Some commands can handle ranges directly. Repeating the command will be done internally. The command will then behave for the operator as a normal command..
- For the other commands, the system will execute the command *end* - *start* + 1 times in which the specified range is each time replaced by a number out of the range. Each expanded command is shown to the operator. Commands that normally change the context, don't do this in this case. The command repetition can be stopped via an interrupt.
- Range commands in combination with help "?" character always show the complete list of available parameters and subnodes and do not suppress subnodes in case of the existing nodes.

Obsolete and Replaced Parameters

Parameters can become obsolete or parameters are substituted by new parameters. See the definition and strategy in section 1.11 CLI Backward Compatibility.

1.6 Filters

The language provides filters to manipulate the output of commands.

For list of available filters, please refer to command description of section "CLI Filters".

Filters can be specified in case the command generates output. They are separated from the basic command with a pipe character |.

The user can specify a sequence of filters as in following example: **info | match exact:1/1 | count lines**.

1.7 Printers

The language provides printers to allow the user to decide how the output must be printed on his terminal.

The available printers are discussed in detail in a separate chapter.

Printers can be specified in case the command generates output. They are separated from the basic command with a pipe character |.

The user can specify maximum one printer as in following example: **info | match exact:1/1 | more**

The default printer can be specified for the CLI session or the operator.

1.8 Getting help

The user can get help in two ways.

The first is using the **help** command. This gives an extensive explanation on the command.

The user can also enter a question-mark **?** at each position in the command. He will then get a short explanation on what he can enter at this position in the command.

For example: **configure system security operator ?** gives following output:

```
<Sec::OperatorName> : the name of the operator [a-z0-9] (1<=x<=11)
```

This has the following meaning:

- **Sec::OperatorName** is the name of the parameter type. This indicates that the user must enter a parameter value.
- **:** indicates that the concerned object is an optional parameter. Mandatory parameters are indicated with **!**, obsolete parameters and obsolete nodes with **X**, regular nodes with **+**, commands with **-**
- **the name of the operator** explains how the parameter will be interpreted by the system.
- **[a-z0-9]** indicates that the value may consist of the lower-case alphanumeric characters, the ASCII characters **a** till **z** and **0** till **9**.
- **(1<=x<=11)** indicates that the name must consist of at least 1 character and maximum 11 characters.

1.9 The CLI Prompt

The prompt can be configured by the user. The prompt can be specified for the session, for an operator or for an operator profile. If no specific prompt is specified for the session, the prompt specified for the operator is taken and the prompt specified for the operator profile is taken if no prompt is specified for the operator.

The prompt can be composed with following components :

- **%n** : the name of the current operator.
- **%s** : the current numbering scheme (**typ|leg|pos**).
- **%i** : the current system id.
- **%t** : the current timestamp.
- **%!** : the current history number.
- **% num d** : the current context.
 - *num* is the maximum number of components (starting from the last) that are shown (default is all).
 - each component will be separated from the next one with a >.
 - a > is also added in front of the first component.
- **%%** : a %
- **%c** : # if the current node was an existing node or \$ if it is newly created.
- any other character is just added to the prompt as is.

The default prompt is "**%s:%n%d%c**"

The system will add a > at the end of each empty prompt or each prompt that consists purely out of white-space

The ISAM CLI prompt configuration supports adding one or more components starting with the "%" escape character. This behavior is extended with the use of the "\$" as an escape character. The system behavior is the same as when using the "%" escape character.

For example: an occurrence of "\$n" is replaced with the name of the current operator.

For backward compatibility, the "\$" character must be used exclusively without the "%" character. As soon as the "%" character is used in the string, all occurrences of the "\$" character will be considered as a literal and will not be replaced with the component it refers to.

The following command already exists, except that the prompt value uses "%" instead of "\$". The usage of "\$" is now also supported:

configure system security operator abcd prompt \$h:\$3d:\$n:\$c:\$i:\$!:\$s:\$

Instead of "%", "\$" is accepted as an escape character. "%" continues to be supported for backward compatibility.

Example:

leg:abcd>configure>system>security>operator>abcd# prompt \$h:\$3d:\$n:\$c

System_id:>security>operator>abcd:abcd:#

If at least one "%" is present in the prompt, the priority will be given to "%" and "\$" will be treated as a literal.

Example:

leg:abcd>security>operator>abcd:abcd:#prompt \$h:%3d:%s:%n:%

\$h:\$3d:\$s:abcd:#

Reverting to all "\$":

\$h:\$3d:\$s:abcd:#prompt \$h:\$3d:\$s:\$n:\$c

System_id:>security>operator>abcd:leg:abcd:#

1.10 Entering CLI Commands

Following key strokes are treated in a special way while entering commands:

- *arrow-left* : move the cursor one position to the left.
- *arrow-right* : move the cursor one position to the right.
- *arrow-up* : get the previous stored command (round-robin, starts with the last stored command).
- *arrow-down* : get the next stored command (round-robin, starts with the oldest stored command).
- *insert* : toggle between insert and overwrite mode.
- *backspace* : delete the character before the cursor and move the cursor one position to the left.
- *delete* : delete the character under the cursor.
- *control-c* : interrupt the current command or clear the current entered string on a telnet or SSH terminal.
- *control-a* : move the cursor to the beginning of the line.
- *control-p* : get the previous stored command (round-robin, starts with the last stored command).
- *control-n* : get the next stored command (round-robin, starts with the oldest stored command).
- *control-k* : delete all characters starting from the position of the cursor.
- *control-u* : delete all entered characters.
- *control-w* : delete one word before the cursor.
- *control-x* : interrupt the current command or clear the current entered string on the craft terminal.
- *control-l* : clear screen.
- *tab* : trigger command completion.
- *space* : terminate a token and trigger command completion, unless it is placed between double quotes.
- *#* : treat all following commands as comment, unless they are placed between double quotes.
- *?* : trigger online-help, unless it is placed between double quotes.

Entering a tab triggers command completion.

The system will try to expand the existing entered string until an ambiguity is found. If there is no ambiguity, a space will be added behind the token.

Entering a space behind an entered string has - for keywords - the same effect as the tab.

For example: entering **c** followed by a tab in the root node will expand to **configure**.

For example: entering **c** followed by a space in the root node will expand to **configure**.

For example: entering **configure system security operator admin pr** followed by a tab will expand to **configure system security operator admin pro** because there is still an ambiguity here between **prompt** and **profile**.

1.11 CLI Backward Compatibility

Strategy

ISAM has provided a Command Line Interface since the beginning. With each new Software Release, new features are added and as a consequence also the CLI commands need to evolve.

New features often result in new commands or extension of existing commands.

Strategy with respect to Configuration Commands

When new features become available, commands and parameters will be affected. The objective of the strategy is that existing configuration scripts will not be broken, i.e. they can still be used without throwing errors.

New commands can be defined that are an add-on to the existing set of commands. Existing commands may need to be expanded or they may be replaced by a new command. Old commands may become useless and will be obsolete.

When existing commands are expanded, new parameters may need to be added on to a command, existing parameters may need to be extended or parameters may be replaced by a new parameter. Exceptionally, parameters become useless and will be obsolete.

Notice that obsolete commands and parameters will not be maintained for new features; moreover, eventually, in due time, in the scope of a major SW release, an obsolete command and/or parameter will actually be removed from the CLI Command Tree. See chapter 'Phase out strategy obsolete commands and/or parameters'.

Backward Compatibility support for configuration commands.

Configuration commands shall remain backwards compatible. A command may become obsolete because either it is no longer useful or it needs to be replaced by a new command.

At the node level there are two ways:

- Obsolete command
 - A command becomes obsolete when the corresponding functionality is removed from the system. In order to avoid that configuration scripts from previous software releases break, the command is not removed. Rather, executing the command will have no effect and the command will never appear in the output of an info command.
- Obsolete and Replaced command
 - A command may get replaced by a new one. This may occur when the corresponding functionality is modified or expanded. In order to avoid that configuration scripts from previous software releases break, the command is not removed. Rather, the command is defined as 'obsolete and replaced'. This means that the command is still valid and can still be executed but it will never appear in the output of an info command.

Backward Compatibility support for Configuration Commands parameters.

Configuration commands shall remain backwards compatible. A way to accomplish this is by allowing parameters of the command to evolve. A parameter becomes obsolete because either it is no longer useful or it needs to be replaced by a new parameter.

- Obsolete parameter
 - A parameter becomes obsolete when the corresponding functionality is no longer supported by the system. In order to avoid that configuration scripts from previous software releases break, the parameter is not removed. Rather, entering the parameter will have no effect and the parameter will never appear in the output of an info command.

- Obsolete and Replaced parameter
 - A parameter may get replaced by a new one. This may occur when the corresponding functionality is modified or extended. In order to avoid that configuration scripts from previous software releases break, the parameter is not removed. Rather, the parameter is defined as 'obsolete and replaced'. This means that the parameter is still valid and can still be executed but it will never appear in the output of an info command. The replacing parameter will appear in the output of an info command and supports the modified or extended functionality.

Strategy with respect to Show Commands

The output of any show command is available in various formats. Formatting of the output may change over time. XML type of output is formalized. Writers of CLI scripts are encouraged to use the XML format, as this output is ignorant of any formatting.

The information displayed may change as a result of new features. The goal is to add new parameters to the existing display output without modifying the current parameters. In exceptional cases the latter cannot be guaranteed.

1.12 Phase Out Strategy Obsolete Commands and/or Parameters

This chapter describes the phase out strategy that will be followed for obsolete commands and/or obsolete parameters.

Announcement Release

The announcement release is the release in which we announce to the customer that a defined set of "impacted" CLI commands will phase-out in the phase-out release. The announcement release is independent from the release in which the commands and/or parameters became 'obsolete'. The "impacted" CLI commands are the commands which are obsolete or the commands which contain obsolete parameters.

See chapter 'Command Phase Out Announcement Release' for the list of "impacted" CLI commands.

Phase Out Release

This is the future release in which the listed announced "impacted" commands are **removed (obsolete command) or modified (obsolete parameter)**. From this release onwards, obsolete commands and/or parameters are no longer supported. The obsolete commands will be indicated as removed in the history section of the CLI user guide. The commands with obsolete parameters will be indicated as modified commands in the history section of the CLI user guide.

The phase-out release is at least the release succeeding the announcement release.

Customer Impact

- List of impacted commands (See chapter 'Command Phase Out Announcement Release') should carefully be checked in the CLI Command Guide chapter Announcement Release. The obsolete commands and/or obsolete parameters are indicated in the command tree by the prefix **X**.
- The customer should determine the phase-out release.
- Any OSS systems and/or scripts using CLI commands should be checked and updated if required.
- Once the command is phased-out, the normal error reporting will be applicable.

1.13 Command Phase Out Announcement Release

This section gives a list of all the impacted CLI commands which will phase out in the phase-out release. See previous chapter 'phase out strategy obsolete commands and/or parameters' for more info about the phase-out release'. The listed CLI commands are commands which are obsolete or commands which contain obsolete parameters.

Not supported commands/parameters from a later release onwards
configure cm (IMPORTANT: All DPoE related commands will be moved to a separate CLI guide)
configure bridge port vlan-id (parameter network-vlan is replaced by l2fwder-vlan and vlan-scope)
configure l2cp (end of support for ANCP/L2CP)
configure pon interface power-shed-prof (command will be replaced by 'configure generic-pon power-shed-prof')
configure qos profiles cac cac-type pon-cac (command will be replaced by 'configure qos profiles cac cac-type generic-pon-cac')
configure system pon-ont (command will be replaced by 'configure generic-pon ont' and 'configure pon pwrbrst-mode')
show l2cp (end of support for ANCP/L2CP)
configure transport ip default-ttl (obsolete and replaced by "configure system management default-ttl")
configure equipment sfpe1t1 framer (removal of obsolete loopback commands)
show qos dsl-bandwidth (will be replaced by "show qos interface-bandwidth")
show qos shdsl-bandwidth (will be replaced by "show qos interface-bandwidth")
show qos ethernet-bandwidth (will be replaced by "show qos interface-bandwidth")
show transport ether-ifmault (will be replaced by "show ethernet mau")
show transport ether-ifsfp1t (will be replaced by "show ethernet sfp")
show transport ether-ifdot3lt (will be replaced by "show ethernet dot3stats")
configure atm [no]ip-cross-connect (obsolete and replaced by "configure ipoa/e-iw")
configure vlan (parameters "pvid-usage" "pppoe-relay" "circuit-id" "remoted-id" will be deleted)
configure vlan (parameter "broadcast-frames" is replaced by "new-broadcast" and will be deleted)
configure vlan (parameter "secure-forwarding" is replaced by "new-secure-fwd" and will be deleted)
configure bridge (obsolete parameter "accept-frame-type" will be deleted)
configure bridge (parameter "old-tag" is replaced by "tag" and will be deleted)
configure xdsl ont line pm-collect pm (is replaced by "configure xdsl ont line l2 pm enable")
configure xdsl ont line pm-collect tca (is replaced by "configure xdsl ont line l2 tca enable")
configure hpna ont port pm-collect (is replaced by "configure hpna ont l2 pm")
configure veip ont port pm-collect (is replaced by "configure veip ont l2 pm")
configure ethernet ont port pm-collect (is replaced by "configure ethernet ont phy pm")

2- Environment Configuration Commands

2.1 Environment Configuration Command Tree	2-160
2.2 Environment Configuration Command	2-161

2.1 Environment Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "Environment Configuration Commands".

Command Tree

----environment

- [no] prompt
- [no] terminal-timeout
- [no] print
- [no] screen-length
- [no] inhibit-alarms
- [no] mode

2.2 Environment Configuration Command

Command Description

This command allows the operator to manage the session-specific parameters. These parameters are only valid for a specific session and are lost when the user logs out.

The default values for **prompt** and **print** can be found in **configure system security operator** operator-name.

The default value for **terminal-timeout** can be found in **configure system security profile** profile-name.

terminal-timeout: A value of 0 equals an infinite timeout value (i.e. the terminal will never time out).

The prompt can be composed with following components :

- **%n** : the name of the current operator.
- **%s** : the current numbering scheme (**typ|leg|pos**).
- **%i** : the current system id.
- **%t** : the current system time.
- **%!** : the current history number.
- **% num d** : the current context.
 - num is the maximum number of components (starting from the last) that are shown (default is all).
 - each component will be separated from the next one with a >.
 - a > is also added in front of the first component.
- **%%** : a %
- **%c** : # if the current node was an existing node or \$ if it is newly created.
- **%h** : the current system id.
- any other character is just added to the prompt as is.

Next to %, ISAM supports the use of the \$ as an escape character. The system behavior is the same as when using the % escape character, e.g. an occurrence of \$n is replaced with the name of the current operator. For backward compatibility, the \$ character must be used exclusively without the % character. As soon as the % character is used in the string, all occurrences of the \$ character will be considered as a literal and will not be replaced with the component it refers to.

User Level

The command can be accessed by operators with all privileges, and executed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> environment [ no prompt | prompt <Sec::Prompt> ] [ no terminal-timeout | terminal-timeout
<Sec::EnvInactivityTimeout> ] [ no print | print <Sec::EnvMore> ] [ no screen-length | screen-length
<Sec::ScreenLength> ] [ [ no ] inhibit-alarms ] [ no mode | mode <Cli::Mode> ]
```

Command Parameters

Table 2.2-2 "Environment Configuration Command" Command Parameters

Parameter	Type	Description
[no] prompt	Parameter type: <Sec::Prompt>	optional parameter with default

2 Environment Configuration Commands

Parameter	Type	Description
	Format: - a specification of the prompt - length: x<=31	value: "" the specification of the prompt
[no] terminal-timeout	Parameter type: <Sec::EnvInactivityTimeout> Format: (default timeout : <Sec::InactivityTimeout>) Possible values: - default : the default inactivity timeout - timeout : specify the inactivity timeout Field type <Sec::InactivityTimeout> - specify the inactivity timeout of the terminal - unit: minutes - range: [0...120]	optional parameter with default value: "timeout : 30" specify the inactivity timeout of the terminal
[no] print	Parameter type: <Sec::EnvMore> Format: (more no-more default) Possible values: - more : the output is passed via the more filter - no-more : the output is put directly on the terminal - default : use the method as specified by the profile	optional parameter with default value: "default" specifies the way the output is printed on the terminal
[no] screen-length	Parameter type: <Sec::ScreenLength> Format: - specifies the number of lines to be printed on the terminal for paging. value 0 disables the configuration - range: [0,2...10000]	optional parameter with default value: "0" specifies the number of lines to be printed on the terminal for paging
[no] inhibit-alarms	Parameter type: boolean	optional parameter disables the alarm reporting in the current session
[no] mode	Parameter type: <Cli::Mode> Format: (batch interactive) Possible values: - batch : non-interactive mode intended for scripting tools - interactive : interactive mode intended for human operators	optional parameter with default value: "interactive" the mode in which the CLI handles command input

3.2 Alarm Log Configuration Command

Command Description

This command allows the operator to maintain a log that contains all alarm state changes by enabling the logging mode and setting the severity level equal to or higher than the severity level that the operator is interested in.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure alarm log-sev-level <Alarm::alarmSeverityReport> log-full-action <Alarm::alarmLogFullAction>
non-itf-rep-sev-level <Alarm::alarmSeverityReport>
```

Command Parameters

Table 3.2-2 "Alarm Log Configuration Command" Command Parameters

Parameter	Type	Description
log-sev-level	Parameter type: <Alarm::alarmSeverityReport> Format: (indeterminate warning minor major critical) Possible values: - indeterminate : not a definite known severity level - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking	<i>optional parameter</i> set the lowest severity level to log alarms
log-full-action	Parameter type: <Alarm::alarmLogFullAction> Format: (wrap halt) Possible values: - wrap : older log records are overwritten by recent ones - halt : logging is stopped until the log buffer is reset	<i>optional parameter</i> set the action if log buffer is full
non-itf-rep-sev-level	Parameter type: <Alarm::alarmSeverityReport> Format: (indeterminate warning minor major	<i>optional parameter</i> set minimum severity level to report non itf alarms

Parameter	Type	Description
	critical) Possible values: - indeterminate : not a definite known severity level - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking	

3.3 Alarm Entry Configuration Command

Command Description

This command allows the operator to manage local alarm entries.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure alarm entry (index) [ no severity | severity <Alarm::alarmSeverity> ] [ [ no ] service-affecting ] [ [ no ] reporting ] [ [ no ] logging ]
```

Command Parameters

Resource Identifier	Type	Description
	- ctrl-dnld-failure : Controller card download failure - melt-hw-issue : MELT hardware issue - melt-board-reset : MELT board reset - board-shelf-mismatch : board type and shelf type mismatch - mgnt-type-mismatch : Board management type mismatch - fileserv-unavail : file transfer Server unavailable or file transfer failed - shdsl-n-loopback : loopback active at the network side - shdsl-c-loopback : loopback active at the customer side - shdsl-conferr : configuration error - shdsl-atm-lcd : loss of atm cell delineation - shdsl-lpr : loss of power at stu-r - shdsl-secu-err : unable to disable stu-r access - shdsl-dev-fault : device fault - shdsl-atm-ncd : no atm cell delineation - shdsl-n-losw : loss of sync word at the network side on each pair - shdsl-c-losw : loss of sync word at the customer side on each pair - shdsl-n-aten : loop attenuation alarm at the network side on each pair - shdsl-c-aten : loop attenuation alarm at the customer side on each pair - shdsl-n-snr : snr margin alarm at the network side each pair - shdsl-c-snr : snr margin alarm at the customer side on each pair - shdsl-n-dccont : dc continuity fault at the network side on each pair - shdsl-c-dccont : dc continuity fault at the customer side on each pair - shdsl-c-actfail : activation failure at the customer side on each pair - e1-fe-rai : Receiving Remote Alarm Indication - e1-ne-rai : Transmitting Remote Alarm Indication - e1-fe-ais : Receiving Alarm Indication Signal - e1-ne-ais : Transmitting Alarm Indication Signal - e1-lof : E1 Loss of frame - e1-los : E1 Loss of Signal - e1-loopback : E1 facility in loopback - ima-grp-fe-su : far-end starting up - ima-grp-fe-cfg : far-end failed configuration - ima-grp-ne-cfg : near-end failed configuration - ima-grp-fe-nl : insufficient number of links at far-end - ima-grp-ne-nl : insufficient number of links at near-end - ima-grp-fe-blk : far-end is blocked - ima-lnk-lif : loss of ima frame - ima-lnk-lods : link out of delay synchronization - ima-lnk-misc : link misconnect - ima-lnk-rfi : link remote failure indication - ima-lnk-fault : fault in link facility - ima-lnk-txblk : transmit blocked due to far-end - ima-lnk-rxblk : receive blocked due to far-end - bad-digitmap : Configured digitmap is unusable - dhcp-unreach : The DHCP server is unreachable - dhcp-no-srv : The address in DHCP reply is NULL - dhcp-inv-srv : The address in DHCP reply is invalid - norpniewithsoftdsp : do not plan / plug-in RPNI-E board	

3 Alarm Configuration Commands

Resource Identifier	Type	Description
	with SoftDsp SW image - unknown-sub : subscriber exist in the POLT, but not in the appl server - ground-key : Return current to the ground - port-hightemp : Temperature threshold on user port exceeded. - port-jbfltca : JB fill level threshold on user port exceeded. - reg-domainname : Registration failure (resolving domain name). - reg-auth : Registration failure (authentication). - reg-timeout : Registration failure (message timeout). - reg-srvfailresp : Registration failure (failure response from server). - inv-domainname : Invitation failure (resolving domain name). - inv-auth : Invitation failure (authentication). - inv-timeout : Invitation failure (message timeout). - inv-srvfailresp : Invitation failure (failure response from server). - subs-srvfailresp : Subscribe failure (failure response from server). - subs-domainname : Subscribe failure (resolving domain name). - subs-auth : Subscribe failure (authentication). - subs-refreshfail : Subscribe failure (refresh failure). - subs-inittimeout : Subscribe failure (initial REQ timeout). - emergency-call : Emergency call for SIP POTS is ongoing. - e1sip-reg-domainname : E1 sip termination registration failure (resolving domain name). - e1sip-reg-auth : E1 sip termination registration failure (authentication). - e1sip-reg-timeout : E1 sip termination registration failure (message timeout). - e1sip-reg-srvfailresp : E1 sip termination registration failure (failure response from server). - e1sip-inv-domainname : E1 sip termination invitation failure (resolving domain name). - e1sip-inv-auth : E1 sip termination invitation failure (authentication). - e1sip-inv-timeout : E1 sip termination invitation failure (message timeout). - e1sip-inv-srvfailresp : E1 sip invitation failure (failure response from server). - e1sip-emergency-call : Emergency call for ISDN PRA/CAS R2 is ongoing. - e1itf-ais-signal : Alarm Indication Signal detected at E1 interface. - e1itf-los-signal : Loss Of Signal detected at E1 interface. - e1itf-rai-signal : Remote Alarm Indication detected at E1 interface. - e1sip-misconfig-mgc10 : Configuration not conform with the core network entity. - e1sip-nsmprf-missed : The SIP termination requires a NSM profile. - e1t1itf-recv-ais : Alarm Indication Signal received at interface. - e1t1itf-recv-los : Loss Of Signal received at interface.	

Resource Identifier	Type	Description
	- e1t1itf-recv-rai : Remote Alarm Indication received at interface. - transport-mismatch : Transport protocol mismatch - dns-lookup-failure : Dns look up failure - none-dns-srv : No reply for all DNS serverd - no-dns-srv : No DNS servers configured - none-srv : No reply for all SIP First Hops - no-srv : No SIP First Hop configured - reg-srv-unreach : All SIP register servers are unreachable - proxy-srv-unreach : All SIP proxy servers are unreachable - dhcp-srv-unreach : The DHCP server is unreachable on this board - fo-trigger : Fail Over Triggered - fb-trigger : Fail Back Triggered - du-trigger : Deliberate Update Triggered - ssp-missing : SSP Missing in CDE - dns-pool-exceed : Number of different SG associated DNS pools exceed - lsa-fo-trigger : SIP voice service degraded - fail-over to LSA server - reg-domainname-sec : Registration failure (resolving domain name). - reg-auth-sec : Registration failure (authentication). - reg-timeout-sec : Registration failure (message timeout). - reg-srvfailresp-sec : Registration failure (failure response from server). - inv-domainname-sec : Invitation failure (resolving domain name). - inv-auth-sec : Invitation failure (authentication). - inv-timeout-sec : Invitation failure (message timeout). - inv-srvfailresp-sec : Invitation failure (failure response from server). - subs-srvfailresp-sec : Subscribe failure (failure response from server). - subs-domainname-sec : Subscribe failure (resolving domain name). - subs-auth-sec : Subscribe failure (authentication). - subs-refreshfail-sec : Subscribe failure (refresh failure). - subs-inittimeout-sec : Subscribe failure (initial REQ timeout). - emergency-call-sec : Emergency call for Secondary Termination is ongoing. - fanout : Lt load overflow - up-overflow : Upstream load overflow - upobc-overflow : Upstream load to OBC overflow - dwobc-overflow : Downstream load to OBC overflow - dw-overflow : Downstream load overflow - lwpri-overflow : The number of BE and CL pkts dropped exceed threshold - queue-drop : The number of pkts dropped by queue exceeds threshold - queue-load : The queue load exceeds threshold - queue-peak-usage : The queue peak usage exceeds threshold - mgc-unreachable : loss of contact with the media gateway controller - failover-to-esamgc : failover to esa mgc	

3 Alarm Configuration Commands

Resource Identifier	Type	Description
	- sgc-unreachable : loss of contac with signaling gateway controller - lcard-unreach-srvcard : line card unreachable with server card - lcard-type-mismatch : associate board of wrong type - meg-unknown-sub : the megaco subscriber is unknown - meg-ground-key : voice port ground key - meg-high-temp : voice port high temperature - meg-act-fail : the first link layer for isdn subscriber activation failure - meg-over-current : voice port over current - line-showering : line showering - low-qos-packetloss : the total packet loss has exceeded the configured threshold - low-qos-jitter : the rtp jitter has exceeded the configured threshold - low-qos-delay : the rtp delay has exceeded the configured threshold - sig-brd-persist-loss : voice signaling board persistent data loss - sig-brd-disk-full : voice signaling board disk 90% full - sig-brd-db-rollback : voice signaling board db rollback - mg-overload : mg overload - meg-unknown-sub-sec : The Megaco subscriber exists in voice signaling board but not in media gateway controller. - line-showering-sec : A subscriber line exceeds 20 off-hook / on-hook events / minute. - loss-env-mon : env-monitor box lost or not alive - etca-los : loss of signal errors in 15 min - etca-fcs : frame check sequence errors in 15 min - etca-day-los : loss of signal errors in 1 day - etca-day-fcs : frame check sequence errors in 1 day - etca-rx-octets : received octets in 15 min - etca-tx-octets : transmitted octets in 15 min - etca-day-rx-octets : received octets in 1 day - etca-day-tx-octets : transmitted octets in 1 day - user-sfp-los : user sfp loss of signal - user-sfp-tx-fail : user sfp tx failure - user-sfp-not-prst : user sfp not detected - user-sfp-inv-id : user sfp invalid id - user-sfp-t-exceed : user sfp temperature exceed - user-sfp-mismatch : user sfp mismatch the configured type - uplink-sfp-los : uplink sfp loss of signal - uplink-sfp-tx-fail : uplink sfp tx failure - uplink-sfp-not-prst : uplink sfp not detected - uplink-sfp-inv-id : uplink sfp invalid id - uplink-sfp-t-exceed : uplink sfp temperature exceed - uplink-sfp-mismatch : uplink sfp mismatch the configured type - loss-lsmwp-cap : lsm redundancy - inv-xvps-pair-data : invalid xvps pair redundancy data - network-power-loss : Loss of Network Power - hw-fault : Hardware Failure - bat-miss : Power Source Battery Missing - bat-fail : Power Source Battery Failure - bat-low : Power Source Battery Charge LOW - bat-a-fail : Power Source BAT-A Fail	

Resource Identifier	Type	Description
	- bat-b-fail : Power Source BAT-B Fail - ac-vol-out-range : AC Input Voltage Value Out of Range - network-power-loss-b : Loss of Network Power B - sem-ac-power-fail : External AC power supply failure - sem-ups-low-volt : External power supply low voltage - dc-a-fail : Local DC A power failure - dc-b-fail : Local DC B power failure - plan-power-mismatch : Planned and detected power mode mismatch - water-seepage-in-box : Detected water seepage in enclosure - sealed-box-open : Sealed box open detected - dc-a-vol-out-range : DC A Input Voltage Value Out of Range - dc-b-vol-out-range : DC B Input Voltage Value Out of Range - inlet-temp-major : The inlet temperature has exceeded a major level - inlet-temp-critical : The inlet temperature has exceeded a critical level - psu-fail-crit : Power Supply failure - psu-a-fail-presence : Power Supply A is not present - psu-a-fail-vin-ac-nok : Power Supply A has Vin AC fault - psu-a-fail-vin-uv : Power Supply A has Vin undervoltage - psu-a-fail-vin-ov : Power Supply A has Vin overvoltage - psu-a-fail-vout-uv : Power Supply A has Vout undervoltage - psu-a-fail-vout-ov : Power Supply A has Vout overvoltage - psu-a-fail-iout-oc : Power Supply A has Iout overcurrent - psu-a-fail-overtemp : Power Supply A has over temperature - psu-b-fail-presence : Power Supply B is not present - psu-b-fail-vin-ac-nok : Power Supply B has Vin AC fault - psu-b-fail-vin-uv : Power Supply B has Vin undervoltage - psu-b-fail-vin-ov : Power Supply B has Vin overvoltage - psu-b-fail-vout-uv : Power Supply B has Vout undervoltage - psu-b-fail-vout-ov : Power Supply B has Vout overvoltage - psu-b-fail-iout-oc : Power Supply B has Iout overcurrent - psu-b-fail-overtemp : Power Supply B has over temperature - synce-fail : synce clock source failure - bits-fail : bits clock source failure - bits-output-shutoff : bits output failure - ieee1588-fail : ieee1588 clock source failure - gnss-fail : gnss clock source failure - ieee1588-hybrid-fail : ieee1588 hybrid tod source failure - signal-loss : synce or bits clock signal loss - signal-efd : synce or bits clock signal exceed frequency deviation - esmc-loss : clock source loss SSM information - bits-output-exceed : exceed bits output threshold - ql-input-exceed : exceed input clock source threshold - holdover : clock system is in the holdover - lti : all clock source failed - tod-reference-fail : Timing ToD Reference failed - internal-clk-fail : Internal CLK failed	

3 Alarm Configuration Commands

Resource Identifier	Type	Description
	- bgp-peer-down : peer operational state is down - bgp-routes-mid-limit : 90% of max nbr of routes BGP can learn from a peer is reached - isis-adjacency-down : isis adjacency is down - isis-adjacency-reject : isis adjacency is rejected - isis-instance-down : isis instance is down or not - ospf-lsa-limit : limit of received LSA's is reached - ospf-lsa-mid-limit : 90% of limit of received LSA's is reached - ospf-neighbor-down : OSPF neighbour is down - ospf-instance-down : OSPF instance is down or not - ospf3-lsa-limit : limit of received OSPFv3 LSAs is reached - ospf3-lsa-mid-limit : 90% of limit of received OSPFv3 LSAs is reached - ospf3-neighbor-down : OSPFv3 neighbour is down - ospf3-instance-down : OSPFv3 instance is down or not - rip-instance-down : rip instance down - lag-down : lag down - lagsubgrp-thresh-reach: lag subgroup threshold reached - lagsubgrp-switch-fail : lag subgroup switchover failed - no-unpinned-free-ports: No free ports available for unpinned traffic - general-arp-limit : arp limit exceeded - gen-switch-out-of-res : failure due to lack of resources on switch - ipv6-nc-limit : ipv6 neighbor cache limit exceeded - dhcp-session-oor : dhcp session out of resources - ihub-fdb-limit : layer 2 fdb limit reached - ihub-mac-limit : layer 2 mac limit reached - l2fw-stp-exception : STP exception condition is present in the SAP - l2fw-stp-root-guard : STP root guard violation is present - vprn-routes-limit : limit of ip is reached - vprn-ipv6-routes-limit: limit of ipv6 is reached - dhcpv6-lease-limit : limit of dhcpv6 leases is reached - dhcpv4-lease-limit : limit of dhcpv4 leases is reached - vpls-mfib-limit : limit of fib table is reached - ihub-ipv6-dad-own : duplicate IPV6 address is detected for IP address allotted to system - ihub-ipv6-dad : duplicate IPV6 address is detected for a user's IP address - ihub-ipv6-dup-pd-route: ipv6 duplicate pd detected - vpls-duplicate-mac : duplicate mac address is detected - vpls-fdb-limit : limit of fdb table is reached - vpls-self-duplic-mac : duplicate of a system owned mac address detected on a sap - vpls-sdp-self-dup-mac : duplicate of a system owned mac address detected on a sdp binding - link-down : link is down - link-lagport-add-fail : failure to add port to LAG - link-conf-mismatch : SFP+plugin-types does not match the planned speed and/or auto-negotiation for the port - ihub-peer-comm : ihub peer to peer communication failure - ihub-sw-fail : IHUB s/w error - ihub-hw-fail : IHUB h/w error - ihub-link-fail : IHUB link failure - ihub-proc-overload : IHUB processor exceeded	

Resource Identifier	Type	Description
	- ihub-out-of-mem : IHUB processor out of memory - ntp-comm-lost : No response is received from the NTP servers - ldp-instance-down : ldp instance down - ldp-session-down : ldp session down - mpls-instance-down : mpls instance down - mpls-lsp-down : lsp down - mpls-lsp-path-down : lsp path down - sdp-instance-down : sdp instance down - sdp-binding-down : sdp binding down - epipe-instance-down : epipe instance down - lldpmed-portcfg-mis : config request failure for lldpmed portconfig - lldpmed-mediapl-mis : config request failure for lldpmed mediapolicy - vlanport-svc-mismatch : config request failure for the provisioned vlanport - mcsrc-stream-lost : multicast video stream lost - eqptsupl-syslog-upload: upload of log file to remote server failure - eqptsupl-ontsw-dnload : ont sw download in progress - cf-75%used : Compact flash exceeds 75% of life expectancy - cf-90%used : Compact flash exceeds 90% of life expectancy - olt-gen-pon-com-fail : pon communication failure on olt - olt-gen-tx-fail : transmitter failure on olt - olt-gen-unprov-ont : unprovisioned ont on pon - olt-gen-pon-eqpt-prov : mismatch btw equipment and provisioning pon attributes - olt-gen-pon-loss-sig : pon loss of signal - olt-gen-pon-diagnostic: pon diagnostic test active - olt-gen-loid-conflict : loid conflict ont on pon - olt-gen-loid-pwderr : loid password error ont on pon - olt-gen-pon-alien-test: pon alien diagnostic test active - olt-gen-alien-detect : pon alien detect active - olt-gen-rng-mism : pon ranging mismatch active - olt-gen-sfp-mism : pon sfp mismatch active - olt-gen-deact-hightca : deactivated ont hightca threshold crossed - olt-gen-deact-lowtca : deactivated ont lowtca threshold crossed - olt-gen-dp-integ : pon data path integrity failure - olt-gen-ddr-fault : pon failure due to ddr fault - olt-pon-tc-err-frag-tc: pon errored fragments threshold crossed - olt-ont-tc-err-frag-tc: ont errored fragments threshold crossed - ont-ploam-loss-sig : loss of signal at ont - ont-ploam-loss-ack : loss of acknowledge from ont - ont-ploam-loss-cd : loss of channel delineation of ont - ont-ploam-phy-eqpt-err: physical equipment error of ont - ont-ploam-startup-fail: startup failure in ranging of ont - ont-ploam-sig-degrade : signal degrade from ont - ont-ploam-disabled : ont disabled alarm - ont-ploam-err-msg : error message from ont - ont-ploam-inactive : inactive ont	

3 Alarm Configuration Commands

Resource Identifier	Type	Description
	- ont-ploam-sig-fail : signal fail alarm from ont - ont-ploam-dying-gasp : dying gasp alarm from ont - ont-ploam-deact-fail : deactive failure of ont - ont-ploam-oam : loss of ploam for ont - ont-ploam-win-drift : drift of window alarm - ont-ploam-rdi : remote defect indication alarm - ont-ploam-loss-ks : loss of key synchronization alarm - ont-ploam-pwr-burst : power bursts on ont - ont-ploam-roq-disa : ont rogue disabled - ont-ploam-diff-reach : ont differential reach exceeded - ont-ploam-looc : Loss of OMCI channel due to persistent MIC failure - sfu-ploam-loss-sig : SFU ONT - loss of signal at ont - sfu-ploam-loss-ack : SFU ONT - loss of acknowledge from ont - sfu-ploam-loss-cd : SFU ONT - loss of channel delineation of ont - sfu-ploam-phy-eqpt-err: SFU ONT - physical equipment error of ont - sfu-ploam-startup-fail: SFU ONT - startup failure in ranging of ont - sfu-ploam-sig-degrade : SFU ONT - signal degrade from ont - sfu-ploam-disabled : SFU ONT - ont disabled alarm - sfu-ploam-err-msg : SFU ONT - error message from ont - sfu-ploam-inactive : SFU ONT - inactive ont - sfu-ploam-sig-fail : SFU ONT - signal fail alarm from ont - sfu-ploam-dying-gasp : SFU ONT - dying gasp alarm from ont - sfu-ploam-deact-fail : SFU ONT - deactive failure of ont - sfu-ploam-oam : SFU ONT - loss of ploam for ont - sfu-ploam-win-drift : SFU ONT - drift of window alarm - sfu-ploam-rdi : SFU ONT - remote defect indication alarm - sfu-ploam-loss-ks : SFU ONT - loss of key synchronization alarm - sfu-ploam-pwr-burst : SFU ONT - power bursts on ont - sfu-ploam-roq-disa : SFU ONT - ont rogue disabled - sfu-ploam-diff-reach : SFU ONT - ont differential reach exceeded - sfu-ploam-looc : SFU ONT - Loss of OMCI channel due to persistent MIC failure - soho-ploam-loss-sig : SOHO ONT - loss of signal at ont - soho-ploam-loss-ack : SOHO ONT - loss of acknowledge from ont - soho-ploam-loss-cd : SOHO ONT - loss of channel delineation of ont - soho-ploam-phy-eqpt-er: SOHO ONT - physical equipment error of ont - soho-ploam-startup-fai: SOHO ONT - startup failure in ranging of ont - soho-ploam-sig-degrade: SOHO ONT - signal degrade from ont - soho-ploam-disabled : SOHO ONT - ont disabled alarm - soho-ploam-err-msg : SOHO ONT - error message from ont - soho-ploam-inactive : SOHO ONT - inactive ont - soho-ploam-sig-fail : SOHO ONT - signal fail alarm from

3 Alarm Configuration Commands

Resource Identifier	Type	Description
	- melt-board-reset : MELT board reset - board-shelf-mismatch : board type and shelf type mismatch - fcs-thresh-exceed : FCS counter threshold exceeded	

Table 3.3-2 "Alarm Entry Configuration Command" Command Parameters

Parameter	Type	Description
[no] severity	Parameter type: <Alarm::alarmSeverity> Format: (indeterminate warning minor major critical ignore) Possible values: - indeterminate : not a definite known severity level - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking - ignore : alarm is not processed by the system	<i>optional parameter with default value: "minor"</i> assign a severity level to this alarm
[no] service-affecting	Parameter type: boolean	<i>optional parameter</i> make this alarm service affecting
[no] reporting	Parameter type: boolean	<i>optional parameter</i> enable reporting of this alarm
[no] logging	Parameter type: boolean	<i>optional parameter</i> enable logging of this alarm

Command Output

Table 3.3-3 "Alarm Entry Configuration Command" Display parameters

Specific Information		
name	Type	Description
category	Parameter type: <Alarm::category> (communications qos processing-error equipment environmental) Possible values: - communications : communications related alarms - qos : QoS related alarms - processing-error : processing failure related alarms - equipment : equipment related alarms - environmental : environmental related alarms	category of an alarm <i>This element is always shown.</i>

3.4 Alarm Filter Configuration Command

Command Description

This command allows the operator to configure Alarm filter parameters.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure alarm filter (fltr-type) filterid <Alarm::fltrId> [ alarmid <Alarm::alarmIndexExt> ] [ no status | status <Alarm::fltrStatus> ] [ no threshold | threshold <Alarm::fltrThreshold> ] [ no window | window <Alarm::fltrWindow> ]
```

Command Parameters

Table 3.4-1 "Alarm Filter Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(fltr-type)	Format: (temporal spatial) Possible values: - temporal : the temporal alarm filter - spatial : the spatial alarm filter	the type of the considered alarm filter
filterid	Parameter type: <Alarm::fltrId> Format: - unique filter number - range: [1...31]	unique filter number

Table 3.4-2 "Alarm Filter Configuration Command" Command Parameters

Parameter	Type	Description

[no] status	Parameter type: <Alarm::fltrStatus> Format: (not-used used) Possible values: - not-used : deactivate the configured alarm filter - used : activate the configured alarm filter	<i>optional parameter with default value: "not-used"</i> filter status
[no] threshold	Parameter type: <Alarm::fltrThreshold> Format: - the threshold value of the considered alarm filter - range: [2...65535]	<i>optional parameter with default value: "2"</i> the threshold value of the considered alarm filter
[no] window	Parameter type: <Alarm::fltrWindow> Format: - the duration of the filter window in seconds - range: [1...65535]	<i>optional parameter with default value: "60"</i> the duration of the filter window, only applicable for temporal type

3.5 Alarm Suppression Filter Configuration Command

Command Description

This command allows the operator to configure Suppression Alarm filter parameters.

Without valid interface and alarmid, suppression filter cannot be activated.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure alarm suppression filterid <Alarm::suppressionfltrId> [ interface <Alarm::suppressionFilterIndex> ] [
alarmid <Alarm::suppressionalarmIndex> ] [ no status | status <Alarm::fltrStatus> ] [ no threshold | threshold
<Alarm::suppressionfltrThreshold> ]
```

Command Parameters

Table 3.5-1 "Alarm Suppression Filter Configuration Command" Resource Parameters

Resource Identifier	Type	Description
filterid	Parameter type: <Alarm::suppressionfltrId> Format: - unique filter number - range: [1...32]	the id of the considered alarm suppression filter

Table 3.5-2 "Alarm Suppression Filter Configuration Command" Command Parameters

Parameter	Type	Description
interface	Parameter type: <Alarm::suppressionFilterIndex> Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	<i>optional parameter</i> suppression filter interface
alarmid	Parameter type: <Alarm::suppressionalarmIndex> Format: (board-missing	<i>optional parameter</i> alarmType

Parameter	Type	Description
	board-init) Possible values: - board-missing : board detected after planning - now missing - board-init : board initialisation failure	
[no] status	Parameter type: <Alarm::fltrStatus> Format: (not-used used) Possible values: - not-used : deactivate the configured alarm filter - used : activate the configured alarm filter	<i>optional parameter with default value: "not-used"</i> filter status
[no] threshold	Parameter type: <Alarm::suppressionfltrThreshold> Format: - the threshold value of the considered alarm filter - range: [1...100]	<i>optional parameter with default value: "1"</i> the threshold value of the considered alarm filter

3.6 Alarm Delta Log Configuration Command

Command Description

This command allows the operator to configure the action of the system when the alarm log buffer is full.

If the action is set to wrap, older log records are overwritten by recent records. If the action is set to halt, logging is stopped until the log buffer is reset.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure alarm delta-log [ indet-log-full-action <Alarm::alarmDeltaLogFullAction> ] [ warn-log-full-action <Alarm::alarmDeltaLogFullAction> ] [ minor-log-full-action <Alarm::alarmDeltaLogFullAction> ] [ major-log-full-action <Alarm::alarmDeltaLogFullAction> ] [ crit-log-full-act <Alarm::alarmDeltaLogFullAction> ]
```

Command Parameters

Table 3.6-2 "Alarm Delta Log Configuration Command" Command Parameters

Parameter	Type	Description
indet-log-full-action	Parameter type: <Alarm::alarmDeltaLogFullAction> Format: (wrap halt) Possible values: - wrap : wrap around when log is full - halt : halt logging when log is full	<i>optional parameter</i> set the action when indeterminate log buffer is full
warn-log-full-action	Parameter type: <Alarm::alarmDeltaLogFullAction> Format: (wrap halt) Possible values: - wrap : wrap around when log is full - halt : halt logging when log is full	<i>optional parameter</i> set the action when warn delta log buffer is full
minor-log-full-action	Parameter type: <Alarm::alarmDeltaLogFullAction> Format: (wrap halt) Possible values: - wrap : wrap around when log is full - halt : halt logging when log is full	<i>optional parameter</i> set the action when minor delta log buffer is full
major-log-full-action	Parameter type: <Alarm::alarmDeltaLogFullAction> Format: (wrap	<i>optional parameter</i> set action when major delta log buffer is full

Parameter	Type	Description
	halt) Possible values: - wrap : wrap around when log is full - halt : halt logging when log is full	
crit-log-full-act	Parameter type: <Alarm::alarmDeltaLogFullAction> Format: (wrap halt) Possible values: - wrap : wrap around when log is full - halt : halt logging when log is full	<i>optional parameter</i> set action when critical delta log buffer is full

3.7 Customizable Alarm Profile Configuration Command

Command Description

This command allows the operator to configure the external alarm profile. The profile is made to be assigned to a remote LT board. The profile reflects a configuration of external alarms parameters that corresponds to a certain environment where the remote board is located (in an outdoor cabinet, basement cabinet, ...). The use of a profile avoids the need to specify the parameters for each remote board separately. The alarm profile groups all five external alarms parameters. The profile contains a description/meaning of each alarm, as well as an indication that tells us whether or not any alarm outputs are to be triggered if the corresponding external input alarm is raised. On top of these parameters, a mnemonic (short for the description), the polarity and the severity are configurable. Note: The Severity parameters of custom alarm profile i.e (severity1,severity2,severity3,severity4,severity5) are supported for only FD-REM not other shelves.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure alarm ( no custom-profile (name) ) | ( custom-profile (name) [ no mnemonic1 | mnemonic1
<Alarm::AlarmMnemonic> ] [ no description1 | description1 <Alarm::AlarmDescription> ] [ no visible1 | visible1
<Alarm::VisibleOutput> ] [ no audible1 | audible1 <Alarm::AudibleOutput> ] [ no polarity1 | polarity1
<Alarm::InversePolarity> ] [ no severity1 | severity1 <Alarm::AlarmSeverity> ] [ no mnemonic2 | mnemonic2
<Alarm::AlarmMnemonic> ] [ no description2 | description2 <Alarm::AlarmDescription> ] [ no visible2 | visible2
<Alarm::VisibleOutput> ] [ no audible2 | audible2 <Alarm::AudibleOutput> ] [ no polarity2 | polarity2
<Alarm::InversePolarity> ] [ no severity2 | severity2 <Alarm::AlarmSeverity> ] [ no mnemonic3 | mnemonic3
<Alarm::AlarmMnemonic> ] [ no description3 | description3 <Alarm::AlarmDescription> ] [ no visible3 | visible3
<Alarm::VisibleOutput> ] [ no audible3 | audible3 <Alarm::AudibleOutput> ] [ no polarity3 | polarity3
<Alarm::InversePolarity> ] [ no severity3 | severity3 <Alarm::AlarmSeverity> ] [ no mnemonic4 | mnemonic4
<Alarm::AlarmMnemonic> ] [ no description4 | description4 <Alarm::AlarmDescription> ] [ no visible4 | visible4
<Alarm::VisibleOutput> ] [ no audible4 | audible4 <Alarm::AudibleOutput> ] [ no polarity4 | polarity4
<Alarm::InversePolarity> ] [ no severity4 | severity4 <Alarm::AlarmSeverity> ] [ no mnemonic5 | mnemonic5
<Alarm::AlarmMnemonic> ] [ no description5 | description5 <Alarm::AlarmDescription> ] [ no visible5 | visible5
<Alarm::VisibleOutput> ] [ no audible5 | audible5 <Alarm::AudibleOutput> ] [ no polarity5 | polarity5
<Alarm::InversePolarity> ] [ no severity5 | severity5 <Alarm::AlarmSeverity> ] )
```

Command Parameters

Table 3.7-1 "Customizable Alarm Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name	custom profile name

Resource Identifier	Type	Description
	- range: [a-zA-Z0-9-_.] - length: 1<=x<=32	

Table 3.7-2 "Customizable Alarm Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] mnemonic1	Parameter type: <Alarm::AlarmMnemonic> Format: - an octet string defining mnemonic of external alarm - range: [A-Z] - length: x<=16	<i>optional parameter with default value: "UNDEF"</i> mnemonic identifying the customizable external alarm 1
[no] description1	Parameter type: <Alarm::AlarmDescription> Format: - an octet string defining description of external alarm - length: x<=40	<i>optional parameter with default value: "Undefined"</i> description of the customizable external alarm 1
[no] visible1	Parameter type: <Alarm::VisibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is visible - disable : external alarm output is non-visible	<i>optional parameter with default value: "disable"</i> trigger a visible alarm for external alarm 1
[no] audible1	Parameter type: <Alarm::AudibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is audible - disable : external alarm output is non-audible	<i>optional parameter with default value: "disable"</i> trigger a audible alarm for external alarm 1
[no] polarity1	Parameter type: <Alarm::InversePolarity> Format: (normal inverse) Possible values: - normal : alarm polarity is normal - inverse : alarm polarity is inverse	<i>optional parameter with default value: "normal"</i> alarm polarity is normal or inverse for external alarm 1
[no] severity1	Parameter type: <Alarm::AlarmSeverity> Format: (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	<i>optional parameter with default value: "major"</i> severity level of external alarm 1
[no] mnemonic2	Parameter type: <Alarm::AlarmMnemonic> Format: - an octet string defining mnemonic of external alarm - range: [A-Z] - length: x<=16	<i>optional parameter with default value: "UNDEF"</i> mnemonic identifying the customizable external alarm 2
[no] description2	Parameter type: <Alarm::AlarmDescription> Format: - an octet string defining description of external alarm - length: x<=40	<i>optional parameter with default value: "Undefined"</i> description of the customizable external alarm 2

3 Alarm Configuration Commands

Parameter	Type	Description
[no] visible2	Parameter type: <Alarm::VisibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is visible - disable : external alarm output is non-visible	<i>optional parameter with default value: "disable"</i> trigger a visible alarm for external alarm 2
[no] audible2	Parameter type: <Alarm::AudibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is audible - disable : external alarm output is non-audible	<i>optional parameter with default value: "disable"</i> trigger a audible alarm for external alarm 2
[no] polarity2	Parameter type: <Alarm::InversePolarity> Format: (normal inverse) Possible values: - normal : alarm polarity is normal - inverse : alarm polarity is inverse	<i>optional parameter with default value: "normal"</i> alarm polarity is normal or inverse for external alarm 2
[no] severity2	Parameter type: <Alarm::AlarmSeverity> Format: (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	<i>optional parameter with default value: "major"</i> severity level of external alarm 2
[no] mnemonic3	Parameter type: <Alarm::AlarmMnemonic> Format: - an octet string defining mnemonic of external alarm - range: [A-Z] - length: x<=16	<i>optional parameter with default value: "UNDEF"</i> mnemonic identifying the customizable external alarm 3
[no] description3	Parameter type: <Alarm::AlarmDescription> Format: - an octet string defining description of external alarm - length: x<=40	<i>optional parameter with default value: "Undefined"</i> description of the customizable external alarm 3
[no] visible3	Parameter type: <Alarm::VisibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is visible - disable : external alarm output is non-visible	<i>optional parameter with default value: "disable"</i> trigger a visible alarm for external alarm 3
[no] audible3	Parameter type: <Alarm::AudibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is audible - disable : external alarm output is non-audible	<i>optional parameter with default value: "disable"</i> trigger a audible alarm for external alarm 3

Parameter	Type	Description
[no] polarity3	Parameter type: <Alarm::InversePolarity> Format: (normal inverse) Possible values: - normal : alarm polarity is normal - inverse : alarm polarity is inverse	<i>optional parameter with default value: "normal"</i> alarm polarity is normal or inverse for external alarm 3
[no] severity3	Parameter type: <Alarm::AlarmSeverity> Format: (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	<i>optional parameter with default value: "major"</i> severity level of external alarm 3
[no] mnemonic4	Parameter type: <Alarm::AlarmMnemonic> Format: - an octet string defining mnemonic of external alarm - range: [A-Z] - length: x<=16	<i>optional parameter with default value: "UNDEF"</i> mnemonic identifying the customizable external alarm 4
[no] description4	Parameter type: <Alarm::AlarmDescription> Format: - an octet string defining description of external alarm - length: x<=40	<i>optional parameter with default value: "Undefined"</i> description of the customizable external alarm 4
[no] visible4	Parameter type: <Alarm::VisibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is visible - disable : external alarm output is non-visible	<i>optional parameter with default value: "disable"</i> trigger a visible alarm for external alarm 4
[no] audible4	Parameter type: <Alarm::AudibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is audible - disable : external alarm output is non-audible	<i>optional parameter with default value: "disable"</i> trigger a audible alarm for external alarm 4
[no] polarity4	Parameter type: <Alarm::InversePolarity> Format: (normal inverse) Possible values: - normal : alarm polarity is normal - inverse : alarm polarity is inverse	<i>optional parameter with default value: "normal"</i> alarm polarity is normal or inverse for external alarm 4
[no] severity4	Parameter type: <Alarm::AlarmSeverity> Format: (indeterminate warning minor major critical)	<i>optional parameter with default value: "major"</i> severity level of external alarm 4

3 Alarm Configuration Commands

Parameter	Type	Description
	Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	
[no] mnemonic5	Parameter type: <Alarm::AlarmMnemonic> Format: - an octet string defining mnemonic of external alarm - range: [A-Z] - length: x<=16	<i>optional parameter with default value: "UNDEF"</i> mnemonic identifying the customizable external alarm 5
[no] description5	Parameter type: <Alarm::AlarmDescription> Format: - an octet string defining description of external alarm - length: x<=40	<i>optional parameter with default value: "Undefined"</i> description of the customizable external alarm 5
[no] visible5	Parameter type: <Alarm::VisibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is visible - disable : external alarm output is non-visible	<i>optional parameter with default value: "disable"</i> trigger a visible alarm for external alarm 5
[no] audible5	Parameter type: <Alarm::AudibleOutput> Format: (enable disable) Possible values: - enable : external alarm output is audible - disable : external alarm output is non-audible	<i>optional parameter with default value: "disable"</i> trigger a audible alarm for external alarm 5
[no] polarity5	Parameter type: <Alarm::InversePolarity> Format: (normal inverse) Possible values: - normal : alarm polarity is normal - inverse : alarm polarity is inverse	<i>optional parameter with default value: "normal"</i> alarm polarity is normal or inverse for external alarm 5
[no] severity5	Parameter type: <Alarm::AlarmSeverity> Format: (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	<i>optional parameter with default value: "major"</i> severity level of external alarm 5

3.8 HGU TR069 Customizable Alarm Configuration Command

Command Description

This command allows the operator to configure the HGU TR069 customizable alarms.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure alarm ( no hgu069-cust (alarm-id) ) | ( hgu069-cust (alarm-id) description <GPON::CustAlmDesc> )
```

Command Parameters

Table 3.8-1 "HGU TR069 Customizable Alarm Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-id)	Format: - HGU TR069 customizable alarm Id - range: [1...31]	HGU TR069 customizable alarm Id

Table 3.8-2 "HGU TR069 Customizable Alarm Configuration Command" Command Parameters

Parameter	Type	Description
description	Parameter type: <GPON::CustAlmDesc> Format: - alarm description - length: 1<=x<=64	<i>mandatory parameter</i> alarm description

4- Trap Configuration Commands

4.1 Trap Configuration Command Tree	4-289
4.2 Trap Definition Configuration Command	4-292
4.3 Trap Manager Configuration Command	4-295
4.4 Trap Manager Configuration Command	4-300

4.1 Trap Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trap Configuration Commands".

Command Tree

```

----configure
  ----trap
    ----definition
      - (name)
      - priority
    ----[no] manager
      - (address)
      - [no] priority

4.2 Trap Definition Configuration Command

Command Description

This command allows the operator to define the priority of a given trap.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure trap definition (name) [ priority <Trap::Priority> ]
```

Command Parameters

Table 4.2-1 "Trap Definition Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (cold-start link-down link-up auth-failure change-occured line-test-report init-started lic-key-chg-occr topology-chg selt-state-chg dhcp-sess-pre radius-server-failure login-occured logout-occured trapmgr-chg-occr mst-genral mst-error mst-protocol-mig mst-inv-bpdu-rx mst-reg-conf-chg alrm-change-occured out-of-sync actual-cp-changed avail-bw-changed mac-auth-failure new-ont-alm ont-prov-status	the name of the trap

Resource Identifier	Type	Description
	sw-upgrade-finished login-occuredv6 logout-occuredv6 trapmgr-chg-occrv6 ont-prov-template auto-replan-board) Possible values: - cold-start : the node is reinitializing - link-down : one of the communication links of the node has failed - link-up : one of the communication links of the node became operational - auth-failure : authentication failure - change-occured : a configuration or operational change occurred - line-test-report : line test result available - init-started : the node is initializing, IP connectivity is established - lic-key-chg-occr : the number of license keys changed - topology-chg : topology changed (scope of cluster management) - selt-state-chg : selt test finished and results available - dhcp-sess-pre : dhcp session preempted - radius-server-failure : radius server failed - login-occured : login occurred - logout-occured : logout occurred - trapmgr-chg-occr : trap manager change occurred - mst-genral : mstp general events - mst-error : mstp error events - mst-protocol-mig : mstp port protocol migration - mst-inv-bpdu-rx : mstp invalid packet received - mst-reg-conf-chg : mstp region configuration change - alrm-change-occured : alarm change occurred - out-of-sync : trap is out of sync - actual-cp-changed : actual channelpair changed trap - avail-bw-changed : available bandwidth changed trap - mac-auth-failure : mac auth failure trap - new-ont-alrm : new ont alarm trap - ont-prov-status : ont auto provision status trap - sw-upgrade-finished : Board software upgrade finished trap - login-occuredv6 : login occurred - logout-occuredv6 : logout occurred - trapmgr-chg-occrv6 : trap manager change occurred - ont-prov-template : ont auto provision template trap - auto-replan-board : automatic board re-planning trap	

Table 4.2-2 "Trap Definition Configuration Command" Command Parameters

Parameter	Type	Description
priority	Parameter type: <Trap::Priority> Format: (urgent high medium low) Possible values: - urgent : urgent - needs to be informed immediately	<i>optional parameter</i> the trap priority

4 Trap Configuration Commands

Parameter	Type	Description
	- high : high priority trap - medium : medium priority trap - low : low priority trap	

4.3 Trap Manager Configuration Command

Command Description

This command allows the operator to configure an SNMP manager, which will receive traps when an event occurs in the system.

The SNMP manager can easily be flooded by events if something happens to the system. This command allows the operator to specify which traps the manager is interested in (trap filtering) and how the traps must be distributed in time (trap shaping).

Traps that cannot be delivered will be dropped.

The Following traps will be sent as a part of changeOccuredTrap alarm-chg-trap, phys-line-trap, eqpt-change-trap, success-set-trap, other-alarm-trap, warning-trap, minor-trap, major-trap, critical-trap, redundancy-trap, eqpt-prot-trap, craft-login-trap, restart-trap, ntr-trap.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure trap ( no manager (address) ) | ( manager (address) [ no priority | priority <Trap::Priority> ] [ [ no ] cold-start-trap ] [ [ no ] link-down-trap ] [ [ no ] link-up-trap ] [ [ no ] auth-fail-trap ] [ [ no ] change-trap ] [ [ no ] line-test-trap ] [ [ no ] init-started-trap ] [ [ no ] lic-key-chg-occr ] [ [ no ] topology-chg ] [ [ no ] self-state-chg ] [ [ no ] dhcp-sess-pre ] [ [ no ] alarm-chg-trap ] [ [ no ] phys-line-trap ] [ [ no ] eqpt-change-trap ] [ [ no ] success-set-trap ] [ [ no ] other-alarm-trap ] [ [ no ] warning-trap ] [ [ no ] minor-trap ] [ [ no ] major-trap ] [ [ no ] critical-trap ] [ [ no ] redundancy-trap ] [ [ no ] eqpt-prot-trap ] [ [ no ] craft-login-trap ] [ [ no ] restart-trap ] [ [ no ] ntr-trap ] [ [ no ] rad-srvr-fail ] [ [ no ] login-occr-trap ] [ [ no ] logout-occr-trap ] [ [ no ] trapmgr-chg-trap ] [ [ no ] mst-genral ] [ [ no ] mst-error ] [ [ no ] mst-protocol-mig ] [ [ no ] mst-inv-bpdu-rx ] [ [ no ] mst-reg-conf-chg ] [ [ no ] dying-gasp ] [ [ no ] alrm-chg-occur ] [ [ no ] mac-auth-fail ] [ [ no ] new-ont-alm ] [ [ no ] ont-prov-status ] [ [ no ] outofsync ] [ [ no ] actual-cp-changed ] [ [ no ] register-node ] [ [ no ] avail-bw-changed ] [ [ no ] login-occr6-trap ] [ [ no ] logout-occr6-trap ] [ [ no ] trapmgr-chg6-trap ] [ [ no ] ont-prov-template ] [ [ no ] auto-replan-board ] [ no max-per-window | max-per-window <Trap::WindowCount> ] [ no window-size | window-size <Trap::WindowSize> ] [ no max-queue-size | max-queue-size <Trap::QueueSize> ] [ no min-interval | min-interval <Trap::Interval> ] [ no min-severity | min-severity <Alarm::alarmSeverityReport> ] )
```

Command Parameters

[no] redundancy-trap	Parameter type: boolean	<i>optional parameter</i> enable snd nbr redundancy chg(part of changeOccurredTrap)
[no] eqpt-prot-trap	Parameter type: boolean	<i>optional parameter</i> enable snd nbr eqpt prot chg(part of changeOccurredTrap)
[no] craft-login-trap	Parameter type: boolean	<i>optional parameter</i> enable snd craft login chg(part of changeOccurredTrap)
[no] restart-trap	Parameter type: boolean	<i>optional parameter</i> enable restart trap(part of changeOccurredTrap)
[no] ntr-trap	Parameter type: boolean	<i>optional parameter</i> enable ntr changes trap(part of changeOccurredTrap)
[no] rad-srvr-fail	Parameter type: boolean	<i>optional parameter</i> enable sending radius server failure trap
[no] login-occr-trap	Parameter type: boolean	<i>optional parameter</i> enable sending login occurred trap
[no] logout-occr-trap	Parameter type: boolean	<i>optional parameter</i> enable sending logout occurred trap
[no] trapmngtr-chg-trap	Parameter type: boolean	<i>optional parameter</i> enable sending trap manager change occurred trap
[no] mst-genral	Parameter type: boolean	<i>optional parameter</i>
[no] mst-error	Parameter type: boolean	<i>optional parameter</i> enable mstp error events trap
[no] mst-protocol-mig	Parameter type: boolean	<i>optional parameter</i> enable mstp port protocol migration trap
[no] mst-inv-bpdu-rx	Parameter type: boolean	<i>optional parameter</i> enable mstp invalid packet received trap
[no] mst-reg-conf-chg	Parameter type: boolean	<i>optional parameter</i> enable mstp region configuration change trap
[no] dying-gasp	Parameter type: boolean	<i>optional parameter</i> enable dying gasp trap
[no] alrm-chg-occur	Parameter type: boolean	<i>optional parameter</i> enable alarm change occurred trap
[no] mac-auth-fail	Parameter type: boolean	<i>optional parameter</i> enable sending mac auth failure

4 Trap Configuration Commands

Parameter	Type	Description
		trap
[no] new-ont-alm	Parameter type: boolean	<i>optional parameter</i> enable new ont alarm trap
[no] ont-prov-status	Parameter type: boolean	<i>optional parameter</i> enable ont auto provision status trap
[no] outofsync	Parameter type: boolean	<i>optional parameter</i> enable outOfSync trap
[no] actual-cp-changed	Parameter type: boolean	<i>optional parameter</i> enable actual channelpair changed trap
[no] register-node	Parameter type: boolean	<i>optional parameter</i> enable register node trap
[no] avail-bw-changed	Parameter type: boolean	<i>optional parameter</i> enable available bandwidth changed trap
[no] login-occr6-trap	Parameter type: boolean	<i>optional parameter</i> enable sending Ipv6 login occurred trap
[no] logout-occr6-trap	Parameter type: boolean	<i>optional parameter</i> enable sending Ipv6 logout occurred trap
[no] trapmgr-chg6-trap	Parameter type: boolean	<i>optional parameter</i> enable sending Ipv6 trap manager change occurred trap
[no] ont-prov-template	Parameter type: boolean	<i>optional parameter</i> enable ont auto provision template trap
[no] auto-replan-board	Parameter type: boolean	<i>optional parameter</i> enable auto board replan trap
[no] max-per-window	Parameter type: <Trap::WindowCount> Format: - maximum allowed number of traps per window - unit: traps - range: [1...20]	<i>optional parameter with default value: 2</i> maximum allowed number of traps per window
[no] window-size	Parameter type: <Trap::WindowSize> Format: - the size of a time window for traps - unit: s - range: [0...3600]	<i>optional parameter with default value: 60</i> the size of a time window for traps in seconds
[no] max-queue-size	Parameter type: <Trap::QueueSize> Format: - maximum number of traps that can be queued - unit: traps - range: [1...20]	<i>optional parameter with default value: 10</i> maximum number of traps that can be queued
[no] min-interval	Parameter type: <Trap::Interval> Format: - minimum time interval between two traps - unit: s - range: [0...3600]	<i>optional parameter with default value: 30</i> the minimum time between two traps
[no] min-severity	Parameter type: <Alarm::alarmSeverityReport> Format: (indeterminate warning minor major critical)	<i>optional parameter with default value: "major"</i> lowest severity an alarm must have, to be reported

Parameter	Type	Description
	Possible values: - indeterminate : not a definite known severity level - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking	

4.4 Trap Manager Configuration Command

Command Description

This command allows the operator to configure an SNMP manager, which will receive traps when an event occurs in the system.

The SNMP manager can easily be flooded by events if something happens to the system. This command allows the operator to specify which traps the manager is interested in (trap filtering) and how the traps must be distributed in time (trap shaping).

Traps that cannot be delivered will be dropped.

The Following traps will be sent as a part of changeOccuredTrap alarm-chg-trap, phys-line-trap, eqpt-change-trap, success-set-trap, other-alarm-trap, warning-trap, minor-trap, major-trap, critical-trap, redundancy-trap, eqpt-prot-trap, craft-login-trap, restart-trap, ntr-trap.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure trap ( no v6manager (ipv6address) ) | ( v6manager (ipv6address) [ no priority | priority <Trap::Priority>
] [ [ no ] cold-start-trap ] [ [ no ] link-down-trap ] [ [ no ] link-up-trap ] [ [ no ] auth-fail-trap ] [ [ no ] change-trap ]
[ [ no ] line-test-trap ] [ [ no ] init-started-trap ] [ [ no ] lic-key-chg-occr ] [ [ no ] topology-chg ] [ [ no ]
self-state-chg ] [ [ no ] dhcp-sess-pre ] [ [ no ] alarm-chg-trap ] [ [ no ] phys-line-trap ] [ [ no ] eqpt-change-trap ] [ [
no ] success-set-trap ] [ [ no ] other-alarm-trap ] [ [ no ] warning-trap ] [ [ no ] minor-trap ] [ [ no ] major-trap ] [ [
no ] critical-trap ] [ [ no ] redundancy-trap ] [ [ no ] eqpt-prot-trap ] [ [ no ] craft-login-trap ] [ [ no ] restart-trap ] [ [
no ] ntr-trap ] [ [ no ] rad-srvr-fail ] [ [ no ] login-occr-trap ] [ [ no ] logout-occr-trap ] [ [ no ] trapmgr-chg-trap ] [
[ no ] mst-genral ] [ [ no ] mst-error ] [ [ no ] mst-protocol-mig ] [ [ no ] mst-inv-bpdu-rx ] [ [ no ] mst-reg-conf-chg
] [ [ no ] dying-gasp ] [ [ no ] actual-cp-changed ] [ [ no ] register-node ] [ [ no ] avail-bw-changed ] [ [ no ]
almr-chg-occur ] [ [ no ] mac-auth-fail ] [ [ no ] outofsync ] [ [ no ] new-ont-almr ] [ [ no ] ont-prov-status ] [ [ no ]
login-occr6-trap ] [ [ no ] logout-occr6-trap ] [ [ no ] trapmgr-chg6-trap ] [ [ no ] ont-prov-template ] [ no
max-per-window | max-per-window <Trap::WindowCount> ] [ no window-size | window-size
<Trap::WindowSize> ] [ no max-queue-size | max-queue-size <Trap::QueueSize> ] [ no min-interval | min-interval
<Trap::Interval> ] [ no min-severity | min-severity <Alarm::alarmSeverityReport> ] )
```

Command Parameters

5.2 Rack Configuration Command

Command Description

This command allows the operator to configure the rack. The operator can configure the following parameter:

- *description*: text that describes the location of the rack.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> configure equipment rack (index) [no description | description <Description-127>]

Command Parameters

Table 5.2-1 "Rack Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> Field type <Eqpt::RackId> - the rack number	the physical position of the rack

Table 5.2-2 "Rack Configuration Command" Command Parameters

Parameter	Type	Description
[no] description	Parameter type: <Description-127> Format: - description to help the operator to identify the object - length: x<=127	<i>optional parameter with default value: ""</i> any description to be used by the operator

5.3 Shelf Configuration Command

Command Description

This command allows the operator to configure the shelf. The operator can configure the following parameters:

- **class:** the classification of the shelf. The following shelf classes are supported:
 - **main-ethernet:** supports Ethernet-based traffic. Shelves in this class can contain NT and LT units. There must be at least one shelf of this class in the system.
 - **ext-ethernet:** supports Ethernet-based traffic. Shelves in this class can only contain LT units.
- **planned-type:** the type planned for this shelf. The **not-planned** parameter indicates that a shelf will not be inserted at this position.
- **lock:** locks or unlocks the shelf.
- **shelf-mode:** the shelf mode. When the shelf mode was changed successfully, the NE will reboot automatically.
- **description:** text that describes the location of the shelf.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment shelf (index) [ no class | class <Equipm::ShelfClass> ] [ no planned-type | planned-type
<Equipm::ShelfType> ] [ [ no ] lock ] [ [ no ] extended-lt-slots ] [ no mode | mode <Equipm::HolderMode> ] [ no
description | description <Description-127> ]
```

Command Parameters

Table 5.3-1 "Shelf Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	the physical identification of the shelf

Table 5.3-2 "Shelf Configuration Command" Command Parameters

Parameter	Type	Description
[no] class	Parameter type: <Equipm::ShelfClass> Format: (main-ethernet ext-ethernet) Possible values: - main-ethernet : main shelf - supports ethernet-based traffic - ext-ethernet : extension shelf - supports ethernet-based	optional parameter with default value: "main-ethernet" the class to which the shelf belongs

Parameter	Type	Description
	traffic	
[no] planned-type	Parameter type: <Equipm::ShelfType> Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "not-planned"</i> the planned type of the shelf
[no] lock	Parameter type: boolean	<i>optional parameter</i> the holder is locked
[no] extended-lt-slots	Parameter type: boolean	<i>obsolete parameter replaced by parameter "mode"</i> change to extended lt slots
[no] mode	Parameter type: <Equipm::HolderMode> Format: (no-extended-lt-slots extended-lt-slots no-ntb-slot no-extended-slots no-ntio-slots ngpon gpon ngpon-port-reduced gpon-mng-ngpon gpon-mng-reduced) Possible values: - no-extended-lt-slots : no extended lt slots - extended-lt-slots : change to extended lt slots - no-ntb-slot : use ntb slot as lt slot - no-extended-slots : no extended slots - no-ntio-slots : not changeable - ngpon : use universal ngpon lt (supports NG-PON2, XGS-PON and XG-PON1 currently) - gpon : use gpon lt - ngpon-port-reduced : use ngpon port reduced mode lt (supports ERPS) - gpon-mng-ngpon : use gpon managed ngpon management model - gpon-mng-reduced : use gpon managed ngpon port reduced mode lt(supports ERPS)	<i>optional parameter with default value: "no-extended-lt-slots"</i> the shelf mode, applicable to NEP and ARAM-E only
[no] description	Parameter type: <Description-127> Format: - description to help the operator to identify the object - length: x<=127	<i>optional parameter with default value: ""</i> any description to be used by the operator

5.4 Slot Configuration Command

Command Description

This command allows the operator to configure a slot.

The slot is identified by the physical slot number. The left-most slot in the shelf is number 1. The following parameters can be configured for the slot:

- **planned-type**: the unit type that will be inserted into the slot. The **not-planned** parameter indicates that a unit will not be inserted into that slot.
- **power-down**: the operator can power-up or power-down slots. This is only applicable to LSM.
- **unlock**: the operator can lock or unlock a unit. A unit in the locked state cannot be used. This attribute is only supported for the NT (the system will refuse to lock the NT of a simplex system), EXT, and a managed LSM. This attribute is not applicable to sealed remote products (7367 SX).
- **alarm-profile**: the operator can assign a customizable alarm profile to a NT or LSM board. This is applicable for all NTs and LSMs.
- **capab-profile**: This parameter only applies to LSMs, NTIOs and mini-NT NRNT-A. For BCM based LSM boards default capab-profile is "default" for Intel based LSM boards it is "8vc_default".
- **disable-key**: This Parameter should contain string between 8 and 16 characters; must contain at least one lowercase letter, one uppercase letter, one numeric digit, and one special character, but cannot contain whitespace.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment slot (index) [ no planned-type | planned-type <Equipm::BoardType> ] [ [ no ] power-down ]
[ [ no ] unlock ] [ no alarm-profile | alarm-profile <Equipm::AlarmProf> ] [ no capab-profile | capab-profile
<Equipm::CapabilityProfile> ] [ no board-40gkr4 | board-40gkr4 <Equipm::board40GKR4> ] [ no
operational-mode | operational-mode <Equipm::OperationalMode> ] [ no dual-host-ip | dual-host-ip
<Ip::V4Address> ] [ no dual-host-loc | dual-host-loc <Equipm::Dualhost> ]
```

Command Parameters

Table 5.4-1 "Slot Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId>	the physical number of the slot

Resource Identifier	Type	Description
	<pre> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number </pre>	

Table 5.4-2 "Slot Configuration Command" Command Parameters

Parameter	Type	Description
[no] planned-type	Parameter type: <Equipm::BoardType> Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "not-planned"</i> type of board intended to be in this position
[no] power-down	Parameter type: boolean	<i>optional parameter</i> power down the board
[no] unlock	Parameter type: boolean	<i>optional parameter</i> unlock the board
[no] alarm-profile	Parameter type: <Equipm::AlarmProf> Format: (none name : <PrintableString-0-32>) Possible values: - none : no profile name to associate - name : profile name Field type <PrintableString-0-32> - a printable string - length: x<=32	<i>optional parameter with default value: "none"</i> customized alarm profile assigned to this board
[no] capab-profile	Parameter type: <Equipm::CapabilityProfile> Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "not_applicable"</i> capability profile assigned to a line board
[no] board-40gkr4	Parameter type: <Equipm::board40GKR4> Format: (inherited	<i>optional parameter with default value: "inherited"</i> inherited, disable or enable board

5 Equipment Configuration Commands

Parameter	Type	Description
	disable enable) Possible values: - inherited : enable or disable 40G KR4 of the board is controlled by system level parameter - disable : the board should not work in 40GKR4 no matter the value of system level - enable : the board should work in 40GKR4 no matter the value of system level	40GKR4
[no] operational-mode	Parameter type: <Equipm::OperationalMode> Format: (not-set gpon xgs mpm-gpon-xgs dual-gpon u-ngpon twenty-five-g ng-pon2 mpm-gpon-xgpon) Possible values: - not-set : cage mode not-set - gpon : cage mode set to gpon - xgs : cage mode set to xgs - mpm-gpon-xgs : cage mode set to mpm-gpon-xgs - dual-gpon : cage mode set to dual-gpon - u-ngpon : cage mode set to u-ngpon - twenty-five-g : cage mode set to 25g - ng-pon2 : cage mode set to ng-pon2 - mpm-gpon-xgpon : cage mode set to mpm-gpon-xgpon	<i>optional parameter with default value: "not-set"</i> operation mode of the cage
[no] dual-host-ip	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> dual host ip
[no] dual-host-loc	Parameter type: <Equipm::Dualhost> Format: (<Eqpt::MultiRackId> / <Eqpt::MultiShelfId> none) Possible values: - none : no host lsm location Field type <Eqpt::MultiRackId> - the rack number Field type <Eqpt::MultiShelfId> - the shelf number	<i>optional parameter with default value: "none"</i> dual host lsm location

5.5 Applique Configuration Command

Command Description

This command allows the operator to configure an applique.

The applique is identified by the physical slot number. The left-most slot in the shelf is number 1. The following parameter can be configured for the slot:

- planned-type: the applique type to be inserted into the slot. The **not-planned** parameter indicates that an applique will not be inserted into that slot.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment applique (index) [ no planned-type | planned-type <Equipm::AppliqueType> ] [ no
applique-profile | applique-profile <Equipm::CapabilityProfile> ]
```

Command Parameters

Table 5.5-1 "Applique Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (iont : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::AppliqueSlotId> lp : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::LtAppliqueSlotId> ntio-1 ntio-2) Possible values: - iont : an nt applique slot - lp : an lt applique slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::AppliqueSlotId> - the applique slot number Field type <Eqpt::LtAppliqueSlotId> - the LT Applique slot number	the physical number of the applique

Table 5.5-2 "Applique Configuration Command" Command Parameters

Parameter	Type	Description
[no] planned-type	Parameter type: <Equipm::AppliqueType> Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "not-planned"</i> type of applique intended to be in this position
[no] applique-profile	Parameter type: <Equipm::CapabilityProfile> Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "not_applicable"</i> capability profile assigned to the applique board

5.6 Protection Group Configuration Command

Command Description

This command allows the operator to configure a protection group.

The protection group is identified by the eqptProtGroupId attribute (index). The value 1 is reserved for extension chain protection group which is always present and cannot be deleted.

The protection group(s) are created implicitly by the system as part of the default configuration. Use "show equipment protection-group" to display the valid protection group identifier(s). Note that the default admin-status for protection-group 1 at system level is locked where it is always unlocked at cli level.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment protection-group (prot-group-id) [ no admin-status | admin-status
<Equipm::PortGroupAdminStatus> ] [ no eps-quenchfactor | eps-quenchfactor <Equipm::TimeTicks> ]
```

Command Parameters

Table 5.6-1 "Protection Group Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(prot-group-id)	Format: - index of protection group - range: [1...109]	Index in eqpt Prot Group Table

Table 5.6-2 "Protection Group Configuration Command" Command Parameters

Parameter	Type	Description
[no] admin-status	Parameter type: <Equipm::PortGroupAdminStatus> Format: (unlock lock) Possible values: - unlock : unlock - lock : lock	<i>optional parameter with default value: "unlock"</i> changes the administrative-status to lock or unlock
[no] eps-quenchfactor	Parameter type: <Equipm::TimeTicks> Format: - timer value for quench mechanish - unit: 1/100 sec	<i>optional parameter with default value: "1440000"</i> timervalue of quenching mechanism(unit: 1/100sec), 0 is valid value

5.7 Protection Element Configuration Command

Command Description

This command allows the operator to configure a protection element.

The protection group is identified by the `eqptProtGroupId` attribute. The value 1 to 9 are reserved for the extension chain protection group which are always present and cannot be deleted. Group 1 corresponding with NT 1+1 group, and Group 2-9 corresponding with possible 8 LT 1+1 groups.

The `redcy-ctrl-status` parameter is used to force a switchover between elements of a protection group or to keep one of the elements active. The **forced-active** parameter indicates that the NTA or NTB slot or LT slot is configured as active.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment protection-element (index) [ no redcy-ctrl-status | redcy-ctrl-status
<Equipm::ProtElementRedcyCtrlStatus> ]
```

Command Parameters

Table 5.7-1 "Protection Element Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId>	Index in eqpt Prot Element Table

Resource Identifier	Type	Description
	- the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	

Table 5.7-2 "Protection Element Configuration Command" Command Parameters

Parameter	Type	Description
[no] redcy-ctrl-status	Parameter type: <Equipm::ProtElementRedcyCtrlStatus> Format: (normal forced_active) Possible values: - normal : enables redundancy (active or standby) - forced_active : forces the element to be active	<i>optional parameter with default value: "normal"</i> changes the redundancy control status

5.8 External-link-host Configuration Commands

Command Description

This command allows the operator to configure the traffic direction of the configurable external-links on the host expansion card. The configurable parameters are:

- **direction:** The traffic direction. Two directions are supported:
 - **network (default):** the direction is configured to allow the traffic from the network
 - **remote-lt :** the direction is configured to allow the traffic to the remote line termination card

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment external-link-host (faceplate-number) [ no direction | direction
<Equipm::ExternalLinkConfigType> ]
```

Command Parameters

Table 5.8-1 "External-link-host Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(faceplate-number)	Format: (<Eqpt::ExtLinkConfigurableDeviceIndex> nt : sfp : <Eqpt::ExtLinkHostPortIndex> ntio-1 : sfp : <Eqpt::ExtLinkHostPortIndex> ntio-2 : sfp : <Eqpt::ExtLinkHostPortIndex>) Possible values: - nt : nt-slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf Possible values: - sfp : SFP port - xfp : XFP port Field type <Eqpt::ExtLinkHostPortIndex> - host port number Field type <Eqpt::ExtLinkConfigurableDeviceIndex> - the faceplate number of the configurable external link	the faceplate number of the configurable external-link

Table 5.8-2 "External-link-host Configuration Commands" Command Parameters

Parameter	Type	Description
[no] direction	Parameter type: <Equipm::ExternalLinkConfigType> Format: (network	<i>optional parameter with default value: "network"</i> the external-link traffic direction

Parameter	Type	Description
	remote-lt) Possible values: - network : the connection direction is from the network - remote-lt : the connection direction is to the remote line termination card	

5.9 Host Shelf SFP Configuration Commands

Command Description

This command allows the operator to configure the association between a host shelf SFP/XFP and a remote LT.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment external-link-assign (index) [ no remote | remote <Equipm::ExpansionSlotIndex> ]
```

Command Parameters

Table 5.9-1 "Host Shelf SFP Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::ExtSfpFaceplateType> nt : sfp : <Eqpt::ExtSfpFaceplateType> nt : xfp : <Eqpt::ExtSfpFaceplateType> lt : <Eqpt::HostRackId> / <Eqpt::HostShelfId> / <Eqpt::LtExtSlotId> / <Eqpt::ExtSfpFaceplateType> ntio-1 : sfp : <Eqpt::ExtSfpFaceplateType> ntio-1 : xfp : <Eqpt::ExtSfpFaceplateType> ntio-2 : sfp : <Eqpt::ExtSfpFaceplateType> ntio-2 : xfp : <Eqpt::ExtSfpFaceplateType>) Possible values: - nt : active nt slot - lt : lt-slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf Field type <Eqpt::HostRackId> - the rack number Field type <Eqpt::HostShelfId> - the shelf number Field type <Eqpt::LtExtSlotId> - the LT slot number Possible values: - sfp : SFP port - xfp : XFP port Field type <Eqpt::ExtSfpFaceplateType> - The faceplate on which remote LT is connected	the physical sfp or xfp cage position

Table 5.9-2 "Host Shelf SFP Configuration Commands" Command Parameters

Parameter	Type	Description
[no] remote	Parameter type: <Equipm::ExpansionSlotIndex> Format: <Eqpt::ExpRack> / <Eqpt::ExpShelf> / <Eqpt::ExpSlot> Field type <Eqpt::ExpRack> - the physical number of the expansion rack, 0 stands for no remote Field type <Eqpt::ExpShelf> - physical nbr of expansion shelf within expansion rack, 0 stands for no remote Field type <Eqpt::ExpSlot> - the physical number of the slot within expansion shelf, 0 stands for no remote	<i>optional parameter with default value: "0/0/0"</i> the expansion shelf LSM

5.10 SFP/XFP Diagnostics configuration Command

Command Description

This command allows the operator to configure RSSI profile on SFP/XFP:

- The slot index of the sfp
- The number of the sfp cage
- The index of rssi profile which would be configured on SFP/XFP.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment diagnostics sfp (position) [ no rssi-prof-id | rssi-prof-id <Eqpt::RssiProfileIndex> ] [ no rssi-state | rssi-state <Eqpt::RssiState> ]
```

Command Parameters

Table 5.10-1 "SFP/XFP Diagnostics configuration Command" Resource Parameters

Resource Identifier	Type	Description
(position)	Format: (acu : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SfpCageNumber> iont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : sfp : <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : xfp : <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : qsfp : <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : cfp : <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : sfp1 : <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : sfp2 : <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : xfp1 : <Eqpt::SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : xfp2 : <Eqpt::SfpCageNumber> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> / <Eqpt::SfpCageNumber> nt : sfp : <Eqpt::SfpCageNumber>	the physical sfp cage position

5 Equipment Configuration Commands

Resource Identifier	Type	Description
	- iot : an nt applique slot - remote-sfp : remote sfp - nt : active nt slot - lt : lt-slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ExpRack> - the physical number of the expansion rack, 0 stands for no remote Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::ExpShelf> - physical nbr of expansion shelf within expansion rack, 0 stands for no remote Field type <Eqpt::EqSlotId> - the equipment slot number Field type <Eqpt::SlotId> - the LT slot number Possible values: - sfp : SFP port - xfp : XFP port - qsfp : QSFP port - cfp : CFP4 port - sfp1 : SFP port 1 - sfp2 : SFP port 2 - xfp1 : XFP port 1 - xfp2 : XFP port 2 Field type <Eqpt::SfpCageNumber> - the SFP cage number - range: [0...2304]	

Table 5.10-2 "SFP/XFP Diagnostics configuration Command" Command Parameters

Parameter	Type	Description
[no] rssi-prof-id	Parameter type: <Eqpt::RssiProfileIndex> Format: - an unique index value for the rssi profile(1-200:userdefined,65535:automode) - range: [1...200,65535]	<i>optional parameter with default value: "65535"</i> an unique index of the rssi profile(1-200)
[no] rssi-state	Parameter type: <Eqpt::RssiState> Format: (enable disable) Possible values: - enable : enable rssi functionality - disable : disable rssi functionality	<i>optional parameter with default value: "disable"</i> to enable or disable the rssi functionality of sfp for uplink ports

5.11 Sfp RSSI Configuration Command

Command Description

This command allows the operator to create and configure the RSSI parameters on SFPs.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ( no rssiprof (index) ) | ( rssiprof (index) name <Eqpt::DisplayString> [ no temp-alm-low |
temp-alm-low <Eqpt::TcaTemp> ] [ no temp-alm-high | temp-alm-high <Eqpt::TcaTemp> ] [ no temp-warn-low |
temp-warn-low <Eqpt::TcaTemp> ] [ no temp-warn-high | temp-warn-high <Eqpt::TcaTemp> ] [ no
voltage-alm-low | voltage-alm-low <Eqpt::TcaVoltage> ] [ no voltage-alm-high | voltage-alm-high
<Eqpt::TcaVoltage> ] [ no voltage-warn-low | voltage-warn-low <Eqpt::TcaVoltage> ] [ no voltage-warn-high |
voltage-warn-high <Eqpt::TcaVoltage> ] [ no bias-alm-low | bias-alm-low <Eqpt::TcaBias> ] [ no bias-alm-high |
bias-alm-high <Eqpt::TcaBias> ] [ no bias-warn-low | bias-warn-low <Eqpt::TcaBias> ] [ no bias-warn-high |
bias-warn-high <Eqpt::TcaBias> ] [ no tx-pwr-alm-low | tx-pwr-alm-low <Eqpt::TcaTxPwr> ] [ no
tx-pwr-alm-high | tx-pwr-alm-high <Eqpt::TcaTxPwr> ] [ no tx-pwr-warn-low | tx-pwr-warn-low
<Eqpt::TcaTxPwr> ] [ no tx-pwr-warn-high | tx-pwr-warn-high <Eqpt::TcaTxPwr> ] [ no rx-pwr-alm-low |
rx-pwr-alm-low <Eqpt::TcaRxPwr> ] [ no rx-pwr-alm-high | rx-pwr-alm-high <Eqpt::TcaRxPwr> ] [ no
rx-pwr-warn-low | rx-pwr-warn-low <Eqpt::TcaRxPwr> ] [ no rx-pwr-warn-high | rx-pwr-warn-high
<Eqpt::TcaRxPwr> ] [ no ebias-alm-low | ebias-alm-low <Eqpt::TcaBias> ] [ no ebias-alm-high | ebias-alm-high
<Eqpt::TcaBias> ] [ no ebias-warn-low | ebias-warn-low <Eqpt::TcaBias> ] [ no ebias-warn-high | ebias-warn-high
<Eqpt::TcaBias> ] [ no etx-alm-low | etx-alm-low <Eqpt::TcaTxPwr> ] [ no etx-alm-high | etx-alm-high
<Eqpt::TcaTxPwr> ] [ no etx-warn-low | etx-warn-low <Eqpt::TcaTxPwr> ] [ no etx-warn-high | etx-warn-high
<Eqpt::TcaTxPwr> ] [ no erx-alm-low | erx-alm-low <Eqpt::TcaRxPwr> ] [ no erx-alm-high | erx-alm-high
<Eqpt::TcaRxPwr> ] [ no erx-warn-low | erx-warn-low <Eqpt::TcaRxPwr> ] [ no erx-warn-high | erx-warn-high
<Eqpt::TcaRxPwr> ] [ no etemp-alm-low | etemp-alm-low <Eqpt::TcaTemp> ] [ no etemp-alm-high |
etemp-alm-high <Eqpt::TcaTemp> ] [ no etemp-warn-low | etemp-warn-low <Eqpt::TcaTemp> ] [ no
etemp-warn-high | etemp-warn-high <Eqpt::TcaTemp> ] [ no profile-type | profile-type <Eqpt::RssiProfileType> ] )
```

Command Parameters

Table 5.11-1 "Sfp RSSI Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - an unique index value for the rssi profile(1-200) - range: [1...200]	an unique index of the rssi profile(1-200)

Table 5.11-2 "Sfp RSSI Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <Eqpt::DisplayString> Format:	<i>mandatory parameter</i> A unique profile name

5 Equipment Configuration Commands

Parameter	Type	Description
	- string to identify the rssi profile - length: 1<=x<=16	
[no] temp-alm-low	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> alarm low threshold for temperature
[no] temp-alm-high	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> alarm high threshold for temperature
[no] temp-warn-low	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> warn low threshold for temperature
[no] temp-warn-high	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> warn high threshold for temperature
[no] voltage-alm-low	Parameter type: <Eqpt::TcaVoltage> Format: - voltage of SFP - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "0"</i> alarm low threshold for Voltage
[no] voltage-alm-high	Parameter type: <Eqpt::TcaVoltage> Format: - voltage of SFP - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "0"</i> alarm high threshold for Voltage
[no] voltage-warn-low	Parameter type: <Eqpt::TcaVoltage> Format: - voltage of SFP - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "0"</i> warn low threshold for Voltage
[no] voltage-warn-high	Parameter type: <Eqpt::TcaVoltage> Format: - voltage of SFP - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "0"</i> warn high threshold for Voltage
[no] bias-alm-low	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> alarm low threshold for bias
[no] bias-alm-high	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> alarm high threshold for bias
[no] bias-warn-low	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> warn low threshold for bias

Parameter	Type	Description
[no] bias-warn-high	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> warn high threshold for bias
[no] tx-pwr-alm-low	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> alarm low threshold for Tx power
[no] tx-pwr-alm-high	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> alarm high threshold for Tx power
[no] tx-pwr-warn-low	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> warn low threshold for Tx power
[no] tx-pwr-warn-high	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> warn high threshold for Tx power
[no] rx-pwr-alm-low	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr> Field type <Eqpt::TcaRxPwr> - power of SFP - unit: dbm - range: [-127...8.2]	<i>optional parameter with default value: "0"</i> alarm low threshold for Rx power
[no] rx-pwr-alm-high	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr> Field type <Eqpt::TcaRxPwr> - power of SFP - unit: dbm - range: [-127...8.2]	<i>optional parameter with default value: "0"</i> alarm high threshold for Rx power
[no] rx-pwr-warn-low	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr> Field type <Eqpt::TcaRxPwr> - power of SFP - unit: dbm - range: [-127...8.2]	<i>optional parameter with default value: "0"</i> warn low threshold for Rx power
[no] rx-pwr-warn-high	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr>	<i>optional parameter with default value: "0"</i> warn high threshold for Rx power

5 Equipment Configuration Commands

Parameter	Type	Description
	Field type <Eqpt::TcaRxPwr> - power of SFP - unit: dbm - range: [-127...8.2]	
[no] ebias-alm-low	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> alarm low threshold for ext bias
[no] ebias-alm-high	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> alarm high threshold for ext bias
[no] ebias-warn-low	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> warn low threshold for ext bias
[no] ebias-warn-high	Parameter type: <Eqpt::TcaBias> Format: - bias of SFP - unit: mA - range: [0...262]	<i>optional parameter with default value: "0"</i> warn high threshold for ext bias
[no] etx-alm-low	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> alarm low threshold for ext Tx power
[no] etx-alm-high	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> alarm high threshold for ext Tx power
[no] etx-warn-low	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> warn low threshold for ext Tx power
[no] etx-warn-high	Parameter type: <Eqpt::TcaTxPwr> Format: <Eqpt::TcaTxPwr> Field type <Eqpt::TcaTxPwr> - power of SFP - unit: dbm - range: [-63.5...63.5]	<i>optional parameter with default value: "0"</i> warn high threshold for ext Tx power
[no] erx-alm-low	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr> Field type <Eqpt::TcaRxPwr> - power of SFP	<i>optional parameter with default value: "0"</i> alarm low threshold for ext Rx power

Parameter	Type	Description
	- unit: dbm - range: [-127...8.2]	
[no] erx-alm-high	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr> Field type <Eqpt::TcaRxPwr> - power of SFP - unit: dbm - range: [-127...8.2]	<i>optional parameter with default value: "0"</i> alarm high threshold for ext Rx power
[no] erx-warn-low	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr> Field type <Eqpt::TcaRxPwr> - power of SFP - unit: dbm - range: [-127...8.2]	<i>optional parameter with default value: "0"</i> warn low threshold for ext Rx power
[no] erx-warn-high	Parameter type: <Eqpt::TcaRxPwr> Format: <Eqpt::TcaRxPwr> Field type <Eqpt::TcaRxPwr> - power of SFP - unit: dbm - range: [-127...8.2]	<i>optional parameter with default value: "0"</i> warn high threshold for ext Rx power
[no] etemp-alm-low	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> alarm low threshold for temperature on network lane
[no] etemp-alm-high	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> alarm high threshold for temperature on network lane
[no] etemp-warn-low	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> warn low threshold for temperature on network lane
[no] etemp-warn-high	Parameter type: <Eqpt::TcaTemp> Format: - temperature of SFP - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> warn high threshold for temperature on network lane
[no] profile-type	Parameter type: <Eqpt::RssiProfileType> Format: (olt ont) Possible values: - olt : This profile is for OLT usage - ont : This profile is for ONT usage	<i>optional parameter with default value: "olt"</i> determine if this RSSI Profile is for OLT or ONT

5.12 2xE1/DS1 CLOCK configuration Command

Command Description

This command allows the operator to configure clock source on the 2xE1/DS1 sfp:

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment sfpe1t1 ( no clock (position) ) | ( clock (position) [ no clocksource | clocksource
<Eqpt::ClockSource> ] )
```

Command Parameters

Table 5.12-1 "2xE1/DS1 CLOCK configuration Command" Resource Parameters

Resource Identifier	Type	Description
(position)	Format: (acu : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::E1dsx1SfpCageNumber> iont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::E1dsx1SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : <Eqpt::E1dsx1SfpCageNumber> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> / <Eqpt::E1dsx1SfpCageNumber> nt : sfp : <Eqpt::E1dsx1SfpCageNumber> nt : xfp : <Eqpt::E1dsx1SfpCageNumber> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::E1dsx1SfpCageNumber> ntio-1 : sfp : <Eqpt::E1dsx1SfpCageNumber> ntio-1 : xfp : <Eqpt::E1dsx1SfpCageNumber> ntio-2 : sfp : <Eqpt::E1dsx1SfpCageNumber> ntio-2 : xfp : <Eqpt::E1dsx1SfpCageNumber> nt-a : sfp : <Eqpt::E1dsx1SfpCageNumber> nt-a : xfp : <Eqpt::E1dsx1SfpCageNumber> nt-b : sfp : <Eqpt::E1dsx1SfpCageNumber> nt-b : xfp : <Eqpt::E1dsx1SfpCageNumber>) Possible values: - acu : acu slot - iont : an nt applique slot - remote-sfp : remote sfp - nt : active nt slot - lt : lt-slot	the physical sfp cage position

Resource Identifier	Type	Description
	- ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ExpRack> - the physical number of the expansion rack, 0 stands for no remote Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::ExpShelf> - physical nbr of expansion shelf within expansion rack, 0 stands for no remote Field type <Eqpt::EqSlotId> - the equipment slot number Field type <Eqpt::SlotId> - the LT slot number Possible values: - sfp : SFP port - xfp : XFP port Field type <Eqpt::E1dsx1SfpCageNumber> - the SFP cage number range NELT-B [1,3..35], NCNC-B/C/D [2..7], RELT-A/B [1,3..15]	

Table 5.12-2 "2xE1/DS1 CLOCK configuration Command" Command Parameters

Parameter	Type	Description
[no] clocksource	Parameter type: <Eqpt::ClockSource> Format: <pre>(tributary1 tributary2 serdes)</pre> Possible values: - tributary1 : clock source is from tributary 1 - tributary2 : clock source is from tributary 2 - serdes : clock source is from serdes	<i>optional parameter with default value: "serdes"</i> Clock source can be tributary1 or tributary2 or serdes

5.13 2xE1/DS1 Pseudo Wire TDM Interface configuration Command

Command Description

This command allows the operator to configure PWTDM interface parameters on the 2xE1/DS1 sfp:

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment sfpe1t1 tdmintf (position) [ no window-number | window-number <Eqpt::WindowNumber>
] [ no window-length | window-length <Eqpt::Windowlength> ]
```

Command Parameters

Table 5.13-1 "2xE1/DS1 Pseudo Wire TDM Interface configuration Command" Resource Parameters

Resource Identifier	Type	Description
(position)	Format: (acu : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::E1dsx1SfpCageNumber> iont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::E1dsx1SfpCageNumber> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : <Eqpt::E1dsx1SfpCageNumber> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> / <Eqpt::E1dsx1SfpCageNumber> nt : sfp : <Eqpt::E1dsx1SfpCageNumber> nt : xfp : <Eqpt::E1dsx1SfpCageNumber> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::E1dsx1SfpCageNumber> ntio-1 : sfp : <Eqpt::E1dsx1SfpCageNumber> ntio-1 : xfp : <Eqpt::E1dsx1SfpCageNumber> ntio-2 : sfp : <Eqpt::E1dsx1SfpCageNumber> ntio-2 : xfp : <Eqpt::E1dsx1SfpCageNumber> nt-a : sfp : <Eqpt::E1dsx1SfpCageNumber> nt-a : xfp : <Eqpt::E1dsx1SfpCageNumber> nt-b : sfp : <Eqpt::E1dsx1SfpCageNumber> nt-b : xfp : <Eqpt::E1dsx1SfpCageNumber>) Possible values: - acu : acu slot	the physical sfp cage position

Resource Identifier	Type	Description
	- iont : an nt applique slot - remote-sfp : remote sfp - nt : active nt slot - lt : lt-slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ExpRack> - the physical number of the expansion rack, 0 stands for no remote Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::ExpShelf> - physical nbr of expansion shelf within expansion rack, 0 stands for no remote Field type <Eqpt::EqSlotId> - the equipment slot number Field type <Eqpt::SlotId> - the LT slot number Possible values: - sfp : SFP port - xfp : XFP port Field type <Eqpt::E1dsx1SfpCageNumber> - the SFP cage number range NELT-B [1,3..35], NCNC-B/C/D [2..7], RELT-A/B [1,3..15]	

Table 5.13-2 "2xE1/DS1 Pseudo Wire TDM Interface configuration Command" Command Parameters

Parameter	Type	Description
[no] window-number	Parameter type: <Eqpt::WindowNumber> Format: - window-number range - range: [0...255]	<i>optional parameter with default value: "20"</i> window number can be configured from 0 to 255, selecting value 0 sets default value
[no] window-length	Parameter type: <Eqpt::Windowlength> Format: - window-length range - range: [0...255]	<i>optional parameter with default value: "10"</i> window number can be configured from 0 to 255, selecting value 0 sets default value, units multiple of 10 milliseconds

5.14 2xE1/DS1 Pseudo Wire TDM SFP configuration Command

Command Description

This command allows the operator to configure pseudowire TDM parameters on the 2xE1/DS1 sfp:

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment sfpe1t1 ( no pwtdm (position) ) | ( pwtdm (position) channel <Eqpt::Channel> packet-length
<Eqpt::Packetlength> jitter-buff-size <Eqpt::JitBufSize> vlanid <Eqpt::VlanId> priority <Eqpt::Priority>
conseq-number <Eqpt::ConseqNo> ecid-rx <Eqpt::ECID> ecid-tx <Eqpt::ECID> source-mac
<Eqpt::PhysicalAddress> dest-mac <Eqpt::PhysicalAddress> )
```

Command Parameters

Table 5.14-2 "2xE1/DS1 Pseudo Wire TDM SFP configuration Command" Command Parameters

Parameter	Type	Description
channel	Parameter type: <Eqpt::Channel> Format: (close open) Possible values: - close : close channel - open : open channel	<i>mandatory parameter</i> open or close the channel
packet-length	Parameter type: <Eqpt::Packetlength> Format: - packet length range - range: [0...16382]	<i>mandatory parameter</i> packet length can be configured from 0 to 16382, packet length for MEF8 is 256 bytes
jitter-buff-size	Parameter type: <Eqpt::JitBufSize>	<i>mandatory parameter</i>

5 Equipment Configuration Commands

Parameter	Type	Description
	Format: - jitter buffer size - range: [0...1023]	jitter buffer size can be configured from 0 to 1023, units in number of MEF8 packets
vlanid	Parameter type: <Eqpt::VlanId> Format: - vlan index - range: [0...4095]	<i>mandatory parameter</i> vlan id can be configured from 0 to 4095
priority	Parameter type: <Eqpt::Priority> Format: - priority range 0 to 7 - range: [0...7]	<i>mandatory parameter</i> 802.1p priority range 0 to 7
conseq-number	Parameter type: <Eqpt::ConseqNo> Format: - consequence range 0 to 7, 0: no control, 1-6: number of packets out of sequence - range: [0...7]	<i>mandatory parameter</i> consequence number range 0 to 7
ecid-rx	Parameter type: <Eqpt::ECID> Format: - Emulated circuit identifier range 0 to 1048575 - range: [0...1048575]	<i>mandatory parameter</i> receive emulated circuit identifier range 0 to 1048575
ecid-tx	Parameter type: <Eqpt::ECID> Format: - Emulated circuit identifier range 0 to 1048575 - range: [0...1048575]	<i>mandatory parameter</i> transmit emulated circuit identifier range 0 to 1048575
source-mac	Parameter type: <Eqpt::PhysicalAddress> Format: - media dependent physical address - length: 6	<i>mandatory parameter</i> source mac address
dest-mac	Parameter type: <Eqpt::PhysicalAddress> Format: - media dependent physical address - length: 6	<i>mandatory parameter</i> destination mac address

5.15 2xE1/DS1 Framer configuration Command

Command Description

This command allows the operator to configure Framer parameters on the 2xE1/DS1 sfp:

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment sfpe1t1 framer (position) [ no frame-mode | frame-mode <Eqpt::Framemode> ] [ no
iwf-on-liu | iwf-on-liu <Eqpt::IwfOnLiu> ] [ no liu-on-liu | liu-on-liu <Eqpt::LiuOnliu> ] [ no pm-to-iwf |
pm-to-iwf <Eqpt::PmTowi> ] [ no ais-to-iwf | ais-to-iwf <Eqpt::AisTowi> ] [ no rai-to-iwf | rai-to-iwf
<Eqpt::RaiTowi> ] [ no rei-to-iwf | rei-to-iwf <Eqpt::ReiTowi> ] [ no pm-to-liu | pm-to-liu <Eqpt::PmToliu> ] [
no ais-to-liu | ais-to-liu <Eqpt::AisToliu> ] [ no rai-to-liu | rai-to-liu <Eqpt::RaiToliu> ] [ no rei-to-liu | rei-to-liu
<Eqpt::ReiToliu> ]
```

Command Parameters

Table 5.15-2 "2xE1/DS1 Framer configuration Command" Command Parameters

Parameter	Type	Description
[no] frame-mode	Parameter type: <Eqpt::Framermode> Format: (framed unframed) Possible values: - framed : selects framed tdm packet - unframed : selects unframed tdm packet	<i>optional parameter with default value: "unframed"</i> select line framing mode
[no] iwf-on-liu	Parameter type: <Eqpt::IwfOnLiu> Format: (enable disable) Possible values: - enable : enable loop towards iwf on liu	<i>optional parameter with default value: "disable"</i> enable loop towards iwf on liu

Parameter	Type	Description
	- disable : disable loop towards iwf on liu	
[no] liu-on-liu	Parameter type: <Eqpt::LiuOnliu> Format: (enable disable) Possible values: - enable : enable loop towards liu on liu - disable : disable loop towards liu on liu	<i>optional parameter with default value: "disable"</i> enable loop towards liu on liu
[no] pm-to-iwf	Parameter type: <Eqpt::PmToiwf> Format: (enable disable) Possible values: - enable : enable performance monitoring towards iwf - disable : disable performance monitoring towards iwf	<i>optional parameter with default value: "disable"</i> enable performance monitoring towards iwf
[no] ais-to-iwf	Parameter type: <Eqpt::AisToiwf> Format: (enable disable) Possible values: - enable : enable ais towards iwf - disable : disable ais towards iwf	<i>optional parameter with default value: "disable"</i> enable ais alarm towards iwf
[no] rai-to-iwf	Parameter type: <Eqpt::RaiToiwf> Format: (enable disable) Possible values: - enable : enable rai towards iwf - disable : disable rai towards iwf	<i>optional parameter with default value: "disable"</i> enable rai alarm towards iwf
[no] rei-to-iwf	Parameter type: <Eqpt::ReiToiwf> Format: (enable disable) Possible values: - enable : enable rei towards iwf - disable : disable rei towards iwf	<i>optional parameter with default value: "disable"</i> enable rei alarm towards iwf
[no] pm-to-liu	Parameter type: <Eqpt::PmToliu> Format: (enable disable) Possible values: - enable : enable performance monitoring towards liu - disable : disable performance monitoring towards liu	<i>optional parameter with default value: "disable"</i> enable performance monitoring towards liu
[no] ais-to-liu	Parameter type: <Eqpt::AisToliu> Format: (enable disable) Possible values: - enable : enable ais towards liu - disable : disable ais towards liu	<i>optional parameter with default value: "disable"</i> enable ais alarm towards liu
[no] rai-to-liu	Parameter type: <Eqpt::RaiToliu> Format: (enable disable) Possible values: - enable : enable rai towards liu - disable : disable rai towards liu	<i>optional parameter with default value: "disable"</i> enable rai alarm towards liu

5 Equipment Configuration Commands

Parameter	Type	Description
[no] rei-to-liu	Parameter type: <Eqpt::ReiToliu> Format: (enable disable) Possible values: - enable : enable rei towards liu - disable : disable rei towards liu	<i>optional parameter with default value: "disable"</i> enable rei alarm towards liu

5.16 2xE1/DS1 Line Interface Unit SFP configuration Command

Command Description

This command allows the operator to configure distance and cable impedance on the 2xE1/DS1 sfp:

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment sfpe1t1 liu (position) [ no distance | distance <Eqpt::distance> ] [ no cable-impedance |
cable-impedance <Eqpt::CableImpedance> ]
```

Command Parameters

Table 5.16-1 "2xE1/DS1 Line Interface Unit SFP configuration Command" Resource Parameters

Resource Identifier	Type	Description
(position)	Format: (acu : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> iont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> remote-sfp : <Eqpt::ExpRack> / <Eqpt::ExpShelf> : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> / <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> nt : sfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> nt : xfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> ntio-1 : sfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> ntio-1 : xfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> ntio-2 : sfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> ntio-2 : xfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> nt-a : sfp : <Eqpt::E1dsx1SfpCageNumber> :	the physical sfp cage position

5 Equipment Configuration Commands

	<Eqpt::TributaryIndex> nt-a : xfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> nt-b : sfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex> nt-b : xfp : <Eqpt::E1dsx1SfpCageNumber> : <Eqpt::TributaryIndex>) Possible values: - acu : acu slot - iont : an nt applique slot - remote-sfp : remote sfp - nt : active nt slot - lt : lt-slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ExpRack> - the physical number of the expansion rack, 0 stands for no remote Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::ExpShelf> - physical nbr of expansion shelf within expansion rack, 0 stands for no remote Field type <Eqpt::EqSlotId> - the equipment slot number Field type <Eqpt::SlotId> - the LT slot number Possible values: - sfp : SFP port - xfp : XFP port Field type <Eqpt::E1dsx1SfpCageNumber> - the SFP cage number range NELT-B [1,3..35], NCNC-B/C/D [2..7], RELT-A/B [1,3..15] Field type <Eqpt::TributaryIndex> - tributary index - range: [1...3]	

Table 5.16-2 "2xE1/DS1 Line Interface Unit SFP configuration Command" Command Parameters

Parameter	Type	Description
[no] distance	Parameter type: <Eqpt::distance> Format: (shorthaul longhaul) Possible values: - shorthaul : distance shorthaul - longhaul : distance longhaul	<i>optional parameter with default value: "shorthaul"</i> distance can be configured as shorthaul or longhaul
[no] cable-impedance	Parameter type: <Eqpt::CableImpedance> Format: (75ohms 120ohms) Possible values: - 75ohms : cable impedance 75 ohms - 120ohms : cable impedance 120 ohms	<i>optional parameter with default value: "120ohms"</i> cable impedance can be configured 75ohms or 120ohms

5.17 NE Configuration Command

Command Description

This command allows the operator to configure the NE. The operator can configure the following parameter:

- *description: text that describes the location of the ISAM.*

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> configure equipment isam [no description | description <Description-127>]

Command Parameters

Table 5.17-2 "NE Configuration Command" Command Parameters

Parameter	Type	Description
[no] description	Parameter type: <Description-127> Format: - description to help the operator to identify the object - length: x<=127	<i>optional parameter with default value: ""</i> any description to be used by the operator

5.18 Environment Monitoring Configuration Command

Command Description

This command allows the operator to configure environment monitoring status to enable/disable the data relay from an external monitor box connected on the NTIO board of ISAM to the monitor server. The operator can configure the following parameters:

- *enable-supervise: enable relay of environment monitoring from an external monitor box.*

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> configure equipment envbox [[no] enable-supervise]

Command Parameters

Table 5.18-2 "Environment Monitoring Configuration Command" Command Parameters

Parameter	Type	Description
[no] enable-supervise	Parameter type: boolean	<i>optional parameter</i> enable environment monitoring relay

5.19 Configure Fan Tray parameters

Command Description

This command allows the operator to configure the fan tray parameter fanmode.

