name	Type	Description
	reception of the BACKWARD DISCONNECTION ACK signal - packet-loss : Pseudo Wire entered the Packet loss state - remote-packet-loss : Remote Packet loss detected - no-dsp-resource : DSP resource allocation failed - la-down : Link aggregation group link-status is down - la-standby-na : Cross-lt lag on standby slot part is not available - la-switch-fail : Cross-lt lag fail to do switchover - la-degrade : Link aggregation group degrade - melt-board-reset : MELT board reset - board-shelf-mismatch : board type and shelf type mismatch - fcs-thresh-exceed : FCS counter threshold exceeded	
state	Parameter type: <Alarm::AlarmState> (active non-active) Possible values: - active : alarm is active - non-active : alarm is not active	reflect's the state of the alarm as either active or non-active. <i>This element is always shown.</i>
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is always shown.</i>
additional-info	Parameter type: <Alarm::AdditionalInfo> - string to identify the owner (example: Tom) - length: x<=512	AdditionalInfo <i>This element is always shown.</i>

Only Show Details: critical alarm table related generic information		
name	Type	Description
changes	Parameter type: <Counter> - 32 bit counter	total number of changes of all reported alarms with a severity level critical since startup. <i>This element is only shown in detail mode.</i>
last-entry-id	Parameter type: <SignedInteger> - a signed integer	last entry that was added to the warning delta log. <i>This element is only shown in detail mode.</i>
last-reset	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds indicating when the warning delta log was last reset. <i>This element is only shown in detail mode.</i>
log-overflowed	Parameter type: <Alarm::OverflowStatus> (yes no) Possible values: - yes : buffer has overflowed - no : no buffer overflow	specifies whether the warning delta log is overflowed or not. <i>This element is only shown in detail mode.</i>

101.2 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query equipment [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]  
[ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.2-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (persist-data-loss sntp-comm-lost nt-disk-95%full preferred-mode timing-reference shub-loc back-pnl-inv shub-conf-loss all) Possible values: - persist-data-loss : all data lost after restart - system not configured - sntp-comm-lost : sntp server not responding - nt-disk-95%full : nt disk 95% full - preferred-mode : preferred mode not available - timing-reference : timing reference failure - shub-loc : communication lost with shub - back-pnl-inv : BackPanel-type Invalid - shub-conf-loss : SHub configuration loss - recent changes lost - all : show all equipment alarm	alarm name of Equipment
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major	severity level of an alarm for reporting

Resource Identifier	Type	Description
	critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

Command Output

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.3 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query eqpt-holder [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ shelf <Equipm::Shelf> ] ]
```

Command Parameters

Table 101.3-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (rack-power rack-fan-unit1 rack-fan-unit2 shelf-mismatch shelf-missing shelf-install-missing door ac-power-fail all) Possible values: - rack-power : power fuse broken - rack-fan-unit1 : fan unit rack 1 failing - rack-fan-unit2 : fan unit rack 2 failing - shelf-mismatch : shelf type different from planned type - shelf-missing : detected shelf no longer detected - shelf-install-missing : shelf planned but not installed - door : open cabinet door - ac-power-fail : external power failure - shelf shutdown in 15 minutes - all : show all sw-mgmt alarm	alarm name of eqpt-holder
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical	severity level of alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
shelf	Parameter type: <Equipm::Shelf> Format: <Eqpt::RackId> / <Eqpt::ShelfId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	the shelf identifier of alarm

Command Output

101.4 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query eqpt-holder-ext [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ shelf <Equipm::Shelf> ] ]
```

Command Parameters

Table 101.4-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (network-power-loss hw-fault bat-miss bat-fail bat-low bat-a-fail bat-b-fail ac-vol-out-range network-power-loss-b sem-ac-power-fail sem-ups-low-volt dc-a-fail dc-b-fail plan-power-mismatch water-seepage-in-box sealed-box-open dc-a-vol-out-range dc-b-vol-out-range inlet-temp-major inlet-temp-critical all) Possible values: - network-power-loss : Loss of Network Power - hw-fault : Hardware Failure - bat-miss : Power Source Battery Missing - bat-fail : Power Source Battery Failure - bat-low : Power Source Battery Charge LOW	alarm name of eqpt-holder-ext

Resource Identifier	Type	Description
	- bat-a-fail : Power Source BAT-A Fail - bat-b-fail : Power Source BAT-B Fail - ac-vol-out-range : AC Input Voltage Value Out of Range - network-power-loss-b : Loss of Network Power B - sem-ac-power-fail : External AC power supply failure - sem-ups-low-volt : External power supply low voltage - dc-a-fail : Local DC A power failure - dc-b-fail : Local DC B power failure - plan-power-mismatch : Planned and detected power mode mismatch - water-seepage-in-box : Detected water seepage in enclosure - sealed-box-open : Sealed box open detected - dc-a-vol-out-range : DC A Input Voltage Value Out of Range - dc-b-vol-out-range : DC B Input Voltage Value Out of Range - inlet-temp-major : The inlet temperature has exceeded a major level - inlet-temp-critical : The inlet temperature has exceeded a critical level - all : show all equipment holder extent alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
shelf	Parameter type: <Equipm::Shelf> Format: <Eqpt::RackId> / <Eqpt::ShelfId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	the shelf identifier of alarm

101.5 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query plug-in-unit [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ board <Equipm::EqptSlotIndex> ] ]
```

Command Parameters

Table 101.5-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (board-mismatch waiting-for-sw temp-exceeded backplane-data-failure temp-shutdown board-missing board-instl-missing board-init board-reset-prot sem-power-fail sem-ups-fail board-reset-cf shub-uplink all) Possible values: - board-mismatch : board inserted different from planned - waiting-for-sw : not able to download all the applicable sw files - temp-exceeded : temperature threshold exceeded on the board - backplane-data-failure: It port on backplane data failure - temp-shutdown : board powered down itself - too high temperature - board-missing : board detected after planning - now missing - board-instl-missing : board never detected after planning - board-init : board initialisation failure	alarm name of plug-in-unit

Resource Identifier	Type	Description
	- board-reset-prot : number of resets exceeded - sem-power-fail : SEM external power failure - sem-ups-fail : SEM external power supply failure - board-reset-cf : board reset and/or communication failure - shub-uplink : lanx uplink breakdown or removal - all : show all equipment alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no
board	Parameter type: <Equipm::EqptSlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	the physical number of the slot

101 query current alarms by filters

Resource Identifier	Type	Description
	- the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number

101.6 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query plug-in-unit-ext [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::EqptSlotIndex> ] ]
```

Command Parameters

Table 101.6-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (pluginfan plugin-dc-a plugin-dc-b plugin-dg apsf-alarm ntr-a-loss ntr-b-loss xvps-conf-loss mac-entry-nofree fibre-conn-mismatch link-cap-mismatch eqpt-cap-mismatch ctrl-dnld-failure melt-hw-issue melt-board-reset board-shelf-mismatch mgnt-type-mismatch all) Possible values: - pluginfan : REM Fan Alarm - plugin-dc-a : REM DC A Alarm - plugin-dc-b : REM DC B Alarm - plugin-dg : Dying Gasp Alarm - apsf-alarm : Applique Power Supply Failure - ntr-a-loss : NTR-A signal is not available - ntr-b-loss : NTR-B signal is not available - xvps-conf-loss : xvps configuration loss	alarm name of plug-in-unit-ext

Resource Identifier	Type	Description
	- mac-entry-nofree : no free mac entry in the mac table on lt board - fibre-conn-mismatch : REM Fibre Connection Mismatch Alarm - link-cap-mismatch : Link speed capability mismatch - eqpt-cap-mismatch : Link equipment capability mismatch - ctrl-dnld-failure : Controller card download failure - melt-hw-issue : MELT hardware issue - melt-board-reset : MELT board reset - board-shelf-mismatch : board type and shelf type mismatch - mgnt-type-mismatch : Board management type mismatch - all : show all bgp alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board	Parameter type: <Equipm::EqptSlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf	the physical number of the slot

101 query current alarms by filters

Resource Identifier	Type	Description
	- ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number

101.7 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sw-mgmt [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ board <Equipm::EqptSlotIndex> ] ]
```

Command Parameters

Table 101.7-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (sw-rollback db-rollback xvps-inv-dbase inv-cde-file miss-cde-file cde-hash-error auto-fetch-failure low-disk-space all) Possible values: - sw-rollback : non active oswp,db cannot be operational - will rollback - db-rollback : selected oswp,db cannot be operational - will rollback - xvps-inv-dbase : invalid xvps dbase - inv-cde-file : invalid xvps cde file - miss-cde-file : missing cde profile - cde-hash-error : cde profile hash error - auto-fetch-failure : not able to fetch file from specified server - low-disk-space : insufficient space for Sw storage - all : show all sw-mgmt alarm	alarm name of sw-mgmt
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor	severity level of an alarm for reporting

Resource Identifier	Type	Description
	major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board	Parameter type: <Equipm::EqptSlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	the physical number of the slot

101.8 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query filetransfer [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ server-id <Alarm::FileTransfer> ] ]
```

Command Parameters

Table 101.8-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (fileserv-unavail all) Possible values: - fileserv-unavail : file transfer Server unavailable or file transfer failed - all : show all filetransfer alarm	alarm name of filetransfer
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values:	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
server-id	Parameter type: <Alarm::FileTransfer> Format: - next hop IP address	the server id of file transfer

Command Output

101.9 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query lsmredundancy [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::LtSlotIndex> ] ]
```

Command Parameters

Table 101.9-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (loss-lsmswp-cap inv-xvps-pair-data all) Possible values: - loss-lsmswp-cap : lsm redundancy - inv-xvps-pair-data : invalid xvps pair redundancy data - all : show all lsm redundancy alarm	alarm name of lsmredundancy
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
board	Parameter type: <Equipm::LtSlotIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical number of the slot

101 query current alarms by filters

name	Type	Description
	- cas-r2-channel : CAS R2 channel related alarms - lldpmed : lldpmed alarms - pseudo-wire : pseudo Wire related alarms - link-aggr : Link aggregation related alarms - fcs-exceed : FCS auto-recovery related alarms - e1t1-interface : E1/T1 physical interfaces related alarms	
name	Parameter type: <Alarm::alarmTypeLsmredundancy> (loss-lmswp-cap inv-xvps-pair-data all) Possible values: - loss-lmswp-cap : lsm redundancy - inv-xvps-pair-data : invalid xvps pair redundancy data - all : show all lsm redundancy alarm	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.10 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query traffic-overflow [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::SlotIndex> ] ]
```

Command Parameters

Table 101.10-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (fanout up-overflow upobc-overflow dwobc-overflow dw-overflow lwpri-overflow all) Possible values: - fanout : Lt load overflow - up-overflow : Upstream load overflow - upobc-overflow : Upstream load to OBC overflow - dwobc-overflow : Downstream load to OBC overflow - dw-overflow : Downstream load overflow - lwpri-overflow : The number of BE and CL pkts dropped exceed threshold - all : Traffic overflow alarms	alarm name of traffic-overflow
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	- minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board	Parameter type: <Equipm::SlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	the physical number of the board

101.11 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query l2forward [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ bridgeport <Vlan::BridgePort> ] ]
```

Command Parameters

Table 101.11-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (mac-conflict vmac-full all) Possible values: - mac-conflict : duplicate mac address on the bridge port - vmac-full : virtual mac address is full on the bridge port - all : show all l2forward alarm	alarm name of l2forward
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.12 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sync [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ board <Alarm::SynceSlot> ] ]
```

Command Parameters

Table 101.12-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (synce-fail bits-fail bits-output-shutoff ieee1588-fail gnss-fail ieee1588-hybrid-fail holdover tod-reference-fail internal-clk-fail all) Possible values: - synce-fail : synce clock source failure - bits-fail : bits clock source failure - bits-output-shutoff : bits output failure - ieee1588-fail : ieee1588 clock source failure - gnss-fail : gnss clock source failure - ieee1588-hybrid-fail : ieee1588 hybrid tod source failure - holdover : clock system is in the holdover - tod-reference-fail : Timing ToD Reference failed - internal-clk-fail : Internal CLK failed - all : show all external device alarm	alarm name of sync
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board	Parameter type: <Alarm::SynceSlot> Format: (ntio-1 ntio-2 nt-a nt-b lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> not-used nt) Possible values: - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - nt-a : nt-a slot - nt-b : nt-b slot - nt : active nt slot - lt : lt slot - not-used : no interface Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical number of the slot

101.13 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query cfm [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ cfm-mep-id <UnsignedSignedInteger> ] ]
```

Command Parameters

Table 101.13-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (cfm-defrdiccm cfm-defmacstatus cfm-defremoteccm cfm-deferrorccm cfm-defxconccm cfm-defais all) Possible values: - cfm-defrdiccm : rdi bit in ccm received - cfm-defmacstatus : ccm mac error status - cfm-defremoteccm : missing ccm from mep - cfm-deferrorccm : invalid ccm received - cfm-defxconccm : unexpected ccm received - cfm-defais : ethernet ais received - all : show all multicast source alarm	alarm name of cfm
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
cfm-mep-id	Parameter type: <UnsignedSignedInteger> Format: - an unsigned integer	dot1agCfmMepIdentifier index

Command Output

101.14 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query efm-oam [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
line <Itf::EfmEthernetIndex> ] ]
```

Command Parameters

Table 101.14-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (efm-oam-cpelinkfault efm-oam-cpedyinggasp efm-oam-cpecrevt all) Possible values: - efm-oam-cpelinkfault : EFM-OAM CPE link fault - efm-oam-cpedyinggasp : EFM-OAM CPE dying gasp - efm-oam-cpecrevt : EFM-OAM CPE critical event - all : show all vlanport alarm	alarm name of efm-oam
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting	serviceaffecting no

Resource Identifier	Type	Description
	noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
line	Parameter type: <Itf::EfmEthernetIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the number of ethernet line

101.15 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query auto-switch [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Itf::XdslLine> ] ]
```

Command Parameters

Table 101.15-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (auto-switch-status all auswqueuefullatm auswbkpfailatm auswrecfgfailatm auswdataunatm auswqueuefulptm auswbkpfailptm auswrecfgfailptm auswdataunptm auswbakpfailatm) Possible values: - auto-switch-status : auto-switch status - all : show all bgp alarm - auswqueuefullatm : auto-switch queue Full for ATM - auswbkpfailatm : auto-switch config data backup failed for ATM - auswrecfgfailatm : auto-switch fallback reconfiguration failed for ATM - auswdataunatm : auto-switch backup config data unavailable for ATM - auswqueuefulptm : auto-switch queue Full for PTM - auswbkpfailptm : auto-switch config data backup failed for PTM - auswrecfgfailptm : auto-switch fallback reconfiguration failed for PTM - auswdataunptm : auto-switch backup config data	alarm name of auto-switch

Resource Identifier	Type	Description
	unavailable for PTM - auswbakpfailatm : auto-switch backup fail for ATM	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::XdslLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical number of the port

101.16 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query atm [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port
<Equipm::AtmIndex> ] ]
```

Command Parameters

Table 101.16-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (cell-discard-up cell-discard-down all) Possible values: - cell-discard-up : cell discarded in the upstream direction - cell-discard-down : cell discarded in the downstream direction - all : show all ATM alarm	alarm name of atm
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
port	Parameter type: <Equipm::AtmIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical number of the port

