sfu-sup2-tx-hwarn	Parameter type: <Alarm::OntTxPwrWarnHigh> (yes no) Possible values: - yes : tx power at ont side is too high - no : tx power at ont side is normal	SFU ONT - SFP Tx power is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
sfu-sup2-tx-lwarn	Parameter type: <Alarm::OntTxPwrWarnLow> (yes no) Possible values:	SFU ONT - SFP Tx power is lower than configured warn threshold <i>This element is only shown in</i>

104 Current Alarm Status Commands

name	Type	Description
	- yes : tx power at ont side is too low - no : tx power at ont side is normal	<i>detail mode.</i>
sfu-sup2-temp-hwarn	Parameter type: <Alarm::OntTempWarnHigh> (yes no) Possible values: - yes : temp at ont side is too high - no : temp at ont side is normal	SFU ONT - SFP temperature is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
sfu-sup2-temp-lwarn	Parameter type: <Alarm::OntTempWarnLow> (yes no) Possible values: - yes : temp at ont side is too low - no : temp at ont side is normal	SFU ONT - SFP temperature is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
sfu-sup2-volt-hwarn	Parameter type: <Alarm::OntVoltWarnHigh> (yes no) Possible values: - yes : voltage at ont side is too high - no : voltage at ont side is normal	SFU ONT - SFP voltage is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
sfu-sup2-volt-lwarn	Parameter type: <Alarm::OntVoltWarnLow> (yes no) Possible values: - yes : voltage at ont side is too low - no : voltage at ont side is normal	SFU ONT - SFP voltage is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
sfu-sup2-bias-hwarn	Parameter type: <Alarm::OntBiasWarnHigh> (yes no) Possible values: - yes : bias at ont side is too high - no : bias at ont side is normal	SFU ONT - SFP bias is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
sfu-sup2-bias-lwarn	Parameter type: <Alarm::OntBiasWarnLow> (yes no) Possible values: - yes : bias at ont side is too low - no : bias at ont side is normal	SFU ONT - SFP bias is lower than configured warn threshold <i>This element is only shown in detail mode.</i>

104.99 SOHO ONT General Supplemental 2 Current Alarm Status Command

Command Description

This command displays the SOHO ONT general supplemental 2 current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current soho-sup2 [ (index) ]
```

Command Parameters

Table 104.99-1 "SOHO ONT General Supplemental 2 Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.99-2 "SOHO ONT General Supplemental 2 Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont	Parameter type: <Gpon::OntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId>	identifies the ont entry <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
	- the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Only Show Details: current alarm status		
name	Type	Description
soho-sup2-temp-low	Parameter type: <Alarm::OntTempAlrmLow> (yes no) Possible values: - yes : temp at ont side is too low - no : temp at ont side is normal	SOHO ONT - SFP Temperature is higher than configured alarm high threshold <i>This element is only shown in detail mode.</i>
soho-sup2-volt-low	Parameter type: <Alarm::OntVoltAlrmLow> (yes no) Possible values: - yes : voltage at ont side is too low - no : voltage at ont side is normal	SOHO ONT - SFP Voltage is higher than configured alarm high threshold <i>This element is only shown in detail mode.</i>
soho-sup2-bias-low	Parameter type: <Alarm::OntBiasAlrmLow> (yes no) Possible values: - yes : bias at ont side is too low - no : bias at ont side is normal	SOHO ONT - SFP Bias is lower than configured alarm low threshold <i>This element is only shown in detail mode.</i>
soho-sup2-tx-high	Parameter type: <Alarm::OntTxPwrAlrmHigh> (yes no) Possible values: - yes : tx power at ont side is too high - no : tx power at ont side is normal	SOHO ONT - SFP tx power is higher than configured alarm high threshold <i>This element is only shown in detail mode.</i>
soho-sup2-rx-hwarn	Parameter type: <Alarm::OntRxPwrWarnHigh> (yes no) Possible values: - yes : rx power at ont side is too high - no : rx power at ont side is normal	SOHO ONT - SFP Rx power is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-rx-lwarn	Parameter type: <Alarm::OntRxPwrWarnLow> (yes no) Possible values: - yes : rx power at ont side is too low - no : rx power at ont side is normal	SOHO ONT - SFP Rx power is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-tx-hwarn	Parameter type: <Alarm::OntTxPwrWarnHigh> (yes no) Possible values: - yes : tx power at ont side is too high - no : tx power at ont side is normal	SOHO ONT - SFP Tx power is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-tx-lwarn	Parameter type: <Alarm::OntTxPwrWarnLow> (yes no) Possible values:	SOHO ONT - SFP Tx power is lower than configured warn threshold <i>This element is only shown in detail mode.</i>

name	Type	Description
	- yes : tx power at ont side is too low - no : tx power at ont side is normal	<i>detail mode.</i>
soho-sup2-temp-hwarn	Parameter type: <Alarm::OntTempWarnHigh> (yes no) Possible values: - yes : temp at ont side is too high - no : temp at ont side is normal	SOHO ONT - SFP temperature is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-temp-lwarn	Parameter type: <Alarm::OntTempWarnLow> (yes no) Possible values: - yes : temp at ont side is too low - no : temp at ont side is normal	SOHO ONT - SFP temperature is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-volt-hwarn	Parameter type: <Alarm::OntVoltWarnHigh> (yes no) Possible values: - yes : voltage at ont side is too high - no : voltage at ont side is normal	SOHO ONT - SFP voltage is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-volt-lwarn	Parameter type: <Alarm::OntVoltWarnLow> (yes no) Possible values: - yes : voltage at ont side is too low - no : voltage at ont side is normal	SOHO ONT - SFP voltage is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-bias-hwarn	Parameter type: <Alarm::OntBiasWarnHigh> (yes no) Possible values: - yes : bias at ont side is too high - no : bias at ont side is normal	SOHO ONT - SFP bias is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
soho-sup2-bias-lwarn	Parameter type: <Alarm::OntBiasWarnLow> (yes no) Possible values: - yes : bias at ont side is too low - no : bias at ont side is normal	SOHO ONT - SFP bias is lower than configured warn threshold <i>This element is only shown in detail mode.</i>

104.100 MDU ONT General Supplemental 2 Current Alarm Status Command

Command Description

This command displays the MDU ONT general supplemental 2 current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current mdu-sup2 [ (index) ]
```

Command Parameters

Table 104.100-1 "MDU ONT General Supplemental 2 Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.100-2 "MDU ONT General Supplemental 2 Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont	Parameter type: <Gpon::OntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId>	identifies the ont entry <i>This element is only shown in detail mode.</i>

name	Type	Description
	- the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Only Show Details: current alarm status		
name	Type	Description
mdu-sup2-temp-low	Parameter type: <Alarm::OntTempAlrmLow> (yes no) Possible values: - yes : temp at ont side is too low - no : temp at ont side is normal	MDU ONT - SFP Temperature is higher than configured alarm high threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-volt-low	Parameter type: <Alarm::OntVoltAlrmLow> (yes no) Possible values: - yes : voltage at ont side is too low - no : voltage at ont side is normal	MDU ONT - SFP Voltage is higher than configured alarm high threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-bias-low	Parameter type: <Alarm::OntBiasAlrmLow> (yes no) Possible values: - yes : bias at ont side is too low - no : bias at ont side is normal	MDU ONT - SFP Bias is lower than configured alarm low threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-tx-high	Parameter type: <Alarm::OntTxPwrAlrmHigh> (yes no) Possible values: - yes : tx power at ont side is too high - no : tx power at ont side is normal	MDU ONT - SFP tx power is higher than configured alarm high threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-rx-hwarn	Parameter type: <Alarm::OntRxPwrWarnHigh> (yes no) Possible values: - yes : rx power at ont side is too high - no : rx power at ont side is normal	MDU ONT - SFP Rx power is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-rx-lwarn	Parameter type: <Alarm::OntRxPwrWarnLow> (yes no) Possible values: - yes : rx power at ont side is too low - no : rx power at ont side is normal	MDU ONT - SFP Rx power is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-tx-hwarn	Parameter type: <Alarm::OntTxPwrWarnHigh> (yes no) Possible values: - yes : tx power at ont side is too high - no : tx power at ont side is normal	MDU ONT - SFP Tx power is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-tx-lwarn	Parameter type: <Alarm::OntTxPwrWarnLow> (yes no) Possible values:	MDU ONT - SFP Tx power is lower than configured warn threshold <i>This element is only shown in</i>

104 Current Alarm Status Commands

name	Type	Description
	- yes : tx power at ont side is too low - no : tx power at ont side is normal	<i>detail mode.</i>
mdu-sup2-temp-hwarn	Parameter type: <Alarm::OntTempWarnHigh> (yes no) Possible values: - yes : temp at ont side is too high - no : temp at ont side is normal	MDU ONT - SFP temperature is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-temp-lwarn	Parameter type: <Alarm::OntTempWarnLow> (yes no) Possible values: - yes : temp at ont side is too low - no : temp at ont side is normal	MDU ONT - SFP temperature is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-volt-hwarn	Parameter type: <Alarm::OntVoltWarnHigh> (yes no) Possible values: - yes : voltage at ont side is too high - no : voltage at ont side is normal	MDU ONT - SFP voltage is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-volt-lwarn	Parameter type: <Alarm::OntVoltWarnLow> (yes no) Possible values: - yes : voltage at ont side is too low - no : voltage at ont side is normal	MDU ONT - SFP voltage is lower than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-bias-hwarn	Parameter type: <Alarm::OntBiasWarnHigh> (yes no) Possible values: - yes : bias at ont side is too high - no : bias at ont side is normal	MDU ONT - SFP bias is higher than configured warn threshold <i>This element is only shown in detail mode.</i>
mdu-sup2-bias-lwarn	Parameter type: <Alarm::OntBiasWarnLow> (yes no) Possible values: - yes : bias at ont side is too low - no : bias at ont side is normal	MDU ONT - SFP bias is lower than configured warn threshold <i>This element is only shown in detail mode.</i>

104.101 Ellid Alarm Status Command

Command Description

This command displays the ellid current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ellid [(alarm-index)]

Command Parameters

Table 104.101-1 "Ellid Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.101-2 "Ellid Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>
ellid-index	Parameter type: <Itf::ComplexPortType> (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId>	identifies the ellid where the alarm has occurred. <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
	Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id Field type <Eqpt::VlanId> - VLAN id Field type <Eqpt::LogicalId> - logical id Field type <Eqpt::VrflId> - VRF id	