The fanmode determines the applied speed of the fan trays.

On 7302 ISAM, 7330 ISAM FTTN and 7360 ISAM the fanmode is effective only if intelligent fan packs are installed. Traditional fan packs (A-fans) do not support speed change, the 'classic' mode applies.

On 7363 MX intelligent fan packs are by default present. The "classic mode" will change the fan speed, but based on ambient temperature only.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment fan-tray [ fanmode <Eqpt::FanMode> ]
```

Command Parameters

Table 5.19-2 "Configure Fan Tray parameters" Command Parameters

Parameter	Type	Description
fanmode	Parameter type: <Eqpt::FanMode> Format: (auto eco protect classic) Possible values: - auto : runs in average mode; fan speeds determined by predefined thermal margins - eco : runs in 'green' mode; minimal thermal margins - protect : runs in protected mode; wider thermal settings wrt auto - classic : fixed fan speed; no SW control	<i>optional parameter</i> Fan Tray mode

5.20 Configure Board Auto Replan feature

Command Description

Parameter indicates whether the system is configured to allow an LT slot to be automatically re-planned into a new slot value upon LT hardware migration. Enabling this feature makes sure that a new compatible LT inserted into an already configured slot becomes operational automatically, without loss of the original configuration database and without requiring any (re-)configuration action. This only applies to certain board replacement scenarios and for a subset of (from/to) LT types.

By default, the field is set to false (value 2) i.e. the slot will not be automatically re-planned when the new LT is inserted. When the feature is enabled by the operator, the value is set to True (value 1).

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment replan [ boardautoreplan <Eqpt::BoardAutoReplan> ]
```

Command Parameters

Table 5.20-2 "Configure Board Auto Replan feature" Command Parameters

Parameter	Type	Description
boardautoreplan	Parameter type: <Eqpt::BoardAutoReplan> Format: (enable disable) Possible values: - enable : enable board auto replan functionality - disable : disable board auto replan functionality	<i>optional parameter</i> Set the Board Auto Replan feature

6.2 ONT Interface Configuration Command

Command Description

This command allows the operator to create and configure the ONT parameters.

provversion - when '' is set, it detects ONT hardware version on board and is updated accordingly.*

sernum - User can only set it when admin state is down and admin-state cannot be changed to up with default sernum (ALCL:00000000). The First 4 bytes form the vendorid and the last 8 bytes form the serial no.

sw-ver-pland - The special string of 'AUTO' is used to indicate that if this ONT's hardware version (eqpt-ver-num in 'show ont interface command) and planned variant (plnd-var) has a matching entry created using 'configure equipment ont sw-ctrl', then the plnd-sw-version from the gponOntSwVerCtlTable table will be downloaded to the ONT. The special string of 'UNPLANNED' is used to avoid any download. The special string of 'DISABLED' is used not to control onu sw version, and not report mismatch alarm. The special string of 'DELAYACTIVATE' is used for non-immediate activation.

subslocid - 0 to 12 (36 for ngpon2/xgs/25g) ASCII character string or 0 to 24 (72 for ngpon2/xgs/25g) HEX string depending on slidmode.

sw-dnload-version - The special string of 'AUTO' is used to indicate that if this ONT's hardware version (eqpt-ver-num in 'show equipment ont interface command) and planned variant (plnd-var) has a matching entry created using 'configure equipment ont sw-ctrl', then the plnd-sw-version from the gponOntSwVerCtlTable table will be downloaded to the ONT. The special string of 'DISABLED' is used to indicate this feature as blocked. If sw-ver-pland is set to 'DISABLED', sw-dnload-version can only be 'DISABLED'.

NOTE: In order to change power-shed-profile, provversion, sernum, fec-up, us-police-mode, us_tcpolice-mode, log-auth-id and log-auth-pwd parameters, the ONT state must be in Out-of-Service. If not specified, the values of the above parameters stay unchanged.

admin-state - cannot be modified in the same command execution with any other parameter and vice versa. If not specified, the value of this parameter stays unchanged.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont ( no interface (ont-idx) ) | ( interface (ont-idx) [ no battery-bkup | battery-bkup
<Gpon::BatteryBkup> ] [ no berint | berint <Gpon::BertInterval> ] [ no desc1 | desc1 <Gpon::Desc> ] [ no desc2 |
desc2 <Gpon::Desc> ] [ no provversion | provversion <Gpon::ProvVersion> ] [ no sernum | sernum
<Gpon::SerNum> ] [ subslocid <Gpon::SubsLocId> ] sw-ver-pland <Gpon::SwVerPlnd> [ no fec-up | fec-up
<Gpon::FecUp> ] [ no bridge-map-mode | bridge-map-mode <Gpon::BridgeMapMode> ] [ no pwr-shed-prof-id |
pwr-shed-prof-id <Gpon::PwrShedProfIndex> ] [ no ont-enable | ont-enable <Gpon::OntEnable> ] [ no p2p-enable |
p2p-enable <Gpon::P2PEnable> ] [ no optics-hist | optics-hist <Gpon::OpticsHist> ] [ no sw-dnload-version |
sw-dnload-version <Gpon::SwVerDn> ] [ no plnd-var | plnd-var <Gpon::PlndVar> ] [ no rf-filter | rf-filter
<Gpon::RfFilter> ] [ no us-police-mode | us-police-mode <Gpon::UsPoliceMode> ] [ no enable-aes | enable-aes
<Gpon::EnableAES> ] [ no voip-allowed | voip-allowed <Gpon::VoipAllowed> ] [ no iphc-allowed | iphc-allowed
<Gpon::IphcAllowed> ] [ no slid-visibility | slid-visibility <Gpon::SlidAvailabilityStatus> ] [ no log-auth-id |
log-auth-id <Gpon::LogAuthId> ] [ no log-auth-pwd | log-auth-pwd <Security::Password6> ] [ no cvlantrans-mode
```

```

| cvlantrans-mode <Gpon::CVlanTransMode> ] [ no sn-bundle-ctrl | sn-bundle-ctrl <Gpon::SnBundleCtrl> ] [ no
pland-cfgfile1 | pland-cfgfile1 <Gpon::CfgFileName> ] [ no pland-cfgfile2 | pland-cfgfile2 <Gpon::CfgFileName>
] [ no dnload-cfgfile1 | dnload-cfgfile1 <Gpon::CfgFileName> ] [ no dnload-cfgfile2 | dnload-cfgfile2
<Gpon::CfgFileName> ] [ no us-tcpolice-mode | us-tcpolice-mode <Gpon::UsTcPoliceMode> ] [ no

```

Command Parameters

Table 6.2-1 "ONT Interface Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	ONT index

Table 6.2-2 "ONT Interface Configuration Command" Command Parameters

Parameter	Type	Description
[no] battery-bkup	Parameter type: <Gpon::BatteryBkup> Format: (disable enable) Possible values: - disable : ONT is not equipped with battery backup - enable : ONT is equipped with battery backup	<i>optional parameter with default value: "disable"</i> battery backup
[no] berint	Parameter type: <Gpon::BertInterval> Format: - BER Interval - range: [8000...100000]	<i>optional parameter with default value: "8000"</i> accumulation interval (in number of downstream frames) for ONU BER calculation
[no] desc1	Parameter type: <Gpon::Desc> Format:	<i>optional parameter with default value: ""</i>

6 Gpon ONT Configuration Commands

Parameter	Type	Description
	- desc - length: x<=64	free-form textual field for user to describe the ONT
[no] desc2	Parameter type: <Gpon::Desc> Format: - desc - length: x<=64	<i>optional parameter with default value: ""</i> free-form textual field for user to describe the ONT
[no] provversion	Parameter type: <Gpon::ProvVersion> Format: - provisioned version number - length: x<=14	<i>optional parameter with default value: ""</i> the provisioned version number
[no] sernum	Parameter type: <Gpon::SerNum> Format: <Gpon::VendorId> : <Gpon::SerialNo> Field type <Gpon::VendorId> - vendor id - 4 ASCII characters - range: [a-zA-Z0-9] - length: 4 Field type <Gpon::SerialNo> - serial num - 8 ASCII characters - range: [a-fA-F0-9] - length: 8	<i>optional parameter with default value: "ALCL : 00000000"</i> the provisioned serial number
subslcid	Parameter type: <Gpon::SubsLocId> Format: - subsloc id, 0 to 12 (36 for ngpon2/xgs/25g) ASCII character string or 0 to 24 (72 for ngpon2/xgs/25g) HEX string depending on slidmode - length: x<=72	<i>optional parameter</i> subscriber location id (SLID)
sw-ver-pland	Parameter type: <Gpon::SwVerPlnd> Format: (auto unplanned disabled delayactivate <Gpon::SwVerPlnd>) Possible values: - auto : download sw to onu using the sw-ctrl version - unplanned : avoid any download related action, but report mismatch alarm - disabled : not to control onu sw version, and not report mismatch alarm - delayactivate : for non-immediate activation Field type <Gpon::SwVerPlnd> - ont sw version - length: 1<=x<=14	<i>mandatory parameter</i> planned ONT software version number. If sw-dnload-version is set to disabled, sw-ver-pland cannot be set to delayactivate.
[no] fec-up	Parameter type: <Gpon::FecUp> Format: (disable enable recommended) Possible values: - disable : Disable use of FEC in Upstream direction - enable : Enable use of FEC in Upstream direction - recommended : Automatically set based on planned ONT technology: gpon=disable,ngpon=enable,auto-match=enable	<i>optional parameter with default value: "gpon : disable,ngpon : enable,auto-match : enable"</i> enable/disable use of FEC in Upstream direction
[no] bridge-map-mode	Parameter type: <Gpon::BridgeMapMode> Format: (1-mp-bridge-map-filter	<i>optional parameter with default value: "1-mp-bridge-map-filter"</i> ont bridge map mode

Parameter	Type	Description
	n-p-bridge-map-filter n-mp-bridge-map-filter) Possible values: - 1-mp-bridge-map-filter: 1:MP bridge map mode - n-p-bridge-map-filter : N:P bridge map mode - n-mp-bridge-map-filter: N:MP bridge map mode	
[no] pwr-shed-prof-id	Parameter type: <Gpon::PwrShedProfIndex> Format: (none <Gpon::PwrShedProfIndex>) Possible values: - none : no profile to associate Field type <Gpon::PwrShedProfIndex> - a pwr shed profile index value - range: [0...50]	<i>optional parameter with default value: "none"</i> power shed profile id
[no] ont-enable	Parameter type: <Gpon::OntEnable> Format: (auto disable enable) Possible values: - auto : OLT automatically decided on proper action - disable : ONT is Manually Disabled - enable : ONT is Manually Enabled	<i>optional parameter with default value: "auto"</i> ONT disabling decision for rogue ONTs
[no] p2p-enable	Parameter type: <Gpon::P2PEnable> Format: (disable enable) Possible values: - disable : Disable Port-to-port traffic exchange - enable : Enable Port-to-port traffic exchange	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during modification.</i> allow port-to-port traffic exchange between ethernet UNIs on the same ONT
[no] optics-hist	Parameter type: <Gpon::OpticsHist> Format: (disable enable) Possible values: - disable : Disable daily optical supervision measurements collection - enable : Enable daily optical supervision measurements collection	<i>optional parameter with default value: "disable"</i> daily optical supervision measurements collection
[no] sw-dnload-version	Parameter type: <Gpon::SwVerDn> Format: (auto disabled <Gpon::SwVerDn>) Possible values: - auto : download sw to onu using the sw-ctrl version - disabled : indicate this feature is blocked. If sw-ver-pland is set to disabled, sw-dnload-version can only be disabled Field type <Gpon::SwVerDn> - ont sw version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> standby ONT software version number to be downloaded. If sw-ver-pland is set to delayactivate, sw-dnload-version cannot be set to disabled.
[no] plnd-var	Parameter type: <Gpon::PlndVar> Format: - planned variant of the ONT hardware version - length: x<=80	<i>optional parameter with default value: ""</i> planned variant of the ONT hardware version. Use DO for Data-only ONTs, SIP for SIP

6 Gpon ONT Configuration Commands

Parameter	Type	Description
		ONTs,H.248 for MEGACO ONTs
[no] rf-filter	Parameter type: <Gpon::RfFilter> Format: (pass-none pass-low pass-low-high pass-low-middle) Possible values: - pass-none : Pass Nothing - pass-low : Pass only Low Band - pass-low-high : Pass Low and High Band - pass-low-middle : Pass Low and Middle Band	<i>optional parameter with default value: "pass-low-high"</i> filter settings for RF video
[no] us-police-mode	Parameter type: <Gpon::UsPoliceMode> Format: (local network remote) Possible values: - local : local at OLT - network : remote at OLT obsolete alternative replaced by remote - remote : remote at ONT	<i>optional parameter with default value: "local"</i> upstream police mode
[no] enable-aes	Parameter type: <Gpon::EnableAES> Format: (disable enable) Possible values: - disable : disable downstream AES encryption - enable : enable downstream AES encryption	<i>optional parameter with default value: "disable"</i> downstream AES encryption for all unicast (X)GEM ports pertaining to the ONT
[no] voip-allowed	Parameter type: <Gpon::VoipAllowed> Format: (disable enable iphost veip) Possible values: - disable : disable voip support on ONT - enable : enable voip support on ONT - iphost : enable voip support on ONT using iphost - veip : enable voip support on ONT using veip	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during modification.</i> voip support on ONT
[no] iphc-allowed	Parameter type: <Gpon::IphcAllowed> Format: (disable enable) Possible values: - disable : disable iphc support on ONT - enable : enable iphc support on ONT	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during modification.</i> iphc support on ONT
[no] slid-visibility	Parameter type: <Gpon::SlidAvailabilityStatus> Format: (disabled enabled-slid-on enabled-all) Possible values: - disabled : no access using http or telnet - enabled-slid-on : read-only access using http or telnet - enabled-all : read-write access using http or telnet	<i>optional parameter with default value: "disabled"</i> <i>The parameter is not visible during creation.</i> slid visibility of the interface

Parameter	Type	Description
[no] log-auth-id	Parameter type: <Gpon::LogAuthId> Format: - ont logical id - length: x<=24	<i>optional parameter with default value: ""</i> the logical id for the ont
[no] log-auth-pwd	Parameter type: <Security::Password6> Format: (prompt plain : <Security::PlainPassword6>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text Field type <Security::PlainPassword6> - ont password - length: x<=12	<i>optional parameter with default value: "plain : "</i> the password for the ont
[no] cvlantrans-mode	Parameter type: <Gpon::CVlanTransMode> Format: (remote local) Possible values: - remote : cvlan translate remote - local : cvlan translate local	<i>optional parameter with default value: "remote"</i> cvlan translation settings for all traffic except the configured multicast traffic
[no] sn-bundle-ctrl	Parameter type: <Gpon::SnBundleCtrl> Format: (unbundle bundle auto) Possible values: - unbundle : no bundle behavior for sn with loid/sluid - bundle : manual bundling of sn with loid/sluid - auto : automatically bundle the sn with loid/sluid when a new sn is learned	<i>optional parameter with default value: "unbundle"</i> sn bundling behavior associated with slid/loid
[no] pland-cfgfile1	Parameter type: <Gpon::CfgFileName> Format: (auto <Gpon::CfgFileName>) Possible values: - auto : download configure file to onu using the sw-ctrl version Field type <Gpon::CfgFileName> - ont configure file version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile1 version to be planned
[no] pland-cfgfile2	Parameter type: <Gpon::CfgFileName> Format: (auto <Gpon::CfgFileName>) Possible values: - auto : download configure file to onu using the sw-ctrl version Field type <Gpon::CfgFileName> - ont configure file version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile2 version to be planned
[no] dnload-cfgfile1	Parameter type: <Gpon::CfgFileName> Format: (auto <Gpon::CfgFileName>) Possible values: - auto : download configure file to onu using the sw-ctrl	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile1 version to be downloaded

6 Gpon ONT Configuration Commands

Parameter	Type	Description
	version Field type <Gpon::CfgFileName> - ont configure file version - length: 1<=x<=14	
[no] dnload-cfgfile2	Parameter type: <Gpon::CfgFileName> Format: (auto <Gpon::CfgFileName>) Possible values: - auto : download configure file to onu using the sw-ctrl version Field type <Gpon::CfgFileName> - ont configure file version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile2 version to be downloaded
[no] us-tcpolice-mode	Parameter type: <Gpon::UsTcPoliceMode> Format: (local remote) Possible values: - local : local at OLT - remote : remote at ONT	<i>optional parameter with default value: "local"</i> upstream tc(gemport) police mode
[no] planned-us-rate	Parameter type: <Gpon::PlannedUsRate> Format: (nominal-line-rate 2.5g 10g 1.25g auto-match 25g) Possible values: - nominal-line-rate : ont inherits upstream rate from nominal line rate(default) - 2.5g : 2.5 GBit/sec - 10g : 10 GBit/sec - 1.25g : 1.25 GBit/sec - auto-match : upstream rate is detected when onu activates - 25g : 25 GBit/sec	<i>optional parameter with default value: "nominal-line-rate,cde : auto-match"</i> planned upstream rate
admin-state	Parameter type: <Gpon::ItfAdminStatus> Format: (up down) Possible values: - up : set the admin-state to up - down : set the admin-state to down	<i>optional parameter</i> <i>The parameter is not visible during creation.</i> administrative status of the interface
[no] oltdscppbitalign	Parameter type: <Gpon::OltDscpPbitAlign> Format: (disable enable) Possible values: - disable : OLT will not do dscp-to-pbit alignment - enable : OLT will do dscp-to-pbit alignment	<i>optional parameter with default value: "disable"</i> if OLT need perform DSCP to Pbit alignment for this ONU, when the DSCP to Pbit alignment is configured on the vlan port
[no] pref-channel-pair	Parameter type: <Ng2::PreferredChannelPairIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> none) Possible values:	<i>optional parameter with default value: "none"</i> preferred channel pair in case of ngpon2 ont

Parameter	Type	Description
	- none : lt board not specified Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	
[no] prot-channel-pair	Parameter type: <Ng2::PreferredChannelPairIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> none) Possible values: - none : lt board not specified Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	<i>optional parameter with default value: "none"</i> protecting channel pair in case of ngpon2 ont
[no] alt-pref-ch-pair	Parameter type: <Ng2::PreferredChannelPairIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> none) Possible values: - none : lt board not specified Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	<i>optional parameter with default value: "none"</i> alternative preferred channel pair in case of ngpon2 ont
[no] ratelimit-us-dhcp	Parameter type: <Gpon::RateLimitUsDhcp> Format: - ratelimit upstream DHCP packets, 0 - Disabled, 1..16 - Enabled (Packets Per Second limit) - range: [0...16]	<i>optional parameter with default value: "10"</i> upstream rate limit for DHCP packets, unit is pps which means packets per second
[no] ratelimit-us-arp	Parameter type: <Gpon::RateLimitUsArp> Format: - ratelimit upstream ARP packets, 0 - Disabled, 1..16 - Enabled (Packets Per Second limit) - range: [0...16]	<i>optional parameter with default value: "10"</i> upstream rate limit for ARP packets, unit is pps which means packets per second
[no] flush-mac	Parameter type: <Gpon::FlushMac> Format: (disable enable) Possible values: - disable : the MAC will not be flushed when UNIs go down - enable : the MAC will be flushed when UNIs go down	<i>optional parameter with default value: "disable"</i> flush MAC decision for UNIs of this ONT
[no] template-name	Parameter type: <Gpon::OnuProvTemplateName>	<i>optional parameter with default</i>

6 Gpon ONT Configuration Commands

Parameter	Type	Description
	Format: - Template name to be used for ONU auto provisioning - range: [a-zA-Z0-9-_ - length: x<=20	<i>value: "DEFAULT"</i> Name of the Template to be used for ONU auto-provisioning
[no] evtocd	Parameter type: <Gpon::Evtocd> Format: (disable enable) Possible values: - disable : Disable ME Extended VLAN tagging operation configuration data - enable : Enable ME Extended VLAN tagging operation configuration data	<i>optional parameter with default value: "enable"</i> ME Evtocd control
[no] vtfd	Parameter type: <Gpon::Vtfd> Format: (disable enable) Possible values: - disable : Disable ME VLAN tagging filter data - enable : Enable ME VLAN tagging filter data	<i>optional parameter with default value: "enable"</i> ME Vtfd control

Command Output

Table 6.2-3 "ONT Interface Configuration Command" Display parameters

Specific Information		
name	Type	Description
oper-state	Parameter type: <If::ifOperStatus> (up down testing unknown dormant no-value) Possible values: - up : up,traffic can pass - down : down,no traffic is passing - testing : testing,no traffic is passing - unknown : unknown - dormant : dormant,no traffic is passing - no-value : no entry in the table	operational state of the interface <i>This element is always shown.</i>
pwr-shed-prof-name	Parameter type: <Gpon::IgnoredPrintableString> - ignored printable string	power shed profile name <i>This element is always shown.</i>

6.3 NGPON2 Rogue Onu Prevention Configuration Commands

Command Description

This command allows the operator to configure following rogue onu prevention paramters.

- Parameters that controls rogue onu optical transceiver abnormal declaration
- Parameters that enable or disable reporting of rogue onu optical transceiver abnormal alarm

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) onu-tssi-detect [ no poll-interval | poll-interval
<Gpon::RogOnuPollInter> ] [ no poll-cnt | poll-cnt <Gpon::RogOnuPollCnt> ] [ no alm-ctrl | alm-ctrl
<Gpon::RogOnuAlmCtl> ]
```

Command Parameters

Table 6.3-1 "NGPON2 Rogue Onu Prevention Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId>	ONT index

Resource Identifier	Type	Description
	- the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Table 6.3-2 "NGPON2 Rogue Onu Prevention Configuration Commands" Command Parameters

Parameter	Type	Description
[no] poll-interval	Parameter type: <Gpon::RogOnuPollInter> Format: (nopoll <Gpon::RogOnuPollInter>) Possible values: - nopoll : polling is not used Field type <Gpon::RogOnuPollInter> - interval of polling optical transceiver at the ONT(0 : polling is not used) - unit: millisec - range: [20...60000,0]	<i>optional parameter with default value: "20"</i> interval of polling optical transceiver at the ONT
[no] poll-cnt	Parameter type: <Gpon::RogOnuPollCnt> Format: - the number of consecutive polling, which results in abnormality, for declaring the optical transceiver as abnormal - range: [1...250]	<i>optional parameter with default value: "150"</i> number of consecutive polling, which results in abnormality, for declaring the optical transceiver as abnormal
[no] alm-ctrl	Parameter type: <Gpon::RogOnuAlmCtl> Format: (enable disable) Possible values: - enable : enable TSSI alarm - disable : disable TSSI alarm	<i>optional parameter with default value: "enable"</i> enabling or disable alarm for rouge ONU

6.4 GPON GEM port performance monitoring Configuration Commands

Command Description

This command allows the operator to enable the following GEM port performance monitoring counters.

- PM Mode of OLT-side TC-layer (GEM-based) counters
- PM Mode of OLT-side TC-layer (GEM-based) counters for errored fragments
- PM Mode of ONT-side TC-layer (GEM-based) counters

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) tc-layer [ no olt-pm-collect | olt-pm-collect
<Gpon::OntPmTcaCollect> ] [ no od-pm-collect | od-pm-collect <Gpon::OntPmCollect> ] [ no ont-pm-collect |
ont-pm-collect <Gpon::OntPmTcaCollect> ]
```

Command Parameters

Table 6.4-1 "GPON GEM port performance monitoring Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup>	ONT index

Resource Identifier	Type	Description
	- subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Table 6.4-2 "GPON GEM port performance monitoring Configuration Commands" Command Parameters

Parameter	Type	Description
[no] olt-pm-collect	Parameter type: <Gpon::OntPmTcaCollect> Format: (none pm-enable tca-enable) Possible values: - none : no pm - pm-enable : enable pm - tca-enable : enable tca	<i>optional parameter with default value: "pm-enable"</i> OLT-side aggregate TC layer performance monitoring
[no] od-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> OLT-side on-demand aggregate TC layer performance monitoring
[no] ont-pm-collect	Parameter type: <Gpon::OntPmTcaCollect> Format: (none pm-enable tca-enable) Possible values: - none : no pm - pm-enable : enable pm - tca-enable : enable tca	<i>optional parameter with default value: "pm-enable"</i> ONT-side aggregate TC layer performance monitoring

6.5 ONT-SIDE TC-layer Performance Monitoring Counter Thresholds Configuration Command for ONT

Command Description

This command allows the operator to enable configuration of performance Monitoring counter thresholds for ONT-Side TC-layer errored fragments.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) tc-layer-threshold [ no lost-frags-down | lost-frags-down
<Gpon::TcaThresholdValue> ] [ no lost-frags-up | lost-frags-up <Gpon::TcaThresholdValue> ] [ no
bad-headers-down | bad-headers-down <Gpon::TcaThresholdValue> ]
```

Command Parameters

Table 6.5-1 "ONT-SIDE TC-layer Performance Monitoring Counter Thresholds Configuration Command for ONT" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup>	ONT index

Resource Identifier	Type	Description
	- subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Table 6.5-2 "ONT-SIDE TC-layer Performance Monitoring Counter Thresholds Configuration Command for ONT" Command Parameters

Parameter	Type	Description
[no] lost-frags-down	Parameter type: <Gpon::TcaThresholdValue> Format: (disabled <Gpon::TcaThresholdValue>) Possible values: - disabled : threshold is disabled Field type <Gpon::TcaThresholdValue> - tc-layer tca threshold value (4294967295=disabled) - range: [0...4294967294,4294967295]	<i>optional parameter with default value: "disabled"</i> tca setting for lost gem fragments in downstream
[no] lost-frags-up	Parameter type: <Gpon::TcaThresholdValue> Format: (disabled <Gpon::TcaThresholdValue>) Possible values: - disabled : threshold is disabled Field type <Gpon::TcaThresholdValue> - tc-layer tca threshold value (4294967295=disabled) - range: [0...4294967294,4294967295]	<i>optional parameter with default value: "disabled"</i> tca setting for lost gem fragments in upstream
[no] bad-headers-down	Parameter type: <Gpon::TcaThresholdValue> Format: (disabled <Gpon::TcaThresholdValue>) Possible values: - disabled : threshold is disabled Field type <Gpon::TcaThresholdValue> - tc-layer tca threshold value (4294967295=disabled) - range: [0...4294967294,4294967295]	<i>optional parameter with default value: "disabled"</i> tca setting for bad gem headers in downstream

6.6 Multicast TC-layer Performance Monitoring Command for ONT

Command Description

This command allows the operator to enable or disable the ONT-side Multicast Port Performance Monitor collection for the ONT.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) mcast-tc-layer [ no ont-pm-collect | ont-pm-collect
<Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.6-1 "Multicast TC-layer Performance Monitoring Command for ONT" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId>	ONT index

Resource Identifier	Type	Description
	- the ONT identifier	

Table 6.6-2 "Multicast TC-layer Performance Monitoring Command for ONT" Command Parameters

Parameter	Type	Description
[no] ont-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> ONT-side multicast performance monitoring

Command Output

Table 6.6-3 "Multicast TC-layer Performance Monitoring Command for ONT" Display parameters

Specific Information		
name	Type	Description
interval-no	Parameter type: <SignedInteger> - a signed integer	number of rows currently present in the gponMulticastServiceOntsideGemInterval <i>This element is always shown.</i>

6.7 Fec TC-layer Performance Monitoring Command for ONT

Command Description

This command allows the operator to enable or disable the Fec Port Performance Monitor collection for the ONT.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) fec-tc-layer [ no olt-pm-collect | olt-pm-collect
<Gpon::OntPmCollect> ] [ no ont-pm-collect | ont-pm-collect <Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.7-1 "Fec TC-layer Performance Monitoring Command for ONT" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	ONT index

Table 6.7-2 "Fec TC-layer Performance Monitoring Command for ONT" Command Parameters

Parameter	Type	Description
[no] olt-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> OLT-side XGPON FEC performance monitoring
[no] ont-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> ONT-side FEC performance monitoring

Command Output

Table 6.7-3 "Fec TC-layer Performance Monitoring Command for ONT" Display parameters

Specific Information		
name	Type	Description
fec-interval-no	Parameter type: <SignedInteger> - a signed integer	number of rows currently present in the gponFecOntsideGemIntervalTable <i>This element is always shown.</i>

6.8 GPON port Aggregate Ethernet performance monitoring Configuration Commands

Command Description

This command allows the operator to enable the following PON Aggregate Ethernet performance monitoring counters.

- PM Mode of ONT-side PON Aggregate Ethernet counters

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) ethernet [ no ont-pm-collect | ont-pm-collect <Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.8-1 "GPON port Aggregate Ethernet performance monitoring Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId>	ONT index

Resource Identifier	Type	Description
	- the ONT identifier Field type <Ng2::OntId> - the ONT identifier

Command Parameters**

Parameter	Type	Description
[no] ont-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> ONT-side PON aggregate Ethernet performance monitoring

6.9 XGPON tc-layer port performance monitoring Configuration Commands

Command Description

This command allows the operator to enable or disable XGPON TC layer performance monitoring for the ONT.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) xg-tc-layer [ no olt-pm-collect | olt-pm-collect
<Gpon::OntPmCollect> ] [ no ont-pm-collect | ont-pm-collect <Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.9-1 "XGPON tc-layer port performance monitoring Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	ONT index

Table 6.9-2 "XGPON tc-layer port performance monitoring Configuration Commands" Command Parameters

Parameter	Type	Description
[no] olt-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> OLT-side XGPON TC layer performance monitoring
[no] ont-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> ONT-side XGPON TC layer performance monitoring

6.10 XGPON physical-layer port performance monitoring Configuration Commands

Command Description

This command allows the operator to enable or disable the OLT-side XGPON Physical Performance Monitor collection for the ONT.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) phy-layer [ no olt-pm-collect | olt-pm-collect <Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.10-1 "XGPON physical-layer port performance monitoring Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId>	ONT index

Resource Identifier	Type	Description
	- the ONT identifier

Command Parameters

Parameter	Type	Description
[no] olt-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> OLT-side physical layer performance monitoring

6.11 GPON ONT software delay activation control Configuration Commands

Command Description

This command allows the operator to specify when OLT should attempt to activate ONT software.

This command is enabled only when sw-ver-pland is set as "delayactivate".

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) delay-act [ no at | at <Gpon::SwActTime> ]
```

Command Parameters

Table 6.11-1 "GPON ONT software delay activation control Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId>	ONT index

6 Gpon ONT Configuration Commands

Resource Identifier	Type	Description
	- the ONT identifier	

Table 6.11-2 "GPON ONT software delay activation control Configuration Commands" Command Parameters

Parameter	Type	Description
[no] at	Parameter type: <Gpon::SwActTime> Format: - scheduled ont sw activation time - range: [0...4294967295]	<i>optional parameter with default value: "1970-01-01 : 00 : 00"</i> schedule ONT SW specific activating time. Only if sw-ver-pland is set to delayactivate, delay-act at can be configured.

6.12 GPON ONT CPU Load Performance Monitoring Configuration Command

Command Description

This command allows the operator to enable the CPU Load Performance Monitoring PM flag for the ONT.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) cpu-load [ no ont-pm-collect | ont-pm-collect <Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.12-1 "GPON ONT CPU Load Performance Monitoring Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	ONT index

Parameter	Type	Description
[no] ont-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> ONT-side CPU load performance monitoring

6.13 GPON ONT Memory Usage Performance Monitoring Configuration Command

Command Description

This command allows the operator to enable the Memory Usage Performance Monitoring PM flag for the ONT.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont interface (ont-idx) memory-usage [ no ont-pm-collect | ont-pm-collect
<Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.13-1 "GPON ONT Memory Usage Performance Monitoring Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	ONT index

Parameter	Type	Description
[no] ont-pm-collect	Parameter type: <Gpon::OntPmCollect> Format: (enable disable) Possible values: - enable : enable PM - disable : disable PM	<i>optional parameter with default value: "disable"</i> ONT-side Memory Usage performance monitoring

6.14 ONT Card Configuration Command

Command Description

This command allows the operator to create and configure the ONT Card parameters.

Prior to entering this command the ONT must have been already created.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont ( no slot (ont-slot-idx) ) | ( slot (ont-slot-idx) planned-card-type <Gpon::PlndCardType>
plndnumdataports <Gpon::PlndNumDataPorts> plndnumvoiceports <Gpon::PlndNumVoicePorts> [ no port-type |
port-type <Gpon::PortType> ] [ no transp-mode-rem | transp-mode-rem <Gpon::TranspMode> ] [ no
no-mcast-control | no-mcast-control <Gpon::NoMcastCtrl> ] [ no admin-state | admin-state <Gpon::AdminStatus> ]
)
```

Command Parameters

Table 6.14-1 "ONT Card Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ont-slot-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identification of the ont-slot

Resource Identifier	Type	Description
	Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14]	

Table 6.14-2 "ONT Card Configuration Command" Command Parameters

Parameter	Type	Description
planned-card-type	Parameter type: <Gpon::PlndCardType> Format: (ethernet 10_100base pots vdsl2pots vdsl2 ethpots video veip ds1 e1 hpna moca eth_adaptive) Possible values: - ethernet : 10/100/1000/10000 base-t - 10_100base : 10/100 base-t - pots : pots - vdsl2pots : vdsl2/pots combo - vdsl2 : vdsl2 - ethpots : ethernet/pots combo - video : video - veip : VEIP card - ds1 : ds1 - e1 : e1 - hpna : hpna - moca : moca - eth_adaptive : Self-adaptive between PPTP Ethernet and VEIP	<i>mandatory parameter</i> <i>The parameter is not visible during modification.</i> planned card type
plndnumdataports	Parameter type: <Gpon::PlndNumDataPorts> Format: - planned number of data ports - range: [0...16]	<i>mandatory parameter</i> planned number of data ports
plndnumvoiceports	Parameter type: <Gpon::PlndNumVoicePorts> Format: - planned number of voice ports - range: [0...24]	<i>mandatory parameter</i> planned number of voice ports
[no] port-type	Parameter type: <Gpon::PortType> Format: (uni nni) Possible values: - uni : uni interface - nni : nni interface	<i>optional parameter with default value: "uni"</i> <i>The parameter is not visible during modification.</i> port type of the line card
[no] transp-mode-rem	Parameter type: <Gpon::TranspMode> Format: (disable enable) Possible values: - disable : disable transparent	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during modification.</i> transparent mode of the line card

Parameter	Type	Description
	- enable : enable transparent	
[no] no-mcast-control	Parameter type: <Gpon::NoMcastCtrl> Format: (disable enable) Possible values: - disable : disable igmp NoMcastCtrl - enable : enable igmp NoMcastCtrl	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during modification.</i> used to control whether the mcast related OMCI message should be sent to ONT
[no] admin-state	Parameter type: <Gpon::AdminStatus> Format: (down up) Possible values: - down : set the admin-state to down - up : set the admin-state to up	<i>optional parameter with default value: "up"</i> administrative status of the interface

6.15 ONT Software Control Configuration Command

Command Description

This command creates an association between an ONT hardware version/variant and an ONT software version (download and planned).

*hw-version - has the same meaning as the eqpt-ver-num parameter supported by 'show equipment ont interface' command. Special character * (asterisk) may be provided in the string which means that the * character (and all subsequent character positions) are considered to be automatic 'matches' for values in same character positions of eqpt-ver-num parameter.*

ont-variant - has the same meaning as the plnd-var in 'configure equipment ont interface' command

Note: Combination of hw-version and ont-variant must be unique.

plnd-sw-version - has the same meaning as the 'auto-sw-plnd-ver parameter supported by 'show equipment ont interface' command.

sw-dwload-ver - has the same meaning as the 'auto-sw-dld-ver parameter supported by 'show equipment ont interface' command.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont ( no sw-ctrl (sw-ctrl-id) ) | ( sw-ctrl (sw-ctrl-id) hw-version <Gpon::SwVer> [ no
ont-variant | ont-variant <Gpon::PlndVar> ] [ no plnd-sw-version | plnd-sw-version <Gpon::SwVer> ] [ no
plnd-sw-ver-conf | plnd-sw-ver-conf <Gpon::SwVer> ] [ no sw-dwload-ver | sw-dwload-ver <Gpon::SwVer> ] [ no
pland-cfgfile1 | pland-cfgfile1 <Gpon::CfgFile> ] [ no pland-cfgfile2 | pland-cfgfile2 <Gpon::CfgFile> ] [ no
dnload-cfgfile1 | dnload-cfgfile1 <Gpon::CfgFile> ] [ no dnload-cfgfile2 | dnload-cfgfile2 <Gpon::CfgFile> ] )
```

Command Parameters

Table 6.15-1 "ONT Software Control Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(sw-ctrl-id)	Format: - ont sw ctrl id - range: [1...250]	software control id

Table 6.15-2 "ONT Software Control Configuration Command" Command Parameters

Parameter	Type	Description
hw-version	Parameter type: <Gpon::SwVer>	mandatory parameter

Parameter	Type	Description
	Format: - ont sw version - length: 1<=x<=14	<i>The parameter is not visible during modification.</i> ONT hardware version
[no] ont-variant	Parameter type: <Gpon::PlndVar> Format: - planned variant of the ONT hardware version - length: x<=80	<i>optional parameter with default value: ""</i> <i>The parameter is not visible during modification.</i> planned variant of the ONT hardware version. Use DO for Data-only ONTs, SIP for SIP ONTs, H.248 for MEGACO ONTs
[no] plnd-sw-version	Parameter type: <Gpon::SwVer> Format: - ont sw version - length: 1<=x<=14	<i>optional parameter with default value: "UNPLANNED"</i> planned ONT software version number. If sw-dwload-ver is set to disabled, plnd-sw-version cannot be set to delayactivate.
[no] plnd-sw-ver-conf	Parameter type: <Gpon::SwVer> Format: - ont sw version - length: 1<=x<=14	<i>optional parameter with default value: "UNPLANNED"</i> software planned version confirmation
[no] sw-dwload-ver	Parameter type: <Gpon::SwVer> Format: - ont sw version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> software download version. If plnd-sw-version is set to delayactivate, sw-dwload-ver cannot be set to disabled.
[no] pland-cfgfile1	Parameter type: <Gpon::CfgFile> Format: - ont configure file version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile1 version to be planned
[no] pland-cfgfile2	Parameter type: <Gpon::CfgFile> Format: - ont configure file version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile2 version to be planned
[no] dnload-cfgfile1	Parameter type: <Gpon::CfgFile> Format: - ont configure file version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile1 version to be downloaded
[no] dnload-cfgfile2	Parameter type: <Gpon::CfgFile> Format: - ont configure file version - length: 1<=x<=14	<i>optional parameter with default value: "DISABLED"</i> indicate the cfgfile2 version to be planned

6.16 GPON ONT software delay activation control Configuration Commands

Command Description

This command allows the operator to specify when OLT should attempt to activate ONT software.

This command is enabled only when sw-ver-pland is set as "delayactivate".

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont sw-ctrl (sw-ctrl-id) delay-act [ no at | at <Gpon::SwActTime> ]
```

Command Parameters

Table 6.16-1 "GPON ONT software delay activation control Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(sw-ctrl-id)	Format: - ont sw ctrl id - range: [1...250]	software control id

Table 6.16-2 "GPON ONT software delay activation control Configuration Commands" Command Parameters

Parameter	Type	Description
[no] at	Parameter type: <Gpon::SwActTime> Format: - scheduled ont sw activation time - range: [0...4294967295]	<i>optional parameter with default value: "1970-01-01 : 00 : 00"</i> schedule ONT SW specific activating time. Only if sw-ver-pland is set to delayactivate, delay-act at can be configured.

6.17 ONT Interface Configuration Command

Command Description

This command allows the operator to create and configure the ONT parameters.

loop-detect - when default value no-control is set, OLT won't care about ONT loop detect, when disable is set, ONT won't detect loop, when enable is set, ONT will loop detect

loop-portautoshtutoff - when default value enable is set, if ONT detect loop, it will autoly shut down the port, when disable is set, ONT won't auto shutdown

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont loop (ont-idx) [ no loop-detect | loop-detect <Gpon::LoopDetectAdmin> ] [ no loop-portautoshtutoff | loop-portautoshtutoff <Gpon::LoopDetectAutoShut> ]
```

Command Parameters

Table 6.17-1 "ONT Interface Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId>	ONT index

6 Gpon ONT Configuration Commands

Resource Identifier	Type	Description
	- the ONT identifier	

Table 6.17-2 "ONT Interface Configuration Command" Command Parameters

Parameter	Type	Description
[no] loop-detect	Parameter type: <Gpon::LoopDetectAdmin> Format: (no-control disable enable) Possible values: - no-control : loop detect no control - disable : loop detect disable - enable : loop detect enable	<i>optional parameter with default value: "no-control"</i> loop detect admin state settings for this ONT
[no] loop-portautoshut	Parameter type: <Gpon::LoopDetectAutoShut> Format: (disable enable) Possible values: - disable : loop detect disable - enable : loop detect enable	<i>optional parameter with default value: "enable"</i> loop detect auto shutoff settings for this ONT

6.18 ONT GIS Configuration Command

Command Description

This command allows the operator to configure the ONT GIS parameters.

olt-location - when default value disable is set, OLT won't care about ONT GIS info, when enable is set, OLT would provision OLT's location to ONT

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont gis (ont-idx) [ no olt-location | olt-location <Gpon::OltLocation> ]
```

Command Parameters

Table 6.18-1 "ONT GIS Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	ONT index

Table 6.18-2 "ONT GIS Configuration Command" Command Parameters

6 Gpon ONT Configuration Commands

Parameter	Type	Description
[no] olt-location	Parameter type: <Gpon::OltLocation> Format: (disable enable) Possible values: - disable : the OLT GIS info will not be used - enable : the OLT GIS info will be used	<i>optional parameter with default value: "disable"</i> GIS settings for this ONT

6.19 ONT xgpon Configuration Command

Command Description

This command allows the operator to configure the ONT,parameters,enable/disable Performance monitors.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment ont pm-collect (ont-idx) [ no xg-pm-collect | xg-pm-collect <Gpon::OntPmCollect> ]
```

Command Parameters

Table 6.19-1 "ONT xgpon Configuration Command" Resource Parameters

Resource Identifier	Type	Description

7.2 EONT Interface Configuration Command

Command Description

This command allows the operator to create and configure the EONT parameters.

mac-addr - Mac address for this ONT. The parameter cannot be modified. Either mac-addr or auth-id should be configured.

auth-id - logical authentication id for this ONT. Either mac-addr or auth-id should be configured.

sw-ver-pland - The planned ONT software version number. If this software version number is different from the active version number on the ONT, a software download, activation and commit is performed. The special string of AUTO is used to indicate that if this ONT's hardware version has a matching entry created using configure equipment eont sw-ctrl, then the plnd-sw-version will be downloaded to the ONT. The special string of MANUAL is used to download ONT Software manually. Operator could use command "admin equipment eont swdw(ont-idx)". For detailed sw version, its format is like XXXXYYYYRnnmmae for current release.

plnd-var - software version variant. This attribute only valid when sw-ver-pland is auto

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont ( no interface (epon-idx) ) | ( interface (epon-idx) [ mac-addr <Epon::MacAddr> ] [
auth-id <Epon::AuthId> ] [ auth-pwd <Epon::AuthPwd> ] [ no sw-ver-pland | sw-ver-pland <Epon::SwVerPlnd> ]
[ no fec | fec <Epon::FecMode> ] [ no igmp-mode | igmp-mode <Epon::IgmpMode> ] [ no fastleave | fastleave
<Epon::FastLeaveMode> ] [ no macage-time | macage-time <Epon::MacAge> ] [ no phy-lineid | phy-lineid
<Epon::PhyLineId> ] [ no upgrade-mode | upgrade-mode <Epon::UpMode> ] [ no plnd-var | plnd-var
<Epon::PlannedVariant> ] [ no ont-cfg-mode | ont-cfg-mode <Epon::OntCfgMode> ] [ no ont-type | ont-type
<epon::onttype> ] [ no ont-onuidmthd | ont-onuidmthd <Epon::OntOnuldMthd> ] [ alarm-profile-name
<Epon::EponAlrmCtrlProfileName> ] [ no admin-state | admin-state <Epon::ItfAdminStatus> ] [ no stpid | stpid
<Epon::Stpid> ] [ no llidpattern | llidpattern <Epon::Llidpattern> ] )
```

Command Parameters

Table 7.2-1 "EONT Interface Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	ONT index

7 Epon ONT Configuration Commands

Resource Identifier	Type	Description
	- the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	

Table 7.2-2 "EONT Interface Configuration Command" Command Parameters

Parameter	Type	Description
mac-addr	Parameter type: <Epon::MacAddr> Format: - mac-address (example : 01:02:03:04:05:06) - length: 6	<i>optional parameter</i> mac address
auth-id	Parameter type: <Epon::AuthId> Format: - Authentication ID - length: 1<=x<=24	<i>optional parameter</i> logical authentication id
auth-pwd	Parameter type: <Epon::AuthPwd> Format: - Authentication password - length: 1<=x<=12	<i>optional parameter</i> logical authentication password
[no] sw-ver-pland	Parameter type: <Epon::SwVerPlnd> Format: (auto manual <Epon::SwVerPlnd>) Possible values: - auto : auto - manual : manual Field type <Epon::SwVerPlnd> - software version planned - length: 1<=x<=16	<i>optional parameter with default value: "MANUAL"</i> software version planned
[no] fec	Parameter type: <Epon::FecMode> Format: (enable disable) Possible values: - enable : enable FEC mode - disable : disable FEC mode	<i>optional parameter with default value: "disable"</i> FEC mode
[no] igmp-mode	Parameter type: <Epon::IgmpMode> Format: (snoopingmode controllablename floodingmode) Possible values: - snoopingmode : igmp snooping mode - controllablename : controllable igmp mode - floodingmode : flooding mode	<i>optional parameter with default value: "controllable IGMP mode"</i> IGMP handling mode
[no] fastleave	Parameter type: <Epon::FastLeaveMode> Format: (disable enable) Possible values: - disable : disable fastleave mode - enable : enable fastleave mode	<i>optional parameter with default value: "disable"</i> fastleave mode
[no] macage-time	Parameter type: <Epon::MacAge> Format: - MAC aging time	<i>optional parameter with default value: "287"</i> MAC aging time per ONT

Parameter	Type	Description
	- unit: secs - range: [0...287]	
[no] phy-lineid	Parameter type: <Epon::PhyLineId> Format: (enable disable) Possible values: - enable : enable to add option for DHCP/PPP partially - disable : disable to add option for DHCP/PPP partially	<i>optional parameter with default value: "disable"</i> Physical line ID
[no] upgrade-mode	Parameter type: <Epon::UpMode> Format: (none ctc tk dpoe) Possible values: - none : no software upgrade mode - ctc : CTC software upgrade mode - tk : TK software upgrade mode - dpoe : DPoE software upgrade mode	<i>optional parameter with default value: "CTC"</i> software upgrade mode
[no] plnd-var	Parameter type: <Epon::PlannedVariant> Format: - planned variant - length: 1<=x<=16	<i>optional parameter with default value: ""</i> planned variant
[no] ont-cfg-mode	Parameter type: <Epon::OntCfgMode> Format: (disable enable-alu-mode enable-cu-mode) Possible values: - disable : disable ont config save - enable-alu-mode : enable ALU ont config save mode - enable-cu-mode : enable CU ont config save mode	<i>optional parameter with default value: "disable"</i> Ont config save mode
[no] ont-type	Parameter type: <epon::onttype> Format: (auto 10gsym 10gasym 1g) Possible values: - auto : auto - 10gsym : 10gsym - 10gasym : 10gasym - 1g : 1g	<i>optional parameter with default value: "auto"</i> for CAC pre-configuration, to limit the registered ont type
[no] ont-onuidmthd	Parameter type: <Epon::OntOnuidMthd> Format: (sys mac loid) Possible values: - sys : inherit from pon - mac : fill onu id with mac@ in loop id - loid : fill onu id with loid in loop id	<i>optional parameter with default value: "sys"</i> Ont onu id method
alarm-profile-name	Parameter type: <Epon::EponAlrmCtrlProfileName> Format: - name of the Alarm Control profile - length: 1<=x<=32	<i>optional parameter</i> name of the alarm control profile

7 Epon ONT Configuration Commands

Parameter	Type	Description
[no] admin-state	Parameter type: <Epon::ItfAdminStatus> Format: (up down) Possible values: - up : set the admin-state to up - down : set the admin-state to down	<i>optional parameter with default value: "down"</i> <i>The parameter is not visible during creation.</i> administrative status of the interface
[no] stpid	Parameter type: <Epon::Stpid> Format: (88a8 8100 9100 9200) Possible values: - 88a8 : 0x88a8 - 8100 : 0x8100 - 9100 : 0x9100 - 9200 : 0x9200	<i>optional parameter with default value: "0x88a8"</i> STPID
[no] llidpattern	Parameter type: <Epon::Llidpattern> Format: (1x1 1x4 1x8 2x1 2x4) Possible values: - 1x1 : 1 LLID-group,1 LLID per group - 1x4 : 1 LLID-group,4 LLIDs per group - 1x8 : 1 LLID-group,8 LLIDs per group - 2x1 : 2 LLID-groups,1 LLID per group - 2x4 : 2 LLID-groups,4 LLIDs per group	<i>optional parameter with default value: "1x1"</i> LLID pattern

7.3 Epon Ont RSSI Configuration Command

Command Description

This command allows the operator to create and configure the EONT RSSI parameters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont interface (epon-idx) ( no rssi ) | ( rssi [ no temp-alm-low | temp-alm-low
<Epon::TcaTemp> ] [ no temp-alm-high | temp-alm-high <Epon::TcaTemp> ] [ no temp-warn-low |
temp-warn-low <Epon::TcaTemp> ] [ no temp-warn-high | temp-warn-high <Epon::TcaTemp> ] [ no
voltage-alm-low | voltage-alm-low <Epon::TcaVoltage> ] [ no voltage-alm-high | voltage-alm-high
<Epon::TcaVoltage> ] [ no voltage-warn-low | voltage-warn-low <Epon::TcaVoltage> ] [ no voltage-warn-high |
voltage-warn-high <Epon::TcaVoltage> ] [ no bias-alm-low | bias-alm-low <Epon::TcaBias> ] [ no bias-alm-high |
bias-alm-high <Epon::TcaBias> ] [ no bias-warn-low | bias-warn-low <Epon::TcaBias> ] [ no bias-warn-high |
bias-warn-high <Epon::TcaBias> ] [ no tx-pwr-alm-low | tx-pwr-alm-low <Epon::TcaPwr> ] [ no tx-pwr-alm-high |
tx-pwr-alm-high <Epon::TcaPwr> ] [ no tx-pwr-warn-low | tx-pwr-warn-low <Epon::TcaPwr> ] [ no
tx-pwr-warn-high | tx-pwr-warn-high <Epon::TcaPwr> ] [ no rx-pwr-alm-low | rx-pwr-alm-low <Epon::TcaPwr> ]
[ no rx-pwr-alm-high | rx-pwr-alm-high <Epon::TcaPwr> ] [ no rx-pwr-warn-low | rx-pwr-warn-low
<Epon::TcaPwr> ] [ no rx-pwr-warn-high | rx-pwr-warn-high <Epon::TcaPwr> ] )
```

Command Parameters

Table 7.3-1 "Epon Ont RSSI Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index

Table 7.3-2 "Epon Ont RSSI Configuration Command" Command Parameters

Parameter	Type	Description
[no] temp-alm-low	Parameter type: <Epon::TcaTemp>	optional parameter with default

7 Epon ONT Configuration Commands

Parameter	Type	Description
	Format: - temperature of eponont - unit: degree C - range: [-128...128]	<i>value: "0"</i> alarm low threshold for temperature
[no] temp-alm-high	Parameter type: <Epon::TcaTemp> Format: - temperature of eponont - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "70"</i> alarm high threshold for temperature
[no] temp-warn-low	Parameter type: <Epon::TcaTemp> Format: - temperature of eponont - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "0"</i> warn low threshold for temperature
[no] temp-warn-high	Parameter type: <Epon::TcaTemp> Format: - temperature of eponont - unit: degree C - range: [-128...128]	<i>optional parameter with default value: "70"</i> warn high threshold for temperature
[no] voltage-alm-low	Parameter type: <Epon::TcaVoltage> Format: - voltage of epon ont - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "3.135"</i> alarm low threshold for Voltage
[no] voltage-alm-high	Parameter type: <Epon::TcaVoltage> Format: - voltage of epon ont - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "3.465"</i> alarm high threshold for Voltage
[no] voltage-warn-low	Parameter type: <Epon::TcaVoltage> Format: - voltage of epon ont - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "3.135"</i> warn low threshold for Voltage
[no] voltage-warn-high	Parameter type: <Epon::TcaVoltage> Format: - voltage of epon ont - unit: volts - range: [0...6.55]	<i>optional parameter with default value: "3.465"</i> warn high threshold for Voltage
[no] bias-alm-low	Parameter type: <Epon::TcaBias> Format: - bias of epon ont - unit: mA - range: [0...262]	<i>optional parameter with default value: "5"</i> alarm low threshold for bias
[no] bias-alm-high	Parameter type: <Epon::TcaBias> Format: - bias of epon ont - unit: mA - range: [0...262]	<i>optional parameter with default value: "110"</i> alarm high threshold for bias
[no] bias-warn-low	Parameter type: <Epon::TcaBias> Format: - bias of epon ont - unit: mA - range: [0...262]	<i>optional parameter with default value: "5"</i> warn low threshold for bias
[no] bias-warn-high	Parameter type: <Epon::TcaBias> Format: - bias of epon ont	<i>optional parameter with default value: "110"</i> warn high threshold for bias

Parameter	Type	Description
	- unit: mA - range: [0...262]	
[no] tx-pwr-alm-low	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2]	<i>optional parameter with default value: "-1"</i> alarm low threshold for Tx power
[no] tx-pwr-alm-high	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2]	<i>optional parameter with default value: "3.99"</i> alarm high threshold for Tx power
[no] tx-pwr-warn-low	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2]	<i>optional parameter with default value: "-1"</i> warn low threshold for Tx power
[no] tx-pwr-warn-high	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2]	<i>optional parameter with default value: "3.99"</i> warn high threshold for Tx power
[no] rx-pwr-alm-low	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2]	<i>optional parameter with default value: "-23.979"</i> alarm low threshold for Rx power
[no] rx-pwr-alm-high	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2]	<i>optional parameter with default value: "-2.999"</i> alarm high threshold for Rx power
[no] rx-pwr-warn-low	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2]	<i>optional parameter with default value: "-23.979"</i> warn low threshold for Rx power
[no] rx-pwr-warn-high	Parameter type: <Epon::TcaPwr> Format: <Epon::float> Field type <Epon::float> - OLT side TCA threshold - unit: dbm	<i>optional parameter with default value: "-2.999"</i> warn high threshold for Rx power

7 Epon ONT Configuration Commands

Parameter	Type	Description
	- range: [-40...8.2]	

7.4 Epon Ont Management Configuration Command

Command Description

This command allows the operator to create and configure the EONT Management parameters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont interface (epon-idx) ( no management ) | ( management [ ip <Ip::V4Address> ] [ mask <Ip::V4Address> ] [ gateway <Ip::V4Address> ] cvlan <Epon::cvlan> [ no svlan | svlan <Epon::svlan> ] [ no priority | priority <Epon::Priority> ] [ no snmpver | snmpver <Epon::SnmpVersion> ] [ trap-ip <Ip::V4Address> ] [ no trap-port | trap-port <Epon::MgntPort> ] [ no snmp-port | snmp-port <Epon::MgntPort> ] [ security-name <Epon::securityname> ] [ community-write <Epon::communitystr> ] [ community-read <Epon::communitystr> ] )
```

Command Parameters

Table 7.4-1 "Epon Ont Management Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index

Table 7.4-2 "Epon Ont Management Configuration Command" Command Parameters

Parameter	Type	Description
ip	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter</i> IP address for this ONT
mask	Parameter type: <Ip::V4Address> Format:	<i>optional parameter</i> network mask for this ONT

7 Epon ONT Configuration Commands

Parameter	Type	Description
	- IPv4-address	
gateway	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter</i> network gateway address for this ONT
cvlan	Parameter type: <Epon::cvlan> Format: - Vlan id - range: [0...4093]	<i>mandatory parameter</i> management CVLAN id for this ONT
[no] svlan	Parameter type: <Epon::svlan> Format: - Vlan id - range: [2...4093,0]	<i>optional parameter with default value: "0"</i> management SVLAN id for this ONT
[no] priority	Parameter type: <Epon::Priority> Format: - priority - range: [0...7]	<i>optional parameter with default value: "5"</i> management PBIT for this ONT
[no] snmpver	Parameter type: <Epon::SnmpVersion> Format: (v1 v2 v3) Possible values: - v1 : snmp version v1 - v2 : snmp version v2 - v3 : snmp version v3	<i>optional parameter with default value: "v2"</i> snmp version for this ONT
trap-ip	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter</i> trap IP address for this ONT
[no] trap-port	Parameter type: <Epon::MgntPort> Format: - mgnt Port - range: [0...65535]	<i>optional parameter with default value: "162"</i> trap port for this ONT
[no] snmp-port	Parameter type: <Epon::MgntPort> Format: - mgnt Port - range: [0...65535]	<i>optional parameter with default value: "161"</i> snmp port for this ONT
security-name	Parameter type: <Epon::securityname> Format: - an octet string defining security name of EPON - length: 1<=x<=32	<i>optional parameter</i> security name for this ONT
community-write	Parameter type: <Epon::communitystr> Format: - an octet string defining community string of EPON - length: 1<=x<=32	<i>optional parameter</i> community string for write for this ONT
community-read	Parameter type: <Epon::communitystr> Format: - an octet string defining community string of EPON - length: 1<=x<=32	<i>optional parameter</i> community string for read for this ONT

7.5 Epon Ont Ethernet Configuration Command

Command Description

This command allows the operator to configure provisioning data associated with epon ont ethernet port.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont interface (epon-idx) ( no port (uni-index) ) | ( port (uni-index) [ no auto-detect |
auto-detect <Epon::AutoDetect> ] [ no vlanmode | vlanmode <Epon::VlanMode> ] [ no vlanid-default |
vlanid-default <Epon::DefaultVlanID> ] [ no pbit-default | pbit-default <Epon::DefaultPBit> ] [ no pause | pause
<Epon::PauseAdmin> ] [ no policyup | policyup <Epon::PolicyUpAdmin> ] [ cir-up <Epon::CIRUp> ] [ bucket-up
<Epon::BucketUp> ] [ exbrsize-up <Epon::ExBrSizeUp> ] [ no policydown | policydown
<Epon::PolicyDwnAdmin> ] [ cir-dw <Epon::CIRDwn> ] [ pir-dw <Epon::PIRDwn> ] [ no multiconf | multiconf
<Epon::McastCfg> ] [ no mac-max | mac-max <Epon::MacLrnLimit> ] [ no multigroup-max | multigroup-max
<Epon::MultiGroupMax> ] [ no pm-collect | pm-collect <Epon::CollectInd> ] [ no loopback | loopback
<Epon::LoopbackAdmin> ] [ no loopportshut | loopportshut <Epon::LoopShutoff> ] [ no port-mode | port-mode
<Epon::PortMode> ] )
```

Command Parameters

Table 7.5-1 "Epon Ont Ethernet Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index
(uni-index)	Format: <Epon::EontSlot> / <Epon::EontPort> Field type <Epon::EontSlot> - Epon Ont Slot - range: [1...16] Field type <Epon::EontPort>	port index

Resource Identifier	Type	Description
	- Epon Ont Port - range: [1...64]	

Table 7.5-2 "Epon Ont Ethernet Configuration Command" Command Parameters

Parameter	Type	Description
[no] auto-detect	Parameter type: <Epon::AutoDetect> Format: (enable disable) Possible values: - enable : enable auto negotiation - disable : disable auto negotiation	<i>optional parameter with default value: "enable"</i> enable or disable auto negotiation
[no] vlanmode	Parameter type: <Epon::VlanMode> Format: (transparent tagged translation trunk aggregation) Possible values: - transparent : VLAN mode transparent - tagged : VLAN mode tag - translation : Vlan mode translate - trunk : Vlan trunk - aggregation : Vlan aggregation	<i>optional parameter with default value: "transparent"</i> vlan mode for ethernet port
[no] vlanid-default	Parameter type: <Epon::DefaultVlanID> Format: - default vlan id - range: [2...4092,4097]	<i>optional parameter with default value: "4097"</i> default vlan of this port
[no] pbit-default	Parameter type: <Epon::DefaultPBit> Format: - default pbit - range: [0...7]	<i>optional parameter with default value: "0"</i> default pbit of this port
[no] pause	Parameter type: <Epon::PauseAdmin> Format: (enable disable) Possible values: - enable : enable flow control - disable : disable flow control	<i>optional parameter with default value: "enable"</i> enable or disable pause
[no] policyup	Parameter type: <Epon::PolicyUpAdmin> Format: (enable disable) Possible values: - enable : enable rate limit in upstream - disable : disable rate limit in upstream	<i>optional parameter with default value: "disable"</i> enable or disable policy upstream
cir-up	Parameter type: <Epon::CIRUp> Format: - information rate - unit: kbps - range: [0...1000000]	<i>optional parameter</i> committed information rate upstream
bucket-up	Parameter type: <Epon::BucketUp> Format: - depth of the token bucket - unit: bytes - range: [2000...64000]	<i>optional parameter</i> depth of this token bucket to be tolerant of a certain burst size in upstream direction

Parameter	Type	Description
exbrsize-up	Parameter type: <Epon::ExBrSizeUp> Format: - token to permit the forwarding engine to finish the packet being sent when the CBS - unit: bytes - range: [0...2000]	<i>optional parameter</i> token to permit the forwarding engine to finish the packet being sent when CBS is exhausted in upstream direction
[no] policydown	Parameter type: <Epon::PolicyDwnAdmin> Format: (enable disable) Possible values: - enable : enable rate limit in downstream - disable : disable rate limit in downstream	<i>optional parameter with default value: "disable"</i> enable or disable policy downstream
cir-dw	Parameter type: <Epon::CIRDwn> Format: - information rate - unit: kbps - range: [0...1000000]	<i>optional parameter</i> committed information rate downstream
pir-dw	Parameter type: <Epon::PIRDwn> Format: - information rate - unit: kbps - range: [0...1000000]	<i>optional parameter</i> peak information rate downstream
[no] multiconf	Parameter type: <Epon::McastCfg> Format: (strip nostrip translation) Possible values: - strip : strip vlan tag - nostrip : do not strip vlan tag - translation : translation	<i>optional parameter with default value: "strip"</i> multicast traffic configuration on ethernet port
[no] mac-max	Parameter type: <Epon::MacLrnLimit> Format: - mac learning limit - range: [0...64]	<i>optional parameter with default value: "0"</i> max MAC number at this port
[no] multigroup-max	Parameter type: <Epon::MultiGroupMax> Format: - max multicast group - range: [CLI_EPON_MTIGRPMAX_VALUE_MIN...CLI_EPON_MTIGRPMAX_VALUE_MAX]	<i>optional parameter with default value: "16"</i> max multicast group at this port
[no] pm-collect	Parameter type: <Epon::CollectInd> Format: (enable disable) Possible values: - enable : enable PM collection - disable : disable PM collection	<i>optional parameter with default value: "disable"</i> performance monitor switch
[no] loopback	Parameter type: <Epon::LoopbackAdmin> Format: (enable disable) Possible values: - enable : enable loopback - disable : disable loopback	<i>optional parameter with default value: "disable"</i> enable or disable loopback on ethernet Port
[no] loopportshut	Parameter type: <Epon::LoopShutoff> Format:	<i>optional parameter with default value: "enable"</i>

7 Epon ONT Configuration Commands

Parameter	Type	Description
	(disable enable) Possible values: - disable : disable auto shut off - enable : enable auto shut off	enable or disable the auto shut off when loopback is detected on this ethernet port
[no] port-mode	Parameter type: <Epon::PortMode> Format: (10m-half 10m-full 100m-half 100m-full 1g) Possible values: - 10m-half : 10M Half - 10m-full : 10M Full - 100m-half : 100M Half - 100m-full : 100M Full - 1g : 1G	<i>optional parameter with default value: "100M-Full"</i> Enet port mode

7.6 Epon Ont Ethernet Auto-Negotiation Configuration Command

Command Description

This command allows the operator to configure provisioning data associated with epon ont ethernet port auto-negotiation.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont interface (epon-idx) port (uni-index) ( no auto-adv-abili ) | ( auto-adv-abili [ autoneg10t
<Epon::autoneg10t> ] [ autoneg10tfd <Epon::autoneg10tfd> ] [ autoneg100t4 <Epon::autoneg100t4> ] [
autoneg100tx <Epon::autoneg100tx> ] [ autoneg100txfd <Epon::autoneg100txfd> ] [ autoneg100t2
<Epon::autoneg100t2> ] [ autoneg100t2fd <Epon::autoneg100t2fd> ] [ autoneg1000x <Epon::autoneg1000x> ] [
autoneg1000xfd <Epon::autoneg1000xfd> ] [ autoneg1000t <Epon::autoneg1000t> ] [ autoneg1000tfd
<Epon::autoneg1000tfd> ] [ fdxpause <Epon::fdxpause> ] [ fdxapause <Epon::fdxapause> ] [ fdxspause
<Epon::fdxspause> ] [ fdxbpause <Epon::fdxbpause> ] [ remfault1 <Epon::remfault1> ] [ remfault2
<Epon::remfault2> ] [ isoethernet <Epon::isoethernet> ] )
```

Command Parameters

Table 7.6-1 "Epon Ont Ethernet Auto-Negotiation Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index
(uni-index)	Format: <Epon::EontSlot> / <Epon::EontPort> Field type <Epon::EontSlot> - Epon Ont Slot	port index

Resource Identifier	Type	Description
	- range: [1...16] - Field type <Epon::EontPort> - Epon Ont Port - range: [1...64]	

Table 7.6-2 "Epon Ont Ethernet Auto-Negotiation Configuration Command" Command Parameters

Parameter	Type	Description
autoneg10t	Parameter type: <Epon::autoneg10t> Format: (yes no) Possible values: - yes : 10t supported - no : 10t not supported	<i>optional parameter</i> advertise support of 10T
autoneg10tfd	Parameter type: <Epon::autoneg10tfd> Format: (yes no) Possible values: - yes : 10tfd supported - no : 10tfd not supported	<i>optional parameter</i> advertise support of 10TFD
autoneg100t4	Parameter type: <Epon::autoneg100t4> Format: (yes no) Possible values: - yes : 100t4 supported - no : 100t4 not supported	<i>optional parameter</i> advertise support of 100T4
autoneg100tx	Parameter type: <Epon::autoneg100tx> Format: (yes no) Possible values: - yes : 100tx supported - no : 100tx not supported	<i>optional parameter</i> advertise support of 100TX
autoneg100txfd	Parameter type: <Epon::autoneg100txfd> Format: (yes no) Possible values: - yes : 100txfd supported - no : 100txfd not supported	<i>optional parameter</i> advertise support of 100TXFD
autoneg100t2	Parameter type: <Epon::autoneg100t2> Format: (yes no) Possible values: - yes : 100t2 supported - no : 100t2 not supported	<i>optional parameter</i> advertise support of 100T2
autoneg100t2fd	Parameter type: <Epon::autoneg100t2fd> Format: (yes no) Possible values: - yes : 100t2fd supported - no : 100t2fd not supported	<i>optional parameter</i> advertise support of 100T2FD

Parameter	Type	Description
autoneg1000x	Parameter type: <Epon::autoneg1000x> Format: (yes no) Possible values: - yes : 1000x supported - no : 1000x not supported	<i>optional parameter</i> advertise support of 1000X
autoneg1000xfd	Parameter type: <Epon::autoneg1000xfd> Format: (yes no) Possible values: - yes : 1000xfd supported - no : 1000xfd not supported	<i>optional parameter</i> advertise support of 1000XFD
autoneg1000t	Parameter type: <Epon::autoneg1000t> Format: (yes no) Possible values: - yes : 1000t supported - no : 1000t not supported	<i>optional parameter</i> advertise support of 1000T
autoneg1000tfd	Parameter type: <Epon::autoneg1000tfd> Format: (yes no) Possible values: - yes : 1000tfd supported - no : 1000tfd not supported	<i>optional parameter</i> advertise support of 1000TFD
fdxpause	Parameter type: <Epon::fdxpause> Format: (yes no) Possible values: - yes : fdxpause supported - no : fdxpause not supported	<i>optional parameter</i> advertise support of FdxPause
fdxapause	Parameter type: <Epon::fdxapause> Format: (yes no) Possible values: - yes : fdxapause supported - no : fdxapause not supported	<i>optional parameter</i> advertise support of FdxAPause
fdxspause	Parameter type: <Epon::fdxspause> Format: (yes no) Possible values: - yes : fdxspause supported - no : fdxspause not supported	<i>optional parameter</i> advertise support of FdxSPause
fdxbpause	Parameter type: <Epon::fdxbpause> Format: (yes no) Possible values: - yes : fdxbpause supported - no : fdxbpause not supported	<i>optional parameter</i> advertise support of FdxBPause
remfault1	Parameter type: <Epon::remfault1>	<i>optional parameter</i>

7 Epon ONT Configuration Commands

Parameter	Type	Description
	Format: (yes no) Possible values: - yes : remfault1 supported - no : remfault1 not supported	advertise support of RemFault1
remfault2	Parameter type: <Epon::remfault2> Format: (yes no) Possible values: - yes : remfault2 supported - no : remfault2 not supported	<i>optional parameter</i> advertise support of RemFault2
isoethernet	Parameter type: <Epon::isoethernet> Format: (yes no) Possible values: - yes : isoethernet supported - no : isoethernet not supported	<i>optional parameter</i> advertise support of IsoEthernet

7.7 Epon Ont LLID Configuration Command

Command Description

This command modifies provisioning data associated with epon ont llid.

Note: Multi-LLID is not supported , llid-num only support '1'.

queue-profile - queue profile ID for LLID , only 1 is supported.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont interface (epon-idx) ( no llid (llid-num) ) | ( llid (llid-num) [ no queue-profile |
queue-profile <Epon::ProfIdOne> ] [ no churn | churn <Epon::churnState> ] [ no churn-time | churn-time
<Epon::churnTime> ] [ no churn-keyextime | churn-keyextime <Epon::churnTime> ] [ no loop-backadmin |
loop-backadmin <Epon::LoopBack> ] [ no dbapollinglevel | dbapollinglevel <Epon::dba> ] rate-limit-prof
<Qos::QosRateLimitProfileNameEllid> [ no closeportasovld | closeportasovld <Epon::closePortAsOvld> ] )
```

Command Parameters

Table 7.7-1 "Epon Ont LLID Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index
(llid-num)	Format: - Ont llid number,range 1 for EPON,range 1-8 for DPOE - range: [1...8]	Ont llid number, range 1 for EPON,range 1-8 for DPOE

Table 7.7-2 "Epon Ont LLID Configuration Command" Command Parameters

Parameter	Type	Description
[no] queue-profile	Parameter type: <Epon::ProfIdOne> Format:	<i>optional parameter with default value: 1L</i>

7 Epon ONT Configuration Commands

Parameter	Type	Description
	- LLID Queue Profile ID - range: [1]	Queue profile ID for LLID. Currently only 1 is supported
[no] churn	Parameter type: <Epon::churnState> Format: (enable disable) Possible values: - enable : Enable churning encryption - disable : Disable churning encryption	<i>optional parameter with default value: "disable"</i> Enable/Disable churning encryption
[no] churn-time	Parameter type: <Epon::churnTime> Format: - ONT churn time - unit: secs - range: [1...65535]	<i>optional parameter with default value: 3L</i> churning time
[no] churn-keyexptime	Parameter type: <Epon::churnTime> Format: - ONT churn time - unit: secs - range: [1...65535]	<i>optional parameter with default value: 10L</i> churning key exchanging time
[no] loop-backadmin	Parameter type: <Epon::LoopBack> Format: (enable disable) Possible values: - enable : Enable Loopback function - disable : Disable Loopback function	<i>optional parameter with default value: "disable"</i> Enable/Disable Loopback function
[no] dbapollinglevel	Parameter type: <Epon::dba> Format: - DBA polling level - range: [0...7]	<i>optional parameter with default value: 2L</i> DBA polling level
rate-limit-prof	Parameter type: <Qos::QosRateLimitProfileNameEllid> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>mandatory parameter</i> the name of the protocol profile to be mapped on ellid. none for no ratelimit. It only used for EPON ELLID interface current.
[no] closeportasovld	Parameter type: <Epon::closePortAsOvld> Format: (enable disable) Possible values: - enable : Enable close port as overload - disable : Disable close port as overload	<i>optional parameter with default value: "disable"</i> Enable/Disable close port as protocol total rate or burst overload

7.8 Epon Ont RMS Configuration Command

Command Description

This command allows the operator to configure epon ont RMS.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont interface (epon-idx) ( no rms ) | ( rms [ no ip-mode | ip-mode <Epon::IpMode> ] [ ip
<Epon::IpAddr> ] [ mask <Epon::IpAddr> ] [ gateway <Epon::IpAddr> ] [ no pppoe-mode | pppoe-mode
<Epon::pppoeMode> ] [ no pppoe-username | pppoe-username <Epon::pppoeUsrName> ] [ no pppoe-pwd |
pppoe-pwd <Epon::pppoePwd> ] [ no tagged-mode | tagged-mode <Epon::TagMode> ] cvlan <Epon::rmsCvlan> [
no svlan | svlan <Epon::rmsSvlan> ] [ no pbit | pbit <Epon::pbit> ] [ no url | url <Epon::url> ] )
```

Command Parameters

Table 7.8-1 "Epon Ont RMS Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index

Table 7.8-2 "Epon Ont RMS Configuration Command" Command Parameters

Parameter	Type	Description
[no] ip-mode	Parameter type: <Epon::IpMode> Format: (static dhcp pppoe) Possible values: - static : static mode - dhcp : dhcp mode	optional parameter with default value: "dhcp" mode to get the ip address

7 Epon ONT Configuration Commands

Parameter	Type	Description
	- pppoe : PPPoE mode	
ip	Parameter type: <Epon::IpAddr> Format: - IPv4-address	<i>optional parameter</i> ip address
mask	Parameter type: <Epon::IpAddr> Format: - IPv4-address	<i>optional parameter</i> subnet of the ip
gateway	Parameter type: <Epon::IpAddr> Format: - IPv4-address	<i>optional parameter</i> default gateway of the ip
[no] pppoe-mode	Parameter type: <Epon::pppoeMode> Format: (auto chap pap) Possible values: - auto : AUTO mode - chap : CHAP mode - pap : PAP mode	<i>optional parameter with default value: "auto"</i> PPPoE configure mode
[no] pppoe-username	Parameter type: <Epon::pppoeUsrName> Format: - user name - length: 1<=x<=32	<i>optional parameter with default value: ""</i> PPPoE user name
[no] pppoe-pwd	Parameter type: <Epon::pppoePwd> Format: - PPPoE password hidden from users - length: 1<=x<=32	<i>optional parameter with default value: ""</i> PPPoE password
[no] tagged-mode	Parameter type: <Epon::TagMode> Format: (transparent tag stacking) Possible values: - transparent : transparent mode - tag : tagged mode - stacking : stacking mode	<i>optional parameter with default value: "tag"</i> vlan tag mode
cvlan	Parameter type: <Epon::rmsCvlan> Format: - Vlan id - range: [2...4092]	<i>mandatory parameter</i> customer vlan for RMS
[no] svlan	Parameter type: <Epon::rmsSvlan> Format: - Vlan id - range: [0,2...4092]	<i>optional parameter with default value: 0L</i> Service vlan for RMS
[no] pbit	Parameter type: <Epon::pbit> Format: - DBA polling level - range: [0...7]	<i>optional parameter with default value: 7L</i> default pbit of this service is associated
[no] url	Parameter type: <Epon::url> Format: - URL - length: x<=256	<i>optional parameter with default value: ""</i> PPPoE user name

7.9 EONT Software Control Configuration Command

Command Description

This command configures an association between an ONT hardware version/variant and an ONT software version (download and planned).

Note: the combination for hw-version and ont-variant should be unique.

Note: hw-version and ont-variant could not be modified.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure equipment eont ( no sw-ctrl (sw-ctrl-id) ) | ( sw-ctrl (sw-ctrl-id) hw-version <Epon::HwVer> [ no
ont-variant | ont-variant <Epon::PlndVar> ] plnd-sw-version <Epon::SwVer> [ no upgrade-mode | upgrade-mode
<Epon::UpMode> ] )
```

Command Parameters

Table 7.9-1 "EONT Software Control Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(sw-ctrl-id)	Format: - eont sw ctrl id - range: [1...500]	software control id

Table 7.9-2 "EONT Software Control Configuration Command" Command Parameters

Parameter	Type	Description
hw-version	Parameter type: <Epon::HwVer> Format: - Octet String - length: 1<=x<=8	<i>mandatory parameter</i> <i>The parameter is not visible during modification.</i> EONT hardware version
[no] ont-variant	Parameter type: <Epon::PlndVar> Format: - eont sw version - length: x<=16	<i>optional parameter with default value: ""</i> <i>The parameter is not visible during modification.</i> variant of the EONT hardware version
plnd-sw-version	Parameter type: <Epon::SwVer> Format: - eont sw version	<i>mandatory parameter</i> planned EONT software version

7 Epon ONT Configuration Commands

Parameter	Type	Description
	- length: x<=16	
[no] upgrade-mode	Parameter type: <Epon::UpMode> Format: (none ctc tk dpoe) Possible values: - none : no software upgrade mode - ctc : CTC software upgrade mode - tk : TK software upgrade mode - dpoe : DPoE software upgrade mode	<i>optional parameter with default value: "ctc"</i> EONT software upgrade mode

8- *Port Protection Configuration Commands*

8.1 Port Protection Configuration Command Tree	8-426
8.2 Port Protection Configuration Command	8-427

8.1 Port Protection Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "Port Protection Configuration Commands".

Command Tree

```
----configure
----[no] port-protection
    - (port)
    - paired-port
```

8.2 Port Protection Configuration Command

Command Description

This command allows the operator to configure a protection group on two ports which will then operate in redundancy. The system will decide which port of the two becomes active. In case of failure of one port the other port will take over. A forced switchover can also be triggered manually by the operator.

The port protection group is identified by the first port in the group that is intended to be protected. The following parameters can be configured for the protection group :

- *paired-port*: the paired port that will ensure the protection of the first one.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure port-protection (port) paired-port <RedPort::PairedPortIndex>
```

Command Parameters

Table 8.2-1 "Port Protection Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId>) Possible values: - pon : pon-aid - chpair : chpair-aid Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier	the port identifier of the first port in the protection group

Table 8.2-2 "Port Protection Configuration Command" Command Parameters

Parameter	Type	Description
paired-port	Parameter type: <RedPort::PairedPortIndex>	mandatory parameter

8 Port Protection Configuration Commands

Parameter	Type	Description
	Format: (pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId>) Possible values: - pon : pon-aid - chpair : chpair-aid Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier	the port identifier of the paired port in the protection group

9.2 xDSL Common Service Profile Configuration Command

Command Description

This command allows the operator to manage the DSL service profile. The service profile groups all parameters on DSL service level (data rates, Rate Adaption mode, delay, ...). The service parameters are common for all DSL flavors.

DESCRIPTION FOR THE COMMAND PARAMETER-SCOPE: The combination scope+profile must be unique. Typically local-profile must be used especially when configuring via CLI. Use of network-profile is depreciated. The network-profile was foreseen to allow management agents to define network-wide unique profiles, independent of what local profiles may have been created.