101.17 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ether-itf [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ether-ifindex <Ether::InterfaceIndex> ] ]
```

Command Parameters

Table 101.17-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: all Possible values: - all : show all ethernet interface alarm	alarm name of ether-itf
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no

Resource Identifier	Type	Description
ether-ifindex	Parameter type: <Ether::InterfaceIndex> Format: - index of the collision interface - range: [0...2147483647]	the number of ethernet interface

Command Output

101.18 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query authentication [ (name) [ severity <Alarm::querySeverity> ] [ servaff  
<Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.18-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (vlan-assign-fail vsa-info-invalid auth-mac-conflict user-pwd-fault all) Possible values: - vlan-assign-fail : failure to assign VLAN for a user session - vsa-info-invalid : radius fail to assign a valid vsa to a user session - auth-mac-conflict : failure to check mac conflict for a user session - user-pwd-fault : failure to check user or password of a user session - all : show all authentication alarm	alarm name of authentication
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

Command Output

101.19 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query redundancy [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.19-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (loss-over-cap ping-check-fail all) Possible values: - loss-over-cap : switch over capability in a redundant system - ping-check-fail : ping check in a redundant system - all : show all bgp alarm	alarm name of redundancy
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

Command Output

name	Parameter type: <Alarm::almtypeRedundancy>	alarm name that are active

name	Type	Description
	(loss-over-cap ping-check-fail all) Possible values: - loss-over-cap : switch over capability in a redundant system - ping-check-fail : ping check in a redundant system - all : show all bgp alarm	<i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.20 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query external-device [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.20-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (loss-env-mon all) Possible values: - loss-env-mon : env-monitor box lost or not alive - all : show all external device alarm	alarm name of external-device
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

Command Output

101.21 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sfp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.21-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (host-sfp-los host-sfp-tx-fail host-sfp-not-prst host-sfp-inv-id host-sfp-ctrl-fail host-sfp-rmtlt host-sfp-mismatch host-sfp-incompt exp-sfp-los exp-sfp-tx-fail exp-sfp-not-prst exp-sfp-inv-id exp-sfp-ctrl-fail exp-sfp-1-los exp-sfp-2-los all) Possible values: - host-sfp-los : loss of signal - host-sfp-tx-fail : Tx failure - host-sfp-not-prst : not present - host-sfp-inv-id : no valid Nokia ID - host-sfp-ctrl-fail : control failure - host-sfp-rmtlt : unexpected remote plug-in - host-sfp-mismatch : assignment does not match reported rack/shelf/slot - host-sfp-incompt : incompatible shelf type detected - exp-sfp-los : expansion side loss of signal	alarm name of sfp

Resource Identifier	Type	Description
	- exp-sfp-tx-fail : Tx failure - exp-sfp-not-prst : not present - exp-sfp-inv-id : no valid Nokia ID - exp-sfp-ctrl-fail : control failure - exp-sfp-1-los : expansion side sfp1 loss of signal - exp-sfp-2-los : expansion side sfp2 loss of signal - all : show all SFP alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

101 query current alarms by filters

name	Type	Description
	- exp-sfp-not-prst : not present - exp-sfp-inv-id : no valid Nokia ID - exp-sfp-ctrl-fail : control failure - exp-sfp-1-los : expansion side sfp1 loss of signal - exp-sfp-2-los : expansion side sfp2 loss of signal - all : show all SFP alarm	
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.22 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query custom-ext-alarm [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::EqptSlotIndex> ] ]
```

Command Parameters

Table 101.22-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (custextalarm1 custextalarm2 custextalarm3 custextalarm4 custextalarm5 all) Possible values: - custextalarm1 : Customizable External Alarm Number 1 - custextalarm2 : Customizable External Alarm Number 2 - custextalarm3 : Customizable External Alarm Number 3 - custextalarm4 : Customizable External Alarm Number 4 - custextalarm5 : Customizable External Alarm Number 5 - all : show all customizable external alarm	alarm name of custom-ext-alarm
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board	Parameter type: <Equipm::EqptSlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	the physical number of the slot

101.23 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sfrssi [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ board <Alarm::SlotIndex> ] ]
```

Command Parameters

Table 101.23-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description

severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.24 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query pppcc-engine-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ engine <Vlan::StackedVlanSigned> ] ]
```

Command Parameters

Table 101.24-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (pppce-trans-15min-tca pppce-sess-15min-tca pppce-trans-1day-tca pppce-sess-1day-tca all) Possible values: - pppce-trans-15min-tca : 15 minutes transaction timeout count exceeds configured TCA - pppce-sess-15min-tca : 15 minutes session timeout count exceeds configured TCA - pppce-trans-1day-tca : 1day transaction timeout count exceeds configured TCA - pppce-sess-1day-tca : 1day session timeout count exceeds configured TCA - all : show all PPPOE Cross Connect Engine TCA alarm	alarm name of pppcc-engine-tca
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
engine	Parameter type: <Vlan::StackedVlanSigned> Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the ppp-cc engine number

101.25 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sfpe1t1-clock [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Alarm::SlotIndex> ] ]
```

Command Parameters

Table 101.25-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (dsx1-serdes-fail dsx1-tributary1-fail dsx1-tributary2-fail dsx1-los-fail dsx1-ais-sync dsx1-lof-sync dsx1-los-sync dsx1-deg-fail all) Possible values: - dsx1-serdes-fail : SERDES clock alarm failure - dsx1-tributary1-fail : The tributary 1 clock is not present - dsx1-tributary2-fail : The tributary 2 clock is not present - dsx1-los-fail : All the selected tribs in Loss of Signal - dsx1-ais-sync : Alarm Indication signal on the tributary selected as sync source - dsx1-lof-sync : Loss of Framing on the tributary selected as sync source - dsx1-los-sync : Loss of signal on the tributary selected as sync source - dsx1-deg-fail : Signal degrade Alarm - all : show all SFP 2e1t1 clock alarm	alarm name of sfpe1t1-clock
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor	severity level of an alarm for reporting

101.26 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sfpe1t1-framer [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Alarm::SlotIndex> ] ]
```

Command Parameters

Table 101.26-1 "show current alarm by filters" Resource Parameters

101.27 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sip-server [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ server-index <Sip::ServerId> ] ]
```

Command Parameters

Table 101.27-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (transport-mismatch dns-lookup-failure all) Possible values: - transport-mismatch : Transport protocol mismatch - dns-lookup-failure : Dns look up failure - all : show all sip server alarm	alarm name of sip-server
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
server-index	Parameter type: <Sip::ServerId> Format: - the SIP server table index - range: [1...128]	sip server index

Command Output

Table 101.27-2 "show current alarm by filters" Display parameters

101.28 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sip-vsp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ vsp-index <Sip::DialPlanId> ] ]
```

Command Parameters

Table 101.28-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (none-dns-srv no-dns-srv none-srv no-srv reg-srv-unreach proxy-srv-unreach all) Possible values: - none-dns-srv : No reply for all DNS serverd - no-dns-srv : No DNS servers configured - none-srv : No reply for all SIP First Hops - no-srv : No SIP First Hop configured - reg-srv-unreach : All SIP register servers are unreachable - proxy-srv-unreach : All SIP proxy servers are unreachable - all : show all sip vsp alarm	alarm name of sip-vsp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
vsp-index	Parameter type: <Sip::DialPlanId> Format: - the dial plan table index - range: [1...255]	sip vsp index

Command Output

101.29 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sip-dial-plan [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ dialplan-index <Sip::DialPlanId> ] ]
```

Command Parameters

Table 101.29-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (bad-digitmap all) Possible values: - bad-digitmap : Configured digitmap is unusable - all : show all sip dial plan alarm	alarm name of sip-dial-plan
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
dialplan-index	Parameter type: <Sip::DialPlanId> Format: - the dial plan table index - range: [1...255]	index of the dial plan

Command Output

101.30 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sip-user-agent [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::EqptSlotIndex> ] ]
```

Command Parameters

Table 101.30-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (dhcp-unreach dhcp-no-srv dhcp-inv-srv all) Possible values: - dhcp-unreach : The DHCP server is unreachable - dhcp-no-srv : The address in DHCP reply is NULL - dhcp-inv-srv : The address in DHCP reply is invalid - all : show all sip user agent alarm	alarm name of sip-user-agent
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting	serviceaffecting no

Resource Identifier	Type	Description
	noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
board	Parameter type: <Equipm::EqptSlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	the physical number of the slot

101.31 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sip-plugin-unit [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::EqptSlotIndex> ] ]
```

Command Parameters

Table 101.31-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (norpniewwithsoftdsp all) Possible values: - norpniewwithsoftdsp : do not plan / plug-in RPNI-E board with SoftDsp SW image - all : show all sip plug in unit alarm	alarm name of sip-plugin-unit
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

name	Parameter type: <Alarm::alarmtypesSippluginunit> (norpniewithsoftdsp all) Possible values: - norpniewithsoftdsp : do not plan / plug-in RPNI-E board with SoftDsp SW image - all : show all sip plug in unit alarm	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs>	time in seconds when alarm was

name	Type	Description
	- the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.32 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sip-termination [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ term-index <Itf::PotsLine> ] ]
```

Command Parameters

Table 101.32-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (unknown-sub ground-key port-hightemp port-jbfltca reg-domainname reg-auth reg-timeout reg-srvfailresp inv-domainname inv-auth inv-timeout inv-srvfailresp subs-srvfailresp subs-domainname subs-auth subs-refreshfail subs-inittimeout emergency-call all) Possible values: - unknown-sub : subscriber exist in the POLT, but not in the appl server - ground-key : Return current to the ground - port-hightemp : Temperature threshold on user port exceeded. - port-jbfltca : JB fill level threshold on user port exceeded. - reg-domainname : Registration failure (resolving domain	alarm name of sip-termination

Resource Identifier	Type	Description
	name). - reg-auth : Registration failure (authentication). - reg-timeout : Registration failure (message timeout). - reg-srvfailresp : Registration failure (failure response from server). - inv-domainname : Invitation failure (resolving domain name). - inv-auth : Invitation failure (authentication). - inv-timeout : Invitation failure (message timeout). - inv-srvfailresp : Invitation failure (failure response from server). - subs-srvfailresp : Subscribe failure (failure response from server). - subs-domainname : Subscribe failure (resolving domain name). - subs-auth : Subscribe failure (authentication). - subs-refreshfail : Subscribe failure (refresh failure). - subs-inittimeout : Subscribe failure (initial REQ timeout). - emergency-call : Emergency call for SIP POTS is ongoing. - all : show all sip termination alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
term-index	Parameter type: <Itf::PotsLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the termination index

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.33 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query secondary-sip-term [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ term-index <Itf::PotsLine> ] ]
```

Command Parameters

Table 101.33-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (reg-domainname-sec reg-auth-sec reg-timeout-sec reg-srvfailresp-sec inv-domainname-sec inv-auth-sec inv-timeout-sec inv-srvfailresp-sec subs-srvfailresp-sec subs-domainname-sec subs-auth-sec subs-refreshfail-sec subs-inittimeout-sec emergency-call-sec all) Possible values: - reg-domainname-sec : Registration failure (resolving domain name). - reg-auth-sec : Registration failure (authentication). - reg-timeout-sec : Registration failure (message timeout). - reg-srvfailresp-sec : Registration failure (failure response from server). - inv-domainname-sec : Invitation failure (resolving domain name). - inv-auth-sec : Invitation failure (authentication). - inv-timeout-sec : Invitation failure (message timeout). - inv-srvfailresp-sec : Invitation failure (failure response	alarm name of secondary sip term

Resource Identifier	Type	Description
	from server). - subs-srvfailresp-sec : Subscribe failure (failure response from server). - subs-domainname-sec : Subscribe failure (resolving domain name). - subs-auth-sec : Subscribe failure (authentication). - subs-refreshfail-sec : Subscribe failure (refresh failure). - subs-inittimeout-sec : Subscribe failure (initial REQ timeout). - emergency-call-sec : Emergency call for Secondary Termination is ongoing. - all : show all secondary sip termination alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
term-index	Parameter type: <Itf::PotsLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identifies the termination

time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.34 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query xdsl [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port
<Itf::XdslLine> ] ]
```

Command Parameters

Table 101.34-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (xdsl-ne-los xdsl-ne-lof xdsl-ne-lom xdsl-ne-ese xdsl-act-cfg-error xdsl-act-not-feas xdsl-up-br-reach xdsl-ne-ncd xdsl-ne-lcd xdsl-fe-los xdsl-fe-lof xdsl-fe-lpr xdsl-fe-lol xdsl-fe-lom xdsl-fe-ese xdsl-fe-upbo-vio xdsl-fe-cpe-pol xdsl-tpstc-mis xdsl-act-comm xdsl-act-modem xdsl-do-br-reach xdsl-fe-ncd xdsl-fe-lcd xdsl-frtx-init-fail xdsl-vect-dle all) Possible values:	alarm name of xdsl

101 query current alarms by filters

Resource Identifier	Type	Description
	- xdsl-ne-los : loss of signal - xdsl-ne-lof : loss of frame - xdsl-ne-lom : loss of margin - xdsl-ne-ese : excessive severe errors - xdsl-act-cfg-error : line configuration data cannot be used - xdsl-act-not-feas : line capacity not enough to setup requested profile - xdsl-up-br-reach : planned bitrate not reached after initialization - xdsl-ne-ncd : no cell delineation - xdsl-ne-lcd : loss of cell delineation - xdsl-fe-los : loss of signal - xdsl-fe-lof : loss of frame - xdsl-fe-lpr : loss of power - xdsl-fe-lol : loss of link - xdsl-fe-lom : loss of margin - xdsl-fe-ese : excessive severe errors - xdsl-fe-upbo-vio : upbo violation - xdsl-fe-cpe-pol : activation failure cpe policing - xdsl-tpstc-mis : mismatch between the configured tps-tc mode and the mode supported by the connected cpe - xdsl-act-comm : init not successful due to communications problem - xdsl-act-modem : no peer modem detected - xdsl-do-br-reach : planned bitrate not reached after init - xdsl-fe-ncd : no cell delineation - xdsl-fe-lcd : loss of cell delineation - xdsl-frtx-init-fail : init not successful due to forced rtx - xdsl-vect-dle : vectoring disorderly leaving event - all : show all xDSL alarm alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::XdslLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identifies the physical position of the port

Resource Identifier	Type	Description
	<Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number