Only Show Details: ellid alarms		
name	Type	Description
key-fail-one-churn	Parameter type: <alarm::keyfailone> (yes no) Possible values: - yes : key exchange failure during one churning time - no : key exchange failure during one churning time is ok	key exchange failure during one churning time <i>This element is only shown in detail mode.</i>
key-fail-three-churn	Parameter type: <alarm::keyfailthree> (yes no) Possible values: - yes : key exchange failure during three churning time - no : key exchange failure during three churning time is ok	key exchange failure during three churning time <i>This element is only shown in detail mode.</i>
oam-discov-fail	Parameter type: <alarm::oamext> (yes no) Possible values: - yes : extend oam discovery failure - no : extend oam discovery failure is ok	extend oam discovery failure <i>This element is only shown in detail mode.</i>
report-timeout	Parameter type: <alarm::timeout> (yes no) Possible values: - yes : report timeout detecting - no : report timeout detecting is ok	report timeout detecting <i>This element is only shown in detail mode.</i>
total-packets-exceed	Parameter type: <alarm::totalexceed> (yes no) Possible values: - yes : total amount of protocol packets exceed threshold - no : total amount of protocol packets is ok	total amount of protocol packets exceed threshold <i>This element is only shown in detail mode.</i>
arp-packets-exceed	Parameter type: <alarm::arpexceed> (yes no) Possible values: - yes : protocol arp packets exceed threshold - no : protocol arp packets is ok	protocol arp packets exceed threshold <i>This element is only shown in detail mode.</i>
dhcp-packets-exceed	Parameter type: <alarm::dhcpxceed> (yes no)	protocol dhcp packets exceed threshold <i>This element is only shown in</i>

name	Type	Description
	Possible values: - yes : protocol dhcp packets exceed threshold - no : protocol dhcp packets is ok	<i>detail mode.</i>
igmp-packets-exceed	Parameter type: <alarm::igmpexceed> (yes no) Possible values: - yes : protocol igmp packets exceed threshold - no : protocol igmp packets is ok	protocol igmp packets exceed threshold <i>This element is only shown in detail mode.</i>
pppoe-packets-exceed	Parameter type: <alarm::pppoeexceed> (yes no) Possible values: - yes : protocol pppoe packets exceed threshold - no : protocol pppoe packets is ok	protocol pppoe packets exceed threshold <i>This element is only shown in detail mode.</i>
nd-packets-exceed	Parameter type: <alarm::ndexceed> (yes no) Possible values: - yes : protocol nd packets exceed threshold - no : protocol nd packets is ok	protocol nd packets exceed threshold <i>This element is only shown in detail mode.</i>
icmpv6-packets-exceed	Parameter type: <alarm::icmpexceed> (yes no) Possible values: - yes : protocol icmp packets exceed threshold - no : protocol icmp packets is ok	protocol icmpv6 packets exceed threshold <i>This element is only shown in detail mode.</i>
mld-packets-exceed	Parameter type: <alarm::mldexceed> (yes no) Possible values: - yes : protocol igmp packets exceed threshold - no : protocol igmp packets is ok	protocol mld packets exceed threshold <i>This element is only shown in detail mode.</i>
dhcpv6-packets-exceed	Parameter type: <alarm::dhcpv6exceed> (yes no) Possible values: - yes : protocol dhcpv6 packets exceed threshold - no : protocol dhcpv6 packets is ok	protocol dhcpv6 packets exceed threshold <i>This element is only shown in detail mode.</i>
cfm-packets-exceed	Parameter type: <alarm::cfmexceed> (yes no) Possible values: - yes : protocol cfm packets exceed threshold - no : protocol cfm packets is ok	protocol cfm packets exceed threshold <i>This element is only shown in detail mode.</i>

104.102 Ima-Group Alarm Log Status Command

Command Description

This command displays the Ima-Group alarm log status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current epon [(alarm-index)]

Command Parameters

Table 104.102-1 "Ima-Group Alarm Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.102-2 "Ima-Group Alarm Log Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>
pon-index	Parameter type: <Itf::ComplexPortType> (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId>	identifies the epon where the alarm has occurred. <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
	- voip : voip - voip:ng2 : voip - la-group : link aggregation group - dist-router-interface : dist router interface - voicefxs : voicefxs - mpm : multi-pon module Possible values: - vlan : vlan port Possible values: - slot-vlan : slot unstacked - slot-stacked : slot vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier Field type <Eqpt::ComboPonId> - the comboPON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::BundleId> - the BUNDLE identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	

name	Type	Description
	Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id Field type <Eqpt::VlanId> - VLAN id Field type <Eqpt::LogicalId> - logical id Field type <Eqpt::VrflId> - VRF id	
newonu-index	Parameter type: <SignedInteger> - a signed integer	the newonu index for the pon alarm <i>This element is only shown in detail mode.</i>
log-info	Parameter type: <Alarm::AdditionalInfo> - string to identify the owner (example: Tom) - length: x<=512	some additional information about the table entry. <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status

name	Type	Description
onu-unprovisioned	Parameter type: <Alarm::checkNewOnu> (newonu not-newonu) Possible values: - newonu : new onu is exist - not-newonu : new onu is not exist	new onu is exist or not. <i>This element is only shown in detail mode.</i>
signal-loss	Parameter type: <Alarm::signalLoss> (loss not-loss) Possible values: - loss : new onu is exist - not-loss : new onu is not exist	pon loss of signal <i>This element is only shown in detail mode.</i>
bitrate-high	Parameter type: <Alarm::bitRate> (yes no) Possible values: - yes : new onu is exist - no : new onu is not exist	the error bit rate high at pon interface is reached or not <i>This element is only shown in detail mode.</i>
opmodule-mismatch	Parameter type: <Alarm::opmoudleMatch> (yes no) Possible values: - yes : new onu is exist - no : new onu is not exist	the optical module mismatched at pon interface failed or not. <i>This element is only shown in detail mode.</i>

104.103 Ima-Group Alarm Log Status Command

Command Description

This command displays the Ima-Group alarm log status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current eont-phyoam [ (index) ]
```

Command Parameters

Table 104.103-1 "Ima-Group Alarm Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.103-2 "Ima-Group Alarm Log Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>
onu-index	Parameter type: <Itf::ComplexPortType> (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId>	identifies the epon where the alarm has occurred. <i>This element is only shown in detail mode.</i>

name	Type	Description

name	Type	Description
	- voip : voip - voip:ng2 : voip - la-group : link aggregation group - dist-router-interface : dist router interface - voicefxs : voicefxs - mpm : multi-pon module Possible values: - vlan : vlan port Possible values: - slot-vlan : slot unstacked - slot-stacked : slot vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier Field type <Eqpt::ComboPonId> - the comboPON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::BundleId> - the BUNDLE identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	

name	Type	Description
	Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id Field type <Eqpt::VlanId> - VLAN id Field type <Eqpt::LogicalId> - logical id Field type <Eqpt::VrflId> - VRF id	
additional-info	Parameter type: <Alarm::AdditionalInfo> - string to identify the owner (example: Tom) - length: x<=512	some additional information about the table entry. <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status

name	Type	Description
link-fault	Parameter type: <Alarm::linkFaultType> (yes no) Possible values: - yes : link fault at cpe/onu - no : link fault is not exist	Link fault at ont. <i>This element is only shown in detail mode.</i>
dying-gasp	Parameter type: <Alarm::dyingGaspType> (yes no) Possible values: - yes : dying gasp is exist - no : dying gasp is not exist	received dying gasp indication from ont. <i>This element is only shown in detail mode.</i>
critical-event	Parameter type: <Alarm::criticalEventType> (yes no) Possible values: - yes : critical event is exist - no : critical event is not exist	receive critical event indication from ont is ok or not <i>This element is only shown in detail mode.</i>
oam-fail	Parameter type: <Alarm::oamFailType> (yes no) Possible values: - yes : oam failing is yes - no : oam failing is not exist	ont fails to respond to oam message requests. <i>This element is only shown in detail mode.</i>

104.104 Ima-Group Alarm Log Status Command

Command Description

This command displays the Ima-Group alarm log status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current eont-services-lan [ (alarm-index) ]
```

Command Parameters

Table 104.104-1 "Ima-Group Alarm Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.104-2 "Ima-Group Alarm Log Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>

104.105 Ima-Group Alarm Log Status Command

Command Description

This command displays the Ima-Group alarm log status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current eolt-ont-tca [ (alarm-index) ]
```

Command Parameters

Table 104.105-1 "Ima-Group Alarm Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-index)	Format: - index of a current alarm entry	alarm type

Command Output

104 Current Alarm Status Commands

name	Type	Description
	- voip : voip - voip:ng2 : voip - la-group : link aggregation group - dist-router-interface : dist router interface - voicefxs : voicefxs - mpm : multi-pon module Possible values: - vlan : vlan port Possible values: - slot-vlan : slot unstacked - slot-stacked : slot vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier Field type <Eqpt::ComboPonId> - the comboPON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::BundleId> - the BUNDLE identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	

name	Type	Description
	Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id Field type <Eqpt::VlanId> - VLAN id Field type <Eqpt::LogicalId> - logical id Field type <Eqpt::VrflId> - VRF id	
additional-info	Parameter type: <Alarm::AdditionalInfo> - string to identify the owner (example: Tom) - length: x<=512	some additional information about the table entry. <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
ont-olt-rx-pw-lo	Parameter type: <Alarm::pwLoType> (yes no) Possible values: - yes : congestion of ethernet port is detected - no : congestion of ethernet port is not exist	receive power from ont at olt side is lower. <i>This element is only shown in detail mode.</i>
ont-olt-rx-pw-hig	Parameter type: <Alarm::pwHigType> (yes no) Possible values: - yes : congestion of ethernet port is detected - no : congestion of ethernet port is not exist	receive power from ont at olt side is high. <i>This element is only shown in detail mode.</i>
ont-olt-rx-pw-warnlo	Parameter type: <Alarm::pwWarnLoType> (yes no) Possible values: - yes : congestion of ethernet port is detected - no : congestion of ethernet port is not exist	receive power from ont at olt side is warn lower. <i>This element is only shown in detail mode.</i>
ont-olt-rx-pw-warnhig	Parameter type: <Alarm::pwWarnHigType> (yes no) Possible values: - yes : congestion of ethernet port is detected - no : congestion of ethernet port is not exist	receive power from ont at olt side is warn high. <i>This element is only shown in detail mode.</i>

104.106 Ima-Group Alarm Log Status Command

Command Description

This command displays the Ima-Group alarm log status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current eont-sw-dl [ (alarm-index) ]
```