DESCRIPTION FOR THE COMMAND PARAMETER max-delay-down and max-delay-up: The delay is expressed in milliseconds. Range: 1 to 63 ms in steps of 1 ms with 1 as special value. The value 1 is used to specify that fast or pseudo fast latency (i.e. no interleaving).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ( no service-profile (index) ) | ( service-profile (index) name <AsamProfileName> [ (scope) ] [
version <SignedInteger> ] [ no ra-mode-down | ra-mode-down <Xdsl::RAModeDownType> ] [ no ra-mode-up |

```

Command Parameters

Table 9.2-1 "xDSL Common Service Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...1024]	index of the profile

Table 9.2-2 "xDSL Common Service Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	<i>mandatory parameter</i> profile name
(scope)	Format: local-profile Possible values: - local-profile : the local profile	<i>obsolete parameter that will be ignored</i> scope of the profile
version	Parameter type: <SignedInteger> Format: - a signed integer	<i>optional parameter</i> version maintained by manager, usually 1 for new profile
[no] ra-mode-down	Parameter type: <Xdsl::RAModeDownType> Format: (operator-ctrl automatic dynamic sos-dynamic) Possible values: - operator-ctrl : operator controlled rate adaptive mode in downstream - automatic : automatic rate adaptive mode at startup in downstream - dynamic : dynamic rate adaptive mode at startup and at showtime in downstream - sos-dynamic : dynamic rate adaptive mode with SOS in downstream	<i>optional parameter with default value: "automatic"</i> rate adaptation mode for down stream
[no] ra-mode-up	Parameter type: <Xdsl::RAModeUpType> Format: (operator-ctrl automatic dynamic sos-dynamic) Possible values: - operator-ctrl : operator controlled rate adaptive mode in upstream - automatic : automatic rate adaptive mode at startup in upstream - dynamic : dynamic rate adaptive mode at startup and at showtime in upstream - sos-dynamic : dynamic rate adaptive mode with SOS in upstream	<i>optional parameter with default value: "automatic"</i> rate adaptation mode for up stream
[no] min-bitrate-down	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 1024</i> minimum downstream bit rate to be maintained
[no] min-bitrate-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 64</i> minimum upstream bit rate to be maintained
[no] sos-minbitrate-dn	Parameter type: <Xdsl::BitRate> Format: - a bit rate value	<i>optional parameter with default value: 64</i> minimum net data rate required

9 xDSL Configuration Commands

Parameter	Type	Description
	- unit: kbps - range: [0...2147483647]	for a valid SOS request in downstream
[no] sos-minbitrate-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 64</i> minimum net data rate required for a valid SOS request in upstream
[no] plan-bitrate-down	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 1536</i> planned bitrate in downstream
[no] plan-bitrate-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 128</i> planned bitrate in upstream
[no] max-bitrate-down	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 6144</i> maximum bitrate in downstream
[no] max-bitrate-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 640</i> maximum bitrate in upstream
[no] max-delay-down	Parameter type: <Xdsl::InterleavingDelay> Format: - a delay time period - unit: msec - range: [1...63]	<i>optional parameter with default value: 16</i> maximum delay for interleaving function in downstream
[no] max-delay-up	Parameter type: <Xdsl::InterleavingDelay> Format: - a delay time period - unit: msec - range: [1...63]	<i>optional parameter with default value: 16</i> maximum delay for interleaving function in upstream
[no] max-delay-var-dn	Parameter type: <Xdsl::VariationDelay> Format: - a delay time period - unit: 1/10msec - range: [1...255]	<i>optional parameter with default value: 255</i> maximum delay variation in downstream
[no] max-delay-var-up	Parameter type: <Xdsl::VariationDelay> Format: - a delay time period - unit: 1/10msec - range: [1...255]	<i>optional parameter with default value: 255</i> maximum delay variation in upstream
[no] memory-down	Parameter type: <Xdsl::DownstreamMemory> Format: - configurable downstream memory - unit: 1/100 - range: [0...100,255]	<i>optional parameter with default value: 255</i> configurable memory for downstream. Value 0-100 express the % of memory to be allocated to the downstream direction and special value 255 means the vendor discretionary algorithm shall be used.
[no] imp-noise-prot-dn	Parameter type: <Xdsl::ImpNoiseProtection>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: - minimum impulse noise protection - unit: 1/10 symbols - range: [0...160]	<i>value: 0</i> minimum impulse noise protection in downstream
[no] imp-noise-prot-up	Parameter type: <Xdsl::ImpNoiseProtection> Format: - minimum impulse noise protection - unit: 1/10 symbols - range: [0...160]	<i>optional parameter with default value: 0</i> minimum impulse noise protection in upstream
[no] inp8-dn	Parameter type: <Xdsl::ImpNoiseProtection> Format: - minimum impulse noise protection - unit: 1/10 symbols - range: [0...160]	<i>optional parameter with default value: 0</i> minimum impulse noise protection in downstream with a subcarrier spacing of 8.6250kHz
[no] inp8-up	Parameter type: <Xdsl::ImpNoiseProtection> Format: - minimum impulse noise protection - unit: 1/10 symbols - range: [0...160]	<i>optional parameter with default value: 0</i> minimum impulse noise protection in upstream with a subcarrier spacing of 8.6250kHz
[no] inp-wo-erasure-dn	Parameter type: boolean	<i>optional parameter</i> min-inp even without erasure detection in downstream
[no] inp-wo-erasure-up	Parameter type: boolean	<i>optional parameter</i> min-inp even without erasure detection in upstream
[no] min-l2-br-down	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 128</i> minimum downstream bitrate to be maintained during L2
[no] active	Parameter type: boolean	<i>optional parameter</i> <i>The parameter is not visible during creation.</i> to activate the profile

9.3 xDSL Common Spectrum Profile Configuration Command

Command Description

This command allows the operator to manage the DSL spectrum profile. The spectrum profiles groups all parameters on DSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the DSL flavor used (ADSL1/2, READSL2, ADSL2Plus, VDSL, VDSL2).

The specific values depending on the DSL flavor can be configured via:

- `configure xdsl spectrum-profile adsl-adsl2`
- `configure xdsl spectrum-profile re-adsl`
- `configure xdsl spectrum-profile adsl2-plus`
- `configure xdsl spectrum-profile vdsl`
- `configure xdsl spectrum-profile vdsl2`

The actual selected operating mode determines which set of DSL specific parameters is used. In case a common parameter is not supported for a specific DSL flavor, this parameter will be ignored for that flavor.

When all the DSL specific flavors are configured the complete profile has to be activated.

DESCRIPTION FOR THE COMMAND PARAMETER-SCOPE: The combination scope+profile must be unique. Typically local-profile must be used especially when configuring via CLI. Use of network-profile is depreciated. The network-profile was foreseen to allow management agents to define network-wide unique profiles, independent of what local profiles may have been created.

User Level

The command can be accessed by operators with `xdsl` privileges, and executed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```

Command Parameters

Table 9.3-1 "xDSL Common Spectrum Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...256]	index of the profile.

Table 9.3-2 "xDSL Common Spectrum Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	<i>mandatory parameter</i> profile name
(scope)	Format: local-profile Possible values: - local-profile : the local profile	<i>obsolete parameter that will be ignored</i> scope of the profile
version	Parameter type: <SignedInteger> Format: - a signed integer	<i>optional parameter</i> version maintained by manager, usually 1 for new profile
[no] dis-ansi-t1413	Parameter type: boolean	<i>optional parameter</i> disable ANSI T1.413-1998
[no] dis-etsi-dts	Parameter type: boolean	<i>optional parameter</i> disable ETSI DTS/TM06006
[no] dis-g992-1-a	Parameter type: boolean	<i>optional parameter</i> disable G.992.1 POTS non-overlapped spectrum
[no] dis-g992-1-b	Parameter type: boolean	<i>optional parameter</i> disable G.992.1 ISDN non-overlapped spectrum
[no] dis-g992-2-a	Parameter type: boolean	<i>optional parameter</i> disable G.992.2 POTS non-overlapped spectrum
[no] dis-g992-3-a	Parameter type: boolean	<i>optional parameter</i> disable G.992.3 POTS non-overlapped spectrum
[no] dis-g992-3-b	Parameter type: boolean	<i>optional parameter</i> disable G.992.3 ISDN non-overlapped spectrum
[no] g992-3-aj	Parameter type: boolean	<i>optional parameter</i> G.992.3 all digital mode non-overlapped spectrum
[no] g992-3-l1	Parameter type: boolean	<i>optional parameter</i> G.992.3 POTS non-overlapped spectrum US mask 1
[no] g992-3-l2	Parameter type: boolean	<i>optional parameter</i>

9 xDSL Configuration Commands

Parameter	Type	Description
		G.992.3 POTS non-overlapped spectrum US mask 2
[no] g992-3-am	Parameter type: boolean	<i>optional parameter</i> G.992.3 extended POTS with non-overlapped spectrum
[no] g992-5-a	Parameter type: boolean	<i>optional parameter</i> G.992.5 POTS non-overlapped spectrum
[no] g992-5-b	Parameter type: boolean	<i>optional parameter</i> G.992.5 ISDN non-overlapped spectrum
[no] ansi-t1.424	Parameter type: boolean	<i>optional parameter</i> ANSI T1.424
[no] dis-etsi-ts	Parameter type: boolean	<i>optional parameter</i> disable ETSI TS
[no] itu-g993-1	Parameter type: boolean	<i>optional parameter</i> ITU G993-1
[no] ieee-802.3ah	Parameter type: boolean	<i>optional parameter</i> IEEE 802.3ah
[no] g992-5-aj	Parameter type: boolean	<i>optional parameter</i> G.992.5 all digital mode non-overlapped spectrum
[no] g992-5-am	Parameter type: boolean	<i>optional parameter</i> G.992.5 extended POTS non-overlapped spectrum
[no] g993-2-8a	Parameter type: boolean	<i>optional parameter</i> G.993.2_8A VDSL-2 with profile 8A
[no] g993-2-8b	Parameter type: boolean	<i>optional parameter</i> G.993.2_8B VDSL-2 with profile 8B
[no] g993-2-8c	Parameter type: boolean	<i>optional parameter</i> G.993.2_8C VDSL-2 with profile 8C
[no] g993-2-8d	Parameter type: boolean	<i>optional parameter</i> G.993.2_8D VDSL-2 with profile 8D
[no] g993-2-12a	Parameter type: boolean	<i>optional parameter</i> G.993.2_12A VDSL-2 with profile 12A
[no] g993-2-12b	Parameter type: boolean	<i>optional parameter</i> G.993.2_12B VDSL-2 with profile 12B
[no] g993-2-17a	Parameter type: boolean	<i>optional parameter</i> G.993.2_17A VDSL-2 with profile 17A
[no] g993-2-30a	Parameter type: boolean	<i>optional parameter</i> G.993.2_30A VDSL-2 with profile 30A
[no] g993-2-35b	Parameter type: boolean	<i>optional parameter</i> G.993.2_35B VDSL-2 with profile 35B
[no] min-noise-down	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 0</i> minimum noise margin in downstream

[illegible]

9 xDSL Configuration Commands

Parameter	Type	Description
	Possible values: - none : l2 or l3 not supported - l2 : only l2 supported - l3 : only l3 supported - l2-l3 : l2 and l3 supported	
[no] l0-time	Parameter type: <Xdsl::LineL0Time> Format: - min time in a state before transiting into another - unit: sec - range: [0...1800]	<i>optional parameter with default value: 255</i> min time between exit from and entry in l2 state
[no] l2-time	Parameter type: <Xdsl::LineL2Time> Format: - min time in a state before transiting into another - unit: sec - range: [0...1800]	<i>optional parameter with default value: 60</i> min time between entry in l2 and first power trim
[no] l2-agpow-red-tx	Parameter type: <Xdsl::LineL2Atp> Format: - the maximum aggregate transmit power reduction - unit: dB - range: [0...31]	<i>optional parameter with default value: 3</i> the maximum aggregate transmit power reduction for l2
[no] modification	Parameter type: <Xdsl::ModifyStatus> Format: (start cancel complete) Possible values: - start : to start modifying the profile - cancel : to cancel the modifications done - complete : to complete the modifications	<i>optional parameter with default value: "complete"</i> to modify the profile
[no] active	Parameter type: boolean	<i>optional parameter</i> The parameter is not visible during creation. to activate the profile
[no] rau-noise-down	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 70</i> downstream upshift noise margin for rate adaptation
[no] rau-noise-up	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 70</i> upstream upshift noise margin for rate adaptation
[no] rau-time-down	Parameter type: <Xdsl::RaTime> Format: - a data rate value - unit: sec - range: [0...16383]	<i>optional parameter with default value: 300</i> downstream minimum upshift rate adaptation interval
[no] rau-time-up	Parameter type: <Xdsl::RaTime> Format: - a data rate value - unit: sec - range: [0...16383]	<i>optional parameter with default value: 300</i> upstream minimum upshift rate adaptation interval
[no] rad-noise-down	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB	<i>optional parameter with default value: 20</i> downstream downshift noise margin for rate adaptation

Parameter	Type	Description
	- range: [0...310]	
[no] rad-noise-up	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 20</i> upstream downshift noise margin for rate adaptation
[no] rad-time-down	Parameter type: <Xdsl::RaTime> Format: - a data rate value - unit: sec - range: [0...16383]	<i>optional parameter with default value: 30</i> downstream minimum downshift rate adaptation interval
[no] rad-time-up	Parameter type: <Xdsl::RaTime> Format: - a data rate value - unit: sec - range: [0...16383]	<i>optional parameter with default value: 30</i> upstream minimum downshift rate adaptation interval
[no] l2-agpw-to-red-tx	Parameter type: <Xdsl::LineL2AtprT> Format: - the total maximum aggregate transmit power reduction - unit: dB - range: [0...31]	<i>optional parameter with default value: 31</i> total maximum aggregate transmit power reduction for L2

9.4 xDSL Artificial Noise Downstream Configuration Command

Command Description

This command allows the operator to configure artificial noise in Downstream

This command allows to specify the transmitter-referred artificial noise level to be used as additional noise source at the downstream transmitter.

Artificial Noise PSD points are defined in the range -140dBm/Hz..-40 dBm/Hz. These values must be manually converted to the range 0..200 using the formula $-2 \times (40 + \text{PSD level})$.

A special value (-167,5 dBm/Hz) (entered value: 255) states no artificial noise has to be applied.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) artificial-noise-down (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::CustPsd> ]
```

Command Parameters

Table 9.4-1 "xDSL Artificial Noise Downstream Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...256]	index of the profile.
(psd-point)	Format: - psd point - range: [1...32]	psd-point

Table 9.4-2 "xDSL Artificial Noise Downstream Configuration Command" Command Parameters

Parameter	Type	Description
[no] frequency	Parameter type: <Xdsl::CustFreq> Format:	optional parameter with default value: 0

Parameter	Type	Description
	- frequency - unit: khz - range: [0...35324]	psd frequency
[no] psd	Parameter type: <Xdsl::CustPsd> Format: - psd level - unit: -2*(40+PSD level in dBm/Hz) - range: [0...200,255]	<i>optional parameter with default value: 0</i> psd level

9.5 xDSL Spectrum Profile for ADSL/ADSL2 Configuration Command

Command Description

This command allows the operator to manage the ADSL and ADSL2 specific part of the DSL spectrum profile. The spectrum profiles groups all parameters on DSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration Profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the DSL flavor used (ADSL1/2, READSL2, ADSL2Plus, VDSL).

This chapter contains the ADSL-ADSL2 flavor specific parameters.

Note: the activation of the profile has to be done via configure xdsl spectrum-profile.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) adsl-adsl2 [ [ no ] proprietary-feat ] [ no propr-feat-value |
propr-feat-value <Xdsl::ProprFeatValue> ] [ no max-agpowlev-down | max-agpowlev-down <Xdsl::PowerLevel> ]
[ no max-agpowlev-up | max-agpowlev-up <Xdsl::PowerLevel> ] [ no max-psd-down | max-psd-down
<Xdsl::Adsl2PowerSpectralDensityDown> ] [ no max-psd-up | max-psd-up
<Xdsl::Adsl2PowerSpectralDensityUp> ] [ no pbo-mode-up ] [ no max-recv-power-up | max-recv-power-up
<Xdsl::RxPowerLevel> ] [ no psd-mask-up | psd-mask-up <Xdsl::Adsl2PsdMaskUp> ]
```

Command Parameters

9.6 xDSL Spectrum Profile for RE-ADSL2 Configuration Command

Command Description

This command allows the operator to manage the Reach Extended ADSL2 specific part of the DSL spectrum profile. The spectrum profiles groups all parameters on DSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the DSL flavor used (ADSL1/2, READSL2, ADSL2Plus, VDSL).

This chapter contains the Reach Extended DSL2 flavor specific parameters.

Note: the activation of the profile has to be done via configure xdsl spectrum-profile.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) re-adsl [ [ no ] proprietary-feat ] [ no propr-feat-value | propr-feat-value
<Xdsl::ProprFeatValue> ] [ no max-agpowlev-down | max-agpowlev-down <Xdsl::PowerLevel> ] [ no
max-agpowlev-up | max-agpowlev-up <Xdsl::PowerLevel> ] [ no max-psd-down | max-psd-down
<Xdsl::ReAdsl2PowerSpectralDensityDown> ] [ no max-psd-up | max-psd-up
<Xdsl::ReAdsl2PowerSpectralDensityUp> ] [ [ no ] pbo-mode-up ] [ no max-recv-power-up | max-recv-power-up
<Xdsl::RxPowerLevel> ]
```

Command Parameters

[no] propr-feat-value	Parameter type: <Xdsl::ProprFeatValue> Format: - Proprietary feature - range: [0...4294967295]	<i>optional parameter with default value: 1</i> proprietary feature
[no] max-agpowlev-down	Parameter type: <Xdsl::PowerLevel> Format: - a power level value - unit: 1/10 * dBm - range: [0...255]	<i>optional parameter with default value: 255</i> maximum aggregate power allowed in downstream
[no] max-agpowlev-up	Parameter type: <Xdsl::PowerLevel> Format: - a power level value - unit: 1/10 * dBm - range: [0...255]	<i>optional parameter with default value: 255</i> maximum aggregate power allowed in upstream
[no] max-psd-down	Parameter type: <Xdsl::ReAdsl2PowerSpectralDensityDown> Format: - a power spectral density value - unit: 1/10 * dBm/Hz - range: [-600...-370]	<i>optional parameter with default value: -370</i> maximum power spectral density allowed in downstream
[no] max-psd-up	Parameter type: <Xdsl::ReAdsl2PowerSpectralDensityUp> Format: - a power spectral density value - unit: 1/10 * dBm/Hz - range: [-600...-329]	<i>optional parameter with default value: -329</i> maximum power spectral density allowed in upstream
[no] pbo-mode-up	Parameter type: boolean	<i>optional parameter</i> upstream power backoff mode ON
[no] max-recv-power-up	Parameter type: <Xdsl::RxPowerLevel> Format: - a received power level value - unit: 1/10 * dBm - range: [-255...255]	<i>optional parameter with default value: 255</i> the maximum receive power allowed in upstream

9.7 xDSL Spectrum Profile for ADSL2 Plus Configuration Command

Command Description

This command allows the operator to manage the ADSL2-plus specific part of the DSL spectrum profile. The spectrum profiles groups all parameters on DSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the DSL flavor used (ADSL1/2, READSL2, ADSL2Plus, VDSL).

This chapter contains the ADSL2-plus flavor specific parameters.

Note: the activation of the profile has to be done via configure xdsl spectrum-profile.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) adsl2-plus [ [ no ] proprietary-feat ] [ no propr-feat-value |
propr-feat-value <Xdsl::ProprFeatValue> ] [ no max-agpowlev-down | max-agpowlev-down <Xdsl::PowerLevel> ]
[ no max-agpowlev-up | max-agpowlev-up <Xdsl::PowerLevel> ] [ no max-psd-down | max-psd-down
<Xdsl::Adsl2PlusPowerSpectralDensityDown> ] [ no max-psd-up | max-psd-up
<Xdsl::Adsl2PlusPowerSpectralDensityUp> ] [ no psd-shape-down | psd-shape-down
<Xdsl::Adsl2PlusPsdShapeDown> ] [ [ no ] pbo-mode-up ] [ no max-recv-power-up | max-recv-power-up
<Xdsl::RxPowerLevel> ] [ no psd-mask-up | psd-mask-up <Xdsl::Adsl2PlusPsdMaskUp> ]
```

9.8 ADSL2-plus Custom PSD shape Configuration Command

Command Description

This command allows the operator to configure the ADSL2-plus custom psd shape in downstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) adsl2-plus cust-psd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::CustFrqAdsl2> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

Command Parameters

Parameter	Type	Description
	Format: - psd level - unit: -0.5 * (PSD level in dBm/Hz) - range: [0...255]	<i>value: 0</i> psd level

9.9 xDSL Spectrum Profile for VDSL Configuration Command

Command Description

This command allows the operator to manage the VDSL specific part of the DSL spectrum profile. The spectrum profiles groups all parameters on DSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the DSL flavor used (ADSL1/2, READSL2, ADSL2Plus, VDSL).

This chapter contains the VDSL flavor specific parameters.

Note: the activation of the profile has to be done via `configure xdsl spectrum-profile`. The configured `cust-psd-sc-down/cust-psd-ty-down`, `cust-rx-psd-sc-up/ cust-rx-psd-ty-up` are ignored by the system after activation of the profile if no corresponding breakpoints are configured before the activation.

User Level

The command can be accessed by operators with `xdsl` privileges, and executed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl [ [ no ] proprietary-feat ] [ no propr-feat-value | propr-feat-value

9.10 VDSL Ghs Tones Transmission Power Control Configuration Command

Command Description

This command allows the operator to configure transmission power of the G.hs tones in VDSL environment. G.hs is intended to be a robust mechanism for activating a multiplicity of xDSL. Activation of regional standards or legacy devices can be handled by implicit (escape) or explicit (non-standard facilities) mechanisms.

The parameters defined are used for control of the transmission power. There are various tone sets defined for the control of the transmission power, viz., A43, B43, A43C and V43. The power of each tone of the set shall be equivalent to the given PSD value integrated in a total bandwidth of 4.3125 kHz

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl ghstone-set-pwr-ctrl [ no a43 | a43 <Xdsl::GhsTonesTxPwrCtrl> ] [
no b43 | b43 <Xdsl::GhsTonesTxPwrCtrl> ] [ no a43c | a43c <Xdsl::GhsTonesTxPwrCtrl> ] [ no v43 | v43
<Xdsl::GhsTonesTxPwrCtrl> ]
```

9.11 VDSL Custom PSD shape Downstream Configuration Command

Command Description

This command allows the operator to configure the VDSL custom psd shape in downstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the frequency scale and the psd shape type will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl cust-psd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

Command Parameters

9.12 VDSL Custom RX PSD shape Upstream Configuration Command

Command Description

This command allows the operator to configure the VDSL custom rx-psd shape in upstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the frequency scale and the psd shape type will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl cust-rx-psd-pt-up (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

9.13 VDSL Power Back Off Configuration Command

Command Description

This command can be used to specify the power back off parameters for each upstream band.

Parameter A and B can be used for computing the PSD reference for US PBO for each band (including optional band). The range of parameter A for each band is 40..80.95 dBm/Hz in steps of 0.01 dBm/Hz. And the range of parameter B is 0..40.95 dBm/Hz in steps of 0.01 dBm/Hz.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl pbo (band) [ param-a <Xdsl::PboParamA> ] [ param-b <Xdsl::PboParamB> ]
```

Command Parameters

Table 9.13-1 "VDSL Power Back Off Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...256]	index of the profile.
(band)	Format: - equal fext band - range: [1...5]	band index

Table 9.13-2 "VDSL Power Back Off Configuration Command" Command Parameters

Parameter	Type	Description
param-a	Parameter type: <Xdsl::PboParamA> Format: - pbo param A - unit: 0.01 dBm/Hz - range: [4000...8095]	<i>optional parameter</i> parameter A value
param-b	Parameter type: <Xdsl::PboParamB> Format: - pbo param B - unit: 0.01 dBm/Hz - range: [0...4095]	<i>optional parameter</i> parameter B value

9.14 xDSL Spectrum Profile for VDSL2

Configuration Command

Command Description

This command allows the operator to manage the VDSL2 specific part of the DSL spectrum profile. The spectrum profiles groups all parameters on DSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the DSL flavor used (ADSL1/2, READSL2, ADSL2Plus, VDSL, VDSL2).

This chapter contains the VDSL2 flavor specific parameters.

Note: the activation of the profile has to be done via `configure xdsl spectrum-profile`. The configured `cust-psd-sc-down/cust-psd-ty-down`, `cust-psd-sc-up/cust-psd-ty-up`, `cust-rx-psd-sc-up/cust-rx-psd-ty-up` are ignored by the system after activation of the profile if no corresponding breakpoints are configured before the activation.

User Level

The command can be accessed by operators with `xdsl` privileges, and executed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl2 [ [ no ] proprietary-feat ] [ no propr-feat-value | propr-feat-value
<Xdsl::ProprFeatValue> ] [ no max-agpowlev-down | max-agpowlev-down <Xdsl::VdslPowerLevel> ] [ no

9 xDSL Configuration Commands

Parameter	Type	Description
[no] psd-pbo-e-len-up	Parameter type: <Xdsl::PsdPboElectrLength> Format: (estimated <Xdsl::PsdPboLength>) Possible values: - estimated : estimated electrical length Field type <Xdsl::PsdPboLength> - electrical parameter AB range - unit: 1/2 * dB - range: [0...255]	<i>optional parameter with default value: "estimated"</i> the electrical length to be used with the AB parameters
[no] m-psd-level-down	Parameter type: <Xdsl::MaxPsdDown> Format: (no-constraint <Xdsl::MaxPsdLevelType>) Possible values: - no-constraint : no constraint on psd level Field type <Xdsl::MaxPsdLevelType> - Max psd level - unit: 1/10 * dBm/Hz - range: [-955...0]	<i>optional parameter with default value: "no-constraint"</i> maximum PSD level for downstream
[no] m-psd-level-up	Parameter type: <Xdsl::MaxPsdUp> Format: (no-constraint <Xdsl::MaxPsdLevelType>) Possible values: - no-constraint : no constraint on psd level Field type <Xdsl::MaxPsdLevelType> - Max psd level - unit: 1/10 * dBm/Hz - range: [-955...0]	<i>optional parameter with default value: "no-constraint"</i> maximum PSD level for upstream
[no] psd-pbo-par-a-up	Parameter type: <Xdsl::ABParamType> Format: - binary string - length: 10	<i>optional parameter with default value: "0f : a0 : 12 : 7a : 15 : 18 : 15 : 18 : 15 : 18"</i> par A value for computing the PSD reference for US PBO
[no] psd-pbo-par-b-up	Parameter type: <Xdsl::ABParamType> Format: - binary string - length: 10	<i>optional parameter with default value: "00 : 00 : 07 : b9 : 06 : 29 : 04 : 35 : 03 : af"</i> par B value for computing the PSD reference for US PBO
[no] v-noise-snr-down	Parameter type: <Xdsl::SnrmMode> Format: (mode-1 mode-2 mode-3) Possible values: - mode-1 : virtual noise disabled - mode-2 : Tx referred virtual noise enabled - mode-3 : Rx referred virtual noise enabled(not supported)	<i>optional parameter with default value: "mode-1"</i> downstream mode of virtual noise SNR margin
[no] v-noise-snr-up	Parameter type: <Xdsl::SnrmModeUp> Format: (mode-1 mode-2 mode-3) Possible values: - mode-1 : virtual noise disabled - mode-2 : Tx referred virtual noise enabled	<i>optional parameter with default value: "mode-1"</i> upstream mode of virtual noise SNR Margin

Parameter	Type	Description
	- mode-3 : Rx referred virtual noise enabled	
[no] v-noise-psd-down	Parameter type: <Xdsl::VirtualNoisePsdDownType> Format: - binary string - length: x<=97	<i>optional parameter with default value: ""</i> (deprecated)virtual noise level for determining the SNR margin in downstream bands
[no] v-noise-psd-up	Parameter type: <Xdsl::VirtualNoisePsdUpType> Format: - binary string - length: x<=49	<i>optional parameter with default value: ""</i> (deprecated)virtual noise level for determining the SNR margin in upstream bands
[no] cust-psd-sc-down	Parameter type: <Xdsl::PsdScaleBit> Format: (linear logarithmic) Possible values: - linear : linear scale - logarithmic : logarithmic scale	<i>optional parameter with default value: "linear"</i> psd scale
[no] cust-psd-ty-down	Parameter type: <Xdsl::PsdTypeBit> Format: (mask template) Possible values: - mask : PSD mask - template : PSD template	<i>optional parameter with default value: "mask"</i> psd type
[no] cust-psd-sc-up	Parameter type: <Xdsl::PsdScaleBit> Format: (linear logarithmic) Possible values: - linear : linear scale - logarithmic : logarithmic scale	<i>optional parameter with default value: "linear"</i> psd scale
[no] cust-psd-ty-up	Parameter type: <Xdsl::PsdTypeBit> Format: (mask template) Possible values: - mask : PSD mask - template : PSD template	<i>optional parameter with default value: "mask"</i> psd type
[no] cust-rx-psd-sc-up	Parameter type: <Xdsl::PsdScaleBit> Format: (linear logarithmic) Possible values: - linear : linear scale - logarithmic : logarithmic scale	<i>optional parameter with default value: "linear"</i> psd scale
[no] cust-rx-psd-ty-up	Parameter type: <Xdsl::PsdTypeBit> Format: (mask template) Possible values: - mask : PSD mask - template : PSD template	<i>optional parameter with default value: "mask"</i> psd type
[no] upbo-aele-mode	Parameter type: <Xdsl::UpboAeleMode> Format: - the electrical length estimation mode to be used in Aele Method	<i>optional parameter with default value: 0</i> the electrical length estimation mode to be used in the

9 xDSL Configuration Commands

Parameter	Type	Description
	- range: [0...3]	Alternative Electrical Length Method
[no] upboaele-min-thrs	Parameter type: <Xdsl::UpboAeleMinThresh> Format: - the electrical length minimum threshold to be used in AeLe Method - unit: percent - range: [0...15]	<i>optional parameter with default value: 10</i> the electrical length minimum threshold value to be used in the Alternative Electrical Length Method
[no] short-loop-lr	Parameter type: boolean	<i>optional parameter</i> enable vdsl2 lr short loop operation
[no] medium-loop-lr	Parameter type: boolean	<i>optional parameter</i> enable vdsl2 lr medium loop operation
[no] long-loop-lr	Parameter type: boolean	<i>optional parameter</i> enable vdsl2 lr long loop operation

9.15 VDSL2 Custom PSD shape Downstream Configuration Command

Command Description

This command allows the operator to configure the VDSL2 custom psd shape in downstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the frequency scale and the psd shape type will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl2 cust-psd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

Command Parameters

9.16 VDSL2 Custom PSD shape Upstream Configuration Command

Command Description

This command allows the operator to configure the VDSL2 custom psd shape in downstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the frequency scale and the psd shape type will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl2 cust-psd-pt-up (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

Command Parameters

9.17 VDSL2 Custom RX PSD shape Upstream Configuration Command

Command Description

This command allows the operator to configure the VDSL2 custom rx-psd shape in upstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the frequency scale and the psd shape type will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl2 cust-rx-psd-pt-up (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

Command Parameters

9.18 VDSL2 Virtual Noise Downstream Configuration Command

Command Description

This command allows the operator to configure VDSL2 virtual noise in downstream direction.

It helps operator to enter the virtual noise in a user-friendly way. Instead of entering octets, as was the case with the earlier command, the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl2 v-noise-psd-pt-down (psd-point) [ no frequency | frequency <Xdsl::CustFreq> ] [ no psd | psd <Xdsl::CustPsdVdsl2VtNoise> ]
```

Command Parameters

9.19 VDSL2 Virtual Noise Upstream Configuration Command

Command Description

This command allows the operator to configure VDSL2 virtual noise in upstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets, as was the case with the earlier command, the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl2 v-noise-psd-pt-up (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::CustPsdVdsl2VtNoise> ]
```

Command Parameters

Parameter	Type	Description
	Format: - psd level - unit: $-2 \times (40 + \text{PSD level in dBm/Hz})$ - range: [0...200,255]	<i>value: 0</i> psd level

9.20 VDSL2 Power Back Off Configuration Command

Command Description

This command can be used to specify the power back off parameters for each upstream band.

The equal FEXT reference electrical length parameter value for each band (including optional band) can be used for computing the PSD reference for US equal FEXT PBO. The range of this parameter for each band is 1.8 dB to 63 dB in steps of 0.1 dB. The special value 0 dB indicates that the modem has to use dedicated mechanism to optimally apply the equal FEXT without providing any manual setting for this parameter. The special value 1.8 dB disables equal FEXT UPBO in the respective upstream band.

Parameter A and B can be used for computing the PSD reference for US PBO for each band (including optional band). The range of parameter A for each band is 40..80.95 dBm/Hz in steps of 0.01 dBm/Hz. And the range of parameter B is 0..40.95 dBm/Hz in steps of 0.01 dBm/Hz.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl spectrum-profile (index) vdsl2 pbo (band) [ no equal-fext | equal-fext
<Xdsl::EqualFextUpstreamParam> ] [ param-a <Xdsl::PboParamA> ] [ param-b <Xdsl::PboParamB> ]
```

Command Parameters

Parameter	Type	Description
[no] equal-fext	Parameter type: <Xdsl::EqualFextUpstreamParam> Format: - pbo equal fext upstream - unit: 0.1 dB - range: [0,18...630]	<i>optional parameter with default value: 0L</i> equal fext upstream param
param-a	Parameter type: <Xdsl::PboParamA> Format:	<i>optional parameter</i> parameter A value

9 xDSL Configuration Commands

Parameter	Type	Description
	- pbo param A - unit: 0.01 dBm/Hz - range: [4000...8095]	
param-b	Parameter type: <Xdsl::PboParamB> Format: - pbo param B - unit: 0.01 dBm/Hz - range: [0...4095]	<i>optional parameter</i> parameter B value

9.21 xDSL DPBO Profile Configuration Command

Command Description

Downstream power back off profile to configure the modem for a physical line.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ( no dpbo-profile (index) ) | ( dpbo-profile (index) name <AsamProfileName> [ no es-elect-length
| es-elect-length <Xdsl::ElectricalLength> ] [ no es-cable-model-a | es-cable-model-a <Xdsl::CableModelA> ] [ no
es-cable-model-b | es-cable-model-b <Xdsl::CableModelB> ] [ no es-cable-model-c | es-cable-model-c
<Xdsl::CableModelC> ] [ no min-usable-signal | min-usable-signal <Xdsl::MinUsableSignalLevel> ] [ no
min-frequency | min-frequency <Xdsl::MinFrequency> ] [ no max-frequency | max-frequency
<Xdsl::MaxFrequency> ] [ no rs-elect-length | rs-elect-length <Xdsl::RemoteSideElectricalLength> ] [ no
muf-control | muf-control <Xdsl::MaxUsableFrequencyControl> ] [ no offset | offset <Xdsl::DpboOffset> ] [ no
modification | modification <Xdsl::ModifyStatus> ] [ [ no ] active ] )
```

Command Parameters

Table 9.21-1 "xDSL DPBO Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...50]	index of profile

Table 9.21-2 "xDSL DPBO Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	<i>mandatory parameter</i> name of profile
[no] es-elect-length	Parameter type: <Xdsl::ElectricalLength> Format: - electrical length (1/10 * electrical-length) - unit: 0.1 dB - range: [0...2559]	<i>optional parameter with default value: 0L</i> exchange side electrical length
[no] es-cable-model-a	Parameter type: <Xdsl::CableModelA> Format: - cable model param (2 [^] -8 * cable-model) - unit: 2 [^] -8 - range: [-256...384]	<i>optional parameter with default value: 0L</i> cable model a
[no] es-cable-model-b	Parameter type: <Xdsl::CableModelB>	<i>optional parameter with default</i>

9 xDSL Configuration Commands

Parameter	Type	Description
	Format: - cable model param ($2^{-8} * \text{cable-model}$) - unit: $2^{-8} \text{ Hz}^{-0.5}$ - range: [-256...384]	<i>value: 0L</i> cable model b
[no] es-cable-model-c	Parameter type: <Xdsl::CableModelC> Format: - cable model param ($2^{-8} * \text{cable-model}$) - unit: 2^{-8} Hz^{-1} - range: [-256...384]	<i>optional parameter with default value: 0L</i> cable model c
[no] min-usable-signal	Parameter type: <Xdsl::MinUsableSignalLevel> Format: - minimum usable signal ($1/10 * \text{min-usable-signal}$) - unit: 0.1 dB - range: [-1400...0]	<i>optional parameter with default value: -1275L</i> minimal usable signal level
[no] min-frequency	Parameter type: <Xdsl::MinFrequency> Format: - minimum frequency - unit: kHz - range: [0...35324]	<i>optional parameter with default value: 0L</i> min frequency
[no] max-frequency	Parameter type: <Xdsl::MaxFrequency> Format: - maximum frequency - unit: kHz - range: [0...35324]	<i>optional parameter with default value: 30000L</i> max frequency
[no] rs-elect-length	Parameter type: <Xdsl::RemoteSideElectricalLength> Format: - remote side electrical length ($1/100 * \text{rs-elect-length}$) - unit: 0.01 dB - range: [0...25599]	<i>optional parameter with default value: 0L</i> remote side electrical length
[no] muf-control	Parameter type: <Xdsl::MaxUsableFrequencyControl> Format: - maximum usable frequency ($1/10 * \text{muf-control}$) - unit: 0.1 dB - range: [0...2559,3000]	<i>optional parameter with default value: 3000L</i> maximal usable frequency
[no] offset	Parameter type: <Xdsl::DpboOffset> Format: - dpbo offset ($1/10 * \text{offset}$) - unit: 0.1 dB - range: [-2560...2559]	<i>optional parameter with default value: 0L</i> offset
[no] modification	Parameter type: <Xdsl::ModifyStatus> Format: (start cancel complete) Possible values: - start : to start modifying the profile - cancel : to cancel the modifications done - complete : to complete the modifications	<i>optional parameter with default value: "complete"</i> modify the profile
[no] active	Parameter type: boolean	<i>optional parameter</i> to activate the profile

9.22 xDSL DPBO Mode Independent Custom PSD Mask Configuration Command

Command Description

This command specifies PSD breakpoints of DPBO Mode Independent Custom PSD Mask. A number of 2 to 32 PSD breakpoints can be specified. This parameter matches the PSDMASKds parameter described in ITU-T G.997.1 This set of breakpoints may contain two subsets :

The first sub-set defines the DPBO Custom PSD Mask. It matches the DPBOPSDMASKds parameter described in ITU-T G.997.1 The second sub-set (if any), defines the DPBO Minimum Override Mask. It matches the DPBOLFO parameter described in ITU-T G.997.1 The successive PSD points of each sub-set must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

The second sub-set starts at the first breakpoint whose frequency is lower than the frequency of the previous breakpoint.

Only PSD values within the standard range from -95 to 0 dBm/Hz are guaranteed.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl dpbo-profile (index) micpsd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::DpboFrequency> ] [ no psd | psd <Xdsl::DpboCustomPsd> ]
```

Command Parameters

Table 9.22-1 "xDSL DPBO Mode Independent Custom PSD Mask Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...50]	index of profile
(psd-point)	Format: - psd point - range: [1...32]	psd point

Table 9.22-2 "xDSL DPBO Mode Independent Custom PSD Mask Configuration Command" Command Parameters

9 xDSL Configuration Commands

Parameter	Type	Description
[no] frequency	Parameter type: <Xdsl::DpboFrequency> Format: - frequency - unit: khz - range: [0...35324]	<i>optional parameter with default value: 0L</i> psd frequency
[no] psd	Parameter type: <Xdsl::DpboCustomPsd> Format: - psd level (-0.1 * PSD-level) - unit: -0.1*dBm/Hz - range: [0...1275]	<i>optional parameter with default value: 0L</i> psd level

9.23 xDSL DPBO Exchange PSD Mask Configuration Command

Command Description

This command specifies the Assumed Exchange PSD mask to be protected by the DPBO shaping mechanism at the remote flexibility point. This parameter matches the DPBOEPSD parameter described in ITU-T G.997.1. A number of 2 to 16 PSD points can be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

Only PSD values within the standard range from -95 to 0 dBm/Hz are guaranteed.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

User Level

The command can be accessed by operators with `xdsl` privileges, and executed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> configure xsdl dpbo-profile (index) epsd-pt-down (psd-point) [ no frequency | frequency <Xdsl::DpboFrequency> ] [ no psd | psd <Xdsl::DpboExchangePsd> ]
```

Command Parameters

Parameter	Type	Description
	- unit: -0.1*dBm/Hz - range: [0...1275]	

9.24 xDSL RTX Profile Configuration Command

Command Description

This command allows the operator to configure the RTX profile which can be used to configure the modem for a physical Line

RTX downstream/upstream parameters will have effect, only when the retransmission feature in downstream/upstream is not "forbidden" on the line

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ( no rtx-profile (index) ) | ( rtx-profile (index) name <AsamProfileName> [ version
<SignedInteger> ] [ no rtx-mode-dn | rtx-mode-dn <Xdsl::RtxMode> ] [ no rtx-mode-up | rtx-mode-up
<Xdsl::RtxMode> ] [ no min-exp-thrpt-dn | min-exp-thrpt-dn <Xdsl::BitRate> ] [ no min-exp-thrpt-up |
min-exp-thrpt-up <Xdsl::BitRate> ] [ no plan-exp-thrpt-dn | plan-exp-thrpt-dn <Xdsl::BitRate> ] [ no
plan-exp-thrpt-up | plan-exp-thrpt-up <Xdsl::BitRate> ] [ no max-exp-thrpt-dn | max-exp-thrpt-dn <Xdsl::BitRate>
] [ no max-exp-thrpt-up | max-exp-thrpt-up <Xdsl::BitRate> ] [ no max-net-rate-dn | max-net-rate-dn
<Xdsl::BitRate> ] [ no max-net-rate-up | max-net-rate-up <Xdsl::BitRate> ] [ no min-delay-dn | min-delay-dn
<Xdsl::RtxMinDelay> ] [ no min-delay-up | min-delay-up <Xdsl::RtxMinDelay> ] [ no max-delay-dn |
max-delay-dn <Xdsl::RtxMaxDelay> ] [ no max-delay-up | max-delay-up <Xdsl::RtxMaxDelay> ] [ no

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...1024]	index of the profile

Table 9.24-2 "xDSL RTX Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName>	mandatory parameter

9 xDSL Configuration Commands

Parameter	Type	Description
	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	profile name
version	Parameter type: <SignedInteger> Format: - a signed integer	<i>optional parameter</i> version maintained by manager, usually 1 for new profile
[no] rtx-mode-dn	Parameter type: <Xdsl::RtxMode> Format: (forbidden preferred forced testmode) Possible values: - forbidden : retransmission forbidden in down/upstream - preferred : retransmission preferred in down/upstream - forced : retransmission forced in down/upstream - testmode : retransmission testmode in down/upstream	<i>optional parameter with default value: "preferred"</i> retransmission mode in downstream
[no] rtx-mode-up	Parameter type: <Xdsl::RtxMode> Format: (forbidden preferred forced testmode) Possible values: - forbidden : retransmission forbidden in down/upstream - preferred : retransmission preferred in down/upstream - forced : retransmission forced in down/upstream - testmode : retransmission testmode in down/upstream	<i>optional parameter with default value: "preferred"</i> retransmission mode in upstream
[no] min-exp-thrpt-dn	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 64</i> minimum expected throughput for downstream direction
[no] min-exp-thrpt-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 64</i> minimum expected throughput for upstream direction
[no] plan-exp-thrpt-dn	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 128</i> planned expected throughput for downstream direction
[no] plan-exp-thrpt-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 128</i> planned expected throughput for upstream direction
[no] max-exp-thrpt-dn	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 262143</i> maximum expected throughput for downstream direction
[no] max-exp-thrpt-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value	<i>optional parameter with default value: 262143</i> maximum expected throughput

Parameter	Type	Description
	- unit: kbps - range: [0...2147483647]	for upstream direction
[no] max-net-rate-dn	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 262143</i> maximum net data rate for downstream direction
[no] max-net-rate-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 262143</i> maximum net data rate for upstream direction
[no] min-delay-dn	Parameter type: <Xdsl::RtxMinDelay> Format: - a delay time period - unit: msec - range: [0...63]	<i>optional parameter with default value: 0</i> minimum instantaneous delay allowed (due to the effect of retransmission) for downstream direction
[no] min-delay-up	Parameter type: <Xdsl::RtxMinDelay> Format: - a delay time period - unit: msec - range: [0...63]	<i>optional parameter with default value: 0</i> minimum instantaneous delay allowed (due to the effect of retransmission) for upstream direction
[no] max-delay-dn	Parameter type: <Xdsl::RtxMaxDelay> Format: - a delay time period - unit: msec - range: [2...63]	<i>optional parameter with default value: 12</i> maximum instantaneous delay allowed (due to the effect of retransmission) for downstream direction Special value 0 means no delay bounds
[no] max-delay-up	Parameter type: <Xdsl::RtxMaxDelay> Format: - a delay time period - unit: msec - range: [2...63]	<i>optional parameter with default value: 12</i> maximum instantaneous delay allowed (due to the effect of retransmission) for upstream direction Special value 0 means no delay bounds
[no] min-inp-shine-dn	Parameter type: <Xdsl::ShineImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [0...63]	<i>optional parameter with default value: 8</i> minimum impulse noise protection against shine for downstream direction
[no] min-inp-shine-up	Parameter type: <Xdsl::ShineImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [0...63]	<i>optional parameter with default value: 8</i> minimum impulse noise protection against shine for upstream direction
[no] min-inp-rein-dn	Parameter type: <Xdsl::ReinImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [0...7]	<i>optional parameter with default value: 0</i> minimum impulse noise protection against rein for downstream direction
[no] min-inp-rein-up	Parameter type: <Xdsl::ReinImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols	<i>optional parameter with default value: 0</i> minimum impulse noise protection against rein for

9 xDSL Configuration Commands

Parameter	Type	Description
	- range: [0...7]	upstream direction
[no] min-inp8-shine-dn	Parameter type: <Xdsl::ShineImpNoiseProtection8> Format: - minimum impulse noise protection for 8.625 khz tone spacing - unit: DMT symbols - range: [0...127]	<i>optional parameter with default value: 16</i> minimum impulse noise protection against shine for downstream direction for 8.625 khz tone spacing
[no] min-inp8-shine-up	Parameter type: <Xdsl::ShineImpNoiseProtection8> Format: - minimum impulse noise protection for 8.625 khz tone spacing - unit: DMT symbols - range: [0...127]	<i>optional parameter with default value: 16</i> minimum impulse noise protection against shine for upstream direction for 8.625 khz tone spacing
[no] min-inp8-rein-dn	Parameter type: <Xdsl::ReinImpNoiseProtection8> Format: - minimum impulse noise protection for 8.625 khz tone spacing - unit: DMT symbols - range: [0...13]	<i>optional parameter with default value: 0</i> minimum impulse noise protection against rein for downstream direction for 8.625 khz tone spacing
[no] min-inp8-rein-up	Parameter type: <Xdsl::ReinImpNoiseProtection8> Format: - minimum impulse noise protection for 8.625 khz tone spacing - unit: DMT symbols - range: [0...13]	<i>optional parameter with default value: 0</i> minimum impulse noise protection against rein for upstream direction for 8.625 khz tone spacing
[no] int-arr-time-dn	Parameter type: <Xdsl::RtxInterArrivalTime> Format: (derivedfrom100hz derivedfrom120hz) Possible values: - derivedfrom100hz : inter-arrival time derived from 100hz - derivedfrom120hz : inter-arrival time derived from 120hz	<i>optional parameter with default value: "derivedfrom100hz"</i> assumed inter-arrival time for rein protection for downstream direction
[no] int-arr-time-up	Parameter type: <Xdsl::RtxInterArrivalTime> Format: (derivedfrom100hz derivedfrom120hz) Possible values: - derivedfrom100hz : inter-arrival time derived from 100hz - derivedfrom120hz : inter-arrival time derived from 120hz	<i>optional parameter with default value: "derivedfrom100hz"</i> assumed inter-arrival time for rein protection for upstream direction
[no] shine-ratio-dn	Parameter type: <Xdsl::RtxShineRatio> Format: - shine ratio - unit: 1/1000 - range: [0...100]	<i>optional parameter with default value: 10</i> shine ratio for downstream direction
[no] shine-ratio-up	Parameter type: <Xdsl::RtxShineRatio> Format: - shine ratio - unit: 1/1000 - range: [0...100]	<i>optional parameter with default value: 10</i> shine ratio for upstream direction
[no] leftr-thresh-dn	Parameter type: <Xdsl::RtxLeftrThreshold> Format: - near-end defect threshold - unit: 1/100 - range: [0,1...99]	<i>optional parameter with default value: 0</i> threshold for declaring a near-end defect in downstream direction
[no] leftr-thresh-up	Parameter type: <Xdsl::RtxLeftrThreshold> Format: - near-end defect threshold	<i>optional parameter with default value: 0</i> threshold for declaring a near-end

Parameter	Type	Description
	- unit: 1/100 - range: [0,1...99]	defect in upstream direction
[no] modification	Parameter type: <Xdsl::RtxModifyStatus> Format: (start cancel complete) Possible values: - start : enable profile modifications - cancel : stop profile modifications and cancel the changes done - complete : activate the changes and disable profile modifications (other than name, version)	<i>optional parameter with default value: "complete"</i> profile modification status of an already created profile
[no] active	Parameter type: boolean	<i>optional parameter</i> to activate the profile

9.25 xDSL Vectoring Profile Configuration Command

Command Description

This command allows the operator to configure the vectoring profile which can be used for far end crosstalk cancellation. The profile contains vectoring related parameters of the modem.

band-control-up/dn : are the values pairs of begin- and end-subcarriers. Maximum 8 bands can be specified. The successive subcarriers must have increasing ($>/=$) values. Spectrum bands can be controlled per direction. When a specified spectrum band overlaps both directions, the actual band control will be restricted to the configured bandplan for the specified direction.

By default, the whole spectrum shall be used for crosstalk cancellation.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ( no vect-profile (index) ) | ( vect-profile (index) name <AsamProfileName> [ version
<SignedInteger> ] [ no fext-cancel-up | fext-cancel-up <Xdsl::VectEnable> ] [ no fext-cancel-dn | fext-cancel-dn
<Xdsl::VectEnable> ] [ [ no ] leg-can-dn-m1 ] [ [ no ] leg-can-dn-m2 ] [ [ no ] dis-gvect-cpe ] [ [ no ]
gvecfriend-cpe ] [ [ no ] gvecfriend-dn-cpe ] [ [ no ] legacy-cpe ] [ no band-control-up | band-control-up
<Xdsl::VectBandControl> ] [ no band-control-dn | band-control-dn <Xdsl::VectBandControl> ] [ no
vect-leav-thresh | vect-leav-thresh <Xdsl::VectLeavThresh> ] [ no vect-feat-bitmap | vect-feat-bitmap
<Xdsl::VectFeatValue> ] [ [ no ] legacy-upbo ] [ no modification | modification <Xdsl::RtxModifyStatus> ] [ [ no ]
active ] )
```

Command Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...25]	index of the profile

Table 9.25-2 "xDSL Vectoring Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	<i>mandatory parameter</i> profile name
version	Parameter type: <SignedInteger>	<i>optional parameter</i>

Parameter	Type	Description
	Format: - a signed integer	version maintained by manager, usually 1 for new profile
[no] fext-cancel-up	Parameter type: <Xdsl::VectEnable> Format: (enable disable full-disable) Possible values: - enable : enable vectoring gain and protection of other vectored lines - disable : disable vectoring gain and enable protection of other vectored lines - full-disable : disable vectoring gain and protection of other vectored lines	<i>optional parameter with default value: "enable"</i> enable/disable far end xtalk cancellation in upstream direction
[no] fext-cancel-dn	Parameter type: <Xdsl::VectEnable> Format: (enable disable full-disable) Possible values: - enable : enable vectoring gain and protection of other vectored lines - disable : disable vectoring gain and enable protection of other vectored lines - full-disable : disable vectoring gain and protection of other vectored lines	<i>optional parameter with default value: "enable"</i> enable/disable far end xtalk cancellation in downstream direction
[no] leg-can-dn-m1	Parameter type: boolean	<i>optional parameter</i> enable method 1
[no] leg-can-dn-m2	Parameter type: boolean	<i>optional parameter</i> enable method 2, cannot be enabled without first enabling method 1
[no] dis-gvect-cpe	Parameter type: boolean	<i>optional parameter</i> disable g.vector capable cpe type
[no] gvecfriend-cpe	Parameter type: boolean	<i>optional parameter</i> full vector friendly cpe type (dn/up)
[no] gvecfriend-dn-cpe	Parameter type: boolean	<i>optional parameter</i> vector friendly cpe type downstream
[no] legacy-cpe	Parameter type: boolean	<i>optional parameter</i> legacy cpe type
[no] band-control-up	Parameter type: <Xdsl::VectBandControl> Format: - specify as start1:stop1:start2:stop2... with max 8 pairs of start:stop subcarriers, incrementing values within the range[0...8191] (variable string) - length: x<=16	<i>optional parameter with default value: ""</i> defines the upstream spectrum in which xtalk cancellation is not allowed
[no] band-control-dn	Parameter type: <Xdsl::VectBandControl> Format: - specify as start1:stop1:start2:stop2... with max 8 pairs of start:stop subcarriers, incrementing values within the range[0...8191] (variable string) - length: x<=16	<i>optional parameter with default value: ""</i> defines the downstream spectrum in which xtalk cancellation is not allowed
[no] vect-leav-thresh	Parameter type: <Xdsl::VectLeavThresh> Format: - specify the disorderly leaving threshold	<i>optional parameter with default value: "8"</i> the time between observed loss of

9 xDSL Configuration Commands

Parameter	Type	Description
	- unit: DMT symbols - range: [0...40000]	US signal and forced cutoff of the DS signal, expressed in DMT symbols
[no] vect-feat-bitmap	Parameter type: <Xdsl::VectFeatValue> Format: - vectoring features - range: [0...4294967295]	<i>optional parameter with default value: 0</i> enable or disable specific vectoring features at line level
[no] legacy-upbo	Parameter type: boolean	<i>optional parameter</i> LegacyUpboProfile usage is allowed when legacy CPE is detected on vectoring line
[no] modification	Parameter type: <Xdsl::RtxModifyStatus> Format: (start cancel complete) Possible values: - start : enable profile modifications - cancel : stop profile modifications and cancel the changes done - complete : activate the changes and disable profile modifications (other than name, version)	<i>optional parameter with default value: "complete"</i> profile modification status of an already created profile
[no] active	Parameter type: boolean	<i>optional parameter</i> to activate the profile

9.26 xDSL Sos Profile Configuration Command

Command Description

This command allows the operator to configure the SOS profile, which can be used to configure the modem for a physical line.

User Level

The command can be accessed by operators with *xdsl* privileges, and executed by operators with *xdsl* privileges.

Command Syntax

The command has the following syntax:

```
> configure xsdl ( no sos-profile (index) ) | ( sos-profile (index) name <AsamProfileName> [ version
<SignedInteger> ] [ no sos-time-down | sos-time-down <Xdsl::XdslSosTime> ] [ no sos-time-up | sos-time-up
<Xdsl::XdslSosTime> ] [ no sos-ntones-down | sos-ntones-down <Xdsl::SosTones> ] [ no sos-ntones-up |
sos-ntones-up <Xdsl::SosTones> ] [ no sos-crc-down | sos-crc-down <Xdsl::SosCRC> ] [ no sos-crc-up | sos-crc-up
<Xdsl::SosCRC> ] [ no max-sos-down | max-sos-down <Xdsl::MaxSOS> ] [ no max-sos-up | max-sos-up
<Xdsl::MaxSOS> ] [ no snrmoffset-roc-dn | snrmoffset-roc-dn <Xdsl::SosSnrmRoc> ] [ no snrmoffset-roc-up |
snrmoffset-roc-up <Xdsl::SosSnrmRoc> ] [ no min-inp-roc-down | min-inp-roc-down <Xdsl::SosMinInpRoc> ] [
no min-inp-roc-up | min-inp-roc-up <Xdsl::SosMinInpRoc> ] [ no roc-mode-down | roc-mode-down
<Xdsl::RocMode> ] [ no roc-mode-up | roc-mode-up <Xdsl::RocMode> ] [ no modification | modification
<Xdsl::ModifyStatus> ] [ [ no ] active ] )
```

Table 9.26-1 "xDSL Sos Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...25]	index of the profile

Table 9.26-2 "xDSL Sos Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	<i>mandatory parameter</i> profile name
version	Parameter type: <SignedInteger> Format: - a signed integer	<i>optional parameter</i> version maintained by manager, usually 1 for new profile
[no] sos-time-down	Parameter type: <Xdsl::XdslSosTime> Format: - Time window after which SOS is triggered. - unit: 64ms - range: [0...255]	<i>optional parameter with default value: 0</i> Time window after which SOS is triggered for the downstream direction. Special value '0'

9 xDSL Configuration Commands

Parameter	Type	Description
		indicates SOS triggering criteria is disabled and it is vendor discretionary
[no] sos-time-up	Parameter type: <Xdsl::XdslSosTime> Format: - Time window after which SOS is triggered. - unit: 64ms - range: [0...255]	<i>optional parameter with default value: 0</i> Time window after which SOS is triggered for the upstream direction. Special value '0' indicates SOS triggering criteria is disabled and it is vendor discretionary
[no] sos-ntones-down	Parameter type: <Xdsl::SosTones> Format: - Minimum percentage of tones that must be degraded persistently across sos time - unit: percent - range: [0...100]	<i>optional parameter with default value: 0</i> Minimum percentage of tones in downstream that must be degraded persistently across sos-time-down
[no] sos-ntones-up	Parameter type: <Xdsl::SosTones> Format: - Minimum percentage of tones that must be degraded persistently across sos time - unit: percent - range: [0...100]	<i>optional parameter with default value: 0</i> Minimum percentage of tones in upstream that must be degraded persistently across sos-time-up
[no] sos-crc-down	Parameter type: <Xdsl::SosCRC> Format: - Minimum number of normalized CRC anomalies received within the timeframe of sos time - unit: 0.02 - range: [1...65535]	<i>optional parameter with default value: 1</i> Minimum number of normalized CRC anomalies received in downstream within the timeframe of sos-time-down
[no] sos-crc-up	Parameter type: <Xdsl::SosCRC> Format: - Minimum number of normalized CRC anomalies received within the timeframe of sos time - unit: 0.02 - range: [1...65535]	<i>optional parameter with default value: 1</i> Minimum number of normalized CRC anomalies received in upstream within the timeframe of sos-time-up
[no] max-sos-down	Parameter type: <Xdsl::MaxSOS> Format: - Maximum number of times a successful SOS may be performed with in 120 seconds interval. - unit: times - range: [0...15]	<i>optional parameter with default value: 0</i> Maximum number of times a successful SOS in downstream may be performed with in 120 seconds interval. Special value '0' specifies no max limit.
[no] max-sos-up	Parameter type: <Xdsl::MaxSOS> Format: - Maximum number of times a successful SOS may be performed with in 120 seconds interval. - unit: times - range: [0...15]	<i>optional parameter with default value: 0</i> Maximum number of times a successful SOS in upstream may be performed with in 120 seconds interval. Special value '0' specifies no max limit.
[no] snrmoffset-roc-dn	Parameter type: <Xdsl::SosSnrmRoc> Format: - SNR margin offset for ROC channel. - unit: 1/10dB - range: [0...310]	<i>optional parameter with default value: 0</i> SNR margin offset for ROC channel in downstream
[no] snrmoffset-roc-up	Parameter type: <Xdsl::SosSnrmRoc> Format: - SNR margin offset for ROC channel.	<i>optional parameter with default value: 0</i> SNR margin offset for ROC

Parameter	Type	Description
	- unit: 1/10dB - range: [0...310]	channel in upstream
[no] min-inp-roc-down	Parameter type: <Xdsl::SosMinInpRoc> Format: - Minimum Impulse Noise Protection to apply on the ROC channel. - unit: DMT symbols - range: [0...8]	<i>optional parameter with default value: 4</i> Minimum Impulse Noise Protection to apply on the ROC channel in downstream
[no] min-inp-roc-up	Parameter type: <Xdsl::SosMinInpRoc> Format: - Minimum Impulse Noise Protection to apply on the ROC channel. - unit: DMT symbols - range: [0...8]	<i>optional parameter with default value: 4</i> Minimum Impulse Noise Protection to apply on the ROC channel in upstream
[no] roc-mode-down	Parameter type: <Xdsl::RocMode> Format: (allowed forbidden) Possible values: - allowed : ROC channel is allowed to be used for SOS mechanism - forbidden : ROC channel is forbidden to be used for SOS mechanism	<i>optional parameter with default value: "allowed"</i> Robust Overhead Channel (ROC) in downstream is allowed/forbidden to be used for SOS
[no] roc-mode-up	Parameter type: <Xdsl::RocMode> Format: (allowed forbidden) Possible values: - allowed : ROC channel is allowed to be used for SOS mechanism - forbidden : ROC channel is forbidden to be used for SOS mechanism	<i>optional parameter with default value: "allowed"</i> Robust Overhead Channel (ROC) in upstream is allowed/forbidden to be used for SOS
[no] modification	Parameter type: <Xdsl::ModifyStatus> Format: (start cancel complete) Possible values: - start : to start modifying the profile - cancel : to cancel the modifications done - complete : to complete the modifications	<i>optional parameter with default value: "complete"</i> to modify the profile
[no] active	Parameter type: boolean	<i>optional parameter</i> to activate the profile

9.27 xDSL Vectoring Control Entity Profile Configuration Command

Command Description

This command allows the operator to configure the vectoring control entity profile. The profile contains vectoring processing related parameters.

vce-min-par-join: Specifies the supported amount of lines for a group joining, with the intention to avoid impact on active lines. The system should reserve room to guarantee that at least the specified number of lines can join in parallel. At the moment multiple lines are joining, this is achieved by not canceling the same number of disturbers which normally could be canceled in the system.

vce-band-plan: The bandplan needs to cover the widest bandplan up to the highest possible frequency that could be configured via the spectrum profiles to the individual vectored lines. The goal is to force same upstream and downstream band edges for all lines controlled by the vector control entity, except for differences in US0 frequency limits (TypeA, TypeB, TypeM). When changing this parameter, all lines connected to this vectoring control entity need to be re-initialized.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ( no vce-profile (index) ) | ( vce-profile (index) name <AsamProfileName> [ version
<SignedInteger> ] [ no vce-gain-mode | vce-gain-mode <Xdsl::VectGainAchievedMode> ] [ no vce-join-timeout |
vce-join-timeout <Xdsl::VectJoinTime> ] [ no vce-min-par-join | vce-min-par-join <Xdsl::VectMinParallelJoins> ]
[ no vce-hist-pcoder | vce-hist-pcoder <Xdsl::VectHistPrePostCoder> ] [ no vce-band-plan | vce-band-plan
<Xdsl::VectBandPlan> ] [ no vce-max-vect-freq | vce-max-vect-freq <Xdsl::MaxVectFrequencyMode> ] [ no
modification | modification <Xdsl::RtxModifyStatus> ] [ [ no ] active ] )
```

Command Parameters

Table 9.27-1 "xDSL Vectoring Control Entity Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...25]	index of the profile

Table 9.27-2 "xDSL Vectoring Control Entity Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format:	mandatory parameter profile name

Parameter	Type	Description
	- a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	
version	Parameter type: <SignedInteger> Format: - a signed integer	<i>optional parameter</i> version maintained by manager, usually 1 for new profile
[no] vce-gain-mode	Parameter type: <Xdsl::VectGainAchievedMode> Format: (at-init after-reset during-showtime) Possible values: - at-init : gain achieved at init - after-reset : gain achieved in showtime only after board reset, in all other cases gain achieved at init - during-showtime : gain achieved during showtime (tracking)	<i>optional parameter with default value: "at-init"</i> vectoring control entity gain achieved mode
[no] vce-join-timeout	Parameter type: <Xdsl::VectJoinTime> Format: (auto <Xdsl::VectJoinTimeout>) Possible values: - auto : waiting time selected by the system Field type <Xdsl::VectJoinTimeout> - specify the queuing time - unit: sec - range: [0,1...40]	<i>optional parameter with default value: "15"</i> vectoring control entity join timeout
[no] vce-min-par-join	Parameter type: <Xdsl::VectMinParallelJoins> Format: (not-specified <Xdsl::VectParallelJoins>) Possible values: - not-specified : amount of lines for group joining is not specified Field type <Xdsl::VectParallelJoins> - specify the supported amount of lines for a group joining - unit: lines - range: [1...48]	<i>optional parameter with default value: "8"</i> vectoring control entity min parallel joinings
[no] vce-hist-pcoder	Parameter type: <Xdsl::VectHistPrePostCoder> Format: (disable enable1-2 enable2) Possible values: - disable : historical pre-/postcoder disabled - enable1-2 : historical pre-/postcoder enabled in phase1-2 - enable2 : historical pre-/postcoder enabled in phase2	<i>optional parameter with default value: "disable"</i> vectoring control entity historical pre/post coder
[no] vce-band-plan	Parameter type: <Xdsl::VectBandPlan> Format: (annex-a annex-b-997e annex-b-998e annex-b-998ade b998ade17ds35 b998e17ds35 a998ds35 annex-b-hpe)	<i>optional parameter with default value: "annex-b-998ade"</i> vectoring control entity band plan

9 xDSL Configuration Commands

Parameter	Type	Description
	Possible values: - annex-a : ITU-T G.993.2 VDSL2 Annex A (extended) band plan - annex-b-997e : ITU-T G.993.2 VDSL2 Annex B band plan type 997E17 - annex-b-998e : ITU-T G.993.2 VDSL2 Annex B band plan type 998E17 - annex-b-998ade : ITU-T G.993.2 VDSL2 Annex B band plan type 998ADE17 - b998ade17ds35 : ITU-T G.993.2 VDSL2 Annex B band plan type 998ADE35 - b998e17ds35 : ITU-T G.993.2 VDSL2 Annex B band plan type 998E35 - a998ds35 : ITU-T G.993.2 VDSL2 Annex A band plan type 998ds35 - annex-b-hpe : ITU-T G.993.2 VDSL2 Annex B band plan type HPE	
[no] vce-max-vect-freq	Parameter type: <Xdsl::MaxVectFrequencyMode> Format: (max17mhzvectoring max35mhzvectoring) Possible values: - max17mhzvectoring : Vectoring until maximum 17MHz - max35mhzvectoring : Vectoring until maximum 35MHz	<i>optional parameter with default value: "max17mhzvectoring"</i> vectoring control entity maximum vectoring frequency
[no] modification	Parameter type: <Xdsl::RtxModifyStatus> Format: (start cancel complete) Possible values: - start : enable profile modifications - cancel : stop profile modifications and cancel the changes done - complete : activate the changes and disable profile modifications (other than name, version)	<i>optional parameter with default value: "complete"</i> profile modification status of an already created profile
[no] active	Parameter type: boolean	<i>optional parameter to activate the profile</i>

9.28 xDSL Legacy UPBO Profile Configuration

Command

Command Description

This command allows the operator to configure the legacy UPBO profile which can be used to optimize the upstream performance of vectored lines adjacent to non-vectored or ZTV vectored lines with legacy VDSL2 CPE connected. The profile contains upstream power back-off related parameters of the modem used on the line of the legacy modem. This command allows the operator to configure the legacy UPBO profile which can be used to optimize the upstream performance of vectored lines. The profile contains upstream power back-off related parameters of the mode.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ( no leg-upbo-profile (index) ) | ( leg-upbo-profile (index) name <AsamProfileName> [ version
<SignedInteger> ] [ no pbo-mode | pbo-mode <Xdsl::PboModeVdsl> ] [ no rx-psd-shape-up | rx-psd-shape-up
<Xdsl::RxVdsl2PsdShape> ] [ no psd-pbo-e-len-up | psd-pbo-e-len-up <Xdsl::PsdPboElectrLength> ] [ no
equal-fext | equal-fext <Xdsl::EqualFextParam> ] [ no psd-pbo-par-a-up | psd-pbo-par-a-up <Xdsl::ABParamType>
] [ no psd-pbo-par-b-up | psd-pbo-par-b-up <Xdsl::ABParamType> ] [ no modification | modification
<Xdsl::ProfileModifyStatus> ] [ [ no ] active ] )
```

Command Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...4]	index of the profile

Table 9.28-2 "xDSL Legacy UPBO Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	mandatory parameter profile name
version	Parameter type: <SignedInteger> Format: - a signed integer	optional parameter version maintained by manager, usually default value is 1 for new profile
[no] pbo-mode	Parameter type: <Xdsl::PboModeVdsl>	optional parameter with default

9 xDSL Configuration Commands

Parameter	Type	Description
	Format: (pbo-mode-down pbo-mode-up pbo-up-pol-sd pbo-up-pol-us0 pbo-up-pol-pass) Possible values: - pbo-mode-down : upstream power backoff mode OFF - pbo-mode-up : upstream power backoff mode ON - pbo-up-pol-sd : pbo mode ON policing shutdown - pbo-up-pol-us0 : pbo mode ON policing US0 only - pbo-up-pol-pass : pbo mode ON policing passive	<i>value: "pbo-mode-up"</i> upstream power backoff mode
[no] rx-psd-shape-up	Parameter type: <Xdsl::RxVdsl2PsdShape> Format: (ab-param equal-fext) Possible values: - ab-param : AB parameter spectral density shape in upstream - equal-fext : equal fext in upstream	<i>optional parameter with default value: "ab-param"</i> the reference RX PSD shape for upstream
[no] psd-pbo-e-len-up	Parameter type: <Xdsl::PsdPboElectrLength> Format: (estimated <Xdsl::PsdPboLength>) Possible values: - estimated : estimated electrical length Field type <Xdsl::PsdPboLength> - electrical parameter AB range - unit: 1/2 * dB - range: [0...255]	<i>optional parameter with default value: "estimated"</i> the electrical length to be used with the AB parameters
[no] equal-fext	Parameter type: <Xdsl::EqualFextParam> Format: - binary string - length: 10	<i>optional parameter with default value: "00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00"</i> equal fext upstream param
[no] psd-pbo-par-a-up	Parameter type: <Xdsl::ABParamType> Format: - binary string - length: 10	<i>optional parameter with default value: "0f : a0 : 12 : 7a : 15 : 18 : 15 : 18 : 15 : 18"</i> param A value for computing the PSD reference for US PBO
[no] psd-pbo-par-b-up	Parameter type: <Xdsl::ABParamType> Format: - binary string - length: 10	<i>optional parameter with default value: "00 : 00 : 07 : b9 : 06 : 29 : 04 : 35 : 03 : af"</i> param B value for computing the PSD reference for US PBO
[no] modification	Parameter type: <Xdsl::ProfileModifyStatus> Format: (start cancel complete) Possible values: - start : enable profile modifications - cancel : stop profile modifications and cancel the changes done - complete : activate the changes and disable profile modifications (other than name, version)	<i>optional parameter with default value: "complete"</i> profile modification status of an already created profile
[no] active	Parameter type: boolean	<i>optional parameter to activate the profile</i>

9.29 xDSL Board Configuration Command

Command Description

This command allows the operator to configure xdsl parameters related with a specific board.

An already existing Downstream-Power-Back-Off(DPBO)-profile can be attached to a board.

All lines on this board will use this DPBO-profile unless a line-specific DPBO-profile is configured.

To deconfigure the DPBO-profile, it has to be put to 0.

An already existing Vectoring-Control-Entity(VCE)-profile can be attached to a Board-Level-Vectoring(BLV)-LT or to a System-Level-Vectoring(SLV)-VP board. The VCE-profile is applicable for vectoring cancellation of all the physical lines which can be vectored by the board. Note that a physical line can only be vectored if also a vectoring profile has been assigned to the line and vectoring is enabled.

The auto detect functions of the LT-VP connection can be enabled or disabled on SLV LT boards and VP boards.

The vce-capacity-mode is specific for 7363 systems. It only applies to VP boards, not to LT boards.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl board (board-index) [ no dpbo-profile | dpbo-profile <Xdsl::LineDpboProfile> ] [ no vce-profile |
vce-profile <Xdsl::BoardVceProfile> ] [ no vplt-autodiscover | vplt-autodiscover <Xdsl::autoDiscoverState> ] [ no
vce-capacity-mode | vce-capacity-mode <Xdsl::vceCapacityMode> ] [ no leg-upbo-profile | leg-upbo-profile
<Xdsl::BoardLegacyUpboProfile> ] [ no vect-class | vect-class <Xdsl::BoardVectClass> ]
```

Command Parameters

9.30 xDSL Board Vectoring Fallback Configuration Command

Command Description

This command allows the operator to configure per board the profile selection in case the line enters the vectoring fallback mode.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl board (board-index) vect-fallback [ [ no ] fb-vplt-com-fail ] [ [ no ] fb-cpe-cap-mism ] [ [ no ] fb-conf-not-feas ] [ no spectrum-profile | spectrum-profile <Xdsl::VectFbSpectrumProfile> ] [ no service-profile | service-profile <Xdsl::VectFbServiceProfile> ] [ no dpbo-profile | dpbo-profile <Xdsl::VectFbDpboProfile> ] [ no rtx-profile | rtx-profile <Xdsl::VectFbRtxProfile> ] [ no sos-profile | sos-profile <Xdsl::VectFbSosProfile> ]
```

Command Parameters

9.31 Xdsl Auto Port Reset Configurations

Command Description

This command allows the operator to configure xdsl parameters related to Automatic Port Reset.

Modification of the parameter values is not allowed when the feature is enabled.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl board (board-index) auto-port-reset [ no max-retry-attempt | max-retry-attempt <Xdsl::maxRetry>
] [ no reset-interval | reset-interval <Xdsl::IntervalTime> ] [ no reset-threshold | reset-threshold
<Xdsl::ThresholdTotal> ]
```

Command Parameters

Table 9.31-1 "Xdsl Auto Port Reset Configurations" Resource Parameters

Resource Identifier	Type	Description
(board-index)	Format: (ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Possible values: - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	board index

Table 9.31-2 "Xdsl Auto Port Reset Configurations" Command Parameters

Parameter	Type	Description
[no] max-retry-attempt	Parameter type: <Xdsl::maxRetry> Format: - maximum reset count for continuous automatic reset attempts - range: [1...5]	<i>optional parameter with default value: "2"</i> max number of continuous automatic port reset attempts
[no] reset-interval	Parameter type: <Xdsl::IntervalTime> Format: - unit for time in terms of 1 min - unit: min - range: [1...1440]	<i>optional parameter with default value: "3"</i> wait time between two consecutive resets
[no] reset-threshold	Parameter type: <Xdsl::ThresholdTotal>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: - maximum number of total auto-port-resets - range: [1...100]	<i>value: "20"</i> threshold for the automatic port reset attempts

9.32 xDSL Vectoring Processing Board Configuration Command

Command Description

This command allows the operator to configure which LTs should be connected to the vp-board. The lines on these LTs are expected to be vectored.

Configuring the links between a vp-board and its LTs is only allowed as long as the VPLT auto discovery feature is disabled for the vp-board.

Configuring is not allowed for 7363 systems.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl vp-board (board-index) vp-link <Xdsl::VectVpLink> [ no lt-expect | lt-expect <Xdsl::LsmBoardOrZero> ]
```

Command Parameters

Table 9.32-1 "xDSL Vectoring Processing Board Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(board-index)	Format: (ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Possible values: - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	vp board index
vp-link	Parameter type: <Xdsl::VectVpLink> Format: - specifies the vp-link or the soft-link on the vp-board - range: [1...16]	the link on the vp board

Table 9.32-2 "xDSL Vectoring Processing Board Configuration Command" Command Parameters

Parameter	Type	Description
[no] lt-expect	Parameter type: <Xdsl::LsmBoardOrZero> Format:	optional parameter with default value: "none"

Parameter	Type	Description
	(<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> none) Possible values: - none : lt board not specified Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	expected lt board slot index

9.33 xDSL Line Configuration Command

Command Description

This command allows the operator to configure the xDSL line. One should associate a spectrum, a service, a downstream power backoff and a retransmission profile to the line.

In case the operator wants to have VDSL2 crosstalk cancellation, a non-null xDSL Vectoring profile should be associated to a VDSL2 line. Any vectoring profile assigned to a line running in ADSLx mode will be ignored. The vectoring license counter is incremented when a xDSL Vectoring profile is assigned to an installed xdsl line, independent of its running mode ADSLx or VDSLx.

The operator can restrict a line to come up in specific ADSLx/VDSLx opmodes using opmode mask option in spectrum-profile.

Note: VDSL2 Vectoring Control Engine parameters should be configured via a vce-profile. The vce-profile is applicable for VDSL2 vectoring cancellation of all the physical lines which can be vectored by the board to which the vce-profile has been attached.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl line (if-index) [ no service-profile | service-profile <Xdsl::LineServiceProfile> ] [ no
spectrum-profile | spectrum-profile <Xdsl::LineSpectrumProfile> ] [ no dpbo-profile | dpbo-profile
<Xdsl::LineDpboProfile> ] [ no rtx-profile | rtx-profile <Xdsl::LineRtxProfile> ] [ no vect-profile | vect-profile
<Xdsl::LineVectProfile> ] [ no sos-profile | sos-profile <Xdsl::LineSosProfile> ] [ [ no ] ansi-t1413 ] [ [ no ]
etsi-dts ] [ [ no ] g992-1-a ] [ [ no ] g992-1-b ] [ [ no ] g992-2-a ] [ [ no ] g992-3-a ] [ [ no ] g992-3-b ] [ [ no ]

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	interface index of the line

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	

Table 9.33-2 "xDSL Line Configuration Command" Command Parameters

Parameter	Type	Description
[no] service-profile	Parameter type: <Xdsl::LineServiceProfile> Format: (none <Xdsl::SrvcProfilePointer> name : <PrintableString>) Possible values: - none : no profile to associate - name : profile name Field type <Xdsl::SrvcProfilePointer> - profile index - range: [0...1024] Field type <PrintableString> - printable string	<i>optional parameter with default value: "none"</i> ADSLx/VDSLx service profile to be configured on this line
[no] spectrum-profile	Parameter type: <Xdsl::LineSpectrumProfile> Format: (none <Xdsl::ProfilePointer> name : <PrintableString>) Possible values: - none : no profile to associate - name : profile name Field type <Xdsl::ProfilePointer> - profile index - range: [0...256] Field type <PrintableString> - printable string	<i>optional parameter with default value: "none"</i> ADSLx/VDSLx spectrum profile to be configured on this line
[no] dpbo-profile	Parameter type: <Xdsl::LineDpboProfile> Format: (none <Xdsl::DpboProfilePointer> name : <PrintableString>) Possible values: - none : no profile to associate - name : profile name Field type <Xdsl::DpboProfilePointer> - profile index - range: [0...50] Field type <PrintableString> - printable string	<i>optional parameter with default value: "none"</i> ADSLx/VDSLx dpbo profile to be configured on this line
[no] rtx-profile	Parameter type: <Xdsl::LineRtxProfile> Format: (none <Xdsl::RtxProfilePointer> name : <PrintableString>) Possible values: - none : no profile to associate - name : profile name Field type <Xdsl::RtxProfilePointer> - profile index - range: [0...1024]	<i>optional parameter with default value: "none"</i> ADSLx/VDSLx rtx profile to be configured on this line.

9 xDSL Configuration Commands

Parameter	Type	Description
	Field type <PrintableString> - printable string	
[no] vect-profile	Parameter type: <Xdsl::LineVectProfile> Format: (none <Xdsl::VectProfilePointer> name : <PrintableString>) Possible values: - none : no profile to associate - name : profile name Field type <Xdsl::VectProfilePointer> - profile index - range: [0...25] Field type <PrintableString> - printable string	<i>optional parameter with default value: "none"</i> VDSL2 vectoring profile to be configured on this line.
[no] sos-profile	Parameter type: <Xdsl::LineSosProfile> Format: (none <Xdsl::SosProfilePointer> name : <PrintableString>) Possible values: - none : no profile to associate - name : profile name Field type <Xdsl::SosProfilePointer> - profile index - range: [0...25] Field type <PrintableString> - printable string	<i>optional parameter with default value: "none"</i> sos profile to be configured on this line
[no] ansi-t1413	Parameter type: boolean	<i>optional parameter</i> ANSI T1.413-1998
[no] etsi-dts	Parameter type: boolean	<i>optional parameter</i> ETSI DTS/TM06006
[no] g992-1-a	Parameter type: boolean	<i>optional parameter</i> G.992.1 POTS non-overlapped spectrum
[no] g992-1-b	Parameter type: boolean	<i>optional parameter</i> G.992.1 ISDN non-overlapped spectrum
[no] g992-2-a	Parameter type: boolean	<i>optional parameter</i> G.992.2 POTS non-overlapped spectrum
[no] g992-3-a	Parameter type: boolean	<i>optional parameter</i> G.992.3 POTS non-overlapped spectrum
[no] g992-3-b	Parameter type: boolean	<i>optional parameter</i> G.992.3 ISDN non-overlapped spectrum
[no] g992-3-aj	Parameter type: boolean	<i>optional parameter</i> G.992.3 all digital mode non-overlapped spectrum
[no] g992-3-l1	Parameter type: boolean	<i>optional parameter</i> G.992.3 POTS non-overlapped spectrum US mask 1
[no] g992-3-l2	Parameter type: boolean	<i>optional parameter</i> G.992.3 POTS non-overlapped spectrum US mask 2
[no] g992-3-am	Parameter type: boolean	<i>optional parameter</i>

Parameter	Type	Description
		G.992.3 extended POTS with non-overlapped spectrum
[no] g992-5-a	Parameter type: boolean	<i>optional parameter</i> G.992.5 POTS non-overlapped spectrum
[no] g992-5-b	Parameter type: boolean	<i>optional parameter</i> G.992.5 ISDN non-overlapped spectrum
[no] ansi-t1.424	Parameter type: boolean	<i>optional parameter</i> ANSI T1.424
[no] etsi-ts	Parameter type: boolean	<i>optional parameter</i> ETSI TS
[no] itu-g993-1	Parameter type: boolean	<i>optional parameter</i> ITU G993-1
[no] ieee-802.3ah	Parameter type: boolean	<i>optional parameter</i> IEEE 802.3ah
[no] g992-5-aj	Parameter type: boolean	<i>optional parameter</i> G.992.5 all digital mode non-overlapped spectrum
[no] g992-5-am	Parameter type: boolean	<i>optional parameter</i> G.992.5 extended POTS non-overlapped spectrum
[no] g993-2-8a	Parameter type: boolean	<i>optional parameter</i> G.993.2_8A VDSL-2 with profile 8A
[no] g993-2-8b	Parameter type: boolean	<i>optional parameter</i> G.993.2_8B VDSL-2 with profile 8B
[no] g993-2-8c	Parameter type: boolean	<i>optional parameter</i> G.993.2_8C VDSL-2 with profile 8C
[no] g993-2-8d	Parameter type: boolean	<i>optional parameter</i> G.993.2_8D VDSL-2 with profile 8D
[no] g993-2-12a	Parameter type: boolean	<i>optional parameter</i> G.993.2_12A VDSL-2 with profile 12A
[no] g993-2-12b	Parameter type: boolean	<i>optional parameter</i> G.993.2_12B VDSL-2 with profile 12B
[no] g993-2-17a	Parameter type: boolean	<i>optional parameter</i> G.993.2_17A VDSL-2 with profile 17A
[no] g993-2-30a	Parameter type: boolean	<i>optional parameter</i> G.993.2_30A VDSL-2 with profile 30A
[no] g993-2-35b	Parameter type: boolean	<i>optional parameter</i> G.993.2_35B VDSL-2 with profile 35B
[no] carrier-data-mode	Parameter type: <Xdsl::CarrierDataMode> Format: (off on on-init) Possible values: - off : disable the collection - on : enable the collection	<i>optional parameter with default value: "off"</i> carrier data measurement collection only applies to ADSLx/VDSLx. In G.fast mode the collection is fixed enabled.

9 xDSL Configuration Commands

Parameter	Type	Description
	- on-init : enable and re-initialize the line	
[no] admin-up	Parameter type: boolean	<i>optional parameter</i> set the admin-state of the line to up
bonding-mode	Parameter type: <Xdsl::BondingMode> Format: (native atm-bonding bonding) Possible values: - native : (deprecated)native mode for channel-1 - atm-bonding : (deprecated)atm bonding mode for channel-1 obsolete alternative replaced by bonding - bonding : (deprecated)bonding mode for channel-1	<i>obsolete parameter that will be ignored</i> channel-1 bonding mode
[no] transfer-mode	Parameter type: <Xdsl::TpsTcMode> Format: (atm ptm system-default) Possible values: - atm : atm mode - ptm : ptm mode - system-default : determined by the system, based on board type	<i>optional parameter with default value: "system-default"</i> tps tc mode
[no] imp-noise-sensor	Parameter type: boolean	<i>optional parameter</i> disable impulse noise monitoring on this xdsl line
[no] vect-qln-mode	Parameter type: <Xdsl::QLNmode> Format: (without-cancel with-cancel) Possible values: - without-cancel : without cancellation - with-cancel : with cancellation	<i>optional parameter with default value: "without-cancel"</i> specify the quiet line noise reporting mode
[no] auto-switch	Parameter type: boolean	<i>optional parameter</i> enable auto-switch feature on xdsl line
[no] vect-fallback	Parameter type: <Xdsl::LineFallbackMode> Format: (auto forced) Possible values: - auto : disable forced vectoring fallback on this xdsl line - forced : enable forced vectoring fallback on this xdsl line	<i>optional parameter with default value: "auto"</i> enable/disable forced vectoring fallback on this xdsl line

Command Output

Table 9.33-3 "xDSL Line Configuration Command" Display parameters

Specific Information		
name	Type	Description
service-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the service profile <i>This element is only shown in detail mode.</i>
spectrum-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the spectrum profile <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
dpbo-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the dpbo profile <i>This element is only shown in detail mode.</i>
rtx-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the rtx profile <i>This element is only shown in detail mode.</i>
vect-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the vectoring profile <i>This element is only shown in detail mode.</i>
override-state	Parameter type: <Xdsl::OverrideState> (not-created created-no-overrules created-overrules) Possible values: - not-created : not created - created-no-overrules : created no overrules - created-overrules : created overrules	indicates whether an override record is configured and if it are not all 'no-overrules' <i>This element is only shown in detail mode.</i>
sos-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the sos profile <i>This element is only shown in detail mode.</i>

9.34 xDSL Line TCA Threshold Configuration Command

Command Description

This command allows the operator to configure the Threshold Crossing Alert (TCA) thresholds. The configuration is specific per xdsl line.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl line (if-index) tca-line-threshold [ [ no ] enable ] [ no es-nearend | es-nearend
<Xdsl::IntervalTcaThreshold> ] [ no ses-nearend | ses-nearend <Xdsl::IntervalTcaThreshold> ] [ no uas-nearend |
uas-nearend <Xdsl::IntervalTcaThreshold> ] [ no leftr-nearend | leftr-nearend <Xdsl::IntervalTcaThreshold> ] [ no
leftr-day-nearend | leftr-day-nearend <Xdsl::DayTcaThreshold> ] [ no es-day-nearend | es-day-nearend
<Xdsl::DayTcaThreshold> ] [ no ses-day-nearend | ses-day-nearend <Xdsl::DayTcaThreshold> ] [ no
uas-day-nearend | uas-day-nearend <Xdsl::DayTcaThreshold> ] [ no es-farend | es-farend
<Xdsl::IntervalTcaThreshold> ] [ no ses-farend | ses-farend <Xdsl::IntervalTcaThreshold> ] [ no uas-farend |
uas-farend <Xdsl::IntervalTcaThreshold> ] [ no es-day-farend | es-day-farend <Xdsl::DayTcaThreshold> ] [ no
ses-day-farend | ses-day-farend <Xdsl::DayTcaThreshold> ] [ no uas-day-farend | uas-day-farend
<Xdsl::DayTcaThreshold> ] [ no leftr-farend | leftr-farend <Xdsl::IntervalTcaThreshold> ] [ no leftr-day-farend |
leftr-day-farend <Xdsl::DayTcaThreshold> ] [ no reinit | reinit <Xdsl::IntervalReinitTcaThreshold> ] [ no
reinit-day | reinit-day <Xdsl::IntervalDayReinitTcaThreshold> ]
```

Command Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the line

Table 9.34-2 "xDSL Line TCA Threshold Configuration Command" Command Parameters

Parameter	Type	Description
[no] enable	Parameter type: boolean	<i>optional parameter</i> enable the reporting of TCA's for this xDSL line
[no] es-nearend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> errored seconds at the near end
[no] ses-nearend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> severely errored seconds at the near end
[no] uas-nearend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> unavailable seconds at the near end
[no] leftr-nearend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> leftr seconds at the near end
[no] leftr-day-nearend	Parameter type: <Xdsl::DayTcaThreshold> Format: - the tca threshold for a day errored second, 0 - disable - range: [0...86400]	<i>optional parameter with default value: 0</i> leftr seconds at the near end for a day
[no] es-day-nearend	Parameter type: <Xdsl::DayTcaThreshold> Format: - the tca threshold for a day errored second, 0 - disable - range: [0...86400]	<i>optional parameter with default value: 0</i> errored seconds at the near end for a day
[no] ses-day-nearend	Parameter type: <Xdsl::DayTcaThreshold> Format: - the tca threshold for a day errored second, 0 - disable - range: [0...86400]	<i>optional parameter with default value: 0</i> severely errored seconds at the near end for a day
[no] uas-day-nearend	Parameter type: <Xdsl::DayTcaThreshold> Format: - the tca threshold for a day errored second, 0 - disable - range: [0...86400]	<i>optional parameter with default value: 0</i> unavailable seconds at the near end for a day
[no] es-farend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> errored seconds at the far end
[no] ses-farend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> severely errored seconds at the far end
[no] uas-farend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> unavailable seconds at the far end
[no] es-day-farend	Parameter type: <Xdsl::DayTcaThreshold> Format: - the tca threshold for a day errored second, 0 - disable - range: [0...86400]	<i>optional parameter with default value: 0</i> errored seconds at the far end for a day
[no] ses-day-farend	Parameter type: <Xdsl::DayTcaThreshold> Format: - the tca threshold for a day errored second, 0 - disable - range: [0...86400]	<i>optional parameter with default value: 0</i> severely errored seconds at the far end for a day
[no] uas-day-farend	Parameter type: <Xdsl::DayTcaThreshold> Format:	<i>optional parameter with default value: 0</i>

9 xDSL Configuration Commands

Parameter	Type	Description
	- the tca threshold for a day errored second, 0 - disable - range: [0...86400]	unavailable seconds at the far end for a day
[no] leftr-farend	Parameter type: <Xdsl::IntervalTcaThreshold> Format: - the tca threshold for errored second, 0 - disable - range: [0...900]	<i>optional parameter with default value: 0</i> leftr seconds at the far end
[no] leftr-day-farend	Parameter type: <Xdsl::DayTcaThreshold> Format: - the tca threshold for a day errored second, 0 - disable - range: [0...86400]	<i>optional parameter with default value: 0</i> leftr seconds at the far end for a day
[no] reinit	Parameter type: <Xdsl::IntervalReinitTcaThreshold> Format: - a tca threshold for reinit - range: [0...2147483647]	<i>optional parameter with default value: 0</i> reinit threshold for 15 min interval
[no] reinit-day	Parameter type: <Xdsl::IntervalDayReinitTcaThreshold> Format: - a tca threshold for reinit - range: [0...2147483647]	<i>optional parameter with default value: 0</i> reinit threshold for 1 day interval

9.35 xDSL Per Line Override Configuration

Command

Command Description

This command allows the operator to manage part of the DSL OverrideData. The OverrideData parameters give the ability to the operator to override per-line parameters defined in service/spectrum / retransmission profiles.

RTX downstream/upstream parameters will be overruled when the retransmission feature in downstream/upstream is different from "forbidden" value on the line. As long as the RTX downstream/upstream feature has not been enabled, the other RTX downstream/upstream parameters will have no effect on the line.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ( no override-data (if-index) ) | ( override-data (if-index) [ no max-bitrate-down |
max-bitrate-down <Xdsl::OverrideBitRate> ] [ no max-bitrate-up | max-bitrate-up <Xdsl::OverrideBitRate> ] [ no
max-delay-down | max-delay-down <Xdsl::OverrideInterleavingDelay> ] [ no max-delay-up | max-delay-up
<Xdsl::OverrideInterleavingDelay> ] [ no imp-noise-prot-dn | imp-noise-prot-dn
<Xdsl::OverrideImpNoiseProtection> ] [ no imp-noise-prot-up | imp-noise-prot-up
<Xdsl::OverrideImpNoiseProtection> ] [ no trgt-noise-down | trgt-noise-down
<Xdsl::OverrideTargetNoiseMargin> ] [ no trgt-noise-up | trgt-noise-up <Xdsl::OverrideTargetNoiseMargin> ] [ no
max-psd-down | max-psd-down <Xdsl::OverridePsdLevel> ] [ no max-psd-up | max-psd-up
<Xdsl::OverridePsdLevel> ] [ no carrier-mask-down | carrier-mask-down <Xdsl::OverrideCarrierMaskDown> ] [

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 9.35-2 "xDSL Per Line Override Configuration Command" Command Parameters

Parameter	Type	Description
[no] max-bitrate-down	Parameter type: <Xdsl::OverrideBitRate> Format: (no-override <Xdsl::OverrideBitRate>) Possible values: - no-override : no override Field type <Xdsl::OverrideBitRate> - bitrate - unit: kbit/s - range: [0...2147483647]	optional parameter with default value: "no-override" maximum bitrate down
[no] max-bitrate-up	Parameter type: <Xdsl::OverrideBitRate> Format: (no-override <Xdsl::OverrideBitRate>) Possible values: - no-override : no override Field type <Xdsl::OverrideBitRate> - bitrate - unit: kbit/s - range: [0...2147483647]	optional parameter with default value: "no-override" maximum bitrate up
[no] max-delay-down	Parameter type: <Xdsl::OverrideInterleavingDelay> Format: (no-override <Xdsl::OverrideInterleavingDelay>) Possible values: - no-override : no override Field type <Xdsl::OverrideInterleavingDelay> - maximum interleaving delay - unit: ms - range: [1...63]	optional parameter with default value: "no-override" maximum interleaving delay down
[no] max-delay-up	Parameter type: <Xdsl::OverrideInterleavingDelay> Format: (no-override <Xdsl::OverrideInterleavingDelay>) Possible values: - no-override : no override Field type <Xdsl::OverrideInterleavingDelay> - maximum interleaving delay - unit: ms - range: [1...63]	optional parameter with default value: "no-override" maximum interleaving delay up
[no] imp-noise-prot-dn	Parameter type: <Xdsl::OverrideImpNoiseProtection>	optional parameter with default

Parameter	Type	Description
	Format: (no-override <Xdsl::OverrideImpNoiseProtection>) Possible values: - no-override : no override Field type <Xdsl::OverrideImpNoiseProtection> - minimum impulse noise protection - unit: 0.1 symbols - range: [0...160]	<i>value: "no-override"</i> minimum impulse noise protection down
[no] imp-noise-prot-up	Parameter type: <Xdsl::OverrideImpNoiseProtection> Format: (no-override <Xdsl::OverrideImpNoiseProtection>) Possible values: - no-override : no override Field type <Xdsl::OverrideImpNoiseProtection> - minimum impulse noise protection - unit: 0.1 symbols - range: [0...160]	<i>optional parameter with default value: "no-override"</i> minimum impulse noise protection up
[no] trgt-noise-down	Parameter type: <Xdsl::OverrideTargetNoiseMargin> Format: (no-override <Xdsl::OverrideTargetNoiseMargin>) Possible values: - no-override : no override Field type <Xdsl::OverrideTargetNoiseMargin> - target noise margin - unit: dB / 10 - range: [0...310]	<i>optional parameter with default value: "no-override"</i> target noise margin down
[no] trgt-noise-up	Parameter type: <Xdsl::OverrideTargetNoiseMargin> Format: (no-override <Xdsl::OverrideTargetNoiseMargin>) Possible values: - no-override : no override Field type <Xdsl::OverrideTargetNoiseMargin> - target noise margin - unit: dB / 10 - range: [0...310]	<i>optional parameter with default value: "no-override"</i> target noise margin up
[no] max-psd-down	Parameter type: <Xdsl::OverridePsdLevel> Format: (no-override no-constraint <Xdsl::OverridePsdLevel>) Possible values: - no-override : no override - no-constraint : no override Field type <Xdsl::OverridePsdLevel> - override psd level - unit: dBm/Hz * 1/10 - range: [-955...0]	<i>optional parameter with default value: "no-override"</i> maximum psd level down
[no] max-psd-up	Parameter type: <Xdsl::OverridePsdLevel> Format: (no-override no-constraint <Xdsl::OverridePsdLevel>) Possible values:	<i>optional parameter with default value: "no-override"</i> maximum psd level up

9 xDSL Configuration Commands

Parameter	Type	Description
	- no-override : no override - no-constraint : no override Field type <Xdsl::OverridePsdLevel> - override psd level - unit: dBm/Hz * 1/10 - range: [-955...0]	
[no] carrier-mask-down	Parameter type: <Xdsl::OverrideCarrierMaskDown> Format: (no-override <Xdsl::OverrideCarrierMaskDown>) Possible values: - no-override : no override Field type <Xdsl::OverrideCarrierMaskDown> - override carrier mask down - length: 64	optional parameter with default value: "no-override" override carrier mask down
[no] carrier-mask-up	Parameter type: <Xdsl::OverrideCarrierMaskUp> Format: (no-override <Xdsl::OverrideCarrierMaskUp>) Possible values: - no-override : no override Field type <Xdsl::OverrideCarrierMaskUp> - override carrier mask up - length: 8	optional parameter with default value: "no-override" override carrier mask up
[no] noise-psd-mode-dn	Parameter type: <Xdsl::OverrideNoiseModeDown> Format: (no-override virtual artificial) Possible values: - no-override : no override - virtual : override Tx referred virtual noise - artificial : override artificial noise	optional parameter with default value: "no-override" noise override mode
[no] noise-psd-mode-up	Parameter type: <Xdsl::OverrideNoiseModeUp> Format: (no-override virtual virtual-rx) Possible values: - no-override : no override - virtual : override Tx referred virtual noise - virtual-rx : override Rx referred virtual noise	optional parameter with default value: "no-override" noise override mode
[no] rtx-mode-dn	Parameter type: <Xdsl::RtxOverrideMode> Format: (forbidden preferred forced testmode nooverride) Possible values: - forbidden : retransmission forbidden in down/upstream - preferred : retransmission preferred in down/upstream - forced : retransmission forced in down/upstream - testmode : retransmission testmode in down/upstream - nooverride : retransmission nooverride in down/upstream	optional parameter with default value: "nooverride" override retransmission mode in downstream on lines
[no] rtx-mode-up	Parameter type: <Xdsl::RtxOverrideMode> Format: (forbidden preferred forced testmode nooverride) Possible values: - forbidden : retransmission forbidden in down/upstream - preferred : retransmission preferred in down/upstream - forced : retransmission forced in down/upstream - testmode : retransmission testmode in down/upstream - nooverride : retransmission nooverride in down/upstream	optional parameter with default value: "nooverride" override retransmission mode in downstream on lines

Parameter	Type	Description
	(forbidden preferred forced testmode nooverrule) Possible values: - forbidden : retransmission forbidden in down/upstream - preferred : retransmission preferred in down/upstream - forced : retransmission forced in down/upstream - testmode : retransmission testmode in down/upstream - nooverrule : retransmission nooverrule in down/upstream	overrule retransmission mode in upstream on lines
[no] max-net-rate-dn	Parameter type: <Xdsl::RtxRate> Format: - a data rate value - unit: kbit/s - range: [-1,0...2147483647]	<i>optional parameter with default value: -1</i> overrule maximum net data rate for downstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] max-net-rate-up	Parameter type: <Xdsl::RtxRate> Format: - a data rate value - unit: kbit/s - range: [-1,0...2147483647]	<i>optional parameter with default value: -1</i> overrule maximum net data rate for upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] max-exp-thrpt-dn	Parameter type: <Xdsl::RtxRate> Format: - a data rate value - unit: kbit/s - range: [-1,0...2147483647]	<i>optional parameter with default value: -1</i> overrule maximum expected throughput for downstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] max-exp-thrpt-up	Parameter type: <Xdsl::RtxRate> Format: - a data rate value - unit: kbit/s - range: [-1,0...2147483647]	<i>optional parameter with default value: -1</i> overrule maximum expected throughput for upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] min-inp-shine-dn	Parameter type: <Xdsl::RtxShineImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [-1,0...63]	<i>optional parameter with default value: -1</i> overrule minimum impulse noise protection against shine for downstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] min-inp-shine-up	Parameter type: <Xdsl::RtxShineImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [-1,0...63]	<i>optional parameter with default value: -1</i> overrule minimum impulse noise protection against shine for upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] min-inp-rein-dn	Parameter type: <Xdsl::RtxReinImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [-1,0...7]	<i>optional parameter with default value: -1</i> overrule minimum impulse noise protection against rein for downstream direction, special value -1 means the rtxprofile

9 xDSL Configuration Commands

Parameter	Type	Description
		parameter will not be overruled
[no] min-inp-rein-up	Parameter type: <Xdsl::RtxReinImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [-1,0...7]	<i>optional parameter with default value: -1</i> overrule minimum impulse noise protection against rein for upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] min-delay-dn	Parameter type: <Xdsl::RtxOverruleMinDelay> Format: - a delay time period - unit: msec - range: [-1,0...63]	<i>optional parameter with default value: -1</i> overrule minimum instantaneous delay allowed (due to the effect of retransmission) for downstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] min-delay-up	Parameter type: <Xdsl::RtxOverruleMinDelay> Format: - a delay time period - unit: msec - range: [-1,0...63]	<i>optional parameter with default value: -1</i> overrule minimum instantaneous delay allowed (due to the effect of retransmission) for upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] rtx-max-delay-dn	Parameter type: <Xdsl::RtxOverruleMaxDelay> Format: - a delay time period - unit: msec - range: [-1,2...63]	<i>optional parameter with default value: -1</i> overrule maximum instantaneous delay allowed (due to the effect of retransmission) for downstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] rtx-max-delay-up	Parameter type: <Xdsl::RtxOverruleMaxDelay> Format: - a delay time period - unit: msec - range: [-1,2...63]	<i>optional parameter with default value: -1</i> overrule maximum instantaneous delay allowed (due to the effect of retransmission) for upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] shine-ratio-dn	Parameter type: <Xdsl::RtxOverruleShineRatio> Format: - shine ratio - unit: 1/1000 - range: [-1,0...100]	<i>optional parameter with default value: -1</i> overrule shine ratio for downstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] shine-ratio-up	Parameter type: <Xdsl::RtxOverruleShineRatio> Format: - shine ratio - unit: 1/1000 - range: [-1,0...100]	<i>optional parameter with default value: -1</i> overrule shine ratio for upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] leftr-thresh-dn	Parameter type: <Xdsl::RtxOverruleLeftrThreshold> Format: - near-end defect threshold - unit: 1/100 - range: [-1,0,1...99]	<i>optional parameter with default value: -1</i> overrule threshold for declaring a near-end defect in downstream direction, special value -1 means

Parameter	Type	Description
		the rtxprofile parameter will not be overruled
[no] leftr-thresh-up	Parameter type: <Xdsl::RtxOverrideLeftThreshold> Format: - near-end defect threshold - unit: 1/100 - range: [-1,0,1...99]	<i>optional parameter with default value: -1</i> override threshold for declaring a far-end defect in upstream direction, special value -1 means the rtxprofile parameter will not be overruled
[no] memory-down	Parameter type: <Xdsl::OverrideMemoryDownstream> Format: - override the configured interleaver memory downstream - unit: 1/100 - range: [-1,255,0...100]	<i>optional parameter with default value: -1</i> override configurable downstream memory
[no] modification	Parameter type: <Xdsl::ModifyStatus> Format: (start cancel complete) Possible values: - start : to start modifying the profile - cancel : to cancel the modifications done - complete : to complete the modifications	<i>optional parameter with default value: "complete"</i> modify the profile
[no] active	Parameter type: boolean	<i>optional parameter</i> <i>The parameter is not visible during creation.</i> to activate the profile

9.36 xDSL Override Noise Psd Shape Downstream Configuration Command

Command Description

This command allows the operator to configure the virtual/artificial noise in downstream direction.

It helps operator to enter the virtual/artificial noise psd shape in a user-friendly way. The operator can enter numbers corresponding to frequency and psd level.

The downstream override noise PSD shape overrides the downstream virtual or artificial noise PSD shape configured in the profile, according to the setting of noise-psd-mode-dn

- *no-override:override noise PSD is ignored*
- *virtual:override noise PSD overrides the virtual noise PSD in the profile.*

In case no override noise PSD is specified (empty), v-noise-snr-down is set to mode-1, otherwise v-noise-snr-down is set to mode-2.

- *artificial: override noise PSD overrides the artificial noise PSD in the profile*

When all the (needed) parameters are configured, the complete Override Data has to be activated.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the psd shape mode will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl override-data (if-index) noise-psd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::CustPsd> ]
```

Command Parameters

Table 9.36-1 "xDSL Override Noise Psd Shape Downstream Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>	interface index of the port

Resource Identifier	Type	Description
	Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	
(psd-point)	Format: - psd point - range: [1...32]	psd point

Table 9.36-2 "xDSL Override Noise Psd Shape Downstream Configuration Command" Command Parameters

Parameter	Type	Description
[no] frequency	Parameter type: <Xdsl::CustFreq> Format: - frequency - unit: khz - range: [0...35324]	<i>optional parameter with default value: 0L</i> psd frequency
[no] psd	Parameter type: <Xdsl::CustPsd> Format: - psd level - unit: $-2 \times (40 + \text{PSD level in dBm/Hz})$ - range: [0...200,255]	<i>optional parameter with default value: 0L</i> psd level

9.37 xDSL Override Noise Psd Shape Upstream Configuration Command

Command Description

This command allows the operator to configure the virtual noise in upstream direction.

It helps operator to enter the virtual noise psd shape in a user-friendly way. The operator can enter numbers corresponding to frequency and psd level.