101.35 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query xdsl-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Itf::XdslLine> ] ]
```

Command Parameters

Table 101.35-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (xtca-ne-es xtca-ne-ses xtca-ne-uas xtca-ne-day-es xtca-ne-day-ses xtca-ne-day-uas xtca-fe-es xtca-fe-ses xtca-fe-uas xtca-fe-day-es xtca-fe-day-ses xtca-fe-day-uas xtca-leftrs xtca-day-leftrs xtca-fe-leftrs xtca-fe-day-leftrs xtca-reinit xtca-day-reinit xtca-spontintrpt xtca-day-spontintrpt all) Possible values: - xtca-ne-es : errored seconds in 15 min - xtca-ne-ses : severely errored seconds in 15 min - xtca-ne-uas : unavailable seconds in 15 min - xtca-ne-day-es : errored seconds in 1 day - xtca-ne-day-ses : severely errored seconds in 1 day	alarm name of xdsl-tca

101 query current alarms by filters

Resource Identifier	Type	Description
	- xtca-ne-day-uas : unavailable seconds in 1 day - xtca-fe-es : errored seconds in 15 min - xtca-fe-ses : severely errored secs in 15 min - xtca-fe-uas : unavailable seconds in 15 min - xtca-fe-day-es : errored seconds in 1 day - xtca-fe-day-ses : severely errored secs in 1 day - xtca-fe-day-uas : unavailable seconds in 1 day - xtca-leftrs : low error free throughput seconds in 15 min - xtca-day-leftrs : low error free throughput seconds in 1 day - xtca-fe-leftrs : far end low error free throughput seconds in 15 min - xtca-fe-day-leftrs : far end low error free throughput seconds in 1 day - xtca-reinit : Reinitialization seconds in 15 min - xtca-day-reinit : Reinitialization seconds in 1 day - xtca-spontintrpt : spontaneous interrupt seconds in 15 min - xtca-day-spontintrpt : spontaneous interrupt seconds in 1 day - all : show all xDSL threshold cross alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no
port	Parameter type: <Itf::XdslLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identifies the physical position of the port

name	Type	Description
	far-end middle-end line null) Possible values: - near-end : alarm location is near - far-end : alarm location is far - middle-end : alarm location is middle - line : alarm location is line - null : alarm location not defined	<i>detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
direction	Parameter type: <Alarm::almDirection> (received transmit null) Possible values: - received : alarm is received - transmit : alarm is transmit - null : direction not defined	alarm direction: received or transmit <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.36 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query vect-board [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ board-index <Equipm::EqptVpSlotIndex> ] ]
```

Command Parameters

Table 101.36-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (vect-vp-lt-mismatch vect-inv-qsf vect-vp-lt-fail vect-no-gain-at-init all) Possible values: - vect-vp-lt-mismatch : actual vp-lt connection(s) do not match expected vp-lt connection(s) or vp-lt connection lost - vect-inv-qsf : qsf has no valid Nokia ID - vect-vp-lt-fail : vp-lt connection not operational - vect-no-gain-at-init : Lines cannot train in gain-at-init mode - all : show all vectoring board alarm	alarm name of vect-board
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	- all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board-index	Parameter type: <Equipm::EqptVpSlotIndex> Format: (ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Possible values: - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the index of the board

101.37 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query vect-line [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Itf::XdslLine> ] ]
```

Command Parameters

Table 101.37-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (vectline-xtc-var-vict vectline-xtc-var-dist vectline-corp-errf vect-cpe-cap-mismatch vectline-conf_notfeas all) Possible values: - vectline-xtc-var-vict : excessive victim crosstalk coefficients variation - vectline-xtc-var-dist : excessive disturber crosstalk coefficients variation - vectline-corp-errf : corrupted or missing errorf-samples - vect-cpe-cap-mismatch : not allowed Vectoring CPE connected - vectline-conf_notfeas : vect line configuration not feasible - all : show all vectoring line alarm	alarm name of vect-line
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	- minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::XdslLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical position of the port

101.38 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query eo-conversion [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ port <SignedInteger> ] ]
```

Command Parameters

Table 101.38-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: all Possible values: - all : show all E/O conversion alarm	alarm name of eo-conversion
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no

Resource Identifier	Type	Description
port	Parameter type: <SignedInteger> Format: - a signed integer	the number of the port

101.39 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query bonding-group [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ group <Xdsl::BondingInterfaceIndex> ] ]
```

Command Parameters

Table 101.39-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (up-plan-bitrate up-min-bitrate up-config-not-feas down-plan-bitrate down-min-bitrate down-config-not-feas non-bonding-cpe multiple-cpes register group-incomplete all) Possible values: - up-plan-bitrate : upstream bitrate is above min and below planned - up-min-bitrate : upstream bitrate is below min bitrate - up-config-not-feas : upstream bitrate is not enough to set up config group - down-plan-bitrate : downstream bitrate is above min and below planned - down-min-bitrate : downstream bitrate is below min bitrate - down-config-not-feas : downstream bitrate is not enough to set up config group - non-bonding-cpe : no bonding cpe modem is connected - multiple-cpes : bonding group has multiple cpe modems connected - register : bonding group discovery or aggregation register failure	alarm name of bonding-group

Resource Identifier	Type	Description
	- group-incomplete : bonding group is incomplete - all : show all bonding-group alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
group	Parameter type: <Xdsl::BondingInterfaceIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	bonding group interface index

101 query current alarms by filters

name	Type	Description
	failure - group-incomplete : bonding group is incomplete - all : show all bonding-group alarm	
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
location	Parameter type: <Alarm::almLocation> (near-end far-end middle-end line null) Possible values: - near-end : alarm location is near - far-end : alarm location is far - middle-end : alarm location is middle - line : alarm location is line - null : alarm location not defined	alarm location: near, middle, far <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
direction	Parameter type: <Alarm::almDirection> (received transmit null) Possible values: - received : alarm is received - transmit : alarm is transmit - null : direction not defined	alarm direction: received or transmit <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.40 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query custom [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.40-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (custom1 custom2 custom3 custom4 custom5 he-custom1 he-custom2 he-custom3 he-custom4 he-custom5 he-custom6 all) Possible values: - custom1 : customizable alarm 1 - custom2 : customizable alarm 2 - custom3 : customizable alarm 3 - custom4 : customizable alarm 4 - custom5 : customizable alarm 5 - he-custom1 : host expansion customizable alarm 1 - he-custom2 : host expansion customizable alarm 2 - he-custom3 : host expansion customizable alarm 3 - he-custom4 : host expansion customizable alarm 4 - he-custom5 : host expansion customizable alarm 5 - he-custom6 : host expansion customizable alarm 6 - all : show all customizable alarm	alarm name of custom
severity	Parameter type: <Alarm::querySeverity> Format:	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	(indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

101.41 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query megaco-media-gw [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::EqptSlotIndex> ] ]
```

Command Parameters

Table 101.41-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (mgc-unreachable failover-to-esamgc all) Possible values: - mgc-unreachable : loss of contact with the media gateway controller - failover-to-esamgc : failover to esa mgc - all : show all megaco media gateway alarm	alarm name of megaco-media-gw
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms

101.42 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query megaco-sig-gw [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::LtSlotIndex> ] ]
```

Command Parameters

Table 101.42-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (sgc-unreachable all) Possible values: - sgc-unreachable : loss of contact with signaling gateway controller - all : show all megaco signaling gateway alarm	alarm name of megaco-sig-gw
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values:	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
board	Parameter type: <Equipm::LtSlotIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical number of slot

101.43 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query megaco-plug-unit [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.43-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (lcard-unreach-srvcard lcard-type-mismatch all) Possible values: - lcard-unreach-srvcard : line card unreachable with server card - lcard-type-mismatch : associate board of wrong type - all : show all megaco plug unit alarm	alarm name of megaco-plug-unit
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

Command Output

101.44 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query megaco-term [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ port <Itf::MegacoPotsLine> ] ]
```

Command Parameters

Table 101.44-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (meg-unknown-sub meg-ground-key meg-high-temp meg-act-fail meg-over-current line-showering low-qos-packetloss low-qos-jitter low-qos-delay all) Possible values: - meg-unknown-sub : the megaco subscriber is unknown - meg-ground-key : voice port ground key - meg-high-temp : voice port high temperature - meg-act-fail : the first link layer for isdn subscriber activation failure - meg-over-current : voice port over current - line-showering : line showering - low-qos-packetloss : the total packet loss has exceeded the configured threshold - low-qos-jitter : the rtp jitter has exceeded the configured threshold - low-qos-delay : the rtp delay has exceeded the configured threshold - all : show all megaco termination alarm	alarm name of megaco-term
severity	Parameter type: <Alarm::querySeverity> Format:	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	(indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::MegacoPotsLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> / <Eqpt::MegacoPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number Field type <Eqpt::MegacoPortId> - the port number of Megaco	the physical number of the port

101.45 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query megaco-sig-lt [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ board <Equipm::LtSlotIndex> ] ]
```

Command Parameters

Table 101.45-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (sig-brd-persist-loss sig-brd-disk-full sig-brd-db-rollback mg-overload all) Possible values: - sig-brd-persist-loss : voice signaling board persistent data loss - sig-brd-disk-full : voice signaling board disk 90% full - sig-brd-db-rollback : voice signaling board db rollback - mg-overload : mg overload - all : show all megaco signaling lt alarm	alarm name of megaco-sig-lt
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

Resource Identifier	Type	Description
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board	Parameter type: <Equipm::LtSlotIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical number of the slot

Command Output

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.46 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query shdsl [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port
<Itf::ShdslLine> ] ]
```

Command Parameters

Table 101.46-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (shdsl-n-loopback shdsl-c-loopback shdsl-conferr shdsl-atm-lcd shdsl-lpr shdsl-secu-err shdsl-dev-fault shdsl-atm-ncd all) Possible values: - shdsl-n-loopback : loopback active at the network side - shdsl-c-loopback : loopback active at the customer side - shdsl-conferr : configuration error - shdsl-atm-lcd : loss of atm cell delineation - shdsl-lpr : loss of power at stu-r - shdsl-secu-err : unable to disable stu-r access - shdsl-dev-fault : device fault - shdsl-atm-ncd : no atm cell delineation - all : show all shdsl alarm	alarm name of Shdsl
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all)	severity level of an alarm for reporting

Resource Identifier	Type	Description
	Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::ShdslLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical port number of the slot

101.47 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query shdsl-isam [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ port <Itf::ShdslLine> ] ]
```

Command Parameters

Table 101.47-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (shdsl-n-losw shdsl-c-losw shdsl-n-aten shdsl-c-aten shdsl-n-snr shdsl-c-snr shdsl-n-dccont shdsl-c-dccont shdsl-c-actfail all) Possible values: - shdsl-n-losw : loss of sync word at the network side on each pair - shdsl-c-losw : loss of sync word at the customer side on each pair - shdsl-n-aten : loop attenuation alarm at the network side on each pair - shdsl-c-aten : loop attenuation alarm at the customer side on each pair - shdsl-n-snr : snr margin alarm at the network side each pair - shdsl-c-snr : snr margin alarm at the customer side on each pair - shdsl-n-dccont : dc continuity fault at the network side on each pair - shdsl-c-dccont : dc continuity fault at the customer side on each pair - shdsl-c-actfail : activation failure at the customer side on	alarm name of shdsl-isam

101 query current alarms by filters

Resource Identifier	Type	Description
	each pair - all : show all shdsl isam alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::ShdslLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identifies the physical position of the port

name	Parameter type: <Alarm::alarmtypeShdslisam> (shdsl-n-losw shdsl-c-losw shdsl-n-aten shdsl-c-aten shdsl-n-snr shdsl-c-snr shdsl-n-dccont shdsl-c-dccont shdsl-c-actfail all) Possible values: - shdsl-n-losw : loss of sync word at the network side on each pair - shdsl-c-losw : loss of sync word at the customer side on each pair - shdsl-n-aten : loop attenuation alarm at the network side on each pair - shdsl-c-aten : loop attenuation alarm at the customer side on each pair - shdsl-n-snr : snr margin alarm at the network side each pair - shdsl-c-snr : snr margin alarm at the customer side on each pair - shdsl-n-dccont : dc continuity fault at the network side on each pair - shdsl-c-dccont : dc continuity fault at the customer side on each pair	alarm name that are active <i>This element is only shown in detail mode.</i>

name	Type	Description
	- shdsl-c-actfail : activation failure at the customer side on each pair - all : show all shdsl isam alarm	
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
location	Parameter type: <Alarm::almLocation> (near-end far-end middle-end line null) Possible values: - near-end : alarm location is near - far-end : alarm location is far - middle-end : alarm location is middle - line : alarm location is line - null : alarm location not defined	alarm location: near, middle, far <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
direction	Parameter type: <Alarm::almDirection> (received transmit null) Possible values: - received : alarm is received - transmit : alarm is transmit - null : direction not defined	alarm direction: received or transmit <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.48 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ima-group [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]  
[ port <Equipm::AtmImaIndex> ] ]
```

Command Parameters

Table 101.48-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ima-grp-fe-su ima-grp-fe-cfg ima-grp-ne-cfg ima-grp-fe-nl ima-grp-ne-nl ima-grp-fe-blk all) Possible values: - ima-grp-fe-su : far-end starting up - ima-grp-fe-cfg : far-end failed configuration - ima-grp-ne-cfg : near-end failed configuration - ima-grp-fe-nl : insufficient number of links at far-end - ima-grp-ne-nl : insufficient number of links at near-end - ima-grp-fe-blk : far-end is blocked - all : show all ima-group alarm	alarm name of ima-group
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Equipm::AtmImaIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical number of the port

101.49 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ima-link [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Itf::ShdslLine> ] ]
```

Command Parameters

Table 101.49-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ima-lnk-lif ima-lnk-lods ima-lnk-misc ima-lnk-rfi ima-lnk-fault ima-lnk-txblk ima-lnk-rxblk all) Possible values: - ima-lnk-lif : loss of ima frame - ima-lnk-lods : link out of delay synchronization - ima-lnk-misc : link misconnect - ima-lnk-rfi : link remote failure indication - ima-lnk-fault : fault in link facility - ima-lnk-txblk : transmit blocked due to far-end - ima-lnk-rxblk : receive blocked due to far-end - all : show all ima-link alarm	alarm name of ima-link
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate	severity level of an alarm for reporting

101 query current alarms by filters

101.50 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ether-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <If::EthernetPortIndex> ] ]
```

Command Parameters

Table 101.50-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (etca-los etca-fcs etca-day-los etca-day-fcs etca-rx-octets etca-tx-octets etca-day-rx-octets etca-day-tx-octets all) Possible values: - etca-los : loss of signal errors in 15 min - etca-fcs : frame check sequence errors in 15 min - etca-day-los : loss of signal errors in 1 day - etca-day-fcs : frame check sequence errors in 1 day - etca-rx-octets : received octets in 15 min - etca-tx-octets : transmitted octets in 15 min - etca-day-rx-octets : received octets in 1 day - etca-day-tx-octets : transmitted octets in 1 day - all : show all ethernet threshold cross alarm	alarm name of ether-tca
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all)	severity level of an alarm for reporting

Resource Identifier	Type	Description
	Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::EthernetPortIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical number of the port

101.51 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ether-sfp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <If::EthernetPortIndex> ] ]
```

Command Parameters

Table 101.51-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (user-sfp-los user-sfp-tx-fail user-sfp-not-prst user-sfp-inv-id user-sfp-t-exceed user-sfp-mismatch all) Possible values: - user-sfp-los : user sfp loss of signal - user-sfp-tx-fail : user sfp tx failure - user-sfp-not-prst : user sfp not detected - user-sfp-inv-id : user sfp invalid id - user-sfp-t-exceed : user sfp temperature exceed - user-sfp-mismatch : user sfp mismatch the configured type - all : show all ethernet SFP alarm	alarm name of ether-sfp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	- major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting

101.52 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query uplink-ether-sfp [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ port <Itf::EthernetPortIndex> ] ]
```

Command Parameters

Table 101.52-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (uplink-sfp-loss uplink-sfp-tx-fail uplink-sfp-not-prst uplink-sfp-inv-id uplink-sfp-t-exceed uplink-sfp-mismatch all) Possible values: - uplink-sfp-loss : uplink sfp loss of signal - uplink-sfp-tx-fail : uplink sfp tx failure - uplink-sfp-not-prst : uplink sfp is not detected - uplink-sfp-inv-id : uplink sfp invalid id - uplink-sfp-t-exceed : uplink sfp temperature exceed - uplink-sfp-mismatch : uplink sfp mismatch the configured type - all : show all uplink ethsfp alarm	alarm name of uplink-ether-sfp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Itf::EthernetPortIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical number of the port