Command Parameters

Table 104.106-1 "Ima-Group Alarm Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.106-2 "Ima-Group Alarm Log Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>
additional-info	Parameter type: <Alarm::AdditionalInfo> - string to identify the owner (example: Tom) - length: x<=512	some additional information about the table entry. <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
version-mismatch	Parameter type: <Alarm::versionMismatchType> (yes no) Possible values: - yes : software version mismatch is yes - no : software version mismatch is no	software version is mismatch. <i>This element is only shown in detail mode.</i>
dl-mode-mismatch	Parameter type: <Alarm::downloadModelType> (yes no)	software download mode mismatch. <i>This element is only shown in</i>

name	Type	Description
	Possible values: - yes : software download mode mismatch is yes - no : software download mode mismatch is no	<i>detail mode.</i>
version-not-found	Parameter type: <Alarm::versionFoundType> (yes no) Possible values: - yes : software version not found is yes - no : software version not found is no	software version not found. <i>This element is only shown in detail mode.</i>
dl-file-missing	Parameter type: <Alarm::downloadFileType> (yes no) Possible values: - yes : software download file missing is yes - no : software download file missing is no	software download file missing . <i>This element is only shown in detail mode.</i>
dl-in-progress	Parameter type: <Alarm::downloadProgressType> (yes no) Possible values: - yes : software download in progress is yes - no : software download in progress is no	software download in progress . <i>This element is only shown in detail mode.</i>
st-dl-failing	Parameter type: <Alarm::downloadFailType> (yes no) Possible values: - yes : software download failure is yes - no : software download failure is no	software download failure . <i>This element is only shown in detail mode.</i>
dl-active-failing	Parameter type: <Alarm::downloadActFailType> (yes no) Possible values: - yes : software download active failure is yes - no : software download active failure is no	software download active failure. <i>This element is only shown in detail mode.</i>
dl--commit-failing	Parameter type: <Alarm::downloadComFailType> (yes no) Possible values: - yes : software download commit failure is yes - no : software download commit failure is no	software download commit failure. <i>This element is only shown in detail mode.</i>

104.107 LT CFM Current Alarm Status Command

Command Description

This command displays iacm cfm current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current cfm [ (index) ]
```

Command Parameters

Table 104.107-1 "LT CFM Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.107-2 "LT CFM Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
cfm-mep-id	Parameter type: <UnsignedSignedInteger> - an unsigned integer	dot1agCfmMepIdentifier index where the alarm has occurred. <i>This element is only shown in detail mode.</i>
cfm-unique-id	Parameter type: <Alarm::IdentificationIdxOrZero> - a signed integer	unique identification for the alarm or zero when not applicable, alarm entry is further specified in additional-info <i>This element is only shown in detail mode.</i>
additional-info	Parameter type: <Alarm::AddInfoStringCcm> - additional alarm information	Additional information regarding the cfm alarm <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
cfm-defrdiccm	Parameter type: <Alarm::IacmCfmRdiCcm> (yes no)	specifies rdi bit in ccm received <i>This element is only shown in detail mode.</i>

name	Type	Description
	Possible values: - yes : rdi bit in ccm received - no : no rdi bit in ccm received	
cfm-defmacstatus	Parameter type: <Alarm::IacmCfmMacError> (yes no) Possible values: - yes : mac error status - no : no mac error status	ccm mac error status <i>This element is only shown in detail mode.</i>
cfm-defremoteccm	Parameter type: <Alarm::IacmCfmMepCcm> (yes no) Possible values: - yes : missing ccm from mep - no : no missing ccm from mep	specifies missing ccm from mep <i>This element is only shown in detail mode.</i>
cfm-deferrorccm	Parameter type: <Alarm::IacmCfmInvalidCcm> (yes no) Possible values: - yes : invalid ccm received - no : no invalid ccm received	specifies invalid ccm received <i>This element is only shown in detail mode.</i>
cfm-defxconccm	Parameter type: <Alarm::IacmCfmUnexpectedCcm> (yes no) Possible values: - yes : unexpected ccm received - no : no unexpected ccm received	specifies unexpected ccm received <i>This element is only shown in detail mode.</i>
cfm-defais	Parameter type: <Alarm::IacmCfmAis> (yes no) Possible values: - yes : ethernet ais received - no : no ethernet ais received	specifies ethernet ais received <i>This element is only shown in detail mode.</i>

104.108 IHUB Eth Cfm Current Alarm Status Command

Command Description

This command displays ihub cfm current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current eth-cfm [ (index) ]
```

Command Parameters

Table 104.108-1 "IHUB Eth Cfm Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.108-2 "IHUB Eth Cfm Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
cfm-mep-id	Parameter type: <UnsignedSignedInteger> - an unsigned integer	dot1agCfmMepIdentifier index where the alarm has occurred. <i>This element is only shown in detail mode.</i>
cfm-unique-id	Parameter type: <Alarm::IdentificationIdxOrZero> - a signed integer	unique identification for the alarm or zero when not applicable, alarm entry is further specified in additional-info <i>This element is only shown in detail mode.</i>
additional-info	Parameter type: <Alarm::AddInfoStringIhubCfm> - additional alarm information	Additional information regarding the cfm alarm <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status

name	Type	Description
defrdiccm	Parameter type: <Alarm::IhubCfmRdiCcm> (yes no) Possible values: - yes : rdi bit in ccm received - no : no rdi bit in ccm received	specifies rdi bit in ccm received <i>This element is only shown in detail mode.</i>
defmacstatus	Parameter type: <Alarm::IhubCfmMacError> (yes no) Possible values: - yes : mac error status - no : no mac error status	ccm mac error status <i>This element is only shown in detail mode.</i>
defremoteccm	Parameter type: <Alarm::IhubCfmMepCcm> (yes no) Possible values: - yes : missing ccm from mep - no : no missing ccm from mep	specifies missing ccm from mep <i>This element is only shown in detail mode.</i>
deferrorccm	Parameter type: <Alarm::IhubCfmInvalidCcm> (yes no) Possible values: - yes : invalid ccm received - no : no invalid ccm received	specifies invalid ccm received <i>This element is only shown in detail mode.</i>
defxconccm	Parameter type: <Alarm::IhubCfmUnexpectedCcm> (yes no) Possible values: - yes : unexpected ccm received - no : no unexpected ccm received	specifies unexpected ccm received <i>This element is only shown in detail mode.</i>

104.109 RSVP Current Alarm Status Command

Command Description

This command displays the current RSVP alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current rsvp [ (index) ]
```

Command Parameters

Table 104.109-1 "RSVP Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.109-2 "RSVP Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
router-id	Parameter type: <Ihub::baseRouter> base Possible values: - base : base router	identifies the base router <i>This element is only shown in detail mode.</i>
neighbor-index	Parameter type: <Alarm::IdentificationIdxOrZero> - a signed integer	An unique number to identify the alarm or zero when not applicable, Neighbor is further specified in additional-info <i>This element is only shown in detail mode.</i>
additional-info	Parameter type: <Alarm::AddInfoString> - additional alarm information	identifies the Neighbor using the Nbr address and ifIndex or empty string if not applicable <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
neighbor-down	Parameter type: <Alarm::RsvpNeighborDown> (yes	specifies whether the RSVP Neighbor is down or not

name	Type	Description
	no) Possible values: - yes : rsvp neighbor is down - no : rsvp neighbor is up or rsvp interface is shutdown or ip interface is shutdown or rsvp instance is shutdown	<i>This element is only shown in detail mode.</i>
instance-down	Parameter type: <Alarm::RsvpInstanceDown> (yes no) Possible values: - yes : rsvp instance is down - no : rsvp instance is up or not configured	specifies whether the Rsvp instance is down or not <i>This element is only shown in detail mode.</i>

104.110 IPD eth-ring Current Alarm Status Command

Command Description

This command displays the ipd eth-ring current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current eth-ring [(index)]

Command Parameters

Table 104.110-1 "IPD eth-ring Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm log table index

Command Output

Table 104.110-2 "IPD eth-ring Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ring-id	Parameter type: <Alarm::genAlarmIndex> - index of a current alarm entry	identifies the eth-ring-instance <i>This element is only shown in detail mode.</i>
ring path-index	Parameter type: <Alarm::genAlarmIndex> - index of a current alarm entry	identifies the ring-path within a eth-ring <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
ering-path-blocked	Parameter type: <Alarm::EthRingPathBlocked> (yes no) Possible values: - yes : ethernet ring path is blocked - no : ethernet ring path is unblocked	specifies whether a eth-ring path is blocked or not <i>This element is only shown in detail mode.</i>

104.111 EFM-OAM Current Alarm Status Command

Command Description

This command displays the EFM-OAM current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current efm-oam [ (index) ]
```

Command Parameters

Table 104.111-1 "EFM-OAM Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.111-2 "EFM-OAM Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>
line	Parameter type: <Itf::EfmEthernetIndex> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identifies the line where the alarm has occurred. <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
link-fault	Parameter type: <Alarm::linkFaultType> (yes	Link fault at cpe <i>This element is only shown in</i>

name	Type	Description
	no) Possible values: - yes : link fault at cpe/onu - no : link fault is not exist	<i>detail mode.</i>
dying-gasp	Parameter type: <Alarm::dyingGaspType> (yes no) Possible values: - yes : dying gasp is exist - no : dying gasp is not exist	received dying gasp indication from cpe <i>This element is only shown in detail mode.</i>
critical-event	Parameter type: <Alarm::criticalEventType> (yes no) Possible values: - yes : critical event is exist - no : critical event is not exist	receive critical event indication from cpe <i>This element is only shown in detail mode.</i>

104.112 Ont loop detect Current Alarm Status Command

Command Description

This command displays the ont loop detect current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ont-loopdetect [(index)]

Command Parameters

Table 104.112-1 "Ont loop detect Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.112-2 "Ont loop detect Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont	Parameter type: <Gpon::OntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup>	identifies the ont entry <i>This element is only shown in detail mode.</i>

name	Type	Description
	- channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier

104.113 ONT PLOAM Current Alarm Status Command

Command Description

This command displays the ONT PLOAM current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ont-ploam [(index)]