When all the (needed) parameters are configured, the complete Override Data has to be activated.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the psd shape mode will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

The upstream override noise PSD shape overrides the upstream virtual or artificial noise PSD shape configured in the profile, according to the setting of noise-psd-mode-up:

- *no-override:override noise PSD is ignored.*
- *virtual:override noise PSD overrides the virtual noise PSD in the profile. In case no override noise PSD is specified (empty), v-noise-snr-up is set to mode-1, otherwise v-noise-snr-up is set to mode-2.*
- *virtual-rx:override noise PSD overrides the virtual noise PSD in the profile. In case no override noise PSD is specified (empty), v-noise-snr-up is set to mode-1, otherwise v-noise-snr-up is set to mode-3.*

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl override-data (if-index) noise-psd-pt-up (psd-point) [ no frequency | frequency <Xdsl::CustFreq> ]
[ no psd | psd <Xdsl::CustPsd> ]
```

Command Parameters

9.38 xDSL INS Near End Configuration Command

Command Description

This command allows the operator to configure the Impulse-Noise-Sensor parameters for the near-end side.

The InmMode must be enabled first to be able to start monitoring. To stop monitoring on the line this InmMode must be disabled.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl imp-noise-sensor near-end (if-index) [ no inm-mode | inm-mode <Xdsl::InmMode> ] [ no inm-eq-inp-mode | inm-eq-inp-mode <Xdsl::InmEquivInpMode> ] [ no ins-sensitivity | ins-sensitivity <Xdsl::InsSensitivity> ] [ no inm-cluster-cont | inm-cluster-cont <Xdsl::ClusterContinuation> ] [ no inm-iat-offset | inm-iat-offset <Xdsl::InterArrivalTimeOffset> ] [ no inm-iat-step | inm-iat-step <Xdsl::InterArrivalTimeStep> ]
```

Command Parameters

Table 9.38-1 "xDSL INS Near End Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 9.38-2 "xDSL INS Near End Configuration Command" Command Parameters

Parameter	Type	Description
[no] inm-mode	Parameter type: <Xdsl::InmMode> Format: (disable enable) Possible values: - disable : disable impulse noise monitoring stats collection - enable : enable impulse noise monitoring stats collection	optional parameter with default value: "disable" enable upstr impulse noise monitoring stats collection
[no] inm-eq-inp-mode	Parameter type: <Xdsl::InmEquivInpMode> Format:	optional parameter with default value: "mode-0"

Parameter	Type	Description
	(mode-0 mode-1 mode-2 mode-3) Possible values: - mode-0 : impulse length - mode-1 : cluster length - mode-2 : sum of impulse length in cluster - mode-3 : gap compensated impulse length in cluster	equivalent INP mode used for the construction of the INM equivalent INP histograms
[no] ins-sensitivity	Parameter type: <Xdsl::InsSensitivity> Format: - impulse noise sensitivity - unit: dB / 10 - range: [-128...127]	<i>optional parameter with default value: 0L</i> upstream impulse noise sensor sensitivity
[no] inm-cluster-cont	Parameter type: <Xdsl::ClusterContinuation> Format: (disabled <Xdsl::ClusterContinuation>) Possible values: - disabled : disable cluster continuation Field type <Xdsl::ClusterContinuation> - impulse noise cluster continuation - unit: DMT Symbol - range: [0...64]	<i>optional parameter with default value: "disabled"</i> upstream impulse noise cluster continuation
[no] inm-iat-offset	Parameter type: <Xdsl::InterArrivalTimeOffset> Format: - inter arrival time offset - unit: DMT Symbol - range: [3...511]	<i>optional parameter with default value: 3L</i> interval offset of upstr inter-arrival time histograms
[no] inm-iat-step	Parameter type: <Xdsl::InterArrivalTimeStep> Format: - inter arrival time step - range: [0...7]	<i>optional parameter with default value: 0L</i> interval width of upstr inter-arrival time histograms

9.39 xDSL INS Far End Configuration Command

Command Description

This command allows the operator to configure the Impulse-Noise-Sensor parameters for the far-end side.

The InmMode must be enabled first to be able to start monitoring. To stop monitoring on the line this InmMode must be disabled.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl imp-noise-sensor far-end (if-index) [ no inm-mode | inm-mode <Xdsl::InmMode> ] [ no
inm-eq-inp-mode | inm-eq-inp-mode <Xdsl::InmEquivInpMode> ] [ no ins-sensitivity | ins-sensitivity
<Xdsl::InsSensitivity> ] [ no inm-cluster-cont | inm-cluster-cont <Xdsl::ClusterContinuation> ] [ no inm-iat-offset |
inm-iat-offset <Xdsl::InterArrivalTimeOffset> ] [ no inm-iat-step | inm-iat-step <Xdsl::InterArrivalTimeStep> ]
```

Command Parameters

10.2 Gpon xDSL Common Service Profile Configuration Command

Command Description

This command allows the operator to manage the xDSL service profile.

NOTE: This command can be used only with profiles having LOCAL scope. Once a profile has been activated, no more edits are allowed.

WARNING: Service profiles not activated within 15 minutes of creation will be deleted.

DESCRIPTION FOR THE COMMAND PARAMETERS max-delay-down and max-delay-up: The delay is expressed in milliseconds. Range: 1 to 63 ms in steps of 1 ms with 1 as special value. The value 1 is used to specify that fast or pseudo fast latency (i.e. no interleaving).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont ( no service-profile (index) ) | ( service-profile (index) name <AsamProfileName> [ no
ra-mode-down | ra-mode-down <Gpon::RAModeType> ] [ no ra-mode-up | ra-mode-up <Gpon::RAModeType> ] [
no min-bitrate-down | min-bitrate-down <Xdsl::BitRate> ] [ no min-bitrate-up | min-bitrate-up <Xdsl::BitRate> ] [
no max-bitrate-down | max-bitrate-down <Xdsl::BitRate> ] [ no max-bitrate-up | max-bitrate-up <Xdsl::BitRate> ]
[ no max-delay-down | max-delay-down <Xdsl::InterleavingDelay> ] [ no max-delay-up | max-delay-up
<Xdsl::InterleavingDelay> ] [ no imp-noise-prot-dn | imp-noise-prot-dn <Xdsl::ImpNoiseProtection> ] [ no
imp-noise-prot-up | imp-noise-prot-up <Xdsl::ImpNoiseProtection> ] [ [ no ] active ] )
```

Command Parameters

Table 10.2-1 "Gpon xDSL Common Service Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...256]	index of the profile

Table 10.2-2 "Gpon xDSL Common Service Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	mandatory parameter profile name

Parameter	Type	Description
[no] ra-mode-down	Parameter type: <Gpon::RAModeType> Format: (operator-ctrlld automatic) Possible values: - operator-ctrlld : operator controlled rate adaptive mode in downstream - automatic : automatic rate adaptive mode at startup in downstream	<i>optional parameter with default value: "automatic"</i> rate adaptation mode for down stream
[no] ra-mode-up	Parameter type: <Gpon::RAModeType> Format: (operator-ctrlld automatic) Possible values: - operator-ctrlld : operator controlled rate adaptive mode in downstream - automatic : automatic rate adaptive mode at startup in downstream	<i>optional parameter with default value: "automatic"</i> rate adaptation mode for up stream
[no] min-bitrate-down	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 1024</i> minimum downstream bit rate to be maintained
[no] min-bitrate-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 64</i> minimum upstream bit rate to be maintained
[no] max-bitrate-down	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 6144</i> maximum bitrate in downstream
[no] max-bitrate-up	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 640</i> maximum bitrate in upstream
[no] max-delay-down	Parameter type: <Xdsl::InterleavingDelay> Format: - a delay time period - unit: msec - range: [1...63]	<i>optional parameter with default value: 16</i> maximum delay for interleaving function in downstream
[no] max-delay-up	Parameter type: <Xdsl::InterleavingDelay> Format: - a delay time period - unit: msec - range: [1...63]	<i>optional parameter with default value: 16</i> maximum delay for interleaving function in upstream
[no] imp-noise-prot-dn	Parameter type: <Xdsl::ImpNoiseProtection> Format: - minimum impulse noise protection - unit: 1/10 symbols - range: [0...160]	<i>optional parameter with default value: 0</i> minimum impulse noise protection in downstream
[no] imp-noise-prot-up	Parameter type: <Xdsl::ImpNoiseProtection> Format: - minimum impulse noise protection - unit: 1/10 symbols	<i>optional parameter with default value: 0</i> minimum impulse noise protection in upstream

Parameter	Type	Description
	- range: [0...160]	
[no] active	Parameter type: boolean	<i>optional parameter</i> <i>The parameter is not visible during creation.</i> to activate the profile

Command Output

Table 10.2-3 "Gpon xDSL Common Service Profile Configuration Command" Display parameters

Specific Information		
name	Type	Description
scope	Parameter type: <Xdsl::AsamProfileScope> local-profile Possible values: - local-profile : the local profile	scope of the profile <i>This element is only shown in detail mode.</i>
version	Parameter type: <SignedInteger> - a signed integer	version maintained by manager. only allowed value is 1 and cannot be incremented. <i>This element is only shown in detail mode.</i>
ref-count	Parameter type: <AsamProfileRefCount> - number of entities using this particular profile - range: [0...65535]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is only shown in detail mode.</i>

10.3 Gpon xDSL Common Spectrum Profile Configuration Command

Command Description

This command allows the operator to manage the xDSL spectrum profile. The spectrum profiles groups all parameters on xDSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the xDSL flavor used (VDSL,VDSL2).

The specific values depending on the xDSL flavor can be configured via:

- `configure xdsl spectrum-profile vdsl`
- `configure xdsl spectrum-profile vdsl2`

The actual selected operating mode determines which set of xDSL specific parameters is used. In case a common parameter is not supported for a specific xDSL flavor, this parameter will be ignored for that flavor.

When all the xDSL specific flavors are configure the complete profile has to be activated.

NOTE: This command can be used only with profiles having LOCAL scope. Once a profile has been activated, no more edits are allowed.

User Level

The command can be accessed by operators with `xdsl` privileges, and executed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont ( no spectrum-profile (index) ) | ( spectrum-profile (index) name <AsamProfileName> [ [ no ]
g992-1-a ] [ [ no ] g992-5-a ] [ [ no ] dis-g993-2-8c ] [ [ no ] dis-g993-2-12b ] [ [ no ] dis-g993-2-17a ] [ [ no ]
dis-g993-2-30a ] [ no min-noise-down | min-noise-down <Xdsl::NoiseMargin> ] [ no min-noise-up | min-noise-up
<Xdsl::NoiseMargin> ] [ no trgt-noise-down | trgt-noise-down <Xdsl::NoiseMargin> ] [ no trgt-noise-up |
trgt-noise-up <Xdsl::NoiseMargin> ] [ no max-noise-down | max-noise-down <Xdsl::NoiseMarginPlus> ] [ no
max-noise-up | max-noise-up <Xdsl::NoiseMarginPlus> ] [ no rf-band-list | rf-band-list <Gpon::RFBand> ] [ [ no ]
active ] )
```

Command Parameters

[no] dis-g993-2-17a	Parameter type: boolean	<i>optional parameter</i> disable G.993.2_17A VDSL-2 with profile 17A
[no] dis-g993-2-30a	Parameter type: boolean	<i>optional parameter</i> disable G.993.2_30A VDSL-2 with profile 30A
[no] min-noise-down	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 0</i> minimum noise margin in downstream
[no] min-noise-up	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 0</i> minimum noise margin in upstream
[no] trgt-noise-down	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 60</i> target noise margin in downstream
[no] trgt-noise-up	Parameter type: <Xdsl::NoiseMargin> Format: - a noise margin value - unit: 0.1 dB - range: [0...310]	<i>optional parameter with default value: 60</i> target noise margin in upstream
[no] max-noise-down	Parameter type: <Xdsl::NoiseMarginPlus> Format: - a normal noise margin value plus special value - unit: 0.1 dB - range: [0...310,511]	<i>optional parameter with default value: 511</i> maximum noise margin in downstream
[no] max-noise-up	Parameter type: <Xdsl::NoiseMarginPlus> Format: - a normal noise margin value plus special value - unit: 0.1 dB - range: [0...310,511]	<i>optional parameter with default value: 511</i> maximum noise margin in upstream
[no] rf-band-list	Parameter type: <Gpon::RFBand>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: - a variable length octet string defining rf band list - length: x<=80	value: "07 : 08 : 07 : D0 : 19 : 0D : AC : 0F : A0 : 19 : 1B : 58 : 1C : 84 : 19 : 27 : 74 : 27 : A6 : 19 : 36 : B0 : 38 : 0E : 19 : 46 : 94 : 46 : F8 : 19 : 52 : 08 : 53 : CA : 19 : 61 : 3A : 61 : 9E : 19 : 6D : 60 : 74 : 04 : 19" list of RF bands
[no] active	Parameter type: boolean	optional parameter The parameter is not visible during creation. to activate the profile

Command Output

Table 10.3-3 "Gpon xDSL Common Spectrum Profile Configuration Command" Display parameters

Specific Information		
name	Type	Description
scope	Parameter type: <Xdsl::AsamProfileScope> local-profile Possible values: - local-profile : the local profile	scope of the profile <i>This element is only shown in detail mode.</i>
version	Parameter type: <SignedInteger> - a signed integer	version maintained by manager <i>This element is only shown in detail mode.</i>
ref-count	Parameter type: <AsamProfileRefCount> - number of entities using this particular profile - range: [0...65535]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is only shown in detail mode.</i>

10.4 Gpon xDSL Spectrum Profile for VDSL Configuration Command

Command Description

This command allows the operator to manage the VDSL specific part of the DSL spectrum profile. The spectrum profiles groups all parameters on DSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the DSL flavor used (VDSL).

This chapter contains the VDSL flavor specific parameters.

Note: the activation of the profile has to be done via configure xdsl spectrum-profile.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont spectrum-profile (index) vdsl [ no vdsl-band-plan | vdsl-band-plan <Gpon::VdslBandPlan> ] [
no pbo-mode | pbo-mode <Gpon::PboModeVdsl> ] [ no adsl-band | adsl-band <Gpon::AdslBandUsage> ]
```

Command Parameters

Table 10.4-1 "Gpon xDSL Spectrum Profile for VDSL Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...256]	index of the profile.

Table 10.4-2 "Gpon xDSL Spectrum Profile for VDSL Configuration Command" Command Parameters

Parameter	Type	Description
[no] vdsl-band-plan	Parameter type: <Gpon::VdslBandPlan> Format: (annex-a annex-b-997e annex-b-998e annex-b-998ade) Possible values: - annex-a : ITU-T G.993.2 VDSL2 Annex A (extended) band plan	<i>optional parameter with default value: "annex-a"</i> the VDSL band plan

Parameter	Type	Description
	- annex-b-997e : ITU-T G.993.2 VDSL2 Annex B band plan type 997E17 - annex-b-998e : ITU-T G.993.2 VDSL2 Annex B band plan type 998E17 - annex-b-998ade : ITU-T G.993.2 VDSL2 Annex B band plan type 998ADE17	
[no] pbo-mode	Parameter type: <Gpon::PboModeVdsl> Format: (pbo-mode-down pbo-mode-up) Possible values: - pbo-mode-down : upstream power backoff mode OFF - pbo-mode-up : upstream power backoff mode ON	<i>optional parameter with default value: "pbo-mode-up"</i> upstream power backoff mode
[no] adsl-band	Parameter type: <Gpon::AdslBandUsage> Format: (allow-adsl excl-adsl excl-adsl2plus excl-cust-adsl) Possible values: - allow-adsl : usage of adsl spectrum (25kHz..1.1mhz) is allowed - excl-adsl : usage of adsl spectrum (25kHz..1.1mhz) is not allowed - excl-adsl2plus : usage of adsl2plus spectrum (25kHz..2.2mhz) is not allowed - excl-cust-adsl : usage of adsl spectrum (25kHz..640kHz) is not allowed	<i>optional parameter with default value: "excl-adsl"</i> adsl band Usage

10.5 Gpon xDSL Spectrum Profile for VDSL2 Configuration Command

Command Description

This command allows the operator to manage the VDSL2 specific part of the xDSL spectrum profile. The spectrum profiles groups all parameters on xDSL on physical level. These parameters are mainly related to the environmental conditions of the line (spectrum management).

The Spectrum Configuration profile contains parameters which have a common value for all DSL flavors (Common) and parameters which have a specific value depending on the xDSL flavor used (VDSL, VDSL2).

This chapter contains the VDSL2 flavor specific parameters.

Note: the activation of the profile has to be done via `configure xdsl spectrum-profile`.

User Level

The command can be accessed by operators with `xdsl` privileges, and executed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont spectrum-profile (index) vdsl2 [ no max-agpowlev-down | max-agpowlev-down
<Gpon::VdslPowerLevel> ] [ no psd-shape-down | psd-shape-down <Gpon::Vdsl2PsdShapeDown> ] [ no
psd-pbo-e-len-up | psd-pbo-e-len-up <Xdsl::PsdPboElectrLength> ] [ no m-psd-level-down | m-psd-level-down
<Gpon::MaxPsdLevel> ] [ no m-psd-level-up | m-psd-level-up <Gpon::MaxPsdLevel> ] [ no psd-pbo-par-a-up |
psd-pbo-par-a-up <Xdsl::ABParamType> ] [ no psd-pbo-par-b-up | psd-pbo-par-b-up <Xdsl::ABParamType> ] [ no
v-noise-snr-down | v-noise-snr-down <Xdsl::SnrmMode> ] [ no v-noise-snr-up | v-noise-snr-up
<Xdsl::SnrmModeUp> ] [ no cust-psd-sc-down | cust-psd-sc-down <Xdsl::PsdScaleBit> ] [ no cust-psd-ty-down |
cust-psd-ty-down <Xdsl::PsdTypeBit> ] [ no cust-psd-sc-up | cust-psd-sc-up <Xdsl::PsdScaleBit> ] [ no
cust-psd-ty-up | cust-psd-ty-up <Xdsl::PsdTypeBit> ]
```

Command Parameters

10.6 VDSL2 Custom PSD shape Downstream Configuration Command

Command Description

This command allows the operator to configure the VDSL2 custom psd shape in downstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the frequency scale and the psd shape type will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont spectrum-profile (index) vdsl2 cust-psd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

Command Parameters

10.7 VDSL2 Custom PSD shape Upstream Configuration Command

Command Description

This command allows the operator to configure the VDSL2 custom psd shape in downstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. Using this method, the frequency scale and the psd shape type will also be reset to the default value. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont spectrum-profile (index) vdsl2 cust-psd-pt-up (psd-point) [ no frequency | frequency
<Xdsl::CustFreq> ] [ no psd | psd <Xdsl::PsdLevel> ]
```

Command Parameters

10.8 ONT VDSL2 Virtual Noise Downstream Configuration Command

Command Description

This command allows the operator to configure ONT VDSL2 virtual noise in downstream direction.

It helps operator to enter the virtual noise in a user-friendly way. Instead of entering octets, as was the case with the earlier command, the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont spectrum-profile (index) vdsl2 v-noise-psd-pt-down (psd-point) [ no frequency | frequency <Xdsl::CustFreq> ] [ no psd | psd <Xdsl::CustPsdVdsl2VtNoise> ]
```

Command Parameters

10.9 ONT VDSL2 Virtual Noise Upstream Configuration Command

Command Description

This command allows the operator to configure ONT VDSL2 virtual noise in upstream direction.

It helps operator to enter the custom psd shape in a user-friendly way. Instead of entering octets, as was the case with the earlier command, the operator can enter numbers corresponding to frequency and psd.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

When defining a PSD shape, a minimum of 2 PSD points should be specified. The successive PSD points must have increasing ($>/=$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont spectrum-profile (index) vdsl2 v-noise-psd-pt-up (psd-point) [ no frequency | frequency <Xdsl::CustFreq> ] [ no psd | psd <Xdsl::CustPsdVdsl2VtNoise> ]
```

Command Parameters

Parameter	Type	Description
	- range: [0...35324]	
[no] psd	Parameter type: <Xdsl::CustPsdVdsl2VtNoise> Format: - psd level - unit: -2*(40+PSD level in dBm/Hz) - range: [0...200,255]	<i>optional parameter with default value: 0</i> psd level

10.10 Gpon xDSL Line Configuration Command

Command Description

This command allows the operator to configure the xDSL pon line.

For the configuration one should associate a spectrum and a service profile to the line. The op-mode controls the operational modes allowed on the line. It can be used to disable an operational mode that is enabled in the spectrum profile but is not allowed on the line. It uses the same bitmap coding as op-mode in the xDSL spectrum-profile. '0' is used as special value to indicate that all the modes supported by the line are allowed.

The modes which are not supported by the line must be disabled.

An operational mode is allowed on the line when it is enabled in the op-mode of the line configuration and the op-mode in the xDSL spectrum-profile.

To deconfigure a line the service-profile and spectrum-profile has to be put to 0.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont line (if-index) [ no service-profile | service-profile <Gpon::LineServiceProfile> ] [ no
spectrum-profile | spectrum-profile <Xdsl::OntLineSpectrumProfile> ] [ no dpbo-profile | dpbo-profile
<Xdsl::OntLineDpboProfile> ] [ no up-rtx-profile | up-rtx-profile <Xdsl::OntLineRtxProfile> ] [ no
down-rtx-profile | down-rtx-profile <Xdsl::OntLineRtxProfile> ] [ [ no ] g993-2-8c ] [ [ no ] g993-2-12b ] [ [ no ]
g993-2-17a ] [ [ no ] g993-2-30a ] [ no transfer-mode | transfer-mode <Gpon::TpsTcMode> ] [ no
carrier-data-mode | carrier-data-mode <Gpon::CarrierDataMode> ] [ no pm-collect | pm-collect
<Gpon::OntPmTcaCollect> ] [ [ no ] pwr-shed-override ] [ no admin-state | admin-state <Gpon::ItfAdminStatus> ]
```

Command Parameters

Specific Information		
name	Type	Description
oper-state	Parameter type: <Itf::ifOperStatus> (up down testing unknown dormant no-value) Possible values: - up : up,traffic can pass - down : down,no traffic is passing - testing : testing,no traffic is passing - unknown : unknown - dormant : dormant,no traffic is passing - no-value : no entry in the table	the operational state of the interface <i>This element is always shown.</i>
service-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the service profile <i>This element is always shown.</i>
spectrum-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the spectrum profile <i>This element is always shown.</i>
up-rtx-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the Rtx profile in upstream <i>This element is always shown.</i>
down-rtx-profile-name	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the Rtx profile in downstream <i>This element is always shown.</i>

10.11 Xdsl ONT Uni Physical Layer Configuration Command

Command Description

This command allows the operator to provision performance monitoring and threshold crossing alerts for an Xdsl ONT physical layer UNI.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont line (if-index) phy [ no pm | pm <Gpon::OntPmCollect> ] [ no tca | tca
<Gpon::OntPmCollect> ] [ no ne-err-secs | ne-err-secs <Gpon::ErroredSecondsThreshold> ] [ no ne-sev-err-secs |
ne-sev-err-secs <Gpon::ErroredSecondsThreshold> ] [ no ne-unavail-secs | ne-unavail-secs
<Gpon::ErroredSecondsThreshold> ] [ no fe-err-secs | fe-err-secs <Gpon::ErroredSecondsThreshold> ] [ no
fe-sev-err-secs | fe-sev-err-secs <Gpon::ErroredSecondsThreshold> ] [ no fe-unavail-secs | fe-unavail-secs
<Gpon::ErroredSecondsThreshold> ]
```

10.12 Xdsl ONT Uni Layer 2 Configuration

Command

Command Description

This command allows the operator to provision performance monitoring and threshold crossing alerts for a Xdsl ONT layer 2 UNI.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont line (if-index) l2 [ no pm | pm <Gpon::OntPmCollect> ] [ no tca | tca <Gpon::OntPmCollect> ]
[ no dropped-frames-up | dropped-frames-up <Gpon::ErrorCountThreshold> ] [ no dropped-frames-dn |
dropped-frames-dn <Gpon::ErrorCountThreshold> ]
```

[no] dropped-frames-up	Parameter type: <Gpon::ErrorCountThreshold> Format: (disable <Gpon::ErrorCountThreshold>) Possible values: - disable : disable tca Field type <Gpon::ErrorCountThreshold> - error count threshold (0-4294967295) - range: [0...4294967295]	<i>optional parameter with default value: "disable"</i> incoming (upstream) dropped frames threshold
[no] dropped-frames-dn	Parameter type: <Gpon::ErrorCountThreshold> Format: (disable <Gpon::ErrorCountThreshold>) Possible values: - disable : disable tca Field type <Gpon::ErrorCountThreshold> - error count threshold (0-4294967295) - range: [0...4294967295]	<i>optional parameter with default value: "disable"</i> outgoing (downstream) dropped frames threshold

10.13 Gpon xDSL DPBO Profile Configuration Command

Command Description

Downstream power back off profile to configure the modem for a physical Gpon line.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont ( no dpbo-profile (index) ) | ( dpbo-profile (index) name <AsamProfileName> [ no
es-elect-length | es-elect-length <Gpon::ElectricalLength> ] [ no es-cable-model-a | es-cable-model-a
<Gpon::CableModel> ] [ no es-cable-model-b | es-cable-model-b <Gpon::CableModel> ] [ no es-cable-model-c |
es-cable-model-c <Gpon::CableModel> ] [ no min-usable-signal | min-usable-signal
<Gpon::MinUsableSignalLevel> ] [ no min-frequency | min-frequency <Gpon::MinFrequency> ] [ no
max-frequency | max-frequency <Gpon::MaxFrequency> ] [ [ no ] active ] )
```

Command Parameters

Parameter	Type	Description
[no] es-cable-model-b	Parameter type: <Gpon::CableModel> Format: - cable model param ($2^8 * \text{cable-model}$) - unit: 2^8 - range: [-256...384]	<i>optional parameter with default value: 0L</i> cable model b
[no] es-cable-model-c	Parameter type: <Gpon::CableModel> Format: - cable model param ($2^8 * \text{cable-model}$) - unit: 2^8 - range: [-256...384]	<i>optional parameter with default value: 0L</i> cable model c
[no] min-usable-signal	Parameter type: <Gpon::MinUsableSignalLevel> Format: - minimum usable signal ($1/10 * \text{min-usable-signal}$) - unit: 0.1 dB - range: [-1275...0]	<i>optional parameter with default value: -1275L</i> minimal usable signal level
[no] min-frequency	Parameter type: <Gpon::MinFrequency> Format: - minimum frequency - unit: kHz - range: [0...8832]	<i>optional parameter with default value: 0L</i> min frequency
[no] max-frequency	Parameter type: <Gpon::MaxFrequency> Format: - maximum frequency - unit: kHz - range: [138...30000]	<i>optional parameter with default value: 30000L</i> max frequency
[no] active	Parameter type: boolean	<i>optional parameter to activate the profile</i>

10.14 Gpon xDSL DPBO Mode Independent Custom PSD Mask Configuration Command

Command Description

This command specifies PSD breakpoints of DPBO Mode Independent Custom PSD Mask. A number of 2 to 32 PSD breakpoints can be specified. This parameter matches the PSDMASKds parameter described in ITU-T G.997.1 This set of breakpoints may contain two subsets :

The first sub-set defines the DPBO Custom PSD Mask. It matches the DPBOPSDMASKds parameter described in ITU-T G.997.1 The second sub-set (if any), defines the DPBO Minimum Override Mask. It matches the DPBOLFO parameter described in ITU-T G.997.1 The successive PSD points of each sub-set must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

The second sub-set starts at the first breakpoint whose frequency is lower than the frequency of the previous breakpoint.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont dpbo-profile (index) micpsd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::DpboFrequency> ] [ no psd | psd <Gpon::DpboCustomPsd> ]
```

Command Parameters

[no] psd	Parameter type: <Gpon::DpboCustomPsd> Format: - psd level (-10 * PSD-level) - unit: -10*dBm/Hz - range: [0...950]	<i>optional parameter with default value: 0L</i> psd level

10.15 Gpon xDSL DPBO Exchange PSD Mask Configuration Command

Command Description

This command specifies the Assumed Exchange PSD mask to be protected by the DPBO shaping mechanism at the remote flexibility point. This parameter matches the DPBOEPSD parameter described in ITU-T G.997.1. A number of 2 to 16 PSD points can be specified. The successive PSD points must have increasing ($\geq$) frequencies. It is allowed that for two successive PSD points, different PSD levels are defined at a same frequency (brickwall).

Only PSD values within the standard range from -95 to 0 dBm/Hz are guaranteed.

When all break points are set to default values (frequency 0, psd 0), the psd shape is cleared. To clear the entire shape at once, set the first two breakpoints to default values. When any other breakpoint is set to default values, all points following it will also be set to the default values.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont dpbo-profile (index) epsd-pt-down (psd-point) [ no frequency | frequency
<Xdsl::DpboFrequency> ] [ no psd | psd <Gpon::DpboCustomPsd> ]
```

Command Parameters

10.16 Gpon xDSL ONT Configuration Command

Command Description

This command allows the operator to configure xdsl parameters at the GPON ONT Level.

An already existing Downstream-Power-Back-Off(DPBO)-profile can be attached to the GPON ONT.

All ports on this ont will use this DPBO-profile unless a line-specific DPBO-profile is configured.

To deconfigure the DPBO-profile, it has to be put to 0.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont interface (if-index) [ no dpbo-profile | dpbo-profile <Xdsl::LineDpboProfile> ]
```

Command Parameters

Table 10.16-1 "Gpon xDSL ONT Configuration Command" Resource Parameters

10.17 Gpon xDSL Common Rtx Profile Configuration Command

Command Description

This command allows the operator to manage the xDSL rtx profile.

NOTE: This command can be used only with profiles having LOCAL scope. Once a profile has been activated, no more edits are allowed.

WARNING: Rtx profiles not activated within 15 minutes of creation will be deleted.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl ont ( no rtx-profile (index) ) | ( rtx-profile (index) name <AsamProfileName> [ version
<SignedInteger> ] [ no rtx-mode | rtx-mode <Xdsl::GRtxMode> ] [ no min-exp-thrpt | min-exp-thrpt

Command Parameters

Table 10.17-1 "Gpon xDSL Common Rtx Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...1024]	index of the profile

Table 10.17-2 "Gpon xDSL Common Rtx Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	mandatory parameter profile name
version	Parameter type: <SignedInteger> Format: - a signed integer	optional parameter version maintained by manager, usually 1 for new profile
[no] rtx-mode	Parameter type: <Xdsl::GRtxMode>	optional parameter with default

10 Gpon xDSL Configuration Commands

Parameter	Type	Description
	Format: (forbidden preferred forced testmode) Possible values: - forbidden : retransmission forbidden in down/upstream - preferred : retransmission preferred in down/upstream - forced : retransmission forced in down/upstream - testmode : retransmission testmode in down/upstream	<i>value: "preferred"</i> retransmission mode
[no] min-exp-thrpt	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 64</i> minimum expected throughput for downstream/upstream direction
[no] max-exp-thrpt	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 262143</i> maximum expected throughput for downstream/upstream direction
[no] max-net-rate	Parameter type: <Xdsl::BitRate> Format: - a bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 262143</i> maximum net data rate for downstream/upstream direction
[no] min-delay	Parameter type: <Xdsl::RtxMinDelay> Format: - a delay time period - unit: msec - range: [0...63]	<i>optional parameter with default value: 0</i> minimum instantaneous delay allowed (due to the effect of retransmission) for downstream/upstream direction
[no] max-delay	Parameter type: <Xdsl::RtxMaxDelay> Format: - a delay time period - unit: msec - range: [2...63]	<i>optional parameter with default value: 12</i> maximum instantaneous delay allowed (due to the effect of retransmission) for downstream direction
[no] min-inp-shine	Parameter type: <Xdsl::ShineImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [0...63]	<i>optional parameter with default value: 8</i> minimum impulse noise protection against shine for downstream/upstream direction
[no] min-inp-rein	Parameter type: <Xdsl::ReinImpNoiseProtection> Format: - minimum impulse noise protection - unit: DMT symbols - range: [0...7]	<i>optional parameter with default value: 0</i> minimum impulse noise protection against rein for downstream/upstream direction
[no] int-arr-time	Parameter type: <Xdsl::RtxInterArrivalTime> Format: (derivedfrom100hz derivedfrom120hz) Possible values: - derivedfrom100hz : inter-arrival time derived from 100hz - derivedfrom120hz : inter-arrival time derived from 120hz	<i>optional parameter with default value: "derivedfrom100hz"</i> assumed inter-arrival time for rein protection for downstream/upstream direction
[no] shine-ratio	Parameter type: <Xdsl::RtxShineRatio> Format: - shine ratio	<i>optional parameter with default value: 10</i> shine ratio for

Parameter	Type	Description
	- unit: 1/1000 - range: [0...100]	downstream/upstream direction
[no] leftr-thresh	Parameter type: <Xdsl::RtxLeftrThreshold> Format: - near-end defect threshold - unit: 1/100 - range: [0,1...99]	<i>optional parameter with default value: 0</i> threshold for declaring a near-end defect in downstream/upstream direction
[no] active	Parameter type: boolean	<i>optional parameter</i> to activate the profile

Command Output

Table 10.17-3 "Gpon xDSL Common Rtx Profile Configuration Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount> - number of entities using this particular profile - range: [0...65535]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is only shown in detail mode.</i>

11- xDSL System Configuration Commands

11.1 xDSL System Configuration Command Tree	11-597
11.2 xDSL System Automatic Port Reset Configuration Command	11-598

11.1 xDSL System Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "xDSL System Configuration Commands".

Command Tree

```
----configure
  ----xdsl
    ----system
      ----auto-port-reset
        - [no] enable
```

11.2 xDSL System Automatic Port Reset Configuration Command

Command Description

This command allows the operator to enable auto-port-reset feature at system-level.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl system auto-port-reset [ [ no ] enable ]
```

Command Parameters

Table 11.2-2 "xDSL System Automatic Port Reset Configuration Command" Command Parameters

Parameter	Type	Description
[no] enable	Parameter type: boolean	<i>optional parameter</i> enable auto-port-reset

12- ATM Configuration Commands

12.1 ATM Configuration Command Tree	12-600
12.2 ATM PVC Configuration Command	12-601
12.3 IPOA X-connect L2 interworking port Configuration Command	12-603

12.1 ATM Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "ATM Configuration Commands".

Command Tree

```
----configure
  ----atm
    ----[no] pvc
      - (port-index)
      - [no] admin-down
      - [no] aal5-encap-type
    ----X [no] ip-cross-connect
      - (interworking-port)
      - cpe
      - next-hop
```

12.2 ATM PVC Configuration Command

Command Description

This command allows the operator to configure an ATM PVC.

The admin status allows or disallows traffic on the PVC.

The encapsulation type configures the way higher-layer traffic is encapsulated in the AAL5 container.

The LLC Encapsulation method allows the multiplexing of multiple protocols over a single ATM VC. The protocol type of each PDU is identified by a prefixed IEEE 802.2 LLC header.

In the VC Multiplexing method, each ATM VC carries PDUs of exactly one protocol type. When multiple protocols must be transported, there is a separate VC for each protocol type.

Use of the encapsulations:

- *llc-snap and vc-mux-bridged-8023 can be used for cross-connects, ibridge, PPPoE, and IPoE*
- *llc-snap-routed and vc-mux-routed can be used for IPoA*
- *llc-nlpid and vc-mux-pppoa can be used for PPPoA*
- *none can be used for ATM pseudowire*

It is also possible to automatically detect the used encapsulation type on the link.

- *automatic:ip is used for auto-detection between llc-snap, vc-mux-bridged-8023, llc-snap-routed, and vc-mux-routed; ipoe and ipoa dataframes are accepted;*
- *automatic:ppp is used for auto-detection between llc-snap, vc-mux-bridged-8023, llc-nlpid, and vc-mux-pppoa; pppoa and pppoe dataframes are accepted;*
- *automatic:pppoa is used for auto-detection between llc-nlpid and vc-mux-pppoa, only pppoa dataframes are accepted;*
- *automatic:ipoe-ppp is used for auto-detection between llc-snap, vc-mux-bridged-8023, llc-nlpid and vc-mux-pppoa; ipoe, pppoa and pppoe dataframes are accepted;*

The only encapsulation type supported on L2 LTs is llc-snap.

User Level

The command can be accessed by operators with atm privileges, and executed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> configure atm ( no pvc (port-index) ) | ( pvc (port-index) [ [ no ] admin-down ] [ no aal5-encap-type | aal5-encap-type <Atm::VccEncapType> ] )
```

Command Parameters

Table 12.2-1 "ATM PVC Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	the atm static Interface with vpi and vci

Resource Identifier	Type	Description
	<Eqpt::PortId> : <Eqpt::VpiMandatoryId> : <Eqpt::VciMandatoryId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiMandatoryId> - atm VPI Field type <Eqpt::VciMandatoryId> - atm VCI	

Table 12.2-2 "ATM PVC Configuration Command" Command Parameters

Parameter	Type	Description
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> disable traffic flow
[no] aal5-encap-type	Parameter type: <Atm::VccEncapType> Format: (llc-snap llc-snap-routed llc-nlpid vc-mux-bridged-8023 vc-mux-routed vc-mux-pppoa none automatic : ip automatic : ppp automatic : pppoa automatic : ipoe-ppp) Possible values: - llc-snap : logical link control encapsulation bridged protocol - llc-snap-routed : logical link control encapsulation routed protocol - llc-nlpid : logical link control encapsulation pppoa protocol - vc-mux-bridged-8023 : virtual channel multiplex bridged protocol - vc-mux-routed : virtual channel multiplex routed protocol - vc-mux-pppoa : virtual channel multiplex pppoa protocol - automatic : automatic detection of encapsulation type - none : no encapsulation type Possible values: - ip : autodetection of the used ip encapsulation - ppp : autodetection of the used ppp encapsulation - pppoa : autodetection of the used pppoa encapsulation - ipoe-ppp : autodetection of the used ip or ppp encapsulation	<i>optional parameter with default value: "llc-snap"</i> <i>The parameter is not visible during modification.</i> encapsulation method for traffic in an AAL5 container

12.3 IPOA X-connect L2 interworking port Configuration Command

Command Description

Obsolete command, replaced by configure ipoa/e-iw.

This command allows the operator to configure the parameter on the IPOA X-connect L2 interworking port level

User Level

The command can be accessed by operators with atm privileges, and executed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> configure atm ( no ip-cross-connect (interworking-port) ) | ( ip-cross-connect (interworking-port) [ cpe
<Ip::V4AddressHex> ] next-hop <Ip::V4AddressHex> )
```

Obsolete command, replaced by configure ipoa/e-iw.

Command Parameters

Table 12.3-1 "IPOA X-connect L2 interworking port Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(interworking-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	index of rack/shelf/slot/port user-bridgeport

Table 12.3-2 "IPOA X-connect L2 interworking port Configuration Command" Command Parameters

12 ATM Configuration Commands

Parameter	Type	Description
cpe	Parameter type: <Ip::V4AddressHex> Format: - IPv4-address	<i>optional parameter</i> IP address for cpe
next-hop	Parameter type: <Ip::V4AddressHex> Format: - IPv4-address	<i>mandatory parameter</i> IP address for next hop

13- Interface Management Configuration Commands

13.1 Interface Management Configuration Command Tree	13-606
13.2 Network Interface Configuration Command	13-607
13.3 Extend Interface Configuration Command	13-613
13.4 Interface Alarm Configuration Command	13-614
13.5 Interface Sliding-Window Traffic Statistics Command	13-616

13.1 Interface Management Configuration

Command Tree

Description

This chapter gives an overview of nodes that are handled by "Interface Management Configuration Commands".

Command Tree

```
----configure
  ----interface
    ----port
      - (port)
      - [no] admin-up
      X [no] link-state-trap
      - [no] link-updown-trap
      - [no] user
      - [no] severity
      - [no] port-type
    ----atm-pvc
      - (pvc-index)
      - [no] customer-id
    ----alarm
      - (index)
      - [no] default-severity
    ----statistics
      - (port)
      - [no] sliding-win-stats
    ----cage
      - (position)
      - operational-mode
```

13.2 Network Interface Configuration Command

Command Description

This command allows the operator to configure interface management parameters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure interface port (port) [ [ no ] admin-up ] [ no link-state-trap | link-state-trap <Itf::ifLinkUpDownTrap> ]
[ [ no ] link-updown-trap ] [ no user | user <Itf::asamIfExtCustomerId> ] [ no severity | severity
<Itf::asamIfExtAlmReportingSeverity> ] [ no port-type | port-type <Itf::asamIfPortType> ]
```

Command Parameters

Table 13.2-1 "Network Interface Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> ethernet-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>	the interface index

Resource Identifier	Type	Description
	- Epon Ont Slot Field type <Eqpt::EontPortId> - Epon Ont Port Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id Field type <Eqpt::Vrflid> - VRF id	

Table 13.2-2 "Network Interface Configuration Command" Command Parameters

Parameter	Type	Description
[no] admin-up	Parameter type: boolean	<i>optional parameter</i> admin status is up (read-only for voicefxs interface)
[no] link-state-trap	Parameter type: <Itf::ifLinkUpDownTrap> Format: (enable disable no-value) Possible values: - enable : enable link-up/link-down traps - disable : disable link-up/link-down traps - no-value : no valid value	<i>obsolete parameter replaced by parameter "link-updown-trap"</i> indicates if link-up/link-down traps should be generated
[no] link-updown-trap	Parameter type: boolean	<i>optional parameter</i> enable link-up/link-down traps
[no] user	Parameter type: <Itf::asamIfExtCustomerId> Format: - a string identifying the customer or user - length: x<=64	<i>optional parameter with default value: "available"</i> description of the user connected to this interface.
[no] severity	Parameter type: <Itf::asamIfExtAlmReportingSeverity> Format: (indeterminate warning minor major critical no-alarms default no-value) Possible values: - indeterminate : not a definite known severity - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking - no-alarms : do not report alarm - default : take default as specified via Interface Alarm Configuration command - no-value : no entry in the table	<i>optional parameter with default value: "default"</i> set minimum severity for alarm to be reported, If ima is the only interface for which this parameter is not supported
[no] port-type	Parameter type: <Itf::asamIfPortType>	<i>optional parameter with default</i>

13 Interface Management Configuration Commands

Parameter	Type	Description
	Format: (uni nni hc-uni uplink) Possible values: - uni : uni port type - nni : nni port type - hc-uni : hicap uni port type - uplink : uplink port type	<i>value: "uni"</i> the whole network service model based on this interface

13.3 Extend Interface Configuration Command

Command Description

This command allows the operator to configure extended interface management parameters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure interface atm-pvc (pvc-index) [ no customer-id | customer-id <Itf::asamIfExtCustomerId> ]
```

Command Parameters

Table 13.3-1 "Extend Interface Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(pvc-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	the ATM PVC interface index

Table 13.3-2 "Extend Interface Configuration Command" Command Parameters

Parameter	Type	Description
[no] customer-id	Parameter type: <Itf::asamIfExtCustomerId> Format: - a string identifying the customer or user - length: x<=64	<i>optional parameter with default value: "available"</i> Config the customerId per PVC

13.4 Interface Alarm Configuration Command

Command Description

This command allows the operator to configure the default severity for an alarm on this type of interface.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure interface alarm (index) [ no default-severity | default-severity
<Itf::asamIfExtAlmReportingSeverityDefault> ]
```

Command Parameters

Table 13.4-1 "Interface Alarm Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (xdsl-line ethernet-line shdsl-line voicefxs pon chpair chgroup subchgroup ont uni epon eont euni ellid lag ds1) Possible values: - xdsl-line : xdsl line - ethernet-line : ethernet line - shdsl-line : shdsl line - voicefxs : voicefxs - pon : pon interface - chpair : channelpair interface - chgroup : channelgroup interface - subchgroup : subchannelgroup interface - ont : ont interface	index of the IANA ifType

Resource Identifier	Type	Description
	- uni : uni interface - epon : epon interface - eont : epon ont interface - euni : epon uni interface - ellid : epon llid interface - lag : link aggregation group - ds1 : ds1 interface	

Table 13.4-2 "Interface Alarm Configuration Command" Command Parameters

Parameter	Type	Description
[no] default-severity	Parameter <Itf::asamIfExtAlmReportingSeverityDefault> Format: (indeterminate warning minor major critical) Possible values: - indeterminate : not a definite known severity - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking	type: optional parameter with default value: "major" default severity to be reported

13.5 Interface Sliding-Window Traffic Statistics Command

Command Description

This command allows the operator to configure sliding-window traffic statistics on related interface.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure interface statistics (port) [ no sliding-win-stats | sliding-win-stats <Itf::ifStatsEnable> ]
```

Command Parameters

Table 13.5-1 "Interface Sliding-Window Traffic Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Possible values: - chpair : channelpair Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	the interface index

Table 13.5-2 "Interface Sliding-Window Traffic Statistics Command" Command Parameters

Parameter	Type	Description
[no] sliding-win-stats	Parameter type: <Itf::ifStatsEnable> Format: (enable disable) Possible values: - enable : enable sliding-window traffic statistics - disable : disable sliding-window traffic statistics	<i>optional parameter with default value: "disable"</i> indicates if sliding-window traffic statistics be enabled

13.6 Cage mode configuration Command

Command Description

This command allows the operator to configure SLOT cage mode:

- The slot index of the cage
- The number of the sfp cage
- The index of rssi profile which would be configured on cage.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure interface cage (position) [ operational-mode <Eqpt::AsamCageMode> ]
```

Command Parameters

Table 13.6-1 "Cage mode configuration Command" Resource Parameters

Resource Identifier	Type	Description
(position)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::AsamCageIndex> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> : cage : <Eqpt::AsamCageIndex>) Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Possible values: - cage : cage operation mode Field type <Eqpt::AsamCageIndex> - the cage number - range: [1...16]	the physical cage position

Table 13.6-2 "Cage mode configuration Command" Command Parameters

Parameter	Type	Description
operational-mode	Parameter type: <Eqpt::AsamCageMode> Format: (not-set	<i>optional parameter</i> oper-mode of the cage

13 Interface Management Configuration Commands

Parameter	Type	Description
	gpon xgs mpm-gpon-xgs dual-gpon u-ngpon twenty-five-g ng-pon2 mpm-gpon-xgpon) Possible values: - not-set : cage mode set to not set - gpon : cage mode set to gpon - xgs : cage mode set to xgs - mpm-gpon-xgs : cage mode set to mpm-gpon-xgs - dual-gpon : cage mode set to dual-gpon - u-ngpon : cage mode set to u-ngpon - twenty-five-g : cage mode set to twentyfiveg - ng-pon2 : cage mode set to ng-pon2 - mpm-gpon-xgpon : cage mode set to mpm-gpon-xgpon	

14- Error Configuration Commands

14.1 Error Configuration Command Tree	14-620
14.2 Error Log Configuration Command	14-621

14.1 Error Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "Error Configuration Commands".

Command Tree

```
----configure
  ----error
    - [no] log-full-action
```

14.2 Error Log Configuration Command

Command Description

This command allows the operator to configure parameters related to the error log.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure error [ no log-full-action | log-full-action <Error::errorLogFullAction> ]
```

Command Parameters

Table 14.2-2 "Error Log Configuration Command" Command Parameters

Parameter	Type	Description
[no] log-full-action	Parameter type: <Error::errorLogFullAction> Format: (wrap halt) Possible values: - wrap : older log records are overwritten by recent ones - halt : logging is stopped until the log buffer is reset	<i>optional parameter with default value: "wrap"</i> set the action when error log buffer is full

15.2 System Configuration Command

Command Description

This command displays the ID that represents the SID (System ID) of the NE and is used to identify the NE in TL1 messages. The System ID may only include letters, digits, and hyphens, and must be unique for each NE in a managed network. The name is an administratively assigned name for this managed node. By convention, this is the node's fully qualified domain name. The accessOperatorID is an identifier randomly generated by Nokia and assigned to an operator. The Customer Dependent Engineering features are enabled based on the accessOperatorID. The location is the physical location of this node. The textual identification of the contact person for this managed node, together with information on how to contact this person, is given by contact-person.

The snmp-auth-traps indicates whether the SNMP agent process is permitted to generate authentication-failure traps. The ether-shape-rate indicates the Ethernet frame shaping rate in kb/s.

The system-mac is used to configure the system MAC address in ISAM. The systemMacAddr is the MAC address of the LANX interface on the NT board. The lanxBASEMacAddr is the first MAC address of the consecutive MAC addresses used by the LANX. The lanxRangeMac is the number of MAC addresses supported in LANX.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system [ no id | id <Sys::systemId> ] name <Transport::sysName> location <Transport::sysLocation> [
no access-oper-id | access-oper-id <Sys::accessOperatorId> ] [ no system-40gkr4 | system-40gkr4
<Sys::sys40GKR4> ] contact-person <Transport::sysContact> [ [ no ] en-snmpp-auth-trap ] nt-intercon-vlan
<Ihub::StackingVlanId> [ no periph-mgmt-vlan | periph-mgmt-vlan <Sys::PortVlanId> ] internal-nw-vlan
<Ihub::InternalNwVlanId> [ no periph-mgmt-ctrl | periph-mgmt-ctrl <Sys::PeriphMgmtCtrl> ] system-mac
<Sys::systemMac> [ no port-num-in-proto | port-num-in-proto <Sys::PortNumberInprotocol> ] [ no
ont-trc-dbg-vlan | ont-trc-dbg-vlan <Vlan::TrcDbgVlan> ] [ no ntr-ssmout-vlan | ntr-ssmout-vlan
<Ntr::SSMOutVlanId> ] [ no ntr-ptp-vlan | ntr-ptp-vlan <Vlan::EthPtpVlan> ] [ no customer-id | customer-id
<Sys::sysCustomerId> ] [ no voiceoswp | voiceoswp <Sys::sysVoiceOswp> ] [ no scalingmode | scalingmode
<Sys::sysScalingMode> ] [ no arp-polling-inter | arp-polling-inter <Sys::arpPollingInterval> ] [ no bsnap-state |
bsnap-state <Sys::bsnapState> ] bsnap-server-ip <Ip::V4Address> bsnap-server-port <Sys::portNumber> [ no
arp-tca-threshold | arp-tca-threshold <Sys::arpTcaThreshold> ]
```

Command Parameters

Table 15.2-2 "System Configuration Command" Command Parameters

Parameter	Type	Description
[no] id	Parameter type: <Sys::systemId> Format: - system ID - range: printable string (no white-spaces) - length: x<=64	optional parameter with default value: "" the system ID of the NE

Parameter	Type	Description
name	Parameter type: <Transport::sysName> Format: - a printable string - length: x<=255	<i>optional parameter</i> fully-qualified domain name of the system
location	Parameter type: <Transport::sysLocation> Format: - a printable string - length: x<=255	<i>optional parameter</i> location of this system
[no] access-oper-id	Parameter type: <Sys::accessOperatorId> Format: - unique access operator id, to activate a system reset is needed - range: [0...65535]	<i>optional parameter with default value: 0</i> unique access operator id assigned by Nokia, to activate a system reset is needed
[no] system-40gkr4	Parameter type: <Sys::sys40GKR4> Format: (disable enable) Possible values: - disable : System 40GKR4 is disabled - enable : System 40GKR4 is enabled	<i>optional parameter with default value: "disable"</i> enable or disable system 40GKR4
contact-person	Parameter type: <Transport::sysContact> Format: - a printable string - length: x<=255	<i>optional parameter</i> info about the contact person for this system
[no] en-snmp-auth-trap	Parameter type: boolean	<i>optional parameter</i> enable the generation of authentication-failure traps
nt-intercon-vlan	Parameter type: <Ihub::StackingVlanId> Format: - the vlan-id used for stacked Broadcom switching devices of NT - range: [1...4093]	<i>optional parameter</i> the value of the nt-interconnect vlan
[no] periph-mgnt-vlan	Parameter type: <Sys::PortVlanId> Format: - vlan id - range: [0...4093]	<i>optional parameter with default value: 0</i> configure the peripheral management vlan
internal-nw-vlan	Parameter type: <Ihub::InternalNwVlanId> Format: - the vlan-id for internal handling of packets on network ports - range: [1...4093]	<i>optional parameter</i> the value of the internal network vlan
[no] periph-mgnt-ctrl	Parameter type: <Sys::PeriphMgntCtrl> Format: (enable disable) Possible values: - enable : activate the peripheral management functionality - disable : deactivate the peripheral management functionality	<i>optional parameter with default value: "disable"</i> configure the peripheral management service
system-mac	Parameter type: <Sys::systemMac> Format: <Sys::MacAddr> / <Sys::LanxMacAddr> / <Sys::Range> Field type <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6 Field type <Sys::LanxMacAddr> - a lanx-mac-address (example : 01:02:03:04:05:06)	<i>optional parameter</i> sys mac addr in sysMacAddr/lanxBaseMacAddr/lanxRan

15 System Configuration Commands

Parameter	Type	Description
	- length: 6 - Field type <Sys::Range> - range of the shub - range: [0...65535]	
[no] port-num-in-protocol	Parameter type: <Sys::PortNumberInprotocol> Format: (log-slot-num position-based type-based legacy-num) Possible values: - log-slot-num : a system defined, predetermined and unique number - position-based : flat-numbering independent of slot-type - type-based : flat-numbering per slot-type(tl1-like) - legacy-num : numbering used since the early days(position-based-like)	<i>optional parameter with default value: "log-slot-num"</i> numbering scheme for the Line ID field (all protocols)
[no] ont-trc-dbg-vlan	Parameter type: <Vlan::TrcDbgVlan> Format: (none <Vlan::TrcDbgVlan>) Possible values: - none : no trace and debug vlan-id Field type <Vlan::TrcDbgVlan> - vlan id - range: [1...4093]	<i>optional parameter with default value: "none"</i> ONT trace and debug vlan
[no] ntr-ssmout-vlan	Parameter type: <Ntr::SSMOutVlanId> Format: - ssm out vlan id - range: [1...4093]	<i>optional parameter with default value: 4088</i> ssm out vlan id
[no] ntr-ntp-vlan	Parameter type: <Vlan::EthPtpVlan> Format: (none <Vlan::EthPtpVlan>) Possible values: - none : no vlan Field type <Vlan::EthPtpVlan> - vlan id - range: [1...4093]	<i>optional parameter with default value: "none"</i> ntp vlan id
[no] customer-id	Parameter type: <Sys::sysCustomerId> Format: - a printable string identifying the customer or user - length: x<=64	<i>optional parameter with default value: "available"</i> the customer-id assigned in system level
[no] voiceoswp	Parameter type: <Sys::sysVoiceOswp> Format: (novoice h248 sip sip-softdsp h248-softdsp) Possible values: - novoice : no voice software - h248 : h248 software - sip : sip software - sip-softdsp : sip softdsp software - h248-softdsp : h248 softdsp software	<i>optional parameter with default value: "novoice"</i> the voice software when system startup
[no] scalingmode	Parameter type: <Sys::sysScalingMode>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: (l2plus l3plus_host l3plus_lpm) Possible values: - l2plus : l2plus-Mode with L2 FDB table - l3plus_host : l3plus_host-Mode with L3 host/ARP table - l3plus_lpm : l3plus_lpm-Mode with L3 LPM/route table	<i>value: "l2plus"</i> the scalingmode, the new scalingmode takes effect after rebooting
[no] arp-polling-inter	Parameter type: <Sys::arpPollingInterval> Format: - polling interval - unit: sec - range: [120...1096]	<i>optional parameter with default value: "120"</i> configure ARP polling interval
[no] bsnap-state	Parameter type: <Sys::bsnapState> Format: (enable disable) Possible values: - enable : enable BSNAP trace - disable : disable BSNAP trace	<i>optional parameter with default value: "disabled"</i> enable or disable BSNAP
bsnap-server-ip	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter</i> configure BSNAP server ip
bsnap-server-port	Parameter type: <Sys::portNumber> Format: - index number - range: [0...65535]	<i>optional parameter</i> configure BSNAP server port
[no] arp-tca-threshold	Parameter type: <Sys::arpTcaThreshold> Format: - tca threshold - range: [0...1000]	<i>optional parameter with default value: "10"</i> configure ARP tca threshold

15.3 Configure system LEDs

Command Description

This command can be used to switch on/off (enable/disable) all the external LEDs of the system.

This CLI command is only supported on some equipment practices.

On equipments where this CLI command is supported, the returned status will reflect the configuration that has been made. On other equipments, the status 'enabled' is always returned

User Level

The command can be accessed by operators with all privileges, and executed by operators with all privileges.

Command Syntax

The command has the following syntax:

> configure system external-leds [no status | status <Sys::ExternalLedsStatusType>]

Command Parameters

Table 15.3-2 "Configure system LEDs" Command Parameters

Parameter	Type	Description
[no] status	Parameter type: <Sys::ExternalLedsStatusType> Format: (disable enable) Possible values: - disable : disable external LEDs - enable : enable external LEDs	optional parameter with default value: "enable" configure the status of the external LEDs

15.4 System SNTP Configuration Command

Command Description

This command allows the operator to configure the SNTP and its related parameters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system sntp [ server-ip-addr <Ip::V4Address> ] [ no server-port | server-port <Sys::portNumber> ] [ no polling-rate | polling-rate <Sys::pollingRate> ] [ [ no ] enable ] [ no timezone-offset | timezone-offset <Sys::timeZoneOffset> ]
```

Command Parameters

Table 15.4-2 "System SNTP Configuration Command" Command Parameters

Parameter	Type	Description
server-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter</i> configure the ip address of the sntp server
[no] server-port	Parameter type: <Sys::portNumber> Format: - index number - range: [0...65535]	<i>optional parameter with default value: 123</i> configure the port number of the sntp server
[no] polling-rate	Parameter type: <Sys::pollingRate> Format: - polling rate in second - unit: seconds - range: [60...864000]	<i>optional parameter with default value: 3600</i> configure polling rate for the sntp agent
[no] enable	Parameter type: boolean	<i>optional parameter</i> sntp application in the NE is enabled
[no] timezone-offset	Parameter type: <Sys::timeZoneOffset> Format: - specify the offset for timezone from GMT/UTC - unit: minutes - range: [-780...840]	<i>optional parameter with default value: 0</i> set the offset of the local timezone from GMT/UTC

15.5 System SNTP Server Table Configuration Command

Command Description

This command allows the operator to configure SNTP Server Table and its related parameters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system sntp server-table ( no ip-address (ip-addr) ) | ( ip-address (ip-addr) [ no port | port <Sys::ServerPortNumber> ] [ priority <Sys::priority> ] )
```

Command Parameters

Table 15.5-1 "System SNTP Server Table Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ip-addr)	Format: - IPv4-address	configure the ip-address of the sntp server

Table 15.5-2 "System SNTP Server Table Configuration Command" Command Parameters

Parameter	Type	Description
[no] port	Parameter type: <Sys::ServerPortNumber> Format: - port number - range: [0...65535]	<i>optional parameter with default value: 123</i> configure the port number of the sntp server
priority	Parameter type: <Sys::priority> Format: - sntp server priority(1 - high) [1...6] for ipv6 management supported boards,[1...3] for others	<i>optional parameter</i> configure the priority number of the sntp server

15.6 System SNTP Server Table Configuration Command

Command Description

This command allows the operator to configure SNTP Server Table and its related parameters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system sntp server-table ( no ipv6-address (ip-addr) ) | ( ipv6-address (ip-addr) [ no port | port <Sys::ServerPortNumber> ] [ priority <Sys::priority> ] )
```

Command Parameters

Table 15.6-1 "System SNTP Server Table Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(ip-addr)	Format: - IPv6-address	configure the ipv6-address of the sntp server

Table 15.6-2 "System SNTP Server Table Configuration Command" Command Parameters

Parameter	Type	Description
[no] port	Parameter type: <Sys::ServerPortNumber> Format: - port number - range: [0...65535]	<i>optional parameter with default value: 123</i> configure the port number of the sntp server
priority	Parameter type: <Sys::priority> Format: - sntp server priority(1 - high) [1...6] for ipv6 management supported boards,[1...3] for others	<i>optional parameter</i> configure the priority number of the sntp server

15.7 System daylight saving time Configuration Command

Command Description

This command allows the operator to configure the daylight saving time and its related parameters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system dst [ [ no ] enable ]
```

Command Parameters

Table 15.7-2 "System daylight saving time Configuration Command" Command Parameters

Parameter	Type	Description
[no] enable	Parameter type: boolean	<i>optional parameter</i> daylight saving time application in the NE is enabled

15.8 System daylight saving time Configuration Command

Command Description

This command allows the operator to configure the daylight saving time start/end time with the corresponding specified days every year.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system dst ( no date timezone-offset <Sys::timeZoneOffsetDst> ) | ( date timezone-offset
<Sys::timeZoneOffsetDst> start-time <Sys::GaugeTimeInSecs> end-time <Sys::GaugeTimeInSecs> [ no offset |
offset <Sys::DstAdjustment> ] )
```

Command Parameters

Table 15.8-1 "System daylight saving time Configuration Command" Resource Parameters

Resource Identifier	Type	Description
timezone-offset	Parameter type: <Sys::timeZoneOffsetDst> Format: - specify the offset for timezone from GMT/UTC - range: [-780...840]	configure the timezone of daylight saving time

Table 15.8-2 "System daylight saving time Configuration Command" Command Parameters

Parameter	Type	Description
start-time	Parameter type: <Sys::GaugeTimeInSecs> Format: - the time (yyyy-mm-dd:hour:minutes:secs)	<i>mandatory parameter</i> configure start time of daylight saving time
end-time	Parameter type: <Sys::GaugeTimeInSecs> Format: - the time (yyyy-mm-dd:hour:minutes:secs)	<i>mandatory parameter</i> configure end time of daylight saving time
[no] offset	Parameter type: <Sys::DstAdjustment> Format: - The number of minutes that will be adjusted to the time - unit: minutes - range: [0...60]	<i>optional parameter with default value: 60</i> configure offset of daylight saving time

15.9 System daylight saving time Configuration Command

Command Description

This command allows the operator to configure the daylight saving time start/end time with the specified week and weekday repeatedly.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system dst ( no recurring timezone-offset <Sys::timeZoneOffsetDst> ) | ( recurring timezone-offset
<Sys::timeZoneOffsetDst> start-time <Sys::DSTRecurring> end-time <Sys::DSTRecurring> [ no offset | offset
<Sys::DstAdjustment> ] )
```

Command Parameters

Table 15.9-1 "System daylight saving time Configuration Command" Resource Parameters

Resource Identifier	Type	Description
timezone-offset	Parameter type: <Sys::timeZoneOffsetDst> Format: - specify the offset for timezone from GMT/UTC - range: [-780...840]	configure the timezone of daylight saving time

Table 15.9-2 "System daylight saving time Configuration Command" Command Parameters

Parameter	Type	Description
start-time	Parameter type: <Sys::DSTRecurring> Format: (jan - first - sun : <Sys::DSThour> : <Sys::DSTmin> jan - first - mon : <Sys::DSThour> : <Sys::DSTmin> jan - first - tues : <Sys::DSThour> : <Sys::DSTmin> jan - first - wed : <Sys::DSThour> : <Sys::DSTmin> jan - first - thur : <Sys::DSThour> : <Sys::DSTmin> jan - first - fri : <Sys::DSThour> : <Sys::DSTmin> jan - first - sat : <Sys::DSThour> : <Sys::DSTmin> jan - second - sun : <Sys::DSThour> : <Sys::DSTmin> jan - second - mon : <Sys::DSThour> : <Sys::DSTmin> jan - second - tues : <Sys::DSThour> : <Sys::DSTmin> jan - second - wed : <Sys::DSThour> : <Sys::DSTmin> jan - second - thur : <Sys::DSThour> : <Sys::DSTmin> jan - second - fri : <Sys::DSThour> : <Sys::DSTmin>	<i>mandatory parameter</i> configure start time of daylight saving time

Parameter	Type	Description
	jan - second - sat : <Sys::DSThour> : <Sys::DSTmin> jan - third - sun : <Sys::DSThour> : <Sys::DSTmin> jan - third - mon : <Sys::DSThour> : <Sys::DSTmin> jan - third - tues : <Sys::DSThour> : <Sys::DSTmin> jan - third - wed : <Sys::DSThour> : <Sys::DSTmin> jan - third - thur : <Sys::DSThour> : <Sys::DSTmin> jan - third - fri : <Sys::DSThour> : <Sys::DSTmin> jan - third - sat : <Sys::DSThour> : <Sys::DSTmin> jan - fourth - sun : <Sys::DSThour> : <Sys::DSTmin> jan - fourth - mon : <Sys::DSThour> : <Sys::DSTmin> jan - fourth - tues : <Sys::DSThour> : <Sys::DSTmin> jan - fourth - wed : <Sys::DSThour> : <Sys::DSTmin> jan - fourth - thur : <Sys::DSThour> : <Sys::DSTmin> jan - fourth - fri : <Sys::DSThour> : <Sys::DSTmin> jan - fourth - sat : <Sys::DSThour> : <Sys::DSTmin> jan - last - sun : <Sys::DSThour> : <Sys::DSTmin> jan - last - mon : <Sys::DSThour> : <Sys::DSTmin> jan - last - tues : <Sys::DSThour> : <Sys::DSTmin> jan - last - wed : <Sys::DSThour> : <Sys::DSTmin> jan - last - thur : <Sys::DSThour> : <Sys::DSTmin> jan - last - fri : <Sys::DSThour> : <Sys::DSTmin> jan - last - sat : <Sys::DSThour> : <Sys::DSTmin> feb - first - sun : <Sys::DSThour> : <Sys::DSTmin> feb - first - mon : <Sys::DSThour> : <Sys::DSTmin> feb - first - tues : <Sys::DSThour> : <Sys::DSTmin> feb - first - wed : <Sys::DSThour> : <Sys::DSTmin> feb - first - thur : <Sys::DSThour> : <Sys::DSTmin> feb - first - fri : <Sys::DSThour> : <Sys::DSTmin> feb - first - sat : <Sys::DSThour> : <Sys::DSTmin> feb - second - sun : <Sys::DSThour> : <Sys::DSTmin> feb - second - mon : <Sys::DSThour> : <Sys::DSTmin> feb - second - tues : <Sys::DSThour> : <Sys::DSTmin> feb - second - wed : <Sys::DSThour> : <Sys::DSTmin> feb - second - thur : <Sys::DSThour> : <Sys::DSTmin> feb - second - fri : <Sys::DSThour> : <Sys::DSTmin> feb - second - sat : <Sys::DSThour> : <Sys::DSTmin> feb - third - sun : <Sys::DSThour> : <Sys::DSTmin> feb - third - mon : <Sys::DSThour> : <Sys::DSTmin> feb - third - tues : <Sys::DSThour> : <Sys::DSTmin> feb - third - wed : <Sys::DSThour> : <Sys::DSTmin> feb - third - thur : <Sys::DSThour> : <Sys::DSTmin> feb - third - fri : <Sys::DSThour> : <Sys::DSTmin> feb - third - sat : <Sys::DSThour> : <Sys::DSTmin> feb - fourth - sun : <Sys::DSThour> : <Sys::DSTmin> feb - fourth - mon : <Sys::DSThour> : <Sys::DSTmin> feb - fourth - tues : <Sys::DSThour> : <Sys::DSTmin> feb - fourth - wed : <Sys::DSThour> : <Sys::DSTmin> feb - fourth - thur : <Sys::DSThour> : <Sys::DSTmin> feb - fourth - fri : <Sys::DSThour> : <Sys::DSTmin> feb - fourth - sat : <Sys::DSThour> : <Sys::DSTmin> feb - last - sun : <Sys::DSThour> : <Sys::DSTmin> feb - last - mon : <Sys::DSThour> : <Sys::DSTmin> feb - last - tues : <Sys::DSThour> : <Sys::DSTmin> feb - last - wed : <Sys::DSThour> : <Sys::DSTmin> feb - last - thur : <Sys::DSThour> : <Sys::DSTmin> feb - last - fri : <Sys::DSThour> : <Sys::DSTmin> feb - last - sat : <Sys::DSThour> : <Sys::DSTmin>

15.10 System Loop ID Syntax Configuration

Command

Command Description

This command allows the operator to configure the system loop ID syntax. For atm-based-dsl, default value is "Access_Node_ID atm Rack/Frame/Slot/Port:VPI.VCI". For efm-based-dsl, default value is "Access_Node_ID eth Rack/Frame/Slot/Port". For efm-based-pon, default value is "Access_Node_ID eth Rack/Frame/Slot/Port/ONU/OnuSlt/UNI". For efm-based-epon, default value is "Bras Access_Node_ID/Rack/Frame/Slot/Subslot/Port/ONT Oft". For efm-based-ngpon2, default value is "Access_Node_ID eth ng2:Channelgroup/Subchannelgroup/ONU/OnuSlt/UNI". For NT-port, default value is "Access_Node_ID nt Ntslot/PrtType/Port".

The system loop ID syntax is a concatenation of keywords, separators and free text strings.

The operator can use the following predefined keywords to construct the system loop ID :

- **Bras** to specify the Bras identifier.
- **Access_Node_ID** to specify the system id.
- **Rack** to specify the rack number.
- **Frame** to specify the shelf number.
- **Slot** to specify the slot number.
- **Subslot** to specify the slot number in ONT. Subslot is only supported for EPON.
- **ShSlt** to specify the slot number without leading zero.
- **Port** to specify the port number.
- **ShPrt** to specify the port number without leading zero.
- **VPI** to specify the vpi.
- **VCI** to specify the vci.
- **Q-VID** to specify the vlan identifier.
- **LzQVID** to specify the vlan identifier with leading zero.
- **DUVID** to specify that user untagged vlan identifier is not added in string.
- **U-VID** to specify that user untagged vlan identifier is not added in string. When it is the last keyword and the value is null, it removes all non-keywords before it.
- **I-VID** to specify the user side inner vlan identifier.
- **ONT** to specify the ONT id which connecting to OLT. Here using the ONUs MAC as id. it is represented with 12 ASCII characters. ONT is only supported for EPON.
- **ONU** to specify the number of the ONU without leading zero.
- **LzOnu** to specify the number of the ONU with leading zero.
- **OnuSlt** to specify the slot number on the ONU without leading zero.
- **UNI** to specify the number of UNI on the ONU without leading zero.
- **N-VID** to specify the network VLAN identifier.
- **LzNVID** to specify the network VLAN identifier with leading zeros (should not be used on GPON/EPON, neither for ANCP).
- **LzSVID** to specify the network S-VLAN identifier in S+C VLAN forwarding model with leading zeros (should not be used on GPON/EPON, neither for ANCP).
- **Oft** to specify the ONU format. It is a string.
- **OnuSN** to specify the ONU with the serial number.
- **NzOnuSN** to specify the ONU with the serial number without leading zeros.
- **OnuLD** to specify the ONU with logical authentication ID.
- **OntMAC** to specify the ONU with the MAC address. OntMAC is only supported for EPON.
- **Channelgroup** to specify the multi-wavelength optical feeder fiber.
- **Subchannelgroup** to specify the administrative domain within a channelgroup.
- **S-MAC** to specify the system MAC address.
- **Ntslot** to specify the nt slot.

- *PrtType* to specify the nt port type.

Note : the ONT and ONU related keywords are relevant only for the pon and epon syntax.

Note : according to Broadband Forum TR-156, the ONT always adds a VLAN tag before sending the traffic to the OLT. In such case, the OLT not longer knows if traffic arrived at the ONT untagged or tagged. Therefore for GPON, the keywords "DUVID" and "U-VID" will have the same behavior as "Q-VID".

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system loop-id-syntax [ no atm-based-dsl | atm-based-dsl <PrintableString-0-80> ] [ no efm-based-dsl | efm-based-dsl <PrintableString-0-80> ] [ no efm-based-pon | efm-based-pon <PrintableString-0-80> ] [ no efm-based-epon | efm-based-epon <PrintableString-0-80> ] [ no efm-based-ngpon2 | efm-based-ngpon2 <PrintableString-0-80> ]
```

Command Parameters

Table 15.10-2 "System Loop ID Syntax Configuration Command" Command Parameters

Parameter	Type	Description
[no] atm-based-dsl	Parameter type: <PrintableString-0-80> Format: - a printable string - length: x<=80	<i>optional parameter with default value: "Access_Node_ID atm Rack/Frame/Slot/Port : VPI.VCI"</i> define the syntax of loop Id for atm based dsl lines
[no] efm-based-dsl	Parameter type: <PrintableString-0-80> Format: - a printable string - length: x<=80	<i>optional parameter with default value: "Access_Node_ID eth Rack/Frame/Slot/Port"</i> defines the syntax of loop Id for efm based dsl lines
[no] efm-based-pon	Parameter type: <PrintableString-0-80> Format: - a printable string - length: x<=80	<i>optional parameter with default value: "Access_Node_ID eth Rack/Frame/Slot/Port/ONU/Onuslot/UNID"</i> defines the syntax of loop Id for efm based pon lines
[no] efm-based-epon	Parameter type: <PrintableString-0-80> Format: - a printable string - length: x<=80	<i>optional parameter with default value: "Bras Access_Node_ID/Rack/Frame/Slot/Subslot/ONT/ONTid"</i> defines the syntax of loop Id for efm based epon lines, suggest OntMAC for dpoe
[no] efm-based-ngpon2	Parameter type: <PrintableString-0-80> Format: - a printable string - length: x<=80	<i>optional parameter with default value: "Access_Node_ID eth ng2 : Channelgroup/Subchannelgroup/ONU/CPEgroup"</i> defines the syntax of loop Id for efm based ngpon2 lines

15.11 Maximum Lt Link Speed Configuration Command

Command Description

This command allows the operator to configure the maximum lt link speed.

Note: maxltlinkspeed value 20Gb is not supported on NANT-E, this is only supported on FANT-F.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system max-lt-link-speed [ no link-speed | link-speed <Sys::MaxLtLinkSpeed> ]
```

Command Parameters

Table 15.11-2 "Maximum Lt Link Speed Configuration Command" Command Parameters

Parameter	Type	Description
[no] link-speed	Parameter type: <Sys::MaxLtLinkSpeed> Format: (one-gb twodotfive-gb ten-gb twenty-gb twentyfive-gb forty-gb fifty-gb one-hundred-gb) Possible values: - one-gb : enables max 1 Gbps lt link speed - twodotfive-gb : enables max 2.5 Gbps lt link speed - ten-gb : enables max 10 Gbps lt link speed - twenty-gb : enables max 20 Gbps lt link speed - twentyfive-gb : enables max 25 Gbps lt link speed - forty-gb : enables max 40 Gbps lt link speed - fifty-gb : enables max 50 Gbps lt link speed - one-hundred-gb : enables max 100 Gbps lt link speed	<i>optional parameter with default value: "one-gb"</i> the maximum lt link speed

15.12 System ONT Configuration Command

Command Description

Obsolete command, replaced by `configure generic-pon ont`, `configure pon pwrbrst-mode`.

This command is to configure the specific ONT and PON related parameters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system pon-ont [ no slid-mode | slid-mode <Gpon::SlidMode> ] [ no pwrbrst-mode | pwrbrst-mode
<Gpon::PowerBurstMode> ] [ no sn-bundle-timer | sn-bundle-timer <Gpon::SnBundleTimer> ] [ no
sw-ver-mis-block | sw-ver-mis-block <Gpon::SwVerMisBlock> ] [ no sn-autounlock | sn-autounlock
<Gpon::OntAuthMode> ]
```

Obsolete command, replaced by `configure generic-pon ont`, `configure pon pwrbrst-mode`.

Command Parameters

Table 15.12-2 "System ONT Configuration Command" Command Parameters

Parameter	Type	Description
[no] slid-mode	Parameter type: <Gpon::SlidMode> Format: (ascii hexa-dec) Possible values: - ascii : ascii interpretation for subscriber location - hexa-dec : hexadecimal mode interpretation for subscriber location	<i>optional parameter with default value: "ascii"</i> display interpretation for subscriber location id
[no] pwrbrst-mode	Parameter type: <Gpon::PowerBurstMode> Format: (disable enable) Possible values: - disable : disable power burst detection mode - enable : enable power burst detection mode	<i>optional parameter with default value: "disable"</i> power burst detection mode for pon
[no] sn-bundle-timer	Parameter type: <Gpon::SnBundleTimer> Format: - the system timer for auto bundling sn - unit: hour - range: [1...72]	<i>optional parameter with default value: 24L</i> the system timer for bundling sn with loid/slid when ont is in auto-bundle mode
[no] sw-ver-mis-block	Parameter type: <Gpon::SwVerMisBlock> Format:	<i>optional parameter with default value: "enable"</i>

15 System Configuration Commands

Parameter	Type	Description
	(enable disable) Possible values: - enable : block the user traffic when ont version mismatch - disable : do not block the user traffic when ont version mismatch	the control behavior of user traffic block when ont version mismatch
[no] sn-autounlock	Parameter type: <Gpon::OntAuthMode> Format: (disable enable) Possible values: - disable : disable unlock ONT automatically after ONT authenticated - enable : enable unlock ONT automatically after ONT authenticated	<i>optional parameter with default value: "disable"</i> unlock ONT automatically after ONT authenticated

15.13 Epon System PM Configuration Command

Command Description

This command allows the operator to enable or disable the global pm collection.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system epon [ no pm-collect | pm-collect <epon::pmcollect> ] [ no onuidmthd | onuidmthd
<epon::accessloophonuidmthd> ] [ no rogueadmin | rogueadmin <epon::rogueonuadmin> ]
```

Command Parameters

Table 15.13-2 "Epon System PM Configuration Command" Command Parameters

Parameter	Type	Description
[no] pm-collect	Parameter type: <epon::pmcollect> Format: (enable disable) Possible values: - enable : PM collection enabled - disable : PM collection disabled	<i>optional parameter with default value: "disable"</i> enable or disable the global pm collection
[no] onuidmthd	Parameter type: <epon::accessloophonuidmthd> Format: (mac loid) Possible values: - mac : fill onu id with mac@ - loid : fill onu id with loid	<i>optional parameter with default value: "mac"</i> access loop onu id method
[no] rogueadmin	Parameter type: <epon::rogueonuadmin> Format: (autodisable manualdisable) Possible values: - autodisable : auto disable rogue onu - manualdisable : manual disable rogue onu	<i>optional parameter with default value: "manualdisable"</i> choose auto or manual disable a rogue onu

15.14 System Synchronous Interface Timing Clock Configuration Command

Command Description

This command allows the operator to configure all the Clock Synchronization (NTR) characteristics of the ISAM node.

The underlying commands and parameters are applicable for the NT's supporting Enhanced Clock Management.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing [ [ no ] revert ] [ no wait-time | wait-time <Sys::SysClkWaitTime> ] [ no output-ql-thresh | output-ql-thresh <Ntr::SysClkSrcQL> ] [ [ no ] ssmout-en-bits ] [ no ssmout-ceiling | ssmout-ceiling <Ntr::DefSysClkSrcQL> ] [ no ais-sensitivity | ais-sensitivity <Sys::SysClkAisSensitivity> ]
```

Command Parameters

Table 15.14-2 "System Synchronous Interface Timing Clock Configuration Command" Command Parameters

Parameter	Type	Description
[no] revert	Parameter type: boolean	<i>optional parameter</i> configure system clock to revertive or non-revertive. As a limitation non-revertive mode is not supported in duplex NTs.
[no] wait-time	Parameter type: <Sys::SysClkWaitTime> Format: - time to wait a clock source become eligible - unit: seconds - range: [0...720]	<i>optional parameter with default value: 10</i> configure time to wait on the reference switchover
[no] output-ql-thresh	Parameter type: <Ntr::SysClkSrcQL> Format: (clk-ql-stu clk-ql-prs clk-ql-prc clk-ql-inv3 clk-ql-ssu-a-tnc clk-ql-ssu-a clk-ql-tnc	<i>optional parameter with default value: "clk-ql-dnu-dus"</i> configure system threshold of BITS output QL

Parameter	Type	Description
	clk-ql-inv5 clk-ql-inv6 clk-ql-st2 clk-ql-ssu-b clk-ql-inv9 clk-ql-st3 clk-ql-sec clk-ql-smc clk-ql-st3e clk-ql-prov clk-ql-dnu-dus clk-ql-dnu clk-ql-dus) Possible values: - clk-ql-stu : Synchronized-Traceability Unknown - clk-ql-prs : Primary Reference Source - clk-ql-prc : Primary Reference Clock - clk-ql-inv3 : Quality Level unallocated - clk-ql-ssu-a-tnc : Traced to Sync Supply Unit-A/Transmit Node Clock - clk-ql-ssu-a : Traced to Sync Supply Unit-A(ETSI) - clk-ql-tnc : Traced to Transmit Node Clock(ANSI) - clk-ql-inv5 : Quality Level unallocated - clk-ql-inv6 : Quality Level unallocated - clk-ql-st2 : Traceable to Stratum 2 - clk-ql-ssu-b : Traced to Sync Supply Unit-B - clk-ql-inv9 : Quality Level unallocated - clk-ql-st3 : Traceable to Stratum 3 - clk-ql-sec : Traceable to SDH Equipment Clock - clk-ql-smc : Traceable to SONET Clock SelfTimed - clk-ql-st3e : Traceable to Stratum 3E - clk-ql-prov : Operator Provisioned - clk-ql-dnu-dus : Signal should not be used for sync - clk-ql-dnu : Signal should not be used for sync(ETSI) - clk-ql-dus : Signal should not be used for sync(ANSI)	
[no] ssmout-en-bits	Parameter type: boolean	<i>optional parameter</i> enable ssm-out bits mode
[no] ssmout-ceiling	Parameter type: <Ntr::DefSysClkSrcQL> Format: (clk-ql-stu clk-ql-prs clk-ql-prc clk-ql-inv3 clk-ql-ssu-a-tnc clk-ql-ssu-a clk-ql-tnc clk-ql-inv5 clk-ql-inv6 clk-ql-st2 clk-ql-ssu-b clk-ql-inv9 clk-ql-st3 clk-ql-sec clk-ql-smc clk-ql-st3e clk-ql-prov clk-ql-dnu-dus	<i>optional parameter with default value: "clk-ql-sys-def"</i> configure system threshold of BITS and Sync output QL

15 System Configuration Commands

Parameter	Type	Description
	clk-ql-dnu clk-ql-dus clk-ql-sys-def) Possible values: - clk-ql-stu : Synchronized-Traceability Unknown - clk-ql-prs : Primary Reference Source - clk-ql-prc : Primary Reference Clock - clk-ql-inv3 : Quality Level unallocated - clk-ql-ssu-a-tnc : Traced to Sync Supply Unit-A/Transmit Node Clock - clk-ql-ssu-a : Traced to Sync Supply Unit-A(ETSI) - clk-ql-tnc : Traced to Transmit Node Clock(ANSI) - clk-ql-inv5 : Quality Level unallocated - clk-ql-inv6 : Quality Level unallocated - clk-ql-st2 : Traceable to Stratum 2 - clk-ql-ssu-b : Traced to Sync Supply Unit-B - clk-ql-inv9 : Quality Level unallocated - clk-ql-st3 : Traceable to Stratum 3 - clk-ql-sec : Traceable to SDH Equipment Clock - clk-ql-smc : Traceable to SONET Clock SelfTimed - clk-ql-st3e : Traceable to Stratum 3E - clk-ql-prov : Operator Provisioned - clk-ql-dnu-dus : Signal should not be used for sync - clk-ql-dnu : Signal should not be used for sync(ETSI) - clk-ql-dus : Signal should not be used for sync(ANSI) - clk-ql-sys-def : System default value based on region type	
[no] ais-sensitivity	Parameter type: <Sys::SysClkAisSensitivity> Format: (enable disable) Possible values: - enable : enable AIS sensitivity as BITS failure detection - disable : disable AIS sensitivity as BITS failure detection	<i>optional parameter with default value: "disable"</i> configure the system to use AIS detection as BITS input failure

15.15 System Clock Bits Mode Configuration Command

Command Description

This command allows the operator to configure the clock bits mode. This command allow the operator to configure the BITS clock source based on the Network Timing Reference used as a BITS source. The operator can configure the values: E1, Ds1, 2048Khz or autoselect. When "autoselect" is configured, the system takes the default values:

- *ds1 for NTs with CLOCK capability=T1.*
- *e1 for NTs with CLOCK capability=E1.*

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing bits [ (interface-type) ]
```

Command Parameters

Table 15.15-2 "System Clock Bits Mode Configuration Command" Command Parameters

Parameter	Type	Description
(interface-type)	Format: (e1 ds1 khz2048 autoselect) Possible values: - e1 : select E1 Source - ds1 : select DS1 Source - khz2048 : select 2048KHz Source - autoselect : autoselect Source	<i>optional parameter</i> select the external clock type E1 or DS1 or 2048Khz

15.16 System Clock Source Priority Configuration Command

Command Description

This command allows the operator to configure the clock source priority.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ref-order (index) [ (priority) ]
```

Command Parameters

Table 15.16-1 "System Clock Source Priority Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (prio1 prio2) Possible values: - prio1 : configure primary clock source - prio2 : configure secondary clock source	clock priority index

Table 15.16-2 "System Clock Source Priority Configuration Command" Command Parameters

Parameter	Type	Description
(priority)	Format: (bits-a bits-b synce-1 synce-2 ieee1588 ieee1588-a ieee1588-b none) Possible values: - bits-a : select BITS-A for this priority - bits-b : select BITS-B for this priority - synce-1 : select SyncE reference 1 for this priority - synce-2 : select SyncE reference 2 for this priority - ieee1588 : select IEEE 1588 clock for this priority - ieee1588-a : select IEEE 1588-A clock for this priority	<i>optional parameter</i> frequency clock priority selection

Parameter	Type	Description
	- ieee1588-b : select IEEE 1588-B clock for this priority - none : remove clock source for this priority	

15.17 System Clock ToD Sources Priority Configuration Command

Command Description

This command allows the operator to configure the priority of the ToD sources.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing tod-ref-order (index) [ (priority) ]
```

Command Parameters

Table 15.17-1 "System Clock ToD Sources Priority Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (prio1 prio2) Possible values: - prio1 : configure primary tod source - prio2 : configure secondary tod source	ToD clock priority index

Table 15.17-2 "System Clock ToD Sources Priority Configuration Command" Command Parameters

Parameter	Type	Description
(priority)	Format: (ieee1588-a ieee1588 ieee1588-b gnss-a gnss-b none) Possible values: - ieee1588-a : select IEEE 1588-A clock for this ToD priority - ieee1588 : select IEEE 1588 clock for this ToD priority - ieee1588-b : select IEEE 1588-B clock for this ToD priority - gnss-a : select GNSS-A clock for this ToD priority - gnss-b : select GNSS-B clock for this ToD priority	<i>optional parameter</i> ToD clock priority selection

Parameter	Type	Description
	- none : remove clock source for this ToD priority	

15.18 NTR PTP Configuration Command

Command Description

This node is meant to configure all parameters related to clock synchronization based on the IEEE1588 PTP protocol

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp [ no transport-mode | transport-mode <Sys::SysClkPtpTransportMode> ] [ no
dynamic-update | dynamic-update <Sys::SysClkPtpDynamicUpdate> ] [ no tc-step-mode | tc-step-mode
<Ntr::PtpTCModeFormat> ] [ no max-steps-removed | max-steps-removed <Ntr::MaxStepsRemoved> ] [ no profile
| profile <Ntr::PtpProfileFormat> ]
```

Command Parameters

Table 15.18-2 "NTR PTP Configuration Command" Command Parameters

Parameter	Type	Description
[no] transport-mode	Parameter type: <Sys::SysClkPtpTransportMode> Format: (ucast-over-udp ucast-mcast-over-udp mcast-over-enet) Possible values: - ucast-over-udp : PTP frames are embedded in UDP packets - ucast-mcast-over-udp : PTP frames are embedded in UDP packets - mcast-over-enet : PTP frames are embedded in Ethernet packets	<i>optional parameter with default value: "mcast-over-enet"</i> protocol used to transport the PTP frames
[no] dynamic-update	Parameter type: <Sys::SysClkPtpDynamicUpdate> Format: (disable enable) Possible values: - disable : don't use dynamic extraction - enable : use dynamically extracted information	<i>optional parameter with default value: "disable"</i> specify if dynamic extraction of dataset information is activated
[no] tc-step-mode	Parameter type: <Ntr::PtpTCModeFormat> Format: (disable one-step-enable) Possible values: - disable : disable TC mode	<i>optional parameter with default value: "disable"</i> define the step mode of PTP TC

Parameter	Type	Description
	- one-step-enable : enable one-step TC	
[no] max-steps-removed	Parameter type: <Ntr::MaxStepsRemoved> Format: - the max value of stepsRemoved for BMCA - range: [0...255]	<i>optional parameter with default value: "255"</i> configure the max value of stepsRemoved for BMCA
[no] profile	Parameter type: <Ntr::PtpProfileFormat> Format: (custom-profile g8265-1-profile g8275-1-profile ccsa-profile) Possible values: - custom-profile : system with custom profile - g8265-1-profile : select the itu-t G8265.1 standard profile - g8275-1-profile : select the itu-t G8275.1 standard profile - ccsa-profile : select the CCSA standard profile	<i>optional parameter with default value: "custom-profile"</i> configure the system ptp profile and update the related ptp configurations to the standard specified default value. (Note: FANT-H does not support custom-profile)

15.19 NTR Clock Transmission Protocol Configuration Command

Command Description

This command is used to configure the transmission protocol for the IEEE1588 clock sources

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp tx-protocol (index) [ no ip-addr | ip-addr <Ip::V4Address> ] [ no gateway-addr | gateway-addr <Ip::AddressAndIpMaskFull> ] [ no vlan | vlan <Sys::PortVlanId> ]
```

Command Parameters

Table 15.19-1 "NTR Clock Transmission Protocol Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ieee1588-a ieee1588-b ieee1588-a:1 ieee1588-b:1 ieee1588) Possible values: - ieee1588-a : ieee1588 port 1 on nt-a excluding FANT-G NT type - ieee1588-b : ieee1588 port 1 on nt-b excluding FANT-G NT type - ieee1588-a:1 : ieee1588 port 1 on nt-a of FANT-G - ieee1588-b:1 : ieee1588 port 1 on nt-b of FANT-G - ieee1588 : ieee1588 port on nt of FANT-H	ieee1588 clock index

Table 15.19-2 "NTR Clock Transmission Protocol Configuration Command" Command Parameters

Parameter	Type	Description
[no] ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> ip-address of the ToPSync PHY Port
[no] gateway-addr	Parameter type: <Ip::AddressAndIpMaskFull> Format:	<i>optional parameter with default value: "0.0.0.0/0"</i>

Parameter	Type	Description
	<Ip::V4Address> / <Ip::PrefixLengthFull> Field type <Ip::V4Address> - IPv4-address Field type <Ip::PrefixLengthFull> - IP address prefix length - range: [0...32]	default gateway towards the GrandMaster clock if outside the slave subnet
[no] vlan	Parameter type: <Sys::PortVlanId> Format: - vlan id - range: [0...4093]	<i>optional parameter with default value: 0</i> PTP port vlan

15.20 System Synchronous InterfaceTiming Clock Switching Mode configuration Command

Command Description

This command is used to configure the PTP domain Value (decimal) definition

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> configure system sync-if-timing ptp ptp-domain (index) [no domain | domain <Ntr::PtpDomain>]

Command Parameters

Table 15.20-1 "System Synchronous InterfaceTiming Clock Switching Mode configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ieee1588-a ieee1588-b ieee1588-a:1 ieee1588-b:1 ieee1588) Possible values: - ieee1588-a : ieee1588 port on nt-a excluding FANT-G NT type - ieee1588-b : ieee1588 port on nt-b excluding FANT-G NT type - ieee1588-a:1 : ieee1588 port 1 on nt-a of FANT-G - ieee1588-b:1 : ieee1588 port 1 on nt-b of FANT-G - ieee1588 : ieee1588 port on nt of FNAT-H	ieee1588 clock index

Table 15.20-2 "System Synchronous InterfaceTiming Clock Switching Mode configuration Command" Command Parameters

Parameter	Type	Description
[no] domain	Parameter type: <Ntr::PtpDomain> Format: - ptp domain - range: [0...255]	<i>optional parameter with default value: 0</i> ptp domain

15.21 NTR Acceptable Clock Master Configuration Command

Command Description

This command is used to configure the list of clock masters that are deemed to be acceptable

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp accept-master (index) [ no ip-addr | ip-addr <Ip::V4Address> ] [ no priority1 | priority1 <Ntr::Priority> ] [ no priority2 | priority2 <Ntr::Priority> ]
```

Command Parameters

Table 15.21-1 "NTR Acceptable Clock Master Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of the acceptable clock master, Index mapping to 1588 port: n1, 2, 3: FANT-G ieee1588a:1; FANT-F ieee1588a; n4, 5, 6: FANT-G ieee1588b:1; FANT-F ieee1588b; - range: [1...6]	index of the acceptable clock master

Table 15.21-2 "NTR Acceptable Clock Master Configuration Command" Command Parameters

Parameter	Type	Description
[no] ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> ip-address of the acceptable master
[no] priority1	Parameter type: <Ntr::Priority> Format: - priority of the acceptable master - range: [0...255]	<i>optional parameter with default value: 128</i> priority one of the acceptable master
[no] priority2	Parameter type: <Ntr::Priority> Format: - priority of the acceptable master - range: [0...255]	<i>optional parameter with default value: 128</i> configure finer grained ordering among other equivalent ieee 1588 clock sources

15.22 PTP Slave Port DataSet Configuration Command

Command Description

This command is used to configure the DataSet parameters of the PTP port for clock synchronization

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp slave-port-dataset (index) [ no delay-mechanism | delay-mechanism
<Sys::SysClkPtpDataSetDelayMech> ] [ no delay-interval | delay-interval <Sys::SysClkPtpDataSetDelayInt> ] [ no
compensation | compensation <Sys::SysClkPtpDataSetCompensation> ] [ no sync-interval | sync-interval
<Sys::SysClkPtpDataSetSyncIntervalInt> ] [ no announce-interval | announce-interval
<Sys::SysClkPtpDataSetAnnounceInt> ] [ no multicast-mac | multicast-mac <Sys::MultiAddr> ]
```

Command Parameters

Table 15.22-1 "PTP Slave Port DataSet Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ieee1588-a ieee1588-b ieee1588-a:1 ieee1588-b:1 ieee1588) Possible values: - ieee1588-a : ieee1588 port on nt-a excluding FANT-G NT type - ieee1588-b : ieee1588 port on nt-b excluding FANT-G NT type - ieee1588-a:1 : ieee1588 port 1 on nt-a of FANT-G - ieee1588-b:1 : ieee1588 port 1 on nt-b of FANT-G - ieee1588 : ieee1588 port on nt of FNAT-H	determine which IEEE1588 slave PTP device will be configured

Table 15.22-2 "PTP Slave Port DataSet Configuration Command" Command Parameters

Parameter	Type	Description
[no] delay-mechanism	Parameter type: <Sys::SysClkPtpDataSetDelayMech> Format: e2e Possible values:	<i>optional parameter with default value: "e2e"</i> specify which kind of delay mechanism must be used for PTP

Parameter	Type	Description
	- e2e : delay computation mechanism used is E2E	communication
[no] delay-interval	Parameter type: <Sys::SysClkPtpDataSetDelayInt> Format: - interval between -7 to 4 - range: [-7...4]	<i>optional parameter with default value: 0</i> end-to-end delay
[no] compensation	Parameter type: <Sys::SysClkPtpDataSetCompensation> Format: - compensation centered on 0 - unit: nanosecond - range: [-100000...100000]	<i>optional parameter with default value: 0</i> define the PTP packet transport delay compensation
[no] sync-interval	Parameter type: <Sys::SysClkPtpDataSetSyncIntervalInt> Format: - interval between -8 to 4 - range: [-8...4]	<i>optional parameter with default value: -4</i> end-to-end sync interval
[no] announce-interval	Parameter type: <Sys::SysClkPtpDataSetAnnounceInt> Format: - interval centered on 0 - range: [-4...4]	<i>optional parameter with default value: -3</i> announce interval
[no] multicast-mac	Parameter type: <Sys::MultiAddr> Format: - a mac-address (example : 01:1B:19:00:00:00) - length: 6	<i>optional parameter with default value: "01 : 1B : 19 : 00 : 00 : 00"</i> a multicast mac-address for a PTP port (range: 01:1B:19:00:00:00, 01:80:C2:00:00:0E)

15.23 PTP Default Dataset Configuration Command

Command Description

This command is used to configure the default DataSet parameters of the ToD clock sources

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp default-dataset (index) [ no priority1 | priority1 <Ntr::Priority> ] [ no
priority2 | priority2 <Ntr::Priority> ] [ no clock-class | clock-class <Sys::SysClkPtpClockQuality> ] [ no
clock-accuracy | clock-accuracy <Sys::SysClkPtpClockQuality> ] [ no domain | domain <Ntr::PtpDomain> ]
```

Command Parameters

Table 15.23-1 "PTP Default Dataset Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ieee1588-a ieee1588-b gnss-a gnss-b local) Possible values: - ieee1588-a : IEEE 1588-A ToD source - ieee1588-b : IEEE 1588-B ToD source - gnss-a : GNSS-A ToD source - gnss-b : GNSS-B ToD source - local : local ToD source	determine which default DataSet must be configured among the ToD sources

Table 15.23-2 "PTP Default Dataset Configuration Command" Command Parameters

Parameter	Type	Description
[no] priority1	Parameter type: <Ntr::Priority> Format: - priority of the acceptable master - range: [0...255]	<i>optional parameter with default value: 128</i> configure the priority1 for the default DataSet
[no] priority2	Parameter type: <Ntr::Priority> Format: - priority of the acceptable master - range: [0...255]	<i>optional parameter with default value: 128</i> configure the priority2 for the default DataSet
[no] clock-class	Parameter type: <Sys::SysClkPtpClockQuality> Format: - clock quality of the PTP source	<i>optional parameter with default value: 248</i> configure the clock class value

Parameter	Type	Description
	- range: [0...255]	for the default DataSet
[no] clock-accuracy	Parameter type: <Sys::SysClkPtpClockQuality> Format: - clock quality of the PTP source - range: [0...255]	<i>optional parameter with default value: 255</i> configure the clock accuracy value for the default DataSet
[no] domain	Parameter type: <Ntr::PtpDomain> Format: - ptp domain - range: [0...255]	<i>optional parameter with default value: 0</i> configure the PTP domain value for the default DataSet

15.24 PTP Master Port DataSet Profile Configuration Command

Command Description

This command is used to create and configure the profiles of the PTP Master Port DataSet for clock synchronization