101.53 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query qos-queue [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ port <If::PhyLine> ] ]
```

Command Parameters

Table 101.53-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (queue-drop queue-load queue-peak-usage all) Possible values: - queue-drop : The number of pkts dropped by queue exceeds threshold - queue-load : The queue load exceeds threshold - queue-peak-usage : The queue peak usage exceeds threshold - all : show all qos queue alarm	alarm name of qos-queue
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect>	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting
port	Parameter type: <Itf::PhyLine> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ont.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> uni.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> uni.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ont : ont - ont.ng2 : ngpon2 ONT style identification - uni.ng2 : ngpon2 UNI style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId>	the physical number of the port

Resource Identifier	Type	Description
	- the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier

101.54 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query temporal [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.54-1 "show current alarm by filters" Resource Parameters

101.55 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query spatial [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.55-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.56 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-ploam [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.56-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-ploam-loss-sig ont-ploam-loss-ack ont-ploam-loss-cd ont-ploam-phy-eqpt-err ont-ploam-startup-fail ont-ploam-sig-degrade ont-ploam-disabled ont-ploam-err-msg ont-ploam-inactive ont-ploam-sig-fail ont-ploam-dying-gasp ont-ploam-deact-fail ont-ploam-oam ont-ploam-win-drift ont-ploam-rdi ont-ploam-loss-ks ont-ploam-pwr-burst ont-ploam-rog-disa ont-ploam-diff-reach ont-ploam-looc all) Possible values: - ont-ploam-loss-sig : loss of signal at ont - ont-ploam-loss-ack : loss of acknowledge from ont - ont-ploam-loss-cd : loss of channel delineation of ont - ont-ploam-phy-eqpt-err: physical equipment error of ont - ont-ploam-startup-fail: startup failure in ranging of ont	alarm name of ONT PLOAM

Resource Identifier	Type	Description
	- ont-ploam-sig-degrade : signal degrade from ont - ont-ploam-disabled : ont disabled alarm - ont-ploam-err-msg : error message from ont - ont-ploam-inactive : inactive ont - ont-ploam-sig-fail : signal fail alarm from ont - ont-ploam-dying-gasp : dying gasp alarm from ont - ont-ploam-deact-fail : deactive failure of ont - ont-ploam-oam : loss of ploam for ont - ont-ploam-win-drift : drift of window alarm - ont-ploam-rdi : remote defect indication alarm - ont-ploam-loss-ks : loss of key synchronization alarm - ont-ploam-pwr-burst : power bursts on ont - ont-ploam-rog-disa : ont rogue disabled - ont-ploam-diff-reach : ont differential reach exceeded - ont-ploam-looc : Loss of OMCI channel due to persistent MIC failure - all : show ont ploam related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	gpon ont equipment ifindex of ont

101 query current alarms by filters

Resource Identifier	Type	Description
	Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier

time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.57 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-gen [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.57-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-gen-omci-fail ont-gen-eqpt-selftest ont-gen-ac-pwr-fail ont-gen-bat-missing ont-gen-bat-low ont-gen-bat-fail ont-gen-phys-intrusion ont-gen-sw-dnload-f ont-gen-sw-dnload-p ont-gen-sw-act-fail ont-gen-eqpt-vers-mis ont-gen-sw-vers-mis ont-gen-us-rate-mis ont-gen-mdu-env1 ont-gen-mdu-env2 ont-gen-mdu-env3 ont-gen-nw-time-err ont-gen-opt-sig-high ont-gen-opt-sig-low ont-gen-eqpt-prov-sa ont-gen-eqpt-prov-nsa all) Possible values: - ont-gen-omci-fail : loss of communication - ont-gen-eqpt-selftest : ont self-test failure - ont-gen-ac-pwr-fail : ac power failure on ont - ont-gen-bat-missing : battery missing	alarm name of ONT general

Resource Identifier	Type	Description
	- ont-gen-bat-low : battery low - ont-gen-bat-fail : battery failure - ont-gen-phys-intrusion: physical intrusion - ont-gen-sw-dnload-f : ont sw download failure - ont-gen-sw-dnload-p : ont sw download in progress - ont-gen-sw-act-fail : ont sw activation failure - ont-gen-eqpt-vers-mis : ont equipment version mismatch - ont-gen-sw-vers-mis : ont sw version mismatch - ont-gen-us-rate-mis : ont upstream rate mismatch - ont-gen-mdu-env1 : mdu environmental alarm#1 - ont-gen-mdu-env2 : mdu environmental alarm#2 - ont-gen-mdu-env3 : mdu environmental alarm#3 - ont-gen-nw-time-err : network timing protocol error - ont-gen-opt-sig-high : optical signal level too high - ont-gen-opt-sig-low : optical signal level too low - ont-gen-eqpt-prov-sa : service affecting mismatch btw equipment and provisioning attributes - ont-gen-eqpt-prov-nsa : non service affecting mismatch btw equipment and provisioning attributes - all : show ont general related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	gpon ont equipment ifindex of ont

101 query current alarms by filters

Resource Identifier	Type	Description
	- the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier

101.58 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.58-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-cpu-util-tca ont-mem-util-tca all) Possible values: - ont-cpu-util-tca : ONT CPU utilization threshold crossed - ont-mem-util-tca : ONT memory utilization threshold crossed - all : ONT TCA related alarms	alarm name of ont tca
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	gpon ont equipment ifindex of ont

name	Parameter type: <Alarm::almtypeOnttcaihub> (ont-cpu-util-tca ont-mem-util-tca all) Possible values: - ont-cpu-util-tca : ONT CPU utilization threshold crossed - ont-mem-util-tca : ONT memory utilization threshold crossed - all : ONT TCA related alarms	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.59 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query olt-gen [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Gpon::PonId> ] ]
```

Command Parameters

Table 101.59-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (olt-gen-pon-com-fail olt-gen-tx-fail olt-gen-unprov-ont olt-gen-pon-eqpt-prov olt-gen-pon-loss-sig olt-gen-pon-diagnostic olt-gen-loid-conflict olt-gen-loid-pwderr olt-gen-pon-alien-test olt-gen-alien-detect olt-gen-rng-mism olt-gen-sfp-mism olt-gen-deact-hightca olt-gen-deact-lowtca olt-gen-dp-integ olt-gen-ddr-fault all) Possible values: - olt-gen-pon-com-fail : pon communication failure on olt - olt-gen-tx-fail : transmitter failure on olt - olt-gen-unprov-ont : unprovisioned ont on pon - olt-gen-pon-eqpt-prov : mismatch btw equipment and provisioning pon attributes - olt-gen-pon-loss-sig : pon loss of signal - olt-gen-pon-diagnostic: pon diagnostic test active - olt-gen-loid-conflict : loid conflict ont on pon - olt-gen-loid-pwderr : loid password error ont on pon	alarm name of olt general

101 query current alarms by filters

Resource Identifier	Type	Description
	- olt-gen-pon-alien-test: pon alien diagnostic test active - olt-gen-alien-detect : pon alien detect active - olt-gen-rng-mism : pon ranging mismatch active - olt-gen-sfp-mism : pon sfp mismatch active - olt-gen-deact-hightca : deactivated ont hightca active - olt-gen-deact-lowtca : deactivated ont lowtca active - olt-gen-dp-integ : pon data path integrity failure - olt-gen-ddr-fault : pon failure due to ddr fault - all : OLT general alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Gpon::PonId> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	specify which port the alarm occurred on

101.60 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-card [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
ont-card <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.60-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-sbscr-lim-missing ont-sbscr-lim-type-mis ont-sbscr-lim-removal ont-sbscr-lim-fail ont-sbscr-lim-svc-mis ont-sbscr-lim-port-mis all) Possible values: - ont-sbscr-lim-missing : provisioned ont card missing - ont-sbscr-lim-type-mis: wrong type plug-in ont card - ont-sbscr-lim-removal : improper removal ont card - ont-sbscr-lim-fail : ont card failure - ont-sbscr-lim-svc-mis : ont service mismatch for provisioned onu card - ont-sbscr-lim-port-mis: port mismatch btw actual and planned ont card - all : ONT Subscriber Card related alarms	alarm name of ont subscriber card
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ont-card	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	all gpon ont plan card

101.61 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-video [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ video-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.61-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-svc-video-conf-mis ont-svc-video-pw-high ont-svc-video-pw-low all) Possible values: - ont-svc-video-conf-mis: config request failure for video service - ont-svc-video-pw-high : high power level for rf video signal - ont-svc-video-pw-low : low power level for rf video signal - all : ont services video related alarms	alarm name of ont video
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect>	serviceaffecting no

Resource Identifier	Type	Description
	Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting
video-port	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	all video port

101.62 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-pots [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont-pots <Alarm::queryDefaultAid> ] ]
```

Command Parameters

101.63 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-lan [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.63-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-svc-lan-mismatch ont-svc-lan-loss-sig ont-svc-enet-poos all) Possible values: - ont-svc-lan-mismatch : ont service mismatch for lan - ont-svc-lan-loss-sig : loss of signal on an ethernet port interface - ont-svc-enet-poos : Ethernet Ports out of Service - all : ONT Services LAN related alarms	alarm name of ont lan
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format:	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	(service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ont-port	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	all gpon ont port

Command Output

101.64 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-ces [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ cesds1-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.64-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description

101.65 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-voip [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ voip-uni <Gpon::VoipOntIndex> ] ]
```

Command Parameters

Table 101.65-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-svc-voip-cnf-file ont-svc-voip-svc-mis ont-svc-voip-gw-comm ont-svc-voip-dhcp-fail ont-svc-voip-icnf-subs ont-svc-voip-icnf-ntfy ont-svc-voip-icnf-http ont-svc-voip-dhcp-to ont-svc-voip-dhcp-mal ont-svc-voip-dhcp-noad ont-svc-voip-dhcp-leas ont-svc-voip-subs-dns ont-svc-voip-subs-tcp ont-svc-voip-subs-tls ont-svc-voip-subs-auth ont-svc-voip-subs-to ont-svc-voip-subs-err ont-svc-voip-not-to ont-svc-voip-notref-to ont-svc-voip-not-mal ont-svc-voip-not-rej ont-svc-voip-http-dns ont-svc-voip-http-tcp ont-svc-voip-http-tls ont-svc-voip-http-auth ont-svc-voip-http-to ont-svc-voip-http-err	alarm name of ont voip

Resource Identifier	Type	Description
	ont-svc-voip-http-mal ont-svc-voip-subscription-refr ont-svc-voip-not-refr ont-svc-voip-icfg-err all) Possible values: - ont-svc-voip-cnf-file : voice configuration file error - ont-svc-voip-svc-mis : service mismatch for provisioned client service - ont-svc-voip-gw-comm : voice gateway communication failure - ont-svc-voip-dhcp-fail: voice dhcp server failure - ont-svc-voip-icnf-subscription: voice iconfig subscription failure - ont-svc-voip-icnf-notify: voice iconfig notify failure - ont-svc-voip-icnf-http: voice iconfig http failure - ont-svc-voip-dhcp-to : DHCP server retransmissions timed out - ont-svc-voip-dhcp-mal : DHCP response was malformed - ont-svc-voip-dhcp-noad: DHCP server failed to issue the required parameters - ont-svc-voip-dhcp-leas: DHCP Server failure due to problem in lease renewal - ont-svc-voip-subscription-dns : iConfig Subscription failure due to DNS problem - ont-svc-voip-subscription-tcp : iConfig Subscription failure due to TCP socket problem - ont-svc-voip-subscription-tls : iConfig Subscription failure due to TLS session problem - ont-svc-voip-subscription-auth: iConfig Subscription failure due to authentication error - ont-svc-voip-subscription-to : iConfig Subscription failure due to retransmission timeout - ont-svc-voip-subscription-err : iConfig Subscription failure due to response error - ont-svc-voip-not-to : iConfig Notify response timeout for new subscription - ont-svc-voip-notref-to: iConfig Notify response timeout for subscription refresh - ont-svc-voip-not-mal : iConfig Notify response is malformed - ont-svc-voip-not-rej : iConfig subscription request rejected by configuration server - ont-svc-voip-http-dns : VOIP client can't retrieve config doc due to DNS problem - ont-svc-voip-http-tcp : VOIP client can't retrieve config doc due to TCP socket problem - ont-svc-voip-http-tls : VOIP client can't retrieve config doc due to TLS session problem - ont-svc-voip-http-auth: VOIP client can't retrieve config doc due to auth error - ont-svc-voip-http-to : VOIP client can't retrieve config doc due to re-tx timeout - ont-svc-voip-http-err : VOIP client can't retrieve config doc due to response error - ont-svc-voip-http-mal : iConfig configuration document is malformed - ont-svc-voip-subscription-refr: iConfig Subscription refresh error

	- ont-svc-voip-not-mal : iConfig Notify response is malformed - ont-svc-voip-not-rej : iConfig subscription request rejected by configuration server - ont-svc-voip-http-dns : VOIP client can't retrieve config doc due to DNS problem - ont-svc-voip-http-tcp : VOIP client can't retrieve config doc due to TCP socket problem - ont-svc-voip-http-tls : VOIP client can't retrieve config doc due to TLS session problem - ont-svc-voip-http-auth: VOIP client can't retrieve config doc due to auth error - ont-svc-voip-http-to : VOIP client can't retrieve config doc due to re-tx timeout - ont-svc-voip-http-err : VOIP client can't retrieve config doc due to response error - ont-svc-voip-http-mal : iConfig configuration document is malformed - ont-svc-voip-sub-refr: iConfig Subscription refresh error - ont-svc-voip-not-refr : iConfig Notify response for refresh subscribe failed - ont-svc-voip-icfg-err : iConfig Configuration Error - all : ont services voip related alarms	
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.66 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-video-ani [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.66-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-svc-v-ani-conf-mis ont-svc-v-ani-loss-sig ont-svc-v-ani-lv-high ont-svc-v-ani-lv-low all) Possible values: - ont-svc-v-ani-conf-mis: config request failure for video ani service - ont-svc-v-ani-loss-sig: video loss of signal on ani - ont-svc-v-ani-lv-high : high video optical signal level - ont-svc-v-ani-lv-low : low video optical signal level - all : ont services video ani related alarms	alarm name of ont video ani
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	gpon ont equipment ifindex of ont

101.68 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-moca [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
uni-index <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.68-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-moca-svc-mis ont-moca-link-los ont-moca-min-bw all) Possible values: - ont-moca-svc-mis : moca ont service mismatch - ont-moca-link-los : moca loss of link - ont-moca-min-bw : moca bw between nodes less than minimum bw - all : ONT MoCA related alarms	alarm name of ont moca
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format:	serviceaffecting no

Resource Identifier	Type	Description
	(service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
uni-index	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	all ont port

101.69 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-tc-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.69-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-tc-rx-los-frag-tc ont-tc-tx-los-frag-tc ont-tc-bad-gem-hd-tc all) Possible values: - ont-tc-rx-los-frag-tc : rx loss of gem fragments threshold crossed - ont-tc-tx-los-frag-tc : tx loss of gem fragments threshold crossed - ont-tc-bad-gem-hd-tc : bad gem header threshold crossed - all : ONT TC TCA related alarms	alarm name of ont tc tca