Command Parameters

Table 104.113-1 "ONT PLOAM Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

name	Type	Description
	- channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Only Show Details: current alarm status		
name	Type	Description
ont-ploam-loss-sig	Parameter type: <Alarm::ONTPLOAMLOSO> (yes no) Possible values: - yes : loss of signal at ont - no : no loss of signal at ont	loss of signal at ont <i>This element is only shown in detail mode.</i>
ont-ploam-loss-ack	Parameter type: <Alarm::ONTPLOAMLOA> (yes no) Possible values: - yes : loss of acknowledge from ont - no : no loss of acknowledge from ont	loss of acknowledge from ont <i>This element is only shown in detail mode.</i>
ont-ploam-loss-cd	Parameter type: <Alarm::ONTPLOAMLCD> (yes no) Possible values: - yes : loss of gem/atm channel delineation of ont - no : gem/atm channel delineation of ont is normal	loss of gem/atm channel delineation of ont <i>This element is only shown in detail mode.</i>
ont-ploam-phy-eqpt-err	Parameter type: <Alarm::ONTPLOAMPEE> (yes no) Possible values: - yes : physical equipment error of ont - no : no physical equipment error of ont	physical equipment error of ont <i>This element is only shown in detail mode.</i>
ont-ploam-startup-fail	Parameter type: <Alarm::ONTPLOAMSUF> (yes no) Possible values: - yes : startup failure in ranging of ont - no : no startup failure in ranging of ont	startup failure in ranging of ont <i>This element is only shown in detail mode.</i>
ont-ploam-sig-degrade	Parameter type: <Alarm::ONTPLOAMSD> (yes no) Possible values: - yes : signal degrade ber threshold exceeded from ont - no : signal degrade ber threshold is normal	signal degrade ber threshold exceeded from ont <i>This element is only shown in detail mode.</i>
ont-ploam-disabled	Parameter type: <Alarm::ONTPLOAMONTDisabled> (yes no) Possible values: - yes : ont has been autonomously disabled - no : ont is enabled	ont has been autonomously disabled because of misbehaving transmissions <i>This element is only shown in detail mode.</i>
ont-ploam-err-msg	Parameter type: <Alarm::ONTPLOAMMEM> (yes no) Possible values: - yes : message error message from ont - no : no message error message from ont	message error message from ont <i>This element is only shown in detail mode.</i>

name	Type	Description
ont-ploam-inactive	Parameter type: <Alarm::ONTPLOAMInact> (yes no) Possible values: - yes : ont is inactive - no : ont is active	ont is inactive <i>This element is only shown in detail mode.</i>
ont-ploam-sig-fail	Parameter type: <Alarm::ONTPLOAMSF> (yes no) Possible values: - yes : signal fail ber threshold exceeded from ont - no : no signal fail ber threshold exceeded from ont	signal fail ber threshold exceeded from ont <i>This element is only shown in detail mode.</i>
ont-ploam-dying-gasp	Parameter type: <Alarm::ONTPLOAMDG> (yes no) Possible values: - yes : received dying gasp indication from ont - no : no received dying gasp indication from ont	received dying gasp indication from ont <i>This element is only shown in detail mode.</i>
ont-ploam-deact-fail	Parameter type: <Alarm::ONTPLOAMDF> (yes no) Possible values: - yes : deactivate failure of ont - no : no deactivate failure of ont	deactivate failure of ont <i>This element is only shown in detail mode.</i>
ont-ploam-oam	Parameter type: <Alarm::ONTPLOAMLOAM> (yes no) Possible values: - yes : loss of ploam for ont - no : no Loss of ploam for ont	loss of ploam for ont <i>This element is only shown in detail mode.</i>
ont-ploam-win-drift	Parameter type: <Alarm::ONTPLOAMDOW> (yes no) Possible values: - yes : drift of window - no : no drift of window	drift of window. <i>This element is only shown in detail mode.</i>
ont-ploam-rdi	Parameter type: <Alarm::ONTPLOAMRDI> (yes no) Possible values: - yes : remote defect indication from ont - no : no remote defect indication from ont	remote defect indication from ont. <i>This element is only shown in detail mode.</i>
ont-ploam-loss-ks	Parameter type: <Alarm::ONTPLOAMLOKS> (yes no) Possible values: - yes : loss of key synchronization between olt and ont - no : key synchronization between olt and ont is ok	loss of key synchronization between olt and ont <i>This element is only shown in detail mode.</i>
ont-ploam-pwr-burst	Parameter type: <Alarm::ONTPLOAMONTPWREERR> (yes no) Possible values: - yes : ont power up error - no : ont power up ok	ont power up error. <i>This element is only shown in detail mode.</i>
ont-ploam-rog-disa	Parameter type: <Alarm::ONTPLOAMROGUEONTDIS> (yes no)	ont has been autonomously disabled because of misbehaving transmissions and is thought to be

104 Current Alarm Status Commands

name	Type	Description
	Possible values: - yes : ont has been autonomously disabled to be a rogue ont - no : ont is normal	a rogue ont. <i>This element is only shown in detail mode.</i>
ont-ploam-diff-reach	Parameter type: <Alarm::ONTPLOAMDIFREACH> (yes no) Possible values: - yes : ont has been deactivated because its location on the pon has exceeded its differential reach capability - no : ont is normal	ont has been deactivated because its location on the pon has exceeded its differential reach capability. <i>This element is only shown in detail mode.</i>
ont-ploam-looc	Parameter type: <Alarm::ONTPLOAMLOOC> (yes no) Possible values: - yes : ont has been deactivated due to persistent OMCI MIC failure - no : ont is normal	ont has been deactivated due to persistent OMCI MIC failure. <i>This element is only shown in detail mode.</i>

104.114 SFU ONT PLOAM Current Alarm Status Command

Command Description

This command displays the SFU ONT PLOAM current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current sfu-ploam [ (index) ]
```

Command Parameters

name	Type	Description
	no) Possible values: - yes : mdu environmental alarm2 - no : do not detect the mdu environmental alarm2	<i>detail mode.</i>
ont-gen-mdv-env3	Parameter type: <Alarm::ONTGENERALENV3> (yes no) Possible values: - yes : mdu environmental alarm3 - no : do not detect the mdu environmental alarm3	mdv environmental alarm3 <i>This element is only shown in detail mode.</i>
ont-gen-nw-time-err	Parameter type: <Alarm::ONTGENERALNTPERR> (yes no) Possible values: - yes : a condition meaning the ont is unable to establish timing from the ntp server(s) - no : a condition meaning the ont is able to establish timing from the ntp server(s)	a condition meaning the ont is unable to establish timing from the ntp server(s) <i>This element is only shown in detail mode.</i>
ont-gen-opt-sig-high	Parameter type: <Alarm::ONTGENERALLEVELHI> (yes no) Possible values: - yes : optical signal level is too high - no : optical signal level is normal	optical signal level is too high <i>This element is only shown in detail mode.</i>
ont-gen-opt-sig-low	Parameter type: <Alarm::ONTGENERALLEVELLO> (yes no) Possible values: - yes : optical signal level is too low - no : optical signal level is normal	Optical signal level is too low <i>This element is only shown in detail mode.</i>
ont-gen-eqpt-prov-nsa	Parameter type: <Alarm::ONTGENERALONTNSAMEA> (yes no) Possible values: - yes : non service affects mismatch between ont equipment and ont provisioning attributes - no : ont is provisioned properly	non service affects mismatch between ont equipment and ont provisioning attributes <i>This element is only shown in detail mode.</i>

104.118 SFU ONT General Current Alarm Status Command

Command Description

This command displays the SFU ONT general current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current sfu-gen [ (index) ]
```

Command Parameters

Table 104.118-1 "SFU ONT General Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.118-2 "SFU ONT General Current Alarm Status Command" Display parameters

Specific Information

Specific Information		
name	Type	Description
ont-card	Parameter type: <Gpon::OntSlotAlarmIndex2> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId>	gpon ont plan card <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
	- the PON identifier - Field type <Ng2::ChannelGroup> - channel group number - Field type <Ng2::SubchannelGroup> - subchannel group number - Field type <Eqpt::OntId> - the ONT identifier - Field type <Ng2::OntId> - the ONT identifier - Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14]	

Only Show Details: current alarm status		
name	Type	Description
ont-sbscr-lim-missing	Parameter type: <Alarm::ONTCARDLIMMISSING> (yes no) Possible values: - yes : provisioned ont card missing - no : provisioned ont card works properly	provisioned ont card missing <i>This element is only shown in detail mode.</i>
ont-sbscr-lim-type-mis	Parameter type: <Alarm::ONTCARDLIMMEA> (yes no) Possible values: - yes : plug-in ont card is wrong type - no : ont card works properly	plug-in ont card is wrong type <i>This element is only shown in detail mode.</i>
ont-sbscr-lim-removal	Parameter type: <Alarm::ONTCARDLIMIMPROPRMVL> (yes no) Possible values: - yes : ont card removed without being deprovisioned - no : ont card removed correctly	ont card removed without being deprovisioned <i>This element is only shown in detail mode.</i>
ont-sbscr-lim-fail	Parameter type: <Alarm::ONTCARDLIMFAIL> (yes no) Possible values: - yes : ont card failed detected or failed self test - no : ont card works properly	ont card failed detected or failed self test <i>This element is only shown in detail mode.</i>
ont-sbscr-lim-svc-mis	Parameter type: <Alarm::ONTCARDLIMSVCNIS> (yes no) Possible values: - yes : ont did not accept the omci configuration requests for the provisioned onu card - no : ont card works properly	ont did not accept the omci configuration requests for the provisioned onu card <i>This element is only shown in detail mode.</i>
ont-sbscr-lim-port-mis	Parameter type: <Alarm::ONTCARDLIMNUMPORTSMIS> (yes no) Possible values: - yes : the actual number of ports of a plug-in ont card is different from the planned number of ports - no : the actual number of ports of a plug-in ont card is the same to the planned number of ports	the actual number of ports of a plug-in ont card is different from the planned number of ports <i>This element is only shown in detail mode.</i>

104.122 ONT SERVICES POTS Current Alarm Status Command

Command Description

This command displays the ONT SERVICES POTS current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ont-pots [(index)]