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp ( no mstr-port-ds-prof (name) ) | ( mstr-port-ds-prof (name) [ no
delay-mechanism | delay-mechanism <Sys::SysClkPtpDataSetDelayMech> ] [ no step-mode | step-mode
<Sys::SysClkPtpStepMode> ] [ no announce-interval | announce-interval <Sys::SysClkPtpDataSetAnnounceInt> ] [
no sync-interval | sync-interval <Sys::SysClkPtpDataSetSyncIntervalInt> ] [ no delay-interval | delay-interval
<Sys::SysClkPtpDataSetDelayInt> ] [ no multicast-mac | multicast-mac <Sys::MultiAddr> ] )
```

Command Parameters

Table 15.24-1 "PTP Master Port DataSet Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name for the profile of the PTP Master Port DataSet

Table 15.24-2 "PTP Master Port DataSet Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] delay-mechanism	Parameter type: <Sys::SysClkPtpDataSetDelayMech> Format: e2e Possible values: - e2e : delay computation mechanism used is E2E	<i>optional parameter with default value: "e2e"</i> specify which kind of delay mechanism must be used for PTP communication
[no] step-mode	Parameter type: <Sys::SysClkPtpStepMode> Format: (one-step two-step) Possible values: - one-step : - two-step :	<i>optional parameter with default value: "one-step"</i> specify the working mode of PTP stack by defining the mechanism to send the timestamp
[no] announce-interval	Parameter type: <Sys::SysClkPtpDataSetAnnounceInt>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: - interval centered on 0 - range: [-4...4]	<i>value: -3</i> specify the time between successive PTP announce messages in log2
[no] sync-interval	Parameter type: <Sys::SysClkPtpDataSetSyncIntervalInt> Format: - interval between -8 to 4 - range: [-8...4]	<i>optional parameter with default value: -4</i> specify the time between successive PTP sync messages in log2
[no] delay-interval	Parameter type: <Sys::SysClkPtpDataSetDelayInt> Format: - interval between -7 to 4 - range: [-7...4]	<i>optional parameter with default value: 0</i> end-to-end delay
[no] multicast-mac	Parameter type: <Sys::MultiAddr> Format: - a mac-address (example : 01:1B:19:00:00:00) - length: 6	<i>optional parameter with default value: "01 : 1B : 19 : 00 : 00 : 00"</i> a multicast mac-address for a PTP port (range: 01:1B:19:00:00:00, 01:80:C2:00:00:0E)

Command Output

Table 15.24-3 "PTP Master Port DataSet Profile Configuration Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount> - number of entities using this particular profile - range: [0...65535]	show if the profile is attached to a PTP master port or not <i>This element is always shown.</i>

15.25 PTP master port Configuration Commands

Command Description

This command is used to configure the PTP master port parameters of an interface for ToD

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp ( no master-port (port-idx) ) | ( master-port (port-idx) [ no admin-state |
admin-state <Ptp::AdminStatus> ] [ no mstr-port-ds-prof | mstr-port-ds-prof <Ptp::MasterPortProfile> ] [ no vlan-id
| vlan-id <Vlan::PtpVlan> ] [ no pbit | pbit <Ptp::MasterPortPbit> ] [ no compensation | compensation
<Sys::SysMasterClkPortCompensation> ] )
```

Command Parameters

Table 15.25-1 "PTP master port Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(port-idx)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /	the dataport to configure as PTP master port

Resource Identifier	Type	Description
	<code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /</code> <code><Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /</code> <code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /</code> <code><Eqpt::OntSlotId> / <Eqpt::OntPortId> :</code> <code><Eqpt::UnstackedVlan></code> <code> uni : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> /</code> <code><Eqpt::OntPortId></code> <code> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /</code> <code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /</code> <code><Eqpt::LLId> : <Eqpt::UnstackedVlan></code> <code> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /</code> <code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /</code> <code><Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan></code> <code> uni.ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId></code> <code> uni.ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni)</code> Possible values: - vlan-port : vlan port - uni : uni - uni.ng2 : ngpon2 UNI style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	

Resource Identifier	Type	Description
	Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 15.25-2 "PTP master port Configuration Commands" Command Parameters

Parameter	Type	Description
[no] admin-state	Parameter type: <Ptp::AdminStatus> Format: (down up) Possible values: - down : disable the PTP traffic on the ONT dataport - up : enable the PTP traffic on the ONT dataport	<i>optional parameter with default value: "down"</i> determine if the PTP traffic towards the end-user should be enabled or not
[no] mstr-port-ds-prof	Parameter type: <Ptp::MasterPortProfile> Format: name : <PrintableString-0-32> Possible values: - name : profile name Field type <PrintableString-0-32> - a printable string - length: x<=32	<i>optional parameter with default value: "name : default"</i> master port PTP dataset profile to be attached to PTP master port
[no] vlan-id	Parameter type: <Vlan::PtpVlan> Format: (untagged <Vlan::PtpVlan>) Possible values: - untagged : PTP packets are untagged Field type <Vlan::PtpVlan> - vlan id - range: [0...4095]	<i>optional parameter with default value: "4097"</i> specify the vlan for tagging the PTP packets at the end-user side. Only for ONT(uni) and not applicable for LT(vlan-port)
[no] pbit	Parameter type: <Ptp::MasterPortPbit> Format: - pbit - range: [0...7]	<i>optional parameter with default value: "0"</i> specify the priority of the PTP packets at the end-user side
[no] compensation	Parameter type: <Sys::SysMasterClkPortCompensation> Format: - compensation centered on 0 - unit: nanosecond - range: [-50000...50000]	<i>optional parameter with default value: 0</i> define the PTP packet transport delay compensation for PTP master port

15.26 System Clock Synchronous Source port Configuration Command

Command Description

This command allows the operator to configure the compensation of the specified PTP link port.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp link-port-compensation (port) [ no compensation | compensation
<Sys::SysClkPtpLinkPortCompensation> ]
```

Command Parameters

Table 15.26-1 "System Clock Synchronous Source port Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (ntio-1 : sfp : <ClkSys::FaceplateNumber> ntio-1 : xfp : <ClkSys::FaceplateNumber> ntio-2 : sfp : <ClkSys::FaceplateNumber> ntio-2 : xfp : <ClkSys::FaceplateNumber> nt-a : xfp : <ClkSys::FaceplateNumber> nt-a : qsfp : <ClkSys::FaceplateNumber> nt-b : xfp : <ClkSys::FaceplateNumber> nt-b : qsfp : <ClkSys::FaceplateNumber> nt : sfp : <ClkSys::FaceplateNumber> nt : xfp : <ClkSys::FaceplateNumber> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <ClkSys::FaceplateNumber>) Possible values: - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot - nt : active nt slot - lt : lt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	port number supporting PTP source

15 System Configuration Commands

Resource Identifier	Type	Description
	- the shelf number Field type <Eqpt::SlotId> - the LT slot number Possible values: - nosfp : no SFP/XFP port - sfp : SFP port - xfp : XFP port - qsfp : QSFP port Field type <ClkSys::FaceplateNumber> - host SFP faceplate number	

Table 15.26-2 "System Clock Synchronous Source port Configuration Command" Command Parameters

Parameter	Type	Description
[no] compensation	Parameter type: <Sys::SysClkPtpLinkPortCompensation> Format: - compensation centered on 0 - unit: nanosecond - range: [-100000...100000]	<i>optional parameter with default value: 0</i> ptp link port compensation

15.27 PTP L2 port Configuration Commands

Command Description

This command is used to configure the PTP L2 port parameters of an interface for clock

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ptp ( no l2-ptp-port (port-idx) ) | ( l2-ptp-port (port-idx) [ no admin-state |
admin-state <Sys::PtpAdminState> ] [ no priority | priority <Ntr::Priority> ] [ no vlan-id | vlan-id
<Vlan::PtpVlanId> ] [ no multi-address | multi-address <Sys::MultiAddr> ] )
```

Command Parameters

Table 15.27-1 "PTP L2 port Configuration Commands" Resource Parameters

Resource Identifier	Type	Description
(port-idx)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> nt-a : xfp : <Itf::FacePlateIndex> nt-a : qsfp : <Itf::FacePlateIndex> nt-b : xfp : <Itf::FacePlateIndex> nt-b : qsfp : <Itf::FacePlateIndex> ntio-1 : xfp : <Itf::FacePlateIndex>) Possible values: - lt : lt slot - nt-a : nt-a slot - nt-b : nt-b slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Possible values: - xfp : xfp port - qsfp : qsfp port Field type <Itf::FacePlateIndex> - the faceplate port number	the dataport to configure as PTP master port

Table 15.27-2 "PTP L2 port Configuration Commands" Command Parameters

Parameter	Type	Description
[no] admin-state	Parameter type: <Sys::PtpAdminState> Format: (enable disable) Possible values: - enable : enable the path connectivity check protection at group level - disable : disable the path connectivity check protection at group level	<i>optional parameter with default value: "disable"</i> determine if the ptp port should be enabled or not
[no] priority	Parameter type: <Ntr::Priority> Format: - priority of the acceptable master - range: [0...255]	<i>optional parameter with default value: "128"</i> specifies local priority of the PTP port
[no] vlan-id	Parameter type: <Vlan::PtpVlanId> Format: (untagged <Vlan::PtpVlanId>) Possible values: - untagged : PTP packets are untagged Field type <Vlan::PtpVlanId> - vlan id - range: [1...4095]	<i>optional parameter with default value: "untagged"</i> specify the vlan for tagging the PTP packets at ptp port
[no] multi-address	Parameter type: <Sys::MultiAddr> Format: - a mac-address (example : 01:1B:19:00:00:00) - length: 6	<i>optional parameter with default value: "01 : 1B : 19 : 00 : 00 : 00"</i> a multicast mac-address for a PTP port (range: 01:1B:19:00:00:00,01:80:C2:00:00:0E)

15.28 Clock ToD Parameters Configuration Command

Command Description

This command is used to configure the ToD parameters for Clock synchronization

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing tod [ format <Sys::SysClkToDFormat> ] [ leapsecond
<Sys::SysClkToDLeapSecond> ] [ leapsecond-adjust-val <Sys::SysClkToDLeapSecondAdjustValue> ] [
leapsecond-adjust-date <Sys::SysClkToDLeapSecondAdjustDate> ]
```

Command Parameters

Table 15.28-2 "Clock ToD Parameters Configuration Command" Command Parameters

Parameter	Type	Description
format	Parameter type: <Sys::SysClkToDFormat> Format: (gps-cmcc nmea0183-gpzda nmea0183-gprmc test) Possible values: - gps-cmcc : 1PPS format is gps-cmcc - nmea0183-gpzda : 1PPS format is nmea0183-gpzda - nmea0183-gprmc : 1PPS format is nmea0183-gprmc - test : 1PPS format is the test format	<i>optional parameter</i> define the format of the ToD information
leapsecond	Parameter type: <Sys::SysClkToDLeapSecond> Format: - leap second 0 to 255 - range: [0...255]	<i>optional parameter</i> offset of the UTC time and TAI time
leapsecond-adjust-val	Parameter type: <Sys::SysClkToDLeapSecondAdjustValue> Format: - leap second adjustment value:-1,0,1 - range: [-1...1]	<i>optional parameter</i> define the leap second adjustment value which is released by BIPM
leapsecond-adjust-date	Parameter type: <Sys::SysClkToDLeapSecondAdjustDate> Format: - leap second adjustment date, format:yyyy-mm-dd	<i>optional parameter</i> define the leap second adjustment date and the format of the date is yyyy-mm-dd

15.29 1PPS ToD Interface Parameters Configuration Command

Command Description

This command is used to configure the 1PPS ToD interface parameters

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing tod interface (index) [ no direction | direction <Sys::SysClk1ppsDirection> ] [ no
admin-state | admin-state <Sys::ItfAdminState> ] [ no cable-comp | cable-comp
<Sys::SycClk1ppsCableCompensation> ]
```

Command Parameters

Table 15.29-1 "1PPS ToD Interface Parameters Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (rj45-a rj45-b sma-a sma-b) Possible values: - rj45-a : the external 1PPS ToD interface is the rj45-a port - rj45-b : the external 1PPS ToD interface is the rj45-b port - sma-a : the external 1PPS interface is the sma-a port - sma-b : the external 1PPS interface is the sma-b port	define the 1PPS interface to configure

Table 15.29-2 "1PPS ToD Interface Parameters Configuration Command" Command Parameters

Parameter	Type	Description
[no] direction	Parameter type: <Sys::SysClk1ppsDirection> Format: (input output) Possible values: - input : the 1PPS ToD signal is an input signal to the system - output : the 1PPS ToD signal is an output signal from the system	optional parameter with default value: "output" direction of the 1pps ToD signal
[no] admin-state	Parameter type: <Sys::ItfAdminState> Format:	optional parameter with default value: "down"

15 System Configuration Commands

Parameter	Type	Description
	(down up) Possible values: - down : the interface is not used to transmit the 1pps ToD signal - up : the interface may be used to transmit the 1pps ToD signal	administrative state of the 1PPS interface
[no] cable-comp	Parameter type: <Sys::SycClk1ppsCableCompensation> Format: - cable-compensate value of a 1PPS ToD signal - unit: nanosecond - range: [0...10000]	<i>optional parameter with default value: "0"</i> cable compensation value of the 1pps interface

Command Output

Table 15.29-3 "1PPS ToD Interface Parameters Configuration Command" Display parameters

Specific Information		
name	Type	Description
signal-status	Parameter type: <Sys::SycClk1ppsSignalStatus> (valid invalid) Possible values: - valid : the 1pps signal is valid - invalid : the 1pps signal is not valid	status of the 1pps signal on the interface <i>This element is only shown in detail mode.</i>

15.30 1PPS ToD Serial Parameters Configuration Command

Command Description

This command is used to configure the 1PPS ToD serial parameters

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing tod serial-param (index) [ no baud-rate | baud-rate
<Sys::SysClk1ppsSerialBaudRate> ] [ no data-bit | data-bit <Sys::SysClk1ppsSerialDataBit> ] [ no stop-bit |
stop-bit <Sys::SysClk1ppsSerialStopBit> ] [ no parity | parity <Sys::SysClk1ppsSerialParity> ]
```

Command Parameters

Table 15.30-1 "1PPS ToD Serial Parameters Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (rj45-a rj45-b) Possible values: - rj45-a : the 1PPS serial port is the rj45-a port - rj45-b : the 1PPS serial port is the rj45-b port	define the 1PPS serial interface to configure

Table 15.30-2 "1PPS ToD Serial Parameters Configuration Command" Command Parameters

Parameter	Type	Description
[no] baud-rate	Parameter type: <Sys::SysClk1ppsSerialBaudRate> Format: (4800 9600 19200 38400) Possible values: - 4800 : the baud rate of the 1PPS serial port is set to 4800 bits/sec - 9600 : the baud rate of the 1PPS serial port is set to 9600 bits/sec - 19200 : the baud rate of the 1PPS serial port is set to 19200 bits/sec - 38400 : the baud rate of the 1PPS serial port is set to 38400	<i>optional parameter with default value: 4800</i> specify the baudrate of the serial 1PPS port

15 System Configuration Commands

Parameter	Type	Description
[no] data-bit	bits/sec Parameter type: <Sys::SysClk1ppsSerialDatabit> Format: (7 8) Possible values: - 7 : the data bit of the 1PPS serial port is 7 - 8 : the data bit of the 1PPS serial port is 8	<i>optional parameter with default value: 8</i> specify the data bit of the 1PPS serial port
[no] stop-bit	Parameter type: <Sys::SysClk1ppsSerialStopBit> Format: (1 2) Possible values: - 1 : the data bit of the 1PPS serial port is 1 - 2 : the data bit of the 1PPS serial port is 2	<i>optional parameter with default value: 1</i> specify the stop bit of the 1PPS serial port
[no] parity	Parameter type: <Sys::SysClk1ppsSerialParity> Format: (odd even none) Possible values: - odd : the parity of the 1PPS serial port is odd - even : the parity of the 1PPS serial port is even - none : the parity of the 1PPS serial port is none	<i>optional parameter with default value: "none"</i> specify the parity of the 1PPS serial port

15.31 ToD Holdover Specification Configuration Command

Command Description

This command is used to configure the ToD Holdover Specification parameters

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing tod holdover-spec [ no duration | duration
<Sys::SysClkTodHoldoverSpecDuration> ] [ no clockclass | clockclass
<Sys::SysClkTodHoldoverSpecClockClass> ]
```

Command Parameters

Table 15.31-2 "ToD Holdover Specification Configuration Command" Command Parameters

Parameter	Type	Description
[no] duration	Parameter type: <Sys::SysClkTodHoldoverSpecDuration> Format: - duration 0 to 2880,unit:minute - range: [0...2880]	<i>optional parameter with default value: 0</i> specify the duration of Tod Holdover Specification
[no] clockclass	Parameter type: <Sys::SysClkTodHoldoverSpecClockClass> Format: - clock class 0 to 255 - range: [0...255]	<i>optional parameter with default value: 135</i> specify the clock class of Tod Holdover Specification

15.32 System Clock Synchronous Status Message Configuration Command

Command Description

This command allows the operator to configure the support of synchronous status message (SSM) for the configured clock source.

Note: When the default-ql is unconfigured, the system resets the default QL value as clk-ql-stu or clk-ql-prc based on the bits mode.All QL Values are applicable to both ETSI/ANSI unless the difference specified in CLI help.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ssm (index) [ [ no ] ssmenable ] [ no default-ql | default-ql <Ntr::SysClkSrcQLDef> ] [ no target-ql | target-ql <Ntr::SysClkSrcQL> ]
```

Command Parameters

Table 15.32-1 "System Clock Synchronous Status Message Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (bits-a bits-b synce-1 synce-2 ieee1588-a ieee1588-b ieee1588) Possible values: - bits-a : configure SSM for bits-a - bits-b : configure SSM for bits-b - synce-1 : configure SSM for SyncE reference 1 - synce-2 : configure SSM for SyncE reference 2 - ieee1588-a : configure SSM for ieee1588-a - ieee1588-b : configure SSM for ieee1588-b - ieee1588 : configure SSM for ieee1588	clock synchronous status message index

Table 15.32-2 "System Clock Synchronous Status Message Configuration Command" Command Parameters

Parameter	Type	Description
[no] ssmenable	Parameter type: boolean	<i>optional parameter</i> enable ssm
[no] default-ql	Parameter type: <Ntr::SysClkSrcQLDef> Format: (clk-ql-stu clk-ql-prs clk-ql-prc clk-ql-inv3 clk-ql-ssu-a-tnc clk-ql-ssu-a clk-ql-tnc clk-ql-inv5 clk-ql-inv6 clk-ql-st2 clk-ql-ssu-b clk-ql-inv9 clk-ql-st3 clk-ql-sec clk-ql-smc clk-ql-st3e clk-ql-prov clk-ql-dnu-dus clk-ql-dnu clk-ql-dus clk-ql-default) Possible values: - clk-ql-stu : Synchronized-Traceability Unknown - clk-ql-prs : Primary Reference Source - clk-ql-prc : Primary Reference Clock - clk-ql-inv3 : Quality Level unallocated - clk-ql-ssu-a-tnc : Traced to Sync Supply Unit-A/Transmit Node Clock - clk-ql-ssu-a : Traced to Sync Supply Unit-A(ETSI) - clk-ql-tnc : Traced to Transmit Node Clock(ANSI) - clk-ql-inv5 : Quality Level unallocated - clk-ql-inv6 : Quality Level unallocated - clk-ql-st2 : Traceable to Stratum 2 - clk-ql-ssu-b : Traced to Sync Supply Unit-B - clk-ql-inv9 : Quality Level unallocated - clk-ql-st3 : Traceable to Stratum 3 - clk-ql-sec : Traceable to SDH Equipment Clock - clk-ql-smc : Traceable to SONET Clock SelfTimed - clk-ql-st3e : Traceable to Stratum 3E - clk-ql-prov : Operator Provisioned - clk-ql-dnu-dus : Signal should not be used for sync - clk-ql-dnu : Signal should not be used for sync(ETSI) - clk-ql-dus : Signal should not be used for sync(ANSI) - clk-ql-default : Special identifier for SSM QL default	<i>optional parameter with default value: "clk-ql-default"</i> default QL of clock source,for ETSI is clk-ql-prc and for ANSI is clk-ql-stu
[no] target-ql	Parameter type: <Ntr::SysClkSrcQL> Format: (clk-ql-stu clk-ql-prs clk-ql-prc clk-ql-inv3 clk-ql-ssu-a-tnc clk-ql-ssu-a clk-ql-tnc	<i>optional parameter with default value: "clk-ql-dnu-dus"</i> target QL of the clock source

15 System Configuration Commands

Parameter	Type	Description
	clk-ql-inv5 clk-ql-inv6 clk-ql-st2 clk-ql-ssu-b clk-ql-inv9 clk-ql-st3 clk-ql-sec clk-ql-smc clk-ql-st3e clk-ql-prov clk-ql-dnu-dus clk-ql-dnu clk-ql-dus) Possible values: - clk-ql-stu : Synchronized-Traceability Unknown - clk-ql-prs : Primary Reference Source - clk-ql-prc : Primary Reference Clock - clk-ql-inv3 : Quality Level unallocated - clk-ql-ssu-a-tnc : Traced to Sync Supply Unit-A/Transmit Node Clock - clk-ql-ssu-a : Traced to Sync Supply Unit-A(ETSI) - clk-ql-tnc : Traced to Transmit Node Clock(ANSI) - clk-ql-inv5 : Quality Level unallocated - clk-ql-inv6 : Quality Level unallocated - clk-ql-st2 : Traceable to Stratum 2 - clk-ql-ssu-b : Traced to Sync Supply Unit-B - clk-ql-inv9 : Quality Level unallocated - clk-ql-st3 : Traceable to Stratum 3 - clk-ql-sec : Traceable to SDH Equipment Clock - clk-ql-smc : Traceable to SONET Clock SelfTimed - clk-ql-st3e : Traceable to Stratum 3E - clk-ql-prov : Operator Provisioned - clk-ql-dnu-dus : Signal should not be used for sync - clk-ql-dnu : Signal should not be used for sync(ETSI) - clk-ql-dus : Signal should not be used for sync(ANSI)	

15.33 System Clock Synchronous Source port Configuration Command

Command Description

This command allows the operator to configure the binding of the syncE reference to the physical port which provides the clock source for synchronous Ethernet.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing syncE (index) [ (port) ]
```

Command Parameters

Table 15.33-1 "System Clock Synchronous Source port Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (syncE-1 syncE-2) Possible values: - syncE-1 : configure port for SyncE reference 1 - syncE-2 : configure port for SyncE reference 2	reference number of the port

Table 15.33-2 "System Clock Synchronous Source port Configuration Command" Command Parameters

Parameter	Type	Description
(port)	Format: (ntio-1 : sfp : <ClkSys::FaceplateNumber> ntio-1 : xfp : <ClkSys::FaceplateNumber> ntio-2 : sfp : <ClkSys::FaceplateNumber> ntio-2 : xfp : <ClkSys::FaceplateNumber> nt-a : xfp : <ClkSys::FaceplateNumber> nt-a : cfp : <ClkSys::FaceplateNumber> nt-a : qsfp : <ClkSys::FaceplateNumber> nt-b : xfp : <ClkSys::FaceplateNumber> nt-b : cfp : <ClkSys::FaceplateNumber> nt-b : qsfp : <ClkSys::FaceplateNumber> nt : sfp : <ClkSys::FaceplateNumber> nt : xfp : <ClkSys::FaceplateNumber>	<i>optional parameter</i> port number supporting syncE clock source

15 System Configuration Commands

Parameter	Type	Description
	nt : cfp : <ClkSys::FaceplateNumber> nt : qsfp : <ClkSys::FaceplateNumber> none lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <ClkSys::FaceplateNumber>) Possible values: - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot - nt : active nt slot - lt : lt slot - none : no port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Possible values: - nosfp : no SFP/XFP/CFP/QSFP port - sfp : SFP port - xfp : XFP port - cfp : CFP port - qsfp : QSFP port Field type <ClkSys::FaceplateNumber> - host SFP faceplate number	

15.34 System Clock Force Reference Configuration Command

Command Description

This command allows the operator to manually select the clock source. Note that the operator must release the manual clock selection ([none]) to restore the automatic (external) clock source selection.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing force-reference [ (force-reference) ]
```

Command Parameters

Table 15.34-2 "System Clock Force Reference Configuration Command" Command Parameters

Parameter	Type	Description
(force-reference)	Format: (local none) Possible values: - local : select hold over clock - none : select autonomous clock selection	<i>optional parameter</i> manually force system clock source

15.35 SSMOut Configuration Command for synce ports

Command Description

This command allows the operator to enable or disable SSMout for synce ports. This command is applicable to NT's supporting enhanced clock management

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ssmout-synce (index) [ [ no ] ssmout-enable ]
```

Command Parameters

Table 15.35-1 "SSMOut Configuration Command for synce ports" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ntio-1 : sfp : <ClkSys::SsmOutFaceplateNumber> ntio-1 : xfp : <ClkSys::SsmOutFaceplateNumber> ntio-2 : sfp : <ClkSys::SsmOutFaceplateNumber> ntio-2 : xfp : <ClkSys::SsmOutFaceplateNumber> nt-a : sfp : <ClkSys::SsmOutFaceplateNumber> nt-a : xfp : <ClkSys::SsmOutFaceplateNumber> nt-a : cfp : <ClkSys::SsmOutFaceplateNumber> nt-a : qsfp : <ClkSys::SsmOutFaceplateNumber> nt-b : sfp : <ClkSys::SsmOutFaceplateNumber> nt-b : xfp : <ClkSys::SsmOutFaceplateNumber> nt-b : cfp : <ClkSys::SsmOutFaceplateNumber> nt-b : qsfp : <ClkSys::SsmOutFaceplateNumber> nt : sfp : <ClkSys::SsmOutFaceplateNumber>) Possible values: - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot - nt : active nt slot Possible values: - nosfp : no SFP/XFP/CFP/QSFP port - sfp : SFP port - xfp : XFP port	xdsl port supporting synce clock source

Resource Identifier	Type	Description
	- cfp : CFP4 port - qsfp : QSFP port Field type <ClkSys::SsmOutFaceplateNumber> - host SFP faceplate number	

Table 15.35-2 "SSMOut Configuration Command for synce ports" Command Parameters

Parameter	Type	Description
[no] ssmout-enable	Parameter type: boolean	<i>optional parameter</i> enable ssm-out for synce port

15.36 SSMOut Configuration Command for XDSL ports

Command Description

This command allows the operator to enable or disable SSMout for xDSL ports. This command is applicable to NT's supporting enhanced clock management

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing ( no ssmout-ltport (index) ) | ( ssmout-ltport (index) [ [ no ] ssmout-enable ] )
```

Command Parameters

Table 15.36-1 "SSMOut Configuration Command for XDSL ports" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::Vpild> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	xdsl port supporting synce clock source

Resource Identifier	Type	Description
	- the shelf number - Field type <Eqpt::SlotId> - the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Table 15.36-2 "SSMOut Configuration Command for XDSL ports" Command Parameters

Parameter	Type	Description
[no] ssmout-enable	Parameter type: boolean	<i>optional parameter</i> enable ssm-out for dsl port

15.37 T4 D-PLL Configuration Command

Command Description

This command allows the operator to configure the T4 D-PLL parameters. Note: In standard mode, T4 parameters are optional. The possible combinations are: 1. t4mode = standard, t4-prio-ref1 = none, t4-prio-ref2 = none 2. t4mode = synce-transfer, t4-prio-ref1 and t4-prio-ref2 can be synce-1, synce-2 or none 3. t4mode = synce-split, t4-prio-ref1 and t4-prio-ref2 can be synce-1, synce-2 or none For t4-jitter-bw, the allowed values are 18, 35, 70, 560

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing t4-out-config [ no t4-mode | t4-mode <Ntr::T4Mode> ] [ no t4-damping-factor |
t4-damping-factor <Ntr::T4DampingFactor> ] [ no t4-jitter-bw | t4-jitter-bw <Ntr::T4JitterBw> ] [ no t4-prio-ref1 |
t4-prio-ref1 <Ntr::T4PrioRef> ] [ no t4-prio-ref2 | t4-prio-ref2 <Ntr::T4PrioRef> ]
```

Command Parameters

Table 15.37-2 "T4 D-PLL Configuration Command" Command Parameters

Parameter	Type	Description
[no] t4-mode	Parameter type: <Ntr::T4Mode> Format: (standard synce-transfer synce-split) Possible values: - standard : standard configuration - synce-transfer : synce-transfer t4 mode - synce-split : synce-split t4 mode	optional parameter with default value: "standard" standard t4 mode
[no] t4-damping-factor	Parameter type: <Ntr::T4DampingFactor> Format: (factor-1.2-db factor-2.5-db factor-5.0-db factor-10.0-db factor-20.0-db) Possible values: - factor-1.2-db : 1.2 db damping factor - factor-2.5-db : 2.5 db damping factor - factor-5.0-db : 5.0 db damping factor - factor-10.0-db : 10.0 db damping factor - factor-20.0-db : 20.0 db damping factor	optional parameter with default value: "factor-5.0-db" t4 d-pll damping factor

Parameter	Type	Description
[no] t4-jitter-bw	Parameter type: <Ntr::T4JitterBw> Format: - jitter bandwidth - range: [0...1024]	<i>optional parameter with default value: 18</i> t4 jitter bandwidth filter
[no] t4-prio-ref1	Parameter type: <Ntr::T4PrioRef> Format: (none local synce-1 synce-2 assysclk) Possible values: - none : no clock is specified for this priority - local : This option cannot be configured - synce-1 : 1st SyncE clock is specified for this priority - synce-2 : 2nd SyncE clock is specified for this priority - assysclk : This option cannot be configured	<i>optional parameter with default value: "none"</i> synce reference 1
[no] t4-prio-ref2	Parameter type: <Ntr::T4PrioRef> Format: (none local synce-1 synce-2 assysclk) Possible values: - none : no clock is specified for this priority - local : This option cannot be configured - synce-1 : 1st SyncE clock is specified for this priority - synce-2 : 2nd SyncE clock is specified for this priority - assysclk : This option cannot be configured	<i>optional parameter with default value: "none"</i> synce reference 2

15.38 SyncE Configuration Command for FELT-B ports

Command Description

This command allows the operator to enable or disable SyncE for FELT-B ports. This command is applicable to NT's supporting enhanced clock management

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> configure system sync-if-timing bits-bind [ no bits-a-bind | bits-a-bind <Sys::LtSlotIndexOrZero> ] [ no bits-b-bind | bits-b-bind <Sys::LtSlotIndexOrZero> ]
```

Command Parameters

Table 15.38-2 "SyncE Configuration Command for FELT-B ports" Command Parameters

Parameter	Type	Description
[no] bits-a-bind	Parameter type: <Sys::LtSlotIndexOrZero> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> none) Possible values: - lt : LT slot - none : No LT is specified Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	<i>optional parameter with default value: "none"</i> config ethernet LT outputs BITS-OUT to NTA BITS-IN
[no] bits-b-bind	Parameter type: <Sys::LtSlotIndexOrZero> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> none) Possible values: - lt : LT slot - none : No LT is specified Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	<i>optional parameter with default value: "none"</i> config ethernet LT outputs BITS-OUT to NTB BITS-IN

Parameter	Type	Description
	- the shelf number Field type <Eqpt::SlotId> - the LT slot number	

15.39 ALS State Configuration Command

Command Description

This command allows the operator to enable or disable the system wide ALS state.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> configure system auto-laser-shutdown [no action | action <Sys::AlsState>]

Command Parameters

Table 15.39-2 "ALS State Configuration Command" Command Parameters

Parameter	Type	Description
[no] action	Parameter type: <Sys::AlsState> Format: (enable disable) Possible values: - enable : enable ALS state - disable : disable ALS state	optional parameter with default value: "enable" system wide ALS handling state

15.40 Configure system auto-switch

Command Description

This command allows the operator to configure system-wide auto-switching parameters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system auto-switch [ [ no ] xdsl-atm-ptm ] [ no xdsl-stepup-delay | xdsl-stepup-delay
<Sys::AutoSwitchDelayTime> ]
```

Command Parameters

Table 15.40-2 "Configure system auto-switch" Command Parameters

Parameter	Type	Description
[no] xdsl-atm-ptm	Parameter type: boolean	<i>optional parameter</i> enable system-wide auto-switching between ATM and PTM on XDSL ports.
[no] xdsl-stepup-delay	Parameter type: <Sys::AutoSwitchDelayTime> Format: - delay time in seconds - unit: seconds - range: [0...65535]	<i>optional parameter with default value: 3600</i> auto-switching step up delay time (seconds) for PTM service(s).

15.41 ZTP (Zero Touch Provision) State Configuration Command

Command Description

This command allows the operator to enable or disable the system wide ZTP state. In unsupported ISAM it returns the default value "disable" when read. If ZTP state is set to enable then Zero Touch Provision will be started from next ISAM / NT reset. Not supported for HOT RESET

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system zero-touch-provision [ no action | action <Sys::Boolean> ]
```

Command Parameters

Table 15.41-2 "ZTP (Zero Touch Provision) State Configuration Command" Command Parameters

Parameter	Type	Description
[no] action	Parameter type: <Sys::Boolean> Format: (enable disable) Possible values: - enable : enable ZTP state - disable : disable ZTP state	<i>optional parameter with default value: "disable"</i> system wide ZTP handling state. If set to enable the Zero Touch Provision will start from next reset of ISAM / NT

15.42 System Relay ID Syntax Configuration

Command

Command Description

This command allows the operator to configure the system relay ID syntax. For atm-based-dsl, default value is "S-MAC Rack/Frame/Slot/Port:VPI.VCI". For efm-based-dsl, default value is "S-MAC Rack/Frame/Slot/Port". For nt-port, default value is "S-MAC Ntslot/PrtType/Port".

The system relay ID syntax is a concatenation of keywords, separators and free text strings.

The operator can use the following predefined keywords to construct the system relay ID :

- **S-MAC** to specify the system MAC address.
- **Rack** to specify the rack number.
- **Frame** to specify the shelf number.
- **Slot** to specify the slot number.
- **Port** to specify the port number.
- **VPI** to specify the vpi.
- **VCI** to specify the vci.
- **Ntslot** to specify the nt slot.
- **PrtType** to specify the nt port type.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system relay-id-syntax [ no atm-based-dsl | atm-based-dsl <PrintableString-0-80> ] [ no efm-based-dsl | efm-based-dsl <PrintableString-0-80> ]
```

Command Parameters

Table 15.42-2 "System Relay ID Syntax Configuration Command" Command Parameters

Parameter	Type	Description
[no] atm-based-dsl	Parameter type: <PrintableString-0-80> Format: - a printable string - length: x<=80	optional parameter with default value: "S-MAC Rack/Frame/Slot/Port : VPI.VCI" define the syntax of relay Id for atm based dsl lines
[no] efm-based-dsl	Parameter type: <PrintableString-0-80> Format: - a printable string - length: x<=80	optional parameter with default value: "S-MAC Rack/Frame/Slot/Port" defines the syntax of relay Id for

15 System Configuration Commands

Parameter	Type	Description
		efm based dsl lines

15.43 FIPS Configuration Command

Command Description

Obsolete command.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> configure system fips [(enable)]

Obsolete command.

Command Parameters

Table 15.43-2 "FIPS Configuration Command" Command Parameters

Parameter	Type	Description
(enable)	Format: (disable enable) Possible values: - disable : Disable FIPS - enable : Enable FIPS	<i>optional parameter</i> Enable FIPS in the system

15.44 NT SFTP Server Configuration Command

Command Description

This command allows the operator to configure NT SFTP server credentials and access rights to var/cmd/nt_sftp folder.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> configure system nt-sftp [[no] write-enable]

Command Parameters

Table 15.44-2 "NT SFTP Server Configuration Command" Command Parameters

Parameter	Type	Description
[no] write-enable	Parameter type: boolean	<i>optional parameter</i> enable write permissions to var/cmd/nt_sftp folder

15.45 NT SFTP Server Credentials Configuration Command

Command Description

This command allows the operator to configure NT SFTP server credentials.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system nt-sftp ( no user-name (name) ) | ( user-name (name) password <Sys::NtSftpServerPassword> )
```

Command Parameters

Table 15.45-1 "NT SFTP Server Credentials Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - the username used to access the file server - length: 1<=x<=32	username used to access NT SFTP server

Table 15.45-2 "NT SFTP Server Credentials Configuration Command" Command Parameters

Parameter	Type	Description
password	Parameter type: <Sys::NtSftpServerPassword> Format: (prompt plain : <Sys::PlainPassword> encrypted : <Sys::EncryptedPassword>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Sys::PlainPassword> - the password used to access the file server - length: 1<=x<=32 Field type <Sys::EncryptedPassword> - password string exposed to users - length: 8<=x<=68	<i>mandatory parameter</i> password used to access NT SFTP server

16.2 Security Banner Configuration Command

Command Description

This command allows the operator to configure the login banner and the welcome banner.

There is a limit to the number of characters that can be entered in a single CLI command. For lengthy banners, Nokia recommends that the operator enter separate commands to configure the login banner and the welcome banner.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security [ no oper-policy-prio | oper-policy-prio <Aaa::AaaPolicyPriority> ] [ no login-banner |
login-banner <Sec::Banner> ] [ no welcome-banner | welcome-banner <Sec::Banner> ] [ no login-setting |
login-setting <Sec::LoginSetting> ] [ no cli-session | cli-session <Sec::CliSessionLimit> ] [ [ no ] unauth-fwd ] [ [
no ] src-mac-check ]
```

Command Parameters

Table 16.2-2 "Security Banner Configuration Command" Command Parameters

Parameter	Type	Description
[no] oper-policy-prio	Parameter type: <Aaa::AaaPolicyPriority> Format: (rrn rrt ttt rrr ttr) Possible values: - rrn : authentication and authorization using Radius without remote accounting - rrt : authentication and authorization using Radius while accounting using TACACS+ - ttt : authentication, authorization and accounting using TACACS+ - rrr : authentication, authorization and accounting using RADIUS - ttr : authentication and authorization using TACACS+ and accounting using RADIUS	<i>optional parameter with default value: "rrn"</i> aaa policy priority for operator
[no] login-banner	Parameter type: <Sec::Banner> Format: - a banner to be shown to the operator Note: up to 2048 length of banner is only supported on FANT-(F,G,H),	<i>optional parameter with default value: ""</i> banner to be shown before the operator enters its name

Parameter	Type	Description
	CFNT-(A,B,C), 480 for other NT. If using special and functional characters like pound, reversed slash,space, the whole banner must be in the quotation marks. Quotation marks and reversed slash is not counted in length. A reversed slash followed by 'r' combined with reversed slash followed by 'n' is used to change line. - length: x<=2048	
[no] welcome-banner	Parameter type: <Sec::Banner> Format: - a banner to be shown to the operator Note: up to 2048 length of banner is only supported on FANT-(F,G,H), CFNT-(A,B,C), 480 for other NT. If using special and functional characters like pound, reversed slash,space, the whole banner must be in the quotation marks. Quotation marks and reversed slash is not counted in length. A reversed slash followed by 'r' combined with reversed slash followed by 'n' is used to change line. - length: x<=2048	<i>optional parameter with default value: ""</i> the banner to be shown when the operator logged in
[no] login-setting	Parameter type: <Sec::LoginSetting> Format: <Sec::LoginAttempt> : <Sec::LockoutDuration> Field type <Sec::LoginAttempt> - the number of failed login attempts - range: [0...10] Field type <Sec::LockoutDuration> - configure duration for lockout, the unit is minute - range: [0...1440]	<i>optional parameter with default value: "0 : 0"</i> Configure both login attempt and lockout duration.
[no] cli-session	Parameter type: <Sec::CliSessionLimit> Format: - the max number that user can login by telnet or ssh - range: [1...10]	<i>optional parameter with default value: "10"</i> the limited session that the operator logged in by telnet or ssh
[no] unauth-fwd	Parameter type: boolean	<i>optional parameter</i> enable 802.1x un-authentication forward
[no] src-mac-check	Parameter type: boolean	<i>optional parameter</i> enable source mac check

16.3 Operator Configuration Command

Command Description

This command allows the operator to specify an operator instance.

After this instance is created, an operator can log in to the system with the specified name and password.

Operators have a profile that determines most of the operator properties. The operator profile must be created before the operator can be created.

The operator profile is assigned when the operator is created. The profile cannot be changed afterward. If the operator wants to change the profile, the operator must first delete the operator and then recreate it.

*The default values for **prompt** can be found in **configure system security profile** profile-name.*

The following rules apply to a plain text password.

- *The password must consist of a minimum of six and a maximum of 20 printable characters.*
- *The password must contain at least one non-alphanumeric character.*
- *A new password must be different from the last three passwords.*

*Never specify a new password using the **encrypted** option. You could mistakenly enter any hexadecimal string that is not necessarily linked to a password, and it is almost impossible to calculate a password from an encrypted string. The encrypted method of specifying passwords is only intended to restore an existing configuration.*

An operator must enter a new password when logging in for the first time after another operator has changed his or her password.

There is no separate command to change a password. An operator must change the password in the operator's operator node.

The prompt can be composed with following components :

- **%n** : the name of the current operator.
- **%s** : the current numbering scheme (**typ|leg|pos**).
- **%i** : the current system id.
- **%t** : the current system time.
- **%!** : the current history number.
- **% num d** : the current context.
 - *num is the maximum number of components (starting from the last) that are shown (default is all).*
 - *each component will be separated from the next one with a >.*
 - *a > is also added in front of the first component.*
- **%%** : a %
- **%c** : # if the current node was an existing node or \$ if it is newly created.
- **%h** : the current system id.
- *any other character is just added to the prompt as is.*

***confirm-prompt** feature for the operator will be disabled by default. If the feature is disabled, warning prompt wont be displayed to the operator. Operator can enable/disable this feature using this parameter.*

Next to %, ISAM supports the use of the \$ as an escape character. The system behavior is the same as when using the % escape character, e.g. an occurrence of \$n is replaced with the name of the current operator. For backward compatibility, the \$ character must be used exclusively without the % character. As soon as the % character is used in the string, all occurrences of the \$ character will be considered as a literal and will not be replaced with the component it refers to.

User Level

The command can be accessed by operators with *all,admin* privileges.

The last operator with security write permissions cannot be deleted.

An operator can be deleted when still logged in. The operator instance is only removed after the operator has logged out or is logged out by the system.

Operators without security read or write permissions cannot see other operators.

Operators without security write permissions cannot create, delete, or modify another operator, but they can enter the commands to perform these actions. However, these commands always fail when executed.

Command Syntax

The command has the following syntax:

```
> configure system security ( no operator (name) ) | ( operator (name) profile <Sec::ProfileName> password
<Sec::OperatorPassword> [ no bgn-time | bgn-time <Sys::GaugeTimeInSecs> ] [ no end-time | end-time
<Sys::GaugeTimeInSecs> ] [ no prompt | prompt <Sec::Prompt> ] [ no description | description
<Sec::OperatorDesc> ] [ [ no ] more ] [ [ no ] confirm-prompt ] )
```

Command Parameters

Table 16.3-1 "Operator Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - the name of an operator - range: [a-z0-9+] - length: 1<=x<=11	the name of the operator

Table 16.3-2 "Operator Configuration Command" Command Parameters

Parameter	Type	Description
profile	Parameter type: <Sec::ProfileName> Format: - the name of an operator profile - range: [a-z0-9] - length: 1<=x<=11	<i>mandatory parameter</i> The parameter is not visible during modification. the name of an operator profile
password	Parameter type: <Sec::OperatorPassword> Format: (prompt plain : <Sec::OperatorPlainPassword> encrypted : <Sec::EncryptedPassword>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the hashed password Field type <Sec::OperatorPlainPassword> - the password in plain text is placed in double quotes when # ? [or] is used.\n In double quotes, backslash is regared as escape, and it is used to escape control character, quotation mark, and itself. - length: 6<=x<=20 Field type <Sec::EncryptedPassword> - the encrypted password of length either 20 or 68 only	<i>mandatory parameter</i> the password needed to log in
[no] bgn-time	Parameter type: <Sys::GaugeTimeInSecs> Format: - the time (yyyy-mm-dd:hour:minutes:secs)	<i>optional parameter with default value:</i> "1970-01-01 : 00 : 00 : 00"

16 Security Configuration Commands

Parameter	Type	Description
		the start of the valid time of operator, range:[1970-01-01:00:00:00,2035-12-31
[no] end-time	Parameter type: <Sys::GaugeTimeInSecs> Format: - the time (yyyy-mm-dd:hour:minutes:secs)	<i>optional parameter with default value: "2035-12-31 : 23 : 59 : 59"</i> the end of the valid time of operator, range:[1970-01-01:00:00:00,2035-12-31
[no] prompt	Parameter type: <Sec::Prompt> Format: - a specification of the prompt - length: x<=31	<i>optional parameter with default value: ""</i> the specification of the prompt
[no] description	Parameter type: <Sec::OperatorDesc> Format: - any description to be used by the operator - length: x<=31	<i>optional parameter with default value: ""</i> any description to be used by the operator
[no] more	Parameter type: boolean	<i>optional parameter</i> the output is passed via the more filter
[no] confirm-prompt	Parameter type: boolean	<i>optional parameter</i> confirmation prompt will be enabled

16.4 Profile Configuration Command

Command Description

This command allows the operator to specify an operator profile.

The operator profile determines most of the operator properties.

An operator profile is typically used to limit the commands that a group of operators can execute to those for which they have the necessary skills and for which they are responsible.

*Any change of the attribute slot-numbering will only take effect for new CLI sessions. The slot-numbering of an active CLI session will never be changed. The actual slot-numbering used for a session can be made visible with the command **show sessions***

terminal-timeout: A value of 0 equals an infinite timeout value (i.e. the terminal will never time out).

The prompt can be composed with following components :

- **%n** : the name of the current operator.
- **%s** : the current numbering scheme (**typ|leg|pos**).
- **%i** : the current system id.
- **%t** : the current system time.
- **%!** : the current history number.
- **% num d** : the current context.
 - num is the maximum number of components (starting from the last) that are shown (default is all).
 - each component will be separated from the next one with a >.
 - a > is also added in front of the first component.
- **%%** : a %
- **%c** : # if the current node was an existing node or \$ if it is newly created.
- **%h** : the current system id.
- any other character is just added to the prompt as is.

Next to %, ISAM supports the use of the \$ as an escape character. The system behavior is the same as when using the % escape character, e.g. an occurrence of \$n is replaced with the name of the current operator. For backward compatibility, the \$ character must be used exclusively without the % character. As soon as the % character is used in the string, all occurrences of the \$ character will be considered as a literal and will not be replaced with the component it refers to.

User Level

The command can be accessed by operators with all,admin privileges.

The last operator with security write permissions cannot be deleted.

The permissions of a profile cannot be changed as long as one operator belongs to the profile.

Operators without security read or write permissions cannot see other operator profiles.

Command Syntax

The command has the following syntax:

```
> configure system security ( no profile (name) ) | ( profile (name) [ no prompt | prompt <Sec::Prompt> ] [ no
password-timeout | password-timeout <Sec::PasswordTimeout> ] [ no terminal-timeout | terminal-timeout
<Sec::InactivityTimeout> ] [ no slot-numbering | slot-numbering <Sec::SlotDesc> ] [ no description | description
```

```

<Sec::ProfileDesc> ] [ no aaa | aaa <Sec::Aaa> ] [ no atm | atm <Sec::Atm> ] [ no alarm | alarm <Sec::Alarm> ] [
no dhcp | dhcp <Sec::Dhcp> ] [ no equipment | equipment <Sec::Equipment> ] [ no igmp | igmp <Sec::Igmp> ] [ no
ip | ip <Sec::Ip> ] [ no pppoe | pppoe <Sec::Pppoe> ] [ no qos | qos <Sec::Qos> ] [ no software-mngt |
software-mngt <Sec::Sw> ] [ no transport | transport <Sec::Transport> ] [ no vlan | vlan <Sec::Vlan> ] [ no xdsl |
xdsl <Sec::Xdsl> ] [ no sip | sip <Sec::Sip> ] [ no megaco | megaco <Sec::Megaco> ] [ no lacp | lacp <Sec::Lacp> ]
[ no mstp | mstp <Sec::Mstp> ] [ no security | security <Sec::Security> ] [ no service | service <Sec::Service> ] [ no
debug | debug <Sec::Debug> ] [ no debug-mirror | debug-mirror <Sec::DebugMirror> ] [ no filter | filter
<Sec::Filter> ] [ no link | link <Sec::Link> ] [ no log | log <Sec::Log> ] [ no oam | oam <Sec::Oam> ] [ no liadmin |
liadmin <Sec::Liadmin> ] [ no liuser | liuser <Sec::Liuser> ] [ no drouter | drouter <Sec::Drouter> ] [ no ai | ai
<Sec::Ai> ] [ no lvoice | lvoice <Sec::Lvoice> ] [ no lldpmed | lldpmed <Sec::LldpMed> ] )

```

Command Parameters

Table 16.4-1 "Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - the name of an operator profile - range: [a-z0-9] - length: 1<=x<=11	the name of the profile

Table 16.4-2 "Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] prompt	Parameter type: <Sec::Prompt> Format: - a specification of the prompt - length: x<=31	<i>optional parameter with default value: "\"%s : %n%d%c \""</i> the specification of the prompt
[no] password-timeout	Parameter type: <Sec::PasswordTimeout> Format: - the maximum time a password may be unchanged - unit: days - range: [0...365]	<i>optional parameter with default value: 0</i> the maximum time a password may be unchanged
[no] terminal-timeout	Parameter type: <Sec::InactivityTimeout> Format: - specify the inactivity timeout of the terminal - unit: minutes - range: [0...120]	<i>optional parameter with default value: 30</i> specify the inactivity timeout of the terminal
[no] slot-numbering	Parameter type: <Sec::SlotDesc> Format: (type-based position-based legacy-based) Possible values: - type-based : flat-numbering per slot-type (tl1-like) - position-based : flat-numbering independent of slot-type - legacy-based : numbering used since the early days (position-based-like)	<i>optional parameter with default value: "legacy-based"</i> slot numbering scheme to be used by the operator
[no] description	Parameter type: <Sec::ProfileDesc> Format: - any description to be used by the operator - length: x<=31	<i>optional parameter with default value: ""</i> any description to be used by the operator
[no] aaa	Parameter type: <Sec::Aaa> Format: (write read none) Possible values:	<i>optional parameter with default value: "none"</i> the access rights to AAA related commands

Parameter	Type	Description
	- write : write and read access - read : read access - none : no access	
[no] atm	Parameter type: <Sec::Atm> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to ATM related commands
[no] alarm	Parameter type: <Sec::Alarm> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to alarm related commands
[no] dhcp	Parameter type: <Sec::Dhcp> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to DHCP related commands
[no] equipment	Parameter type: <Sec::Equipment> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to equipment related commands
[no] igmp	Parameter type: <Sec::Igmp> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to IGMP related commands
[no] ip	Parameter type: <Sec::Ip> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to IP related commands

16 Security Configuration Commands

Parameter	Type	Description
[no] pppoe	Parameter type: <Sec::Pppoe> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to PPPOE related commands
[no] qos	Parameter type: <Sec::Qos> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to qos related commands
[no] software-mngt	Parameter type: <Sec::Sw> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> access rights to software management related commands
[no] transport	Parameter type: <Sec::Transport> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to transport related commands
[no] vlan	Parameter type: <Sec::Vlan> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to VLAN related commands
[no] xdsl	Parameter type: <Sec::Xdsl> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to xDSL related commands
[no] sip	Parameter type: <Sec::Sip> Format: (write	<i>optional parameter with default value: "none"</i> the access rights to sip related

Parameter	Type	Description
	read none) Possible values: - write : write and read access - read : read access - none : no access	commands
[no] megaco	Parameter type: <Sec::Megaco> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to megaco related commands
[no] lacp	Parameter type: <Sec::Lacp> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to lacp related commands
[no] mstp	Parameter type: <Sec::Mstp> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to mstp related commands
[no] security	Parameter type: <Sec::Security> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to security related commands
[no] service	Parameter type: <Sec::Service> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to service and base router related commands
[no] debug	Parameter type: <Sec::Debug> Format: (write read none) Possible values:	<i>optional parameter with default value: "none"</i> the access rights to debug related commands

16 Security Configuration Commands

Parameter	Type	Description
	- write : write and read access - read : read access - none : no access	
[no] debug-mirror	Parameter type: <Sec::DebugMirror> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to debug-mirror related commands
[no] filter	Parameter type: <Sec::Filter> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to filter related commands
[no] link	Parameter type: <Sec::Link> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to link related commands
[no] log	Parameter type: <Sec::Log> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to log related commands
[no] oam	Parameter type: <Sec::Oam> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to OAM related commands
[no] liadmin	Parameter type: <Sec::Liadmin> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to Lawful Intercept admin related commands

Parameter	Type	Description
[no] liuser	Parameter type: <Sec::Liuser> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to Lawful Intercept session related commands
[no] drouter	Parameter type: <Sec::Drouter> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to Drouter related commands
[no] ai	Parameter type: <Sec::Ai> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to AI related commands
[no] livoice	Parameter type: <Sec::Livoice> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to Lawful Intercept voice related commands
[no] lldpmed	Parameter type: <Sec::LldpMed> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to LLDP-MED related commands

16.5 Default Profile Configuration Command

Command Description

This command allows the superuser to specify a default operator profile. The default profile is used when an operator is authenticated via a RADIUS server but the RADIUS server does not support vendor-specific attributes.

The default profile determines most of the operator properties.

The prompt can be composed with following components :

- **%n** : the name of the current operator.
- **%s** : the current numbering scheme (**typ|leg|pos**).
- **%i** : the current system id.
- **%t** : the current system time.
- **%!** : the current history number.
- **% num d** : the current context.
 - num is the maximum number of components (starting from the last) that are shown (default is all).
 - each component will be separated from the next one with a >.
 - a > is also added in front of the first component.
- **%%** : a %
- **%c** : # if the current node was an existing node or \$ if it is newly created.
- **%h** : the current system id.
- any other character is just added to the prompt as is.

Next to %, ISAM supports the use of the \$ as an escape character. The system behavior is the same as when using the % escape character, e.g. an occurrence of \$n is replaced with the name of the current operator. For backward compatibility, the \$ character must be used exclusively without the % character. As soon as the % character is used in the string, all occurrences of the \$ character will be considered as a literal and will not be replaced with the component it refers to.

User Level

The command can be accessed by operators with all,admin privileges.

Operators without security read or write permissions cannot see the default profile.

Command Syntax

The command has the following syntax:

```
> configure system security default-profile [ no prompt | prompt <Sec::Prompt> ] [ password-timeout
<Sec::PasswordTimeout> ] [ no terminal-timeout | terminal-timeout <Sec::InactivityTimeout> ] [ no
slot-numbering | slot-numbering <Sec::SlotDesc> ] [ no description | description <Sec::ProfileDesc> ] [ no aaa | aaa
<Sec::Aaa> ] [ no atm | atm <Sec::Atm> ] [ no alarm | alarm <Sec::Alarm> ] [ no dhcp | dhcp <Sec::Dhcp> ] [ no
equipment | equipment <Sec::Equipment> ] [ no igmp | igmp <Sec::Igmp> ] [ no ip | ip <Sec::Ip> ] [ no pppoe |
pppoe <Sec::Pppoe> ] [ no qos | qos <Sec::Qos> ] [ no software-mngt | software-mngt <Sec::Sw> ] [ no transport |
transport <Sec::Transport> ] [ no vlan | vlan <Sec::Vlan> ] [ no xdsl | xdsl <Sec::Xdsl> ] [ no sip | sip <Sec::Sip> ]
[ no megaco | megaco <Sec::Megaco> ] [ no lacp | lacp <Sec::Lacp> ] [ no mstp | mstp <Sec::Mstp> ] [ no security |
security <Sec::Security> ] [ no service | service <Sec::Service> ] [ no debug | debug <Sec::Debug> ] [ no
debug-mirror | debug-mirror <Sec::DebugMirror> ] [ no filter | filter <Sec::Filter> ] [ no link | link <Sec::Link> ] [
no log | log <Sec::Log> ] [ no oam | oam <Sec::Oam> ] [ no liadmin | liadmin <Sec::Liadmin> ] [ no liuser | liuser
<Sec::Liuser> ] [ no drouter | drouter <Sec::Drouter> ] [ no ai | ai <Sec::Ai> ] [ no livoice | livoice <Sec::Livoice> ]
[ no lldpmed | lldpmed <Sec::LldpMed> ]
```

Command Parameters

Table 16.5-2 "Default Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] prompt	Parameter type: <Sec::Prompt> Format: - a specification of the prompt - length: x<=31	<i>optional parameter with default value: "\"%s : %n%d%c \""</i> the specification of the prompt
password-timeout	Parameter type: <Sec::PasswordTimeout> Format: - the maximum time a password may be unchanged - unit: days - range: [0...365]	<i>obsolete parameter that will be ignored</i> the maximum time a password may be unchanged
[no] terminal-timeout	Parameter type: <Sec::InactivityTimeout> Format: - specify the inactivity timeout of the terminal - unit: minutes - range: [0...120]	<i>optional parameter with default value: 0</i> the maximum time a terminal may be inactive
[no] slot-numbering	Parameter type: <Sec::SlotDesc> Format: (type-based position-based legacy-based) Possible values: - type-based : flat-numbering per slot-type (tl1-like) - position-based : flat-numbering independent of slot-type - legacy-based : numbering used since the early days (position-based-like)	<i>optional parameter with default value: "legacy-based"</i> slot description to be used by the operator
[no] description	Parameter type: <Sec::ProfileDesc> Format: - any description to be used by the operator - length: x<=31	<i>optional parameter with default value: ""</i> any description to be used by the operator
[no] aaa	Parameter type: <Sec::Aaa> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "read"</i> the access rights to AAA related commands
[no] atm	Parameter type: <Sec::Atm> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to ATM related commands
[no] alarm	Parameter type: <Sec::Alarm> Format: (write read none) Possible values:	<i>optional parameter with default value: "write"</i> the access rights to alarm related commands

16 Security Configuration Commands

Parameter	Type	Description
	- write : write and read access - read : read access - none : no access	
[no] dhcp	Parameter type: <Sec::Dhcp> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to DHCP related commands
[no] equipment	Parameter type: <Sec::Equipment> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to equipment related commands
[no] igmp	Parameter type: <Sec::Igmp> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to IGMP related commands
[no] ip	Parameter type: <Sec::Ip> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to IP related commands
[no] pppoe	Parameter type: <Sec::Pppoe> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to PPOE related commands
[no] qos	Parameter type: <Sec::Qos> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to qos related commands

Parameter	Type	Description
[no] software-mngt	Parameter type: <Sec::Sw> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> access rights to software management related commands
[no] transport	Parameter type: <Sec::Transport> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to transport related commands
[no] vlan	Parameter type: <Sec::Vlan> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to VLAN related commands
[no] xdsl	Parameter type: <Sec::Xdsl> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to xDSL related commands
[no] sip	Parameter type: <Sec::Sip> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to sip related commands
[no] megaco	Parameter type: <Sec::Megaco> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to megaco related commands
[no] lacp	Parameter type: <Sec::Lacp> Format: (write	<i>optional parameter with default value: "write"</i> the access rights to lacp related

16 Security Configuration Commands

Parameter	Type	Description
	read none) Possible values: - write : write and read access - read : read access - none : no access	commands
[no] mstp	Parameter type: <Sec::Mstp> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to mstp related commands
[no] security	Parameter type: <Sec::Security> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "none"</i> the access rights to security related commands
[no] service	Parameter type: <Sec::Service> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to service related commands
[no] debug	Parameter type: <Sec::Debug> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to debug related commands
[no] debug-mirror	Parameter type: <Sec::DebugMirror> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to debug-mirror related commands
[no] filter	Parameter type: <Sec::Filter> Format: (write read none) Possible values:	<i>optional parameter with default value: "write"</i> the access rights to filter related commands

Parameter	Type	Description
	- write : write and read access - read : read access - none : no access	
[no] link	Parameter type: <Sec::Link> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to link related commands
[no] log	Parameter type: <Sec::Log> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to log related commands
[no] oam	Parameter type: <Sec::Oam> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to OAM related commands
[no] liadmin	Parameter type: <Sec::Liadmin> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to Lawful Intercept admin related commands
[no] liuser	Parameter type: <Sec::Liuser> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to Lawful Intercept Session related commands
[no] drouter	Parameter type: <Sec::Drouter> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to Drouter related commands

16 Security Configuration Commands

Parameter	Type	Description
[no] ai	Parameter type: <Sec::Ai> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to AI related commands
[no] livoice	Parameter type: <Sec::Livoice> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to Lawful Intercept voice related commands
[no] lldpmed	Parameter type: <Sec::LldpMed> Format: (write read none) Possible values: - write : write and read access - read : read access - none : no access	<i>optional parameter with default value: "write"</i> the access rights to LLDP-MED related commands

16.6 SNMP View Configuration Command

Command Description

This command allows the operator to configure a view.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

A subtree is identified by an object ID, which is a sequence of numbers (example: 1.3.6.1.6.3.12.1.3). This sequence uniquely identifies a node or a leaf in the MIB tree.

The same subtree can also be addressed using symbolic MIB names (example: snmpTargetParamsTable).

Combinations of symbolic names and numbers are also possible: 1.3.6.1.6.3.12.1.3.1.7.97.97.97 can be written as snmpTargetParamsTable.1.7.97.97.97 or as snmpTargetParamsRowStatus.97.97.97, ...

For each number, we can indicate that it may be ignored when comparing it with MIB elements, by adding an asterisk after the number (example: snmpTargetParamsRowStatus.97.97.97). Because the number is ignored anyway, we recommend replacing it with a 0. For example, snmpTargetParamsRowStatus.97.0*.97. 0* can be abbreviated as *. So, the recommended representation is snmpTargetParamsRowStatus.97.*.97.*

The system stores a view entry based on the view name and the object ID: snmpTargetParamsRowStatus.97.0.97 and snmpTargetParamsRowStatus.97.97*.97 are stored in two different locations, but match the same MIB elements. A consequence of this strategy is that snmpTargetParamsRowStatus.97.97*.97 and snmpTargetParamsRowStatus.97.97.97 can not exist at the same time.*

The most specific filter element takes precedence in the case where more than one filter element matches the same MIB element.

Clarification regarding 'entry-status': If a failure occurs during the configuration of an SNMP view, please check if the view was created and if the corresponding entry-status is valid. If not, please delete and re-create the entire SNMP view.

Command Syntax

The command has the following syntax:

```
> configure system security snmp ( no view (notify-view) subtree <Snmp::ViewSubtree> ) | ( view (notify-view) subtree <Snmp::ViewSubtree> type <Snmp::FilterType> )
```

Command Parameters

Table 16.6-1 "SNMP View Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(notify-view)	Format: - the name of a view - length: x<=32	the name of the view
subtree	Parameter type: <Snmp::ViewSubtree> Format:	the subtree

Resource Identifier	Type	Description
	<Snmplib::ViewSubtree> Field type <Snmplib::ViewSubtree> - specification of view subtree. Eg(vacmAccessTable.*.7)	

Table 16.6-2 "SNMP View Configuration Command" Command Parameters

Parameter	Type	Description
type	Parameter type: <Snmplib::FilterType> Format: (include exclude) Possible values: - include : include the matching varbinds - exclude : exclude the matching varbinds	<i>mandatory parameter</i> the filter type

Command Output

Table 16.6-3 "SNMP View Configuration Command" Display parameters

Specific Information		
name	Type	Description
entry-status	Parameter type: <Transport::WaitRowStatusVacmFilter> (valid corrupted corrupted) Possible values: - valid : SNMP view configuration is ok - corrupted : SNMP view configuration is not operational(not-in-service) - corrupted : SNMP view configuration is not operational(not-ready)	the status of an SNMP view <i>This element is only shown in detail mode.</i>

16.7 Security SNMP Community Configuration Command

Command Description

This command allows the operator to configure community names.

An existing community can not be modified.

SNMP uses community names as a kind of password without user name to verify if a request may be executed.

The community name is configured for an IP range which is specified by IP address and subnet netmask. Different IP addresses with same netmask may represent for same IP range. For example, both 108.79.136.20/24 and 108.79.136.21/24 represent for IP range from 108.79.136.1 to 108.79.136.255.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

There must be at least one community with read-write privileges.

Command Syntax

The command has the following syntax:

```
> configure system security snmp ( no community (name) host-address <Ip::IpXAddressAndIpMaskFull> ) | (
community (name) host-address <Ip::IpXAddressAndIpMaskFull> [ no context | context <Transport::Context> ] [
no privilege | privilege <Snmp::CommunityPrivilege> ] [ no read-view | read-view <Snmp::ViewName> ] [ no
write-view | write-view <Snmp::ViewName> ] [ no notify-view | notify-view <Snmp::ViewName> ] )
```

Command Parameters

Table 16.7-1 "Security SNMP Community Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - the community name The name in plain text is placed in double quotes when # ? [or] is used. In double quotes, backslash is regarded as escape, and it is used to escape control character, quotation mark, and itself. - length: x<=32	the name of the community
host-address	Parameter type: <Ip::IpXAddressAndIpMaskFull> Format: (<Ip::V4Address> / <Ip::PrefixLengthFull> ipv6 : <Ip::V6Prefix> / <Ip::V6PrefixLength>) Possible values: - ipv6 : ipv6-address Field type <Ip::V4Address> - IPv4-address	the ipv4/6 address and mask as prefix length

Resource Identifier	Type	Description
	Field type <Ip::PrefixLengthFull> - IP address prefix length - range: [0...32] Field type <Ip::V6Prefix> - IPv6-address Field type <Ip::V6PrefixLength> - prefix length of IPv6-address - range: [0...128]	

Table 16.7-2 "Security SNMP Community Configuration Command" Command Parameters

Parameter	Type	Description
[no] context	Parameter type: <Transport::Context> Format: (nt shub epon xvps1 xvps2 xvps3 xvps4 xvps5 xvps6 xvps7 xvps8 ihub ai_nt_1 ai_nta_1 ai_ntb_1 vvpsa) Possible values: - nt : nt context - shub : shub context - epon : epon context - xvps1 : xvps1 context - xvps2 : xvps2 context - xvps3 : xvps3 context - xvps4 : xvps4 context - xvps5 : xvps5 context - xvps6 : xvps6 context - xvps7 : xvps7 context - xvps8 : xvps8 context - ihub : ihub context - ai_nt_1 : ai nt context - ai_nta_1 : ai nta context - ai_ntb_1 : ai ntb context - vvpsa : vvpsa context	<i>optional parameter with default value: "nt"</i> the context allowed for this community
[no] privilege	Parameter type: <Snmp::CommunityPrivilege> Format: (read-only read-write write-only) Possible values: - read-only : only read privileges - read-write : read and write privileges - write-only : only write privileges	<i>optional parameter with default value: "read-write"</i> the access privileges we have when we use this community
[no] read-view	Parameter type: <Snmp::ViewName> Format:	<i>optional parameter with default value: "everything"</i>

Parameter	Type	Description
	- the name of a view - length: x<=32	the name of the view to be used for read accesses
[no] write-view	Parameter type: <Snmplib::ViewName> Format: - the name of a view - length: x<=32	<i>optional parameter with default value: "everything"</i> the name of the view to be used for write accesses
[no] notify-view	Parameter type: <Snmplib::ViewName> Format: - the name of a view - length: x<=32	<i>optional parameter with default value: "everything"</i> the name of the view to filter notifications

16.8 Security SNMPv3 Group Configuration

Command

Command Description

This command allows the operator to configure an SNMPv3 Group.

Clarification regarding 'entry-status': If a failure occurs during the configuration of an SNMPv3 Group, please check if the group was created and if the corresponding entry-status is valid. If not, please delete and re-create the entire SNMPv3 Group.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security snmp ( no group (name) security-level <Snmpp::SecurityLevel> context
<Snmpp::Context> ) | ( group (name) security-level <Snmpp::SecurityLevel> context <Snmpp::Context> [ no
read-view | read-view <Snmpp::AssociatedViewName> ] [ no write-view | write-view
<Snmpp::AssociatedViewName> ] [ no notify-view | notify-view <Snmpp::AssociatedViewName> ] )
```

Command Parameters

Table 16.8-1 "Security SNMPv3 Group Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the snmpv3 group The name in plain text is placed in double quotes when # ? [or] is used. In double quotes, backslash is regarded as escape, and it is used to escape control character, quotation mark, and itself. - length: 1<=x<=32	name of snmpV3 group
security-level	Parameter type: <Snmpp::SecurityLevel> Format: (none authentication privacy-and-auth) Possible values: - none : no authentication and no privacy - authentication : authentication without privacy - privacy-and-auth : authentication and privacy	security level for the group

entry-status	Parameter type: <Transport::WaitRowStatusconfigGroup> (valid corrupted corrupted) Possible values: - valid : SNMPv3 group configuration is ok - corrupted : SNMPv3 group configuration is not operational(not-in-service) - corrupted : SNMPv3 group configuration is not operational(not-ready)	the status of an SNMPv3 group <i>This element is only shown in detail mode.</i>

16.9 Security SNMPv3 User Configuration

Command

Command Description

This command allows the operator to configure an SNMPv3 user.

Clarification regarding 'entry-status': If a failure occurs during the configuration of an SNMPv3 user, please check if the user was created and if the corresponding entry-status is valid. If not, please delete and re-create the entire SNMPv3 user.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security snmp ( no user (name) ) | ( user (name) [ no authentication | authentication
<Snmpp::AuthType> ] [ no privacy | privacy <Snmpp::PrivacyType> ] [ no public | public <Snmpp::Identifier> ] )
```

Command Parameters

16.10 Security SNMPv3 User-Group Configuration Command

Command Description

This command allows the operator to map an SNMPv3 user to an SNMPv3 group.

Clarification regarding 'entry-status': If a failure occurs during the configuration of mapping an SNMPv3 user to SNMPv3 user-group, please check if the mapping was done and if the corresponding entry-status is valid. If not, please delete and re-create the entire configuration of mapping an SNMPv3 user to SNMPv3 user-group.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security snmp ( no map-user-group (name) ) | ( map-user-group (name) group-name
<Snmpr::AssociatedGroupName> )
```

Command Parameters

Table 16.10-1 "Security SNMPv3 User-Group Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - snmpv3 user name The name in plain text is placed in double quotes when # ? [or] is used. In double quotes, backslash is regarded as escape, and it is used to escape control character, quotation mark, and itself. - length: 1<=x<=32	name of the snmpV3 user

16.11 SNMP Notify View Configuration Command

Command Description

This command allows the operator to configure a Notify View.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

A subtree is identified by an object ID, which is a sequence of numbers (example: 1.3.6.1.6.3.12.1.3). This sequence uniquely identifies a node or a leaf in the MIB tree.

The same subtree can also be addressed using symbolic MIB names (example: snmpTargetParamsTable).

Combinations of symbolic names and numbers are also possible: 1.3.6.1.6.3.12.1.3.1.7.97.97.97 can be written as snmpTargetParamsTable.1.7.97.97.97 or as snmpTargetParamsRowStatus.97.97.97, ...

For each number, we can indicate that it may be ignored when comparing it with MIB elements, by adding an asterisk after the number (example: snmpTargetParamsRowStatus.97.97.97). Because the number is ignored anyway, we recommend replacing it with a 0. For example, snmpTargetParamsRowStatus.97.0*.97. 0* can be abbreviated as *. So, the recommended representation is snmpTargetParamsRowStatus.97.*.97.*

The system stores a view entry based on the view name and the object ID: snmpTargetParamsRowStatus.97.0.97 and snmpTargetParamsRowStatus.97.97*.97 are stored in two different locations, but match the same MIB elements. A consequence of this strategy is that snmpTargetParamsRowStatus.97.97*.97 and snmpTargetParamsRowStatus.97.97.97 can not exist at the same time.*

The most specific filter element takes precedence in the case where more than one filter element matches the same MIB element.

Clarification regarding 'entry-status': If a failure occurs during the configuration of a Notify View, please check if the view was created and if the corresponding entry-status is valid. If not, please delete and re-create the entire Notify View.

Command Syntax

The command has the following syntax:

```
> configure system security snmp ( no notify-view (notify-view) subtree <Snmp::ViewSubtree> ) | ( notify-view (notify-view) subtree <Snmp::ViewSubtree> type <Snmp::FilterType> )
```

Command Parameters

16.13 Security SNMP Notification Profile Filter Configuration Command

Command Description

This command allows the operator to configure a filter for a notification profile.

Clarification regarding 'entry-status': If a failure occurs during the configuration of a filter for SNMP notification profile, please check if the filter was created and if the corresponding entry-status is valid. If not, please delete and re-create the entire notification profile filter.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security snmp notify-profile (name) ( no filter ) | ( filter notify-view <Snmp::ViewName> )
```

Command Parameters

Table 16.13-1 "Security SNMP Notification Profile Filter Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - notification-profile name - length: 1<=x<=32	name of the notification profile

Table 16.13-2 "Security SNMP Notification Profile Filter Configuration Command" Command Parameters

Parameter	Type	Description
notify-view	Parameter type: <Snmp::ViewName> Format: - the name of a view - length: x<=32	<i>mandatory parameter</i> view to be accessed

Command Output

Table 16.13-3 "Security SNMP Notification Profile Filter Configuration Command" Display parameters

Specific Information		
name	Type	Description
entry-status	Parameter type: <Transport::WaitRowStatusNotifyView>	the status of notification profile

name	Type	Description
	(valid corrupted corrupted) Possible values: - valid : notification profile filter configuration is ok - corrupted : notification profile filter configuration is not operational(not-in-service) - corrupted : notification profile filter configuration is not operational(not-ready)	filter <i>This element is only shown in detail mode.</i>

16.14 Security SNMP Element Manager Configuration Command

Command Description

This command allows the operator to configure an Element Manager using a Profile.

Clarification regarding 'entry-status': If a failure occurs during the configuration of the SNMP element manager, please check if the element manager was created and if the corresponding entry-status is valid. If not, please delete and re-create the entire SNMP element manager.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security snmp ( no manager (name) ) | ( manager (name) destination <Snmpp::Address>
notify-profile <Snmpp::NotifyProfile> [ [ no ] nt ] [ [ no ] shub ] [ [ no ] ihub ] [ [ no ] epon ] [ [ no ] xvps1 ] [ [ no ]
xvps2 ] [ [ no ] xvps3 ] [ [ no ] xvps4 ] [ [ no ] xvps5 ] [ [ no ] xvps6 ] [ [ no ] xvps7 ] [ [ no ] xvps8 ] [ [ no ] vvpsa
] )
```

Command Parameters

Table 16.14-1 "Security SNMP Element Manager Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - element manager name - length: 1<=x<=32	name of the element manager

Table 16.14-2 "Security SNMP Element Manager Configuration Command" Command Parameters

Parameter	Type	Description
destination	Parameter type: <Snmpp::Address> Format: (<Snmpp::IpAddress> : <Snmpp::AddressPort> ipv6 : <Snmpp::Ipv6Address> / <Snmpp::AddressPort>) Possible values: - ipv6 : ipv6-address Field type <Snmpp::IpAddress> - ip-address for the manager Field type <Snmpp::Ipv6Address> - ipv6-address for the manager Field type <Snmpp::AddressPort> - port number for the manager	<i>mandatory parameter</i> <i>The parameter is not visible during modification.</i> destination address of the element manager

Parameter	Type	Description
	- range: [1...65535]	
notify-profile	Parameter type: <Snmp::NotifyProfile> Format: - notification-profile name - length: 1<=x<=32	<i>mandatory parameter</i> name of the notification profile
[no] nt	Parameter type: boolean	<i>optional parameter</i> enable storing in nt
[no] shub	Parameter type: boolean	<i>optional parameter</i> enable storing in shub
[no] ihub	Parameter type: boolean	<i>optional parameter</i> enable storing in ihub
[no] epon	Parameter type: boolean	<i>optional parameter</i> enable storing in epon
[no] xvps1	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps1
[no] xvps2	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps2
[no] xvps3	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps3
[no] xvps4	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps4
[no] xvps5	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps5
[no] xvps6	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps6
[no] xvps7	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps7
[no] xvps8	Parameter type: boolean	<i>optional parameter</i> enable storing in xvps8
[no] vvpsa	Parameter type: boolean	<i>optional parameter</i> enable storing in vvpsa

Command Output

Table 16.14-3 "Security SNMP Element Manager Configuration Command" Display parameters

Specific Information		
name	Type	Description
entry-status	Parameter type: <Transport::WaitRowStatusconfigManger> (valid corrupted corrupted) Possible values: - valid : SNMPv3 element manager configuration is ok - corrupted : SNMPv3 element manager configuration is not operational(not-in-service) - corrupted : SNMPv3 element manager configuration is not operational(not-ready)	the status of an SNMP Element Manager <i>This element is only shown in detail mode.</i>

16.15 Security RADIUS Client Configuration

Command

Command Description

This command allows to configure generic parameters for when a Radius Client is used. More details can be found in the description per parameter.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security radius [ [ no ] auth-super-user ] [ no operator-policy | operator-policy <Aaa::RadiusPolicyName> ] [ no aut-s-unreach-act | aut-s-unreach-act <Aaa::RadiusAuthServUnreachAction> ]
```

Command Parameters

Table 16.15-2 "Security RADIUS Client Configuration Command" Command Parameters

Parameter	Type	Description
[no] auth-super-user	Parameter type: boolean	<i>optional parameter</i> enable superuser RADIUS Authentication
[no] operator-policy	Parameter type: <Aaa::RadiusPolicyName> Format: (none name : <Aaa::IgnoredRadiusPolicyName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <Aaa::IgnoredRadiusPolicyName> - name of the RADIUS policy - length: 1<=x<=64	<i>optional parameter with default value: "none"</i> operator RADIUS policy name
[no] aut-s-unreach-act	Parameter type: <Aaa::RadiusAuthServUnreachAction> Format: (reject-all accept-all) Possible values: - reject-all : All session requests are rejected - accept-all : All session requests are accepted	<i>optional parameter with default value: "reject-all"</i> action to be taken for 802.1x users when authentication server is unreachable

16.16 Security RADIUS Authentication Server Configuration Command

Command Description

This command allows the operator to configure the RADIUS authentication servers. The conceptual table lists the RADIUS authentication servers with their configurable parameters. If an entry (server) must be deleted, it must not be associated with any RADIUS policy. If an entry is associated with a policy, the deletion is not allowed.

Note: the products from the ISAM 7362, 7363 and 7367 family support only vrf-index=0.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security radius ( no auth-server (name) router-instance <Ihub::Router> ) | ( auth-server (name)
router-instance <Ihub::Router> ip-address <Aaa::InetAddress> [ no port | port <Aaa::InetPortNumber> ] secret
<Security::Password3> [ no retry-limit | retry-limit <Aaa::RadiusRetryLimit> ] [ no timeout-limit | timeout-limit
<Aaa::RadiusTimeout> ] [ [ no ] admin-down ] [ no dead-interval | dead-interval <Aaa::RadiusDeadInterval> ] )
```

Command Parameters

Table 16.16-1 "Security RADIUS Authentication Server Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the RADIUS auth server - length: 1<=x<=64	name of RADIUS authentication server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which this auth server belongs

Table 16.16-2 "Security RADIUS Authentication Server Configuration Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Aaa::InetAddress> Format:	mandatory parameter IP address of RADIUS

16 Security Configuration Commands

Parameter	Type	Description
	- IPv4-address	authentication server
[no] port	Parameter type: <Aaa::InetPortNumber> Format: - the port number that is used to communicate with an AAA server - range: [0...65535]	<i>optional parameter with default value: 1812</i> UDP port to which RADIUS auth messages should be sent
secret	Parameter type: <Security::Password3> Format: (prompt plain : <Security::PlainPassword3> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword3> - password string hidden from users - length: 6<=x<=64 Field type <Security::EncryptedPasswordx> - password string exposed to users - length: 8<=x<=64	<i>mandatory parameter</i> secret string used between RADIUS server and client
[no] retry-limit	Parameter type: <Aaa::RadiusRetryLimit> Format: - radius retry limit - range: [0...100]	<i>optional parameter with default value: 3</i> no of times RADIUS server be tried before giving up
[no] timeout-limit	Parameter type: <Aaa::RadiusTimeout> Format: - radius timeout - unit: sec - range: [1...60]	<i>optional parameter with default value: 3</i> time in sec between retransmission to RADIUS server
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> administrative state down
[no] dead-interval	Parameter type: <Aaa::RadiusDeadInterval> Format: - radius dead interval - unit: sec - range: [0...3600]	<i>optional parameter with default value: 600</i> no of sec before setting oper state to unknown from down

16.17 Security RADIUS Accounting Server Configuration Command

Command Description

This command allows the operator to configure the RADIUS accounting servers. The conceptual table lists the RADIUS accounting servers with their configurable parameters. If an entry (server) must be deleted, it must not be associated with any RADIUS policy. If an entry is associated with a policy, the deletion is not allowed.

Note: the products from the ISAM 7362, 7363 and 7367 family support only vrf-index=0.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security radius ( no acc-server (name) router-instance <Ihub::Router> ) | ( acc-server (name)
router-instance <Ihub::Router> ip-address <Aaa::InetAddress> [ no port | port <Aaa::InetPortNumber> ] secret
<Security::Password3> [ no retry-limit | retry-limit <Aaa::RadiusRetryLimit> ] [ no timeout-limit | timeout-limit
<Aaa::RadiusTimeout> ] [ [ no ] admin-down ] [ no dead-interval | dead-interval <Aaa::RadiusDeadInterval> ] )
```

Command Parameters

Table 16.17-1 "Security RADIUS Accounting Server Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the RADIUS accounting server - length: 1<=x<=64	name of the RADIUS accounting server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which the RADIUS Acc Server belongs

Table 16.17-2 "Security RADIUS Accounting Server Configuration Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Aaa::InetAddress> Format:	mandatory parameter IP address of RADIUS

16 Security Configuration Commands

Parameter	Type	Description
	- IPv4-address	accounting server
[no] port	Parameter type: <Aaa::InetPortNumber> Format: - the port number that is used to communicate with an AAA server - range: [0...65535]	<i>optional parameter with default value: 1813</i> UDP port to which RADIUS accounting messages be sent
secret	Parameter type: <Security::Password3> Format: (prompt plain : <Security::PlainPassword3> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword3> - password string hidden from users - length: 6<=x<=64 Field type <Security::EncryptedPasswordx> - password string exposed to users - length: 8<=x<=64	<i>mandatory parameter</i> secret string used between RADIUS server and client
[no] retry-limit	Parameter type: <Aaa::RadiusRetryLimit> Format: - radius retry limit - range: [0...100]	<i>optional parameter with default value: 10</i> no of times RADIUS server be tried before giving up
[no] timeout-limit	Parameter type: <Aaa::RadiusTimeout> Format: - radius timeout - unit: sec - range: [1...60]	<i>optional parameter with default value: 15</i> time in sec between retransmission to RADIUS server
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> administrative state down
[no] dead-interval	Parameter type: <Aaa::RadiusDeadInterval> Format: - radius dead interval - unit: sec - range: [0...3600]	<i>optional parameter with default value: 600</i> no of sec before setting oper state to unknown from down

16.18 Security RADIUS Dynamic Authorization Client Configuration Command

Command Description

This command allows the operator to configure the RADIUS Dynamic Authorization Clients. The conceptual table lists the RADIUS Dynamic Authorization Clients with their configurable parameters.

Note: the products from the ISAM 7362, 7363 and 7367 family support only vrf-index=0.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security radius ( no dyn-auth-client (name) router-instance <Ihub::Router> ) | ( dyn-auth-client
(name) router-instance <Ihub::Router> ip-address <Aaa::InetAddress> secret <Security::Password3> [ [ no ]
admin-down ] )
```

Command Parameters

Table 16.18-1 "Security RADIUS Dynamic Authorization Client Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of dynamic auth client name - length: 1<=x<=64	name of the RADIUS Dynamic Authorization client
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which the RADIUS Dyn Auth Client belongs

Table 16.18-2 "Security RADIUS Dynamic Authorization Client Configuration Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	<i>mandatory parameter</i> IP address of RADIUS authentication server
secret	Parameter type: <Security::Password3>	<i>mandatory parameter</i>

16 Security Configuration Commands

Parameter	Type	Description
	Format: (prompt plain : <Security::PlainPassword3> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword3> - password string hidden from users - length: 6<=x<=64 Field type <Security::EncryptedPasswordx> - password string exposed to users - length: 8<=x<=64	secret string used between RADIUS server and client
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> administrative state down

16.19 Security RADIUS Policy Configuration

Command

Command Description

This command allows the operator to configure RADIUS policies. The conceptual table lists the RADIUS policies with the parameters that apply globally for each RADIUS policy. An entry in this table (policy) can be deleted only if it is not associated with any of the domains. If this entry is deleted, the corresponding entry in the RADIUS server is also deleted.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security radius ( no policy (name) ) | ( policy (name) nas-id <Aaa::NasId> nas-ip-address
<Aaa::InetAddress> [ [ no ] keep-domain-name ] [ [ no ] disable-accnt-msg ] [ no acc-interval | acc-interval
<Aaa::AccInt> ] [ [ no ] disable-eap ] )
```

Command Parameters

Table 16.19-1 "Security RADIUS Policy Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the radius policy - length: 1<=x<=64	name of the RADIUS policy

Table 16.19-2 "Security RADIUS Policy Configuration Command" Command Parameters

Parameter	Type	Description
nas-id	Parameter type: <Aaa::NasId> Format: - a binary string of min 0 and max 64 - length: x<=64	<i>mandatory parameter</i> NAS-Identifier used in messages towards Radius servers
nas-ip-address	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	<i>mandatory parameter</i> NAS-IP-Address used in messages towards Radius servers
[no] keep-domain-name	Parameter type: boolean	<i>optional parameter</i> don't strip domain name when sending to RADIUS server
[no] disable-accnt-msg	Parameter type: boolean	<i>optional parameter</i> disable
[no] acc-interval	Parameter type: <Aaa::AccInt> Format: - radius accnt interval	<i>optional parameter with default value: 0</i> Interim Accounting Interval in

16 Security Configuration Commands

Parameter	Type	Description
	- unit: sec - range: [0,60...2147483647]	seconds
[no] disable-eap	Parameter type: boolean	<i>optional parameter</i> disable

16.20 Security RADIUS Server Configuration

Command

Command Description

This command allows the operator to configure RADIUS servers. The conceptual table lists the set of RADIUS servers with the parameters of each set. The servers that are placed in a set using this table must first be defined in the RADIUS Authenticaion and Accounting server configuration commands. The value returned by the RADIUS server is used by the management station as the value for the index when a new entry in this table is created.

It is always mandatory to configure acc-server along with acc-router-inst and auth-server with auth-router-inst, otherwise the configuration will not succeed.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security radius policy (name) ( no servers (index) ) | ( servers (index) auth-server
<Aaa::RadAuthServer> auth-router-inst <Ihub::Router> [ no acc-server | acc-server <Aaa::RadAccServer> ] [ no
acc-router-inst | acc-router-inst <Ihub::IgnoredRouter> ] priority <Aaa::Priority> )
```

Command Parameters

Table 16.20-1 "Security RADIUS Server Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the radius policy - length: 1<=x<=64	name of the RADIUS policy
(index)	Format: - unique nbr identifying a set within a RADIUS profile. - range: [1...2]	index of RADIUS profile

Table 16.20-2 "Security RADIUS Server Configuration Command" Command Parameters

Parameter	Type	Description
auth-server	Parameter type: <Aaa::RadAuthServer> Format: name : <Aaa::RadAuthServerName> Possible values: - name : use a radius server for authentication Field type <Aaa::RadAuthServerName> - name of the RADIUS auth server - length: 1<=x<=64	mandatory parameter the radius authentication server
auth-router-inst	Parameter type: <Ihub::Router>	mandatory parameter

16 Security Configuration Commands

Parameter	Type	Description
	Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router index to which the RADIUS auth server belongs
[no] acc-server	Parameter type: <Aaa::RadAccServer> Format: (none name : <Aaa::RadAccServerName>) Possible values: - none : no radius server for accounting - name : use a radius server for accounting Field type <Aaa::RadAccServerName> - name of the RADIUS accounting server - length: 1<=x<=64	<i>optional parameter with default value: "none"</i> the radius accounting server, input together with acc-router-inst
[no] acc-router-inst	Parameter type: <Ihub::IgnoredRouter> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	<i>optional parameter with default value: "base"</i> router index to which the RADIUS accounting server belongs, input together with acc-server
priority	Parameter type: <Aaa::Priority> Format: - priority of the server set - range: [1...256]	<i>mandatory parameter</i> priority of the set of RADIUS servers

16.21 Security TACACS+ Client Configuration

Command

Command Description

This command allows to configure generic parameters for when a TACACS+ Client is used. More details can be found in the description per parameter.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security tacacs [ [ no ] auth-super-user ] [ no operator-policy | operator-policy <Aaa::TacacsPolicyName> ]
```

Command Parameters

Table 16.21-2 "Security TACACS+ Client Configuration Command" Command Parameters

Parameter	Type	Description
[no] auth-super-user	Parameter type: boolean	<i>optional parameter</i> enable superuser TACACS+ Authentication
[no] operator-policy	Parameter type: <Aaa::TacacsPolicyName> Format: (none name : <Aaa::IgnoredTacacsPolicyName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <Aaa::IgnoredTacacsPolicyName> - name of the tacacs+ policy - length: 1<=x<=64	<i>optional parameter with default value: "none"</i> operator TACACS+ policy name

16.22 Security TACACS+ Authentication Server Configuration Command

Command Description

This command allows the operator to configure the TACACS+ authentication servers. The conceptual table lists the TACACS+ authentication servers with their configurable parameters. If an entry (server) must be deleted, it must not be associated with any TACACS+ policy. If an entry is associated with a policy, the deletion is not allowed.

Note: the products from the ISAM 7360, 7363 and 7367 family support only vrf-index=0.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security tacacs ( no authen-server (name) router-instance <Ihub::baseRouter> ) | ( authen-server (name) router-instance <Ihub::baseRouter> ip-address <Aaa::InetAddress> [ no port | port <Aaa::InetPortNumber> ] secret <Security::Password3> [ no timeout-limit | timeout-limit <Aaa::TacacsTimeout> ] [ [ no ] admin-down ] [ no dead-interval | dead-interval <Aaa::TacacsDeadInterval> ] )
```

Command Parameters

Table 16.22-1 "Security TACACS+ Authentication Server Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ authentication server - length: 1<=x<=64	name of TACACS+ authentication server
router-instance	Parameter type: <Ihub::baseRouter> Format: base Possible values: - base : base router	router to which this auth server belongs

Table 16.22-2 "Security TACACS+ Authentication Server Configuration Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	mandatory parameter IP address of TACACS+ authentication server
[no] port	Parameter type: <Aaa::InetPortNumber> Format:	optional parameter with default value: 49

Parameter	Type	Description
	- the port number that is used to communicate with an AAA server - range: [0...65535]	TCP port for TACACS+ authentication
secret	Parameter type: <Security::Password3> Format: (prompt plain : <Security::PlainPassword3> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword3> - password string hidden from users - length: 6<=x<=64 Field type <Security::EncryptedPasswordx> - password string exposed to users - length: 8<=x<=64	<i>mandatory parameter</i> secret string used between TACACS+ server and client
[no] timeout-limit	Parameter type: <Aaa::TacacsTimeout> Format: - tacacs timeout - range: [1...60]	<i>optional parameter with default value: 5</i> time in sec between retransmission to TACACS+ server
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> administrative state down
[no] dead-interval	Parameter type: <Aaa::TacacsDeadInterval> Format: - tacacs dead interval - range: [0...3600]	<i>optional parameter with default value: 600</i> no of sec before setting oper state to unknown from down

16.23 Security TACACS+ Authorization Server Configuration Command

Command Description

This command allows the operator to configure the TACACS+ authorization servers. The conceptual table lists the TACACS+ authorization servers with their configurable parameters. If an entry (server) must be deleted, it must not be associated with any TACACS+ policy. If an entry is associated with a policy, the deletion is not allowed.

Note: the products from the ISAM 7360, 7363 and 7367 family support only vrf-index=0.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security tacacs ( no author-server (name) router-instance <Ihub::baseRouter> ) | ( author-server (name) router-instance <Ihub::baseRouter> ip-address <Aaa::InetAddress> [ no port | port <Aaa::InetPortNumber> ] secret <Security::Password3> [ no timeout-limit | timeout-limit <Aaa::TacacsTimeout> ] [ [ no ] admin-down ] [ no dead-interval | dead-interval <Aaa::TacacsDeadInterval> ] )
```

Command Parameters

Table 16.23-1 "Security TACACS+ Authorization Server Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ authorization server - length: 1<=x<=64	name of TACACS+ authorization server
router-instance	Parameter type: <Ihub::baseRouter> Format: base Possible values: - base : base router	router to which this auth server belongs

Table 16.23-2 "Security TACACS+ Authorization Server Configuration Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	mandatory parameter IP address of TACACS+ authorization server
[no] port	Parameter type: <Aaa::InetPortNumber> Format: - the port number that is used to communicate with an AAA	optional parameter with default value: 49 TCP port for TACACS+

Parameter	Type	Description
	server - range: [0...65535]	authorization
secret	Parameter type: <Security::Password3> Format: (prompt plain : <Security::PlainPassword3> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword3> - password string hidden from users - length: 6<=x<=64 Field type <Security::EncryptedPasswordx> - password string exposed to users - length: 8<=x<=64	<i>mandatory parameter</i> secret string used between TACACS+ server and client
[no] timeout-limit	Parameter type: <Aaa::TacacsTimeout> Format: - tacacs timeout - range: [1...60]	<i>optional parameter with default value: 5</i> time in sec between retransmission to TACACS+ server
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> administrative state down
[no] dead-interval	Parameter type: <Aaa::TacacsDeadInterval> Format: - tacacs dead interval - range: [0...3600]	<i>optional parameter with default value: 600</i> no of sec before setting oper state to unknown from down

16.24 Security TACACS+ Accounting Server Configuration Command

Command Description

This command allows the operator to configure the TACACS+ accounting servers. The conceptual table lists the TACACS+ accounting servers with their configurable parameters. If an entry (server) must be deleted, it must not be associated with any TACACS+ policy. If an entry is associated with a policy, the deletion is not allowed.

Note: the products from the ISAM 7360,7363 and 7367 family support only vrf-index=0.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security tacacs ( no acc-server (name) router-instance <Ihub::baseRouter> ) | ( acc-server (name) router-instance <Ihub::baseRouter> ip-address <Aaa::InetAddress> [ no port | port <Aaa::InetPortNumber> ] secret <Security::Password3> [ no timeout-limit | timeout-limit <Aaa::TacacsTimeout> ] [ [ no ] admin-down ] [ no dead-interval | dead-interval <Aaa::TacacsDeadInterval> ] )
```

Command Parameters

Table 16.24-1 "Security TACACS+ Accounting Server Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ accounting server - length: 1<=x<=64	name of the TACACS+ accounting server
router-instance	Parameter type: <Ihub::baseRouter> Format: base Possible values: - base : base router	router to which the TACACS+ Acc Server belongs

Table 16.24-2 "Security TACACS+ Accounting Server Configuration Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	mandatory parameter IP address of TACACS+ accounting server
[no] port	Parameter type: <Aaa::InetPortNumber> Format: - the port number that is used to communicate with an AAA	optional parameter with default value: 49 TCP port for TACACS+

Parameter	Type	Description
	server - range: [0...65535]	accounting
secret	Parameter type: <Security::Password3> Format: (prompt plain : <Security::PlainPassword3> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword3> - password string hidden from users - length: 6<=x<=64 Field type <Security::EncryptedPasswordx> - password string exposed to users - length: 8<=x<=64	<i>mandatory parameter</i> secret string used between TACACS+ server and client
[no] timeout-limit	Parameter type: <Aaa::TacacsTimeout> Format: - tacacs timeout - range: [1...60]	<i>optional parameter with default value: 5</i> time in sec between retransmission to TACACS+ server
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> administrative state down
[no] dead-interval	Parameter type: <Aaa::TacacsDeadInterval> Format: - tacacs dead interval - range: [0...3600]	<i>optional parameter with default value: 600</i> no of sec before setting oper state to unknown from down

16.25 Security TACACS+ Policy Configuration

Command

Command Description

This command allows the operator to configure TACACS+ policies. The conceptual table lists the TACACS+ policies with the parameters that apply globally for each TACACS+ policy. An entry in this table (policy) can be deleted only if it is not associated with any of the domains. If this entry is deleted, the corresponding entry in the TACACS+ server is also deleted.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

> configure system security tacacs (no policy (name)) | (policy (name))

Command Parameters

Table 16.25-1 "Security TACACS+ Policy Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the tacacs+ policy - length: 1<=x<=64	name of the Tacacs+ policy

16.26 Security Tacacs+ Server Configuration

Command

Command Description

This command allows the operator to configure Tacacs+ servers. The conceptual table lists the set of Tacacs+ servers with the parameters of each set. The servers that are placed in a set using this table must first be defined in the Tacacs+ Authenticaion and Accounting server configuration commands. The value returned by the Tacacs+ server is used by the management station as the value for the index when a new entry in this table is created.

It is always mandatory to configure acc-server along with acc-router-inst and auth-server with auth-router-inst, otherwise the configuration will not succeed.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security tacacs policy (name) ( no servers (index) ) | ( servers (index) [ no authen-server |
authen-server <Aaa::TacAuthenServer> ] [ no author-server | author-server <Aaa::TacAuthorServer> ] [ no
acc-server | acc-server <Aaa::TacAccServer> ] priority <Aaa::Priority> )
```

Command Parameters

Table 16.26-1 "Security Tacacs+ Server Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the tacacs+ policy - length: 1<=x<=64	name of the Tacacs+ policy
(index)	Format: - unique nbr identifying a set within a TACACS+ profile. - range: [1...2]	index of Tacacs+ profile

Table 16.26-2 "Security Tacacs+ Server Configuration Command" Command Parameters

Parameter	Type	Description
[no] authen-server	Parameter type: <Aaa::TacAuthenServer> Format: (none name : <Aaa::TacAuthenServerName>) Possible values: - none : no tacacs+ server for authentication - name : use a tacacs+ server for authentication Field type <Aaa::TacAuthenServerName> - name of the TACACS+ authentication server	optional parameter with default value: "none" the Tacacs+ authentication server

16 Security Configuration Commands

Parameter	Type	Description
[no] author-server	- length: 1<=x<=64 Parameter type: <Aaa::TacAuthorServer> Format: (none name : <Aaa::TacAuthorServerName>) Possible values: - none : no tacacs+ server for authorization - name : use a tacacs+ server for authorization Field type <Aaa::TacAuthorServerName> - name of the TACACS+ authorization server - length: 1<=x<=64	<i>optional parameter with default value: "none"</i> the Tacacs+ authorization server
[no] acc-server	Parameter type: <Aaa::TacAccServer> Format: (none name : <Aaa::TacAccServerName>) Possible values: - none : no TACACS+ server for accounting - name : use a TACACS+ server for accounting Field type <Aaa::TacAccServerName> - name of the TACACS+ accounting server - length: 1<=x<=64	<i>optional parameter with default value: "none"</i> the tacacs+ accounting server
priority	Parameter type: <Aaa::Priority> Format: - priority of the server set - range: [1...256]	<i>mandatory parameter</i> priority of the set of Tacacs+ servers

16.27 Security Domain Configuration Command

Command Description

This command allows the operator to configure the domain.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security ( no domain (name) ) | ( domain (name) [ no vlan-id | vlan-id
<Vlan::VlanIndexOrZero> ] [ no primary-dns | primary-dns <Aaa::InetAddress> ] [ no second-dns | second-dns
<Aaa::InetAddress> ] [ no primary-nbns | primary-nbns <Aaa::InetAddress> ] [ no second-nbns | second-nbns
<Aaa::InetAddress> ] [ no sess-timeout | sess-timeout <Aaa::DomainSessionTimeout> ] [ no qos-policy |
qos-policy <Aaa::QosProfileName> ] authenticator <Aaa::IHUBAuthenticator> [ [ no ] admin-down ] )
```

Command Parameters

Table 16.27-1 "Security Domain Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the domain - length: 1<=x<=64	name of the domain

Table 16.27-2 "Security Domain Configuration Command" Command Parameters

Parameter	Type	Description
[no] vlan-id	Parameter type: <Vlan::VlanIndexOrZero> Format: - vlan id - range: [0...4092]	<i>optional parameter with default value: 0</i> a vlan id
[no] primary-dns	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> IP address of primary DNS server
[no] second-dns	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> IP address of secondary DNS server
[no] primary-nbns	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> IP address of primary NBNS server
[no] second-nbns	Parameter type: <Aaa::InetAddress> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> IP address of secondary NBNS server

16 Security Configuration Commands

Parameter	Type	Description
[no] sess-timeout	Parameter type: <Aaa::DomainSessionTimeout> Format: - maximum lifetime of a session - unit: sec - range: [0,600...2147483647]	<i>optional parameter with default value: 0</i> maximum lifetime of a session
[no] qos-policy	Parameter type: <Aaa::QosProfileName> Format: (none name : <Aaa::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <Aaa::IgnoredQosProfileName> - name of the QoS profile - length: 1<=x<=64	<i>optional parameter with default value: "none"</i> name of the QoS policy to be applied to this domain
authenticator	Parameter type: <Aaa::IHUBAuthenticator> Format: radius : <Aaa::RadPolicyName> Possible values: - radius : authenticator type is RADIUS Field type <Aaa::RadPolicyName> - name of the radius policy - length: 1<=x<=64	<i>mandatory parameter</i> type of authenticator
[no] admin-down	Parameter type: boolean	<i>optional parameter</i> administrative state down

16.28 Security Connection Profile Configuration Command

Command Description

This command allows the operator to configure the connection profile parameters.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security ( no conn-profile (name) ) | ( conn-profile (name) version <SignedInteger> [ [ no ] reject-no-domain ] [ [ no ] reject-inv-domain ] domain-name <Aaa::DomainName> )
```

Command Parameters

Table 16.28-1 "Security Connection Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of connection profile

Table 16.28-2 "Security Connection Profile Configuration Command" Command Parameters

Parameter	Type	Description
version	Parameter type: <SignedInteger> Format: - a signed integer	<i>mandatory parameter</i> version number to be associated to the Profile
[no] reject-no-domain	Parameter type: boolean	<i>optional parameter</i> reject user session auth if no domain
[no] reject-inv-domain	Parameter type: boolean	<i>optional parameter</i> reject user session auth if invalid domain
domain-name	Parameter type: <Aaa::DomainName> Format: - name of the domain - length: 1<=x<=64	<i>mandatory parameter</i> name of the domain

16.29 Security Connection Policy Configuration Command

Command Description

This command allows the operator to configure a connection policy associated with the specified policy. The operator should specify the index that indicates which connection policy to apply and the profile-index, which provides the connection profile associated with this policy.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security ( no conn-policy ) | ( conn-policy conn-profile-name <AsamProfileName> )
```

Command Parameters

Table 16.29-2 "Security Connection Policy Configuration Command" Command Parameters

Parameter	Type	Description
conn-profile-name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	<i>mandatory parameter</i> connection profile associated with this policy

16.30 Security 802.1x PAE System Configuration Command

Command Description

This command allows the operator to configure the administrative enable and disable state for port access control and local authentication in a system.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security pae [ [ no ] port-access ]
```

Command Parameters

Table 16.30-2 "Security 802.1x PAE System Configuration Command" Command Parameters

Parameter	Type	Description
[no] port-access	Parameter type: boolean	<i>optional parameter</i> enable port access control

16.31 Security 802.1x Port Authentication Configuration Command

Command Description

This command allows the operator to configure security 802.1x port authentication.