101.70 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-l2uni-eth-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ ont-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.70-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description

101.71 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-moca-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ uni-index <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.71-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-moca-tca-rx-err-fr all) Possible values: - ont-moca-tca-rx-err-fr: moca rx errored frames threshold crossed - all : ONT MoCA TCA related alarms	alarm name of ont moca threshold crossing alert
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

direction	Parameter type: <Alarm::almDirection> (received transmit null) Possible values: - received : alarm is received - transmit : alarm is transmit - null : direction not defined	alarm direction: received or transmit <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.72 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query olt-pon-tc-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ pon <Gpon::PonId> ] ]
```

Command Parameters

Table 101.72-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (olt-pon-tc-err-frag-tc olt-pon-up-bw-tca olt-pon-down-bw-tca all) Possible values: - olt-pon-tc-err-frag-tc: pon errored fragments threshold crossed - olt-pon-up-bw-tca : OLT PON upstream bandwidth TCA - olt-pon-down-bw-tca : OLT PON downstream bandwidth TCA - all : OLT PON TC TCA related alarms	alarm name of olt pon tc tca
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect>	serviceaffecting no

Resource Identifier	Type	Description
	Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting
pon	Parameter type: <Gpon::PonId> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	gpon pon ifindex

101.73 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query olt-ont-tc-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.73-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.74 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-pwe [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
ont-ces-uni <Ces::InterfaceIndex> ] ]
```

Command Parameters

Table 101.74-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-svc-pwe-mismatch ont-svc-pwe-reordr-lof ont-svc-pwe-jitt-buf-o ont-svc-pwe-jitt-buf-u ont-svc-pwe-malf-frms ont-svc-pwe-late-frms ont-svc-pwe-link-loss ont-svc-pwe-arp-fail all) Possible values: - ont-svc-pwe-mismatch : service mismatch for provisioned pseudowire - ont-svc-pwe-reordr-lof: pseudowire reordering and loss of frame - ont-svc-pwe-jitt-buf-o: pseudowire jitter buffer overrun - ont-svc-pwe-jitt-buf-u: pseudowire jitter buffer underrun - ont-svc-pwe-malf-frms : pseudowire malformed frames - ont-svc-pwe-late-frms : pseudowire late frames - ont-svc-pwe-link-loss : pseudowire link loss - ont-svc-pwe-arp-fail : pseudowire arp failure - all : ont services pwe related alarms	alarm name of ont pwe

101.76 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-xdsl [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ dsl-line-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.76-1 "show current alarm by filters" Resource Parameters

101.78 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query mcsrc [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ grp-ip-addr <Alarm::IpAddress> ] ]
```

Command Parameters

Table 101.78-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (mcsrc-stream-lost all) Possible values: - mcsrc-stream-lost : multicast video stream lost - all : multicast source alarms	alarm name of multicast source
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
grp-ip-addr	Parameter type: <Alarm::IpAddress> Format: - IPv4-address	identify the mcast address where the alarm has occurred

Command Output

101.79 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query eqpt-supplemental [ (name) [ severity <Alarm::querySeverity> ] [ servaff  
<Alarm::queryServAffect> ] [ shelf <Equipm::Shelf> ] ]
```

Command Parameters

Table 101.79-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (eqptsupl-syslog-upload eqptsupl-ontsw-dnload cf-75%used cf-90%used all) Possible values: - eqptsupl-syslog-upload: upload of log file to remote server failure - eqptsupl-ontsw-dnload : ont sw download in progress - cf-75%used : Compact flash exceeds 75% of life expectancy - cf-90%used : Compact flash exceeds 90% of life expectancy - all : equipment supplemental alarms	alarm name of equipment supplemental
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
shelf	Parameter type: <Equipm::Shelf> Format: <Eqpt::RackId> / <Eqpt::ShelfId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	specify which shelf the alarm occurred on

Command Output

101.80 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont
<Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.80-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-gen-sw-dnload-file ont-gen-fan-fail ont-gen-high-temp ont-gen-high-temp-ex ont-gen-emergency-call ont-gen-sw-version ont-poe-exceed-max ont-poe-overload-yell ont-opti-malfunc ont-gen-cfgdld-fail ont-gen-rssi-mis ont-gen-tx-pwr-low ont-gen-temp-high ont-gen-volt-high ont-gen-bias-high ont-loopdetect-mis ont-olt-rx-pw-lo ont-olt-rx-pw-hig ont-olt-rx-pw-warnlo ont-olt-rx-pw-warnhig ont-gen-tod-out-sync ont-gen-tune-fail hgu-tr069-parm-fail ont-gen-tod-mismatch all) Possible values: - ont-gen-sw-dnload-file: ont sw download file missing	alarm name of ONT general supplemental

Resource Identifier	Type	Description
	- ont-gen-fan-fail : ont fan failure - ont-gen-high-temp : ont high temperature - ont-gen-high-temp-ex : ont excessive high temperature - ont-gen-emergency-call: ont emergency call - ont-gen-sw-version : ont sw version control error - ont-poe-exceed-max : ont poe exceed max - ont-poe-overload-yell : ONU is nearing its maximum ability to supply the power - ont-opti-malfunc : Malfunction of ONT's optical transceiver - ont-gen-cfgdld-fail : download of voice xml file to ont failed - ont-gen-rssi-mis : ONU RSSI configuration mismatch - ont-gen-tx-pwr-low : ONU SFP Tx Power is lower than configured Alarm low threshold - ont-gen-temp-high : ONU SFP Temperature is higher than configured Alarm high threshold - ont-gen-volt-high : ONU SFP Voltage is higher than configured Alarm high threshold - ont-gen-bias-high : ONU SFP Bias is higher than configured Alarm high threshold - ont-loopdetect-mis : ont loop detect mismatch - ont-olt-rx-pw-lo : olt side receive power from ont low - ont-olt-rx-pw-hig : olt side receive power from ont high - ont-olt-rx-pw-warnlo : olt side receive power from ont low warning - ont-olt-rx-pw-warnhig : olt side receive power from ont high warning - ont-gen-tod-out-sync : ONU TOD is out-sync with OLT - ont-gen-tune-fail : ONU has failed to tune to Target-ChnlPair - hgu-tr069-param-fail : hgu tr069 parameters mismatch - ont-gen-tod-mismatch : ONU TOD MISMATCH - all : ONT general supplemental related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- all : query service affecting and not affecting alarms	
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identifies the ont entry

101.81 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ihub-l2forward [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ port <Ihub::EtherPortAndLag> ] ]
```

Command Parameters

Table 101.81-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (l2fw-stp-exception l2fw-stp-root-guard all) Possible values: - l2fw-stp-exception : STP exception condition is present in the SAP - l2fw-stp-root-guard : STP root gaurd violation is present - all : ihub-l2forward alarms	alarm name of ihub-l2forward
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms

101.82 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query vprn [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::Router> ] ]
```

Command Parameters

Table 101.82-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (vprn-routes-limit vprn-ipv6-routes-limit dhcpv6-lease-limit dhcpv4-lease-limit all) Possible values: - vprn-routes-limit : limit of ip is reached - vprn-ipv6-routes-limit: limit of ipv6 is reached - dhcpv6-lease-limit : limit of dhcpv6 leases is reached - dhcpv4-lease-limit : limit of dhcpv4 leases is reached - all : vprn related alarms	alarm name of vprn
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect>	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting
router-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	identifies the vprn service-id or the base router where the alarm has occurred

101.83 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ospf [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::Router> ] ]
```

Command Parameters

Table 101.83-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ospf-lsa-limit ospf-lsa-mid-limit ospf-neighbor-down ospf-instance-down all) Possible values: - ospf-lsa-limit : limit of received LSA's is reached - ospf-lsa-mid-limit : 90% of limit of received LSA's is reached - ospf-neighbor-down : OSPF neighbour is down - ospf-instance-down : OSPF instance is down or not - all : ospf related alarms	alarm name of ospf
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
router-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	identifies the vprn service-id or the base router where the alarm has occurred

Command Output

101.84 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query rip [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::Router> ] ]
```

Command Parameters

Table 101.84-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (rip-instance-down all) Possible values: - rip-instance-down : rip instance down - all : rip related alarms	alarm name of rip
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
router-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	identifies the vprn service-id or the base router where the alarm has occurred

101.85 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query vpls [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ service-id <Alarm::ServiceId> ] ]
```

Command Parameters

Table 101.85-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (vpls-mfib-limit vpls-duplicate-mac vpls-fdb-limit vpls-self-duplic-mac vpls-sdp-self-dup-mac all) Possible values: - vpls-mfib-limit : limit of fib table is reached - vpls-duplicate-mac : duplicate mac address is detected - vpls-fdb-limit : limit of fdb table is reached - vpls-self-duplic-mac : duplicate of a system owned mac address detected on a sap - vpls-sdp-self-dup-mac : duplicate of a system owned mac address detected on a sdp binding - all : vpls related alarms	alarm name of vpls
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	- major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
service-id	Parameter type: <Alarm::ServiceId> Format: - a profile index value - range: [1...2147483647]	identifies the vpls service-id where the alarm has occurred

Command Output

101.86 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ihub-link [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Ihub::EtherPort> ] ]
```

Command Parameters

Table 101.86-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (link-down link-lagport-add-fail link-conf-mismatch all) Possible values: - link-down : link is down - link-lagport-add-fail : failure to add port to LAG - link-conf-mismatch : SFP+plugin-types does not match the planned speed and/or auto-negotiation for the port - all : ihub-link related alarms	alarm name of ihub-link
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format:	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	(service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
port	Parameter type: <Ihub::EtherPort> Format: (nt-a : sfp : <Alarm::FacePlatePortIndex> nt-a : xfp : <Alarm::FacePlatePortIndex> nt-a : qsfp : <Alarm::FacePlatePortIndex> nt-a : cfp : <Alarm::FacePlatePortIndex> nt-a : eth : <Alarm::FacePlatePortIndex> nt-a : ieee1588 : <Alarm::FacePlatePortIndex> nt-a : ai : <Alarm::FacePlatePortIndex> nt-b : sfp : <Alarm::FacePlatePortIndex> nt-b : xfp : <Alarm::FacePlatePortIndex> nt-b : qsfp : <Alarm::FacePlatePortIndex> nt-b : cfp : <Alarm::FacePlatePortIndex> nt-b : eth : <Alarm::FacePlatePortIndex> nt-b : ieee1588 : <Alarm::FacePlatePortIndex> nt-b : ai : <Alarm::FacePlatePortIndex> ntio-1 : sfp : <Alarm::FacePlatePortIndex> ntio-1 : xfp : <Alarm::FacePlatePortIndex> ntio-1 : qsfp : <Alarm::FacePlatePortIndex> ntio-1 : cfp : <Alarm::FacePlatePortIndex> ntio-2 : sfp : <Alarm::FacePlatePortIndex> ntio-2 : xfp : <Alarm::FacePlatePortIndex> ntio-2 : qsfp : <Alarm::FacePlatePortIndex> ntio-2 : cfp : <Alarm::FacePlatePortIndex> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a : qsfp : <Alarm::QsfpPortIndex> - <Alarm::LaneIndex> nt-b : qsfp : <Alarm::QsfpPortIndex> - <Alarm::LaneIndex> ntio-1 : qsfp : <Alarm::QsfpPortIndex> - <Alarm::LaneIndex>) Possible values: - nt-a : the nt-a slot - nt-b : the nt-b slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf - lt : the lt slot - nt-a : the nt-a slot - nt-b : the nt-b slot - ntio-1 : the nt-b slot Possible values: - sfp : SFP port - xfp : XFP port - qsfp : QSFP port - cfp : CFP port - eth : RJ45 or lemi port - ieee1588 : IEEE1588 port - ai : AI port Field type <Eqpt::RackId> - the rack number	identifies the ihub port where the alarm has occurred

Resource Identifier	Type	Description
	Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Alarm::FacePlatePortIndex> - the faceplate port number Field type <Alarm::QsfpPortIndex> - the qsfp port number Field type <Alarm::LaneIndex> - the lane number of qsfp port

101.87 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ihub-equip [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]  
[ board <Alarm::NtSlotId> ] ]
```

Command Parameters

Table 101.87-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ihub-peer-comm ihub-sw-fail ihub-hw-fail ihub-link-fail ihub-proc-overload ihub-out-of-mem ntp-comm-lost all) Possible values: - ihub-peer-comm : ihub peer to peer communication failure - ihub-sw-fail : IHUB s/w error - ihub-hw-fail : IHUB h/w error - ihub-link-fail : IHUB link failure - ihub-proc-overload : IHUB processor exceeded - ihub-out-of-mem : IHUB processor out of memory - ntp-comm-lost : No response is received from the NTP servers - all : ihub-equip related alarms	alarm name of ihub-equip
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values:	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
board	Parameter type: <Alarm::NtSlotId> Format: (nt-a nt-b) Possible values: - nt-a : nt-a slot - nt-b : nt-b slot	identifies the slot where the alarm has been detected

Command Output

101.88 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query lag [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ lag-id <Alarm::LagId> ] ]
```

Command Parameters

Table 101.88-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (lag-down lagsubgrp-thresh-reach lagsubgrp-switch-fail no-unpinned-free-ports all) Possible values: - lag-down : lag down - lagsubgrp-thresh-reach: lag subgroup threshold reached - lagsubgrp-switch-fail : lag subgroup switchover failed - no-unpinned-free-ports: No free ports available for unpinned traffic - all : LAG related alarms	alarm name of lag
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
lag-id	Parameter type: <Alarm::LagId> Format: - link aggregation group id - range: [1...64]	Identifies the lag where the alarm has occurred

Command Output

101.89 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ihub-general [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.89-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (general-arp-limit gen-switch-out-of-res ipv6-nc-limit dhcp-session-oor ihub-fdb-limit ihub-mac-limit all) Possible values: - general-arp-limit : arp limit exceeded - gen-switch-out-of-res : failure due to lack of resources on switch - ipv6-nc-limit : ipv6 neighbor cache limit exceeded - dhcp-session-oor : dhcp session out of resources - ihub-fdb-limit : layer 2 fdb limit reached - ihub-mac-limit : layer 2 mac limit reached - all : IHUB general related alarms	alarm name of ihub-general
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	- minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	default AID param is all

name	Parameter type: <Alarm::alarmTypeIhubgeneral> (general-arp-limit gen-switch-out-of-res ipv6-nc-limit dhcp-session-oor ihub-fdb-limit ihub-mac-limit all) Possible values: - general-arp-limit : arp limit exceeded - gen-switch-out-of-res : failure due to lack of resources on switch - ipv6-nc-limit : ipv6 neighbor cache limit exceeded - dhcp-session-oor : dhcp session out of resources - ihub-fdb-limit : layer 2 fdb limit reached - ihub-mac-limit : layer 2 mac limit reached - all : IHUB general related alarms	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.90 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ellid [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ellid-index <Itf::ComplexPortType> ] ]
```

Command Parameters

Table 101.90-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (key-fail-one-churn key-fail-three-churn oam-discov-fail report-timeout total-packets-exceed arp-packets-exceed dhcp-packets-exceed igmp-packets-exceed pppoe-packets-exceed nd-packets-exceed icmpv6-packets-exceed mld-packets-exceed dhcpv6-packets-exceed cfm-packets-exceed all) Possible values: - key-fail-one-churn : key exchange failure during one churning time - key-fail-three-churn : key exchange failure during three churning time - oam-discov-fail : extend oam discovery failure - report-timeout : report timeout detecting - total-packets-exceed : total amount of protocol packets exceed threshold - arp-packets-exceed : protocol arp packets exceed threshold - dhcp-packets-exceed : protocol dhcp packets exceed threshold	alarm name of ellid

101 query current alarms by filters

Resource Identifier	Type	Description
	- igmp-packets-exceed : protocol igmp packets exceed threshold - pppoe-packets-exceed : protocol pppoe packets exceed threshold - nd-packets-exceed : protocol nd packets exceed threshold - icmpv6-packets-exceed : protocol icmpv6 packets exceed threshold - mld-packets-exceed : protocol mld packets exceed threshold - dhcpv6-packets-exceed : protocol dhcpv6 packets exceed threshold - cfm-packets-exceed : protocol cfm packets exceed threshold - all : ellid related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ellid-index	Parameter type: <Itf::ComplexPortType> Format: (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> :	identifies the ellid where the alarm has occurred

severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor	the alarms severity level <i>This element is only shown in detail mode.</i>

101 query current alarms by filters

name	Type	Description
	- major : alarm severity is major - critical : alarm severity is critical	
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.91 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query epon [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
pon-index <Itf::ComplexPortType> ] ]
```