Command Parameters

Table 104.122-1 "ONT SERVICES POTS Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.122-2 "ONT SERVICES POTS Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont-pots	Parameter type: <Gpon::OntPotsAlarmIndex2> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId>	gpon ont pots port index <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
	- the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Only Show Details: current alarm status		
name	Type	Description
ont-svc-pots-svc-mis	Parameter type: <Alarm::ONTPOTSSVCMIS> (yes no) Possible values: - yes : ont service mismatch for provisioned pots - no : ont service pots works properly	ont service mismatch for provisioned pots <i>This element is only shown in detail mode.</i>
ont-svc-pots-rtcp-lost	Parameter type: <Alarm::ONTPOTSRTCPSTREAMLOSS> (yes no) Possible values: - yes : pots realtime transport control protocol stream lost - no : ont service pots works properly	pots realtime transport control protocol stream lost <i>This element is only shown in detail mode.</i>
ont-svc-pots-icnf-subs	Parameter type: <Alarm::ONTPOTSICONFIGSUBFAIL> (yes no) Possible values: - yes : iconfig subscription of the pots line failed - no : ont service pots works properly	pots line iconfig subscription failure <i>This element is only shown in detail mode.</i>
ont-svc-pots-icnf-ntfy	Parameter type: <Alarm::ONTPOTSICONFIGNOTIFYFAIL> (yes no) Possible values: - yes : iconfig notify failed for a pots line - no : ont service pots works properly	pots line iconfig notify failure <i>This element is only shown in detail mode.</i>
ont-svc-pots-icnf-http	Parameter type: <Alarm::ONTPOTSICONFIGHTTPFAIL> (yes no) Possible values: - yes : iconfig http redirect failed for a pots line - no : ont service pots works properly	pots line iconfig http failure <i>This element is only shown in detail mode.</i>
ont-svc-pots-sip-reg	Parameter type: <Alarm::ONTPOTSSIPREGFAIL> (yes no) Possible values: - yes : sip registration failed for the pots line - no : ont service pots works properly	pots line sip registration failure <i>This element is only shown in detail mode.</i>
ont-svc-pots-sip-inv	Parameter type: <Alarm::ONTPOTSSIPINVITEFAIL> (yes no)	pots line sip invite request failure <i>This element is only shown in detail mode.</i>

name	Type	Description
	Possible values: - yes : sip invite request for the pots line failed - no : ont service pots works properly	
ont-svc-pots-sip-subsc	Parameter type: <Alarm::ONTPOTSSIPSUBFAIL> (yes no) Possible values: - yes : sip subscribe failed for the pots line - no : ont service pots works properly	pots line sip subscribe failure <i>This element is only shown in detail mode.</i>
ont-svc-pots-sip-mt-tc	Parameter type: <Alarm::ONTPOTSSIPMSGTMOUTTCA> (yes no) Possible values: - yes : number of sip message timeouts threshold has crossed for the pots line - no : ont service pots works properly	pots line sip message timeout threshold crossed <i>This element is only shown in detail mode.</i>
ont-svc-pots-pk-loss-tc	Parameter type: <Alarm::ONTPOTSRTTPKTLOSSTCA> (yes no) Possible values: - yes : number of rtp bearer packets loss on a pots line has been crossed - no : ont service pots works properly	pots line rtp bearer packets loss threshold crossed <i>This element is only shown in detail mode.</i>
ont-svc-pots-jitter-tc	Parameter type: <Alarm::ONTPOTSJITTERTCA> (yes no) Possible values: - yes : rtp jitter threshold has been crossed on a pots line - no : ont service pots works properly	pots line rtp jitter threshold crossed <i>This element is only shown in detail mode.</i>
ont-svc-pots-subs-dns	Parameter type: <Alarm::ONTPOTSICNFSUBSDNS> (yes no) Possible values: - yes : iconfig subscription failed because domain name could not be resolved - no : ont service pots works properly	iconfig subscription failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-subs-tcp	Parameter type: <Alarm::ONTPOTSICNFSUBSTCP> (yes no) Possible values: - yes : iconfig subscription failed because of TCP socket - no : ont service pots works properly	iconfig subscription failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-subs-tls	Parameter type: <Alarm::ONTPOTSICNFSUBSTLS> (yes no) Possible values: - yes : iconfig subscription failed because of TLS session - no : ont service pots works properly	iconfig subscription failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-subs-auth	Parameter type: <Alarm::ONTPOTSICNFSUBSAUTH> (yes no) Possible values: - yes : iconfig subscription failed because authentication failed - no : ont service pots works properly	iconfig subscription failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-subs-to	Parameter type: <Alarm::ONTPOTSICNFSUBSTO>	iconfig subscription failed

104 Current Alarm Status Commands

name	Type	Description
	(yes no) Possible values: - yes : iconfig subscription failed because of retransmission timeout - no : ont service pots works properly	<i>This element is only shown in detail mode.</i>
ont-svc-pots-sub-err	Parameter type: <Alarm::ONTPOTSICNFSUBSERR> (yes no) Possible values: - yes : iconfig subscription failed because of response error - no : ont service pots works properly	iconfig subscription failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-not-to	Parameter type: <Alarm::ONTPOTSICNFNOTTO> (yes no) Possible values: - yes : iconfig notification failed because of retransmission timeout - no : ont service pots works properly	iconfig notification failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-notref-to	Parameter type: <Alarm::ONTPOTSICNFNOTREFTO> (yes no) Possible values: - yes : iconfig notification refresh failed because of timeout - no : ont service pots works properly	iconfig notification failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-not-mal	Parameter type: <Alarm::ONTPOTSICNFNOTMAL> (yes no) Possible values: - yes : iconfig notification refresh failed because of a malformed message - no : ont service pots works properly	iconfig notification failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-not-rej	Parameter type: <Alarm::ONTPOTSICNFNOTREJ> (yes no) Possible values: - yes : iconfig notification refresh failed because it was rejected by the server - no : ont service pots works properly	iconfig notification failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-http-dns	Parameter type: <Alarm::ONTPOTSICNFHTTPTDNS> (yes no) Possible values: - yes : iconfig doc retrieval failed because domain name could not be resolved - no : ont service pots works properly	iconfig doc retrieval failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-http-tcp	Parameter type: <Alarm::ONTPOTSICNFHTTPTCP> (yes no) Possible values: - yes : iconfig doc retrieval failed because of TCP socket - no : ont service pots works properly	iconfig doc retrieval failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-http-tls	Parameter type: <Alarm::ONTPOTSICNFHTTPTLS> (yes no) Possible values: - yes : iconfig doc retrieval failed because of TLS session	iconfig doc retrieval failed <i>This element is only shown in detail mode.</i>

name	Type	Description
	- no : ont service pots works properly	
ont-svc-pots-http-auth	Parameter type: <Alarm::ONTPOTSICNFHTTPAUTH> (yes no) Possible values: - yes : iconfig doc retrieval failed because authentication failed - no : ont service pots works properly	iconfig doc retrieval failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-http-to	Parameter type: <Alarm::ONTPOTSICNFHTTPTO> (yes no) Possible values: - yes : iconfig doc retrieval failed because of retransmission timeout - no : ont service pots works properly	iconfig doc retrieval failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-http-err	Parameter type: <Alarm::ONTPOTSICNFHTTTPERR> (yes no) Possible values: - yes : iconfig doc retrieval failed because of response error - no : ont service pots works properly	iconfig doc retrieval failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-http-mal	Parameter type: <Alarm::ONTPOTSICNFHTTPMAL> (yes no) Possible values: - yes : iconfig doc retrieval failed because of a malformed message - no : ont service pots works properly	iconfig doc retrieval failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-insuff	Parameter type: <Alarm::ONTPOTSINSUFF> (yes no) Possible values: - yes : iconfig service failed because of insufficient data - no : ont VOIP service pots works properly	iconfig VOIP service failed <i>This element is only shown in detail mode.</i>
ont-svc-pots-poos	Parameter type: <Alarm::ONTPOTSPOOS> (yes no) Possible values: - yes : pots ports out of service - no : pots ports work properly	pots ports out of service <i>This element is only shown in detail mode.</i>

104.123 ONT SERVICES LAN Current Alarm Status Command

Command Description

This command displays the ONT SERVICES LAN current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current ont-lan [ (index) ]
```

Command Parameters

Table 104.123-1 "ONT SERVICES LAN Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.123-2 "ONT SERVICES LAN Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont-port	Parameter type: <Gpon::IfIndexAlarmIndex2> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	gpon ont port <i>This element is only shown in detail mode.</i>

name	Type	Description
	Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Only Show Details: current alarm status		
name	Type	Description
ont-svc-lan-mismatch	Parameter type: <Alarm::ONTLANSVCMIS> (yes no) Possible values: - yes : the ont did not accept the omci configuration requests for the lan service - no : ont service lan works properly	ont service mismatch for lan <i>This element is only shown in detail mode.</i>
ont-svc-lan-loss-sig	Parameter type: <Alarm::ONTLANLOS> (yes no) Possible values: - yes : loss of signal on an ethernet port interface - no : ont service lan works properly	loss of signal on an ethernet port interface <i>This element is only shown in detail mode.</i>
ont-svc-enet-poos	Parameter type: <Alarm::ONTENETPOOS> (yes no) Possible values: - yes : ethernet ports out of service - no : ethernet ports work properly	ethernet ports out of service <i>This element is only shown in detail mode.</i>

104.124 ONT TCA Current Alarm Status Command

Command Description

This command displays the ONT TCA current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ont-tca [(index)]

Command Parameters

Table 104.124-1 "ONT TCA Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

pon-t-rxtotdropfrmhi	Parameter type: <Alarm::RXTOTDROPPFRMHI> (yes no) Possible values: - yes : rx total dropped packet high tca - no : olt works properly	pon utilization rx (upstream) total drop frame high threshold crossed <i>This element is only shown in detail mode.</i>
pon-t-rxtotdropfrmmd	Parameter type: <Alarm::RXTOTDROPPFRMMD> (yes no) Possible values: - yes : rx total dropped packet medium tca - no : olt works properly	pon utilization rx (upstream) total drop frame medium threshold crossed <i>This element is only shown in detail mode.</i>
pon-t-rxtotdropfrmlo	Parameter type: <Alarm::RXTOTDROPPFRMLO> (yes no) Possible values: - yes : rx total dropped packet low tca - no : olt works properly	pon utilization rx (upstream) total drop frame low threshold crossed <i>This element is only shown in detail mode.</i>

104.129 OLT Channel Pair Utilization TCA Current Alarm Status Command

Command Description

This command displays the channel-pair utilization TCA current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current olt-chpr-util-tca [ (index) ]
```