This command is valid for user ports. If the user port resides on a board that does not support user authentication, this command will fail.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security pae authenticator (port) [ no controlled-port | controlled-port
<Aaa::PaeControlledPortControl> ] [ no quiet-period | quiet-period <Aaa::paeQuitTime> ] [ no tx-period | tx-period
<Aaa::paeTime> ] [ no supp-timeout | supp-timeout <Aaa::paeTime> ] [ no server-timeout | server-timeout
<Aaa::paeTime> ] [ no max-req | max-req <Aaa::paeMaxReq> ] [ [ no ] re-auth-enabled ] [ no re-auth-period |
re-auth-period <Aaa::paeReauthPeriod> ]
```

Command Parameters

Table 16.31-1 "Security 802.1x Port Authentication Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> /	identification of the port or virtual channel

Resource Identifier	Type	Description
	<Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Table 16.31-2 "Security 802.1x Port Authentication Configuration Command" Command Parameters

Parameter	Type	Description
[no] controlled-port	Parameter type: <Aaa::PaeControlledPortControl> Format: (force-unauthorized auto force-authorized) Possible values: - force-unauthorized : force unauthorized control - auto : automatic control - force-authorized : force authorized control	<i>optional parameter with default value: "auto"</i> current value of the controlled Port
[no] quiet-period	Parameter type: <Aaa::paeQuietTime> Format: - quietPeriod	<i>optional parameter with default value: 60</i> quietPeriod constant currently

16 Security Configuration Commands

Parameter	Type	Description
	- unit: sec - range: [0...65535]	used, value in seconds
[no] tx-period	Parameter type: <Aaa::paeTime> Format: - authentication time - unit: sec - range: [1...65535]	<i>optional parameter with default value: 30</i> txPeriod constant currently used, value in seconds
[no] supp-timeout	Parameter type: <Aaa::paeTime> Format: - authentication time - unit: sec - range: [1...65535]	<i>optional parameter with default value: 30</i> suppTimeout constant currently used, value in seconds
[no] server-timeout	Parameter type: <Aaa::paeTime> Format: - authentication time - unit: sec - range: [1...65535]	<i>optional parameter with default value: 30</i> serverTimeout constant currently used, value in seconds
[no] max-req	Parameter type: <Aaa::paeMaxReq> Format: - max number of requests - range: [1...10]	<i>optional parameter with default value: 2</i> maxReq constant currently used
[no] re-auth-enabled	Parameter type: boolean	<i>optional parameter</i> enable re-authentication
[no] re-auth-period	Parameter type: <Aaa::paeReauthPeriod> Format: - re-authentication Period - unit: sec - range: [1...65535]	<i>optional parameter with default value: 3600</i> the actual re-authentication period, value in seconds

16.32 Security 802.1x Extension, Port Authentication Configuration Command

Command Description

This command allows the operator to configure the security 802.1x extension port authentication.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security pae ext-authenticator (port) [ [ no ] authentication ] [ [ no ] init-authreq-off ] [ [ no ] handshake ] [ no handshake-period | handshake-period <Aaa::PortHandShakePeriod> ] [ [ no ] mac-auth ] [ [ no ] mab-auth ] [ [ no ] dyn-vlan-assign ]
```

Command Parameters

Table 16.32-1 "Security 802.1x Extension, Port Authentication Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number	identification of the port or virtual channel

Resource Identifier	Type	Description
	Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Table 16.32-2 "Security 802.1x Extension, Port Authentication Configuration Command" Command Parameters

Parameter	Type	Description
[no] authentication	Parameter type: boolean	<i>optional parameter</i> enable 802.1x authentication
[no] init-authreq-off	Parameter type: boolean	<i>optional parameter</i> disable initiate authentication request to supplicant
[no] handshake	Parameter type: boolean	<i>optional parameter</i> enable handshake for this port
[no] handshake-period	Parameter type: <Aaa::PortHandShakePeriod> Format: - handshake time interval - unit: sec - range: [5...90]	<i>optional parameter with default value: 15</i> specify the handshake time interval, value in seconds
[no] mac-auth	Parameter type: boolean	<i>optional parameter</i> enable 802.1x mac authentication
[no] mab-auth	Parameter type: boolean	<i>optional parameter</i> enable 802.1x mac authentication bypass

Parameter	Type	Description
[no] dyn-vlan-assign	Parameter type: boolean	<i>optional parameter</i> enable 802.1x dynamic vlan assignment

16.33 Security 802.1x Port Configuration Command

Command Description

This command allows the operator to configure the security 802.1x port.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> configure system security pae port (port) [ [ no ] initialize ]
```

Command Parameters

Table 16.33-1 "Security 802.1x Port Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the port or virtual channel

Resource Identifier	Type	Description
	Field type <Eqpt::Vpild> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Table 16.33-2 "Security 802.1x Port Configuration Command" Command Parameters

Parameter	Type	Description
[no] initialize	Parameter type: boolean	<i>optional parameter</i> initialize this port

16.34 Security Password Policy Configuration

Command

Command Description

This command allows the operator to configure the password policy.

There is no separate command to change a password. An operator must change the password in the operator's operator node by the local admin.

User Level

The command can be accessed by operators with security,all privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security password [ min-length <Sec::PwdLength> ] [ min-num-numeric-char
<Sec::PwdNumChars> ] [ min-num-special-char <Sec::PwdSpeChars> ] [ no mixed-case | mixed-case
<Sec::MixCase> ]
```

Command Parameters

Table 16.34-2 "Security Password Policy Configuration Command" Command Parameters

Parameter	Type	Description
min-length	Parameter type: <Sec::PwdLength> Format: - the minimum length of the password - unit: characters - range: [6...20]	<i>optional parameter</i> the minimum length of the password
min-num-numeric-char	Parameter type: <Sec::PwdNumChars> Format: - minimum number of numerical characters - unit: characters - range: [0...19]	<i>optional parameter</i> minimum number of numerical characters
min-num-special-char	Parameter type: <Sec::PwdSpeChars> Format: - minimum number of special character - unit: characters - range: [1...20]	<i>optional parameter</i> minimum number of special character
[no] mixed-case	Parameter type: <Sec::MixCase> Format: (mandatory not-mandatory) Possible values:	<i>optional parameter with default value: "not-mandatory"</i> both upper and lower case characters must be present

Parameter	Type	Description
	- mandatory : both upper and lower case characters must be present - not-mandatory : both upper and lower case characters not mandatory	

16.35 File Transfer Configure Command

Command Description

This command configure file transfer states and attributes.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security filetransfer [ no protocol | protocol <SwMngt::FileTransferProtocolType> ] [ no
tftp-rollovr | tftp-rollovr <SwMngt::FileTransferRolloverType> ]
```

Command Parameters

Table 16.35-2 "File Transfer Configure Command" Command Parameters

Parameter	Type	Description
[no] protocol	Parameter type: <SwMngt::FileTransferProtocolType> Format: (tftp ftp sftp) Possible values: - tftp : the tftp protocol is selected for file transfer - ftp : the ftp protocol is selected for file transfer - sftp : the sftp protocol is selected for file transfer	<i>optional parameter with default value: "tftp"</i> the protocol that is to be used for file transfer
[no] tftp-rollovr	Parameter type: <SwMngt::FileTransferRolloverType> Format: - TFTP Block Number - range: [0...1]	<i>optional parameter with default value: 0</i> The value with which TFTP Block number rollover will happen

16.36 file Transfer server Configure Commands

Command Description

This command configures file transfer server states and attributes.

If the auth-type value is password based, then password value length needs to be 1 to 32 characters. if the auth-type value is publickey based, then key-type parameter value needs to be either dsa2048 or rsa2048.

Default value for password is applicable only for public key based authentication.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security filetransfer ( no server (serverid) ) | ( server (serverid) user-name
<SwMngt::UserName> [ no password | password <Security::Password1> ] [ no auth-type | auth-type
<SwMngt::ServerAuthType> ] [ no key-type | key-type <SwMngt::ServerKeyType> ] )
```

Command Parameters

Table 16.36-1 "file Transfer server Configure Commands" Resource Parameters

Resource Identifier	Type	Description
(serverid)	Format: - IPv4-address	(IP address) of the file transfer server

Table 16.36-2 "file Transfer server Configure Commands" Command Parameters

Parameter	Type	Description
user-name	Parameter type: <SwMngt::UserName> Format: - the username used to access the file server - length: x<=32	<i>mandatory parameter</i> the username used to access the file server
[no] password	Parameter type: <Security::Password1> Format: (prompt plain : <Security::PlainPassword1> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword1> - the password used to access the file server - length: 1<=x<=32 Field type <Security::EncryptedPasswordx>	<i>optional parameter with default value: "plain : "</i> the password used to access the file server

16 Security Configuration Commands

Parameter	Type	Description
	- password string exposed to users - length: 8<=x<=64	
[no] auth-type	Parameter type: <SwMngt::ServerAuthType> Format: (password-based publickey-based) Possible values: - password-based : password based authentication - publickey-based : public key based authentication	<i>optional parameter with default value: "password-based"</i> sftp server authentication type
[no] key-type	Parameter type: <SwMngt::ServerKeyType> Format: (none dsa2048 rsa2048) Possible values: - none : no key - dsa2048 : dsa 2048 bit key-pair - rsa2048 : rsa 2048 bit key-pair	<i>optional parameter with default value: "none"</i> sftp server authentication key type

16.37 file Transfer server Configure Commands

Command Description

This command configures file transfer server states and attributes.

If the auth-type value is password based, then password value length needs to be 1 to 32 characters. if the auth-type value is publickey based, then key-type parameter value needs to be either dsa2048 or rsa2048.

Default value for password is applicable only for public key based authentication.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security filetransfer ( no serverv6 (serveridv6) ) | ( serverv6 (serveridv6) user-name
<SwMngt::UserName> [ no password | password <Security::Password1> ] [ no auth-type | auth-type
<SwMngt::ServerAuthType> ] [ no key-type | key-type <SwMngt::ServerKeyType> ] )
```

Command Parameters

Table 16.37-1 "file Transfer server Configure Commands" Resource Parameters

Resource Identifier	Type	Description
(serveridv6)	Format: - IPv6-address	(IPv6 address) of the file transfer server

Table 16.37-2 "file Transfer server Configure Commands" Command Parameters

Parameter	Type	Description
user-name	Parameter type: <SwMngt::UserName> Format: - the username used to access the file server - length: x<=32	<i>mandatory parameter</i> the username used to access the file server
[no] password	Parameter type: <Security::Password1> Format: (prompt plain : <Security::PlainPassword1> encrypted : <Security::EncryptedPasswordx>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <Security::PlainPassword1> - the password used to access the file server - length: 1<=x<=32 Field type <Security::EncryptedPasswordx>	<i>optional parameter with default value: "plain : "</i> the password used to access the file server

16 Security Configuration Commands

Parameter	Type	Description
	- password string exposed to users - length: 8<=x<=64	
[no] auth-type	Parameter type: <SwMngt::ServerAuthType> Format: (password-based publickey-based) Possible values: - password-based : password based authentication - publickey-based : public key based authentication	<i>optional parameter with default value: "password-based"</i> sftp server authentication type
[no] key-type	Parameter type: <SwMngt::ServerKeyType> Format: (none dsa2048 rsa2048) Possible values: - none : no key - dsa2048 : dsa 2048 bit key-pair - rsa2048 : rsa 2048 bit key-pair	<i>optional parameter with default value: "none"</i> sftp server authentication key type

16.38 PM File Upload Configure Command

Command Description

This command configures PM file upload related parameters

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security pmfile ( no upload (upload-index) ) | ( upload (upload-index) pri-server-addr
<SwMngt::pmFileUploadPrimaryServerAddr> upload-path <SwMngt::pmFileUploadPath> interval-type
<SwMngt::pmFileUploadIntervalType> [ no auto-upload | auto-upload <SwMngt::pmFileAutoUpload> ] [ no
retry-num | retry-num <SwMngt::pmFileUploadRetryNum> ] [ no max-delay | max-delay
<SwMngt::pmFileUploadMaxDelay> ] [ no cdr-max-delay | cdr-max-delay
<SwMngt::pmFileUploadCDRMaxDelay> ] [ no cdr-max-timeout | cdr-max-timeout
<SwMngt::pmFileUploadCDRTimeout> ] )
```

Command Parameters

Table 16.38-1 "PM File Upload Configure Command" Resource Parameters

Resource Identifier	Type	Description
(upload-index)	Format: - the unique internal identifier of PM file upload entry (1-VOICE, 2-DSL, 3-CDR) 1) 1-VOICE / 2-DSL : To enable the VoIP / DSL performance monitoring counter reporting by means of PM file upload. The configuration of an entry in this table enables the VoIP / DSL PM counter reporting by means of PM file upload. Autonomous PM upload needs explicitly to be enabled/disabled. Manual PM file upload becomes automatically enabled when creating an entry with identifier 1-VOICE or 2-DSL. 2) 3-CDR : To enable the VoIP 5-min interval statistics counters and CDR data reporting by means of PM file upload. Autonomous CDR data PM file upload becomes automatically enabled when creating an entry with identifier 3-CDR. Manual PM file upload is not supported. - range: [1...3]	the unique internal identifier of PM file upload entry (1-VOICE, 2-DSL, 3-CDR) 1) 1-VOICE / 2-DSL : To enable the VoIP / DSL performance monitoring counter reporting by means of PM file upload. The configuration of an entry in this table enables the VoIP / DSL PM counter reporting by means of PM file upload. Autonomous PM upload needs explicitly to be enabled/disabled. Manual PM file upload becomes automatically enabled when creating an entry with identifier 1-VOICE or 2-DSL. 2) 3-CDR : To enable the VoIP 5-min interval statistics counters and CDR data reporting by means of PM file upload. Autonomous CDR data PM file upload becomes automatically

Resource Identifier	Type	Description
		enabled when creating an entry with identifier 3-CDR. Manual PM file upload is not supported.

Table 16.38-2 "PM File Upload Configure Command" Command Parameters

Parameter	Type	Description
pri-server-addr	Parameter <SwMngt::pmFileUploadPrimaryServerAddr> Format: - IPv4-address type:	<i>mandatory parameter</i> IP address of the primary SFTP file server
upload-path	Parameter type: <SwMngt::pmFileUploadPath> Format: - The path to be addressed for PM / CDR Data file upload. The directory to be specified is the sub-directory below the root directory (the first or top-most directory in a hierarchy). The name of the sub-directory is not allowed to start with '/'. It must end with a '/'. The sub-directory is a mandatory input. The system does not assume any default sub-directory name. - length: x<=127	<i>mandatory parameter</i> The path to be addressed for PM / CDR Data file upload. The directory to be specified is the sub-directory below the root directory (the first or top-most directory in a hierarchy). The name of the sub-directory is not allowed to start with '/'. It must end with a '/'. The sub-directory is a mandatory input. The system does not assume any default sub-directory name.
interval-type	Parameter type: <SwMngt::pmFileUploadIntervalType> Format: (15-min 24-hour 5-min) Possible values: - 15-min : PM counters collected based on the 15-min interval - 24-hour : PM counters collected based on the 1-day interval - 5-min : PM counters collected based on the 5-min interval	<i>mandatory parameter</i> The type of interval to be used to transfer the PM counters. In case it concerns PM file upload entry for 1-VOICE or 2-DSL, the interval-type parameter can only be configured to 15-min or 24-hour. In case it concerns PM file upload entry for 3-CDR, the interval-type parameter can only be configured to 5-min.
[no] auto-upload	Parameter type: <SwMngt::pmFileAutoUpload> Format: (enable disable) Possible values: - enable : PM file transfer auto upload enabled - disable : PM file transfer auto upload disabled	<i>optional parameter with default value: "disable"</i> Allows to configure whether the auto upload of the PM file is enabled or disabled. This parameter is only applicable to the PM file upload entry for 1-VOICE or 2-DSL.
[no] retry-num	Parameter type: <SwMngt::pmFileUploadRetryNum> Format: - In case it concerns PM file upload entry for 1-VOICE or 2-DSL : The number of PM file upload retries in case the initial PM file upload failed. All retries will be done within the same interval as the interval in which the initial PM file upload failed. The several retries will be randomly spread over this interval. In case it concerns PM file upload entry for 3-CDR : The number of CDR Data file upload retries in case the initial CDR Data file upload failed. All retries will be done within the same 5-min interval as the 5-min interval in which the initial CDR Data file upload failed. The several retries will be randomly spread over this 5-min interval. - range: [0...5]	<i>optional parameter with default value: "3"</i> In case it concerns PM file upload entry for 1-VOICE or 2-DSL : The number of PM file upload retries in case the initial PM file upload failed. All retries will be done within the same interval as the interval in which the initial PM file upload failed. The several retries will be randomly spread over this interval. In case it concerns PM file upload entry for 3-CDR : The number of CDR Data file upload

Parameter	Type	Description
		retries in case the initial CDR Data file upload failed. All retries will be done within the same 5-min interval as the 5-min interval in which the initial CDR Data file upload failed. The several retries will be randomly spread over this 5-min interval.
[no] max-delay	Parameter type: <SwMngt::pmFileUploadMaxDelay> Format: - The maximum delay period, expressed in seconds, for PM file upload after PM data file ready (maximum 120 seconds after interval expiry). The system will randomly calculate a delay time within the configured maximum delay period. This parameter is only applicable to the PM file upload entry for 1-VOICE or 2-DSL. - unit: seconds - range: [0...400]	<i>optional parameter with default value: "400"</i> The maximum delay period, expressed in seconds, for PM file upload after PM data file ready (maximum 120 seconds after interval expiry). The system will randomly calculate a delay time within the configured maximum delay period. This parameter is only applicable to the PM file upload entry for 1-VOICE or 2-DSL.
[no] cdr-max-delay	Parameter type: <SwMngt::pmFileUploadCDRMaxDelay> Format: - The maximum delay period, expressed in seconds, for CDR Data file upload after CDR data file ready. The system will randomly calculate a delay time within the configured maximum delay period. This parameter is only applicable to the PM file upload entry for 3-CDR - unit: seconds - range: [0...240]	<i>optional parameter with default value: "240"</i> The maximum delay period, expressed in seconds, for CDR Data file upload after CDR data file ready. The system will randomly calculate a delay time within the configured maximum delay period. This parameter is only applicable to the PM file upload entry for 3-CDR.
[no] cdr-max-timeout	Parameter type: <SwMngt::pmFileUploadCDRTimeout> Format: - The maximum time (expressed in hours) to store the not-uploaded files at the system disk (NT). This parameter is only applicable to the PM file upload entry for 3-CDR. - unit: hour - range: [0...72]	<i>optional parameter with default value: "24"</i> The maximum time (expressed in hours) to store the not-uploaded files at the system disk (NT). This parameter is only applicable to the PM file upload entry for 3-CDR.

16.39 5-min CDR File Upload Configure Command

Command Description

Obsolete command.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security cdr-pm-file ( no upload (upload-index) ) | ( upload (upload-index) pri-server-addr
<SwMngt::pmFileUploadPrimaryServerAddr>      upload-path      <SwMngt::pmFileUploadPath>      retry-num
<SwMngt::pmFileUploadRetryNum>                max-delay        <SwMngt::cdrFileUploadMaxDelay>        timeout
<SwMngt::pmFileUploadTimeout> )
```

Obsolete command.

Command Parameters

Table 16.39-1 "5-min CDR File Upload Configure Command" Resource Parameters

Resource Identifier	Type	Description
(upload-index)	Format: - the unique internal identifier of PM file upload entry (1-VOICE) - range: [1]	the unique internal identifier of 5-min CDR file upload entry

Table 16.39-2 "5-min CDR File Upload Configure Command" Command Parameters

Parameter	Type	Description
pri-server-addr	Parameter type: <SwMngt::pmFileUploadPrimaryServerAddr> Format: - IPv4-address	<i>mandatory parameter</i> IP address of the primary SFTP file server
upload-path	Parameter type: <SwMngt::pmFileUploadPath> Format: - The path to be addressed for PM / CDR Data file upload. The directory to be specified is the sub-directory below the root directory (the first or top-most directory in a hierarchy). The name of the sub-directory is not allowed to start with '/'. It must end with a '/'. The sub-directory is a mandatory input. The system does not assume any default sub-directory name. - length: x<=127	<i>mandatory parameter</i> the path to be addressed for 5-min CDR file upload, must not start with '/' but must end with a '/'
retry-num	Parameter type: <SwMngt::pmFileUploadRetryNum> Format:	<i>mandatory parameter</i> the number of PM file upload

Parameter	Type	Description
	- In case it concerns PM file upload entry for 1-VOICE or 2-DSL : The number of PM file upload retries in case the initial PM file upload failed. All retries will be done within the same interval as the interval in which the initial PM file upload failed. The several retries will be randomly spread over this interval. In case it concerns PM file upload entry for 3-CDR : The number of CDR Data file upload retries in case the initial CDR Data file upload failed. All retries will be done within the same 5-min interval as the 5-min interval in which the initial CDR Data file upload failed. The several retries will be randomly spread over this 5-min interval. - range: [0...5]	retries in case the initial 5-min CDR file upload failed
max-delay	Parameter type: <SwMngt::cdrFileUploadMaxDelay> Format: - The maximum delay period, expressed in seconds, for CDR Data file upload after CDR data file ready. The system will randomly calculate a delay time within the configured maximum delay period. This parameter is only applicable to the PM file upload entry for 3-CDR - unit: seconds - range: [0...240]	<i>mandatory parameter</i> the max delay period expressed in seconds for 5-min CDR file upload after data file ready
timeout	Parameter type: <SwMngt::pmFileUploadTimeout> Format: - The maximum time (expressed in hours) to store the not-uploaded files at the system disk (NT). This parameter is only applicable to the PM file upload entry for 3-CDR. - unit: hour - range: [0...72]	<i>mandatory parameter</i> The Max time to store the not-uploaded files on NT

16.40 Lawful Intercept Split Management Configuration Command

Command Description

When li separate is enabled:

- only CLI operators with li-admin access right can grant other operators LI access.
- only CLI operators with li-admin access right can view who has LI access.

When li separate is disabled:

- any operator with security access right can can grant other operators LI access

Before enabling, make sure that at least one CLI operator is existing with li-admin access righth

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security li [ [ no ] separate ]
```

Command Parameters

Table 16.40-2 "Lawful Intercept Split Management Configuration Command" Command Parameters

Parameter	Type	Description
[no] separate	Parameter type: boolean	<i>optional parameter</i> enable split management

16.41 MAC Filter Configuration Command

Command Description

By using this command, upstream traffic from any peripheral attached to the management port on the system will be filtered at mac level.

The filter is implemented using a white-list of 20 MAC ranges, with each begin and end MAC address having the same OUI. (Original manufacturer Unique Identifier, covering the 3 most significant bytes)

On the NRCD-B the filter is a filter on the destination mac address of the frames received over this port.

On other cards/systems, such as the NRCD-C and the 7363 ISAM MX, 7367 ISAM SX-16F the filter is a filter on the source mac address of the frames received over this port.

Mac Ranges need to be specified as next possibilities

- range xx:xx:xx:xx:xx:XX-xx:xx:xx:xx:xx:YY where YY-XX < 32
- range xx:xx:xx:xx:xx:00-xx:xx:xx:xx:xx:ff
- range xx:xx:xx:xx:00:00-xx:xx:xx:xx:ff:ff
- range xx:xx:xx:00:00:00-xx:xx:xx:ff:ff:ff

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security peripheral-mgmt mac-filter (index-num) [ no filter | filter <Sys::PeriphMacFilter> ]
```

Command Parameters

Table 16.41-1 "MAC Filter Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index-num)	Format: - Filter rule number - range: [1...20]	filter number

Table 16.41-2 "MAC Filter Configuration Command" Command Parameters

Parameter	Type	Description
[no] filter	Parameter type: <Sys::PeriphMacFilter> Format: (any - any <Sys::MacAddr> - <Sys::MacAddr>) Possible values: - any : any MAC address Field type <Sys::MacAddr>	optional parameter with default value: "00 : 00 : 00 : 00 : 00 : 00-00 : 00 : 00 : 00 : 00 : 00" specifies to MAC addresses to be matched with the packet

16 Security Configuration Commands

Parameter	Type	Description
	- a mac-address (example : 01:02:03:04:05:06) - length: 6 Possible values: - any : any MAC address Field type <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6	

16.42 NT slot Security Configuration Command

Command Description

This command allows the operator to configure NT slot related security parameters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security slot (index) [ [ no ] debug-usb ]
```

Command Parameters

Table 16.42-1 "NT slot Security Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (nt-a nt-b) Possible values: - nt-a : nt-a slot - nt-b : nt-b slot	NT slot index

Table 16.42-2 "NT slot Security Configuration Command" Command Parameters

Parameter	Type	Description
[no] debug-usb	Parameter type: boolean	<i>optional parameter</i> enable microusb port

17- Secure Shell Configuration Commands

17.1 Secure Shell Configuration Command Tree	17-817
17.2 SSH Server Configuration Command	17-818
17.3 Secure Shell User Configuration Command	17-820
17.4 Secure Shell Access Configuration Command	17-821
17.5 Secure Shell SFTP User Configuration Command	17-824

17.1 Secure Shell Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "Secure Shell Configuration Commands".

Command Tree

```

----configure
  ----system
    ----security
      ----ssh
        ----server-profile
          - [no] server-retries
          - [no] idle-timeout
          - [no] dis-hmac-sha-1
          - [no] dis-hmac-sha-1-96
          - [no] dis-hmac-sha2-256
          - [no] dis-hmac-sha2-512
          - [no] dis-hmac-md5
          - [no] dis-hmac-md5-96
          - [no] dis-aes
          - [no] dis-des-3
          - [no] dis-blowfish
          - [no] dis-des-56
          - [no] dis-cast-128-cbc
          - [no] dis-arcfour
          - [no] dis-aes-192-cbc
          - [no] dis-aes-256-cbc
          - [no] dis-aes-128-ctr
          - [no] dis-aes-192-ctr
          - [no] dis-aes-256-ctr
          - [no] dis-dh-grp1-sha1
          - [no] dis-dh-grp14-sha1
          - [no] dis-ecdh-nistp256
          - server-host-key
        ----[no] user
          - (name)
          - [no] key
        ----access
          - [no] protocol
          - [no] cli
          - [no] tl1
          - [no] debug
          - [no] debugkernel
        ----sftp-user
          - (username)
          - [no] password
          - [no] auth-type
          - [no] key-type

```

17.2 SSH Server Configuration Command

Command Description

This command configures the SSH Server parameters like maximum number of server retries, idle timeout, authentication algorithm, encryption algorithm, key-exchange and host key to be used.

At least one encryption, authentication, key-exchange and host key algorithm should be enabled for a successful establishment of SSH connection. By default, all the algorithms are enabled.

Any Change to the server-profile parameters will result in to restart of the SSH server internally and the SSH server will not be available for few seconds. Until the SSH server is ready, the system will neither be able to process SSH requests nor will provide updated server details when queried.

The modification done via this command has no impact on the current sessions instead it will be taken into effect from the next session onwards.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security ssh server-profile [ no server-retries | server-retries <SSH::ServerRetries> ] [ no
idle-timeout | idle-timeout <SSH::ServerIdleTimeOut> ] [ [ no ] dis-hmac-sha-1 ] [ [ no ] dis-hmac-sha-1-96 ] [ [ no ]
dis-hmac-sha2-256 ] [ [ no ] dis-hmac-sha2-512 ] [ [ no ] dis-hmac-md5 ] [ [ no ] dis-hmac-md5-96 ] [ [ no ]
dis-aes ] [ [ no ] dis-des-3 ] [ [ no ] dis-blowfish ] [ [ no ] dis-des-56 ] [ [ no ] dis-cast-128-cbc ] [ [ no ] dis-arcfour ]
[ [ no ] dis-aes-192-cbc ] [ [ no ] dis-aes-256-cbc ] [ [ no ] dis-aes-128-ctr ] [ [ no ] dis-aes-192-ctr ] [ [ no ]
dis-aes-256-ctr ] [ [ no ] dis-dh-grp1-sha1 ] [ [ no ] dis-dh-grp14-sha1 ] [ [ no ] dis-ecdh-nistp256 ] [
server-host-key <SSH::ServerHostKey> ]
```

Command Parameters

Table 17.2-2 "SSH Server Configuration Command" Command Parameters

Parameter	Type	Description
[no] server-retries	Parameter type: <SSH::ServerRetries> Format: - maximum number of attempts can be tried - range: [1...3]	<i>optional parameter with default value: 3</i> maximum number of attempts can be tried
[no] idle-timeout	Parameter type: <SSH::ServerIdleTimeOut> Format: - maximum idle time allowed - unit: sec - range: [0...1800]	<i>optional parameter with default value: 1800</i> maximum idle time allowed
[no] dis-hmac-sha-1	Parameter type: boolean	<i>optional parameter</i> disable hmac-sha-1 authentication

Parameter	Type	Description
[no] dis-hmac-sha-1-96	Parameter type: boolean	<i>optional parameter</i> disable hmac-sha-1-96 authentication
[no] dis-hmac-sha2-256	Parameter type: boolean	<i>optional parameter</i> disable hmac-sha2-256 authentication
[no] dis-hmac-sha2-512	Parameter type: boolean	<i>optional parameter</i> disable hmac-sha2-512 authentication
[no] dis-hmac-md5	Parameter type: boolean	<i>optional parameter</i> disable hmac-md5 authentication
[no] dis-hmac-md5-96	Parameter type: boolean	<i>optional parameter</i> disable hmac-md5-96 authentication
[no] dis-aes	Parameter type: boolean	<i>optional parameter</i> disable aes-128-cbc encryption
[no] dis-des-3	Parameter type: boolean	<i>optional parameter</i> disable 3des encryption
[no] dis-blowfish	Parameter type: boolean	<i>optional parameter</i> disable blowfish encryption
[no] dis-des-56	Parameter type: boolean	<i>optional parameter</i> disable des-56 encryption
[no] dis-cast-128-cbc	Parameter type: boolean	<i>optional parameter</i> disable cast-128-cbc encryption
[no] dis-arcfour	Parameter type: boolean	<i>optional parameter</i> disable arcfour encryption
[no] dis-aes-192-cbc	Parameter type: boolean	<i>optional parameter</i> disable aes-192-cbc encryption
[no] dis-aes-256-cbc	Parameter type: boolean	<i>optional parameter</i> disable aes-256-cbc encryption
[no] dis-aes-128-ctr	Parameter type: boolean	<i>optional parameter</i> disable aes-128-ctr encryption
[no] dis-aes-192-ctr	Parameter type: boolean	<i>optional parameter</i> disable aes-192-ctr encryption
[no] dis-aes-256-ctr	Parameter type: boolean	<i>optional parameter</i> disable aes-256-ctr encryption
[no] dis-dh-grp1-sha1	Parameter type: boolean	<i>optional parameter</i> disable dh-grp1-sha1 kex algorithm
[no] dis-dh-grp14-sha1	Parameter type: boolean	<i>optional parameter</i> disable dh-grp14-sha1 kex algorithm
[no] dis-ecdh-nistp256	Parameter type: boolean	<i>optional parameter</i> disable ecdh-sha2-nistp256 kex algorithm
server-host-key	Parameter type: <SSH::ServerHostKey> Format: (dsa rsa dsa1024 rsa1024) Possible values: - dsa : dsa 2048 bit key-pair - rsa : rsa 2048 bit key-pair - dsa1024 : dsa 1024 bit key-pair - rsa1024 : rsa 1024 bit key-pair	<i>optional parameter</i> specifies the host key algorithm to be used by server

17.3 Secure Shell User Configuration Command

Command Description

This command is used to configure a client (user, operator) who is authorised to manage the system in a secure way and choosing the public key authentication (as opposed to password authentication)method. A maximum of 10 such users can be configured. As parameters, the command requires a client user name and the corresponding public key. The public key is generated by the user using e.g. ssh-keygen (Unix), PuTTYgen (PC), etc.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> configure system security ssh (no user (name)) | (user (name) [no key | key <SSH::SshClientPublicKey>])

Command Parameters

Table 17.3-1 "Secure Shell User Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - unique index to the table - length: 1<=x<=11	unique index to the table

Table 17.3-2 "Secure Shell User Configuration Command" Command Parameters

Parameter	Type	Description
[no] key	Parameter type: <SSH::SshClientPublicKey> Format: - user public key to be stored - length: x<=1200	<i>optional parameter with default value: ""</i> public string of the client

17.4 Secure Shell Access Configuration Command

Command Description

This command allows the operator to enable and disable the remote management access channels like TL1, CLI and debug.

This command allows also configuration of file transfer protocol.

Options for cli

1. *ssh - enables only CLI/SSH and disables CLI/TELNET*
2. *telnet - enables only CLI/TELNET and disables CLI/SSH and SFTP*
3. *telnet-ssh - enables both CLI/SSH and CLI/TELNET*

Options for file transfer protocol

1. *ftp - enables the FTP application*
2. *sftp - enables the SFTP application*
3. *tftp - enables the TFTP application*

Options for tl1

1. *none - disable TL1/SSH, TL1/Telnet, and TL1/UDP*
2. *ssh - enables only TL1/SSH*
3. *telnet - enables only TL1/Telnet*
4. *udp - enables only TL1/UDP*
5. *udp-ssh - enables both TL1/UDP and TL1/SSH*
6. *udp-telnet - enables both TL1/UDP and TL1/Telnet*
7. *ssh-telnet - enables both TL1/SSH and TL1/Telnet*
8. *udp-ssh-telnet - enables TL1/UDP, TL1/SSH, and TL1/Telnet*

Options for debug (ssh/udp-ssh only applicable for FD 100/320Gbps NT and FX NT)

1. *none - disable debug/UDP and debug/SSH*
2. *udp - enable debug/UDP*
3. *ssh - enable debug/SSH*
4. *udp-ssh - enable debug/UDP and debug/SSH*

Options for debugkernel (only applicable on 7367 ISAM SX/DX ,7363 ISAM MX, FANT-G)

1. *none - disable debugkernel/SSH*
2. *ssh - enable debugkernel/SSH*

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security ssh access [ no protocol | protocol <SwMngt::FileTransferProtocolType> ] [ no cli | cli
<SSH::ChannelCLISSH> ] [ no tl1 | tl1 <SSH::ChannelTL1SSH> ] [ no debug | debug
<SSH::ChannelDebugUDP> ] [ no debugkernel | debugkernel <SSH::ChannelKernelDebug> ]
```

Command Parameters

Table 17.4-2 "Secure Shell Access Configuration Command" Command Parameters

Parameter	Type	Description
[no] protocol	Parameter type: <SwMngt::FileTransferProtocolType> Format: (tftp ftp sftp) Possible values: - tftp : the tftp protocol is selected for file transfer - ftp : the ftp protocol is selected for file transfer - sftp : the sftp protocol is selected for file transfer	<i>optional parameter with default value: "tftp"</i> the protocol that is to be used for file transfer
[no] cli	Parameter type: <SSH::ChannelCLISSH> Format: (ssh telnet telnet-ssh) Possible values: - ssh : enable only cli over ssh - telnet : enable only cli over telnet - telnet-ssh : enable both cli over ssh and telnet	<i>optional parameter with default value: "telnet-ssh"</i> enable/disable cli over ssh or telnet
[no] tl1	Parameter type: <SSH::ChannelTL1SSH> Format: (none ssh telnet udp udp-ssh udp-telnet ssh-telnet udp-ssh-telnet) Possible values: - none : disable tl1 over ssh/telnet/udp - ssh : enable only tl1 over ssh - telnet : enable only tl1 over telnet - udp : enable only tl1 over udp - udp-ssh : enable both tl1 over ssh and udp - udp-telnet : enable both tl1 over udp and telnet - ssh-telnet : enable both tl1 over ssh and telnet - udp-ssh-telnet : enable tl1 over udp, ssh and telnet	<i>optional parameter with default value: "udp-ssh-telnet"</i> enable/disable tl1 over ssh, telnet, or udp
[no] debug	Parameter type: <SSH::ChannelDebugUDP> Format: (none ssh udp udp-ssh) Possible values: - none : disable debug ports - ssh : enable debug over ssh - udp : enable debug over udp - udp-ssh : enable debug over udp and ssh	<i>optional parameter with default value: "udp"</i> enable/disable debug
[no] debugkernel	Parameter type: <SSH::ChannelKernelDebug> Format: (none ssh)	<i>optional parameter with default value: "none"</i> enable/disable debug of kernel

Parameter	Type	Description
	Possible values: - none : disable debug - ssh : enable debug over ssh	

17.5 Secure Shell SFTP User Configuration

Command

Command Description

The system acts as an SFTP client towards an external SFTP server. This command allows the operator to configure the user name, password, auth-type and auth-key-type, the system should use towards the external SFTP server.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system security ssh sftp-user [ (username) ] [ no password | password <SSH::SftpPassword> ] [ no auth-type | auth-type <SwMngt::ServerAuthType> ] [ no key-type | key-type <SwMngt::ServerKeyType> ]
```

Command Parameters

Table 17.5-2 "Secure Shell SFTP User Configuration Command" Command Parameters

Parameter	Type	Description
(username)	Format: - specifies sftp user name to be used - length: x<=32	optional parameter user name used when ISAM acts as SFTP client
[no] password	Parameter type: <SSH::SftpPassword> Format: (prompt plain : <SSH::SftpPassword> encrypted : <SSH::SftpEncryptedPassword>) Possible values: - prompt : prompts the operator for a password - plain : the password in plain text - encrypted : the encrypted password Field type <SSH::SftpPassword> - sftp password - length: 6<=x<=32 Field type <SSH::SftpEncryptedPassword> - sftp encrypted password - length: 23<=x<=95	optional parameter with default value: "encrypted : " password used when ISAM acts as SFTP client
[no] auth-type	Parameter type: <SwMngt::ServerAuthType> Format: (password-based publickey-based)	optional parameter with default value: "password-based" authentication type used when ISAM acts as SFTP client

Parameter	Type	Description
	Possible values: - password-based : password based authentication - publickey-based : public key based authentication	
[no] key-type	Parameter type: <SwMngt::ServerKeyType> Format: (none dsa2048 rsa2048) Possible values: - none : no key - dsa2048 : dsa 2048 bit key-pair - rsa2048 : rsa 2048 bit key-pair	<i>optional parameter with default value: "none"</i> authentication key type used when ISAM acts as SFTP client

18- Transaction Configuration Commands

18.1 Transaction Configuration Command Tree	18-827
18.2 Transaction Configuration Command	18-828

18.1 Transaction Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "Transaction Configuration Commands".

Command Tree

```
----configure
  ----system
    ----transaction
      - [no] time-out-value
      - log-full-action
```

18.2 Transaction Configuration Command

Command Description

This command allows the operator to configure transaction parameters.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> configure system transaction [ no time-out-value | time-out-value <Trans::TimeoutValue> ] [ log-full-action <Trans::logFullaction> ]
```

Command Parameters

Table 18.2-2 "Transaction Configuration Command" Command Parameters

Parameter	Type	Description
[no] time-out-value	Parameter type: <Trans::TimeoutValue> Format: (indefinite <Trans::TimeoutValue>) Possible values: - indefinite : indefinite timeout value Field type <Trans::TimeoutValue> - timeout of the transaction - unit: 1/100 sec - range: [6000...360000]	<i>optional parameter with default value: 6000</i> set the timeout for transaction
log-full-action	Parameter type: <Trans::logFullaction> Format: (wrap halt) Possible values: - wrap : older log records are overwritten by recent ones - halt : logging is stopped until the log buffer is reset	<i>optional parameter</i> set action to be taken when the log is full

19- SYSLOG Configuration Commands

19.1 SYSLOG Configuration Command Tree	19-830
19.2 Syslog Configuration Commands	19-831
19.3 SYSLOG Destination Configuration command	19-832
19.4 SYSLOG Route Configuration Command	19-835

19.1 SYSLOG Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "SYSLOG Configuration Commands".

Command Tree

```
----configure
  ----system
    ----syslog
      - [no] version
      - [no] time-format
      ----[no] destination
        - (name)
        - type
        - [no] disable
        - [no] upload-rotate
        - [no] persist-enable
        - [no] persist-timer
      ----[no] route
        - (name)
        - msg-type
        - facility
        - [no] syslog-vlan
        - [no] emergency
        - [no] alert
        - [no] critical
        - [no] error
        - [no] warning
        - [no] notice
        - [no] information
        - [no] debug
```

19.2 Syslog Configuration Commands

Command Description

Version parameter allows the operator to configure the syslog RFC version to be used. by default rfc3164 will be used, Change in the RFC version clears syslog counters, queues and files.

Timeformat parameter allows the operator to configure the timestamp format to be used for rfc5424 syslog version. By default timewithoutzone (yyyy-mm-ddThr:min:sec.secfracZ) format will be used. If Syslog version is configured as rfc3164, then mm-dd:hrs:mins:secs format will be used by default.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system syslog [ no version | version <Syslog::Version> ] [ no time-format | time-format <Syslog::TimeFormat> ]
```

Command Parameters

Table 19.2-2 "Syslog Configuration Commands" Command Parameters

Parameter	Type	Description
[no] version	Parameter type: <Syslog::Version> Format: (rfc3164 rfc5424) Possible values: - rfc3164 : rfc3164 is selected for syslog version - rfc5424 : rfc5424 is selected for syslog version	<i>optional parameter with default value: "rfc3164"</i> the RFC version that is to be used for Syslog. Change in the RFC version clears syslog counters, queues and files
[no] time-format	Parameter type: <Syslog::TimeFormat> Format: (timewithoutzone timewithzone) Possible values: - timewithoutzone : timewithoutzone(yyyy-mm-ddThr:min:sec.secfracZ) format is selected - timewithzone : timewithzone(yyyy-mm-ddThr:min:sec.secfrac(+/-)hh:mm) format is selected	<i>optional parameter with default value: "timewithoutzone"</i> the TimeStamp Format is to be used for rfc5424 Syslog version

19.3 SYSLOG Destination Configuration command

Command Description

This command allows the operator to configure a syslog destination. Log messages can be sent to a file or, for rotated files, to a file on a designated upload server (file:), a remote server (udp:), all logged in CLI-users (all-cli) or all logged in TL1-users (all-tl1) or both (all-users).

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system syslog ( no destination (name) ) | ( destination (name) type <Sys::ServerType> [ [ no ] disable ]
[ [ no ] upload-rotate ] [ [ no ] persist-enable ] [ no persist-timer | persist-timer <Sys::PersistTimer> ] )
```

Command Parameters

Table 19.3-1 "SYSLOG Destination Configuration command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of the syslog destination

Table 19.3-2 "SYSLOG Destination Configuration command" Command Parameters

Parameter	Type	Description
type	Parameter type: <Sys::ServerType> Format: (file : <Sys::ServName> : <Sys::FileSize> remote-file : <Ip::V4Address> : <Sys::UploadPathName> : <Sys::ServName> : <Sys::FileSize> udp : <Ip::V4Address> : <Sys::NetworkPort> : unlimited udp : <Ip::V4Address> : <Sys::NetworkPort> : <SYS::MaxRate> all-cli all-tl1 all-users udp6 : <ipv6::Prefix> / <Sys::NetworkPort> : unlimited udp6 : <ipv6::Prefix> / <Sys::NetworkPort> : <SYS::MaxRate> remote-file6 : <ipv6::Prefix> / <Sys::UploadPathName> : <Sys::ServName> : <Sys::FileSize>) Possible values: - file : file in which logs to be stored	mandatory parameter destination type

Parameter	Type	Description
	- remote-file : remote file in which logs to be stored - udp : log messages to the destination - all-cli : cli users terminal logging - all-tl1 : tl1 users terminal logging - all-users : all cli and tl1 users - udp6 : log messages to ipv6 destination - remote-file6 : remote file in which logs to be stored via v6 server Field type <Ip::V4Address> - IPv4-address Field type <ipv6::Prefix> - IPv6-address Field type <Sys::UploadPathName> - an absolute or relative path name (example : /var/log/), path name must end with slash or backslash depending on OS of TFTP server used - length: 1<=x<=64 Field type <Sys::ServName> - filename in which logs to be stored - range: [a-zA-Z0-9-_.] - length: 1<=x<=12 Field type <Sys::FileSize> - the maximum file size in bytes - range: [1...980000] Field type <Sys::NetworkPort> - the network port number - range: [1...65535] Possible values: - unlimited : transfer rate is unlimited, 0 equals unlimited Field type <SYS::MaxRate> - transfer rate - unit: messages/second - range: [1...2147483647]	
[no] disable	Parameter type: boolean	<i>optional parameter</i> disable logging to the destination
[no] upload-rotate	Parameter type: boolean	<i>optional parameter</i> enable upload of rotated files to a configured path
[no] persist-enable	Parameter type: boolean	<i>optional parameter</i> enable copy of local syslog files to flash. It is not recommended to enable this feature since the many copies to compact flash may shorten its lifetime. Recommendation is to send syslog to external server. Since copy interval is every 5 mins (default), up to last 5 mins of syslog data may be lost. When enabling this feature, syslog filename must be restricted to maximum 11 characters. Using 12 characters will lead to failures.
[no] persist-timer	Parameter type: <Sys::PersistTimer> Format: - interval at which local syslog file persistence repeats - unit: min	<i>optional parameter with default value: "5"</i> interval at which local syslog file persistence repeats, range 5 to 60

19 SYSLOG Configuration Commands

Parameter	Type	Description
	- range: [5...60]	min.

19.4 SYSLOG Route Configuration Command

Command Description

This command allows an operator to configure which messages must be sent to a given syslog destination and to assign the appropriate syslog parameters to them.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> configure system syslog ( no route (name) msg-type <Sys::MessageType> ) | ( route (name) msg-type
<Sys::MessageType> facility <Sys::LogFacility> [ no syslog-vlan | syslog-vlan <Syslog::VlanId> ] [ [ no ]
emergency ] [ [ no ] alert ] [ [ no ] critical ] [ [ no ] error ] [ [ no ] warning ] [ [ no ] notice ] [ [ no ] information ] [ [
no ] debug ] )
```

Command Parameters

Table 19.4-1 "SYSLOG Route Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of the destination where messages must be sent to
msg-type	Parameter type: <Sys::MessageType> Format: (all authentication cli-config-chgs tl1-config-chgs cli-msgs tl1-msgs tracing1 tracing2 tracing3 video-cdr eqpt li-config-chgs omci docsis ont-prov-status protocol tracing4 dsl)	type of the message to be routed

19 SYSLOG Configuration Commands

Resource Identifier	Type	Description
	Possible values: - all : messages of any type - authentication : authentication messages - cli-config-chgs : cli commands - tl1-config-chgs : tl1 commands - cli-msgs : cli messages - tl1-msgs : tl1 messages - tracing1 : protocol tracing messages - tracing2 : protocol tracing messages - tracing3 : protocol tracing messages - video-cdr : video cdr messages - eqpt : equipment event messages - li-config-chgs : li-config-chgs can only be logged to a destination = encrypted file - omci : OMCI events - docsis : DOCSIS events - ont-prov-status : Ont Auto Provision Status Messages - protocol : protocol message - tracing4 : protocol tracing messages - dsl : dsl event messages	

Table 19.4-2 "SYSLOG Route Configuration Command" Command Parameters

Parameter	Type	Description
facility	Parameter type: <Sys::LogFacility> Format: (kern user mail daemon auth syslog pr news uucp cron local0 local1 local2 local3 local4 local5 local6 local7) Possible values: - kern : kernel facility - user : user facility - mail : mail facility - daemon : daemon facility - auth : authentication facility - syslog : syslog facility - pr : printer facility - news : news facility - uucp : uucp facility - cron : cron facility - local0 : local0 facility - local1 : local1 facility - local2 : local2 facility	<i>mandatory parameter</i> facility to be set in the outgoing message

Parameter	Type	Description
	- local3 : local3 facility - local4 : local4 facility - local5 : local5 facility - local6 : local6 facility - local7 : local7 facility	
[no] syslog-vlan	Parameter type: <Syslog::VlanId> Format: - vlan id - range: [1...4093]	<i>optional parameter with default value: 0</i> Vlan of the syslog server valid only for tracing4 message type
[no] emergency	Parameter type: boolean	<i>optional parameter</i> pass messages of severity emergency
[no] alert	Parameter type: boolean	<i>optional parameter</i> pass messages of severity alert
[no] critical	Parameter type: boolean	<i>optional parameter</i> pass messages of severity critical
[no] error	Parameter type: boolean	<i>optional parameter</i> pass messages of severity error
[no] warning	Parameter type: boolean	<i>optional parameter</i> pass messages of severity warning
[no] notice	Parameter type: boolean	<i>optional parameter</i> pass messages of severity notice
[no] information	Parameter type: boolean	<i>optional parameter</i> pass messages of severity info
[no] debug	Parameter type: boolean	<i>optional parameter</i> pass messages of severity debug

20- Software Management Configuration Commands

20.1 Software Management Configuration Command Tree	20-839
20.2 Software Replacement Mode Configuration Command	20-840
20.3 Software Management Overall Software Package Configuration Command	20-841
20.4 Database Automatic Activation Configure Command	20-845

20.1 Software Management Configuration

Command Tree

Description

This chapter gives an overview of nodes that are handled by "Software Management Configuration Commands".

Command Tree

```
----configure
  ----software-mngt
    - sw-replacement-mode
  ----oswp
    - (index)
    - primary-file-server-id
    - second-file-server-id
    X download-set
    X autofetch
    - [no] activate
    - [no] auto-verify
    - [no] on-schedule-time
  ----database
    - [no] activate
    - [no] backup
    - [no] backupv6
    - [no] auto-backup-intvl
```

20.2 Software Replacement Mode Configuration Command

Command Description

This command allows the operator to change how the software is being replaced during OSWP activation.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> configure software-mngt sw-replacement-mode <SwMgmt::SwReplacementMode>

Command Parameters

Table 20.2-2 "Software Replacement Mode Configuration Command" Command Parameters

Parameter	Type	Description
sw-replacement-mode	Parameter type: <SwMgmt::SwReplacementMode> Format: (upgrade-via-active upgrade-via-standby lt-by-lt) Possible values: - upgrade-via-active : Selects mode to do software upgrade via active nt - upgrade-via-standby : Enables upgrade via Standby NT - lt-by-lt : Enables ISSU upgrade mode	<i>optional parameter</i> Defines the required mode for doing Software Replacement.

20.3 Software Management Overall Software Package Configuration Command

Introduction

The Overall Software Package (OSWP) can be in any one of the following states: operational, aborting, downloading, enabled, disabled, activated, and committed. The operator can perform such functions as download the OSWP or set of files, abort its download, or enable or disable its autofetch property. The operator can also specify primary and secondary TFTP-server IDs for downloading the database.

The operator can also configure the download set or the set of files that are needed before triggering activation.

Download a new OSWP

To download an OSWP, the system must have only one enabled/active/committed OSWP, the management channel between the system and the manager must be established, and the system must not be involved in another software download process.

The manager requests that the system download a new OSWP. The manager specifies the path name of the overall descriptor file, the TFTP-servers where the overall descriptor files are located, and the set of files the manager wants to have available on the system before activating the new OSWP.

The system downloads the overall descriptor files and stores them persistently. The system downloads the software files that are specified in the downloaded SWP descriptor files, on condition that sufficient resources are available for their persistent storage. The manager can monitor the progress of the download process with granularity.

The download process can be implicitly or explicitly interrupted. The implicit interruption can occur due to reasons such as the unavailability of enough resources to store SWP files, the system not being able to download or interpret the overall descriptor file, or the system not being able to download a selected SWP descriptor file. The explicit interruption can occur when the manager requests that the system abort the ongoing download process.

If there are no exceptions, the system has two OSWPs; the Enabled/Active/Committed OSWP and the new downloaded OSWP. The state of the new OSWP is Enabled/NotActive/UnCommitted.

If the system supports software load validation feature and auto-verify is configured for a downloading oswp, system will perform implicit digital verification of downloaded files.If the digital verification is success system will make the OSWP state as Enabled/NotActive/UnCommitted otherwise it is Disabled/NotActive/UnCommitted.Also it should be noted that If auto-verify enabled then download of feature not supported release will have limitation and will be made as disabled since it will not have Digital signature files to validate. In such cases operator has to disable auto-verify and download.

Finally, after a successful verification process, Operator has to manually cross verify the root-certificate displayed in CLI with the distributed root certificate via other channel for that package then only it is ensured that downloaded package not altered from its original source.

Abort an OSWP

The manager can abort an OSWP when the system has two OSWPs. The state of the first OSWP is Enabled/Active/Committed while the second OSWP is in one of the following three states: Enabled/NotActive/UnCommitted, Downloading/NotActive/UnCommitted, or Disabled/NotActive/UnCommitted. The management channel between the system and the manager is established and the system is not involved in any other software download process.

The manager requests that the system remove the NotActive/UnCommitted OSWP. The system removes all the persistent stored files and databases not related to the Enabled/Active/Committed OSWP. The state of the OSWP to be removed is Aborting/NotActive/UnCommitted during the complete removal operation.

After a successful abort, the system has only one OSWP. The state of this OSWP is Enabled/Active/Committed. Only files and databases related to this OSWP are stored persistently in the system.

Activate a Not-Active OSWP

To activate a not-active OSWP, the system requires two OSWPs. The state of one OSWP is Enabled/Active and the state of the second OSWP is Enabled/NotActive. The management channel between the system and the manager is established and the system is not involved in another software download process.

The manager requests that the system activates the Enabled/NotActive OSWP. In case the manager requests to activate with linked database, the system first selects an available database that is compatible with and linked to the Enabled/NotActive OSWP. In case the manager requests to activate with default database, the system creates a default database that is compatible with the Enabled/NotActive OSWP. The system then starts the activation process of the NotActive OSWP.

The activation can happen on active NT or on standby NT. Activation on standby NT is only possible in case the redundant NT board is equipped and hot standby and the NT board type supports it. In case the conditions to do the activation on standby NT are fulfilled, the system will select this option. In case these conditions are not fulfilled the system will select activation on active NT.

Finally, after the successful activation of the Not-active OSWP, the system has two OSWPs. The previous Not-active OSWP is now active, together with the selected compatible database. Also, the previous Active OSWP is still available, but NotActive. In case the activation was done on standby NT, the standby NT from before the activation will be the active NT after the activation.

Commit an OSWP

To commit an OSWP, the system requires two OSWPs. The state of the first OSWP is Enabled/Active/UnCommitted and the state of the second OSWP is Enabled/NotActive/Committed.

The manager requests that the system commit the active OSWP. The system removes all the persistent stored files and databases that do not belong to the Enabled/Active OSWP. The state of the OSWP to be committed is Enabled/Active/Committing during the complete commit operation.

Finally, after a successful commit process, the system has only one OSWP. The state of this OSWP is Enabled/Active/Committed. Only files related to this OSWP are stored persistently in the system.

Verify an OSWP

If the system supports software load validation feature Operator can perform explicit digital verification of an OSWP. To verify an OSWP, the availability state of the OSWP should be Enabled.

Finally, after a successful verification process, Operator has to manually cross verify the root-certificate displayed in CLI with the distributed root certificate via other channel for that package then only it is ensured that downloaded package not altered from its original source.

Abort Verify an OSWP

The manager can abort verify on an OSWP when the system running explicit verification on that OSWP.

Command Description

This command allows the operator to configure various OSWP attributes and parameters.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> configure software-mngt oswp (index) [ primary-file-server-id <SwMngt::serverIdv6> ] [ second-file-server-id
<SwMngt::serverIdv6> ] [ download-set <SwMngt::downloadSet> ] [ autofetch <SwMngt::autoFetch> ] [ no
activate | activate <SwMngt::OswpAutoAct> ] [ no auto-verify | auto-verify <SwMngt::OswpAutoVerify> ] [ no
on-schedule-time | on-schedule-time <Sys::TimeIOInMinsRef1970> ]
```

Command Parameters

Table 20.3-1 "Software Management Overall Software Package Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - id of one of the two oswps - range: [1...2]	index to the swm oswp table

Table 20.3-2 "Software Management Overall Software Package Configuration Command" Command Parameters

Parameter	Type	Description
primary-file-server-id	Parameter type: <SwMngt::serverIdv6> Format: (<Ip::V4Address> ipv6 : <Ip::InetAddressType>) Possible values: - ipv6 : Ipv6 address (only for management IPv6 supported boards) Field type <Ip::V4Address> - IPv4-address Field type <Ip::InetAddressType> - IPv6 address	<i>optional parameter</i> tftp/sftp server address for overall descriptor file
second-file-server-id	Parameter type: <SwMngt::serverIdv6> Format: (<Ip::V4Address> ipv6 : <Ip::InetAddressType>) Possible values: - ipv6 : Ipv6 address (only for management IPv6 supported boards) Field type <Ip::V4Address> - IPv4-address Field type <Ip::InetAddressType> - IPv6 address	<i>optional parameter</i> 2nd tftp/sftp server address for overall descriptor file
download-set	Parameter type: <SwMngt::downloadSet> Format: (min-set actual-set complete-set)	<i>obsolete parameter that will be ignored</i> set of files needed before triggering activation

20 Software Management Configuration Commands

Parameter	Type	Description
	Possible values: - min-set : minimum set of files needed to activate - actual-set : files applicable for the board types - complete-set : all the files	
autofetch	Parameter type: <SwMngt::autoFetch> Format: disabled Possible values: - disabled : disable autofetch feature	<i>obsolete parameter that will be ignored</i> disable autofetch feature
[no] activate	Parameter type: <SwMngt::OswpAutoAct> Format: (manually after-download on-schedule) Possible values: - manually : manually activate the OSWP - after-download : enable the automatic activation of OSWP after downloading - on-schedule : enable the automatic activation of OSWP at the time defined in on-schedule-time	<i>optional parameter with default value: "manually"</i> determines when to active an OSWP
[no] auto-verify	Parameter type: <SwMngt::OswpAutoVerify> Format: (disabled enabled) Possible values: - disabled : manually verify the OSWP - enabled : enable the automatic verification of OSWP after downloading	<i>optional parameter with default value: "disabled"</i> determines auto-verify of an OSWP after downloading
[no] on-schedule-time	Parameter type: <Sys::TimeIOInMinsRef1970> Format: - the time (yyyy-mm-dd:hour:minutes)	<i>optional parameter with default value: "1970-01-01 : 00 : 00"</i> the expected activation time of OSWP, range:[1970-01-01 00:00,2035-12-31 23:59]

20.4 Database Automatic Activation Configure Command

Command Description

This command configure database automatic activation and automatic backup states and attributes.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> configure software-mngt database [ no activate | activate <SwMngt::DbAutoAct> ] [ no backup | backup
<SwMngt::DbAutoBackup> ] [ no backupv6 | backupv6 <SwMngt::V6DbAutoBackup> ] [ no auto-backup-intvl |
auto-backup-intvl <SwMngt::DbAutoBackIntvl> ]
```

Command Parameters

Table 20.4-2 "Database Automatic Activation Configure Command" Command Parameters

Parameter	Type	Description
[no] activate	Parameter type: <SwMngt::DbAutoAct> Format: (after-download manually) Possible values: - after-download : enable the automatic activation of database after downloading - manually : manually activate the OSWP	<i>optional parameter with default value: "manually"</i> determines when to active database
[no] backup	Parameter type: <SwMngt::DbAutoBackup> Format: (manually activate : <Ip::V4Address> : <SwMngt::dbpath>) Possible values: - manually : manually backup of the database - activate : automatic backup of the database Field type <Ip::V4Address> - IPv4-address Field type <SwMngt::dbpath> - path for the db (example: /path_to_db) - range: [a-zA-Z0-9-_/] - length: x<=255	<i>optional parameter with default value: "manually"</i> backup destination of database
[no] backupv6	Parameter type: <SwMngt::V6DbAutoBackup> Format:	<i>optional parameter with default value: "manually"</i>

20 Software Management Configuration Commands

Parameter	Type	Description
	(manually activate : <Ip::InetAddressType> / <SwMngt::dbpath>) Possible values: - manually : manually backup of the database - activate : automatic backup of the database Field type <Ip::InetAddressType> - IPv6 address Field type <SwMngt::dbpath> - path for the db (example: /path_to_db) - range: [a-zA-Z0-9-_./] - length: x<=255	IPv6 backup destination of database
[no] auto-backup-intvl	Parameter type: <SwMngt::DbAutoBackIntvl> Format: - the interval period for automatic backup - unit: hours - range: [1...168]	<i>optional parameter with default value: 24</i> the interval period for automatic backup

21.2 QoS Configuration Command

Command Description

This command allows the operator to specify global QoS parameters.

The ATM overhead factor is used to calculate ATM bandwidth required by streams for which bandwidth parameters are specified as Ethernet bandwidth. The ATM overhead factor specifies in terms of percentage what part of a given raw ATM bit rate will be available for Ethernet frames. The default value is 85%, which means a typical overhead of 15% for ATM/AAL5. QoS management will use this value to deduct the available Ethernet rate on ATM-based DSL interfaces.

The Eth EFM overhead factor is used to calculate EFM bandwidth required by streams for which bandwidth parameters are specified as Ethernet bandwidth. The Eth EFM overhead factor specifies in terms of percentage what part of a given raw EFM bit rate will be available for Ethernet frames. The default value is 97%, which means a typical overhead of 3% for EFM Encapsulation.

The enable alignment is used to enable or disable the DSCP to P-bits alignment for all the L3 forwarded traffic.

The Global CAC-mode selection switch determines whether Connection Admission Control relies on the guaranteed sync rate or the actual line rate of the physical interface.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos [ no atm-overhead-fact | atm-overhead-fact <Qos::AtmFactor> ] [ no eth-efm-fact | eth-efm-fact
<Qos::EthEfmFactor> ] [ [ no ] enable-alignment ] [ no cac-mode | cac-mode <Qos::CacMode> ] [ [ no ] use-dei ] [
[ no ] set-dei ]
```

Command Parameters

Table 21.2-2 "QoS Configuration Command" Command Parameters

Parameter	Type	Description
[no] atm-overhead-fact	Parameter type: <Qos::AtmFactor> Format: - over head factor introduced by atm layer - unit: % - range: [1...100]	<i>optional parameter with default value: 85</i> over head factor introduced by atm layer
[no] eth-efm-fact	Parameter type: <Qos::EthEfmFactor> Format: - value to estimate bandwidth overhead inserted by efm layer - unit: % - range: [1...100]	<i>optional parameter with default value: 97</i> value to estimate bandwidth overhead inserted by efm layer
[no] enable-alignment	Parameter type: boolean	<i>optional parameter</i> DSCP to P-bit alignment for all

Parameter	Type	Description
		forwarded L3 traffic
[no] cac-mode	Parameter type: <Qos::CacMode> Format: (nocac msr alr) Possible values: - nocac : no cac in system - msr : base on minimum synchronized rate - alr : base on actual line rate	<i>optional parameter with default value: "msr"</i> This object stores an global CAC mode selection switch
[no] use-dei	Parameter type: boolean	<i>optional parameter</i> Enable global control of DEI aware
[no] set-dei	Parameter type: boolean	<i>optional parameter</i> Enable global control of DEI remark

21.3 QoS 802.1P Class-to-Queue Mapping Configuration Command

Command Description

This command allows the operator to configure the downstream traffic class mapping table. This table defines which 802.1P codepoint is cast to which egress buffer on the L3 units.

There is a second class to the queue mapping table on the SHub/IHub, but this class is independent from the configuration perspective of this table. (See the traffic class configuration section for more information.) The second class is used mainly for upstream traffic segregation into egress buffers on the SHub/IHub.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos tc-map-dot1p (index) [ queue <Qos::Queues> ] [ tc <Qos::QosTrafficClass> ] [ dpcolor <Qos::Color> ] [ policer-color <Qos::PolicerColor> ]
```

Command Parameters

Table 21.3-1 "QoS 802.1P Class-to-Queue Mapping Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - value of 802.1p field - range: [0...7]	value of 802.1p field

Table 21.3-2 "QoS 802.1P Class-to-Queue Mapping Configuration Command" Command Parameters

Parameter	Type	Description
queue	Parameter type: <Qos::Queues> Format: - output dsl/gpon/epon port queue number - range: [0...7,255]	<i>obsolete parameter replaced by parameter "tc"</i> output dsl port queue number
tc	Parameter type: <Qos::QosTrafficClass> Format: - the traffic class number - range: [0...7]	<i>optional parameter</i> the traffic class number
dpcolor	Parameter type: <Qos::Color> Format: (green yellow)	<i>optional parameter</i> output discard precedence on queue

Parameter	Type	Description
	Possible values: - green : discard priority green in queue - yellow : discard priority yellow in queue	
policer-color	Parameter type: <Qos::PolicerColor> Format: (green yellow red) Possible values: - green : green color - yellow : yellow color - red : red color	<i>optional parameter</i> the frame colour for trtcm

21.4 QoS Dsl Control Pkt Policer Configuration

Command

Command Description

This command allows the operator to configure a upstream QoS Dsl Control Packet Policer. This control packet policer serves to prevent DoS attacks from subscriber premises against the control plane of the ISAM. The policing parameters that can be configured are the sustainable rate in packets/sec and the maximum burst size in packets.

Control packets arriving at a higher rate than the sustainable rate are dropped by the policer.

Control packets arriving in a longer burst than the maximum burst size are dropped by the policer.

Control packets are packets directed to the LSM itself or inserted by the LSM. The control packet protocol type depends on the applied forwarding model, and can be 802.1x, ARP, RIP, DHCP, IGMP, PPPoEDiscovery, PPP LCP, PPP control, PPP LCP termination acknowledgement. Policing is not applied on control packets inserted by the LSM.

This command allows the operator to control the DSL line level control packet policer (enable or disable) for control protocol packets that remains in the data plane. And this feature is supported only for ARP and RIP protocol.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos dsl-ctrl-pkt-policer [ no sustained-rate | sustained-rate <Qos::SustainedRate> ] [ no burst-size | burst-size <Qos::DslCtrlBurstSize> ] [ no protocol-ctrl | protocol-ctrl <Qos::ControlProtocolPolicerCtrl> ]
```

Command Parameters

Table 21.4-2 "QoS Dsl Control Pkt Policer Configuration Command" Command Parameters

Parameter	Type	Description
[no] sustained-rate	Parameter type: <Qos::SustainedRate> Format: - the police rate of inc user pkts in pps - range: [1...64]	optional parameter with default value: 15 max sustainable rate in packets/sec
[no] burst-size	Parameter type: <Qos::DslCtrlBurstSize> Format: - the burst size - range: [1...128]	optional parameter with default value: 10 max burst size, in packets
[no] protocol-ctrl	Parameter type: <Qos::ControlProtocolPolicerCtrl> Format: (police-arprp nopolice-arprp)	optional parameter with default value: "police-arprp" DSL control packet policer applicability for control protocol

Parameter	Type	Description
	Possible values: - police-arrip : police arp rip packets by the dsl-ctrl-policer if handled as data packet - nopolice-arrip : no police arp rip packets by the dsl-ctrl-policer if handled as data packet	packets that remain in data plane. Currently under this only ARP and RIP control packets are controlled.

21.5 QoS Nni Control Pkt Policer Configuration Command

Command Description

This command allows the operator to configure a upstream QoS Nni Control Packet Policer. This control packet policer serves to prevent DoS attacks from subscriber premises against the control plane of the ISAM. The policing parameters that can be configured are the sustainable rate in packets/sec and the maximum burst size in packets.

Control packets arriving at a higher rate than the sustainable rate are dropped by the policer.

Control packets arriving in a longer burst than the maximum burst size are dropped by the policer.

Control packets are packets directed to the LSM itself or inserted by the LSM. The control packet protocol type depends on the applied forwarding model, and can be 802.1x, ARP, RIP, DHCP, IGMP, PPPoEDiscovery, PPP LCP, PPP control, PPP LCP termination acknowledgement. Policing is not applied on control packets inserted by the LSM.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos nni-ctrl-pkt-policer [ no sustained-rate | sustained-rate <Qos::NniSustainedRate> ] [ no burst-size | burst-size <Qos::NniCtrlBurstSize> ]
```

Command Parameters

Table 21.5-2 "QoS Nni Control Pkt Policer Configuration Command" Command Parameters

Parameter	Type	Description
[no] sustained-rate	Parameter type: <Qos::NniSustainedRate> Format: - the police rate of inc user pkts in pps - range: [1...256]	<i>optional parameter with default value: 64</i> max sustainable rate in packets/sec
[no] burst-size	Parameter type: <Qos::NniCtrlBurstSize> Format: - the burst size - range: [1...256]	<i>optional parameter with default value: 128</i> max burst size, in packets

21.6 QoS DSCP-to-Dot1P Alignment for L3 Forwarded Traffic Configuration Command

Command Description

This command allows the operator to configure a DSCP-to-Dot1P Alignment Table for L3 forwarded traffic. This facility allows DSCP to P-bits alignment without the use of QoS session profiles via configuring a mapping table with global scope. It is only applied to traffic in interfaces with L3 forwarding.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos dscp-map-dot1p (index) [ dot1p-value <Qos::DscpToDot1PAlign> ]
```

Command Parameters

Table 21.6-1 "QoS DSCP-to-Dot1P Alignment for L3 Forwarded Traffic Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - the DSCP value - range: [0...63]	the DSCP value

Table 21.6-2 "QoS DSCP-to-Dot1P Alignment for L3 Forwarded Traffic Configuration Command" Command Parameters

Parameter	Type	Description
dot1p-value	Parameter type: <Qos::DscpToDot1PAlign> Format: - the DOT1P value - range: [0...7]	<i>optional parameter</i> the DOT1P value

21.7 QoS Queue Profile Configuration Command

Command Description

This command allows the operator to configure a QoS queue profile. A queue profile or buffer acceptance control (BAC) profile contains configuration information on data plane queues. BAC profiles can be used on the L3 line cards.

Minimum and Maximum Threshold value for queues are given in packets.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no queue (name) ) | ( queue (name) (bac-complex-type) [ no unit | unit <Qos::Units> ] )
```

Command Parameters

Table 21.7-1 "QoS Queue Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.7-2 "QoS Queue Profile Configuration Command" Command Parameters

Parameter	Type	Description
(bac-complex-type)	Format: (tail-drop : <Qos::MaxThreshold> red : <Qos::MinThreshold> : <Qos::MaxThreshold> : <Qos::DiscardProbability> twocolour-taildrop : <Qos::MaxThreshold> : <Qos::MaxThresholdYellow> twocoloured : <Qos::MinThreshold> : <Qos::MaxThreshold> : <Qos::DiscardProbability> : <Qos::MinThresholdYellow> : <Qos::MaxThresholdYellow> : <Qos::DiscardProbYellow> gpon-tail-drop : <Qos::MinThreshold> : <Qos::MaxThreshold> threecolour-taildrop : <Qos::MaxThreshold> : <Qos::MaxThresholdYellow> : <Qos::MaxThresholdRed> threecolour-red : <Qos::MinThreshold> : <Qos::MaxThreshold> : <Qos::DiscardProbability> : <Qos::MinThresholdYellow> : <Qos::MaxThresholdYellow> : <Qos::DiscardProbYellow>	mandatory parameter buffer acceptance control algorithm

Parameter	Type	Description

[no] unit	Parameter type: <Qos::Units> Format: (packet byte) Possible values: - packet : the unit of discard threshold is packet - byte : the unit of discard threshold is byte	<i>optional parameter with default value: "packet"</i> identify the threshold unit type

21.8 QoS Scheduler Node Profile Configuration Command

Command Description

This command allows the operator to configure a QoS scheduler node profile. The scheduler node profiles contain configuration settings for the data plane schedulers. These scheduler node profiles are applicable to downstream schedulers on the L3 line cards. The scheduler node settings on the service hub can be modified separately.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no scheduler-node (name) ) | ( scheduler-node (name) priority <Qos::QosPriority> weight
<Qos::QosWeight> shaper-profile <Qos::QosShaperProfileName> [ no ext-shaper | ext-shaper
<Qos::QosShaperProfileName> ] [ no mcast-inc-shape | mcast-inc-shape <Qos::QosMulticastInclShaping> ] )
```

Command Parameters

Table 21.8-1 "QoS Scheduler Node Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.8-2 "QoS Scheduler Node Profile Configuration Command" Command Parameters

Parameter	Type	Description
priority	Parameter type: <Qos::QosPriority> Format: - relative priority - range: [1...8]	mandatory parameter relative priority of the scheduler-node
weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	mandatory parameter relative weight of the scheduler-node
shaper-profile	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated	mandatory parameter the associated shaper profile. For EPON OLT in downstream, this profile used for LLID shaper on 1G PON bandwidth.

21 QoS Configuration Commands

Parameter	Type	Description
	Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
[no] ext-shaper	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated shaper profile. For EPON OLT in downstream, this profile used for LLID shaper on 10G PON bandwidth.
[no] mcast-inc-shape	Parameter type: <Qos::QosMulticastInclShaping> Format: (mcast-shap-on no-mcast-shap) Possible values: - mcast-shap-on : Downstream shaping includes Mcast - no-mcast-shap : Downstream shaping doesnot include Mcast	<i>optional parameter with default value: "false"</i> indicates whether downstream shaping includes Mcast

21.9 QoS CAC Profile Configuration Command

Command Description

This command allows the operator to configure a connection admission control (CAC) profile. CAC profiles are used primarily for multicast video admission control. CAC profiles can be attached to subscriber interfaces. The scope of a CAC profile is a DSL link (and not a PVC), regardless of the number of PVCs on a DSL link.

The system derives the line rate from the physical interfaces and calculates an estimate of the available Ethernet bandwidth using configurable overhead factors. The line rate taken into account may be the guaranteed sync rate or the actual line rate in case of DSL, based on a global configuration setting.

From this bandwidth, a part can be reserved for voice and data applications and the remaining part will be kept by the system as the available bandwidth for multicast video. Only preconfigured multicast streams are considered for CAC. Note that unicast video (regardless of whether it is premium content or generic Internet streaming video) is ignored by the CAC function.

The maximum bandwidth that video will occupy can be further confined using the maximum multicast bandwidth 'max-mcast-bandwidth' parameter.

CAC profiles are applicable to line cards, but not to SHub/IHub interfaces.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no cac (name) ) | ( cac (name) res-voice-bandwidth <Qos::BandWidthKBPS>
max-mcast-bandwidth <Qos::BandWidthKBPS> res-data-bandwidth <Qos::BandWidthKBPS> [ no cac-type |
cac-type <Qos::QosCacType> ] )
```

Command Parameters

Table 21.9-1 "QoS CAC Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.9-2 "QoS CAC Profile Configuration Command" Command Parameters

Parameter	Type	Description
res-voice-bandwidth	Parameter type: <Qos::BandWidthKBPS> Format: - interface bandwidth - unit: kbps - range: [0...2147483647]	mandatory parameter reserved bandwidth for the voice services
max-mcast-bandwidth	Parameter type: <Qos::BandWidthKBPS>	mandatory parameter

21 QoS Configuration Commands

Parameter	Type	Description
	Format: - interface bandwidth - unit: kbps - range: [0...2147483647]	maximum allowed bandwidth for multicast and unicast video service
res-data-bandwidth	Parameter type: <Qos::BandWidthKBPS> Format: - interface bandwidth - unit: kbps - range: [0...2147483647]	<i>mandatory parameter</i> reserved bandwidth for all data services
[no] cac-type	Parameter type: <Qos::QosCacType> Format: (dsl-cac pon-cac generic-pon-cac) Possible values: - dsl-cac : cac profile for dsl links - pon-cac : cac profile for pon interfaces obsolete alternative replaced by generic-pon-cac - generic-pon-cac : cac profile for epon gpon and ngpon2 interfaces	<i>optional parameter with default value: "dsl-cac"</i> cac-profile type

21.10 QoS Single Dot1P Marker Configuration Command

Command Description

This command allows the operator to configure a marker for singleDot1P.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker ( no d1p (name) ) | ( d1p (name) default-dot1p <Qos::ExtVlanSysPrio> )
```

Command Parameters

Table 21.10-1 "QoS Single Dot1P Marker Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.10-2 "QoS Single Dot1P Marker Configuration Command" Command Parameters

Parameter	Type	Description
default-dot1p	Parameter type: <Qos::ExtVlanSysPrio> Format: - the dot-1p bit value - range: [0...7]	<i>mandatory parameter</i> the default dot-1p bit value to be applied on all frames

21.11 QoS Single DSCP Marker Configuration Command

Command Description

This command allows the operator to configure a marker for a single DSCP.

All IP packets will be marked with the specified DSCP value. This marker type is incompatible with DSCP to P-bits alignment.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker ( no dscp (name) ) | ( dscp (name) default-dscp  
<Qos::DscpToDot1PAlignmentDscpIndex> [ [ no ] alignment ] )
```

Command Parameters

Table 21.11-1 "QoS Single DSCP Marker Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.11-2 "QoS Single DSCP Marker Configuration Command" Command Parameters

Parameter	Type	Description
default-dscp	Parameter type: <Qos::DscpToDot1PAlignmentDscpIndex> Format: - the DSCP value - range: [0...63]	<i>mandatory parameter</i> the default DSCP value to be applied on all frames
[no] alignment	Parameter type: boolean	<i>optional parameter</i> enable DSCP to P-bits alignment

21.12 QoS DSCP Contract Table Marker Configuration Command

Command Description

This command allows the operator to configure a marker for a DSCP contract table. To configure the DSCP codepoints in the contract table, the command "**configure qos profiles marker dscp-contract (name) codepoint (codepoint)**" is to be used.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker ( no dscp-contract (name) ) | ( dscp-contract (name) [ [ no ] alignment ] )
```

Command Parameters

Table 21.12-1 "QoS DSCP Contract Table Marker Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.12-2 "QoS DSCP Contract Table Marker Configuration Command" Command Parameters

Parameter	Type	Description
[no] alignment	Parameter type: boolean	<i>optional parameter</i> enable DSCP to P-bits alignment

21.13 QoS DSCP Contract Table Code-point Configuration Command For DSCP-contract

Command Description

*This command allows the operator to configure codepoints in the DSCP contract table. To configure a marker, use the command "**configure qos profiles marker dscp-contract (name)**".*

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker dscp-contract (name) codepoint (codepoint) [ no dscp-value | dscp-value <Qos::DscpToDot1PAlignmentDscpIndex> ]
```

Command Parameters

Table 21.13-1 "QoS DSCP Contract Table Code-point Configuration Command For DSCP-contract" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(codepoint)	Format: - the number of the DSCP codepoint - range: [0...63]	the value of the codepoint

Table 21.13-2 "QoS DSCP Contract Table Code-point Configuration Command For DSCP-contract" Command Parameters

Parameter	Type	Description
[no] dscp-value	Parameter type: <Qos::DscpToDot1PAlignmentDscpIndex> Format: - the DSCP value - range: [0...63]	<i>optional parameter with default value: 0L</i> the dscp value to be assigned to the codepoint

21.14 QoS Dot1P and DSCP Contract Table Marker Configuration Command

Command Description

This command allows the operator to configure a marker for Dot1P and a DSCP contract table. To configure the DSCP codepoints in the contract table, the command "**configure qos profiles marker d1p-dscp-contract (name) codepoint (codepoint)**" is to be used.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker ( no d1p-dscp-contract (name) ) | ( d1p-dscp-contract (name) dot1p-value
<Qos::ExtVlanSysPrio> [ [ no ] alignment ] )
```

Command Parameters

Table 21.14-1 "QoS Dot1P and DSCP Contract Table Marker Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.14-2 "QoS Dot1P and DSCP Contract Table Marker Configuration Command" Command Parameters

Parameter	Type	Description
dot1p-value	Parameter type: <Qos::ExtVlanSysPrio> Format: - the dot-1p bit value - range: [0...7]	<i>mandatory parameter</i> the default dot-1p bit value to be applied on all frames
[no] alignment	Parameter type: boolean	<i>obsolete parameter that will be ignored</i> enable DSCP to P-bits alignment

21.15 DSCP Contract Table Codepoint Configuration Command For D1p-dscp-contract

Command Description

This command allows the operator to configure codepoints for a DSCP contract table. To configure a Dot1P and DSCP contract table, use the command "**configure qos profiles marker d1p-dscp-contract (name)**".

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker d1p-dscp-contract (name) codepoint (codepoint) [ no dscp-value | dscp-value
<Qos::DscpToDot1PAlignmentDscpIndex> ]
```

Command Parameters

Table 21.15-1 "DSCP Contract Table Codepoint Configuration Command For D1p-dscp-contract" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(codepoint)	Format: - the number of the DSCP codepoint - range: [0...63]	the number of the codepoint

Table 21.15-2 "DSCP Contract Table Codepoint Configuration Command For D1p-dscp-contract" Command Parameters

Parameter	Type	Description
[no] dscp-value	Parameter type: <Qos::DscpToDot1PAlignmentDscpIndex> Format: - the DSCP value - range: [0...63]	optional parameter with default value: 0L the dscp value to be assigned to the codepoint

21.16 QoS Dot1P and Single DSCP Marker Configuration Command

Command Description

This command allows the operator to configure a marker for Dot1P and single DSCP.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker ( no d1p-dscp (name) ) | ( d1p-dscp (name) default-dscp
<Qos::DscpToDot1PAlignmentDscpIndex> default-dot1p <Qos::ExtVlanSysPrio> )
```

Command Parameters

Table 21.16-1 "QoS Dot1P and Single DSCP Marker Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.16-2 "QoS Dot1P and Single DSCP Marker Configuration Command" Command Parameters

Parameter	Type	Description
default-dscp	Parameter type: <Qos::DscpToDot1PAlignmentDscpIndex> Format: - the DSCP value - range: [0...63]	<i>mandatory parameter</i> the default DSCP value to be applied on all frames
default-dot1p	Parameter type: <Qos::ExtVlanSysPrio> Format: - the dot-1p bit value - range: [0...7]	<i>mandatory parameter</i> the default dot-1p bit value to be applied on all frames

21.17 QoS Dot1P Alignment Marker Configuration Command

Command Description

This command allows the operator to configure a marker for Dot1P alignment.

Default value for the global DSCP To Dot1P Alignment Table

DSCP Value	P-bit Value
0-7	0
8-15	1
16-23	2
24-31	3
32-39	4
40-47	5
48-55	6
56-63	7

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker ( no d1p-alignment (name) ) | ( d1p-alignment (name) (alignment) [ no  
dscp-pbit-prof | dscp-pbit-prof <Qos::QosDscpToPbitProfileName> ] )
```

Command Parameters

Table 21.17-1 "QoS Dot1P Alignment Marker Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.17-2 "QoS Dot1P Alignment Marker Configuration Command" Command Parameters

Parameter	Type	Description
(alignment)	Format:	mandatory parameter

Parameter	Type	Description
	enable Possible values: - enable : enable dot1p alignment	enable dot1p alignment
[no] dscp-pbit-prof	Parameter type: <Qos::QosDscpToPbitProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> Dscp to Pbit mapping profile name applicable on this marker

21.18 QoS Dot1P Remark Table Marker Configuration Command

Command Description

*This command allows the operator to configure a marker for a Dot1P Remark table. To configure the Dot1P Remark value in remark table, the command "**configure qos profiles marker dot1p-remark (name) dot1p-value (val) remark-value (val)**" is to be used.*

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

> configure qos profiles marker (no dot1p-remark (name)) | (dot1p-remark (name))

Command Parameters

Table 21.18-1 "QoS Dot1P Remark Table Marker Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

21.19 QoS Dot1P Remark Table Dot1p-value Configuration Command For Dot1P-Remark

Command Description

This command allows the operator to configure remark dot1p value in the Dot1P Remark table. To configure the remark value in the Dot1P Remark table, use the command "**configure qos profiles marker dot1p-remark (name) dot1p-value (val) remark-value (val)**".

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles marker dot1p-remark (name) dot1p-value (dot1p-value) [ no remark-value | remark-value
<Qos::ExtVlanSysPrioNc> ]
```

Command Parameters

Table 21.19-1 "QoS Dot1P Remark Table Dot1p-value Configuration Command For Dot1P-Remark" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(dot1p-value)	Format: - the dot-1p bit value - range: [0...7]	the dot1p value

Table 21.19-2 "QoS Dot1P Remark Table Dot1p-value Configuration Command For Dot1P-Remark" Command Parameters

Parameter	Type	Description
[no] remark-value	Parameter type: <Qos::ExtVlanSysPrioNc> Format: - the remarked dot-1p bit value (8 means no change) - range: [0...8]	<i>optional parameter with default value: 8L</i> the remarked dot1p value

21.20 QoS Policer Profile Configuration Command

Command Description

This command allows the operator to configure a QoS policer profile. A QoS policer profile contains all settings related to a policer. The ISAM supports single token bucket policers, where the action upon conformance is either pass or discard.

The L3 line cards units support both upstream and downstream policing. A policer profile can be used within a QoS session profile for upstream and downstream policing.

The L2 line cards units do not support policing.

The SHub/IHub supports ingress policing, but it does not use policer profiles. See the section about the QoS Ingress Policing Configuration Command to set up ingress policing on the SHub/IHub.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no policer (name) ) | ( policer (name) committed-info-rate <Qos::CommittedInfoRate>
committed-burst-size <Qos::CommittedBurstSize> [ no policer-type | policer-type <Qos::PolicerType> ] [ no
excess-info-rate | excess-info-rate <Qos::ExcessInfoRate > ] [ no excess-burst-size | excess-burst-size
<Qos::ExcessBurstSize> ] [ no coupling-flag | coupling-flag <Qos::CouplingFlag> ] [ no color-mode | color-mode
<Qos::ColorMode> ] [ no green-action | green-action <Qos::GreenAction> ] [ no yellow-action | yellow-action
<Qos::YellowAction> ] [ no red-action | red-action <Qos::RedAction> ] [ no policed-size-ctrl | policed-size-ctrl
<Qos::PoliceFrameCtrl> ] [ no peak-info-rate | peak-info-rate <Qos::PeakInfoRate> ] [ no peak-burst-size |
peak-burst-size <Qos::PeakBurstSize> ] [ no cos-threshold | cos-threshold <Qos::QosCoSThresholdProfileName> ]
)
```

Command Parameters

Table 21.20-1 "QoS Policer Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.20-2 "QoS Policer Profile Configuration Command" Command Parameters

Parameter	Type	Description
committed-info-rate	Parameter type: <Qos::CommittedInfoRate> Format: - information rate - unit: kbps - range: [0...2147483647]	<i>mandatory parameter</i> committed information rate of a policer

Parameter	Type	Description
committed-burst-size	Parameter type: <Qos::CommittedBurstSize> Format: - committed burst size of a policer - unit: bytes - range: [0...134217728]	<i>mandatory parameter</i> committed burst size of a policer
[no] policer-type	Parameter type: <Qos::PolicerType> Format: (single-token-bucket trtcm trtcmwithcosrfc2698 trtcmwithcosrfc4115) Possible values: - single-token-bucket : single token bucket - trtcm : trtcm Policer - trtcmwithcosrfc2698 : trTCMwithCoS RFC2698 policer - trtcmwithcosrfc4115 : trTCMwithCoS RFC4115 policer	<i>optional parameter with default value: "single-token-bucket"</i> The parameter is not visible during modification. the policer type
[no] excess-info-rate	Parameter type: <Qos::ExcessInfoRate > Format: - information rate - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 0</i> excess information rate of a policer for trtcm
[no] excess-burst-size	Parameter type: <Qos::ExcessBurstSize> Format: - excess burst size of a policer - unit: bytes - range: [0...134217728]	<i>optional parameter with default value: 64</i> excess burst size of a policer for trtcm
[no] coupling-flag	Parameter type: <Qos::CouplingFlag> Format: (enable disable) Possible values: - enable : enable - disable : disable	<i>optional parameter with default value: "disable"</i> the coupling flag of a policer for trtcm
[no] color-mode	Parameter type: <Qos::ColorMode> Format: (color-blind color-aware) Possible values: - color-blind : color blind mode - color-aware : color aware mode	<i>optional parameter with default value: "color-blind"</i> the color mode of a policer for trtcm
[no] green-action	Parameter type: <Qos::GreenAction> Format: (pass remark : <Aaa::IgnoredQosProfileName> setouterdei) Possible values: - pass : pass - remark : remark - setouterdei : setOuterDEI Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "pass"</i> action for green packet of a policer for trtcm, marker profile for green packet
[no] yellow-action	Parameter type: <Qos::YellowAction> Format: (pass discard	<i>optional parameter with default value: "pass"</i> action for yellow packet of a policer for trtcm, marker profile

21 QoS Configuration Commands

Parameter	Type	Description
	remark : <Aaa::IgnoredQosProfileName> setouterdei) Possible values: - pass : pass - discard : discard - remark : remark - setouterdei : setOuterDEI Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	for yellow packet
[no] red-action	Parameter type: <Qos::RedAction> Format: (pass discard remark : <Aaa::IgnoredQosProfileName> setouterdei) Possible values: - pass : pass - discard : discard - remark : remark - setouterdei : setOuterDEI Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "discard"</i> action for red packet of a policer for trtcm, marker profile for red packet
[no] policed-size-ctrl	Parameter type: <Qos::PoliceFrameCtrl> Format: (auto-controlled ingress-mode egress-mode rmv4b-ingress) Possible values: - auto-controlled : backward compatibility for all LTs - ingress-mode : policer working with ingress packet size - egress-mode : policer working with egress packet size - rmv4b-ingress : policer working on packet size with 4 bytes removed from ingress	<i>optional parameter with default value: "auto-controlled"</i> control for policed frame size
[no] peak-info-rate	Parameter type: <Qos::PeakInfoRate> Format: - peak information rate, for RFC2698 - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 0</i> peak information rate of a policer for trtcm
[no] peak-burst-size	Parameter type: <Qos::PeakBurstSize> Format: - peak burst size of a policer, for RFC2698 - unit: bytes - range: [0...134217728]	<i>optional parameter with default value: 0</i> peak burst size of a policer for trtcm
[no] cos-threshold	Parameter type: <Qos::QosCoSThresholdProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration	<i>optional parameter with default value: "none"</i> cos threshold profile name applicable on the profile

Parameter	Type	Description
	and software. The currently allowed values can be shown with online-help.	

21.21 QoS L2 Filter Profile Configuration Command

Command Description

This command allows the operator to configure an L2 filter. The created L2 filter can be reused to build policy actions based on L2 filtering criteria, inside QoS session profiles.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no l2-filter (name) ) | ( l2-filter (name) [ no dst-mac-addr | dst-mac-addr
<Qos::MacAddrAndMask> ] [ no src-mac-addr | src-mac-addr <Qos::MacAddrAndMask> ] [ no ethertype |
ethertype <Qos::FilterEthernetType> ] [ no dot1p-priority | dot1p-priority <Qos::MatchDot1pValue> ] [ no
canonical-format | canonical-format <Qos::FilterCfi> ] [ no vlan-id | vlan-id <Qos::FilterVlanId> ] )
```

Command Parameters

Table 21.21-1 "QoS L2 Filter Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.21-2 "QoS L2 Filter Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] dst-mac-addr	Parameter type: <Qos::MacAddrAndMask> Format: <Qos::MacAddress> / <Qos::MacPrefixLength> Field type <Qos::MacAddress> - a mac-address (example : 01:02:03:04:05:06) - length: 6 Field type <Qos::MacPrefixLength> - the mac address prefix length - range: [0...48]	optional parameter with default value: "00 : 00 : 00 : 00 : 00 : 00/0" destination mac address to be matched with the packet
[no] src-mac-addr	Parameter type: <Qos::MacAddrAndMask> Format: <Qos::MacAddress> / <Qos::MacPrefixLength> Field type <Qos::MacAddress> - a mac-address (example : 01:02:03:04:05:06) - length: 6 Field type <Qos::MacPrefixLength> - the mac address prefix length - range: [0...48]	optional parameter with default value: "00 : 00 : 00 : 00 : 00 : 00/0" source mac address to be matched with the packet

Parameter	Type	Description
[no] ethertype	Parameter type: <Qos::FilterEthernetType> Format: (ip x75 nbs ecma chaos x25 arp rarp appletalk snmp loopback pppoe-discovery pppoe ipv6 all <Qos::EtherType>) Possible values: - ip : ip - x75 : x75 - nbs : nbs - ecma : ecma - chaos : chaos - x25 : x25 - arp : arp - rarp : rarp - appletalk : appletalk - snmp : snmp - loopback : loopback - pppoe-discovery : pppoe-discovery - pppoe : pppoe - ipv6 : ipv6 - all : all ethtype values are considered a match Field type <Qos::EtherType> - ethertype value - range: [-1...65535]	<i>optional parameter with default value: "all"</i> ethernet type to be matched with the packet
[no] dot1p-priority	Parameter type: <Qos::MatchDot1pValue> Format: - dot1p value to be matched, -1 means match all - range: [-1...7]	<i>optional parameter with default value: -1L</i> dot1p value to be matched, -1 means match all
[no] canonical-format	Parameter type: <Qos::FilterCfi> Format: - canonical format indicator, -1 means match all - range: [-1...1]	<i>optional parameter with default value: -1L</i> canonical format indicator, -1 means match all
[no] vlan-id	Parameter type: <Qos::FilterVlanId> Format: - vlan id to be matched, -1 means match all - range: [-1...4095]	<i>optional parameter with default value: -1L</i> vlan id to be matched, -1 means match all

21.22 QoS L3 Filter Profile Configuration Command

Command Description

This command allows the operator to configure an L3 filter. The created L3 filter can be reused to build policy actions based on L3 filtering criteria, inside QoS session profiles.