Command Parameters

Table 101.91-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (onu-unprovisioned signal-loss bitrate-high opmodule-mismatch all) Possible values: - onu-unprovisioned : unprovisioned ont - signal-loss : pon loss of signal - bitrate-high : the error bit rate high at pon interface - opmodule-mismatch : the optical module mismatched at pon interface - all : epon related alarms	alarm name of pon
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
pon-index	Parameter type: <Itf::ComplexPortType> Format: (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> l2-vlan : <Eqpt::VlanId> ip : <Eqpt::LogicalId> sw-loopback slip uni:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> atm-bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ip-gateway : <Eqpt::VrfId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> shdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> e1-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-ima : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ethernet-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>	identifies the epon where the alarm has occurred

time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.92 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-pots-supplemental [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ ont-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.92-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-sip-reg-dns ont-sip-reg-fail ont-sip-reg-timeout ont-sip-reg-err-resps ont-sip-inv-dns ont-sip-inv-auth ont-sip-inv-timeout ont-sip-inv-err ont-svc-pots-subs-refr ont-svc-pots-not-refr ont-svc-pots-icfg-err all) Possible values: - ont-sip-reg-dns : ont services pots sip registration failed (resolving domain name) - ont-sip-reg-fail : ont services pots sip registration authentication failed - ont-sip-reg-timeout : ont services pots sip registration timeout - ont-sip-reg-err-resps : ont services pots sip registration response error - ont-sip-inv-dns : ont services pots sip invitation failed (resolving domain name) - ont-sip-inv-auth : ont services pots sip invitation authentication failed - ont-sip-inv-timeout : ont services pots sip invitation timeout	alarm name of ONT POTS Supplemental

Resource Identifier	Type	Description
	- ont-sip-inv-err : ont services pots sip invitation response error - ont-svc-pots-subscr-refr: ont services pots iconfig subscription could not be refreshed - ont-svc-pots-not-refr : ont services pots iconfig notification could not be refreshed - ont-svc-pots-icfg-err : ont services pots service failed due to an unmapped iconfig error - all : ONT POTS Supplemental related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ont-port	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	all of gpon ont port

101.93 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sfu-ploam [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.93-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (sfu-ploam-loss-sig sfu-ploam-loss-ack sfu-ploam-loss-cd sfu-ploam-phy-eqpt-err sfu-ploam-startup-fail sfu-ploam-sig-degrade sfu-ploam-disabled sfu-ploam-err-msg sfu-ploam-inactive sfu-ploam-sig-fail sfu-ploam-dying-gasp sfu-ploam-deact-fail sfu-ploam-oam sfu-ploam-win-drift sfu-ploam-rdi sfu-ploam-loss-ks sfu-ploam-pwr-burst sfu-ploam-rog-disa sfu-ploam-diff-reach sfu-ploam-looc all) Possible values: - sfu-ploam-loss-sig : SFU ONT - loss of signal at ont - sfu-ploam-loss-ack : SFU ONT - loss of acknowledge from ont - sfu-ploam-loss-cd : SFU ONT - loss of channel delineation of ont	alarm name of sfu-ploam

101 query current alarms by filters

	exceeded - sfu-ploam-looc : SFU ONT - Loss of OMCI channel due to persistent MIC failure - all : SFU ONT PLOAM related alarms	
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.94 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sfu-gen [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.94-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (sfu-gen-omci-fail sfu-gen-eqpt-selftest sfu-gen-ac-pwr-fail sfu-gen-bat-missing sfu-gen-bat-low sfu-gen-bat-fail sfu-gen-sw-dnload-f sfu-gen-sw-dnload-p sfu-gen-sw-act-fail sfu-gen-eqpt-vers-mis sfu-gen-sw-vers-mis sfu-gen-us-rate-mis sfu-gen-tune-fail sfu-gen-nw-time-err sfu-gen-opt-sig-high sfu-gen-opt-sig-low sfu-gen-eqpt-prov-sa sfu-gen-eqpt-prov-nsa all) Possible values: - sfu-gen-omci-fail : SFU ONT - loss of communication - sfu-gen-eqpt-selftest : SFU ONT - ont self-test failure - sfu-gen-ac-pwr-fail : SFU ONT - ac power failure on ont - sfu-gen-bat-missing : SFU ONT - battery missing - sfu-gen-bat-low : SFU ONT - battery low - sfu-gen-bat-fail : SFU ONT - battery failure - sfu-gen-sw-dnload-f : SFU ONT - ont sw download failure	alarm name of sfu-gen

101 query current alarms by filters

Resource Identifier	Type	Description
	- sfu-gen-sw-dnload-p : SFU ONT - ont sw download in progress - sfu-gen-sw-act-fail : SFU ONT - ont sw activation failure - sfu-gen-eqpt-vers-mis : SFU ONT - ont equipment version mismatch - sfu-gen-sw-vers-mis : SFU ONT - ont sw version mismatch - sfu-gen-us-rate-mis : SFU ONT - ont upstream rate mismatch - sfu-gen-tune-fail : SFU ONT - ont has failed to tune to Target-ChnlPair - sfu-gen-nw-time-err : SFU ONT - network timing protocol error - sfu-gen-opt-sig-high : SFU ONT - optical signal level too high - sfu-gen-opt-sig-low : SFU ONT - optical signal level too low - sfu-gen-eqpt-prov-sa : SFU ONT - service affecting mismatch btw equipment and provisioning attributes - sfu-gen-eqpt-prov-nsa : SFU ONT - non service affecting mismatch btw equipment and provisioning attributes - all : SFU ONT general related alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	gpon ont equipment ifindex

Resource Identifier	Type	Description
	- the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier

101.95 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query soho-ploam [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.95-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description

101.96 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query soho-gen [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.96-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: all Possible values: - all : SOHO ONT general related alarms	alarm name of soho-gen
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting

101.97 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query mdu-ploam [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

101.98 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query mdu-gen [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.98-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description

time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.99 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-hpna [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.99-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-hpna-ser-mis ont-hpna-los-sig all) Possible values: - ont-hpna-ser-mis : hpna ont service mismatch - ont-hpna-los-sig : hpna loss of link - all : ont hpna related alarms	alarm name of ont-hpna
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ont-port	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	all the ont port

101.100 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ldp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::baseRouter> ] ]
```

Command Parameters

Table 101.100-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ldp-instance-down ldp-session-down all) Possible values: - ldp-instance-down : ldp instance down - ldp-session-down : ldp session down - all : ldp related alarms	alarm name of ldp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
router-id	Parameter type: <Ihub::baseRouter> Format: base Possible values: - base : base router	identifies the base router

Command Output

101 query current alarms by filters

name	Type	Description
	- e1t1-interface : E1/T1 physical interfaces related alarms	
name	Parameter type: <Alarm::alarmTypeLdpHub> (ldp-instance-down ldp-session-down all) Possible values: - ldp-instance-down : ldp instance down - ldp-session-down : ldp session down - all : ldp related alarms	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.101 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query mpls [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::baseRouter> ] ]
```

Command Parameters

Table 101.101-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (mpls-instance-down mpls-lsp-down mpls-lsp-path-down all) Possible values: - mpls-instance-down : mpls instance down - mpls-lsp-down : lsp down - mpls-lsp-path-down : lsp path down - all : mpls related alarms	alarm name of mpls
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
router-id	Parameter type: <Ihub::baseRouter> Format: base Possible values: - base : base router	identifies the base router

Command Output

101.102 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sdp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ sdp-id <Alarm::SdpId> ] ]
```

Command Parameters

Table 101.102-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (sdp-instance-down sdp-binding-down all) Possible values: - sdp-instance-down : sdp instance down - sdp-binding-down : sdp binding down - all : sdp related alarms	alarm name of sdp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
sdp-id	Parameter type: <Alarm::SdpId> Format: - sdp-id value - range: [1...17407]	identifies the sdp-id of the sdp binding

101 query current alarms by filters

name	Type	Description
name	Parameter type: <Alarm::almltypeSdpihub> (sdp-instance-down sdp-binding-down all) Possible values: - sdp-instance-down : sdp instance down - sdp-binding-down : sdp binding down - all : sdp related alarms	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.103 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query epipe [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ service-id <Alarm::ServiceId> ] ]
```

Command Parameters

Table 101.103-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (epipe-instance-down all) Possible values: - epipe-instance-down : epipe instance down - all : epipe related alarms	alarm name of epipe
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
service-id	Parameter type: <Alarm::ServiceId> Format: - a profile index value - range: [1...2147483647]	identifies the epipe service-id

Command Output

101.104 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query lldpmed [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
port <LLDPMed::LLDPMedPort> ] ]
```

Command Parameters

Table 101.104-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (lldpmed-portcfg-mis lldpmed-mediapl-mis all) Possible values: - lldpmed-portcfg-mis : config request failure for lldpmed portconfig - lldpmed-mediapl-mis : config request failure for lldpmed mediapolicy - all : lldpmed alarms	alarm name of lldpmed
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting	serviceaffecting no

Resource Identifier	Type	Description
	noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
port	Parameter type: <LLDPMed::LLDPMedPort> Format: (uni : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> uni.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> uni.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - uni : uni - uni.ng2 : ngpon2 UNI style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	identify the lldpmed port

101.105 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query vlanport [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
vlanport <If::VlanPortInterface> ] ]
```

Command Parameters

Table 101.105-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (vlanport-svc-mismatch all) Possible values: - vlanport-svc-mismatch : config request failure for the provisioned vlanport - all : vlanport alarms	alarm name of vlanport
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values:	serviceaffecting no

Resource Identifier	Type	Description
	- service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
vlanport	Parameter type: <Itf::VlanPortInterface> Format: <pre>(vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : <Eqpt::UnstackedVlan>)</pre> Possible values:	identify the vlan port

101.106 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query pim [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::Router> ] ]
```

Command Parameters

Table 101.106-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (pim-neighbor-down pim-max-mcroutes all) Possible values: - pim-neighbor-down : pim neighbor down - pim-max-mcroutes : maximum routes reached - all : pim related alarms	alarm name of Pim
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
router-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	identifies the base router

Command Output

101.107 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query bgp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ router-id <lhub::Router> ] ]
```

Command Parameters

Table 101.107-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (bgp-peer-down bgp-routes-mid-limit all) Possible values: - bgp-peer-down : peer operational state is down - bgp-routes-mid-limit : 90% of max nbr of routes BGP can learn from a peer is reached - all : bgp related alarms	alarm name of bgp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
router-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	identifies the vprn service-id or the base router

101.108 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ihub-ipv6 [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ router-id <lhub::Router> ] ]
```

Command Parameters

Table 101.108-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ihub-ipv6-dad-own ihub-ipv6-dad ihub-ipv6-dup-pd-route all) Possible values: - ihub-ipv6-dad-own : duplicate IPV6 address is detected for IP address allotted to system - ihub-ipv6-dad : duplicate IPV6 address is detected for a user's IP address - ihub-ipv6-dup-pd-route: ipv6 duplicate pd route detected - all : ihub-ipv6 related alarms	alarm name of ihub-ipv6
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect>	serviceaffecting no

Resource Identifier	Type	Description
	Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting
router-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	identifies the vprn service-id or the base router

101.109 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query li [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.109-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (li-traffic-disabled li-bandwidth-limit li-out-of-res all) Possible values: - li-traffic-disabled : lawful interception of traffic disabled - li-bandwidth-limit : lawful intercept reached bandwidth limit - li-out-of-res : lawful intercept out of resources - all : lawful intercept related alarms	alarm name of lawful intercept
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format:	serviceaffecting no

Resource Identifier	Type	Description
	(service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	the default AID param is all

101.110 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-sip-agent-cfg [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ port <Gpon::IpHostCommonIndex> ] ]
```

Command Parameters

Table 101.110-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-sipa-reg-nm-fail ont-sipa-reg-rec-fail ont-sipa-reg-con-fail ont-sipa-reg-val-fail ont-sipa-reg-mis all) Possible values: - ont-sipa-reg-nm-fail : sipua registration name failed - ont-sipa-reg-rec-fail : sipua register reach failed - ont-sipa-reg-con-fail : sipua register connect failed - ont-sipa-reg-val-fail : sipua register validation failed - ont-sipa-reg-mis : sipua register mismatch - all : ont services voip sip agent config related alarms	alarm name of ont-sip-agent-cfg
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	severity level of an alarm for reporting

Resource Identifier	Type	Description
servaff	- all : all alarm severity Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Gpon::IpHostCommonIndex> Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> ont.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId> vlanport.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - ont.ng2 : ngpon2 ont - vlanport.ng2 : ngpon2 vlanport - ont : ont - vlanport : vlanport Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Gpon::IpHostId> - iphost id Field type <Ng2::IpHostId>	gpon iphost port

101 query current alarms by filters

Resource Identifier	Type	Description
	- iphost id (ngpon2) Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id

101.111 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-voip-cfg [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Gpon::IpHostCommonIndex> ] ]
```

Command Parameters

Table 101.111-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-vcd-cfg-nm-fail ont-vcd-cfg-rech-fail ont-vcd-cfg-conn-fail ont-vcd-cfg-vali-fail ont-vcd-cfg-auth-fail ont-vcd-cfg-resp-tmout ont-vcd-cfg-resp-err ont-vcd-cfg-file-err ont-vcd-sub-nm-fail ont-vcd-sub-rech-fail ont-vcd-sub-conn-fail ont-vcd-sub-vali-fail ont-vcd-sub-auth-fail ont-vcd-sub-resp-tmout ont-vcd-sub-resp-err ont-vcd-reb-requ ont-vcd-mis all) Possible values: - ont-vcd-cfg-nm-fail : vcd config name failed - ont-vcd-cfg-rech-fail : vcd config reach failed - ont-vcd-cfg-conn-fail : vcd config connect failed - ont-vcd-cfg-vali-fail : vcd config validation failed - ont-vcd-cfg-auth-fail : vcd config authentication failed - ont-vcd-cfg-resp-tmout: vcd config response timeout - ont-vcd-cfg-resp-err : vcd config response error - ont-vcd-cfg-file-err : vcd config file error	alarm name of ont-voip-cfg

101.112 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-veip [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
ont-port <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.112-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-veip-mismatch all) Possible values: - ont-veip-mismatch : ont veip mismatch - all : ONT VEIP related alarms	alarm name of ont-veip
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ont-port	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	gpon ont port is all

Command Output

101.113 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-mgc [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Gpon::IpHostCommonIndex> ] ]
```