Command Parameters

Table 104.129-1 "OLT Channel Pair Utilization TCA Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.129-2 "OLT Channel Pair Utilization TCA Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
channel-pair	Parameter type: <Gpon::ChannelPairId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel-pair ifindex <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
chpr-t-txmcutilhi	Parameter type: <Alarm::TXMCUTILHI>	channel-pair utilization tx

name	Type	Description
	(yes no) Possible values: - yes : tx mcast utilization high tca - no : olt works properly	(downstream) multicast high threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txmcutilmd	Parameter type: <Alarm::TXMCUTILMD> (yes no) Possible values: - yes : tx mcast utilization medium tca - no : olt works properly	channel-pair utilization tx (downstream) multicast medium threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txmcutillo	Parameter type: <Alarm::TXMCUTILLO> (yes no) Possible values: - yes : tx mcast utilization low tca - no : olt works properly	channel-pair utilization tx (downstream) multicast low threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txtotutilhi	Parameter type: <Alarm::TXTOTUTILHI> (yes no) Possible values: - yes : tx total utilization high tca - no : olt works properly	channel-pair utilization tx (downstream) total high threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txtotutilmd	Parameter type: <Alarm::TXTOTUTILMD> (yes no) Possible values: - yes : tx total utilization medium tca - no : olt works properly	channel-pair utilization tx (downstream) total medium threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txtotutillo	Parameter type: <Alarm::TXTOTUTILLO> (yes no) Possible values: - yes : tx total utilization low tca - no : olt works properly	channel-pair utilization tx (downstream) total low threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-rxtotutilhi	Parameter type: <Alarm::RXTOTUTILHI> (yes no) Possible values: - yes : rx total utilization high tca - no : olt works properly	channel-pair utilization rx (upstream) total high threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-rxtotutilmd	Parameter type: <Alarm::RXTOTUTILMD> (yes no) Possible values: - yes : rx total utilization medium tca - no : olt works properly	channel-pair utilization rx (upstream) total medium threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-rxtotutillo	Parameter type: <Alarm::RXTOTUTILLO> (yes no) Possible values: - yes : rx total utilization low tca - no : olt works properly	channel-pair utilization rx (upstream) total low threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-dbacongperiodhi	Parameter type: <Alarm::DBACONGPERIODHI> (yes no) Possible values:	channel-pair utilization rx (upstream) dbacongperiod high threshold crossed <i>This element is only shown in</i>

104 Current Alarm Status Commands

name	Type	Description
	- yes : rx dba congestion period high tca - no : olt works properly	<i>detail mode.</i>

chpr-t-dbacongperiodlo	Parameter type: <Alarm::DBACONGPERIODLO> (yes no) Possible values: - yes : rx dba congestion period low tca - no : olt works properly	channel-pair utilization rx (upstream) dbacongperiod low threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txucdropfrmhi	Parameter type: <Alarm::TXUCDROPFRMHI> (yes no) Possible values: - yes : tx unicast dropped packet high tca - no : olt works properly	channel-pair utilization tx (downstream) unicast drop frame high threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txucdropfrmmd	Parameter type: <Alarm::TXUCDROPFRMMD> (yes no) Possible values: - yes : tx unicast dropped packet medium tca - no : olt works properly	channel-pair utilization tx (downstream) unicast drop frame medium threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txucdropfrmlo	Parameter type: <Alarm::TXUCDROPFRMLO> (yes no) Possible values: - yes : tx unicast dropped packet low tca - no : olt works properly	channel-pair utilization tx (downstream) unicast drop frame low threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txmcdropfrmhi	Parameter type: <Alarm::TXMCDROPFRMHI> (yes no) Possible values: - yes : tx multicast dropped packet high tca - no : olt works properly	channel-pair utilization tx (downstream) multicast drop frame high threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txmcdropfrmmd	Parameter type: <Alarm::TXMCDROPFRMMD> (yes no) Possible values: - yes : tx multicast dropped packet medium tca - no : olt works properly	channel-pair utilization tx (downstream) multicast drop frame medium threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txmcdropfrmlo	Parameter type: <Alarm::TXMCDROPFRMLO> (yes no) Possible values: - yes : tx multicast dropped packet low tca - no : olt works properly	channel-pair utilization tx (downstream) multicast drop frame low threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txbcdropfrmhi	Parameter type: <Alarm::TXBCDROPFRMHI> (yes no) Possible values: - yes : tx broadcast dropped packet high tca - no : olt works properly	channel-pair utilization tx (downstream) broadcast drop frame high threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txbcdropfrmmd	Parameter type: <Alarm::TXBCDROPFRMMD>	channel-pair utilization tx

name	Type	Description
	(yes no) Possible values: - yes : tx broadcast dropped packet medium tca - no : olt works properly	(downstream) broadcast drop frame medium threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-txbcdropfrmlo	Parameter type: <Alarm::TXBCDROPPFRMLO> (yes no) Possible values: - yes : tx broadcast dropped packet low tca - no : olt works properly	channel-pair utilization tx (downstream) broadcast drop frame low threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-rxtotdropfrmhi	Parameter type: <Alarm::RXTOTDROPPFRMHI> (yes no) Possible values: - yes : rx total dropped packet high tca - no : olt works properly	channel-pair utilization rx (upstream) total drop frame high threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-rxtotdropfrmmd	Parameter type: <Alarm::RXTOTDROPPFRMMD> (yes no) Possible values: - yes : rx total dropped packet medium tca - no : olt works properly	channel-pair utilization rx (upstream) total drop frame medium threshold crossed <i>This element is only shown in detail mode.</i>
chpr-t-rxtotdropfrmlo	Parameter type: <Alarm::RXTOTDROPPFRMLO> (yes no) Possible values: - yes : rx total dropped packet low tca - no : olt works properly	channel-pair utilization rx (upstream) total drop frame low threshold crossed <i>This element is only shown in detail mode.</i>

104.130 OLT ONT TC TCA Current Alarm Status Command

Command Description

This command displays the OLT ONT TC TCA current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current olt-ont-tc-tca [(index)]

Command Parameters

Table 104.130-1 " OLT ONT TC TCA Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.130-2 " OLT ONT TC TCA Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont	Parameter type: <Gpon::OntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup>	gpon ont equipment ifindex of ont <i>This element is only shown in detail mode.</i>

name	Type	Description
	- channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Only Show Details: current alarm status		
name	Type	Description
olt-ont-tc-err-frag-tc	Parameter type: <Alarm::OLTONTTCTCAERRFRAGSONT> (yes no) Possible values: - yes : ont errored fragments threshold crossed - no : olt works properly	ont errored fragments threshold crossed <i>This element is only shown in detail mode.</i>

104.131 ONT POTS SUPPLEMENTAL Current Alarm Status Command

Command Description

This command displays the ONT POTS SUPPLEMENTAL current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ont-pots-supplemental [(index)]

Command Parameters

Table 104.131-1 " ONT POTS SUPPLEMENTAL Current Alarm Status Command" Resource Parameters

Only Show Details: current alarm status		
name	Type	Description
ont-ip-host-mismatch	Parameter type: <Alarm::ONTIPHOS TMIS> (yes no) Possible values: - yes : ont ip host mismatch - no : ont ip host match	ont ip host mismatch <i>This element is only shown in detail mode.</i>
ont-ip-host-ip-alloc	Parameter type: <Alarm::ONTIPHOS TFAIL> (yes no) Possible values: - yes : ont ip host IP allocation failure - no : ont ip host IP allocation works properly	ont ip host IP allocation failure <i>This element is only shown in detail mode.</i>

104.134 Alarm Table Current Alarm Status Command

Command Description

This command displays the alarm-table current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current alarm-table [(index)]

Command Parameters

Table 104.134-1 "Alarm Table Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.134-2 "Alarm Table Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
alarm-tbl-overflow	Parameter type: <Alarm::AlrmTblOflow> (overflow no-overflow) Possible values: - overflow : alarm table overflow - no-overflow : no alarm table overflow	identify if the alarm table has overflowed <i>This element is only shown in detail mode.</i>

104.135 ONT VIDEO Current Alarm Status Command

Command Description

This command displays the ONT VIDEO current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current ont-video [ (index) ]
```

Command Parameters

Table 104.135-1 " ONT VIDEO Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.135-2 " ONT VIDEO Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
video-port	Parameter type: <Gpon::IfIndexAlarmIndex2> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	video port <i>This element is only shown in detail mode.</i>

name	Type	Description
	Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Only Show Details: current alarm status

name	Type	Description
ont-svc-video-conf-mis	Parameter type: <Alarm::ONTVIDEOUNISVCMIS> (yes no) Possible values: - yes : config request failure for video service - no : ont service is ok	config request failure for video service <i>This element is only shown in detail mode.</i>
ont-svc-video-pw-high	Parameter type: <Alarm::ONTRFOUTHIGH> (yes no) Possible values: - yes : high power level for rf video signal - no : ont service is ok	high power level for rf video signal <i>This element is only shown in detail mode.</i>
ont-svc-video-pw-low	Parameter type: <Alarm::ONTRFOUTLOW> (yes no) Possible values: - yes : low power level for rf video signal - no : ont service is ok	low power level for rf video signal <i>This element is only shown in detail mode.</i>

104.136 ONT CES Current Alarm Status Command

Command Description

This command displays the ONT CES current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current ont-ces [ (index) ]
```

Command Parameters

ont-svc-ces-ds1-tmlpbk	Parameter type: <Alarm::ONTCESDS1TMLPBK> (yes no) Possible values: - yes : receiving terminal loopback at ds1 interface - no : ont service is ok	receiving terminal loopback at ds1 interface <i>This element is only shown in detail mode.</i>

104.137 ONT VOIP Current Alarm Status Command

Command Description

This command displays the ONT VOIP current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ont-voip [(index)]