DSCP mask is supported with defined L3-filter name with a prefix "DSCPMASKx_", 'x' must be 1~6, which means treat dscp-value as a last 'x' bits masking -The first 8 characters are UPPER CASE ALPHABETIC = DSCPMASK; and -The 9 character is NUMERICAL = {1, 2, 3, 4, 5, 6}; and -The 10 character is UNDERSCORE; -the remaining is configurable.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no l3-filter (name) ) | ( l3-filter (name) [ no filter-type | filter-type <Qos::L3FilterType> ]
[ no dst-ip-addr | dst-ip-addr <Ip::AddressAndMaskFull> ] [ no src-ip-addr | src-ip-addr
<Ip::AddressAndMaskFull> ] [ no dst-ipv6-addr | dst-ipv6-addr <ipv6::PrefixAndLength> ] [ no src-ipv6-addr |
src-ipv6-addr <ipv6::PrefixAndLength> ] [ no min-dst-port | min-dst-port <Qos::L4PortNumber> ] [ no
max-dst-port | max-dst-port <Qos::L4PortNumber> ] [ no min-src-port | min-src-port <Qos::L4PortNumber> ] [ no
max-src-port | max-src-port <Qos::L4PortNumber> ] [ no dscp-value | dscp-value <Qos::MatchDscpValue> ] [ no
protocol | protocol <Qos::Protocol> ] )
```

Command Parameters

Table 21.22-1 "QoS L3 Filter Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.22-2 "QoS L3 Filter Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] filter-type	Parameter type: <Qos::L3FilterType> Format: (ipv4 ipv6) Possible values: - ipv4 : ipv4 - ipv6 : ipv6	optional parameter with default value: "ipv4" The parameter is not visible during modification. L3 Filter type. Indicates to what kind of ip frames (ipv4 or ipv6) the L3 filter is applicable.
[no] dst-ip-addr	Parameter type: <Ip::AddressAndMaskFull> Format: <Ip::V4Address> / <Ip::PrefixLengthFull>	optional parameter with default value: "0.0.0.0/0" destination ipv4 address to be

Parameter	Type	Description
	Field type <Ip::V4Address> - IPv4-address Field type <Ip::PrefixLengthFull> - IP address prefix length - range: [0...32]	matched with the packet. Only applicable in case filterType is equal to ipv4.
[no] src-ip-addr	Parameter type: <Ip::AddressAndMaskFull> Format: <Ip::V4Address> / <Ip::PrefixLengthFull> Field type <Ip::V4Address> - IPv4-address Field type <Ip::PrefixLengthFull> - IP address prefix length - range: [0...32]	<i>optional parameter with default value: "0.0.0.0/0"</i> source ipv4 address to be matched with the packet. Only applicable in case filterType is equal to ipv4.
[no] dst-ipv6-addr	Parameter type: <ipv6::PrefixAndLength> Format: <ipv6::Prefix> / <ipv6::PrefixLength> Field type <ipv6::Prefix> - IPv6-address Field type <ipv6::PrefixLength> - length of IPv6 address or prefix - range: [0...128]	<i>optional parameter with default value: ":::0"</i> destination ipv6 address to be matched with the packet. Only applicable in case filterType is equal to ipv6.
[no] src-ipv6-addr	Parameter type: <ipv6::PrefixAndLength> Format: <ipv6::Prefix> / <ipv6::PrefixLength> Field type <ipv6::Prefix> - IPv6-address Field type <ipv6::PrefixLength> - length of IPv6 address or prefix - range: [0...128]	<i>optional parameter with default value: ":::0"</i> source ipv6 address to be matched with the packet. Only applicable in case filterType is equal to ipv6.
[no] min-dst-port	Parameter type: <Qos::L4PortNumber> Format: - the layer-4 port number - range: [0...65535]	<i>optional parameter with default value: 0L</i> minimum value of the layer-4 destination port number
[no] max-dst-port	Parameter type: <Qos::L4PortNumber> Format: - the layer-4 port number - range: [0...65535]	<i>optional parameter with default value: 65535L</i> maximum value of the layer-4 destination port number
[no] min-src-port	Parameter type: <Qos::L4PortNumber> Format: - the layer-4 port number - range: [0...65535]	<i>optional parameter with default value: 0L</i> minimum value of the layer-4 source port number
[no] max-src-port	Parameter type: <Qos::L4PortNumber> Format: - the layer-4 port number - range: [0...65535]	<i>optional parameter with default value: 65535L</i> maximum value of the layer-4 source port number
[no] dscp-value	Parameter type: <Qos::MatchDscpValue> Format: - dscp value to be matched, -1 means match all - range: [-1...63]	<i>optional parameter with default value: -1L</i> dscp value to be matched, -1 means match all
[no] protocol	Parameter type: <Qos::Protocol> Format: (egp eigrp gre icmp icmpv6 igmp	<i>optional parameter with default value: "all"</i> protocol to be matched with the packet

21 QoS Configuration Commands

Parameter	Type	Description
	igrp ip ipinip ipv6 ipv6-frag ipv6-hopopt ipv6-nonxt ipv6-opts ipv6-route ospf-igp tcp udp rsvp all <Qos::ProtocolType>) Possible values: - egp : egp (IANA protocol number 8) - eigrp : eigrp (IANA protocol number 88) - gre : gre (IANA protocol number 47) - icmp : icmp (IANA protocol number 1) - icmpv6 : icmpv6 (IANA protocol number 58) - igmp : igmp (IANA protocol number 2) - igrp : igrp (IANA protocol number 9) - ip : ip (IANA protocol number 4) - ipinip : ipinip(protocol id should be 94) - ipv6 : ipv6 (IANA protocol number 41) - ipv6-frag : ipv6-frag (IANA protocol number 44) - ipv6-hopopt : ipv6-HOPOPT (IANA protocol number 0) - ipv6-nonxt : ipv6-NoNxt (IANA protocol number 59) - ipv6-opts : ipv6-opts (IANA protocol number 60) - ipv6-route : ipv6-route (IANA protocol number 43) - ospf-igp : ospf-igp (IANA protocol number 89) - tcp : tcp (IANA protocol number 6) - udp : udp (IANA protocol number 17) - rsvp : rsvp (IANA protocol number 46) - all : all are considered as match Field type <Qos::ProtocolType> - ip protocol value - range: [0...255]	

21.23 QoS Policy Action Profile Configuration Command

Command Description

This command allows the operator to configure a QoS policy action profile. A QoS policy action contains: discard packet, set a DSCP value, set a Dot1P value, policing with a policer, policer sharing, count attribute.

Dot1P and DSCP values are set to frames matched by the filter associated with this policy action.

The forwarding action for the frames matched by the filter can be discard or pass. The default forwarding action is pass. When the forwarding action is discard, the other policy actions in this entry will not be checked; the frame will be discarded immediately.

Policy sharing causes multiple QoS subflow with the same policy action profile to share their policer instance, in case they are set up within the same session profile in the same direction.

Count configures whether the traffic classified by filter needs to be counted. Count means enable to count the traffic classified by filter, no count means disable to count the traffic classified by the filter. Default value is no count.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no policy-action (name) ) | ( policy-action (name) [ no dscp-value | dscp-value
<Qos::SetDscpValue> ] [ no dot1p-value | dot1p-value <Qos::SetDot1pValue> ] [ [ no ] discard-packet ] [ [ no ]
shared-policer ] [ no policer-profile | policer-profile <Qos::QosPolicerProfileName> ] [ [ no ] count ] [ no
mirror-vlan | mirror-vlan <Qos::PolicyActionMirrorVlan> ] [ no tc-value | tc-value <Qos::tcvalue> ] )
```

Command Parameters

Table 21.23-1 "QoS Policy Action Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.23-2 "QoS Policy Action Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] dscp-value	Parameter type: <Qos::SetDscpValue> Format: - dscp value set in a matched packet, -1 means no change - range: [-1...63]	optional parameter with default value: -1L dscp value set in a matched packet, -1 means no change

21 QoS Configuration Commands

Parameter	Type	Description
[no] dot1p-value	Parameter type: <Qos::SetDot1pValue> Format: - dot1p value set in a matched packet, -1 means no change - range: [-1...7]	<i>optional parameter with default value: -1L</i> dot1p value set in a matched packet, -1 means no change
[no] discard-packet	Parameter type: boolean	<i>optional parameter</i> discard the packet matching the policy
[no] shared-policer	Parameter type: boolean	<i>optional parameter</i> enable the sharing policer instances among subflows
[no] policer-profile	Parameter type: <Qos::QosPolicerProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> policer used to the packet matching the policy
[no] count	Parameter type: boolean	<i>optional parameter</i> enable to count traffic classified by filter
[no] mirror-vlan	Parameter type: <Qos::PolicyActionMirrorVlan> Format: - vlan id for mirror, 0 means no mirror - range: [0...4093]	<i>optional parameter with default value: 0L</i> vlan id for mirror, 0 means no mirror
[no] tc-value	Parameter type: <Qos::tcvalue> Format: - traffic class value range - range: [-1...7]	<i>optional parameter with default value: -1L</i> tc value to map the queue for matched packet, -1 means no change

21.24 QoS Policy Profile Configuration Command

Command Description

This command allows the operator to configure a QoS policy profile. A policy rule groups together a policy condition (filter) with a set of associated actions. A policy rule contains:

- Filter type (L2 filter or L3 filter)
- L2 or L3 filter
- Precedence of this policy rule
- Policy action

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no policy (name) ) | ( policy (name) filter <Qos::PolicyFilter> [ no precedence |
precedence <Qos::PolicyPrecedence> ] [ no policy-action | policy-action <Qos::QosPolicyActionProfileName> ] )
```

Command Parameters

Table 21.24-1 "QoS Policy Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.24-2 "QoS Policy Profile Configuration Command" Command Parameters

Parameter	Type	Description
filter	Parameter type: <Qos::PolicyFilter> Format: (l2-name : <Qos::IgnoredQosProfileName> l3-name : <Qos::IgnoredQosProfileName>) Possible values: - l2-name : refer to a l2 filter - l3-name : refer to a l3 filter Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help. Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>mandatory parameter</i> the filter for the policy rule

21 QoS Configuration Commands

Parameter	Type	Description
[no] precedence	Parameter type: <Qos::PolicyPrecedence> Format: - the precedence value of the policy rule - range: [0...255]	<i>optional parameter with default value: 10L</i> precedence value of the policy rule
[no] policy-action	Parameter type: <Qos::QosPolicyActionProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> policy action profile applicable for the policy

21.25 QoS Session Profile Configuration Command

Command Description

This command allows the operator to configure the QoS session profile. The QoS session profile is the main building block for conveying user traffic contractual rights and treatment. The QoS session profile is a "macro"-profile, which consists of individual settings as well as references to smaller profiles.

A QoS session profile is composed of

- a logical flow type,
- a marker profile,
- two policer profiles for up and downstream policing,
- two lists for upstream and downstream policy conditions and actions.
- tag selection for downstream scheduler.

The logical flow type is a legacy parameter which is ignored. Any value is interpreted as "Generic", that is, the QoS session profile can be attached to any interface. If the QoS session profile contains settings that are not supported on the interface, then these are silently ignored by the system.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no session (name) ) | ( session (name) logical-flow-type <Qos::LogicalFlowType> [ no
up-policer | up-policer <Qos::QosPolicerProfileName> ] [ no down-policer | down-policer
<Qos::QosPolicerProfileName> ] [ no up-marker | up-marker <Qos::QosMarkerProfileName> ] [ no
ing-outer-marker | ing-outer-marker <Qos::QosMarkerProfileName> ] [ no ds-schedule-tag | ds-schedule-tag
<Qos::DsSchedulerProfileTag> ] [ no up-policer-per-tc | up-policer-per-tc <Qos::QosPolicerPerTCProfileName> ]
[ no up-dscptotc-prof | up-dscptotc-prof <Qos::QosDscpToTcProfileName> ] [ no dn-dscptotc-prof |
dn-dscptotc-prof <Qos::QosDscpToTcProfileName> ] [ no up-pbittotc-prof | up-pbittotc-prof
<Qos::QosPbitToTcProfileName> ] [ no dn-pbittotc-prof | dn-pbittotc-prof <Qos::QosPbitToTcProfileName> ] [ no
up-default-tc | up-default-tc <Qos::tcvalue> ] [ no dn-default-tc | dn-default-tc <Qos::tcvalue> ] )
```

Command Parameters

Table 21.25-1 "QoS Session Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.25-2 "QoS Session Profile Configuration Command" Command Parameters

Parameter	Type	Description
logical-flow-type	Parameter type: <Qos::LogicalFlowType>	mandatory parameter

21 QoS Configuration Commands

Parameter	Type	Description
	Format: (generic pvc dot-1x-session pvc-vlan-combination ppp-session ip-session ipoe-vlan-cc pppoe-vlan-cc ipoa-cc pppoa-cc ipoe-ibridge pppoe-ibridge pppoa-relay pppoe-relay ipoe-ip-aware-bridge ipoa-ip-aware-bridge ipoa) Possible values: - generic : any defined logical flow - pvc : all frames on a pvc - dot-1x-session : frames on a pvc except ppp frames - pvc-vlan-combination : frames on dot-1D port with the same vlan-id - ppp-session : all frames on a ppp session - ip-session : all frames in an IP session or interface - ipoe-vlan-cc : all ipoe frames in a vlan cc interface - pppoe-vlan-cc : all pppoe frames in a vlan cc interface - ipoa-cc : all ipoa frames in a ipoa cc interface(replaced by ipoa) - pppoa-cc : all pppoa frames in a pppoa cc interface - ipoe-ibridge : all ipoe frames in i-bridge interface - pppoe-ibridge : all pppoe frames in i-bridge interface - pppoa-relay : pppoa frames in pppoa relay interface - pppoe-relay : all pppoe frames in pppoe relay - ipoe-ip-aware-bridge : ipoe frames in ip aware bridge interface - ipoa-ip-aware-bridge : all ipoa frames in ip aware bridge interface(replaced by ipoa) - ipoa : all ipoa frames in a ipoa interface	a traffic stream up on which policy to be made. Important note: this mandatory parameter is depreciated. No distinction is made any more between the different flow types : independent on what is configured, generic is used.
[no] up-policer	Parameter type: <Qos::QosPolicerProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> policer profile name applicable on this session upstream
[no] down-policer	Parameter type: <Qos::QosPolicerProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate	<i>optional parameter with default value: "none"</i> policer profile applicable on this session downstream

Parameter	Type	Description

21.26 QoS Session Upstream Policy List Configuration Command

Command Description

This command allows the operator to configure a list of upstream policies in a QoS session profile. However the number of these policy rules are hardware dependent.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles session (name) ( no up-policy (name) ) | ( up-policy (name) )
```

Command Parameters

Table 21.26-1 "QoS Session Upstream Policy List Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	policy profile name applicable

21.27 QoS Session Downstream Policy List Configuration Command

Command Description

This command allows the operator to configure a list of downstream policies in a QoS session profile. However the number of these policy rules are hardware dependent.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

> configure qos profiles session (name) (no down-policy (name)) | (down-policy (name))

Command Parameters

Table 21.27-1 "QoS Session Downstream Policy List Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	policy profile name applicable

21.28 QoS Session remote Upstream Policy List Configuration Command

Command Description

This command allows the operator to configure a list of remote side upstream policies in a QoS session profile.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles session (name) ( no rem-up-policy (name) ) | ( rem-up-policy (name) )
```

Command Parameters

Table 21.28-1 "QoS Session remote Upstream Policy List Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	policy profile name applicable

21.29 QoS Session Remote Downstream Policy List Configuration Command

Command Description

This command allows the operator to configure a list of remote side downstream policies in a QoS session profile.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

> configure qos profiles session (name) (no rem-down-policy (name)) | (rem-down-policy (name))

Command Parameters

Table 21.29-1 "QoS Session Remote Downstream Policy List Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	policy profile name applicable

21.30 QoS AggrQueuesConfig Profile Configuration Command

Command Description

This command allows the operator to configure a QoS AggrQueuesConfig profile. The AggrQueuesConfig Profile table stores the attributes of 8 queues of one UNI. These AggrQueuesConfig profiles are applicable to qos interface for UNI Upstream and Downstream.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no aggrqueuesconfig (name) ) | ( aggrqueuesconfig (name) [ no q0-priority | q0-priority
<Qos::Qpriority_0> ] [ no q1-priority | q1-priority <Qos::Qpriority_1> ] [ no q2-priority | q2-priority
<Qos::Qpriority_2> ] [ no q3-priority | q3-priority <Qos::Qpriority_3> ] [ no q4-priority | q4-priority
<Qos::Qpriority_4> ] [ no q5-priority | q5-priority <Qos::Qpriority_5> ] [ no q6-priority | q6-priority
<Qos::Qpriority_6> ] [ no q7-priority | q7-priority <Qos::Qpriority_7> ] [ no q0-weight | q0-weight
<Qos::QosWeight> ] [ no q1-weight | q1-weight <Qos::QosWeight> ] [ no q2-weight | q2-weight
<Qos::QosWeight> ] [ no q3-weight | q3-weight <Qos::QosWeight> ] [ no q4-weight | q4-weight
<Qos::QosWeight> ] [ no q5-weight | q5-weight <Qos::QosWeight> ] [ no q6-weight | q6-weight
<Qos::QosWeight> ] [ no q7-weight | q7-weight <Qos::QosWeight> ] [ no q0-shaper-prof | q0-shaper-prof
<Qos::QosShaperProfileName> ] [ no q1-shaper-prof | q1-shaper-prof <Qos::QosShaperProfileName> ] [ no
q2-shaper-prof | q2-shaper-prof <Qos::QosShaperProfileName> ] [ no q3-shaper-prof | q3-shaper-prof

q4-bw-sharing | q4-bw-sharing <Qos::BandwidthSharing_4> ] [ no q5-bw-sharing | q5-bw-sharing
<Qos::BandwidthSharing_5> ] [ no q6-bw-sharing | q6-bw-sharing <Qos::BandwidthSharing_6> ] [ no
q7-bw-sharing | q7-bw-sharing <Qos::BandwidthSharing_7> ] )
```

Command Parameters

Table 21.30-1 "QoS AggrQueuesConfig Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.30-2 "QoS AggrQueuesConfig Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] q0-priority	Parameter type: <Qos::Qpriority_0> Format: - priority corresponding to queue 0 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 0
[no] q1-priority	Parameter type: <Qos::Qpriority_1> Format: - priority corresponding to queue 1 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 1
[no] q2-priority	Parameter type: <Qos::Qpriority_2> Format: - priority corresponding to queue 2 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 2
[no] q3-priority	Parameter type: <Qos::Qpriority_3> Format: - priority corresponding to queue 3 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 3
[no] q4-priority	Parameter type: <Qos::Qpriority_4> Format: - priority corresponding to queue 4 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 4
[no] q5-priority	Parameter type: <Qos::Qpriority_5> Format: - priority corresponding to queue 5 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 5
[no] q6-priority	Parameter type: <Qos::Qpriority_6> Format: - priority corresponding to queue 6 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 6
[no] q7-priority	Parameter type: <Qos::Qpriority_7> Format: - priority corresponding to queue 7 - range: [1...8]	<i>optional parameter with default value: 1</i> priority corresponding to queue 7
[no] q0-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter with default value: 1</i> relative weight of the queue 0
[no] q1-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter with default value: 1</i> relative weight of the queue 1
[no] q2-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter with default value: 1</i> relative weight of the queue 2
[no] q3-weight	Parameter type: <Qos::QosWeight>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: - relative weight - range: [0...127]	<i>value: 1</i> relative weight of the queue 3
[no] q4-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter with default value: 1</i> relative weight of the queue 4
[no] q5-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter with default value: 1</i> relative weight of the queue 5
[no] q6-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter with default value: 1</i> relative weight of the queue 6
[no] q7-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter with default value: 1</i> relative weight of the queue 7
[no] q0-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated queue 0 shaper profile.
[no] q1-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated queue 1 shaper profile.
[no] q2-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated queue 2 shaper profile.
[no] q3-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values:	<i>optional parameter with default value: "none"</i> the associated queue 3 shaper profile.

21 QoS Configuration Commands

Parameter	Type	Description
	- none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
[no] q4-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated queue 4 shaper profile.
[no] q5-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated queue 5 shaper profile.
[no] q6-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated queue 6 shaper profile.
[no] q7-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the associated queue 7 shaper profile.
[no] q0-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated	<i>optional parameter with default value: "none"</i> name of the queue 0 queue profile

Parameter	Type	Description
	Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
[no] q1-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> name of the queue 1 queue profile
[no] q2-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> name of the queue 2 queue profile
[no] q3-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> name of the queue 3 queue profile
[no] q4-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> name of the queue 4 queue profile
[no] q5-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software.	<i>optional parameter with default value: "none"</i> name of the queue 5 queue profile

Parameter	Type	Description
	and software. The currently allowed values can be shown with online-help.	
[no] q6-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> name of the queue 6 queue profile
[no] q7-queue-prof	Parameter type: <Qos::QosQueueProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> name of the queue 7 queue profile
[no] q0-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 0 bandwidth profile.
[no] q1-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 1 bandwidth profile.
[no] q2-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 2 bandwidth profile.

Parameter	Type	Description
[no] q3-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 3 bandwidth profile.
[no] q4-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 4 bandwidth profile.
[no] q5-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 5 bandwidth profile.
[no] q6-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 6 bandwidth profile.
[no] q7-bandwidth-prof	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the queue 7 bandwidth profile.
[no] q0-bw-sharing	Parameter type: <Qos::BandwidthSharing_0> Format:	<i>optional parameter with default value: "no-sharing"</i>

21 QoS Configuration Commands

Parameter	Type	Description
	(no-sharing uni-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	enable or disable queue 0 bandwidth sharing
[no] q1-bw-sharing	Parameter type: <Qos::BandwidthSharing_1> Format: (no-sharing uni-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	<i>optional parameter with default value: "no-sharing"</i> enable or disable queue 1 bandwidth sharing
[no] q2-bw-sharing	Parameter type: <Qos::BandwidthSharing_2> Format: (no-sharing uni-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	<i>optional parameter with default value: "no-sharing"</i> enable or disable queue 2 bandwidth sharing
[no] q3-bw-sharing	Parameter type: <Qos::BandwidthSharing_3> Format: (no-sharing uni-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	<i>optional parameter with default value: "no-sharing"</i> enable or disable queue 3 bandwidth sharing
[no] q4-bw-sharing	Parameter type: <Qos::BandwidthSharing_4> Format: (no-sharing uni-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	<i>optional parameter with default value: "no-sharing"</i> enable or disable queue 4 bandwidth sharing
[no] q5-bw-sharing	Parameter type: <Qos::BandwidthSharing_5> Format: (no-sharing uni-sharing	<i>optional parameter with default value: "no-sharing"</i> enable or disable queue 5 bandwidth sharing

Parameter	Type	Description
	ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	
[no] q6-bw-sharing	Parameter type: <Qos::BandwidthSharing_6> Format: (no-sharing uni-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	<i>optional parameter with default value: "no-sharing"</i> enable or disable queue 6 bandwidth sharing
[no] q7-bw-sharing	Parameter type: <Qos::BandwidthSharing_7> Format: (no-sharing uni-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - uni-sharing : enable BW or TCONT sharing on a single UNI - ont-sharing : enable BW or TCONT sharing on across UNIs of an ONT	<i>optional parameter with default value: "no-sharing"</i> enable or disable queue 7 bandwidth sharing

21.31 QoS Shaper Profile Configuration Command

Command Description

This command allows the operator to configure a QoS shaper profile. A QoS shaper profile contains all settings related to a shaper. The ISAM supports single token bucket shapers. EIR is only applicable if shaper type is singleTokenBucketGpon. CBS is applicable only if the shaper type is singleTokenBucket.

The L2+ line cards support shaping on queue.

1. GPON supports EIR and CIR. If CBS is non-zero for GPON; CLI will return an error.
2. DSL doesn't support EIR. So if user enters non-zero for EIR for DSL; CLI will return an error.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no shaper (name) ) | ( shaper (name) committed-info-rate
<Qos::ShaperCommittedInfoRate> committed-burst-size <Qos::ShaperCommittedBurstSizeNew> [ no
excess-info-rate | excess-info-rate <Qos::ShaperExcessiveInfoRate> ] [ no type | type <Qos::ShaperType> ] [ no
autoshape | autoshape <Qos::AutoShape> ] )
```

Command Parameters

Table 21.31-1 "QoS Shaper Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.31-2 "QoS Shaper Profile Configuration Command" Command Parameters

Parameter	Type	Description
committed-info-rate	Parameter type: <Qos::ShaperCommittedInfoRate> Format: - committed information rate of a shaper - unit: kbps - range: [0...2147483647]	<i>mandatory parameter</i> committed information rate of a shaper
committed-burst-size	Parameter type: <Qos::ShaperCommittedBurstSizeNew> Format: - committed burst size of shaper - unit: byte - range: [0,64...2147483647]	<i>mandatory parameter</i> committed burst size of shaper
[no] excess-info-rate	Parameter type: <Qos::ShaperExcessiveInfoRate> Format:	<i>optional parameter with default value: 0</i>

Parameter	Type	Description
	- excessive information rate of a shaper - unit: kbps - range: [0...2147483647]	excessive information rate of shaper
[no] type	Parameter type: <Qos::ShaperType> Format: (singletokenbucket singletokenbucketgpon onetokentworate twotokenbuckettworate) Possible values: - singletokenbucket : single Token Bucket - singletokenbucketgpon : single Token Bucket for GPON - onetokentworate : single Token Two Rate Bucket - twotokenbuckettworate : two Token Two Rate Bucket	<i>optional parameter with default value: "singletokenbucket"</i> the shaper profile type
[no] autoshape	Parameter type: <Qos::AutoShape> Format: (autoshape-on no-autoshape-on) Possible values: - autoshape-on : enable shaping based on queue parameters - no-autoshape-on : disable shaping based on queue parameters	<i>optional parameter with default value: "no-autoshape-on"</i> enable or disable automatic shaping

21.32 QoS Bandwidth Profile Configuration Command

Command Description

This command allows the operator to configure a QoS Bandwidth profile. A QoS Bandwidth profile contains upstream rate enforcement information for frames to which this profile is applied.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no bandwidth (name) ) | ( bandwidth (name) committed-info-rate
<Qos::BwCommittedInfoRate> assured-info-rate <Qos::BwAssuredInfoRate> excessive-info-rate
<Qos::BwExcessiveInfoRate> [ no delay-tolerance | delay-tolerance <Qos::DelayTolerance> ] [ no assu-burst-size |
assu-burst-size <Qos::BwAssuredBurstSize> ] [ no exce-burst-size | exce-burst-size <Qos::BwExcessiveBurstSize>
] [ no dbu | dbu <Qos::BwDBRu> ] )
```

Command Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.32-2 "QoS Bandwidth Profile Configuration Command" Command Parameters

Parameter	Type	Description
committed-info-rate	Parameter type: <Qos::BwCommittedInfoRate> Format: - committed information rate - unit: kbps - range: [0...25000000]	<i>mandatory parameter</i> committed information rate
assured-info-rate	Parameter type: <Qos::BwAssuredInfoRate> Format: - assured information rate - unit: kbps - range: [0...25000000]	<i>mandatory parameter</i> assured information rate
excessive-info-rate	Parameter type: <Qos::BwExcessiveInfoRate> Format: - excessive information rate - unit: kbps	<i>mandatory parameter</i> excessive information rate

Parameter	Type	Description
	- range: [0...25000000]	
[no] delay-tolerance	Parameter type: <Qos::DelayTolerance> Format: - delay tolerance - range: [1...240]	<i>optional parameter with default value: "1"</i> delay tolerance
[no] assu-burst-size	Parameter type: <Qos::BwAssuredBurstSize> Format: - assured burst size only for EPON - unit: kB - range: [1...256]	<i>optional parameter with default value: 256L</i> assured burst size only for EPON
[no] exce-burst-size	Parameter type: <Qos::BwExcessiveBurstSize> Format: - excessive burst size only for EPON - unit: kB - range: [1...256]	<i>optional parameter with default value: 256L</i> excessive burst size only for EPON
[no] dbRu	Parameter type: <Qos::BwDBRu> Format: (enable disable enable-if-supported) Possible values: - enable : enable use of DBRu - disable : disable use of DBRu - enable-if-supported : enable DBRu if supported	<i>optional parameter with default value: "enable-if-supported"</i> DBRu enable

21.33 QoS IngressQoS Profile Configuration

Command

Command Description

This command allows the operator to configure a QoS Ingress profile. The IngressQoS Profile table stores the pbit to TC mappings that can be used by a L2 Forwarder in the upstream and downstream directions.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no ingress-qos (name) ) | ( ingress-qos (name) [ no dot1-p0-tc | dot1-p0-tc
<Qos::TCMask_0> ] [ no dot1-p1-tc | dot1-p1-tc <Qos::TCMask_1> ] [ no dot1-p2-tc | dot1-p2-tc
<Qos::TCMask_2> ] [ no dot1-p3-tc | dot1-p3-tc <Qos::TCMask_3> ] [ no dot1-p4-tc | dot1-p4-tc
<Qos::TCMask_4> ] [ no dot1-p5-tc | dot1-p5-tc <Qos::TCMask_5> ] [ no dot1-p6-tc | dot1-p6-tc
<Qos::TCMask_6> ] [ no dot1-p7-tc | dot1-p7-tc <Qos::TCMask_7> ] [ [ no ] use-dei ] [ no dot1-p0-color |
dot1-p0-color <Qos::NibbleMask_0> ] [ no dot1-p1-color | dot1-p1-color <Qos::NibbleMask_1> ] [ no
dot1-p2-color | dot1-p2-color <Qos::NibbleMask_2> ] [ no dot1-p3-color | dot1-p3-color <Qos::NibbleMask_3> ] [
no dot1-p4-color | dot1-p4-color <Qos::NibbleMask_4> ] [ no dot1-p5-color | dot1-p5-color <Qos::NibbleMask_5>
] [ no dot1-p6-color | dot1-p6-color <Qos::NibbleMask_6> ] [ no dot1-p7-color | dot1-p7-color
<Qos::NibbleMask_7> ] [ no dot1-p0-pol-tc | dot1-p0-pol-tc <Qos::PolTCMask_0> ] [ no dot1-p1-pol-tc |
dot1-p1-pol-tc <Qos::PolTCMask_1> ] [ no dot1-p2-pol-tc | dot1-p2-pol-tc <Qos::PolTCMask_2> ] [ no
dot1-p3-pol-tc | dot1-p3-pol-tc <Qos::PolTCMask_3> ] [ no dot1-p4-pol-tc | dot1-p4-pol-tc <Qos::PolTCMask_4>
] [ no dot1-p5-pol-tc | dot1-p5-pol-tc <Qos::PolTCMask_5> ] [ no dot1-p6-pol-tc | dot1-p6-pol-tc
<Qos::PolTCMask_6> ] [ no dot1-p7-pol-tc | dot1-p7-pol-tc <Qos::PolTCMask_7> ] )
```

Command Parameters

Table 21.33-1 "QoS IngressQoS Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.33-2 "QoS IngressQoS Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] dot1-p0-tc	Parameter type: <Qos::TCMask_0> Format: - traffic class corresponding to pbit0 - range: [0...7,15]	optional parameter with default value: 15 traffic class corresponding to pbit0
[no] dot1-p1-tc	Parameter type: <Qos::TCMask_1>	optional parameter with default

Parameter	Type	Description
	Format: - traffic class corresponding to pbit1 - range: [0...7,15]	<i>value: 15</i> traffic class corresponding to pbit1
[no] dot1-p2-tc	Parameter type: <Qos::TCMask_2> Format: - traffic class corresponding to pbit2 - range: [0...7,15]	<i>optional parameter with default value: 15</i> traffic class corresponding to pbit2
[no] dot1-p3-tc	Parameter type: <Qos::TCMask_3> Format: - traffic class corresponding to pbit3 - range: [0...7,15]	<i>optional parameter with default value: 15</i> traffic class corresponding to pbit3
[no] dot1-p4-tc	Parameter type: <Qos::TCMask_4> Format: - traffic class corresponding to pbit4 - range: [0...7,15]	<i>optional parameter with default value: 15</i> traffic class corresponding to pbit4
[no] dot1-p5-tc	Parameter type: <Qos::TCMask_5> Format: - traffic class corresponding to pbit5 - range: [0...7,15]	<i>optional parameter with default value: 15</i> traffic class corresponding to pbit5
[no] dot1-p6-tc	Parameter type: <Qos::TCMask_6> Format: - traffic class corresponding to pbit6 - range: [0...7,15]	<i>optional parameter with default value: 15</i> traffic class corresponding to pbit6
[no] dot1-p7-tc	Parameter type: <Qos::TCMask_7> Format: - traffic class corresponding to pbit7 - range: [0...7,15]	<i>optional parameter with default value: 15</i> traffic class corresponding to pbit7
[no] use-dei	Parameter type: boolean	<i>optional parameter</i> enable use of DEI bit
[no] dot1-p0-color	Parameter type: <Qos::NibbleMask_0> Format: (green yellow red not-used) Possible values: - green : green color - yellow : yellow color - red : red color - not-used : pbit not in use	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit0
[no] dot1-p1-color	Parameter type: <Qos::NibbleMask_1> Format: (green yellow red not-used) Possible values: - green : green color - yellow : yellow color - red : red color - not-used : pbit not in use	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit1
[no] dot1-p2-color	Parameter type: <Qos::NibbleMask_2> Format: (green yellow red not-used)	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit2

21 QoS Configuration Commands

Parameter	Type	Description
	Possible values: - green : green color - yellow : yellow color - red : red color - not-used : pbit not in use	
[no] dot1-p3-color	Parameter type: <Qos::NibbleMask_3> Format: (green yellow red not-used) Possible values: - green : green color - yellow : yellow color - red : red color - not-used : pbit not in use	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit3
[no] dot1-p4-color	Parameter type: <Qos::NibbleMask_4> Format: (green yellow red not-used) Possible values: - green : green color - yellow : yellow color - red : red color - not-used : pbit not in use	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit4
[no] dot1-p5-color	Parameter type: <Qos::NibbleMask_5> Format: (green yellow red not-used) Possible values: - green : green color - yellow : yellow color - red : red color - not-used : pbit not in use	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit5
[no] dot1-p6-color	Parameter type: <Qos::NibbleMask_6> Format: (green yellow red not-used) Possible values: - green : green color - yellow : yellow color - red : red color - not-used : pbit not in use	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit6
[no] dot1-p7-color	Parameter type: <Qos::NibbleMask_7> Format: (green yellow red not-used) Possible values: - green : green color	<i>optional parameter with default value: "green"</i> ingress color corresponding to pbit7

Parameter	Type	Description
	- yellow : yellow color - red : red color - not-used : pbit not in use	
[no] dot1-p0-pol-tc	Parameter type: <Qos::PolTCMask_0> Format: - policing traffic class corresponding to pbit0 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit0
[no] dot1-p1-pol-tc	Parameter type: <Qos::PolTCMask_1> Format: - policing traffic class corresponding to pbit1 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit1
[no] dot1-p2-pol-tc	Parameter type: <Qos::PolTCMask_2> Format: - policing traffic class corresponding to pbit2 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit2
[no] dot1-p3-pol-tc	Parameter type: <Qos::PolTCMask_3> Format: - policing traffic class corresponding to pbit3 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit3
[no] dot1-p4-pol-tc	Parameter type: <Qos::PolTCMask_4> Format: - policing traffic class corresponding to pbit4 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit4
[no] dot1-p5-pol-tc	Parameter type: <Qos::PolTCMask_5> Format: - policing traffic class corresponding to pbit5 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit5
[no] dot1-p6-pol-tc	Parameter type: <Qos::PolTCMask_6> Format: - policing traffic class corresponding to pbit6 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit6
[no] dot1-p7-pol-tc	Parameter type: <Qos::PolTCMask_7> Format: - policing traffic class corresponding to pbit7 - range: [0...7,15]	<i>optional parameter with default value: 15</i> policing traffic class corresponding to pbit7

21.34 QoS Rate Limit Profile Configuration

Command

Command Description

This command allows the operator to configure a QoS rate limit profile. A QoS rate limit profile contains all rate limit values related to different protocols, or total protocol values

Total protocol ratelimit value and supported protocol ratelimit value

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no rate-limit (name) ) | ( rate-limit (name) [ no total-rate | total-rate
<Qos::RateLimitTotalRate> ] [ no total-burst | total-burst <Qos::RateLimitTotalBurst> ] [ no arp-rate | arp-rate
<Qos::RateLimitProtocolRate> ] [ no arp-burst | arp-burst <Qos::RateLimitProtocolBurst> ] [ no dhcp-rate |
dhcp-rate <Qos::RateLimitProtocolRate> ] [ no dhcp-burst | dhcp-burst <Qos::RateLimitProtocolBurst> ] [ no
igmp-rate | igmp-rate <Qos::RateLimitProtocolRate> ] [ no igmp-burst | igmp-burst
<Qos::RateLimitProtocolBurst> ] [ no pppoe-rate | pppoe-rate <Qos::RateLimitProtocolRate> ] [ no pppoe-burst |
pppoe-burst <Qos::RateLimitProtocolBurst> ] [ no nd-rate | nd-rate <Qos::RateLimitProtocolRate> ] [ no nd-burst |
nd-burst <Qos::RateLimitProtocolBurst> ] [ no icmpv6-rate | icmpv6-rate <Qos::RateLimitProtocolRate> ] [ no
icmpv6-burst | icmpv6-burst <Qos::RateLimitProtocolBurst> ] [ no mld-rate | mld-rate
<Qos::RateLimitProtocolRate> ] [ no mld-burst | mld-burst <Qos::RateLimitProtocolBurst> ] [ no dhcpv6-rate |
dhcpv6-rate <Qos::RateLimitProtocolRate> ] [ no dhcpv6-burst | dhcpv6-burst <Qos::RateLimitProtocolBurst> ] [
no cfm-rate | cfm-rate <Qos::RateLimitProtocolRate> ] [ no cfm-burst | cfm-burst <Qos::RateLimitProtocolBurst> ]
)
```

Command Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.34-2 "QoS Rate Limit Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] total-rate	Parameter type: <Qos::RateLimitTotalRate> Format: - protocol rate limit total rate - unit: pps	<i>optional parameter with default value: 0</i> committed total rate limit value

Parameter	Type	Description
	- range: [0...254]	
[no] total-burst	Parameter type: <Qos::RateLimitTotalBurst> Format: - protocol rate limit total burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> committed total rate limit burst value
[no] arp-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> ARP rate limit value
[no] arp-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> ARP burst value
[no] dhcp-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> DHCP rate limit value
[no] dhcp-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> DHCP burst value
[no] igmp-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> IGMP rate limit value
[no] igmp-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> IGMP burst value
[no] pppoe-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> PPPoE rate limit value
[no] pppoe-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> PPPoE burst value
[no] nd-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> Nd rate limit value
[no] nd-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> Nd burst value
[no] icmpv6-rate	Parameter type: <Qos::RateLimitProtocolRate>	<i>optional parameter with default</i>

21 QoS Configuration Commands

Parameter	Type	Description
	Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>value: 0</i> ICMP V6 rate limit value
[no] icmpv6-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> ICMP V6 burst value
[no] mld-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> MLD rate limit value
[no] mld-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> MLD burst value
[no] dhcpv6-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> DHCP V6 rate limit value
[no] dhcpv6-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> DHCP v6 burst value
[no] cfm-rate	Parameter type: <Qos::RateLimitProtocolRate> Format: - protocol rate limit value - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> CFM rate limit value
[no] cfm-burst	Parameter type: <Qos::RateLimitProtocolBurst> Format: - protocol rate limit burst - unit: pps - range: [0...254]	<i>optional parameter with default value: 0</i> CFM burst value

21.35 QoS DSCP to Pbit Mapping Profile Configuration Command

Command Description

This command allows the operator to configure a QoS DSCP to Pbit mapping profile. To configure the DSCP codepoints in the DSCP to dot1p mapping, the command "**configure qos profiles dscp-pbit (name) codepoint (codepoint) (value)**" is to be used.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no dscp-pbit (name) ) | ( dscp-pbit (name) )
```

Command Parameters

Table 21.35-1 "QoS DSCP to Pbit Mapping Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

21.36 QoS DSCP to Pbit Mapping Profile Configuration Command

Command Description

This command allows the operator to configure a QoS DSCP to Pbit mapping profile. To configure the DSCP codepoints in the DSCP to dot1p mapping, the command "**configure qos profiles dscp-pbit (name) codepoint (codepoint) (value)**" is to be used.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles dscp-pbit (name) codepoint (codepoint) [ dot1p-value <Qos::DscpToDot1PAlign> ]
```

Command Parameters

Table 21.36-1 "QoS DSCP to Pbit Mapping Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(codepoint)	Format: - the number of the DSCP codepoint - range: [0...63]	the value of the codepoint

Table 21.36-2 "QoS DSCP to Pbit Mapping Profile Configuration Command" Command Parameters

Parameter	Type	Description
dot1p-value	Parameter type: <Qos::DscpToDot1PAlign> Format: - the DOT1P value - range: [0...7]	<i>optional parameter</i> the dot1p value to be assigned to the dscp codepoint

21.37 QoS DSCP to Tc Mapping Profile Configuration Command

Command Description

*This command allows the operator to configure a QoS DSCP to Tc mapping profile. To configure the DSCP codepoints in the DSCP to tc mapping, the command "**configure qos profiles dscp-tc (name) codepoint (codepoint) (value)**" is to be used.*

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no dscp-tc (name) ) | ( dscp-tc (name) )
```

Command Parameters

Table 21.37-1 "QoS DSCP to Tc Mapping Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

21.38 QoS DSCP to Tc Mapping Profile Configuration Command

Command Description

*This command allows the operator to configure a QoS DSCP to Tc mapping profile. To configure the DSCP codepoints in the DSCP to tc mapping, the command "**configure qos profiles dscp-tc (name) codepoint (codepoint) (value)**" is to be used.*

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles dscp-tc (name) codepoint (codepoint) [ tc-value <Qos::DscpToTcAlign> ]
```

Command Parameters

Table 21.38-1 "QoS DSCP to Tc Mapping Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(codepoint)	Format: - the number of the DSCP codepoint - range: [0...63]	the value of the codepoint

Table 21.38-2 "QoS DSCP to Tc Mapping Profile Configuration Command" Command Parameters

Parameter	Type	Description
tc-value	Parameter type: <Qos::DscpToTcAlign> Format: - the Tc value - range: [0...7]	<i>optional parameter</i> the tc value to be assigned to the dscp codepoint

21.39 QoS Policer Per Tc Profile Configure

Command Description

This command allows the operator to configure policer per tc profile. .

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

> configure qos profiles (no policer-per-tc (name)) | (policer-per-tc (name))

Command Parameters

Table 21.39-1 "QoS Policer Per Tc Profile Configure" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

21.40 QoS Policer Per Tc Profile Configure

Command Description

This command allows the operator to configure policer per tc profile. .

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles policer-per-tc (name) tc-policer (tc) [ no policer | policer <Qos::QosPolicerProfileName> ]
```

Command Parameters

Table 21.40-1 "QoS Policer Per Tc Profile Configure" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name
(tc)	Format: - the number of the TC index - range: [0...7]	the value of the tc index

Table 21.40-2 "QoS Policer Per Tc Profile Configure" Command Parameters

Parameter	Type	Description
[no] policer	Parameter type: <Qos::QosPolicerProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the value of the tc

21.41 QoS CoS Threshold Profile Configuration Command

Command Description

This command allows the operator to configure a QoS CoS threshold profile. A QoS CoS threshold profile contains all settings related to a policer threshold.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos profiles ( no cos-threshold (name) ) | ( cos-threshold (name) [ no tc0-threshold | tc0-threshold
<Qos::tcThreshold> ] [ no tc1-threshold | tc1-threshold <Qos::tcThreshold> ] [ no tc2-threshold | tc2-threshold
<Qos::tcThreshold> ] [ no tc3-threshold | tc3-threshold <Qos::tcThreshold> ] [ no tc4-threshold | tc4-threshold
<Qos::tcThreshold> ] [ no tc5-threshold | tc5-threshold <Qos::tcThreshold> ] [ no tc6-threshold | tc6-threshold
<Qos::tcThreshold> ] [ no tc7-threshold | tc7-threshold <Qos::tcThreshold> ] )
```

Command Parameters

Table 21.41-1 "QoS CoS Threshold Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name

Table 21.41-2 "QoS CoS Threshold Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] tc0-threshold	Parameter type: <Qos::tcThreshold> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> tc0 threshold, unit: percent
[no] tc1-threshold	Parameter type: <Qos::tcThreshold> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> tc1 threshold, unit: percent
[no] tc2-threshold	Parameter type: <Qos::tcThreshold> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> tc2 threshold, unit: percent
[no] tc3-threshold	Parameter type: <Qos::tcThreshold> Format:	<i>optional parameter with default value: 0</i>

21 QoS Configuration Commands

Parameter	Type	Description
	- Percentage of the QoS Thresh - range: [0...100]	tc3 threshold, unit: percent
[no] tc4-threshold	Parameter type: <Qos::tcThreshold> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> tc4 threshold, unit: percent
[no] tc5-threshold	Parameter type: <Qos::tcThreshold> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> tc5 threshold, unit: percent
[no] tc6-threshold	Parameter type: <Qos::tcThreshold> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> tc6 threshold, unit: percent
[no] tc7-threshold	Parameter type: <Qos::tcThreshold> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> tc7 threshold, unit: percent

21.42 QoS Board-Level Queue and Performance Configuration Command

Command Description

This command allows the operator to configure various parameters related to board-level traffic load and packet loss.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos global (index) [ no buffer-occ-thresh | buffer-occ-thresh <Qos::PercentThresh> ] [ [ no ]
queue-stats ] [ [ no ] dsload-tca ] [ no dsload-thresh | dsload-thresh <Qos::PercentThresh> ] [ [ no ] buffer-tca ] [ no
up-buf-thresh | up-buf-thresh <Qos::UpAggrBufOvflwTcaTh> ] [ no up-obc-thresh | up-obc-thresh
<Qos::UpObcAggrBufOvflwTcaTh> ] [ no dn-obc-thresh | dn-obc-thresh <Qos::DnObcAggrBufOvflwTcaTh> ] [
no dn-buf-thresh | dn-buf-thresh <Qos::DnUcAggrBufOvflwTcaTh> ] [ no part-buf-thresh | part-buf-thresh
<Qos::PartBufThresh> ]
```

Command Parameters

Table 21.42-2 "QoS Board-Level Queue and Performance Configuration Command" Command Parameters

Parameter	Type	Description
[no] buffer-occ-thresh	Parameter type: <Qos::PercentThresh> Format:	<i>optional parameter with default value: 0</i>

21 QoS Configuration Commands

Parameter	Type	Description
	- Percentage of the QoS Thresh - range: [0...100]	the ratio of occupied data buffer entries to the LT global data buffer size, above which the partial buffer threshold alarm will be triggered.(only applicable to low priority traffic i.e. BE and CL)
[no] queue-stats	Parameter type: boolean	<i>optional parameter</i> enable or disable generation of queue statistics
[no] dsload-tca	Parameter type: boolean	<i>optional parameter</i> enable or disable the threshold crossing alarm associated to card-level load of downstream traffic
[no] dsload-thresh	Parameter type: <Qos::PercentThresh> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> Percentage of LT fan-out load above which the alarm will be triggered.
[no] buffer-tca	Parameter type: boolean	<i>optional parameter</i> enable the threshold crossover alarm of aggregation buffer overflow
[no] up-buf-thresh	Parameter type: <Qos::UpAggrBufOvflwTcaTh> Format: - Qos thresh - range: [0...2147483647]	<i>optional parameter with default value: 0</i> the threshold of upstream aggregation buffer overflow TCA.
[no] up-obc-thresh	Parameter type: <Qos::UpObcAggrBufOvflwTcaTh> Format: - Qos thresh - range: [0...2147483647]	<i>optional parameter with default value: 0</i> The threshold of OBC-directed upstream aggregation buffer overflow TCA.
[no] dn-obc-thresh	Parameter type: <Qos::DnObcAggrBufOvflwTcaTh> Format: - Qos thresh - range: [0...2147483647]	<i>optional parameter with default value: 0</i> The threshold of downstream OBC-directed aggregation buffer overflow TCA.
[no] dn-buf-thresh	Parameter type: <Qos::DnUcAggrBufOvflwTcaTh> Format: - Qos thresh - range: [0...2147483647]	<i>optional parameter with default value: 0</i> The threshold of downstream data aggregation buffer overflow TCA.
[no] part-buf-thresh	Parameter type: <Qos::PartBufThresh> Format: - threshold of dropped lower class packets of global buffer. range: [0...18446744073709551615]	<i>optional parameter with default value: "0"</i> The threshold of dropped lower class packets of global buffer occupancy threshold overflow TCA.

21.43 QoS Queue Threshold Crossing Alarm Configuration Command

Command Description

This command allows the operator to configure various parameters related to subscriber interface and queue level traffic load and packet loss.

Load per physical line is calculated by matching the total number of bytes transmitted versus the capacity of the interface in the relevant measurement epoch. Load per queue is measured in terms of the contribution to the interface level load of traffic passed in a certain queue.

Threshold crossing alarms can be specified for the load and packet loss parameters per line and per traffic class.

This feature can be useful to detect network anomalies by watching over packet discard or load level in high-priority traffic classes.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos tca (index) queue <Qos::TcaQueues> [ [ no ] tca-enable ] [ no load-thresh | load-thresh <Qos::PercentThresh> ] [ no dis-frame-th | dis-frame-th <Qos::QosQueueStatsDiscFramesTcaThreshold> ] [ no qpeak-usage-th | qpeak-usage-th <Qos::PercentThresh> ]
```

Table 21.43-2 "QoS Queue Threshold Crossing Alarm Configuration Command" Command Parameters

Parameter	Type	Description
[no] tca-enable	Parameter type: boolean	<i>optional parameter</i> each queue statistic TCA of this queue
[no] load-thresh	Parameter type: <Qos::PercentThresh> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> The threshold of queue traffic load.
[no] dis-frame-th	Parameter <Qos::QosQueueStatsDiscFramesTcaThreshold> Format: - Qos thresh - range: [0...2147483647]	type: <i>optional parameter with default value: 0</i> The threshold of discarded frames of this queue.
[no] qpeak-usage-th	Parameter type: <Qos::PercentThresh> Format: - Percentage of the QoS Thresh - range: [0...100]	<i>optional parameter with default value: 0</i> The threshold of the per queue traffic peak usage.

21.44 QoS DSL Link Configuration Command

Command Description

Obsolete command, replaced by `configure qos interface (index)`.

This command allows the operator to configure QoS settings on subscriber interfaces. For each subscriber interface the operator can apply scheduling and CAC settings.

A scheduler profile is used to configure egress scheduler settings for egress subscriber interfaces on L3 cards. A CAC profile is used to configure CAC settings for a subscriber interface.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos dsl-port (index) [ no scheduler-profile | scheduler-profile <Qos::SchedulerProfName> ] [
cac-profile <Qos::QosCacProfileName> ]
```

Obsolete command, replaced by `configure qos interface (index)`.

Command Parameters

Table 21.44-1 "QoS DSL Link Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	physical port of a subscriber interface.

Table 21.44-2 "QoS DSL Link Configuration Command" Command Parameters

Parameter	Type	Description

	and software. The currently allowed values can be shown with online-help.	
cac-profile	Parameter type: <Qos::QosCacProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter</i> name of cac profile to be mapped on this subscriber interface.

21.45 QoS LIM Queue Configuration Command

Command Description

Obsolete command, replaced by `configure qos interface (index) queue`.

This command allows the operator to configure a QoS Line Card queue. On the L3 line cards, each DSL interface supports four downstream buffers, which can be configured independently using buffer acceptance control (BAC) profiles.

The operator can configure downstream buffers, such that the total buffer pool is oversubscribed. However, this is not recommended because this allows QoS un-aware packet discard. If the total downstream buffer pool is over-subscribed, the system logs a warning message. Proceed with care, as this allows QoS un-aware packet discard in extreme traffic conditions.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos dsl-port (index) queue (queue) [ queue-profile <Qos::QosQueueProfileName> ]
```

Obsolete command, replaced by `configure qos interface (index) queue`.

Command Parameters

Table 21.45-1 "QoS LIM Queue Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	physical port of a subscriber interface.
(queue)	Format: - output dsl/gpon/epon port queue number - range: [0...7,255]	queue in scope of 1 dsl link on a line-interface-module

Table 21.45-2 "QoS LIM Queue Configuration Command" Command Parameters

Parameter	Type	Description
queue-profile	Parameter type: <Qos::QosQueueProfileName> Format:	<i>optional parameter</i> name of the queue profile

Parameter	Type	Description
	(none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	

21.46 QoS ShdSL Link Configuration Command

Command Description

Obsolete command, replaced by `configure qos interface (index)`.

This command allows the operator to configure Shdsl links. For each Shdsl link the operator can apply scheduling and CAC settings.

A scheduler profile is used to configure egress scheduler settings for each egress Shdsl interface. A CAC profile is used to configure CAC settings for each Shdsl interface.

The Shdsl link table can be configured on the SMLT-H , SMLT-J and NSLT-A units.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos shdsl-port (index) [ scheduler-profile <Qos::QoS Scheduler Profile Name> ] [ cac-profile <Qos::QoS CAC Profile Name> ]
```

Obsolete command, replaced by `configure qos interface (index)`.

Command Parameters

Parameter	Type	Description
	- name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
cac-profile	Parameter type: <Qos::QosCacProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter</i> name of cac profile to be mapped on this dsl link

21.47 QoS LIM Queue (SHDSL) Configuration Command

Command Description

Obsolete command, replaced by `configure qos interface (index) queue`.

This command allows the operator to configure a QoS Line Card queue. On the L3 line cards, each SHDSL interface supports four downstream buffers, which can be configured independently using buffer acceptance control (BAC) profiles.

The operator can configure downstream buffers, such that the total buffer pool is oversubscribed. However, this is not recommended because this allows QoS un-aware packet discard. If the total downstream buffer pool is over-subscribed, the system logs a warning message. Proceed with care, as this allows QoS un-aware packet discard in extreme traffic conditions.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos shdsl-port (index) queue (queue) [ queue-profile <Qos::QosQueueProfileName> ]
```

Obsolete command, replaced by `configure qos interface (index) queue`.

Command Parameters

Table 21.47-1 "QoS LIM Queue (SHDSL) Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	physical port of a shdsl link
(queue)	Format: - output dsl/gpon/epon port queue number - range: [0...7,255]	queue in scope of 1 dsl link on a line-interface-module

The currently allowed values can be shown with online-help.	<i>optional parameter</i> name of the queue profile

21.48 QoS Interface Configuration Command

Command Description

This command allows the operator to configure QoS settings on a user-port Interface. A user-port Interface can be a DSL-link, an Shdsl-link, an Ethernet Line, a Link Aggregation Group or a pon, ont or uni interface. For each Interface the operator can apply scheduling and CAC and shaper settings.

A scheduler node profile is used to configure egress scheduler settings for each egress Interface. A CAC profile is used to configure CAC settings for each Interface. A shaper profile is used to configure downstream flooding shaper settings for each Interface.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos interface (index) [ no scheduler-node | scheduler-node <Qos::SchedulerNodeProfName> ] [ no
ingress-profile | ingress-profile <Qos::QosIngressProfileNameEOnu> ] [ no cac-profile | cac-profile

Resource Identifier	Type	Description
	- the NGPON2 ONT PORT identifier Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 21.48-2 "QoS Interface Configuration Command" Command Parameters

Parameter	Type	Description
[no] scheduler-node	Parameter type: <Qos::SchedulerNodeProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the scheduler-node profile to be mapped on this user-port Interface
[no] ingress-profile	Parameter type: <Qos::QosIngressProfileNameEOnu> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the ingress profile to be mapped on this user-port Interface. It only used for EPON ONU interface current.
[no] cac-profile	Parameter type: <Qos::QosCacProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the cac profile to be mapped on this user-port Interface. For EPON OLT in downstream, this profile used for CAC on 1G PON bandwidth.
[no] ext-cac	Parameter type: <Qos::QosCacProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the cac profile to be mapped on this user-port Interface. For EPON OLT in downstream, this profile used for CAC on 10G PON bandwidth.
[no] ds-queue-sharing	Parameter type: boolean	<i>optional parameter</i>

Parameter	Type	Description
[no] us-queue-sharing	Parameter type: boolean	enable downstream queue sharing <i>optional parameter</i> enable upstream queue sharing
[no] ds-num-queue	Parameter type: <Qos::NumberofQueues> Format: (not-applicable <Qos::NumberofQueues>) Possible values: - not-applicable : not applicable Field type <Qos::NumberofQueues> - number of queues per uni - range: [4,8,1]	<i>optional parameter with default value: 4</i> number of downstream queues per uni
[no] ds-num-rem-queue	Parameter type: <Qos::NumberofQueues> Format: (not-applicable <Qos::NumberofQueues>) Possible values: - not-applicable : not applicable Field type <Qos::NumberofQueues> - number of queues per uni - range: [4,8,1]	<i>optional parameter with default value: 0</i> number of remote downstream queues per ont
[no] us-num-queue	Parameter type: <Qos::NumberofQueues> Format: (not-applicable <Qos::NumberofQueues>) Possible values: - not-applicable : not applicable Field type <Qos::NumberofQueues> - number of queues per uni - range: [4,8,1]	<i>optional parameter with default value: 8</i> number of upstream queues per uni
[no] queue-stats-on	Parameter type: boolean	<i>optional parameter</i> enable queue stats collection for ont uni
[no] autoschedule	Parameter type: boolean	<i>optional parameter</i>
oper-weight	Parameter type: <Qos::QosWeight> Format: - relative weight - range: [0...127]	<i>optional parameter</i> operational weight of the ONT or UNI scheduler
oper-rate	Parameter type: <Qos::ShaperExcessiveInfoRate> Format: - excessive information rate of a shaper - unit: kbps - range: [0...2147483647]	<i>optional parameter</i> Operational rate limit when autoShape enabled for ONT or UNI
[no] us-vlanport-queue	Parameter type: boolean	<i>optional parameter</i> Enable Vlan Port Level Queue Configuration
[no] dsfld-shaper-prof	Parameter type: <Qos::QosShaperProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the shaper profile attached to the pon

21 QoS Configuration Commands

Parameter	Type	Description
[no] bandwidth-profile	Parameter type: <Qos::QosBandwidthProfileName> Format: (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the bandwidth profile.
[no] bandwidth-sharing	Parameter type: <Qos::UniBandwidthSharing> Format: (no-sharing ont-sharing) Possible values: - no-sharing : disable bandwidth sharing - ont-sharing : enable UNI level BW or TCONT sharing across UNIs of an ONT	<i>optional parameter with default value: "no-sharing"</i> enable or disable bandwidth sharing
[no] aggr-usq-profile	Parameter type: <Qos::QosAggrQueuesConfigProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the aggrQueuesConfig profile applied on upstream queues of an UNI.
[no] aggr-dsq-profile	Parameter type: <Qos::QosAggrQueuesConfigProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> the name of the aggrQueuesConfig profile applied on downstream queues of an UNI.
[no] gem-sharing	Parameter type: <Qos::GemSharing> Format: (enable disable not-applicable) Possible values: - enable : enable GEM sharing - disable : disable GEM sharing - not-applicable : not applicable	<i>optional parameter with default value: "disable"</i> enable or disable gem sharing
[no] scheduler-mode	Parameter type: <Qos::SchedulerMode> Format: (subscriber-hierarchy service-hierarchy service-flat) Possible values: - subscriber-hierarchy : Subscriber-based hierarchical	<i>optional parameter with default value: "subscriber-hierarchy"</i> specifies which mode is selected for scheduler

Parameter	Type	Description
	scheduling. This mode achieves subscriber fairness using a Traffic Management hierarchy of subscriber levels. - service-hierarchy : Service-based hierarchical scheduling. This mode achieves subscriber fairness using a Traffic Management hierarchy of subscriber levels, but also takes into account the service priority across all subscribers to achieve service fairness. - service-flat : Service-based scheduling across all subscribers, using a flat class-based scheduler and aggregated queues associated with the physical port (e.g. PON port).	
[no] mc-scheduler-node	Parameter type: <Qos::SchedulerNodeProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	optional parameter with default value: "name" : Multicast_Default" the name of the scheduler-node profile to be mapped on multicast port
[no] bc-scheduler-node	Parameter type: <Qos::SchedulerNodeProfName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	optional parameter with default value: "name" : Broadcast_Default" the name of the scheduler-node profile to be mapped on broadcast port
[no] ds-schedule-tag	Parameter type: <Qos::DsScheduleTag> Format: (egressoutertag cvlantag svlantag) Possible values: - egressoutertag : system default behavior: always the egress outer tag used. - cvlantag : Select downstream scheduler based on the c-vlan. - svlantag : Select downstream scheduler based on the s-vlan.	optional parameter with default value: "egressoutertag" specifies downstream scheduler reference

21.49 QoS Interface Queue Configuration

Command

Command Description

This command allows the operator to configure a QoS Line Card queue. On the L3 line cards, each user-port (DSL-Link, Shdsl-link or Ethernet Line or LA-Group) supports four downstream buffers, which can be configured independently using buffer acceptance control (BAC) profiles.

The operator can configure downstream buffers, such that the total buffer pool is oversubscribed. Please take note that this allows QoS un-aware packet discard under extreme traffic conditions. When the total downstream buffer pool is over-subscribed, the system logs a warning message.

Queue profile none only for epon, queue profile must have a name for other boards.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos interface (index) queue (queue) [ priority <Qos::QosPriority> ] [ weight <Qos::QosWeight> ] [
oper-weight <Qos::QosWeight> ] [ queue-profile <Qos::QosQueueProfName> ] [ shaper-profile
<Qos::QosShaperProfileName> ]
```

Command Parameters

The currently allowed values can be shown with online-help.	<i>optional parameter</i> name of the shaper profile

21.50 QoS Interface Upstream Queue Configuration Command

Command Description

This command allows the operator to configure the upstream queues on the LIM with queue profiles

The operator can configure the upstream queue priority and upstream queue weight along with an option to enable or disable the bandwidth sharing.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos interface (index) upstream-queue (queue) [ no priority | priority <Qos::QosPriority> ] [ no weight |
weight <Qos::QosWeight> ] [ no bandwidth-profile | bandwidth-profile <Qos::QosBandwidthProfileName> ] [ no
ext-bw | ext-bw <Qos::QosBandwidthProfileName> ] [ no bandwidth-sharing | bandwidth-sharing
<Qos::BandwidthSharing> ] [ no queue-profile | queue-profile <Qos::QosQueueProfName> ] [ no shaper-profile |
shaper-profile <Qos::QosShaperProfileName> ]
```

Command Parameters

The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> name of the shaper profile

21.51 QoS Interface Remote Downstream Queue Configuration Command

Command Description

This command allows the operator to configure the downstream queues on the ONT.

The operator can configure the downstream queue priority and downstream queue weight at the ONT.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos interface (index) ds-rem-queue (queue) [ no priority | priority <Qos::QosPriority> ] [ no weight | weight <Qos::QosWeight> ]
```

Command Parameters

21.52 QoS Line Control Packets Rate Limit Configuration Command

Command Description

This command allows the operator to configure police rate and burst per protocol.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos ( no ctrl-pkt-policer (protocol-id) ) | ( ctrl-pkt-policer (protocol-id) [ no sustained-rate |
sustained-rate <Qos::SustainedRate> ] [ no burst-size | burst-size <Qos::DslCtrlBurstSize> ] )
```

Command Parameters

Table 21.52-1 "QoS Line Control Packets Rate Limit Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(protocol-id)	Format: (arp igmp dhcpv4 dhcpv6 icmpv6 cfm pppox) Possible values: - arp : arp - igmp : igmp - dhcpv4 : dhcpv4 - dhcpv6 : dhcpv6 - icmpv6 : icmpv6 - cfm : cfm - pppox : pppox	protocol id for arp, igmp, dhcpv4, dhcpv6, icmpv6, cfm, pppox

Table 21.52-2 "QoS Line Control Packets Rate Limit Configuration Command" Command Parameters

Parameter	Type	Description
[no] sustained-rate	Parameter type: <Qos::SustainedRate> Format: - the police rate of inc user pkts in pps - range: [1...64]	<i>optional parameter with default value: 15</i> police the user incoming packets on all pvc's for the protocol of a

21 QoS Configuration Commands

Parameter	Type	Description
		dsl line.
[no] burst-size	Parameter type: <Qos::DslCtrlBurstSize> Format: - the burst size - range: [1...128]	<i>optional parameter with default value: 10</i> police the user incoming packets on all pvc's for the protocol of a dsl line.

21.53 P-bit Based Scheduling For SC Forwarder Cross Connect/Residential Bridge Configuration Command

Command Description

This command allows the operator to configure the P-bit based scheduling for the S+C VLAN forwarder model for Cross Connect / Residential Bridge.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos pbit-scheduling [ no sc-xcon-us | sc-xcon-us <Qos::PbitSched> ] [ no sc-xcon-dn | sc-xcon-dn <Qos::PbitSched> ] [ no sc-rb-us | sc-rb-us <Qos::PbitSched> ] [ no sc-rb-dn | sc-rb-dn <Qos::PbitSched> ]
```

Command Parameters

Table 21.53-2 "P-bit Based Scheduling For SC Forwarder Cross Connect/Residential Bridge Configuration Command" Command Parameters

Parameter	Type	Description
[no] sc-xcon-us	Parameter type: <Qos::PbitSched> Format: (svlanpbitbased cvlanpbitbased) Possible values: - svlanpbitbased : Upstream p-bits affecting QoS action applies to S-VLAN p-bits and C-VLAN p-bits. Downstream S-VLAN p-bits are copied to User-VLAN p-bits - cvlanpbitbased : Upstream p-bits affecting QoS action applies to S-VLAN p-bits. Downstream C-VLAN p-bits are copied to User-VLAN p-bits	<i>optional parameter with default value: "svlanpbitbased"</i> This objects configure the behavior of pbit scheduling in S+C Vlan Cross Connect in upstream direction
[no] sc-xcon-dn	Parameter type: <Qos::PbitSched> Format: (svlanpbitbased cvlanpbitbased) Possible values: - svlanpbitbased : Upstream p-bits affecting QoS action applies to S-VLAN p-bits and C-VLAN p-bits. Downstream S-VLAN p-bits are copied to User-VLAN p-bits - cvlanpbitbased : Upstream p-bits affecting QoS action	<i>optional parameter with default value: "svlanpbitbased"</i> This objects configure the behavior of pbit scheduling in S+C Vlan Cross Connect in downstream direction

21 QoS Configuration Commands

Parameter	Type	Description
	applies to S-VLAN p-bits. Downstream C-VLAN p-bits are copied to User-VLAN p-bits	
[no] sc-rb-us	Parameter type: <Qos::PbitSched> Format: (svlanpbitbased cvlanpbitbased) Possible values: - svlanpbitbased : Upstream p-bits affecting QoS action applies to S-VLAN p-bits and C-VLAN p-bits. Downstream S-VLAN p-bits are copied to User-VLAN p-bits - cvlanpbitbased : Upstream p-bits affecting QoS action applies to S-VLAN p-bits. Downstream C-VLAN p-bits are copied to User-VLAN p-bits	<i>optional parameter with default value: "svlanpbitbased"</i> This objects configure the behavior of pbit scheduling in S+C Vlan iBridge in upstream direction
[no] sc-rb-dn	Parameter type: <Qos::PbitSched> Format: (svlanpbitbased cvlanpbitbased) Possible values: - svlanpbitbased : Upstream p-bits affecting QoS action applies to S-VLAN p-bits and C-VLAN p-bits. Downstream S-VLAN p-bits are copied to User-VLAN p-bits - cvlanpbitbased : Upstream p-bits affecting QoS action applies to S-VLAN p-bits. Downstream C-VLAN p-bits are copied to User-VLAN p-bits	<i>optional parameter with default value: "cvlanpbitbased"</i> This objects configure the behavior of pbit scheduling in S+C Vlan iBridge in downstream direction

21.54 QoS system level Up Control Packet DSCP/Pbit marking, TC mapping Configuration Command

Command Description

This command allows the operator to configure QoS DSCP, Pbit marking, TC mapping for various protocols control packet in upstream direction.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos ( no up-ctrl-pkt (protocol-id) ) | ( up-ctrl-pkt (protocol-id) [ no dscp | dscp <Qos::dscpvalue> ] [ no pbit | pbit <Qos::pbitvalue> ] [ no tc | tc <Qos::tcvalue> ] )
```

Command Parameters

Table 21.54-1 "QoS system level Up Control Packet DSCP/Pbit marking, TC mapping Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(protocol-id)	Format: (arp igmp dhcpv4 dhcpv6 icmpv6 cfm pppox lacp dot1x) Possible values: - arp : configure DSCP/Pbit marking, TC mapping for arp protocol ctrl packet - igmp : configure DSCP/Pbit marking, TC mapping for igmp protocol ctrl packet - dhcpv4 : configure DSCP/Pbit marking, TC mapping for dhcpv4 protocol ctrl packet - dhcpv6 : configure DSCP/Pbit marking, TC mapping for dhcpv6 protocol ctrl packet - icmpv6 : configure DSCP/Pbit marking, TC mapping for	protocol id for arp, igmp, dhcpv4, dhcpv6, icmpv6, cfm, pppox, lacp, dot1x

Resource Identifier	Type	Description
	icmpv6 protocol ctrl packet - cfm : configure DSCP/Pbit marking, TC mapping for cfm protocol ctrl packet - pppox : configure DSCP/Pbit marking, TC mapping for pppox protocol ctrl packet - lacp : configure DSCP/Pbit marking, TC mapping for lacp protocol ctrl packet - dot1x : configure DSCP/Pbit marking, TC mapping for dot1x protocol ctrl packet	

Table 21.54-2 "QoS system level Up Control Packet DSCP/Pbit marking, TC mapping Configuration Command" Command Parameters

Parameter	Type	Description
[no] dscp	Parameter type: <Qos::dscpvalue> Format: - dscp value range - range: [-1...63]	<i>optional parameter with default value: -1L</i> configure the dscp value
[no] pbit	Parameter type: <Qos::pbitvalue> Format: - pbit value range - range: [-1...7]	<i>optional parameter with default value: 7L</i> configure the P-bit value
[no] tc	Parameter type: <Qos::tcvalue> Format: - traffic class value range - range: [-1...7]	<i>optional parameter with default value: -1L</i> configure the traffic class value

21.55 QoS system level Dn Control Packet DSCP/Pbit marking, TC mapping Configuration Command

Command Description

This command allows the operator to configure QoS DSCP, Pbit marking, TC mapping for various protocols control packet in downstream direction.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos ( no dn-ctrl-pkt (protocol-id) ) | ( dn-ctrl-pkt (protocol-id) [ no dscp | dscp <Qos::dscpvalue> ] [ no pbit | pbit <Qos::pbitvalue> ] [ no tc | tc <Qos::tcvalue> ] )
```

Command Parameters

Table 21.55-1 "QoS system level Dn Control Packet DSCP/Pbit marking, TC mapping Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(protocol-id)	Format: (arp igmp dhcpv4 dhcpv6 icmpv6 cfm pppox lacp dot1x) Possible values: - arp : configure DSCP/Pbit marking, TC mapping for arp protocol ctrl packet - igmp : configure DSCP/Pbit marking, TC mapping for igmp protocol ctrl packet - dhcpv4 : configure DSCP/Pbit marking, TC mapping for dhcpv4 protocol ctrl packet - dhcpv6 : configure DSCP/Pbit marking, TC mapping for dhcpv6 protocol ctrl packet - icmpv6 : configure DSCP/Pbit marking, TC mapping for	protocol id for arp, igmp, dhcpv4, dhcpv6, icmpv6, cfm, pppox, lacp, dot1x

Resource Identifier	Type	Description
	icmpv6 protocol ctrl packet - cfm : configure DSCP/Pbit marking, TC mapping for cfm protocol ctrl packet - pppox : configure DSCP/Pbit marking, TC mapping for pppox protocol ctrl packet - lacp : configure DSCP/Pbit marking, TC mapping for lacp protocol ctrl packet - dot1x : configure DSCP/Pbit marking, TC mapping for dot1x protocol ctrl packet	

Table 21.55-2 "QoS system level Dn Control Packet DSCP/Pbit marking, TC mapping Configuration Command" Command Parameters

Parameter	Type	Description
[no] dscp	Parameter type: <Qos::dscpvalue> Format: - dscp value range - range: [-1...63]	<i>optional parameter with default value: -1L</i> configure the dscp value
[no] pbit	Parameter type: <Qos::pbitvalue> Format: - pbit value range - range: [-1...7]	<i>optional parameter with default value: 7L</i> configure the P-bit value
[no] tc	Parameter type: <Qos::tcvalue> Format: - traffic class value range - range: [-1...7]	<i>optional parameter with default value: -1L</i> configure the traffic class value

21.56 QoS handling of upstream protocols(ARP, PPPoE, DHCPv4/v6,ND and MLD) for DSL LT's Configuration Command

Command Description

This command allows the operator to configure the QoS handling of upstream protocols(ARP, PPPoE, DHCPv4/v6,ND and MLD) for DSL LT's.

User Level

The command can be accessed by operators with qos privileges, and executed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> configure qos upstr-prot-dsl [ [ no ] enable ]
```

Command Parameters

Table 21.56-2 "QoS handling of upstream protocols(ARP, PPPoE, DHCPv4/v6,ND and MLD) for DSL LT's Configuration Command" Command Parameters

Parameter	Type	Description
[no] enable	Parameter type: boolean	<i>optional parameter</i> Enable QoS handling of upstream protocols

22.7 VLAN Protocol-based Configuration Command	22-996
22.8 Vlan Pbit Traffic Counter Configuration Command	22-999
22.9 Vlan Priority Regeneration Profile Configuration Command	22-1002

22.1 VLAN Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "VLAN Configuration Commands".

Command Tree

```

----configure
----vlan
  - [no] broadcast-frames
  - priority-policy
  ----vmac-address-format
    - host-id
  ----[no] id
    - (vlanid)
    - [no] name

 - [no] pbit4
 - [no] pbit5
 - [no] pbit6
 - [no] pbit7

22.2 VLAN General Configuration Command

Command Description

This command allows the operator to specify VLAN parameters that are globally applicable to VLANs:

- *broadcast-frames* : applies to VLANs of type residential bridge. when configured, broadcasting of frames is configurable on a per vlan basis, when the parameter is configured as "no broadcast-frames", downstream broadcast is disabled globally for all vlans.
- *priority-policy* : applies to VLANs of type residential bridge, cross-connect and QoS-aware. Indicates if the priority of upstream frames is selected from the vlan (pvid) or port-default. This configuration is only applicable for untagged user traffic.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan [ [ no ] broadcast-frames ] priority-policy <Vlan::PriorityMap>
```

Command Parameters

Table 22.2-2 "VLAN General Configuration Command" Command Parameters

Parameter	Type	Description
[no] broadcast-frames	Parameter type: boolean	<i>optional parameter</i> broadcasting of frames is configurable per vlan
priority-policy	Parameter type: <Vlan::PriorityMap> Format: (vlan-specific port-default) Possible values: - vlan-specific : the priority of the vlan - port-default : the default priority of the port	<i>optional parameter</i> specifies how to deal with ethernet priority of the upstream frames

22.3 Virtual MAC Configuration Command

Command Description

This command allows the user to configure the format in which a virtual MAC address is defined.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan vmac-address-format [ host-id <Vlan::vmacUniqueHostID> ]
```

Command Parameters

Table 22.3-2 "Virtual MAC Configuration Command" Command Parameters

Parameter	Type	Description
host-id	Parameter type: <Vlan::vmacUniqueHostID> Format: - A unique host Id within an EMAN connected to the same IP edges. Maximum supported value in GPON is 65535. - range: [1...524287]	<i>optional parameter</i> Value of vMac unique host ID.

22.4 VLAN Configuration Command

Command Description

This command allows the operator to specify a VLAN and its attributes.

The VLAN numbering space is the concatenation of a Service Provider VLAN, say S-VLAN-ID, and a Customer VLAN, say C-VLAN-ID. Remark that the S-VLAN-ID is assumed to be unique.

The VLAN-ID value "0" - which is not a valid VLAN-tag value - is used to indicate "not applicable". The value 4097 should not be used as a valid forwarding VLAN.

Following convention applies:

- S-VLAN is identified as (S-VLAN-ID, C-VLAN-ID=0)
- unstacked C-VLAN identified as (C-VLAN-ID>0)
- the S-VLAN is absent or not applicable
- C-VLAN-ID > 0. A constraint exists for VLAN 1: it is reserved as the VLAN-unaware bridge. This VLAN is managed as any other VLAN (i.e. it can be created, modified, removed) but it must be a residential bridged VLAN.
- stacked C-VLAN is identified as (S-VLAN-ID>1, C-VLAN-ID>1)
- RIP will be enabled automatically by default during the creation of VLAN.

The following combination is not allowed:pppoe-relay-tag=configurable, while circuit-id-pppoe and remote-id-pppoe are both disable or customer-id or physical-id.

The circuit-id-pppoe and remote-id-pppoe take effect when the pppoe-relay-tag is configurable.

The pppoe-l2-encaps take effect when the pppoe-relay-tag is true or configurable.

- relay-id-dhcp: This parameter is used to enable/disable relay-id for DHCPv4.

The circuit-id-dhcp, remote-id-dhcp, relay-id-dhcp, dhcp-linerate and dhcp-l2-encaps take effect when the dhcp-opt-82 is true or dhcp-opt82-ext or dhcp-opt82-nni or dhcp-opt82-uplink is enable or add-or-replace or add-or-forward.

- pppoe-l2-encaps: This controls insertion of access loop encapsulation sub-options part of PPPoE relay tag - Refer to (R-164 in TR101) - Datalink byte: ATM or Ethernet autogenerated according to actual encapsulation - Encaps 1 byte : configurable (see further down) - Encaps 2 byte : fixed as NA

- dhcp-l2-encaps: This controls insertion of access loop encapsulation sub-options part of DHCP option 82 - Refer to (R-164 in TR101) - Datalink byte: ATM or Ethernet autogenerated according to actual encapsulation - Encaps 1 byte : configurable (see further down) - Encaps 2 byte : fixed as NA

- dhcpv6-l2-encaps: This controls insertion of access loop encapsulation sub-options part of DHCPv6 relay tag - Refer to (R-164 in TR101) - Datalink byte: ATM or Ethernet autogenerated according to actual encapsulation - Encaps 1 byte : configurable (see further down) - Encaps 2 byte : fixed as NA

- l2-encaps1: This specifies the value of access loop encapsulation sub-options value 1 for DHCPv4, DHCPv6 and PPPoE protocol relay tags

- new-broadcast: applies to VLANs of type residential bridge.The configured value of this parameter has no meaning when broadcast-frames is not enabled at node level, meaning globally for all VLANs

- priority: The selection of the VLAN-based priority can apply provided the priority-policy at node-level is vlan-specific.

- vmac-translation: this configuration value has no effect in case MAC learning is disabled (mac-learn-off).

- Note that vmac-translation, vmac-dnstr-filter and vmac-not-in-opt61 parameters can be enabled only at S-VLAN

level in case of S+C-VLAN CC mode.

- *ipv6-mcast-ctrl*: This parameter is used in the following cases: - on the NGLT-A GPON line card, *ipv6-mcast-ctrl* parameter is used to allow or disallow upstream and downstream IPv6 multicast traffic - for all other line cards, in case no DHCPv6 protocol processing is performed on the line card (i.e. *new-secure-fwd*, *dhcpv6-itf-id*, *dhcpv6-remote-id* and *dhcpv6-relay-id* are all disabled), the *ipv6-mcast-ctrl* parameter is used to control upstream and downstream DHCPv6 multicast traffic

- *drly-srv-usr-side*: This parameter is to enable/disable DHCP(v4/v6) server transparency at the user side when DHCP(v4/v6) relay is enabled. This parameter can be enabled only when Secure forwarding and vMaC translation are both disabled. This parameter is supported only on CC forwarder.

- *dhcpv6-relay-id*: This parameter is used to enable/disable relay-id for DHCPv6

- *pppoer-vlanaware*: This parameter is to configure the number of VLAN tags on the user side upto which PPPoE protocol awareness should be enabled. This configuration is applicable only for S+C CC forwarder.

- *dhcpr-vlanaware*: This parameter is to configure the number of VLAN tags on the user side upto which DHCPv4 protocol awareness should be enabled. This configuration is applicable only for S+C CC forwarder.

- *dhcpv6r-vlanaware*: This parameter is to configure the number of VLAN tags on the user side upto which DHCPv6 protocol awareness should be enabled. This configuration is applicable only for S+C CC forwarder.

User Level

The command can be accessed by operators with *vlan* privileges, and executed by operators with *vlan* privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan ( no id (vlanid) ) | ( id (vlanid) [ no name | name <Vlan::AdminString> ] mode
<Vlan::SystemMode> [ [ no ] sntp-proxy ] [ no priority | priority <Vlan::Priority> ] [ [ no ] vmac-translation ] [ [ no ]

```

Command Parameters

Table 22.4-1 "VLAN Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlanid)	Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	VLAN id

Table 22.4-2 "VLAN Configuration Command" Command Parameters

Parameter	Type	Description
[no] name	Parameter type: <Vlan::AdminString> Format: - char string - length: x<=80	<i>optional parameter with default value: ""</i> VLAN name
mode	Parameter type: <Vlan::SystemMode> Format: (cross-connect residential-bridge qos-aware layer2-terminated mirror) Possible values: - cross-connect : crossconnect vlan - residential-bridge : residential bridge vlan - qos-aware : qos aware vlan - layer2-terminated : layer2 terminated vlan - mirror : mirror vlan	<i>mandatory parameter</i> VLAN mode
[no] sntp-proxy	Parameter type: boolean	<i>optional parameter</i> enable SNTP proxy
[no] priority	Parameter type: <Vlan::Priority> Format: - priority of ethernet frames - range: [0...7]	<i>optional parameter with default value: 0</i> default frame priority
[no] vmac-translation	Parameter type: boolean	<i>optional parameter</i> <i>The parameter is not visible during creation.</i> enable virtual Mac address translation
[no] vmac-dnstr-filter	Parameter type: boolean	<i>optional parameter</i> <i>The parameter is not visible during creation.</i> enable virtual Mac source address downstream blocking
[no] vmac-not-in-opt61	Parameter type: boolean	<i>optional parameter</i>

22 VLAN Configuration Commands

Parameter	Type	Description
		skip vmac translation in dhcp option 61 even when vmac is enabled
[no] new-broadcast	Parameter type: <Vlan::NewStaticBrdcstControl> Format: (inherit enable disable) Possible values: - inherit : for S+C VLAN: inherit from S VLAN level if existing; for S or C VLAN: inherit from default fixed system value (which is disable) - enable : new switch broadcast frames - disable : new disable broadcast frames	<i>optional parameter with default value: "inherit"</i> switch downstream broadcast frames (On GPON and L2+ LT boards, broadcast control for S+C L2 Forwarders can only be controlled at S-VLAN level, not individually at S+C-VLAN level.)
[no] protocol-filter	Parameter type: <Vlan::ProtGroup> Format: (pass-all pass-pppoe pass-ipoe pass-pppoe-ipoe pass-ipv6oe pass-pppoe-ipv6oe pass-ipoe-ipv6oe pass-pppoe-ipoe-ipv6oe) Possible values: - pass-all : pass all traffic - pass-pppoe : pass traffic of PPPoE protocol group - pass-ipoe : pass traffic of IPv4oE protocol group - pass-pppoe-ipoe : pass PPPoE and IPv4oE protocol groups - pass-ipv6oe : pass traffic of IPv6oE protocol group - pass-pppoe-ipv6oe : pass PPPoE and IPv6oE protocol groups - pass-ipoe-ipv6oe : pass IPv4oE and IPv6oE protocol groups - pass-pppoe-ipoe-ipv6oe: pass PPPoE, IPv4oE and IPv6oE protocol groups	<i>optional parameter with default value: "pass-all"</i> control protocol group filters
[no] pppoe-relay-tag	Parameter type: <Vlan::PppoeRelayEnableR3.1> Format: (true false configurable) Possible values: - true : pppoe tag with the current fixed format - false : no pppoe tag - configurable : circuit-id-pppoe and remote-id-pppoe controlling format	<i>optional parameter with default value: "false"</i> configure the format of the PPPoE relay tag
[no] dhcp-opt-82	Parameter type: boolean	<i>obsolete parameter replaced by parameter "dhcp-opt82-ext"</i> The parameter is not visible during creation. enable dhcp option 82 (relay)
[no] dhcp-opt82-ext	Parameter type: <Vlan::DhcpOption82Ext> Format: (enable disable transparent add-or-replace	<i>optional parameter with default value: "disable"</i> The parameter is not visible during creation. control of DHCP option 82

Parameter	Type	Description
	add-or-forward) Possible values: - enable : enable dhcp option 82 (relay) - disable : disable dhcp option 82 (relay) - transparent : pass dhcp option 82 transparently if sent by client (relay) - add-or-replace : add dhcp option 82 if not present or replace the dhcp option 82 if present (relay) - add-or-forward : add dhcp option 82 if not present or forward the dhcp option 82 transparently if sent by client (relay)	
[no] dhcp-opt82-nni	Parameter type: <Vlan::Option82Nni> Format: (enable disable transparent add-or-replace add-or-forward) Possible values: - enable : enable dhcp option 82 on NNI Interface(relay) - disable : disable dhcp option 82 on NNI Interface(relay) - transparent : pass dhcp option 82 transparently if sent by client on NNI Interface(relay) - add-or-replace : add dhcp option 82 if not present or replace the dhcp option 82 if present on NNI Interface(relay) - add-or-forward : add dhcp option 82 if not present or forward the dhcp option 82 transparently if sent by client on NNI Interface(relay)	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> control of DHCP option 82 on NNI Interface
[no] dhcp-opt82-uplink	Parameter type: <Vlan::Option82Uplink> Format: (enable disable transparent add-or-replace add-or-forward) Possible values: - enable : enable dhcp option 82 on UPLINK Interface(relay) - disable : disable dhcp option 82 on UPLINK Interface(relay) - transparent : pass dhcp option 82 transparently if sent by client on UPLINK Interface(relay) - add-or-replace : add dhcp option 82 if not present or replace the dhcp option 82 if present on UPLINK Interface(relay) - add-or-forward : add dhcp option 82 if not present or forward the dhcp option 82 transparently if sent by client on UPLINK Interface(relay)	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> control of DHCP option 82 on UPLINK Interface
[no] circuit-id-dhcp	Parameter type: <Vlan::CircuitIdDhcp> Format: (customer-id physical-id ccsa-format disable) Possible values: - customer-id : customer identity as circuit id - physical-id : physical line identity as circuit id	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> configure the circuit id sub-option for DHCP option-82

22 VLAN Configuration Commands

Parameter	Type	Description
	- ccsa-format : circuit id in ccsa format - disable : no circuit id	
[no] remote-id-dhcp	Parameter type: <Vlan::RemoteIdDhcp> Format: (customer-id disable physical-id) Possible values: - customer-id : customer identity as remote id - disable : no remote id - physical-id : physical line identity as remote id	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> configure the remote id sub-option for DHCP option-82
[no] relay-id-dhcp	Parameter type: <Vlan::RelayIdDhcp> Format: (relay-id disable) Possible values: - relay-id : System MAC + Physical Id as relay id - disable : no relay id	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> configure the relay id sub-option for DHCP option-82
[no] dhcp-linerate	Parameter type: <Vlan::Dhcp-linerate> Format: (notadd addactuallinerate addalllineparameters) Possible values: - notadd : not add DSL linerate for DHCP - addactuallinerate : add DSL actual line up and down rate for DHCP - addalllineparameters : add all DSL line parameters for DHCP	<i>optional parameter with default value: "notadd"</i> <i>The parameter is not visible during creation.</i> configure insertion of the linerate for DHCP protocol
[no] pppoe-linerate	Parameter type: <Vlan::Pppoe-linerate> Format: (notadd addactuallinerate addalllineparameters) Possible values: - notadd : not add DSL linerate for PPPoE - addactuallinerate : add DSL actual line up and down rate for PPPoE - addalllineparameters : add all DSL line parameters for PPPoE	<i>optional parameter with default value: "notadd"</i> <i>The parameter is not visible during creation.</i> configure insertion of the linerate for PPPoE protocol (Only applicable on DSL LT boards, not on GPON LT boards. In case both GPON ports and DSL ports are configured in one VLAN, the pppoe-linerate parameter will only be applied on DSL LT boards.)
[no] dhcpv6-linerate	Parameter type: <Vlan::Dhcpv6-linerate> Format: (notadd addactuallinerate addalllineparameters) Possible values: - notadd : not add DSL linerate for DHCPv6 - addactuallinerate : add DSL actual line up and down rate for DHCPv6 - addalllineparameters : add all DSL line parameters for DHCPv6	<i>optional parameter with default value: "notadd"</i> <i>The parameter is not visible during creation.</i> configure insertion of the linerate for DHCPv6 protocol
[no] pppoe-l2-encaps	Parameter type: <Vlan::PppoeAccessEncap> Format: (notadd add)	<i>optional parameter with default value: "notadd"</i> <i>The parameter is not visible during creation.</i>

Parameter	Type	Description
	Possible values: - notadd : not add access loop encapsulation for PPPoE - add : add access loop encapsulation for PPPoE	configure insertion of access loop encapsulation sub-option for PPPoE relay tag (Only applicable on DSL and ETH LT boards, not on GPON LT boards. In case both GPON ports and DSL/ETH ports are configured in one VLAN, the pppoe-l2-encaps parameter will only be applied on DSL and ETH LT boards.)
[no] dhcp-l2-encaps	Parameter type: <Vlan::DhcpAccessEncap> Format: (notadd add) Possible values: - notadd : not add access loop encapsulation for DHCP - add : add access loop encapsulation for DHCP	<i>optional parameter with default value: "notadd"</i> <i>The parameter is not visible during creation.</i> configure insertion of access loop encapsulation sub-option for DHCP option 82 (Only applicable on DSL and ETH LT boards, not on GPON LT boards. In case both GPON ports and DSL/ETH ports are configured in one VLAN, the dhcp-l2-encaps parameter will only be applied on DSL and ETH LT boards.)
[no] dhcpv6-l2-encaps	Parameter type: <Vlan::Dhcpv6AccessEncap> Format: (notadd add) Possible values: - notadd : not add access loop encapsulation for DHCPv6 - add : add access loop encapsulation for DHCPv6	<i>optional parameter with default value: "notadd"</i> <i>The parameter is not visible during creation.</i> configure insertion of access loop encapsulation sub-option for DHCPv6 (Only applicable on DSL and ETH LT boards, not on GPON LT boards. In case both GPON ports and DSL/ETH ports are configured in one VLAN, the dhcpv6-l2-encaps parameter will only be applied on DSL and ETH LT boards.)
[no] l2-encaps1	Parameter type: <Vlan::AccessLoopEncaps1> Format: (not-applicable untagged single-tagged dual-tagged) Possible values: - not-applicable : not applicable - untagged : set untag as encapsulation1 value - single-tagged : set single-tag as encapsulation1 value - dual-tagged : set dual-tag as encapsulation1 value	<i>optional parameter with default value: "not-applicable"</i> <i>The parameter is not visible during creation.</i> configure the encapsulation 1 value of the access loop encapsulation sub-option for DHCP option 82, DHCPv6 relay tag and PPPoE relay tag
[no] pppoer-vlanaware	Parameter type: <Vlan::PppoeRelayVlanAware> Format: (upto-1-uservlan upto-2-uservlans upto-untag-uservlan system-default) Possible values: - upto-1-uservlan : user VLAN awareness for untagged and	<i>optional parameter with default value: "system-default"</i> <i>The parameter is not visible during creation.</i> configure the number of user VLANs that the PPPoE relay functionality should be aware of

22 VLAN Configuration Commands

Parameter	Type	Description
	single-tagged packets - upto-2-uservlans : user VLAN awareness for untagged, single-tagged and dual-tagged packets - upto-untag-uservlan : user VLAN awareness for only untagged packets - system-default : default user VLAN awareness depends on the forwarder type and board type	
[no] dhcpr-vlanaware	Parameter type: <Vlan::DhcpRelayVlanAware> Format: (upto-1-uservlan upto-2-uservlans upto-untag-uservlan system-default) Possible values: - upto-1-uservlan : user VLAN awareness for untagged and single-tagged packets - upto-2-uservlans : user VLAN awareness for untagged, single-tagged and dual-tagged packets - upto-untag-uservlan : user VLAN awareness for only untagged packets - system-default : default user VLAN awareness depends on the forwarder type and board type	<i>optional parameter with default value: "system-default"</i> <i>The parameter is not visible during creation.</i> configure the number of user VLANs that the DHCP relay functionality should be aware of
[no] dhcpv6r-vlanaware	Parameter type: <Vlan::Dhcpv6RelayVlanAware> Format: (upto-1-uservlan upto-2-uservlans upto-untag-uservlan system-default) Possible values: - upto-1-uservlan : user VLAN awareness for untagged and single-tagged packets - upto-2-uservlans : user VLAN awareness for untagged, single-tagged and dual-tagged packets - upto-untag-uservlan : user VLAN awareness for only untagged packets - system-default : default user VLAN awareness depends on the forwarder type and board type	<i>optional parameter with default value: "system-default"</i> <i>The parameter is not visible during creation.</i> configure the number of user VLANs that the DHCPv6 relay functionality should be aware of
[no] drly-srv-usr-side	Parameter type: <Vlan::DRlySrvAtUsrSide> Format: (enable disable) Possible values: - enable : enable DHCP(v4/v6) server transparency at the user side when DHCP(v4/v6) relay is enabled. - disable : disable DHCP(v4/v6) server transparency at the user side when DHCP(v4/v6) relay is enabled.	<i>optional parameter with default value: "disable"</i> enable DHCP(v4/v6) server transparency at the user side when DHCP(v4/v6) relay is enabled. Only applicable for CC forwarder
[no] circuit-id-pppoe	Parameter type: <Vlan::CircuitIdPppoe> Format: (disable customer-id physical-id ccsa-format) Possible values: - disable : no circuit id - customer-id : customer identity as circuit id - physical-id : physical line identity as circuit id - ccsa-format : circuit id in ccsa format	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> configure the circuit id sub-option for PPPoE relay tag

Parameter	Type	Description
[no] remote-id-pppoe	Parameter type: <Vlan::RemoteIdPppoe> Format: (disable customer-id physical-id) Possible values: - disable : no remote id - customer-id : customer identity as remote id - physical-id : physical line identity as remote id	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> configure the remote id sub-option for PPPoE relay tag
[no] new-secure-fw	Parameter type: <Vlan::NewSecureForward> Format: (inherit disable enable) Possible values: - inherit : inherit new-secure-forwarding - disable : disable new-secure-forwarding - enable : enable new-secure-forwarding	<i>optional parameter with default value: "inherit"</i> enable secure forwarding for the VLAN (On GPON and L2+ LT boards, secure forwarding for S+C L2 Forwarders can only be controlled at S-VLAN level, not individually at S+C-VLAN level.)
[no] aging-time	Parameter type: <Vlan::MacAgingTime> Format: - mac aging time in seconds - unit: sec - range: [-1,10...1000000]	<i>optional parameter with default value: -1</i> configure MAC aging time in seconds; in case of default, the system-level value is applicable.
[no] l2cp-transparent	Parameter type: boolean	<i>optional parameter</i> enable l2cp-transparent
[no] dhcpv6-itf-id	Parameter type: <Vlan::Dhcpv6InterfaceId> Format: (disable customer-id physical-id ccsa-format) Possible values: - disable : no interface id - customer-id : customer identity as interface id - physical-id : physical line identity as interface id - ccsa-format : interface id in ccsa format	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> DHCPv6 interface id control
[no] dhcpv6-remote-id	Parameter type: <Vlan::Dhcpv6RemoteId> Format: (disable customer-id physical-id) Possible values: - disable : no interface id - customer-id : customer identity as interface id - physical-id : physical line identity as interface id	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> DHCPv6 remote id control
[no] dhcpv6-relay-id	Parameter type: <Vlan::Dhcpv6RelayId> Format: (disable duid-ll) Possible values: - disable : no dhcpv6 relay-id - duid-ll : two octet network hardware type code, followed by the link-layer address	<i>optional parameter with default value: "disable"</i> <i>The parameter is not visible during creation.</i> DHCPv6 relay id control
[no] dhcpv6-trst-port	Parameter type: <Vlan::Dhcpv6TrstPort> Format: (trusted untrusted)	<i>optional parameter with default value: "untrusted"</i> <i>The parameter is not visible during creation.</i>

22 VLAN Configuration Commands

Parameter	Type	Description
	Possible values: - trusted : trusted port - untrusted : untrusted port	DHCPv6 trusted port control
[no] enterprise-number	Parameter type: <Vlan::Enterprisenumber> Format: - enterprise number - range: [1...4294967295]	<i>optional parameter with default value: "3561"</i> <i>The parameter is not visible during creation.</i> configure enterprise number for DHCPv6 protocol
[no] icmpv6-sec-fltr	Parameter type: boolean	<i>optional parameter</i> <i>The parameter is not visible during creation.</i> enable icmpv6 secure filter
[no] in-qos-prof-name	Parameter type: <Qos::QosIngressProfileName> Format: (default name : <Qos::IgnoredQosProfileName>) Possible values: - default : default profile name - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "default"</i> QoS ingress profile name
[no] ipv4-mcast-ctrl	Parameter type: boolean	<i>optional parameter</i> enable ipv4 multicast control: forward ipv4 multicast frames in this vlan
[no] ipv6-mcast-ctrl	Parameter type: boolean	<i>optional parameter</i> enable ipv6 multicast control: forward ipv6 multicast frames in this vlan
[no] mac-mcast-ctrl	Parameter type: boolean	<i>optional parameter</i> enable mac multicast control: forward mac multicast frames in this vlan
[no] dis-proto-rip	Parameter type: boolean	<i>optional parameter</i> disable RIP-IPv4 protocol
[no] proto-ntp	Parameter type: boolean	<i>optional parameter</i> enable ntp protocol
[no] dis-ip-antispoof	Parameter type: boolean	<i>optional parameter</i> disable IP anti-spoofing
[no] unknown-unicast	Parameter type: boolean	<i>optional parameter</i> enable unknown unicast flooding
[no] pt2ptgem-flooding	Parameter type: boolean	<i>optional parameter</i> enable flooding on unicast GEM port
[no] mac-movement-ctrl	Parameter type: boolean	<i>optional parameter</i> enable mac movement in this vlan
[no] cvlan4095passthru	Parameter type: <Vlan::cvlan4095Passthru> Format: (passthru not-applicable) Possible values: - passthru : Allow passthru of cvlan 4095 - applicable only for SVLANCC	<i>optional parameter with default value: "not-applicable"</i> enable C-VLAN 4095 tunneling behavior. Only applicable for S-VLAN CC forwarder

Parameter	Type	Description
	- not-applicable : Legacy behavior	
[no] arp-snooping	Parameter type: boolean	<i>optional parameter</i> enable arp snooping
[no] arp-polling	Parameter type: boolean	<i>optional parameter</i> enable arp polling
[no] arp-polling-ip	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> configure ARP polling ip address
[no] mac-unauth	Parameter type: boolean	<i>optional parameter</i> enable mac unauthorized default: forward the frame to this vlan if authorization failed

22.5 VLAN Filtering Database Configuration Command

Command Description

This command allows the operator to specify entries in the Layer 2 filtering database for a specific VLAN and unicast MAC address.

This information is used by the bridge in determining how to propagate a received frame.

Use of this command is disencouraged because it will be obsoleted and replaced in the future by the VLAN Port Filtering Database Configuration command.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan ( no unicast-mac (unicast-mac) vlan-id <Network::StackedVlan> ) | ( unicast-mac (unicast-mac)
vlan-id <Network::StackedVlan> forward-port <Itf::UserPortItf> )
```

Command Parameters

Table 22.5-1 "VLAN Filtering Database Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(unicast-mac)	Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	unicast mac address
vlan-id	Parameter type: <Network::StackedVlan> Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	network vlan id

Table 22.5-2 "VLAN Filtering Database Configuration Command" Command Parameters

Parameter	Type	Description
forward-port	Parameter type: <Itf::UserPortItf> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId>	<i>mandatory parameter</i> forward bridge port

22 VLAN Configuration Commands

Parameter	Type	Description
	- the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE	

22.6 VLAN Port Filtering Database Configuration Command

Command Description

This command allows the operator to specify entries in the Layer 2 filtering database for a specific VLAN Port and unicast MAC address.

This information is used by the bridge in determining how to propagate a received frame.

This command will in time obsolete and replace the VLAN Filtering Database Configuration command. Already now, it must be used in case multiple vlan ports are configured on the same bridge port and attached to the same I-Bridge.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan ( no vlan-port (port) unicast-mac <Vlan::MacAddr> ) | ( vlan-port (port) unicast-mac <Vlan::MacAddr> )
```

Command Parameters

Table 22.6-1 "VLAN Port Filtering Database Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> :	vlan port

Resource Identifier	Type	Description
	- the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
unicast-mac	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	unicast mac address

22.7 VLAN Protocol-based Configuration Command

Command Description

For protocol-based VLANs, this command allows the operator to specify how incoming traffic on a port is allocated to a particular VLAN and priority.

For Ethernet frames, the mapping to either the PPPoE or IPoE protocol is:

- protocol value 0x8863: PPPoE
- protocol value 0x8864: PPPoE
- protocol value 0x0800: IPoE
- protocol value 0x0806: IPoE
- protocol value 0x8035: IPoE

For RFC_1042 frames the mapping to either PPPoE or IPoE protocol is:

- protocol value 0x8863: PPPoE
- protocol value 0x8864: PPPoE
- protocol value 0x0800: IPoE
- protocol value 0x0806: IPoE
- protocol value 0x8035: IPoE

priority: The selection of the priority for upstream frames, in case of a protocol based vlan, is not dependent on the configuration of the priority-policy configured at node level.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan ( no port-protocol (port) protocol-group <Vlan::GroupId> ) | ( port-protocol (port) protocol-group <Vlan::GroupId> vlan-id <Vlan::StackedVlan> priority <Vlan::Priority> )
```

Command Parameters

Table 22.7-1 "VLAN Protocol-based Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> /	identity of a port(e.g. uplink port, atm pvc, efm port, eth port, la group ...)