Command Parameters

Table 101.113-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-mgc-mis ont-mgc-timeout all) Possible values: - ont-mgc-mis : ont mgc mismatch - ont-mgc-timeout : ont mgc timeout - all : ont mgc related alarms	alarm name of ont-mgc
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

101 query current alarms by filters

101.114 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-iphost [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]  
[ port <Gpon::IpHostCommonIndex> ] ]
```

Command Parameters

Table 101.114-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-ip-host-mismatch ont-ip-host-file ont-ip-host-ip-alloc all) Possible values: - ont-ip-host-mismatch : ont ip host mismatch - ont-ip-host-file : ont ip host file unavailable - ont-ip-host-ip-alloc : ont ip host IP allocation failure - all : ONT IP HOST related alarms	alarm name of ont-iphost
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting	serviceaffecting no

Resource Identifier	Type	Description
	noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
port	Parameter type: <Gpon::IpHostCommonIndex> Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - ont:ng2 : ngpon2 ont - vlanport:ng2 : ngpon2 vlanport - ont : ont - vlanport : vlanport Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Gpon::IpHostId> - iphost id Field type <Ng2::IpHostId> - iphost id (ngpon2) Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan>	gpon iphost port

name	Parameter type: <Alarm::alarmtypeOntiphostihub> (ont-ip-host-mismatch ont-ip-host-file	alarm name that are active <i>This element is only shown in detail mode.</i>

101 query current alarms by filters

name	Type	Description
	ont-ip-host-ip-alloc all) Possible values: - ont-ip-host-mismatch : ont ip host mismatch - ont-ip-host-file : ont ip host file unavailable - ont-ip-host-ip-alloc : ont ip host IP allocation failure - all : ONT IP HOST related alarms	
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.115 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query otdr [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ponindex <Itf::ComplexPortType> ] ]
```

Command Parameters

Table 101.115-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (otdr-cap-mismatch all) Possible values: - otdr-cap-mismatch : otdr capability mismatch - all : otdr alarms	alarm name of otdr
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ponindex	Parameter type: <If::ComplexPortType> Format: (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> l2-vlan : <Eqpt::VlanId> ip : <Eqpt::LogicalId> sw-loopback slip uni:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> atm-bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ip-gateway : <Eqpt::VrId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> shdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> e1-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-ima : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ethernet-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bridge-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan>	identifies the spf where the alarm has occurred

101.116 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query mgmt-sec-access [ (name) [ severity <Alarm::querySeverity> ] [ servaff  
<Alarm::queryServAffect> ] [ ip-address <Alarm::IpAddress> ] ]
```

Command Parameters

Table 101.116-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (login-successful login-failure all) Possible values: - login-successful : successful login via management access - login-failure : invalid login via management access has crossed the threshold - all : management security related alarms	alarm name of mgmt-sec-access
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting	serviceaffecting no

Resource Identifier	Type	Description
	all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ip-address	Parameter type: <Alarm::IpAddress> Format: - IPv4-address	address of the operator

Command Output

101.117 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query eoltrssi [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ epon-id <Epon::PonId> ] ]
```

Command Parameters

Table 101.117-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (eolt-txpwr-hi-alm eolt-txpwr-lw-alm eolt-txbias-hi-alm eolt-txbias-lw-alm eolt-volt-hi-alm eolt-volt-lw-alm eolt-temp-hi-alm eolt-temp-lw-alm eolt-txpwr-hi-warn eolt-txpwr-lw-warn eolt-txbias-hi-warn eolt-txbias-lw-warn eolt-volt-hi-warn eolt-volt-lw-warn eolt-temp-hi-warn eolt-temp-lw-warn eolt-xfp-txpwr-hi-alm eolt-xfp-txpwr-lw-alm eolt-xfp-bias-hi-alm eolt-xfp-bias-lw-alm eolt-xfp-txpwr-hi-warn eolt-xfp-txpwr-lw-warn eolt-xfp-bias-hi-warn eolt-xfp-bias-lw-warn all) Possible values: - eolt-txpwr-hi-alm : Olt sfp tx power high alarm	alarm name of eoltrssi

Resource Identifier	Type	Description
	- eolt-txpwr-lw-alm : Olt sfp tx power low alarm - eolt-txbias-hi-alm : Olt sfp tx bias high alarm - eolt-txbias-lw-alm : Olt sfp tx bias low alarm - eolt-volt-hi-alm : Olt sfp voltage high alarm - eolt-volt-lw-alm : Olt sfp voltage low alarm - eolt-temp-hi-alm : Olt sfp temperature high alarm - eolt-temp-lw-alm : Olt sfp temperature low alarm - eolt-txpwr-hi-warn : Olt sfp tx power high warn - eolt-txpwr-lw-warn : Olt sfp tx power low warn - eolt-txbias-hi-warn : Olt sfp tx bias high warn - eolt-txbias-lw-warn : Olt sfp tx bias low warn - eolt-volt-hi-warn : Olt sfp voltage high warn - eolt-volt-lw-warn : Olt sfp voltage low warn - eolt-temp-hi-warn : Olt sfp temperature high warn - eolt-temp-lw-warn : Olt sfp temperature low warn - eolt-xfp-txpwr-hi-alm: Olt Xfp tx power high alarm - eolt-xfp-txpwr-lw-alm: Olt Xfp tx power low alarm - eolt-xfp-bias-hi-alm : Olt Xfp tx bias high alarm - eolt-xfp-bias-lw-alm : Olt Xfp tx bias low alarm - eolt-xfp-txpwr-hi-warn: Olt Xfp tx power high alarm - eolt-xfp-txpwr-lw-warn: Olt Xfp tx power low alarm - eolt-xfp-bias-hi-warn : Olt Xfp tx bias high alarm - eolt-xfp-bias-lw-warn : Olt Xfp tx bias low alarm - all : show all epon olt Sfp RSSI alarm	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no

101.118 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query bfd [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ vprn-id <lhub::Router> ] ]
```

Command Parameters

Table 101.118-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: all Possible values: - all : bfd related alarms	alarm name of bfd
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no

Resource Identifier	Type	Description
vprn-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	identifies the vprn service-id or the base router

101.119 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ai [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ board  
<Equipm::NtSlotIndex> ] ]
```

Command Parameters

Table 101.119-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ai-platform-down ai-appl-install-fail ip-assign-fail all) Possible values: - ai-platform-down : Application Intelligence Platform down - ai-appl-install-fail : Application installation failure - ip-assign-fail : Dhcp assigned address failure - all : Application Intelligence related alarms	alarm name of ai
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting	serviceaffecting no

Resource Identifier	Type	Description
	noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
board	Parameter type: <Equipm::NtSlotIndex> Format: (nt-a nt-b) Possible values: - nt-a : nt-a slot - nt-b : nt-b slot	identifies the board hosting the AI Platform

Command Output

101.120 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query tr069serv [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ tr069serv <Gpon::UniInterfaceIndexSnmAgent> ] ]
```

Command Parameters

Table 101.120-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-tr069-serv-mis all) Possible values: - ont-tr069-serv-mis : ont tr069 server config mismatch - all : tr069 server related alarms	alarm name of tr069serv
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
tr069serv	Parameter type: <Gpon::UniInterfaceIndexSnmpAgent> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	identifies the tr069 serv entry

101.121 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ontsnmp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
uni-index <Ces::InterfaceIndex> ] ]
```

Command Parameters

Table 101.121-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-snmis all) Possible values: - ont-snmis : ont snmp agent config mismatch - all : ont snmp related alarmsont snmp related alarms	alarm name of ontsnmp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms

101.122 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query bulk-sync [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ port <RedPort::PortIndex> ] ]
```

Command Parameters

Table 101.122-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (bsf-dhcpv4 bsf-dhcpv6 bsf-pon bsf-vbridge bsf-qos bsf-igmp bsf-lxfwd all) Possible values: - bsf-dhcpv4 : bulksync failed for dhcpv4 - bsf-dhcpv6 : bulksync failed for dhcpv6 - bsf-pon : bulksync failed for pon - bsf-vbridge : bulksync failed for vlan-bridge - bsf-qos : bulksync failed for qos - bsf-igmp : bulksync failed for igmp - bsf-lxfwd : bulksync failed for lxfwd - all : port protection group related alarms	alarm name of bulk-sync
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate	severity level of an alarm for reporting

101.123 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query protection-group [ (name) [ severity <Alarm::querySeverity> ] [ servaff  
<Alarm::queryServAffect> ] [ port <RedPort::PortIndex> ] ]
```

Command Parameters

Table 101.123-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (prot-not-available prot-switchover-fail all) Possible values: - prot-not-available : no protection not available - prot-switchover-fail : port switch over failed - all : port protection group related alarms	alarm name of protection-group
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.124 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-protection [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.124-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-prot-not-available all) Possible values: - ont-prot-not-available: no ont protection available - all : ont protection related alarms	alarm name of protection-group
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	specify which ont the alarm occurred

101.125 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query eth-cfm [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ cfm-mep-id <UnsignedSignedInteger> ] ]
```

Command Parameters

Table 101.125-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (eth-cfm-defrdiccm eth-cfm-defmacstatus eth-cfm-defremoteccm eth-cfm-deferrorccm eth-cfm-defxconccm all) Possible values: - eth-cfm-defrdiccm : rdi bit in ccm received - eth-cfm-defmacstatus : ccm mac error status - eth-cfm-defremoteccm : missing ccm from mep - eth-cfm-deferrorccm : invalid ccm received - eth-cfm-defxconccm : unexpected ccm received - all : eth-cfm related alarms	alarm name of eth-cfm
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	severity level of an alarm for reporting

Resource Identifier	Type	Description
	- all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
cfm-mep-id	Parameter type: <UnsignedSignedInteger> Format: - an unsigned integer	dot1agCfmMepIdentifier index where the alarm has occurred

Command Output

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.126 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-loopdetect [ (name) [ severity <Alarm::querySeverity> ] [ servaff  
<Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.126-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (ont-loopdetect all) Possible values: - ont-loopdetect : ont loop detect - all : ont loop detect related alarms	alarm name of ont-loopdetect
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identifies the ont entry

101.127 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query rsvp [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::baseRouter> ] ]
```

Command Parameters

Table 101.127-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (rsvp-neighbor-down rsvp-instance-down all) Possible values: - rsvp-neighbor-down : rsvp neighbor down - rsvp-instance-down : rsvp instance down - all : rsvp related alarms	alarm name of rsvp
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all)	serviceaffecting no

Resource Identifier	Type	Description
	Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
router-id	Parameter type: <Ihub::baseRouter> Format: base Possible values: - base : base router	identifies the base router

Command Output

name	Type	Description
	- e1t1-interface : E1/T1 physical interfaces related alarms	
name	Parameter type: <Alarm::alarmTypeRsvpihub> (rsvp-neighbor-down rsvp-instance-down all) Possible values: - rsvp-neighbor-down : rsvp neighbor down - rsvp-instance-down : rsvp instance down - all : rsvp related alarms	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.128 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query alarm-table [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ defaultaid <Alarm::queryDefaultAid> ] ]
```

Command Parameters

Table 101.128-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (alarm-tbl-overflow all) Possible values: - alarm-tbl-overflow : alarm table has overflowed - all : alarm table related alarms	alarm name of alarm-table
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
defaultaid	Parameter type: <Alarm::queryDefaultAid> Format: all Possible values: - all : default AID parameter	the default AID param is all

101.129 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ihub-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ port <Ihub::EtherPort> ] ]
```

Command Parameters

Table 101.129-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (tca-outputbw tca-inputbw tca-rxcrcalign tca-txcrcalign tca-txcollisions tca-outputhighbw tca-outputmedbw tca-outputlowbw tca-inputhighbw tca-inputmediumbw tca-inputlowbw all) Possible values: - tca-outputbw : tca output bandwidth - tca-inputbw : tca input bandwidth - tca-rxcrcalign : tca rxcrc align errors - tca-txcrcalign : tca txcrc align errors - tca-txcollisions : tca tx collision errors - tca-outputhighbw : tca output high bandwidth - tca-outputmedbw : tca output medium bandwidth - tca-outputlowbw : tca output low bandwidth - tca-inputhighbw : tca input high bandwidth - tca-inputmediumbw : tca input medium bandwidth - tca-inputlowbw : tca input low bandwidth - all : IHUB TCA related alarms	alarm name of ihub-tca
severity	Parameter type: <Alarm::querySeverity> Format:	severity level of an alarm for reporting

Resource Identifier	Type	Description
	(indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
port	Parameter type: <Ihub::EtherPort> Format: (nt-a : sfp : <Alarm::FacePlatePortIndex> nt-a : xfp : <Alarm::FacePlatePortIndex> nt-a : qsfp : <Alarm::FacePlatePortIndex> nt-a : cfp : <Alarm::FacePlatePortIndex> nt-a : eth : <Alarm::FacePlatePortIndex> nt-a : ieee1588 : <Alarm::FacePlatePortIndex> nt-a : ai : <Alarm::FacePlatePortIndex> nt-b : sfp : <Alarm::FacePlatePortIndex> nt-b : xfp : <Alarm::FacePlatePortIndex> nt-b : qsfp : <Alarm::FacePlatePortIndex> nt-b : cfp : <Alarm::FacePlatePortIndex> nt-b : eth : <Alarm::FacePlatePortIndex> nt-b : ieee1588 : <Alarm::FacePlatePortIndex> nt-b : ai : <Alarm::FacePlatePortIndex> ntio-1 : sfp : <Alarm::FacePlatePortIndex> ntio-1 : xfp : <Alarm::FacePlatePortIndex> ntio-1 : qsfp : <Alarm::FacePlatePortIndex> ntio-1 : cfp : <Alarm::FacePlatePortIndex> ntio-2 : sfp : <Alarm::FacePlatePortIndex> ntio-2 : xfp : <Alarm::FacePlatePortIndex> ntio-2 : qsfp : <Alarm::FacePlatePortIndex> ntio-2 : cfp : <Alarm::FacePlatePortIndex> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a : qsfp : <Alarm::QsfpPortIndex> - <Alarm::LaneIndex> nt-b : qsfp : <Alarm::QsfpPortIndex> - <Alarm::LaneIndex> ntio-1 : qsfp : <Alarm::QsfpPortIndex> - <Alarm::LaneIndex>) Possible values: - nt-a : the nt-a slot - nt-b : the nt-b slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf	identifies the ihub port where the alarm has occurred

101 query current alarms by filters

Resource Identifier	Type	Description
	- ntio-2 : an nt applique slot in a multiple-ntio-shelf - lt : the lt slot - nt-a : the nt-a slot - nt-b : the nt-b slot - ntio-1 : the nt-b slot Possible values: - sfp : SFP port - xfp : XFP port - qsfp : QSFP port - cfp : CFP port - eth : RJ45 or lemi port - ieee1588 : IEEE1588 port - ai : AI port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Alarm::FacePlatePortIndex> - the faceplate port number Field type <Alarm::QsfpPortIndex> - the qsfp port number Field type <Alarm::LaneIndex> - the lane number of qsfp port