Command Parameters

Table 104.137-1 " ONT VOIP Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.137-2 " ONT VOIP Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
voip-uni	Parameter type: <Gpon::VoipOntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup>	uni ifindex <i>This element is only shown in detail mode.</i>

name	Type	Description
	- channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port	
client-number	Parameter type: <Gpon::AlarmIndex2Integer> - a signed integer	service client number <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status

name	Type	Description
ont-svc-voip-cnf-file	Parameter type: <Alarm::ONTVOICONFIGFLERR> (yes no) Possible values: - yes : voice configuration file error - no : ont service is ok	voice configuration file error <i>This element is only shown in detail mode.</i>
ont-svc-voip-svc-mis	Parameter type: <Alarm::ONTVOICLISERMIS> (yes no) Possible values: - yes : service mismatch for provisioned client service - no : ont service is ok	service mismatch for provisioned client service <i>This element is only shown in detail mode.</i>
ont-svc-voip-gw-comm	Parameter type: <Alarm::ONTVOIGATWCOMFAIL> (yes no) Possible values: - yes : voice gateway communication failure - no : ont service is ok	voice gateway communication failure <i>This element is only shown in detail mode.</i>
ont-svc-voip-dhcp-fail	Parameter type: <Alarm::ONTVOIDHCPSEFAIL> (yes no) Possible values: - yes : voice gateway communication failure - no : ont service is ok	voice dhcp server failure <i>This element is only shown in detail mode.</i>
ont-svc-voip-icnf-sub	Parameter type: <Alarm::ONTVOIICONSUBFAIL> (yes no) Possible values: - yes : voice iconfig subscription failure - no : ont service is ok	voice iconfig subscription failure <i>This element is only shown in detail mode.</i>
ont-svc-voip-icnf-ntfy	Parameter type: <Alarm::ONTVOIICONNOTFAIL> (yes no) Possible values: - yes : voice iconfig notify failure - no : ont service is ok	voice iconfig notify failure <i>This element is only shown in detail mode.</i>
ont-svc-voip-icnf-http	Parameter type: <Alarm::ONTVOIICONHTTPFAIL> (yes no) Possible values: - yes : voice iconfig http failure - no : ont service is ok	voice iconfig http failure <i>This element is only shown in detail mode.</i>
ont-svc-voip-dhcp-to	Parameter type: <Alarm::ONTVOIDHCPTO> (yes no)	DHCP server retransmissions timed out <i>This element is only shown in</i>

104 Current Alarm Status Commands

name	Type	Description
	Possible values: - yes : DHCP server retransmissions timed out - no : ont service is ok	<i>detail mode.</i>
ont-svc-voip-dhcp-mal	Parameter type: <Alarm::ONTVOIDHCPMAL> (yes no) Possible values: - yes : DHCP response was malformed - no : ont service is ok	DHCP response was malformed <i>This element is only shown in detail mode.</i>
ont-svc-voip-dhcp-noad	Parameter type: <Alarm::ONTVOIDHCPNOAD> (yes no) Possible values: - yes : DHCP server failed to issue the required parameters - no : ont service is ok	DHCP server failed to issue the required parameters <i>This element is only shown in detail mode.</i>
ont-svc-voip-dhcp-leas	Parameter type: <Alarm::ONTVOIDHCPLEAS> (yes no) Possible values: - yes : DHCP Server failure due to problem in lease renewal - no : ont service is ok	DHCP Server failure due to problem in lease renewal <i>This element is only shown in detail mode.</i>
ont-svc-voip-subscription-dns	Parameter type: <Alarm::ONTVOIICONDNS> (yes no) Possible values: - yes : iConfig Subscription failure due to DNS problem - no : ont service is ok	iConfig Subscription failure due to DNS problem <i>This element is only shown in detail mode.</i>
ont-svc-voip-subscription-tcp	Parameter type: <Alarm::ONTVOIICONTCP> (yes no) Possible values: - yes : iConfig Subscription failure due to TCP socket problem - no : ont service is ok	iConfig Subscription failure due to TCP socket problem <i>This element is only shown in detail mode.</i>
ont-svc-voip-subscription-tls	Parameter type: <Alarm::ONTVOIICONTLS> (yes no) Possible values: - yes : iConfig Subscription failure due to TLS session problem - no : ont service is ok	iConfig Subscription failure due to TLS session problem <i>This element is only shown in detail mode.</i>
ont-svc-voip-subscription-auth	Parameter type: <Alarm::ONTVOIICONAUTH> (yes no) Possible values: - yes : iConfig Subscription failure due to authentication error - no : ont service is ok	iConfig Subscription failure due to authentication error <i>This element is only shown in detail mode.</i>
ont-svc-voip-subscription-timeout	Parameter type: <Alarm::ONTVOIICONSUBSTO> (yes no) Possible values: - yes : iConfig Subscription failure due to retransmission timeout - no : ont service is ok	iConfig Subscription failure due to retransmission timeout <i>This element is only shown in detail mode.</i>
ont-svc-voip-subscription-error	Parameter type: <Alarm::ONTVOIICONSUBSERR> (yes	iConfig Subscription failure due to response error

name	Type	Description
	no) Possible values: - yes : iConfig Subscription failure due to response error - no : ont service is ok	<i>This element is only shown in detail mode.</i>
ont-svc-voip-not-to	Parameter type: <Alarm::ONTVOIICONNOTTO> (yes no) Possible values: - yes : iConfig Notify response timeout for new subscription - no : ont service is ok	iConfig Notify response is malformed <i>This element is only shown in detail mode.</i>
ont-svc-voip-notref-to	Parameter type: <Alarm::ONTVOIICONNOTREFTO> (yes no) Possible values: - yes : iConfig Notify response timeout for subscription refresh - no : ont service is ok	iConfig Notify response timeout for subscription refresh <i>This element is only shown in detail mode.</i>
ont-svc-voip-not-mal	Parameter type: <Alarm::ONTVOIICONNOTMAL> (yes no) Possible values: - yes : iConfig Notify response is malformed - no : ont service is ok	iConfig Notify response is malformed <i>This element is only shown in detail mode.</i>
ont-svc-voip-not-rej	Parameter type: <Alarm::ONTVOIICONNOTREJ> (yes no) Possible values: - yes : iConfig subscription request rejected by configuration server - no : ont service is ok	iConfig subscription request rejected by configuration server <i>This element is only shown in detail mode.</i>
ont-svc-voip-http-dns	Parameter type: <Alarm::ONTVOIHTTPDNS> (yes no) Possible values: - yes : VOIP client can't retrieve config doc due to DNS problem - no : ont service is ok	VOIP client can't retrieve config doc due to DNS problem <i>This element is only shown in detail mode.</i>
ont-svc-voip-http-tcp	Parameter type: <Alarm::ONTVOIHTTPTCP> (yes no) Possible values: - yes : VOIP client can't retrieve config doc due to TCP socket problem - no : ont service is ok	VOIP client can't retrieve config doc due to TCP socket problem <i>This element is only shown in detail mode.</i>
ont-svc-voip-http-tls	Parameter type: <Alarm::ONTVOIHTTPTLS> (yes no) Possible values: - yes : VOIP client can't retrieve config doc due to TLS session problem - no : ont service is ok	VOIP client can't retrieve config doc due to TLS session problem <i>This element is only shown in detail mode.</i>
ont-svc-voip-http-auth	Parameter type: <Alarm::ONTVOIHTTPAUTH> (yes no) Possible values: - yes : VOIP client can't retrieve config doc due to auth error - no : ont service is ok	VOIP client can't retrieve config doc due to auth error <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
ont-svc-voip-http-to	Parameter type: <Alarm::ONTVOIHTTPTO> (yes no) Possible values: - yes : VOIP client can't retrieve config doc due to re-tx timeout - no : ont service is ok	VOIP client can't retrieve config doc due to re-tx timeout <i>This element is only shown in detail mode.</i>
ont-svc-voip-http-err	Parameter type: <Alarm::ONTVOIHTTPERR> (yes no) Possible values: - yes : VOIP client can't retrieve config doc due to response error - no : ont service is ok	VOIP client can't retrieve config doc due to response error <i>This element is only shown in detail mode.</i>
ont-svc-voip-http-mal	Parameter type: <Alarm::ONTVOIICONHTTPMAL> (yes no) Possible values: - yes : iConfig configuration document is malformed - no : ont service is ok	iConfig configuration document is malformed <i>This element is only shown in detail mode.</i>
ont-svc-voip-sub-s-refr	Parameter type: <Alarm::ONTVOIICONSUBSREFR> (yes no) Possible values: - yes : iConfig Subscription refresh error - no : ont service is ok	iConfig Subscription refresh error <i>This element is only shown in detail mode.</i>
ont-svc-voip-not-refr	Parameter type: <Alarm::ONTVOIICONNOTREFR> (yes no) Possible values: - yes : iConfig Notify response for refresh subscribe failed - no : ont service is ok	iConfig Notify response for refresh subscribe failed <i>This element is only shown in detail mode.</i>
ont-svc-voip-icfg-err	Parameter type: <Alarm::ONTVOIICONERR> (yes no) Possible values: - yes : iConfig Configuration Error - no : ont service is ok	iConfig Configuration Error <i>This element is only shown in detail mode.</i>

104.138 ONT VIDEO ANI Current Alarm Status Command

Command Description

This command displays the ONT VIDEO ANI current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ont-video-ani [(index)]

Command Parameters

Table 104.138-1 " ONT VIDEO ANI Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

104.143 ONT HPNA Current Alarm Status Command

Command Description

This command displays the ONT HPNA current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current ont-hpna [ (index) ]
```

Command Parameters

Table 104.143-1 " ONT HPNA Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.143-2 " ONT HPNA Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont-port	Parameter type: <Gpon::IfIndexAlarmIndex2> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	ont port <i>This element is only shown in detail mode.</i>

name	Type	Description
	Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Only Show Details: current alarm status		
name	Type	Description
ont-hpna-ser-mis	Parameter type: <Alarm::ONTHPNASVCMIS> (yes no) Possible values: - yes : hpna ont service mismatch - no : ont service is ok	hpna ont service mismatch <i>This element is only shown in detail mode.</i>
ont-hpna-los-sig	Parameter type: <Alarm::ONTHPNALOS> (yes no) Possible values: - yes : hpna loss of link - no : ont service is ok	hpna loss of link <i>This element is only shown in detail mode.</i>

104.144 ONT SIP AGENT CFG Current Alarm Status Command

Command Description

This command displays the ONT SIP AGENT CFG current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current ont-sip-agent-cfg [ (index) ]
```