Resource Identifier	Type	Description
	<code><Eqpt::OntPortId></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / voip</code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / vuni</code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId></code> <code> ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Ng2::OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId></code> <code> ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni)</code> Possible values: - ng2 : ngpon2 style identification Field type <code><Eqpt::RackId></code> - the rack number Field type <code><Eqpt::ShelfId></code> - the shelf number Field type <code><Eqpt::SlotId></code> - the LT slot number Field type <code><Eqpt::PortId></code> - the port number Field type <code><Eqpt::VpiId></code> - atm VPI Field type <code><Eqpt::VcId></code> - atm VCI Field type <code><Eqpt::PonId></code> - the PON identifier Field type <code><Eqpt::ChannelGroupId></code> - the channel group identifier Field type <code><Eqpt::SubChannelGroupId></code> - the subchannel group identifier Field type <code><Eqpt::OntId></code> - the ONT identifier Field type <code><Ng2::OntId></code> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <code><Eqpt::OntSlotId></code> - the ONT SLOT identifier Field type <code><Eqpt::OntPortId></code> - the ONT PORT identifier Field type <code><Eqpt::Ng2OntSlotId></code> - the NGPON2 ONT SLOT identifier Field type <code><Eqpt::Ng2OntPortId></code> - the NGPON2 ONT PORT identifier Field type <code><Eqpt::LLId></code> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
protocol-group	Parameter type: <code><Vlan::GroupId></code> Format: (pppoe ipoe ipv6oe)	protocol group

Resource Identifier	Type	Description
	Possible values: - pppoe : PPPoE - ipoe : IPv4oE - ipv6oe : IPv6oE	

Table 22.7-2 "VLAN Protocol-based Configuration Command" Command Parameters

Parameter	Type	Description
vlan-id	Parameter type: <Vlan::StackedVlan> Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	<i>mandatory parameter</i> protocol group vlan id
priority	Parameter type: <Vlan::Priority> Format: - priority of ethernet frames - range: [0...7]	<i>mandatory parameter</i> priority of protocol based vlan

22.8 Vlan Pbit Traffic Counter Configuration Command

Command Description

This command allows the operator to configure the p-bit traffic counter.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan pbit-statistics ( no port (vlan-port) min-dot1p <Vlan::Dot1pMin> max-dot1p <Vlan::Dot1pMax> )
| ( port (vlan-port) min-dot1p <Vlan::Dot1pMin> max-dot1p <Vlan::Dot1pMax> )
```

Command Parameters

Table 22.8-1 "Vlan Pbit Traffic Counter Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni :	vlan port

	<pre> stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - vlan-port : vlan port - vlan-port:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: </pre>	

Resource Identifier	Type	Description
	- vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE - Possible values: - stacked : stacked vlan identity - Field type <Eqpt::UnstackedVlan> - unstacked vlan id - Field type <Eqpt::SVlan> - service vlan id - Field type <Eqpt::CVlan> - customer vlan id	
min-dot1p	Parameter type: <Vlan::Dot1pMin> Format: - dot1p value range - range: [0...7]	min p-bit value
max-dot1p	Parameter type: <Vlan::Dot1pMax> Format: - dot1p value range - range: [0...7]	max p-bit value

22.9 Vlan Priority Regeneration Profile Configuration Command

Command Description

This command allows the operator to configure a custom priority regeneration profile instead of one of the 10 hard-coded profiles. The priority regeneration profile table stores the p-bit mapping rules that can be used by a L2 Forwarder in the upstream and downstream direction.

User Level

The command can be accessed by operators with `vlan` privileges, and executed by operators with `vlan` privileges.

Command Syntax

The command has the following syntax:

```
> configure vlan ( no priority-regen (profile-idx) ) | ( priority-regen (profile-idx) profile-name <AsamProfileName>
[ no pbit0 | pbit0 <Vlan::NibbleMaskRestricted_0> ] [ no pbit1 | pbit1 <Vlan::NibbleMaskRestricted_1> ] [ no
pbit2 | pbit2 <Vlan::NibbleMaskRestricted_2> ] [ no pbit3 | pbit3 <Vlan::NibbleMaskRestricted_3> ] [ no pbit4 |
pbit4 <Vlan::NibbleMaskRestricted_4> ] [ no pbit5 | pbit5 <Vlan::NibbleMaskRestricted_5> ] [ no pbit6 | pbit6
<Vlan::NibbleMaskRestricted_6> ] [ no pbit7 | pbit7 <Vlan::NibbleMaskRestricted_7> ] )
```

Command Parameters

Table 22.9-1 "Vlan Priority Regeneration Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(profile-idx)	Format: - a unique index value for the priority regeneration profile - range: [11...32]	A unique profile index

Table 22.9-2 "Vlan Priority Regeneration Profile Configuration Command" Command Parameters

Parameter	Type	Description
profile-name	Parameter type: <AsamProfileName> Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	<i>mandatory parameter</i> A unique profile name
[no] pbit0	Parameter type: <Vlan::NibbleMaskRestricted_0> Format: - nibble mask - range: [0...8]	<i>optional parameter with default value: 8</i> pbit mapping corresponding to pbit0
[no] pbit1	Parameter type: <Vlan::NibbleMaskRestricted_1> Format: - nibble mask - range: [0...8]	<i>optional parameter with default value: 8</i> pbit mapping corresponding to pbit1
[no] pbit2	Parameter type: <Vlan::NibbleMaskRestricted_2>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: - nibble mask - range: [0...8]	<i>value: 8</i> pbit mapping corresponding to pbit2
[no] pbit3	Parameter type: <Vlan::NibbleMaskRestricted_3> Format: - nibble mask - range: [0...8]	<i>optional parameter with default value: 8</i> pbit mapping corresponding to pbit3
[no] pbit4	Parameter type: <Vlan::NibbleMaskRestricted_4> Format: - nibble mask - range: [0...8]	<i>optional parameter with default value: 8</i> pbit mapping corresponding to pbit4
[no] pbit5	Parameter type: <Vlan::NibbleMaskRestricted_5> Format: - nibble mask - range: [0...8]	<i>optional parameter with default value: 8</i> pbit mapping corresponding to pbit5
[no] pbit6	Parameter type: <Vlan::NibbleMaskRestricted_6> Format: - nibble mask - range: [0...8]	<i>optional parameter with default value: 8</i> pbit mapping corresponding to pbit6
[no] pbit7	Parameter type: <Vlan::NibbleMaskRestricted_7> Format: - nibble mask - range: [0...8]	<i>optional parameter with default value: 8</i> pbit mapping corresponding to pbit7

23- VLAN Tpid Configuration Commands

23.1 VLAN Tpid Configuration Command Tree	23-1005
23.2 VLAN General Configuration Command	23-1006

23.1 VLAN Tpid Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "VLAN Tpid Configuration Commands".

Command Tree

```
----configure
  ----vlan
    ----[no] tpid
      - (tpid_idx)
      - value
```

23.2 VLAN General Configuration Command

Command Description

This command allows the operator to specify VLAN parameters that are globally applicable to VLANs:

- tpid : vlan tpid.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

> configure vlan (no tpid (tpid_idx)) | (tpid (tpid_idx) value <Vlan::Tpid>)

Command Parameters

Table 23.2-1 "VLAN General Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(tpid_idx)	Format: - vlan tpid index - range: [1...4]	vlan tpid

Table 23.2-2 "VLAN General Configuration Command" Command Parameters

Parameter	Type	Description
value	Parameter type: <Vlan::Tpid> Format: - vlan tpid hex string(example : 8100), scope is 600-ffff - range: [a-fA-F0-9] - length: 1<=x<=4	<i>mandatory parameter</i> This object configures system tpid

 - (prefixandlength)

24.2 Bridge General Configuration Command

Command Description

This command allows the operator to specify the aging time for dynamically learned MAC addresses in the filtering database. The setting is applicable to the entire bridge.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure bridge [ no ageing-time | ageing-time <Vlan::AgingTime> ]
```

Command Parameters

Table 24.2-2 "Bridge General Configuration Command" Command Parameters

Parameter	Type	Description
[no] ageing-time	Parameter type: <Vlan::AgingTime> Format: - ageing time - unit: sec - range: [10...1000000]	<i>optional parameter with default value: 300</i> ageing timeout for dynamic mac entries

24.3 Bridge Port Configuration Command

Command Description

This command allows the operator to specify various parameters applicable to a specific bridge port. These parameters determine the handling of frames on the bridge port.

Priority Regeneration Profile: these profiles are predetermined. Following profiles are available:

- Profile 1: Trusted Port
- Profile 2: Best Effort
- Profile 3: Controlled Load, all priority 3 traffic
- Profile 4: Controlled Load, all priority 4 traffic
- Profile 5: Background
- Profile 6: Best Effort, Controlled Load, Voice
- Profile 7: Best Effort, Controlled Load, Voice according 802.1d Annex G
- Profile 8: Best Effort, Voice
- Profile 9: L2 VPN with 3 traffic classes
- Profile 10: L2 VPN with 4 traffic classes

Details on these profiles can be obtained using a show command.

The parameter 'acceptable-frame-type' controls the format of frames received from the users. The parameter can take either of three values,

single-tagged: This configuration allows the user to send single tagged frames. The VLAN-id of tagged frames will be verified against the configured port-vlan associations. Untagged frames and priority tagged frames will be discarded (in absence of configuration on how to handle untagged and priority tagged frames). Double tagged frames will be discarded. The configuration of this value should be completed with the configuration of:

- one or more port-vlan associations.

The configuration of this value should **not** be combined with the configuration of:

- a port default vlan, or
- a port-protocol default vlan for PPPoE, or
- a terminated PPPoE interface, or
- a port-protocol default vlan for IPoE, or
- a terminated IPoE interface.

untagged: This configuration allows the user to send untagged frames and on some types of HW also priority tagged frames. Processing untagged / priority tagged frames requires additional configuration. Such frames will be discarded in absence of such additional configuration. The configuration of the acceptable-Frame-Type to this value results also in the autonomous creation by the system of an 'IGMP channel' and of an '802.1x Port' associated to this Bridge Port. These objects are created with default values such that the corresponding function is 'disabled'. The configuration this value should be completed with the creation of:

- one or more port-vlan associations and
- a port default vlan, and/or
- a port-protocol default vlan for PPPoE, and/or
- a port-protocol default vlan for IPoE,

or instead of a port-protocol default vlan for PPPoE.

- a terminated PPPoE interface, or

or instead of a port-protocol default vlan for IPoE.

- a terminated IPoE interface.

However, note that this value is **not always strictly forced on all HW**. E.g. some type of LSMs will accept and

forward single tagged frames when the VLAN-id matches a configured port-vlan association. Other type of LSMs will always discard single tagged frame.

Note that for the multivlan feature, tagged user traffic will be sent but the "acceptable frame types" must be set to "untagged".

mixed-untagged: This value allows the user to send single tagged frames, untagged frames, and on some types of HW also priority tagged frames. The VLAN-id of single tagged frames will be verified against the configured port-vlan associations. Untagged / priority tagged frames will be processed according additional configuration. Such frames will be discarded in absence of such additional configuration. The configuration of this value should be completed with the configuration of:

- one or more port-vlan associations, **and**
- a port default vlan, and/or
- a port-protocol default vlan for PPPoE, and/or
- a port-protocol default vlan for IPoE.

default-priority: The selection of the port default-priority can apply provided the priority-policy at node level is port-default.

mac-learn-off : The configuration value has no effect in case the bridge port is used for IpoA CC and EPON boards: the system accepts all values but no mac learning will be done.

max-unicast-mac: The value 65535 indicates that there is not max mac control on vlan port.

Remark: Please note that in case the RADIUS server returns a VLAN for 802.1x authenticated ports, it is recommended to not configure a port default VLAN ID (PVID) on that user port. In any case, the VLAN ID returned by the RADIUS server may not equal the pre- configured PVID on the user port. In addition, the returned VLAN ID by the RADIUS server may not be configured as the PVID on the user port after successful 802.1x authentication.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure bridge ( no port (port) ) | ( port (port) [ no pvid | pvid <Network::StackedVlan> ] [ no default-priority |
default-priority <Vlan::Priority> ] [ [ no ] mac-learn-off ] [ no max-unicast-mac | max-unicast-mac
<Vlan::MaxMac> ] [ no qos-profile | qos-profile <Qos::QosSessionProfileName> ] [ no prio-regen-prof |
prio-regen-prof <Vlan::PrioRegenProfile> ] [ no prio-regen-name | prio-regen-name
<Vlan::PrioRegenProfileName> ] [ no max-committed-mac | max-committed-mac <Vlan::ComitMaxMac> ] [ no
mirror-mode | mirror-mode <Vlan::MirrorMode> ] [ no mirror-vlan | mirror-vlan <Vlan::MirrorVlan> ] [ no
outervlancapture | outervlancapture <Vlan::OuterVlan> ] [ no direction | direction
<Vlan::outerVlanCaptureDirection> ] [ no pvid-tagging-flag | pvid-tagging-flag <Vlan::PvidTaggingFlag> ] [ no
ds-pbit-mode | ds-pbit-mode <Vlan::DSPbitMode> ] [ no default-tpid | default-tpid <Vlan::Tpid> ] )
```

Command Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identity of a port(e.g. uplink port, atm pvc, efm port, eth port, la group ...)

Resource Identifier	Type	Description
	<code><Eqpt::PortId></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> /</code> <code><Eqpt::OntPortId></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / voip</code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / vuni</code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId></code> <code> ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Ng2::OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId></code> <code> ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni)</code> Possible values: - ng2 : ngpon2 style identification Field type <code><Eqpt::RackId></code> - the rack number Field type <code><Eqpt::ShelfId></code> - the shelf number Field type <code><Eqpt::SlotId></code> - the LT slot number Field type <code><Eqpt::PortId></code> - the port number Field type <code><Eqpt::VpiId></code> - atm VPI Field type <code><Eqpt::VciId></code> - atm VCI Field type <code><Eqpt::PonId></code> - the PON identifier Field type <code><Eqpt::ChannelGroupId></code> - the channel group identifier Field type <code><Eqpt::SubChannelGroupId></code> - the subchannel group identifier Field type <code><Eqpt::OntId></code> - the ONT identifier Field type <code><Ng2::OntId></code> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <code><Eqpt::OntSlotId></code> - the ONT SLOT identifier Field type <code><Eqpt::OntPortId></code> - the ONT PORT identifier Field type <code><Eqpt::Ng2OntSlotId></code> - the NGPON2 ONT SLOT identifier Field type <code><Eqpt::Ng2OntPortId></code> - the NGPON2 ONT PORT identifier Field type <code><Eqpt::LLId></code> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Table 24.3-2 "Bridge Port Configuration Command" Command Parameters

24 Bridge Configuration Commands

Parameter	Type	Description
[no] pvid	Parameter type: <Network::StackedVlan> Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	<i>optional parameter with default value: "stacked : 0 : 4097"</i> The parameter is not visible during creation. default vlan id for untagged frames
[no] default-priority	Parameter type: <Vlan::Priority> Format: - priority of ethernet frames - range: [0...7]	<i>optional parameter with default value: 0</i> priority to be set in upstream frames
[no] mac-learn-off	Parameter type: boolean	<i>optional parameter</i> disable self learning of mac address
[no] max-unicast-mac	Parameter type: <Vlan::MaxMac> Format: - number of unicast mac addresses - range: [1...65535]	<i>optional parameter with default value: "1"</i> max uncommitted unicast mac addresses
[no] qos-profile	Parameter type: <Qos::QosSessionProfileName> Format: (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> qos profile name
[no] prio-regen-prof	Parameter type: <Vlan::PrioRegenProfile> Format: (none trusted-port best-effort cl-all-prio-3 cl-all-prio-4 background be-cl-voice be-cl-1d-voice be-voice l2-vpn-3 l2-vpn-4 11 12 13 14 15 16	<i>optional parameter with default value: "none"</i> priority regeneration profile

Parameter	Type	Description
	17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32) Possible values: - none : default value - trusted-port : trusted port - best-effort : best effort - cl-all-prio-3 : controlled load, all priority 3 traffic - cl-all-prio-4 : controlled load, all priority 4 traffic - background : background - be-cl-voice : best effort, controlled load, voice - be-cl-1d-voice : best effort, controlled load, 802.1d Annex G voice - be-voice : best effort voice - l2-vpn-3 : L2 VPN with 3 traffic classes - l2-vpn-4 : L2 VPN with 4 traffic classes - 11 : operator-defined profile - 12 : operator-defined profile - 13 : operator-defined profile - 14 : operator-defined profile - 15 : operator-defined profile - 16 : operator-defined profile - 17 : operator-defined profile - 18 : operator-defined profile - 19 : operator-defined profile - 20 : operator-defined profile - 21 : operator-defined profile - 22 : operator-defined profile - 23 : operator-defined profile - 24 : operator-defined profile - 25 : operator-defined profile - 26 : operator-defined profile - 27 : operator-defined profile - 28 : operator-defined profile - 29 : operator-defined profile - 30 : operator-defined profile - 31 : operator-defined profile - 32 : operator-defined profile	
[no] prio-regen-name	Parameter type: <Vlan::PrioRegenProfileName> Format: (none name : <Vlan::IgnoredVlanProfileName>) Possible values: - none : no profile name to associate	<i>optional parameter with default value: "none"</i> priority regeneration profile name

24 Bridge Configuration Commands

Parameter	Type	Description
	- name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
[no] max-committed-mac	Parameter type: <Vlan::ComitMaxMac> Format: - number of unicast mac addresses - range: [0...128,65535]	<i>optional parameter with default value: "65535"</i> max committed unicast mac addresses. 65535 means the committed value is the same as max-unicast-mac
[no] mirror-mode	Parameter type: <Vlan::MirrorMode> Format: (disable overwrite-outer-vlan insert-mirror-vlan) Possible values: - disable : disable mirror vlan tag - overwrite-outer-vlan : overwrite outer vlan tag with mirror vlan tag - insert-mirror-vlan : prepend mirror vlan tag to outer vlan tag	<i>optional parameter with default value: "disable"</i> flow mirroring mode of the bridge port
[no] mirror-vlan	Parameter type: <Vlan::MirrorVlan> Format: - mirroring vlan id - range: [0...4093]	<i>optional parameter with default value: 0</i> vlan-id to be inserted into mirrored packets. This configuration value has no effect in case mirroring mode of the bridgeport is disabled (mirror-mode).
[no] outervlancapture	Parameter type: <Vlan::OuterVlan> Format: - outer vlan id - range: [0...4093]	<i>optional parameter with default value: 0</i> specify outer VLAN which has to be matched for mirroring the packets received on bridge port.
[no] direction	Parameter type: <Vlan::outerVlanCaptureDirection> Format: (ingress egress bidirection) Possible values: - ingress : enable mirroring in ingress - egress : enable mirroring in egress - bidirection : enable mirroring in both directions	<i>optional parameter with default value: "bidirection"</i> The direction on which the packets has to be captured and mirrored.
[no] pvid-tagging-flag	Parameter type: <Vlan::PvidTaggingFlag> Format: (onu olt) Possible values: - onu : pvid is handled in ONU. - olt : pvid is handled in OLT.	<i>optional parameter with default value: "onu"</i> pvid will be tagged in ONU or in OLT.
[no] ds-pbit-mode	Parameter type: <Vlan::DSPbitMode> Format: (auto translated transparency filtervlanandpbit)	<i>optional parameter with default value: "auto"</i> downstream p-bits mode

Parameter	Type	Description
	Possible values: - auto : transparency for DSL and translated for GPON - translated : for known p-bits the inverse translation is performed in downstream; unknown p-bits are forwarded unchanged in downstream - transparency : all p-bits are forwarded unchanged in downstream - filtervlanandpbit : for matched vlan and p-bit the inverse translation is performed in downstream; unmatched are discarded in downstream	
[no] default-tpid	Parameter type: <Vlan::Tpid> Format: - vlan tpid hex string(example : 8100), scope is 600-ffff - range: [a-fA-F0-9] - length: 1<=x<=4	<i>optional parameter with default value: "8100"</i> configure default outer tpid

24.4 Bridge Port to VLAN Association Configuration Command

Command Description

This command allows the operator to associate a VLAN to a bridge port and to define VLAN attributes on this port. The parameters that allow to configure the priority bits (prior-best-effort till prior-nw-ctrl) only apply in case of a qos-aware VLAN.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure bridge port (port) ( no vlan-id (index) ) | ( vlan-id (index) [ no tag | tag <Vlan::PortUntagStatus> ] [ no
network-vlan | network-vlan <Network::StackedVlan> ] [ no l2fwder-vlan | l2fwder-vlan <Network::StackedVlan>
] [ no vlan-scope | vlan-scope <Vlan::VlanScope> ] [ no qos | qos <Vlan::QosPolicy> ] [ no qos-profile | qos-profile
<Qos::QosSessionProfileName> ] [ [ no ] prior-best-effort ] [ [ no ] prior-background ] [ [ no ] prior-spare ] [ [ no ]
prior-exc-effort ] [ [ no ] prior-ctrl-load ] [ [ no ] prior-less-100ms ] [ [ no ] prior-less-10ms ] [ [ no ] prior-nw-ctrl ]
[ no in-qos-prof-name | in-qos-prof-name <Qos::QosIngressProfileNameForVlan> ] [ no max-up-qos-policy |
max-up-qos-policy <Vlan::MaxUpQoSPolicy> ] [ no max-ip-antispoof | max-ip-antispoof
<Vlan::MaxIpAntispoof> ] [ no max-unicast-mac | max-unicast-mac <Vlan::BridgeMaxMac> ] [ no
max-ipv6-antisfpf | max-ipv6-antisfpf <Vlan::MaxIpAntispoof> ] [ no mac-learn-ctrl | mac-learn-ctrl
<Vlan::MacLearnCtrl> ] [ no min-cvlan-id | min-cvlan-id <Vlan::MinCVlanId> ] [ no max-cvlan-id | max-cvlan-id
<Vlan::MaxCVlanId> ] [ no ds-dedicated-q | ds-dedicated-q <Vlan::DsDedicatedQueue> ] [ no tpid | tpid
<Vlan::Tpid> ] [ no inner-pbit-remark | inner-pbit-remark <Vlan::InnerPbitRemark> ] [ no groupid | groupid
<Vlan::GroupId> ] [ no usacceptframetype | usacceptframetype <Vlan::USAcceptFrameType> ] [ no
oltregenprofile | oltregenprofile <Vlan::OltRegenProfile> ] )
```

Command Parameters

(index)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndexStacked> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096]	vlan id

Resource Identifier	Type	Description
	Field type <Vlan::SVlanIndexStacked> - service vlan identity - range: [1...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	

Table 24.4-2 "Bridge Port to VLAN Association Configuration Command" Command Parameters

Parameter	Type	Description
[no] tag	Parameter type: <Vlan::PortUntagStatus> Format: (untagged single-tagged priority-tagged) Possible values: - untagged : untagged outgoing frames - single-tagged : singletagged outgoing frames - priority-tagged : prioritytagged outgoing frames	<i>optional parameter with default value: "untagged"</i> tag control for egress port
[no] network-vlan	Parameter type: <Network::StackedVlan> Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	<i>obsolete parameter replaced by parameter "l2fwder-vlan"</i> network vlan id
[no] l2fwder-vlan	Parameter type: <Network::StackedVlan> Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	<i>optional parameter with default value: "stacked : 0 : 4097"</i> layer2 forwarder vlan id
[no] vlan-scope	Parameter type: <Vlan::VlanScope> Format: (network l2fwder local) Possible values: - network : network wide scope	<i>optional parameter with default value: "l2fwder"</i> the vlan scope

Parameter	Type	Description
	obsolete alternative replaced by l2fwder - l2fwder : l2 forwarder scope - local : local scope	
[no] qos	Parameter type: <Vlan::QosPolicy> Format: (priority : <Vlan::Priority> profile : none profile : trusted-port profile : best-effort profile : cl-all-prio-3 profile : cl-all-prio-4 profile : background profile : be-cl-voice profile : be-cl-1d-voice profile : be-voice profile : l2-vpn-3 profile : l2-vpn-4 profile : 11 profile : 12 profile : 13 profile : 14 profile : 15 profile : 16 profile : 17 profile : 18 profile : 19 profile : 20 profile : 21 profile : 22 profile : 23 profile : 24 profile : 25 profile : 26 profile : 27 profile : 28 profile : 29 profile : 30 profile : 31 profile : 32 prio-regen-name : none prio-regen-name : name : <Vlan::IgnoredVlanProfileName>) Possible values: - priority : fixed priority identify - profile : regeneration profile identify - prio-regen-name : priority regeneration profile name Field type <Vlan::Priority> - priority of ethernet frames - range: [0...7] Possible values: - none : default value - trusted-port : trusted port - best-effort : best effort - cl-all-prio-3 : controlled load, all priority 3 traffic - cl-all-prio-4 : controlled load, all priority 4 traffic - background : background - be-cl-voice : best effort, controlled load, voice	<i>optional parameter with default value: "profile : none"</i> the qos policy

24 Bridge Configuration Commands

Parameter	Type	Description
	- be-cl-1d-voice : best effort, controlled load, 802.1d Annex G voice - be-voice : best effort voice - l2-vpn-3 : L2 VPN with 3 traffic classes - l2-vpn-4 : L2 VPN with 4 traffic classes - 11 : operator-defined profile - 12 : operator-defined profile - 13 : operator-defined profile - 14 : operator-defined profile - 15 : operator-defined profile - 16 : operator-defined profile - 17 : operator-defined profile - 18 : operator-defined profile - 19 : operator-defined profile - 20 : operator-defined profile - 21 : operator-defined profile - 22 : operator-defined profile - 23 : operator-defined profile - 24 : operator-defined profile - 25 : operator-defined profile - 26 : operator-defined profile - 27 : operator-defined profile - 28 : operator-defined profile - 29 : operator-defined profile - 30 : operator-defined profile - 31 : operator-defined profile - 32 : operator-defined profile Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
[no] qos-profile	Parameter type: <Qos::QosSessionProfileName> Format: <pre>(none name : <Qos::IgnoredQosProfileName>)</pre> Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "none"</i> qos profile name
[no] prior-best-effort	Parameter type: boolean	<i>optional parameter</i> enable best effort priority (value 0)
[no] prior-background	Parameter type: boolean	<i>optional parameter</i> enable background priority (value 1)
[no] prior-spare	Parameter type: boolean	<i>optional parameter</i> enable spare priority (value 2)
[no] prior-exc-effort	Parameter type: boolean	<i>optional parameter</i> enable the excellent effort priority (value 3)
[no] prior-ctrl-load	Parameter type: boolean	<i>optional parameter</i>

Parameter	Type	Description
		enable the controlled load priority (value 4)
[no] prior-less-100ms	Parameter type: boolean	<i>optional parameter</i> enable video <100ms latency and jitter priority (value 5)
[no] prior-less-10ms	Parameter type: boolean	<i>optional parameter</i> enable video <10ms latency and jitter priority (value 6)
[no] prior-nw-ctrl	Parameter type: boolean	<i>optional parameter</i> enable the network controlled priority (value 7)
[no] in-qos-prof-name	Parameter type: <Qos::QosIngressProfileNameForVlan> Format: (default name : <Qos::IgnoredQosProfileName>) Possible values: - default : default profile name - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "name : Default_TC0"</i> <i>The parameter is not visible during modification.</i> a pointer to the Qos Profile that maps pbits to TCs on a VLAN port basis
[no] max-up-qos-policy	Parameter type: <Vlan::MaxUpQoSPolicy> Format: - the max number of Qos Policy numbers (ACL and CCL) on a VLAN port basis - range: [0...8]	<i>optional parameter with default value: "0"</i> the max number of Qos Policy numbers (ACL and CCL) on a VLAN port basis
[no] max-ip-antispoof	Parameter type: <Vlan::MaxIpAntispoof> Format: - the max number of IP Antispoofing on a VLAN port basis - range: [0...32,65535]	<i>optional parameter with default value: "65535"</i> the max number of IP address number in IP antispoofing and/or ARP relay
[no] max-unicast-mac	Parameter type: <Vlan::BridgeMaxMac> Format: - number of unicast mac addresses - range: [0...65535,65535]	<i>optional parameter with default value: "65535"</i> max uncommitted unicast mac addresses
[no] max-ipv6-antispf	Parameter type: <Vlan::MaxIpAntispoof> Format: - the max number of IP Antispoofing on a VLAN port basis - range: [0...32,65535]	<i>optional parameter with default value: "65535"</i> the max number of IPV6 address number in IP antispoofing and/or ARP relay
[no] mac-learn-ctrl	Parameter type: <Vlan::MacLearnCtrl> Format: - MAC addresses shall be learned 1: mac-learn is enabled 2: mac-learn is disabled 3: mac-learn is inherited from bridge port - range: [1...3]	<i>optional parameter with default value: "3"</i> MAC address learned control up(1), down(2), inherit from bridgedPort(3)
[no] min-cvlan-id	Parameter type: <Vlan::MinCVlanId> Format: - Lower boundary of CVLAN range for protocol awareness - range: [1...4095]	<i>optional parameter with default value: "1"</i> This object configures the lower boundary of CVLAN range for protocol awareness for S-VLAN cross-connect(Tunnel)
[no] max-cvlan-id	Parameter type: <Vlan::MaxCVlanId> Format: - Upper boundary of CVLAN range for protocol awareness - range: [1...4095]	<i>optional parameter with default value: "4095"</i> This object configures the upper boundary of CVLAN range for

24 Bridge Configuration Commands

Parameter	Type	Description
		protocol awareness for S-VLAN cross-connect(Tunnel)
[no] ds-dedicated-q	Parameter type: <Vlan::DsDedicatedQueue> Format: (enable disable) Possible values: - enable : enable use of downstream dedicated Q - disable : disable use of downstream dedicated Q	<i>optional parameter with default value: "disable"</i> Packets use dedicated downstream PON level queue
[no] tpid	Parameter type: <Vlan::Tpid> Format: - vlan tpid hex string(example : 8100), scope is 600-ffff - range: [a-fA-F0-9] - length: 1<=x<=4	<i>optional parameter with default value: "0"</i> This object configures vlan port tpid
[no] inner-pbit-remark	Parameter type: <Vlan::InnerPbitRemark> Format: (untouched remark) Possible values: - untouched : disable use of pbit remark in tunnel mode - remark : enable use of pbit remark in tunnel mode	<i>optional parameter with default value: "untouched"</i> Set pbit remark in tunnel mode, untouched(1), remark(2)
[no] groupid	Parameter type: <Vlan::GroupID> Format: - vlan group id to share the policer instance - range: [0...8192]	<i>optional parameter with default value: "0"</i> This object configures vlan group id to share the policer instance, 0 means no group or not sharing policer instance
[no] usacceptframetype	Parameter type: <Vlan::USAcceptFrameType> Format: (all untagandpriority untagged) Possible values: - all : the upstream rule should allow all types of Ethernet frames which received from the UNI port to pass - untagandpriority : the upstream rule should only allow untag and priority tagged Ethernet frames which received from the UNI port to pass - untagged : the upstream rule should only allow untag Ethernet frames which received from the UNI port to pass	<i>optional parameter with default value: "all"</i> This object specifies the frame types that should be forwarded or not in upstream.
[no] oltregenprofile	Parameter type: <Vlan::OltRegenProfile> Format: (disabled enabled) Possible values: - disabled : ONU will do regeneration profile in S+C tunnel mode,not on OLT side - enabled : OLT will do regeneration profile in S+C tunnel mode,not on ONU side	<i>optional parameter with default value: "disabled"</i> Set pbit regeneration profile on OLT in S+C tunnel mode, enabled(1), disabled(0)

Command Output

Table 24.4-3 "Bridge Port to VLAN Association Configuration Command" Display parameters

Specific Information		
name	Type	Description
prio-regen-name	Parameter type: <Vlan::PrioRegenProfileName>	priority regeneration profile name

name	Type	Description
	(none name : <Vlan::IgnoredVlanProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>This element is only shown in detail mode.</i>

24.5 L2 Static User Ip Address Configuration Command

Command Description

This command allows the operator to configure the IP-address for a user interface(vlan-port) of a L2 forwarder.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

> configure bridge port (port) vlan-id (index) static-user (no ip-address (ipaddr)) | (ip-address (ipaddr))

Command Parameters

Table 24.5-1 "L2 Static User Ip Address Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	identity of a port(e.g. uplink port, atm pvc, efm port, eth port, la group ...)

Resource Identifier	Type	Description
	- the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Ng2::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(index)	Format: <pre>(<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndexStacked> : <Vlan::CVlanIndex>)</pre> Possible values: - stacked : stacked vlan identity - Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] - Field type <Vlan::SVlanIndexStacked> - service vlan identity - range: [1...4093] - Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan id
(ipaddr)	Format: <pre><Ip::V4Address> / <Ip::PrefixLengthArpRelay></pre> Field type <Ip::V4Address> - IPv4-address - Field type <Ip::PrefixLengthArpRelay> - IP address prefix length [23.....32] for dsl - range: [8...32]	inetaddress

24.6 L2 Static User Ipv6 Address Configuration Command

Command Description

This command allows the operator to configure the IPv6-address for a user interface(vlan-port) of a L2 forwarder.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> configure bridge port (port) vlan-id (index) static-user ( no ipv6-address (prefixandlength) ) | ( ipv6-address (prefixandlength) )
```

Command Parameters

Table 24.6-1 "L2 Static User Ipv6 Address Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	identity of a port(e.g. uplink port, atm pvc, efm port, eth port, la group ...)

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(index)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndexStacked> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndexStacked> - service vlan identity - range: [1...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan id
(prefixandlength)	Format: <ipv6::Prefix> / <ipv6::PrefixLengthLimited> Field type <ipv6::Prefix> - IPv6-address Field type <ipv6::PrefixLengthLimited> - length of IPv6 address or prefix - range: [49...64,128]	ipv6 address prefix

25- VLAN Tpid Configuration Commands

25.1 VLAN Tpid Configuration Command Tree	25-1031
25.2 VLAN General Configuration Command	25-1032

25.1 VLAN Tpid Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "VLAN Tpid Configuration Commands".

Command Tree

```
----configure
  ----bridge
    ----port
      ----(port)
        ----vlan-tpid0
          - (num)
          - [no] tpid
```

25.2 VLAN General Configuration Command

Command Description

This command allows the operator to specify VLAN parameters that are globally applicable to VLANs:

- *tpid* : vlan tpid.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

> configure bridge port (port) vlan-tpid0 (num) [no tpid | tpid <Vlan::Tpid>]

Command Parameters

Table 25.2-1 "VLAN General Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	identity of a port(e.g. uplink port, atm pvc, efm port, eth port, la group ...)

Resource Identifier	Type	Description
	- the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Ng2::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(num)	Format: - the tpid number 1 - range: [0]	the value of the tpid index

Table 25.2-2 "VLAN General Configuration Command" Command Parameters

Parameter	Type	Description
[no] tpid	Parameter type: <Vlan::Tpid> Format: - vlan tpid hex string(example : 8100), scope is 600-ffff - range: [a-fA-F0-9] - length: 1<=x<=4	<i>optional parameter with default value: "8100"</i> the value of the tpid

26- VLAN Tpid Configuration Commands

26.1 VLAN Tpid Configuration Command Tree	26-1035
26.2 VLAN General Configuration Command	26-1036

26.1 VLAN Tpid Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "VLAN Tpid Configuration Commands".

Command Tree

```
----configure
  ----bridge
    ----port
      ----(port)
        ----vlan-tpid1
          - (num)
          - [no] tpid
```

26.2 VLAN General Configuration Command

Command Description

This command allows the operator to specify VLAN parameters that are globally applicable to VLANs:

- *tpid* : vlan tpid.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

> configure bridge port (port) vlan-tpid1 (num) [no tpid | tpid <Vlan::Tpid>]

Command Parameters

Table 26.2-1 "VLAN General Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	identity of a port(e.g. uplink port, atm pvc, efm port, eth port, la group ...)

Resource Identifier	Type	Description
	- the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Ng2::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(num)	Format: - the number of the tpid number - range: [1]	the value of the tpid index

Table 26.2-2 "VLAN General Configuration Command" Command Parameters

Parameter	Type	Description
[no] tpid	Parameter type: <Vlan::Tpid> Format: - vlan tpid hex string(example : 8100), scope is 600-ffff - range: [a-fA-F0-9] - length: 1<=x<=4	<i>optional parameter with default value: "0"</i> the value of the tpid

27- Li_VLAN Configuration Commands

27.1 Li_VLAN Configuration Command Tree	27-1039
27.2 li_vlan Li Configuration Command	27-1040

27.1 Li_VLAN Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "Li_VLAN Configuration Commands".

Command Tree

```
----configure
  ----li_vlan
    - vlan-id
```

27.2 li_vlan Li Configuration Command

Command Description

This command allows the operator to configure lawful interception parameters.

Note: Many system management parameters are supported but are not included in this guide as the NE uses default values.

User Level

The command can be accessed by operators with all,admin,li_user privileges, and executed by operators with all,admin,li_user privileges.

Command Syntax

The command has the following syntax:

```
> configure li_vlan vlan-id <Sec::LiVlanID>
```

Command Parameters

Table 27.2-2 "li_vlan Li Configuration Command" Command Parameters

Parameter	Type	Description
vlan-id	Parameter type: <Sec::LiVlanID> Format: - vlan-id, 0: default livlan - range: [0...4093]	<i>optional parameter</i> vlan id range [1...4093]

28- ARP-RELAY Configuration Commands

28.1 ARP-RELAY Configuration Command Tree	28-1042
28.2 Arp-Relay Statistics Configuration Command	28-1043

28.1 ARP-RELAY Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "ARP-RELAY Configuration Commands".

Command Tree

```
----configure
  ----arp-relay
    ----[no] statistics
      - (vlan-port)
```

28.2 Arp-Relay Statistics Configuration Command

Command Description

This command allows the operator to enable/disable the detailed arp-relay statistics.

User Level

The command can be accessed by operators with ip privileges, and executed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> configure arp-relay ( no statistics (vlan-port) ) | ( statistics (vlan-port) )
```

Command Parameters

Table 28.2-1 "Arp-Relay Statistics Configuration Command" Resource Parameters

Resource Identifier	Type	Description

29.2 IGMP Channel Configuration Command

Command Description

This command allows the operator to create and configure the IGMP channel parameters.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp ( no channel (port) ) | ( channel (port) [ no perm-pkg-bitmap | perm-pkg-bitmap
<Igmp::PermPkgBitMap> ] [ no max-num-group | max-num-group <Igmp::ChannelMaxNumGroup> ] [ no mode |
mode <Igmp::ChannelProtocolMode> ] [ (cac-disable) ] [ (ip-anti-spoof-dis) ] [ no igmp-version | igmp-version
<Igmp::UserItfVersion> ] [ no forking | forking <Igmp::ForkingStatus> ] [ no lt-ont-signaling | lt-ont-signaling
<Igmp::ChannelLtOntSignaling> ] [ no mc-pbit-value | mc-pbit-value <Igmp::McPbitValue> ] [ no mcast-vlan-id |
mcast-vlan-id <Igmp::ProtocolMcastVlan> ] [ no mc-vlan-xlate | mc-vlan-xlate <Igmp::mcVlanXlateAdmin> ] [ no
mcast-svc-context | mcast-svc-context <Igmp::McastSvcCtxtName> ] [ no max-msg-rate | max-msg-rate
<Igmp::ChannelMaxMsgRate> ] )
```

Command Parameters

Table 29.2-1 "IGMP Channel Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan>	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VcId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId>	

Resource Identifier	Type	Description
	- the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 29.2-2 "IGMP Channel Configuration Command" Command Parameters

[illegible]

29 IGMP Configuration Commands

Parameter	Type	Description
	- range: [0...2048]	refer to the product information document for detail.
[no] mode	Parameter type: <Igmp::ChannelProtocolMode> Format: (ipoe pppoe) Possible values: - ipoe : IPoE mode - pppoe : PPPoE mode	<i>optional parameter with default value: "ipoe"</i> protocol mode (ipoe or pppoe)
(cac-disable)	Format: (cac-disable cac) Possible values: - cac-disable : disables bandwidth CAC for conf. streams,default=enable - cac : enables bandwidth CAC for conf. streams,default=enable	<i>obsolete parameter that will be ignored</i> bandwidth CAC for pre-configured multicast streams
(ip-anti-spoof-dis)	Format: (ip-anti-spoof-dis ip-anti-spoof) Possible values: - ip-anti-spoof-dis : disables IP@ anti-spoofing,default=enable - ip-anti-spoof : enables IP@ anti-spoofing,default=enable	<i>obsolete parameter that will be ignored</i> enables IP@ anti-spoofing on this user-interface
[no] igmp-version	Parameter type: <Igmp::UserIrfVersion> Format: (system-inherited 2 3) Possible values: - system-inherited : inherits GMQs to user version from the system level - 2 : IGMPV2 GMQs - 3 : IGMPV3 GMQs	<i>optional parameter with default value: "system-inherited"</i> version of the IGMP protocol
[no] forking	Parameter type: <Igmp::ForkingStatus> Format: (system-inherited enable disable) Possible values: - system-inherited : inherits forking status from the system level - enable : enable IGMP forking - disable : disable IGMP forking	<i>optional parameter with default value: "system-inherited"</i> forking status of the IGMP protocol
[no] lt-ont-signaling	Parameter type: <Igmp::ChannelLtOntSignaling> Format: (enabled disabled inherited) Possible values: - enabled : lt to ont signaling is enabled - disabled : lt to ont signaling is disabled - inherited : inherits lt to ont signaling from the system level	<i>optional parameter with default value: "inherited"</i> <i>The parameter is not visible during modification.</i> lt to ont signaling parameter
[no] mc-pbit-value	Parameter type: <Igmp::McPbitValue> Format: - default P-bit value to be used by the ONT on the UNI-side for downstream multicast traffic towards subscribers	<i>optional parameter with default value: 8</i> default P-bit value to be used by the ONT on the UNI-side for

Parameter	Type	Description
	- range: [0...8]	downstream multicast traffic towards subscribers
[no] mcast-vlan-id	Parameter type: <Igmp::ProtocolMcastVlan> Format: - vlan selection value - range: [0...4093]	<i>optional parameter with default value: 0</i> vlan selection for multicast channel
[no] mc-vlan-xlate	Parameter type: <Igmp::mcVlanXlateAdmin> Format: (enabled disabled) Possible values: - enabled : allow mcast vlan translation - disabled : disallow mcast vlan translation	<i>optional parameter with default value: "disabled"</i> to enable or disable mcast vlan translation
[no] mcast-svc-context	Parameter type: <Igmp::McastSvcCtxtName> Format: (name : <Qos::IgnoredQosProfileName> default) Possible values: - default : Default profile is associated - name : Name of the multicast service context profile Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>optional parameter with default value: "default"</i> Multicast Service Context Name
[no] max-msg-rate	Parameter type: <Igmp::ChannelMaxMsgRate> Format: - Maximum number of Upstream IGMP messages that can be received on this IGMP channel - unit: messages/second - range: [0...256]	<i>optional parameter with default value: 0</i> Default value 0 indicates that the value is inherited from what is set in the system wide setting using command - configure qos dsl-ctrl-pkt-policer sustained-rate [1...64] burst-size [1...128]

29.3 IGMP Channel Permission Package Members Configuration Command

Command Description

This command allows the operator to configure the IGMP channel permission package members.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp channel (port) ( no fullview-packages (package) ) | ( fullview-packages (package) )
```

Command Parameters

Table 29.3-1 "IGMP Channel Permission Package Members Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId>	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	<pre> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier </pre>	

29 IGMP Configuration Commands

	Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
(package)	Format: - the package number - range: [1...1024]	package member

29.4 IGMP Channel Preview Package Members Configuration Command

Command Description

This command allows the operator to configure the IGMP channel preview package members.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp channel (port) ( no preview-packages (package) ) | ( preview-packages (package) )
```

Command Parameters

Table 29.4-1 "IGMP Channel Preview Package Members Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId>	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description

29.5 IGMP Package Bitmaps Configuration

Command

Command Description

This command allows the operator to configure IGMP package bitmaps. The package is intended primarily for use by a network/element manager, such as an AMS, to support multiple sets of packages in different regions.

A package is a group of zero or more multicast sources that share a common access permission. Grouping the source channels into one or more packages provides flexibility for the service provider to deliver different levels of services to the end users; for example, "Basic Package", "Middle-Tier Package", and "Premium Package".

NOTE: There is no requirement to configure the package. If the package is modified, there is no effect on the multicast source.

User Level

The command can be accessed by operators with `igmp` privileges, and executed by operators with `igmp` privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp package (index) [ no name | name <Igmp::igmpPackageName> ] [ no template-name |
template-name <Igmp::igmpPackageTemplateName> ] [ no template-version | template-version
<Igmp::igmpPackageTemplateVersion> ]
```

Command Parameters

Table 29.5-1 "IGMP Package Bitmaps Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of the package - range: [1...1024]	index of the package

Table 29.5-2 "IGMP Package Bitmaps Configuration Command" Command Parameters

Parameter	Type	Description
[no] name	Parameter type: <Igmp::igmpPackageName> Format: - a printable string - length: x<=32	optional parameter with default value: "" name of the package
[no] template-name	Parameter type: <Igmp::igmpPackageTemplateName> Format: - a printable string - length: x<=32	optional parameter with default value: "" name of the service template containing this pkg
[no] template-version	Parameter type: <Igmp::igmpPackageTemplateVersion> Format: - version of the service template containing this package	optional parameter with default value: 0 version of the service template

Parameter	Type	Description
	- range: [0...65535]	containing this pkg

29.6 IGMP System Configuration Command

Command Description

This command allows the operator to configure the IGMP parameters that are globally applicable to the Node.

When Configure igmp system uncfg-mcast-supp = asmandssm this works properly if only one SSM/ASM channel per multicast destination address per vlan is distributed in the network, and if the end-users only send IGMPv3 joins for source addresses matching these distributed channels. These restrictions should be respected, else it is recommended to permit only configured SSM, i.e. Configure igmp system uncfg-mcast-supp = legacy.

If Uncfg-mcast-supp goes from AsmandSsm to Legacy, there is a transient period during a few GMI periods before full Legacy behaviour is achieved

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp system [ no src-ip-address | src-ip-address <Ip::V4Address> ] [ [ no ] verify-checksum ] [ no
query-interval | query-interval <Igmp::SystemQueryInterval> ] [ no max-rsp-time | max-rsp-time
<Igmp::SystemQueryMaxResponseTime> ] [ no robustness | robustness <Igmp::SystemRobustness> ] [ no
mem-query-int | mem-query-int <Igmp::MembQueryIntvl> ] [ no last-memb-cnt | last-memb-cnt
<Igmp::MembQueryCount> ] [ no last-max-rsp-tim | last-max-rsp-tim <Igmp::SystemLastMembMaxRespTime>
] [ no host-report-intv | host-report-intv <Igmp::SystemUnsolicitedReportIntvl> ] [ [ no ] start ] [ no preview-valid |
preview-valid <Igmp::SystemPrevalidIntval> ] [ no cdr-validation | cdr-validation
<Igmp::SystemPrecdrvalidIntval> ] [ [ no ] cdr-generation ] [ no except-cdr-rate | except-cdr-rate
<Igmp::CDRGenerationForSingles> ] [ no cdr-export | cdr-export <Igmp::CDRGenerationMethod> ] [ no
cdr-file-aging | cdr-file-aging <Igmp::CDRFileAgingTime> ] [ no cdr-polling | cdr-polling
<Igmp::CDRSystemPollingCycle> ] [ no user-igmp-version | user-igmp-version
<Igmp::igmpSystemGMQToUserSideVersion> ] [ no netw-igmp-version | netw-igmp-version
<Igmp::V3ProcessingAdminStatus> ] [ no v3-max-num-rec | v3-max-num-rec
<Igmp::V3MaxNumRecordsReport> ] [ [ no ] forking ] [ [ no ] lt-ont-signaling ] [ [ no ] vlan-selection ] [ [ no ]
disc-lwr-version ] [ no uncfg-mcast-supp | uncfg-mcast-supp <Igmp::igmpSystemUncfgMcastSupport> ]
```

Command Parameters

Table 29.6-2 "IGMP System Configuration Command" Command Parameters

Parameter	Type	Description
[no] src-ip-address	Parameter type: <Ip::V4Address> Format: - IPv4-address	optional parameter with default value: "0.0.0.0" source ip addr which is tx in every mcast IP datagram
[no] verify-checksum	Parameter type: boolean	optional parameter verification performed on Rx mcast frame
[no] query-interval	Parameter type: <Igmp::SystemQueryInterval>	optional parameter with default

Parameter	Type	Description
	Format: - interval at which general membership queries transmitted - unit: sec - range: [2...3175]	<i>value: 125</i> interval at which general membership queries transmitted
[no] max-rsp-time	Parameter type: <Igmp::SystemQueryMaxResponseTime> Format: - max query response time advertised in queries - unit: 1/10 sec - range: [1...31744]	<i>optional parameter with default value: 100</i> max query response time advertised in queries 1/10 sec
[no] robustness	Parameter type: <Igmp::SystemRobustness> Format: - tuning for the expected packet loss on a subnet - range: [1...10]	<i>optional parameter with default value: 2</i> expected pkt loss on subnet
[no] mem-query-int	Parameter type: <Igmp::MembQueryIntvl> Format: - spacing between GSQs (group-specific queries) - unit: 1/10 sec - range: [2...31744]	<i>optional parameter with default value: 10</i> minimum interval between group-specific queries
[no] last-memb-cnt	Parameter type: <Igmp::MembQueryCount> Format: - number of GSQs (group-specific queries) to be sent - range: [1...10]	<i>optional parameter with default value: 2</i> number of GSQs (group-specific queries) to be sent
[no] last-max-rsp-tim	Parameter type: <Igmp::SystemLastMembMaxRespTime> Format: - allows shorter max response time - unit: 1/10 sec - range: [1...31744]	<i>optional parameter with default value: 2</i> allows shorter max response time
[no] host-report-intv	Parameter type: <Igmp::SystemUnsolicitedReportIntvl> Format: - interval of repetitions of host's report of grp membership - unit: 1/10 sec - range: [1...255]	<i>optional parameter with default value: 10</i> interval of repetitions of host's report of grp membership
[no] start	Parameter type: boolean	<i>optional parameter</i> start Mcast app module
[no] preview-valid	Parameter type: <Igmp::SystemPrevalidIntval> Format: - time interval that confirm the preview session is valid - unit: sec - range: [1...120]	<i>optional parameter with default value: 8</i> time interval that confirm the preview session is valid
[no] cdr-validation	Parameter type: <Igmp::SystemPrecdrvalidIntval> Format: (none <Igmp::SystemPrecdrvalidIntval>) Possible values: - none : CDR generation valid immediately Field type <Igmp::SystemPrecdrvalidIntval> - minimum session time for generating a CDR - unit: sec - range: [0...120]	<i>optional parameter with default value: 2</i> minimum session time for generating a CDR
[no] cdr-generation	Parameter type: boolean	<i>optional parameter</i> start CDR generation in the system
[no] except-cdr-rate	Parameter type: <Igmp::CDRGenerationForSingles> Format: - limit the generation of CDR records - unit: min - range: [1...30]	<i>optional parameter with default value: 3</i> limit the generation of the CDR records

29 IGMP Configuration Commands

Parameter	Type	Description
[no] cdr-export	Parameter type: <Igmpp::CDRGenerationMethod> Format: (local-file-storage remote-logging) Possible values: - local-file-storage : method the cdr generated and forwarded - remote-logging : remote logging method	<i>optional parameter with default value: "local-file-storage"</i> the method the cdr is to be generated and forwarded
[no] cdr-file-aging	Parameter type: <Igmpp::CDRFileAgingTime> Format: - configure the CDR file aging time - unit: hour - range: [4...24]	<i>optional parameter with default value: 8</i> configure the CDR file aging time
[no] cdr-polling	Parameter type: <Igmpp::CDRSystemPollingCycle> Format: - configure the polling period for the CDR records, in multiples of 60 - unit: sec - range: [60...900]	<i>optional parameter with default value: 180</i> configure the polling period for the CDR records
[no] user-igmp-version	Parameter type: <Igmpp::igmpSystemGMQToUserSideVersion> Format: (2 3) Possible values: - 2 : IGMPv2 GMQs - 3 : IGMPv3 GMQs	<i>optional parameter with default value: "3"</i> version of the IGMP protocol
[no] netw-igmp-version	Parameter type: <Igmpp::V3ProcessingAdminStatus> Format: (2 3) Possible values: - 2 : IGMP version2 - 3 : IGMP version3	<i>optional parameter with default value: "3"</i> version for IGMP packet to receive/forward to n/w side
[no] v3-max-num-rec	Parameter type: <Igmpp::V3MaxNumRecordsReport> Format: - max number of records in an IGMPv3 membership report - range: [0...10]	<i>optional parameter with default value: 3</i> max num of group records in one IGMPv3 or MLDv2 report (2 exp N)
[no] forking	Parameter type: boolean	<i>optional parameter</i> enable IGMP forking in the system level
[no] lt-ont-signaling	Parameter type: boolean	<i>optional parameter</i> enables lt to ont signaling at system level
[no] vlan-selection	Parameter type: boolean	<i>optional parameter</i> enable vlan selection
[no] disc-lwr-version	Parameter type: boolean	<i>optional parameter</i> discard lower version packets
[no] uncfg-mcast-supp	Parameter type: <Igmpp::igmpSystemUncfgMcastSupport> Format: (legacy asmandssm) Possible values: - legacy : enable un-configured SSM and ASM support for GPON LTs and un-configured ASM support alone for DSL LTs - asmandssm : enable unconfigured SSM and ASM support	<i>optional parameter with default value: "legacy"</i> enable un-configured SSM/ASM support for GPON/DSL LT cards

Parameter	Type	Description
	for GPON and DSL LT cards	

29.7 IGMP System CDR Type Configuration

Command

Command Description

This command allows the operator to configure the IGMP system Call Detail Record

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp system cdr-type [ [ no ] periodic ] [ no period | period <Igmp::IntermGenCDRPeriod> ] [ [ no ] attempt-max-pview ] [ [ no ] attempt-blackout ] [ [ no ] attempt-no-perm ]
```

Command Parameters

Table 29.7-2 "IGMP System CDR Type Configuration Command" Command Parameters

Parameter	Type	Description
[no] periodic	Parameter type: boolean	<i>optional parameter</i> interim CDR records generated for fullview/preview
[no] period	Parameter type: <Igmp::IntermGenCDRPeriod> Format: - intermediate CDR generation period, in multiples of 5 - unit: min - range: [15...60]	<i>optional parameter with default value: 15</i> intermediate CDR generation period
[no] attempt-max-pview	Parameter type: boolean	<i>optional parameter</i> CDR generated when max nbr preview exceeded is true
[no] attempt-blackout	Parameter type: boolean	<i>optional parameter</i> CDR generated allowed when blackout period is active
[no] attempt-no-perm	Parameter type: boolean	<i>optional parameter</i> CDR generated to join a mcast with no access rights

29.8 IGMP Vlan System Configuration Command

Command Description

This command allows the operator to configure the IGMP parameters on a per Vlan basis.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp ( no vlan (vlan-id) ) | ( vlan (vlan-id) netw-igmp-version <Igmp::VlanV3ProcessStatus> [ no
v3-max-num-rec | v3-max-num-rec <Igmp::V3MaxNumRecordReport> ] )
```

Command Parameters

Table 29.8-1 "IGMP Vlan System Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: - vlan index - range: [1...4093]	index of the system vlan

Table 29.8-2 "IGMP Vlan System Configuration Command" Command Parameters

Parameter	Type	Description
netw-igmp-version	Parameter type: <Igmp::VlanV3ProcessStatus> Format: (2 3) Possible values: - 2 : IGMP version2 - 3 : IGMP version3	<i>mandatory parameter</i> IGMP version of the protocol
[no] v3-max-num-rec	Parameter type: <Igmp::V3MaxNumRecordReport> Format: - max num of group records in one IGMPv3 or MLDv2 report (2 exp N) - range: [0...10]	<i>optional parameter with default value: 3</i> max num of group records in one IGMPv3 report (2 exp N)

29.9 IGMP Multicast Vlan Translation Command

Command Description

This command allows the operator configure source-pon vlan translation.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp ( no mc-vlan-xlate (nwvlan) ) | ( mc-vlan-xlate (nwvlan) ponvlan <Igmp::mcPonVlanId> )
```

Command Parameters

Table 29.9-1 "IGMP Multicast Vlan Translation Command" Resource Parameters

Resource Identifier	Type	Description
(nwvlan)	Format: - the multicast vlan id - range: [2...4093]	identification of the network-side virtual lan

Table 29.9-2 "IGMP Multicast Vlan Translation Command" Command Parameters

Parameter	Type	Description
ponvlan	Parameter type: <Igmp::mcPonVlanId> Format: - vlan index - range: [1...4093]	<i>mandatory parameter</i> identification of the pon-side virtual lan

29.10 IGMP Multicast Pon Vlan Translation Command

Command Description

This command allows the operator configure source-pon vlan translation on pon port.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure igmp ( no mc-pon-vlan-xlate (pon) nwvlan <Igmp::mcSrcVlanId> ) | ( mc-pon-vlan-xlate (pon) nwvlan <Igmp::mcSrcVlanId> ponvlan <Igmp::mcPonVlanId> )
```

Command Parameters

Table 29.10-1 "IGMP Multicast Pon Vlan Translation Command" Resource Parameters

Resource Identifier	Type	Description
(pon)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	identification of the pon interface
nwvlan	Parameter type: <Igmp::mcSrcVlanId> Format: - the multicast vlan id - range: [2...4093]	identification of the network-side virtual lan

Table 29.10-2 "IGMP Multicast Pon Vlan Translation Command" Command Parameters

Parameter	Type	Description
ponvlan	Parameter type: <Igmp::mcPonVlanId> Format: - vlan index - range: [1...4093]	<i>mandatory parameter</i> identification of the pon-side virtual lan

29.11 Igmp Multicast Service Context Configuration Command

Command Description

This command allows the operator to configure multicast service context

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

> configure igmp (no mcast-svc-context (name)) | (mcast-svc-context (name))

Command Parameters

Table 29.11-1 "Igmp Multicast Service Context Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	A unique profile name for the service context

```

30.2 Multicast General Group Configuration Command

Command Description

This command allows the operator to configure general multicast parameters.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast general [ [ no ] fast-change ] [ no pkg-memb-bitmap | pkg-memb-bitmap
<Igmp::PkgMemBitMap> ] [ no max-bitrate | max-bitrate <Igmp::GeneralMcastMaxBitRate> ] [ no mean-bit-rate |
mean-bit-rate <Igmp::GeneralMcastMeanBitRate> ]
```

Command Parameters

Table 30.2-2 "Multicast General Group Configuration Command" Command Parameters

Parameter	Type	Description
[no] fast-change	Parameter type: boolean	<i>optional parameter</i> enable fast channel change
[no] pkg-memb-bitmap	Parameter type: <Igmpp::PkgMemBitMap> Format: - a binary string - length: 128	<i>optional parameter with default value:</i> "ff : ff :" package(s) a class D address belongs
[no] max-bitrate	Parameter type: <Igmpp::GeneralMcastMaxBitRate> Format: - reasonable max bitrate in ATM level for upstream - unit: kbps - range: [0...100000]	<i>optional parameter with default value:</i> 2500 reasonable downstream max bitrate in ATM level

Parameter	Type	Description
[no] mean-bit-rate	Parameter type: <Icmp::GeneralMcastMeanBitRate> Format: - reasonable mean bitrate in ATM level for upstream - unit: kbps - range: [0...100000]	<i>optional parameter with default value: 2500</i> reasonable downstream mean bitrate in ATM level

30.3 General Multicast Package Members Configuration Command

Command Description

This command allows the operator to configure the IGMP general multicast package members.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

> configure mcast general (no package-member (package)) | (package-member (package))

Command Parameters

Table 30.3-1 "General Multicast Package Members Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(package)	Format: - the package number - range: [1...1024]	package member

30.4 Multicast Capacity Configuration Command

Command Description

This command allows the operator to configure the multicast capacity parameters.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast capacity [ no max-num-group | max-num-group <Igmp::McastCapacityMaxNumGroup> ] [ no
max-num-uncfg | max-num-uncfg <Igmp::McastCapacityMaxNumUnCfg> ] [ no cfg-res-time | cfg-res-time
<Igmp::multicastCapacityCfgSourceReserveTime> ] [ no uncfg-res-time | uncfg-res-time
<Igmp::multicastCapacityUnCfgSourceReserveTime> ]
```

Command Parameters

Table 30.4-2 "Multicast Capacity Configuration Command" Command Parameters

Parameter	Type	Description
[no] max-num-group	Parameter type: <Igmp::McastCapacityMaxNumGroup> Format: - no of groups the system can support in enough bandwidth (actual value depends on card capacity) - range: [0...2048]	<i>optional parameter with default value: 1024</i> max number of groups the system (per LT) supports in enough bandwidth
[no] max-num-uncfg	Parameter type: <Igmp::McastCapacityMaxNumUnCfg> Format: - no of uncfg grps,system can support in enough bandwidth (actual value depends on card capacity) - range: [0...2048]	<i>optional parameter with default value: 64</i> max number of uncfg groups the system (per LT) supports in enough bandwidth
[no] cfg-res-time	Parameter type: <Igmp::multicastCapacityCfgSourceReserveTime> Format: - time to reserve - unit: sec - range: [0...2147483647]	<i>optional parameter with default value: 125</i> time to reserve the unused guaranteed configured groups
[no] uncfg-res-time	Parameter type: <Igmp::multicastCapacityUnCfgSourceReserveTime> Format: - time to reserve - unit: sec - range: [0...2147483647]	<i>optional parameter with default value: 0</i> time to reserve the unused unconfigured groups

30.5 Multicast Channel Configuration Command

Command Description

Obsolete command, replaced by `configure mcast chn`.

This command allows the operator to configure the multicast channel.

Note:Mcast channel can not be deleted when VlanSelection is enabled.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast ( no channel (grp-ip-addr) src-ip-addr <Ip::V4Address> ) | ( channel (grp-ip-addr) src-ip-addr
<Ip::V4Address> [ [ no ] dis-fast-change ] [ no pkg-mem-bitmap | pkg-mem-bitmap <Igmp::PkgMemBitMap> ] [
no name | name <Igmp::multicastSrcName> ] [ [ no ] guaranteed-serv ] [ no peak-bit-rate | peak-bit-rate
<Igmp::McastSrcEtherPeakBitRate> ] vlan-id <Igmp::McastSrcVLANID> [ no service-name | service-name
<Igmp::multicastSrcServiceName> ] [ no preview-duration | preview-duration
<Igmp::multicastSrcMaxPreDuration> ] [ no preview-number | preview-number
<Igmp::multicastSrcMaxPreNumber> ] [ no preview-blackout | preview-blackout
<Igmp::multicastSrcPreBlackout> ] )
```

Obsolete command, replaced by `configure mcast chn`.

Command Parameters

Table 30.5-1 "Multicast Channel Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr),range:0.0.0.0....224.0.0.255

Table 30.5-2 "Multicast Channel Configuration Command" Command Parameters

Parameter	Type	Description
[no] dis-fast-change	Parameter type: boolean	<i>optional parameter</i> disable fast channel change
[no] pkg-mem-bitmap	Parameter type: <Igmpp::PkgMemBitMap> Format: - a binary string - length: 128	<i>optional parameter with default value:</i> "01 : 00 : 00 : 00 : 00 : 00 : : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 : 00 :

Parameter	Type	Description
		00 : indicates to which package(s) a mcast channel belongs
[no] name	Parameter type: <Igmp::multicastSrcName> Format: - a printable string - length: x<=32	<i>optional parameter with default value: ""</i> name of the mcast channel
[no] guaranteed-serv	Parameter type: boolean	<i>optional parameter</i> enable guaranteed service
[no] peak-bit-rate	Parameter type: <Igmp::McastSrcEtherPeakBitRate> Format: - peak bit rate for transmit/downstream traffic - unit: kbps - range: [0...100000]	<i>optional parameter with default value: 2125</i> <i>The parameter is not visible during modification.</i> ethernet peak bit rate for downstream traffic
vlan-id	Parameter type: <Igmp::McastSrcVLANID> Format: - VLAN for this multicast source - range: [1...4093]	<i>mandatory parameter</i> <i>The parameter is not visible during modification.</i> VLAN for this multicast channel
[no] service-name	Parameter type: <Igmp::multicastSrcServiceName> Format: - a printable string - length: x<=32	<i>optional parameter with default value: ""</i> name of service or service provider of the mcast channel
[no] preview-duration	Parameter type: <Igmp::multicastSrcMaxPreDuration> Format: - reasonable max duration for each preview per mcast grp - unit: sec - range: [1...6000]	<i>optional parameter with default value: 180</i> Maximum duration for each preview per multicast channel
[no] preview-number	Parameter type: <Igmp::multicastSrcMaxPreNumber> Format: - valid max no. of previews for each preview per mcast grp - range: [1...100]	<i>optional parameter with default value: 3</i> Max number of previews for each preview per mcast group
[no] preview-blackout	Parameter type: <Igmp::multicastSrcPreBlackout> Format: - valid preview Blackout Duration time of per mcast group - unit: sec - range: [0...7200]	<i>optional parameter with default value: 0</i> Preview Blackout Duration time of per multicast channel

30.6 Multicast Channel Package Members Configuration Command

Command Description

This command allows the operator to configure the multicast channel package members.

A multicast channel can be member of maximum 20 packages or be member of all (1024) packages, any value in between will be rejected.

Using this command packages will be added or removed from/to the list of packages of which the multicast channel is currently a member.

If the multicast channel is member of all packages care must be taken when removing packages, meaning that the command will only be accepted if after execution the multicast channel will be member of 20 packages or less.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast channel (grp-ip-addr)src-ip-addr <Ip::V4Address> ( no packagemember (package) ) | ( packagemember (package) )
```

Command Parameters

Table 30.6-1 "Multicast Channel Package Members Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr),range:0.0.0.0....255.255.255.255
(package)	Format: - the package number - range: [1...1024]	package member

30.7 Multicast Channel Configuration Command

Command Description

This command allows the operator to configure the multicast channel.

Note: Mcast channel can not be deleted when VlanSelection is enabled.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast ( no chn (grp-ip-addr) src-ip-addr <Ip::V4Address> vlan-id <Igmp::McastChannelVlan> ) | ( chn
(grp-ip-addr) src-ip-addr <Ip::V4Address> vlan-id <Igmp::McastChannelVlan> [ no end-ip-addr | end-ip-addr
<Ip::V4Address> ] [ no mcast-svc-context | mcast-svc-context <Igmp::McastSvcCtxtName> ] [ [ no ]
dis-fast-change ] [ no pkg-mem-bitmap | pkg-mem-bitmap <Igmp::PkgMemBitMap> ] [ no name | name
<Igmp::multicastSrcName> ] [ [ no ] guaranteed-serv ] [ no peak-bit-rate | peak-bit-rate
<Igmp::McastSrcEtherPeakBitRate> ] [ no service-name | service-name <Igmp::multicastSrcServiceName> ] [ no
preview-duration | preview-duration <Igmp::multicastSrcMaxPreDuration> ] [ no preview-number |
preview-number <Igmp::multicastSrcMaxPreNumber> ] [ no preview-blackout | preview-blackout
<Igmp::multicastSrcPreBlackout> ] )
```

Command Parameters

Table 30.7-1 "Multicast Channel Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr),range:0.0.0.0....255.255.255.255
vlan-id	Parameter type: <Igmp::McastChannelVlan> Format: - vlan id for multicast - range: [1...4093]	vlanid of the multicast channel which is configured in it

Table 30.7-2 "Multicast Channel Configuration Command" Command Parameters

Parameter	Type	Description
[no] end-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	optional parameter with default value: "0.0.0.0" The parameter is not visible during modification. end ip address of the range of

Parameter	Type	Description
	- range: [1...6000]	
[no] preview-number	Parameter type: <Icmp::multicastSrcMaxPreNumber> Format: - valid max no. of previews for each preview per mcast grp - range: [1...100]	<i>optional parameter with default value: 3</i> Max number of previews for each preview per mcast group
[no] preview-blackout	Parameter type: <Icmp::multicastSrcPreBlackout> Format: - valid preview Blackout Duration time of per mcast group - unit: sec - range: [0...7200]	<i>optional parameter with default value: 0</i> Preview Blackout Duration time of per multicast channel

30.8 Multicast Channel Package Members Configuration Command

Command Description

This command allows the operator to configure the multicast channel package members.

A multicast channel can be member of maximum 20 packages or be member of all (1024) packages, any value in between will be rejected.

Using this command packages will be added or removed from/to the list of packages of which the multicast channel is currently a member.

If the multicast channel is member of all packages care must be taken when removing packages, meaning that the command will only be accepted if after execution the multicast channel will be member of 20 packages or less.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast chn (grp-ip-addr)src-ip-addr <Ip::V4Address>vlan-id <Igmp::McastChannelVlan> ( no
packagemember (package) ) | ( packagemember (package) )
```

Command Parameters

Table 30.8-1 "Multicast Channel Package Members Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr),range:0.0.0.0....255.255.255.255
vlan-id	Parameter type: <Igmp::McastChannelVlan> Format: - vlan id for multicast - range: [1...4093]	vlanid of the multicast channel which is configured in it
(package)	Format: - the package number - range: [1...1024]	package member

30.9 Multicast Ipv6 Channel Configuration Command

Command Description

This command allows the operator to configure the multicast Ipv6 channel.

Note: Mcast channel can not be deleted when VlanSelection is enabled.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast ( no ipv6-chn (grp-ipv6-addr) src-ipv6-addr <Igmp::IPv6Address> vlan-id
<Igmp::McastChannelVlan> ) | ( ipv6-chn (grp-ipv6-addr) src-ipv6-addr <Igmp::IPv6Address> vlan-id
<Igmp::McastChannelVlan> [ no end-ipv6-addr | end-ipv6-addr <Igmp::MulticastV6Address> ] [ no
mcast-svc-context | mcast-svc-context <Igmp::McastSvcCtxtName> ] [ [ no ] dis-fast-change ] [ no
pkg-mem-bitmap | pkg-mem-bitmap <Igmp::PkgMemBitMap> ] [ no name | name <Igmp::multicastSrcName> ] [ [
no ] guaranteed-serv ] [ no peak-bit-rate | peak-bit-rate <Igmp::McastSrcEtherPeakBitRate> ] [ no service-name |
service-name <Igmp::multicastSrcServiceName> ] [ no preview-duration | preview-duration
<Igmp::multicastSrcMaxPreDuration> ] [ no preview-number | preview-number
<Igmp::multicastSrcMaxPreNumber> ] [ no preview-blackout | preview-blackout
<Igmp::multicastSrcPreBlackout> ] )
```

Command Parameters

Table 30.9-1 "Multicast Ipv6 Channel Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ipv6-addr)	Format: - multicast ipv6 address (prefix should be FF)	ipv6 address identifying the multicast group
src-ipv6-addr	Parameter type: <Igmp::IPv6Address> Format: - ipv6 address (unicast ipv6 address)	ipv6 address of the multicast server originating the multicast channel,value :: means ASM (any-src-ipv6-addr)
vlan-id	Parameter type: <Igmp::McastChannelVlan> Format: - vlan id for multicast - range: [1...4093]	vlanid of the multicast channel which is configured in it

Table 30.9-2 "Multicast Ipv6 Channel Configuration Command" Command Parameters

Parameter	Type	Description
[no] end-ipv6-addr	Parameter type: <Igmp::MulticastV6Address> Format:	optional parameter with default value: " : "

30 Multicast Configuration Commands

[illegible]

Parameter	Type	Description
	Format: - reasonable max duration for each preview per mcast grp - unit: sec - range: [1...6000]	<i>value: 180</i> Maximum duration for each preview per multicast channel
[no] preview-number	Parameter type: <Icmp::multicastSrcMaxPreNumber> Format: - valid max no. of previews for each preview per mcast grp - range: [1...100]	<i>optional parameter with default value: 3</i> Max number of previews for each preview per mcast group
[no] preview-blackout	Parameter type: <Icmp::multicastSrcPreBlackout> Format: - valid preview Blackout Duration time of per mcast group - unit: sec - range: [0...7200]	<i>optional parameter with default value: 0</i> Preview Blackout Duration time of per multicast channel

30.10 Multicast Channel Package Members Configuration Command

Command Description

This command allows the operator to configure the multicast channel package members.

A multicast channel can be member of maximum 20 packages or be member of all (1024) packages, any value in between will be rejected.

Using this command packages will be added or removed from/to the list of packages of which the multicast channel is currently a member.

If the multicast channel is member of all packages care must be taken when removing packages, meaning that the command will only be accepted if after execution the multicast channel will be member of 20 packages or less.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast ipv6-chn (grp-ipv6-addr)src-ipv6-addr <Igmp::IPv6Address>vlan-id
<Igmp::McastChannelVlan> ( no packagemember (package) ) | ( packagemember (package) )
```

Command Parameters

Table 30.10-1 "Multicast Channel Package Members Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ipv6-addr)	Format: - multicast ipv6 address (prefix should be FF)	ipv6 address identifying the multicast group
src-ipv6-addr	Parameter type: <Igmp::IPv6Address> Format: - ipv6 address (unicast ipv6 address)	ipv6 address of the multicast server originating the multicast channel,value :: means ASM (any-src-ipv6-addr)
vlan-id	Parameter type: <Igmp::McastChannelVlan> Format: - vlan id for multicast - range: [1...4093]	vlanid of the multicast channel which is configured in it
(package)	Format: - the package number - range: [1...1024]	package member

30.11 Multicast Monitoring Source Configuration Command

Command Description

This command allows the operator to configure on demand monitoring for a specified multicast stream.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast monitor ( no src (grp-ip-addr) src-ip-addr <Ip::V4Address> ) | ( src (grp-ip-addr) src-ip-addr
<Ip::V4Address> [ no loss-duration | loss-duration <Igmp::LossDuration> ] [ no loss-thresh-alert | loss-thresh-alert
<Igmp::LossThreshold> ] )
```

Command Parameters

Table 30.11-1 "Multicast Monitoring Source Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	mcast src address in network-byte order(big-endian)
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	Unicast IP address in case SSM multicast channel, value 0.0.0.0 means ASM(any-src-ip-addr)

Table 30.11-2 "Multicast Monitoring Source Configuration Command" Command Parameters

Parameter	Type	Description
[no] loss-duration	Parameter type: <Igmp::LossDuration> Format: - duration - unit: sec - range: [5...2147483647]	<i>optional parameter with default value: 15</i> set the duration to count packets
[no] loss-thresh-alert	Parameter type: <Igmp::LossThreshold> Format: - the threshold for loss of traffic alert, 0 - disable - range: [0...4294967295]	<i>optional parameter with default value: 0</i> set loss of traffic threshold, alert generated if packet count is less or equal to the threshold.

30.12 Multicast Monitoring Channel Configuration Command

Command Description

This command allows the operator to configure on demand monitoring for a specified multicast stream.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast monitor ( no chn (grp-ip-addr) src-ip-addr <Ip::V4Address> vlan-id <Igmp::McastMonitorVlan>
) | ( chn (grp-ip-addr) src-ip-addr <Ip::V4Address> vlan-id <Igmp::McastMonitorVlan> [ no loss-duration |
loss-duration <Igmp::LossDuration> ] [ no loss-thresh-alert | loss-thresh-alert <Igmp::LossThreshold> ] )
```

Command Parameters

Table 30.12-1 "Multicast Monitoring Channel Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	mcast src address in network-byte order(big-endian)
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	Unicast IP address in case SSM multicast channel, value 0.0.0.0 means ASM(any-src-ip-addr)
vlan-id	Parameter type: <Igmp::McastMonitorVlan> Format: - vlan id for multicast - range: [0...4093]	vlanid of the multicast channel. Value 0 means any VLAN ID

Table 30.12-2 "Multicast Monitoring Channel Configuration Command" Command Parameters

Parameter	Type	Description
[no] loss-duration	Parameter type: <Igmp::LossDuration> Format: - duration - unit: sec - range: [5...2147483647]	<i>optional parameter with default value: 15</i> set the duration to count packets
[no] loss-thresh-alert	Parameter type: <Igmp::LossThreshold> Format: - the threshold for loss of traffic alert, 0 - disable - range: [0...4294967295]	<i>optional parameter with default value: 0</i> set loss of traffic threshold, alert generated if packet count is less or equal to the threshold.

30.13 Multicast Static Branch Configuration

Command

Command Description

This command allow the operator to configure the static multicast branch. When at least one static multicast branch is created, the corresponding static multicast root is created.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> configure mcast static ( no branch (grp-ip-addr) src-ip-addr <Ip::V4Address> port <Itf::VlanPort> ) | ( branch (grp-ip-addr) src-ip-addr <Ip::V4Address> port <Itf::VlanPort> )
```

Command Parameters

Table 30.13-1 "Multicast Static Branch Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel, value 0.0.0.0 means ASM(any-src-ip-addr),range:0.0.0.0....255.255.255.255
port	Parameter type: <Itf::VlanPort> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip :	identification of the vlanport

31.2 PPPoX Cross-connect Global Configuration Command

Command Description

This command allows the operator to specify the system-wide configuration parameters applicable to all PPP sessions.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppox-relay cross-connect global-session [ no pado-timeout | pado-timeout <PPPoX::PadTimeOut> ] [
no pads-timeout | pads-timeout <PPPoX::PadTimeOut> ] [ no max-pad-attempts | max-pad-attempts
<PPPoX::PadRRetries> ] [ no trans-max-age | trans-max-age <PPPoX::TransactionMaxAge> ] [ no cc-max-age |
cc-max-age <PPPoX::CcMaxAge> ]
```

Command Parameters

Table 31.2-2 "PPPoX Cross-connect Global Configuration Command" Command Parameters

Parameter	Type	Description
[no] pado-timeout	Parameter type: <PPPoX::PadTimeOut> Format: - timeout for PAD-O PAD-S messages - unit: sec - range: [1...60]	<i>optional parameter with default value: 3</i> timeout for PAD-O message
[no] pads-timeout	Parameter type: <PPPoX::PadTimeOut> Format: - timeout for PAD-O PAD-S messages - unit: sec - range: [1...60]	<i>optional parameter with default value: 3</i> timeout for PAD-S message
[no] max-pad-attempts	Parameter type: <PPPoX::PadRRetries> Format: - maximum number of PAD-R messages - range: [1...16]	<i>optional parameter with default value: 10</i> maximum number of PAD-R messages
[no] trans-max-age	Parameter type: <PPPoX::TransactionMaxAge> Format: - maximum age of PPP transaction - unit: sec - range: [1...300]	<i>optional parameter with default value: 300</i> maximum age of PPP transaction
[no] cc-max-age	Parameter type: <PPPoX::CcMaxAge> Format:	<i>optional parameter with default value: 300</i>

Parameter	Type	Description
	- maximum age of PPP cross-connection - unit: sec - range: [10...3000]	maximum age of PPP cross connection

31.3 PPPoX Cross-connect Engine Configuration Command

Command Description

This command allows the operator to configure the PPP cross-connect engine. The PPP cross-connect engine is identified by a VLAN ID. The name is the name used to identify the PPP cross-connect engine. The lock command locks or unlocks the PPP control plane. For example, if the control plane is unlocked, no new PPP cross-connections can be established, but the existing connections remain until they are released by the PPP server or client.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppox-relay cross-connect ( no engine (vlan-id) ) | ( engine (vlan-id) [ [ no ] mac-addr-conc ] [ [ no ]
dslf-iwf-tag ] [ no max-payload-tag | max-payload-tag <PPPoX::MaxPayloadTag> ] [ no name | name
<PPPoX::EngineName> ] [ [ no ] lock ] [ no service-name | service-name <PPPoX::EngineName> ] )
```

Command Parameters

Table 31.3-1 "PPPoX Cross-connect Engine Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan identity

Table 31.3-2 "PPPoX Cross-connect Engine Configuration Command" Command Parameters

Parameter	Type	Description
[no] mac-addr-conc	Parameter type: boolean	optional parameter

Parameter	Type	Description
		<i>The parameter is not visible during modification.</i> enable MAC address concentration
[no] dslf-iwf-tag	Parameter type: boolean	<i>optional parameter</i> insert DSLF IWF Tag into PPPoE Discovery packets
[no] max-payload-tag	Parameter type: <PPPoX::MaxPayloadTag> Format: (insert no-insert) Possible values: - insert : add tag holding the MRU to PADI and PADR messages - no-insert : donot add tag holding the MRU to PADI and PADR messages	<i>optional parameter with default value: "no-insert"</i> insert:add tag holding the MRU to PADI and PADR messages
[no] name	Parameter type: <PPPoX::EngineName> Format: - Engine Name - length: 1<=x<=32	<i>optional parameter with default value: ""</i> name to identify the engine
[no] lock	Parameter type: boolean	<i>optional parameter</i> lock control plane engine
[no] service-name	Parameter type: <PPPoX::EngineName> Format: - Engine Name - length: 1<=x<=32	<i>optional parameter with default value: ""</i> service name issued by engine in PAD-I message

31.4 PPPoX Cross-connect Engine Monitoring Configuration Command

Command Description

This command allows the operator to configure the exception event counters for the PPP cross-connect engine.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

> configure pppox-relay cross-connect engine (vlan-id) (no monitor) | (monitor)

Command Parameters

Table 31.4-1 "PPPoX Cross-connect Engine Monitoring Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan identity

31.5 PPPCC Engine TCA Threshold Configuration Command

Command Description

This command allows the operator to configure the Threshold Crossing Alert (TCA) thresholds. The configuration is specific per PPP CC Engine.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppox-relay cross-connect engine (vlan-id) tca [ [ no ] enable ] [ no tran-ageout-15min |
tran-ageout-15min <PPPoX::TcaThreshold> ] [ no sess-ageout-15min | sess-ageout-15min
<PPPoX::TcaThreshold> ] [ no tran-ageout-1day | tran-ageout-1day <PPPoX::TcaThreshold> ] [ no
sess-ageout-1day | sess-ageout-1day <PPPoX::TcaThreshold> ]
```

Command Parameters

Table 31.5-1 "PPPCC Engine TCA Threshold Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan identity

Table 31.5-2 "PPPCC Engine TCA Threshold Configuration Command" Command Parameters

Parameter	Type	Description
[no] enable	Parameter type: boolean	<i>optional parameter</i> enable the reporting of TCA's for this pppcc engine

31 PPPoX-Relay Configuration Commands

Parameter	Type	Description
[no] tran-ageout-15min	Parameter type: <PPPoX::TcaThreshold> Format: - value of the tca threshold for the pppcc engine - range: [0...65535]	<i>optional parameter with default value: 0</i> configurable threshold for the transaction ageout 15min counter
[no] sess-ageout-15min	Parameter type: <PPPoX::TcaThreshold> Format: - value of the tca threshold for the pppcc engine - range: [0...65535]	<i>optional parameter with default value: 0</i> configurable threshold for the session ageout 15min counter
[no] tran-ageout-1day	Parameter type: <PPPoX::TcaThreshold> Format: - value of the tca threshold for the pppcc engine - range: [0...65535]	<i>optional parameter with default value: 0</i> configurable threshold for the transaction ageout 1day counter
[no] sess-ageout-1day	Parameter type: <PPPoX::TcaThreshold> Format: - value of the tca threshold for the pppcc engine - range: [0...65535]	<i>optional parameter with default value: 0</i> configurable threshold for the session ageout 1day counter

31.6 PPPoX Cross-connect Client Port Configuration Command

Command Description

This command allows the operator to specify the PPP cross-connect client port. When creating a client port on a vlan port, only a Cvlan may be used.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppox-relay cross-connect ( no client-port (port) ) | ( client-port (port) vlan-id
<Network::StackedVlanSigned> default-priority <PPPoX::DefaultPriority> [ no max-cc | max-cc
<PPPoX::MaxNumPppCc> ] [ no qos-profile | qos-profile <PPPoX::QosProfileName> ] )
```

Command Parameters

Table 31.6-1 "PPPoX Cross-connect Client Port Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /	client port identification

31 PPPoX-Relay Configuration Commands

Resource Identifier	Type	Description
	<Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>) Possible values: - vlan-port : vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE	

Resource Identifier	Type	Description
	Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 31.6-2 "PPPoX Cross-connect Client Port Configuration Command" Command Parameters

Parameter	Type	Description
vlan-id	Parameter type: <Network::StackedVlanSigned> Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	<i>mandatory parameter</i> <i>The parameter is not visible during modification.</i> associates client port to cc-engine
default-priority	Parameter type: <PPPoX::DefaultPriority> Format: - indicates the p-bit for the client port - range: [0...7]	<i>mandatory parameter</i> indicates the p-bit for the client port
[no] max-cc	Parameter type: <PPPoX::MaxNumPppCc> Format: - max no. of PPP cross connection on a port - range: [1...64], [9...64] = 8 with MAC concentration.	<i>optional parameter with default value: 64</i> max no. of PPP cross connection on a port
[no] qos-profile	Parameter type: <PPPoX::QosProfileName> Format: (none name : <PPPoX::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <PPPoX::IgnoredQosProfileName> - name of the QoS profile - length: 1<=x<=32	<i>optional parameter with default value: "none"</i> qos profile name associated with client port

31.7 PPPoX Cross-connect Client Port Monitoring Configuration Command

Command Description

This command allows the operator to configure the exception event counters for the PPP cross-connect client port.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppox-relay cross-connect client-port (port) ( no monitor ) | ( monitor )
```

Command Parameters

Table 31.7-1 "PPPoX Cross-connect Client Port Monitoring Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan>	client port identification

32- PPPoE Configuration Commands

32.1 PPPoE Configuration Command Tree	32-1110
32.2 PPPoE Profile Configuration Command	32-1111
32.3 PPPoE Client Interface Configuration Command	32-1113

32.1 PPPoE Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoE Configuration Commands".

Command Tree

```
----configure
  ----pppoe-client
    ----[no] ppp-profile
      - (name)
      - [no] ipversion
      - [no] authproto
      - [no] mru
    ----[no] interface
      - (ifindex)
      - client-id
      - profile-name
      - username
      - password
      - [no] mac
      - [no] pbit
```

32.2 PPPoE Profile Configuration Command

Command Description

This command allows the operator to configure PPP profile parameters.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppoe-client ( no ppp-profile (name) ) | ( ppp-profile (name) [ no ipversion | ipversion
<PPPoE::pppProfileIpMode> ] [ no authproto | authproto <PPPoE::pppProfileAuthenType> ] [ no mru | mru
<PPPoE::PppProfileMru> ] )
```

Command Parameters

Table 32.2-1 "PPPoE Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of the profile

Table 32.2-2 "PPPoE Profile Configuration Command" Command Parameters

Parameter	Type	Description
[no] ipversion	Parameter type: <PPPoE::pppProfileIpMode> Format: (none ipv4 dual ipv6) Possible values: - none : without NCP phase - ipv4 : only specify ipv4 connection - dual : specify both ipv4 and ipv6 connection - ipv6 : only specify ipv6 connection	<i>optional parameter with default value: "ipv4"</i> specifying ip version during NCP phase
[no] authproto	Parameter type: <PPPoE::pppProfileAuthenType> Format: (auto pap chap) Possible values: - auto : auto selected by ONU - pap : only PAP negotiation	<i>optional parameter with default value: "auto"</i> the type of PPP authentication used

32 PPPoE Configuration Commands

Parameter	Type	Description
	- chap : only CHAP negotiation	
[no] mru	Parameter type: <PPPoE::PppProfileMru> Format: - the MRU of PPP - range: [0...65535]	<i>optional parameter with default value: 1500</i> specifying MRU of PPP

32.3 PPPoE Client Interface Configuration Command

Command Description

This command allows the operator to configure PPPoE client interface parameters.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppoe-client ( no interface (ifindex) client-id <PPPoE::ClientId> ) | ( interface (ifindex) client-id
<PPPoE::ClientId> profile-name <PPPoE::PppProfileName> username <PPPoE::UserName> password
<PPPoE::Password> [ no mac | mac <PPPoE::MacAddress> ] [ no pbit | pbit <PPPoE::PbitValue> ] )
```

Command Parameters

Resource Identifier	Type	Description
	- the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
client-id	Parameter type: <PPPoE::ClientId> Format: - the PPPoE client id - range: [1]	the PPPoE client id

Table 32.3-2 "PPPoE Client Interface Configuration Command" Command Parameters

Parameter	Type	Description
profile-name	Parameter type: <PPPoE::PppProfileName> Format: name : <PPPoE::IgnoredPppProfileName> Possible values: - name : enter profile name to be associated Field type <PPPoE::IgnoredPppProfileName> - name of the PPP profile - length: 1<=x<=64	<i>mandatory parameter</i> PPP profile name
username	Parameter type: <PPPoE::UserName> Format: - user name string - length: x<=25	<i>mandatory parameter</i> user name for PPP authentication
password	Parameter type: <PPPoE::Password> Format: - password string hidden from users - length: x<=25	<i>mandatory parameter</i> password for PPP authentication
[no] mac	Parameter type: <PPPoE::MacAddress> Format: - a unicast mac-address (example : 00:01:02:03:04:05) - length: 6	<i>optional parameter with default value: "00 : 00 : 00 : 00 : 00 : 00"</i> specify the client MAC address for PPPoE frame
[no] pbit	Parameter type: <PPPoE::PbitValue> Format: - the Pbit value - range: [0...7]	<i>optional parameter with default value: 0</i> the Pbit value for PPPoE frame

33- PPPoEL2STATS Configuration Commands

33.1 PPPoEL2STATS Configuration Command Tree	33-1117
33.2 Pppoe-L2 Statistics Configuration Command	33-1118

33.1 PPPoEL2STATS Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoEL2STATS Configuration Commands".

Command Tree

```
----configure
  ----pppoel2
    ----[no] statistics
      - (vlan-port)
```

33.2 Pppoe-L2 Statistics Configuration Command

Command Description

This command is used to enable or disable the PPPoE L2 statistics of extensive counters (on demand) on vlan-port interface.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> configure pppoel2 ( no statistics (vlan-port) ) | ( statistics (vlan-port) )
```

Command Parameters

Table 33.2-1 "Pppoe-L2 Statistics Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /	The VLAN port interface type

34- DHCP Relay Configuration Commands

34.1 DHCP Relay Configuration Command Tree	34-1122
34.2 DHCP Relay User Port Configuration Command	34-1123
34.3 DHCP v6 Relay User Port Configuration Command	34-1126

34.1 DHCP Relay Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "DHCP Relay Configuration Commands".

Command Tree

```
----configure
  ----dhcp-relay
    ----[no] port-stats
      - (vlan-port)
    ----[no] v6-port-stats
      - (vlan-port)
```

34.2 DHCP Relay User Port Configuration

Command

Command Description

This command allows the operator to configure the DHCP relay user port statistics.

User Level

The command can be accessed by operators with dhcp privileges, and executed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> configure dhcp-relay ( no port-stats (vlan-port) ) | ( port-stats (vlan-port) )
```

Command Parameters

Table 34.2-1 "DHCP Relay User Port Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	Identification of the ip user interface or vlan port

34.3 DHCP v6 Relay User Port Configuration Command

Command Description

This command allows the operator to configure the DHCP v6 relay user port statistics.

User Level

The command can be accessed by operators with dhcp privileges, and executed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> configure dhcp-relay ( no v6-port-stats (vlan-port) ) | ( v6-port-stats (vlan-port) )
```

Command Parameters

Table 34.3-1 "DHCP v6 Relay User Port Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	identification of vlan port

35.2 XDSL Bonding Assembly Level Configuration Command

Command Description

This node provides the system-level provisioning of the bonding group assembly timeout and PTM bonding group initialization mode.

Bonding group assembly timeout: Default value is zero ('0', represents an infinite time), and will have as consequence that the bonding group will not come up till all lines in this bonding group are up. This parameter may be overruled by the grp-assembly-time parameter on bonding group-profile level. This parameter will be ignored for PTM bonding group initialization mode2.

PTM bonding group initialization mode: Default value is mode1 (Double initialization with probe-training). When no bonding groups(ATM/PTM) are configured in the system, the new initialization mode will be effective on the system immediately. When bonding groups(ATM/PTM) are configured already in the system,the Mode switching request should be followed by an 'NT Reset' request, to make the new initialization mode effective on the system. PTM BGs, that are operational up while changing the PTM Bonding Init Mode, will stay operational up till an 'NT Reset' is requested. After execution of the 'NT Reset', these PTM BGs will retrain in the newly configured mode and hence suffer a significant service impact.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl-bonding group-assembly-time <Xdsl::SignedIntegerSEC> [ no ptm-init-mode | ptm-init-mode <Xdsl::BondingInitMode> ]
```

Command Parameters

Table 35.2-2 "XDSL Bonding Assembly Level Configuration Command" Command Parameters

Parameter	Type	Description
group-assembly-time	Parameter type: <Xdsl::SignedIntegerSEC> Format: - second - unit: sec - range: [0...65535]	<i>optional parameter</i> Max waiting period for group to become operational
[no] ptm-init-mode	Parameter type: <Xdsl::BondingInitMode> Format: (mode1 mode2) Possible values: - mode1 : Double initialization with probe-training - mode2 : Single initialization without probe-training	<i>optional parameter with default value: "mode1"</i> PTM bonding group initialization mode

35.3 xDSL Bonding Group Profile Configuration Command

Command Description

This command allows to manage the xDSL bonding group profile. A profile can be created in one step with all the necessary parameters and making it active. It can also be created in several steps by specifying a few parameters in each step and make the profile active in the last step.

DESCRIPTION FOR THE COMMAND PARAMETER-SCOPE: The combination scope+profile must be unique. Typically local-profile must be used especially when configuring via CLI. Use of network-profile is depreciated. The network-profile was foreseen to allow management agents to define network-wide unique profiles, independent of what local profiles may have been created.

The command parameters delay-opt-mode-ds and grp-assembly-time will be ignored for PTM bonding group initialization mode2.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> configure xdsl-bonding ( no group-profile (index) ) | ( group-profile (index) name <AsamProfileName> (scope)
version <SignedInteger> [ no min-bitrate-up | min-bitrate-up <Xdsl::BondingBitRate> ] [ no min-bitrate-down |
min-bitrate-down <Xdsl::BondingBitRate> ] [ no plan-bitrate-up | plan-bitrate-up <Xdsl::BondingBitRate> ] [ no
plan-bitrate-down | plan-bitrate-down <Xdsl::BondingBitRate> ] [ no max-bitrate-up | max-bitrate-up
<Xdsl::BondingBitRate> ] [ no max-bitrate-down | max-bitrate-down <Xdsl::BondingBitRate> ] [ no
max-delay-down | max-delay-down <Xdsl::InterleavingDelay> ] [ no max-delay-up | max-delay-up
<Xdsl::InterleavingDelay> ] [ no imp-noise-prot-dn | imp-noise-prot-dn <Xdsl::ImpNoiseProtection> ] [ no
imp-noise-prot-up | imp-noise-prot-up <Xdsl::ImpNoiseProtection> ] [ no delay-opt-mode-ds | delay-opt-mode-ds
<Xdsl::BondingGroupDelayOptimMode> ] [ no grp-assembly-time | grp-assembly-time
<Xdsl::BondingGroupProfileAssemblyTimer> ] [ [ no ] active ] )
```

Command Parameters

Table 35.3-1 "xDSL Bonding Group Profile Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - bonding group profile index - range: [1...100]	index of the profile

Table 35.3-2 "xDSL Bonding Group Profile Configuration Command" Command Parameters

Parameter	Type	Description
name	Parameter type: <AsamProfileName> Format:	mandatory parameter name of the profile

Parameter	Type	Description
	- a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	
(scope)	Format: (local-profile network-profile) Possible values: - local-profile : the local profile - network-profile : the network profile	<i>mandatory parameter</i> scope of the profile
version	Parameter type: <SignedInteger> Format: - a signed integer	<i>mandatory parameter</i> version maintained by manager, usually 1 for new profile
[no] min-bitrate-up	Parameter type: <Xdsl::BondingBitRate> Format: - a bonding bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 64</i> minimum upstream bit rate to be maintained
[no] min-bitrate-down	Parameter type: <Xdsl::BondingBitRate> Format: - a bonding bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 1024</i> minimum downstream bit rate to be maintained
[no] plan-bitrate-up	Parameter type: <Xdsl::BondingBitRate> Format: - a bonding bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 128</i> planned bitrate in upstream
[no] plan-bitrate-down	Parameter type: <Xdsl::BondingBitRate> Format: - a bonding bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 1536</i> planned bitrate in downstream
[no] max-bitrate-up	Parameter type: <Xdsl::BondingBitRate> Format: - a bonding bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 640</i> maximum bitrate in upstream
[no] max-bitrate-down	Parameter type: <Xdsl::BondingBitRate> Format: - a bonding bit rate value - unit: kbps - range: [0...2147483647]	<i>optional parameter with default value: 6144</i> maximum bitrate in downstream
[no] max-delay-down	Parameter type: <Xdsl::InterleavingDelay> Format: - a delay time period - unit: msec - range: [1...63]	<i>optional parameter with default value: 16</i> maximum delay for interleaving function in downstream
[no] max-delay-up	Parameter type: <Xdsl::InterleavingDelay> Format: - a delay time period - unit: msec - range: [1...63]	<i>optional parameter with default value: 16</i> maximum delay for interleaving function in upstream
[no] imp-noise-prot-dn	Parameter type: <Xdsl::ImpNoiseProtection> Format: - minimum impulse noise protection - unit: 1/10 symbols - range: [0...160]	<i>optional parameter with default value: 0</i> minimum impulse noise protection in downstream

35 XDSL Bonding Configuration Commands

Parameter	Type	Description
[no] imp-noise-prot-up	Parameter type: <Xdsl::ImpNoiseProtection> Format: - minimum impulse noise protection - unit: 1/10 symbols - range: [0...160]	<i>optional parameter with default value: 0</i> minimum impulse noise protection in upstream
[no] delay-opt-mode-ds	Parameter type: <Xdsl::BondingGroupDelayOptimMode> Format: (none by-co by-cpe) Possible values: - none : no downstream delay optimization - by-co : the downstream optimization is done by the co - by-cpe : the downstream optimization is done by the cpe(option not yet supported)	<i>optional parameter with default value: "none"</i> identifies the mode of the downstream delay optimization
[no] grp-assembly-time	Parameter type: <Xdsl::BondingGroupProfileAssemblyTimer> Format: (infinity <Xdsl::BondingAssemblyTimer> use-system) Possible values: - infinity : wait forever, special value 0 - use-system : use system wide parameter, special value 65535 Field type <Xdsl::BondingAssemblyTimer> - value of the assembly timer - unit: sec - range: [1...65534]	<i>optional parameter with default value: "use-system"</i> Max waiting period for group to become operational
[no] active	Parameter type: boolean	<i>optional parameter to activate the profile</i>

35.4 xDSL Bonding Group Rtx Profile Configuration Command

Command Description

This command allows the operator to configure the bonding group RTX profile which can be used to configure the modem for each contributing physical line of the bonding group