101.130 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query sfu-sup [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.130-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (sfu-sup-sw-file-error sfu-sup-fan-failure sfu-sup-temp-high-warn sfu-sup-temp-shutoff sfu-sup-emergency-call sfu-sup-swverctrl-err sfu-sup-poe-exceed-max sfu-sup-poe-over-yell sfu-opti-malfunc sfu-sup-cfg-dnld-fail sfu-sup-rssi-cfg-mism sfu-sup-sfp-tx-low sfu-sup-sfp-temp-high sfu-sup-sfp-volt-high sfu-sup-sfp-bias-high sfu-sup-ld-cfg-mism sfu-sup-olt-rx-low sfu-sup-olt-rx-high sfu-sup-olt-rx-lo-warn sfu-sup-olt-rx-hi-warn sfu-sup-tod-out-sync sfu-sup-ont-tune-fail sfu-tr069-parm-fail sfu-sup-tod-mismatch all) Possible values: - sfu-sup-sw-file-error : SFU ONT - Software file has error	alarm name of sfu-sup

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.132 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query mdu-sup [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.132-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (mdu-sup-sw-file-error mdu-sup-fan-failure mdu-sup-temp-high-warn mdu-sup-temp-shutoff mdu-sup-emergency-call mdu-sup-swverctrl-err mdu-sup-poe-exceed-max mdu-sup-poe-over-yell mdu-opti-malfunc mdu-sup-cfg-dnld-fail mdu-sup-rssi-cfg-mism mdu-sup-sfp-tx-low mdu-sup-sfp-temp-high mdu-sup-sfp-volt-high mdu-sup-sfp-bias-high mdu-sup-ld-cfg-mism mdu-sup-olt-rx-low mdu-sup-olt-rx-high mdu-sup-olt-rx-lo-warn mdu-sup-olt-rx-hi-warn mdu-sup-tod-out-sync mdu-sup-ont-tune-fail mdu-tr069-parm-fail mdu-sup-tod-mismatch all) Possible values: - mdu-sup-sw-file-error : MDU ONT - Software file has	alarm name of MDU ONT

Resource Identifier	Type	Description
	error or is missing - mdu-sup-fan-failure : MDU ONT - Fan failure - mdu-sup-temp-high-warn: MDU ONT - High temperature warning - mdu-sup-temp-shutoff : MDU ONT - Service disabled due to excessive temperature - mdu-sup-emergency-call: MDU ONT - Emergency call active - mdu-sup-swverctrl-err : MDU ONT - Software version control error - mdu-sup-poe-exceed-max: MDU ONT - Configured PoE feeding exceeds ONT maximum - mdu-sup-poe-over-yell : MDU ONT - ONU is nearing its maximum ability to supply the power - mdu-opti-malfunc : MDU ONT - Malfunction of ONT's optical transceiver - mdu-sup-cfg-dnld-fail : MDU ONT - Download of voice xml file to ONT failed - mdu-sup-rssi-cfg-mism : MDU ONT - RSSI configuration mismatch - mdu-sup-sfp-tx-low : MDU ONT - SFP Tx Power below configured low-level alarm threshold - mdu-sup-sfp-temp-high : MDU ONT - SFP Temperature above configured high-level alarm threshold - mdu-sup-sfp-volt-high : MDU ONT - SFP Voltage above configured high-level alarm threshold - mdu-sup-sfp-bias-high : MDU ONT - SFP Bias above configured high-level alarm threshold - mdu-sup-ld-cfg-mism : MDU ONT - Loop detection configuration mismatch - mdu-sup-olt-rx-low : MDU ONT - OLT Rx power below receiver operating range - mdu-sup-olt-rx-high : MDU ONT - OLT Rx power above receiver operating range - mdu-sup-olt-rx-lo-warn: MDU ONT - OLT Rx power below low-level warning threshold - mdu-sup-olt-rx-hi-warn: MDU ONT - OLT Rx power above high-level warning threshold - mdu-sup-tod-out-sync : MDU ONT - ONU TOD is out-sync with OLT - mdu-sup-ont-tune-fail : MDU ONT - ONU has failed to tune to Target-ChnlPair - mdu-tr069-param-fail : MDU ONT - hgu tr069 parameters mismatch - mdu-sup-tod-mismatch : MDU ONT - ONU TOD MISMATCH - all : MDU ONT general supplemental related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
	- warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity

severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning	the alarms severity level <i>This element is only shown in detail mode.</i>

101 query current alarms by filters

name	Type	Description
	- minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.133 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query eth-ring [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ ring-id <Alarm::genAlarmIndex> ] ]
```

Command Parameters

Table 101.133-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (eth-ring-path-block all) Possible values: - eth-ring-path-block : eth ring path block - all : eth ring related alarms	alarm name of eth-ring path
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting	serviceaffecting no

101 query current alarms by filters

Resource Identifier	Type	Description
	- noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
ring-id	Parameter type: <Alarm::genAlarmIndex> Format: - index of a current alarm entry	identifies the eth-ring-instance

Command Output

101.134 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query olt-pon-util-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ pon <Gpon::PonId> ] ]
```

Command Parameters

Table 101.134-1 "show current alarm by filters" Resource Parameters

101.135 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query channel-pair [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [ channel-pair <Gpon::ChannelPairId> ] ]
```

Command Parameters

Table 101.135-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (chpr-com-fail chpr-tx-fail chpr-unprov-ont chpr-prov-mismatch chpr-loss-sig chpr-diagnostic chpr-loid-conflict chpr-loid-pwd-err chpr-stk-laser-dis chpr-sfp-mismatch chpr-rng-mismatch chpr-alien-test chpr-alien-detect chpr-deact-hightca chpr-deact-lowtca chpr-dp-integ all) Possible values: - chpr-com-fail : channel pair communication failure on olt - chpr-tx-fail : transmitter failure on channel pair - chpr-unprov-ont : unprovisioned ont on channel pair - chpr-prov-mismatch : mismatch btw equipment and provisioning pon attributes - chpr-loss-sig : channel pair loss of signal - chpr-diagnostic : channel pair diagnostic test active - chpr-loid-conflict : loid conflict ont on channel pair - chpr-loid-pwd-err : loid password error ont on channel pair	alarm name of channel-pair

Resource Identifier	Type	Description
	- chpr-stk-laser-dis : stuck laser disabled on channel pair - chpr-sfp-mismatch : channel pair sfp mismatch - chpr-rng-mismatch : channel pair ranging mismatch - chpr-alien-test : channel pair alien diagnostic test active - chpr-alien-detect : channel pair alien detect active - chpr-deact-hightca : channel pair deactivated ont hightca active - chpr-deact-lowtca : channel pair deactivated ont lowtca active - chpr-dp-integ : channel pair data path integrity failure - all : channel pair related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
channel-pair	Parameter type: <Gpon::ChannelPairId> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	specify which port the alarm occurred on

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.136 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query olt-chpr-util-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ channel-pair <Gpon::ChannelPairId> ] ]
```

Command Parameters

Table 101.136-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (chpr-t-txmcutilhi chpr-t-txmcutilmd chpr-t-txmcutillo chpr-t-txtotutilhi chpr-t-txtotutilmd chpr-t-txtotutillo chpr-t-rxtotutilhi chpr-t-rxtotutilmd chpr-t-rxtotutillo chpr-t-dbacongperiodhi chpr-t-dbacongperiodmd chpr-t-dbacongperiodlo chpr-t-txucdropfrmhi chpr-t-txucdropfrmmmd chpr-t-txucdropfrmlo chpr-t-txmcdropfrmhi chpr-t-txmcdropfrmmmd chpr-t-txmcdropfrmlo chpr-t-txbcdropfrmhi chpr-t-txbcdropfrmmmd chpr-t-txbcdropfrmlo chpr-t-rxtotdropfrmhi chpr-t-rxtotdropfrmmmd chpr-t-rxtotdropfrmlo all) Possible values: - chpr-t-txmcutilhi : channel-pair utilization tx (downstream)	alarm name of olt channel-pair utilization tca

101 query current alarms by filters

Resource Identifier	Type	Description
	multicast high threshold crossed - chpr-t-txmcutilmd : channel-pair utilization tx (downstream) multicast medium threshold crossed - chpr-t-txmcutillo : channel-pair utilization tx (downstream) multicast low threshold crossed - chpr-t-txtotutilhi : channel-pair utilization tx (downstream) total high threshold crossed - chpr-t-txtotutilmd : channel-pair utilization tx (downstream) total medium threshold crossed - chpr-t-txtotutillo : channel-pair utilization tx (downstream) total low threshold crossed - chpr-t-rxtotutilhi : channel-pair utilization rx (upstream) total high threshold crossed - chpr-t-rxtotutilmd : channel-pair utilization rx (upstream) total medium threshold crossed - chpr-t-rxtotutillo : channel-pair utilization rx (upstream) total low threshold crossed - chpr-t-dbacongperiodhi: channel-pair utilization rx (upstream) dbacongperiod high threshold crossed - chpr-t-dbacongperiodmd: channel-pair utilization rx (upstream) dbacongperiod medium threshold crossed - chpr-t-dbacongperiodlo: channel-pair utilization rx (upstream) dbacongperiod low threshold crossed - chpr-t-txucdropfrmhi : channel-pair utilization tx (downstream) unicast drop frame high threshold crossed - chpr-t-txucdropfrmmd : channel-pair utilization tx (downstream) unicast drop frame medium threshold crossed - chpr-t-txucdropfrmlo : channel-pair utilization tx (downstream) unicast drop frame low threshold crossed - chpr-t-txmcdropfrmhi : channel-pair utilization tx (downstream) multicast drop frame high threshold crossed - chpr-t-txmcdropfrmmd : channel-pair utilization tx (downstream) multicast drop frame medium threshold crossed - chpr-t-txmcdropfrmlo : channel-pair utilization tx (downstream) multicast drop frame low threshold crossed - chpr-t-txbcdropfrmhi : channel-pair utilization tx (downstream) broadcast drop frame high threshold crossed - chpr-t-txbcdropfrmmd : channel-pair utilization tx (downstream) broadcast drop frame medium threshold crossed - chpr-t-txbcdropfrmlo : channel-pair utilization tx (downstream) broadcast drop frame low threshold crossed - chpr-t-rxtotdropfrmhi : channel-pair utilization rx (upstream) total drop frame high threshold crossed - chpr-t-rxtotdropfrmmd : channel-pair utilization rx (upstream) total drop frame medium threshold crossed - chpr-t-rxtotdropfrmlo : channel-pair utilization rx (upstream) total drop frame low threshold crossed - all : OLT channel-pair utilization TCA related alarms	
severity	Parameter type: <Alarm::querySeverity> Format: - indeterminate - warning - minor - major - critical	severity level of an alarm for reporting

Resource Identifier	Type	Description
	all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
channel-pair	Parameter type: <Gpon::ChannelPairId> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	specify which port the alarm occurred on

descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.137 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query ont-cfg-dld [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ]
[ ont <Gpon::OntIndex> ] ]
```

Command Parameters

Table 101.137-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (cfg-dld-fail cfg-act-fail cfg-dld-ip cfg-ver-mismatch cfg-file-missing cfg-verctrl-err cfg-not-supported all) Possible values: - cfg-dld-fail : download of configure file to ont failed - cfg-act-fail : activate the passive config file failed - cfg-dld-ip : ont configure file download in progress - cfg-ver-mismatch : the planned configure file does not match the active configure file - cfg-file-missing : ont configure file missing or has an error - cfg-verctrl-err : ont configure file version control error - cfg-not-supported : ont not support the configure file download function - all : ont configure file download related alarms	alarm name of ont-cfg-dld
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all)	severity level of an alarm for reporting

Resource Identifier	Type	Description
	Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
ont	Parameter type: <Gpon::OntIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identifies the ont entry

101.138 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query olt-chpair-tc-tca [ (name) [ severity <Alarm::querySeverity> ] [ servaff
<Alarm::queryServAffect> ] [ channel-pair <Gpon::ChannelPairId> ] ]
```

Command Parameters

Table 101.138-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (olt-chpr-tc-err-frag olt-chpr-up-bw-tca olt-chpr-down-bw-tca all) Possible values: - olt-chpr-tc-err-frag : channelpair errored fragments threshold crossed - olt-chpr-up-bw-tca : OLT CHANNELPAIR upstream bandwidth TCA - olt-chpr-down-bw-tca : OLT CHANNELPAIR downstream bandwidth TCA - all : OLT CHANNELPAIR TC TCA related alarms	alarm name of OLT CHANNELPAIR TC TCA
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting

101 query current alarms by filters

Resource Identifier	Type	Description
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	serviceaffecting no serviceaffecting
channel-pair	Parameter type: <Gpon::ChannelPairId> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	gpon channelpair ifindex

101.139 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query isis [ (name) [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] [
router-id <lhub::Router> ] ]
```

Command Parameters

Table 101.139-1 "show current alarm by filters" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (isis-adjacency-down isis-adjacency-reject isis-instance-down all) Possible values: - isis-adjacency-down : isis adjacency is down - isis-adjacency-reject : isis adjacency is rejected - isis-instance-down : isis instance is down or not - all : isis related alarms	alarm name of isis
severity	Parameter type: <Alarm::querySeverity> Format: (indeterminate warning minor major critical all) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical - all : all alarm severity	severity level of an alarm for reporting
servaff	Parameter type: <Alarm::queryServAffect> Format: (service-affecting	serviceaffecting no

Resource Identifier	Type	Description
	noservice-affecting all) Possible values: - service-affecting : query alarm service affecting - noservice-affecting : query alarm not service affecting - all : query service affecting and not affecting alarms	
router-id	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	the number of ethernet interface

name	Type	Description
	alarms - cas-r2-channel : CAS R2 channel related alarms - lldpmed : lldpmed alarms - pseudo-wire : pseudo Wire related alarms - link-agg : Link aggregation related alarms - fcs-exceed : FCS auto-recovery related alarms - e1t1-interface : E1/T1 physical interfaces related alarms	
name	Parameter type: <Alarm::alarmTypeisisihub> (isis-adjacency-down isis-adjacency-reject isis-instance-down all) Possible values: - isis-adjacency-down : isis adjacency is down - isis-adjacency-reject : isis adjacency is rejected - isis-instance-down : isis instance is down or not - all : isis related alarms	alarm name that are active <i>This element is only shown in detail mode.</i>
severity	Parameter type: <Alarm::AlarmSeverity> (indeterminate warning minor major critical) Possible values: - indeterminate : alarm severity is indeterminate - warning : alarm severity is warning - minor : alarm severity is minor - major : alarm severity is major - critical : alarm severity is critical	the alarms severity level <i>This element is only shown in detail mode.</i>
servaff	Parameter type: <Alarm::alarmServAffect> ((service-affecting yes) (noservice-affecting no)) Possible values: - service-affecting : make this alarm service affecting - yes : make this alarm service affecting - noservice-affecting : make this alarm not service affecting - no : make this alarm not service affecting	alarms affect service or not <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time in seconds when alarm was updated <i>This element is only shown in detail mode.</i>
descript	Parameter type: <Alarm::AddInfoString> - additional alarm information	alarm description <i>This element is only shown in detail mode.</i>

101.140 show current alarm by filters

Command Description

show current alarms by filters

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm query name [ (name) [ defaultaid <Alarm::queryDefaultAid> ] [ severity <Alarm::querySeverity> ] [ servaff <Alarm::queryServAffect> ] ]
```

Command Parameters

Table 101.140-1 "show current alarm by filters" Resource Parameters