Command Parameters

Table 104.144-1 " ONT SIP AGENT CFG Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

recfg-fail-ptm	Parameter type: <Alarm::auswrecfgfailptm> (yes no) Possible values: - yes : auto-switch reconfig failed for PTM - no : auto-switch reconfig failed for PTM clear	Auto switch reconfig status for PTM <i>This element is only shown in detail mode.</i>
data-unavail-ptm	Parameter type: <Alarm::auswdataunptm> (yes no) Possible values: - yes : auto-switch data unavailable for PTM - no : auto-switch data unavailable for PTM clear	Auto switch data unavail status for PTM <i>This element is only shown in detail mode.</i>
bakp-fail-atm	Parameter type: <Alarm::auswbakpfailatm> (yes no) Possible values: - yes : auto-switch backup fail for ATM - no : auto-switch bakcup fail for ATM clear	Auto switch backup status for ATM <i>This element is only shown in detail mode.</i>

104.150 Channel Pair Current Alarm Status Command

Command Description

This command displays the Channel Pair current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current channel-pair [(index)]

Command Parameters

Table 104.150-1 " Channel Pair Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.150-2 " Channel Pair Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
channel-pair	Parameter type: <Gpon::ChannelPairId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	specify which port the alarm occurred on. <i>This element is only shown in detail mode.</i>
Only Show Details: current alarm log status		
name	Type	Description
comm-fail	Parameter type: <Alarm::ChnPairComm> ((failing fail) ok)	current status of Channel pair Communication failure on channel Pair Port

104 Current Alarm Status Commands

name	Type	Description
	Possible values: - failing : Channel pair Communication is failing - fail : Channel pair Communication is failing - ok : Channel pair Communication is ok	<i>This element is only shown in detail mode.</i>
tx-fail	Parameter type: <Alarm::ChnPairTf> ((failing fail) ok) Possible values: - failing : Transmitte is failing - fail : Transmitte is failing - ok : Transmitte is ok	current status of transmit failure on OLT port <i>This element is only shown in detail mode.</i>
new-ont	Parameter type: <Alarm::ChnPairNewOnt> ((failing fail) ok) Possible values: - failing : NEW ONT is failing - fail : NEW ONT is failing - ok : NEW ONT is ok	current status of unprovisioned ont appearance <i>This element is only shown in detail mode.</i>
prov-mismatch	Parameter type: <Alarm::ChnPairMea> ((failing fail) ok) Possible values: - failing : Channel Pair Mismatch Provisioning is failing - fail : Channel Pair Mismatch Provisioning is failing - ok : Channel Pair Mismatch Provisioning is ok	current status of channel Pair provision failure. <i>This element is only shown in detail mode.</i>
loss-sig	Parameter type: <Alarm::ChnPairLoss> ((failing fail) ok) Possible values: - failing : Channel Pair Loss of Signal is failing - fail : Channel Pair Loss of Signal is failing - ok : Channel Pair Loss of Signal is ok	current status of channel Pair loss. <i>This element is only shown in detail mode.</i>
diagnostic	Parameter type: <Alarm::ChnPairRogueTest> ((failing fail) ok) Possible values: - failing : Rogue ONT detection mechanism effective is failing - fail : Rogue ONT detection mechanism effective is failing - ok : Rogue ONT detection mechanism effective is ok	current status of diagnostic tests <i>This element is only shown in detail mode.</i>
loid-conflict	Parameter type: <Alarm::ChnPairLoidConflict> ((failing fail) ok) Possible values: - failing : ONT LOID Conflict is failing - fail : ONT LOID Conflict is failing - ok : LOID Conflict is ok	current status of loid conflict ont. <i>This element is only shown in detail mode.</i>
loid-pwd-err	Parameter type: <Alarm::ChnPairLoidPwdErr> ((failing fail) ok) Possible values: - failing : ONT LOID PWD ERR is failing - fail : ONT LOID PWD ERR is failing - ok : ONT LOID PWD ERR is ok	current status of loid password error. <i>This element is only shown in detail mode.</i>
stk-laser-dis	Parameter type: <Alarm::ChnPairStkLaserDis> ((failing fail) ok)	current status of stuck laser disabled. <i>This element is only shown in</i>

name	Type	Description
	Possible values: - failing : Unranged ONT with stuck laser disabled is failing - fail : Unranged ONT with stuck laser disabled is failing - ok : Unranged ONT with stuck laser disabled is ok	<i>detail mode.</i>
sfp-mismatch	Parameter type: <Alarm::ChnPairSfpMismatch> ((failing fail) ok) Possible values: - failing : sfp mismatch is failing - fail : sfp mismatch is failing - ok : sfp mismatch is ok	current status of sfp mismatch. <i>This element is only shown in detail mode.</i>
rng-mismatch	Parameter type: <Alarm::ChnPairRngMismatch> ((failing fail) ok) Possible values: - failing : ranging mismatch is failing - fail : ranging mismatch is failing - ok : ranging mismatch is ok	current status of ranging mismatch. <i>This element is only shown in detail mode.</i>
alien-test	Parameter type: <Alarm::ChnPairAlienTest> ((failing fail) ok) Possible values: - failing : Alien ONT detection mechanism is active - fail : Alien ONT detection mechanism is active - ok : Alien ONT detection mechanism is not active	current status of alien diagnostic tests <i>This element is only shown in detail mode.</i>
alien-detect	Parameter type: <Alarm::ChnPairAlienDetected> ((failing fail) ok) Possible values: - failing : Alien ONT detected - fail : Alien ONT detected - ok : No alien ONT detected	current status of alien detect <i>This element is only shown in detail mode.</i>
deactont-high-tca	Parameter type: <Alarm::ChnPairDeactOntHighTca> (failing ok) Possible values: - failing : deactivated ont amount exceed high threshold occurred - ok : deactivated ont amount is less than high threshold occurred	current status of deactont high tca <i>This element is only shown in detail mode.</i>
deactont-low-tca	Parameter type: <Alarm::ChnPairDeactOntLowTca> (failing ok) Possible values: - failing : deactivated ont amount exceed low threshold occurred - ok : deactivated ont amount is less than low threshold occurred	current status of deactont low tca <i>This element is only shown in detail mode.</i>
datapath-integ	Parameter type: <Alarm::ChnPairDataPathInteg> (failing ok) Possible values: - failing : number of ONTs with SIPREGTO alarm exceeds threshold - ok : number of ONTs with SIPREGTO alarm does not exceed the threshold	current status of Channel-Pair Data Path Integrity <i>This element is only shown in detail mode.</i>

104.151 Channel Pair OLT TC TCA Current Alarm Status Command

Command Description

This command displays the Channel Pair OLT TC TCA current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current olt-chpair-tc-tca [ (index) ]
```

Command Parameters

Table 104.151-1 " Channel Pair OLT TC TCA Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.151-2 " Channel Pair OLT TC TCA Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
channel-pair	Parameter type: <Gpon::ChannelPairId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	gpon channelpair ifindex <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status		
name	Type	Description
olt-chpr-tc-err-frag	Parameter	type: channelpair errored fragments

name	Type	Description
	<Alarm::OLTCHPRTCTCAERRFRAGSPON> (yes no) Possible values: - yes : channelpair errored fragments threshold crossed - no : olt works properly	threshold crossed <i>This element is only shown in detail mode.</i>
olt-chpr-up-bw-tca	Parameter type: <Alarm::OLTCHPRTCTCAUPBWTCa> (yes no) Possible values: - yes : olt channelpair upstream bandwidth tca - no : olt works properly	OLT CHANNELPAIR upstream bandwidth TCA <i>This element is only shown in detail mode.</i>
olt-chpr-down-bw-tca	Parameter type: <Alarm::OLTCHPRTCTCADWBWTCA> (yes no) Possible values: - yes : olt channelpair downstream bandwidth tca - no : olt works properly	OLT CHANNELPAIR downstream bandwidth TCA <i>This element is only shown in detail mode.</i>

104.152 Ont Configuration Download Current Alarm Status Command

Command Description

This command displays the ont configuration download current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current ont-cfg-dld [ (index) ]
```

Command Parameters

Table 104.152-1 "Ont Configuration Download Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.152-2 "Ont Configuration Download Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont	Parameter type: <Gpon::OntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId>	identifies the ont entry <i>This element is only shown in detail mode.</i>

name	Type	Description
	- the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	
cfgfile-idx	Parameter type: <Alarm::OntCfgFileIndex> (configure file 1 configure file 2) Possible values: - configure file 1 : configure file 1 generate the alarm - configure file 2 : configure file 2 generate the alarm	identifies the configure file which generate the alarm <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status

name	Type	Description
cfg-dld-fail	Parameter type: <Alarm::OntCfgDldFail> (yes no) Possible values: - yes : download of configure file to ont is failed - no : download of configure file to ont is ok	current status of the alarm specifying download of configure file to ont is failed or not <i>This element is only shown in detail mode.</i>
cfg-act-fail	Parameter type: <Alarm::OntCfgActFail> (yes no) Possible values: - yes : activate the passive config file failed - no : activate the passive config file ok	current status of the alarm specifying activate of configure file to ont is failed or not <i>This element is only shown in detail mode.</i>
cfg-dld-ip	Parameter type: <Alarm::OntCfgDldIp> (yes no) Possible values: - yes : ont configure file download in progress - no : no ont configure file download detected	current status of the alarm specifying whether downloading <i>This element is only shown in detail mode.</i>
cfg-ver-mismatch	Parameter type: <Alarm::OntCfgVerMismatch> (yes no) Possible values: - yes : the planned configure file does not match the active configure file - no : the planned configure file match the active configure file	current status of the alarm specifying whether planned configure file match the active configure file or not <i>This element is only shown in detail mode.</i>
cfg-file-missing	Parameter type: <Alarm::OntCfgFileMissing> (yes no) Possible values: - yes : ont configure file missing or has an error - no : ont configure file ok	ont configure file missing <i>This element is only shown in detail mode.</i>
cfg-verctrl-err	Parameter type: <Alarm::OntCfgVerCtrlErr> (yes no) Possible values: - yes : ont configure file version control error - no : ont configure file version control ok	ont configure file version control error <i>This element is only shown in detail mode.</i>
cfg-not-supported	Parameter type: <Alarm::OntCfgNotSupported> (yes	ont not support configure file download function

104 Current Alarm Status Commands

name	Type	Description
	no) Possible values: - yes : ont not support the configure file download function - no : ont support the configure file download function	<i>This element is only shown in detail mode.</i>

104.153 HGU TR069 Current Alarm Status Command

Command Description

This command displays the hgu tr069 current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current hgu-tr069 [ (index) ]
```

Command Parameters

Table 104.153-1 "HGU TR069 Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.153-2 "HGU TR069 Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
ont	Parameter type: <Gpon::OntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup>	identifies the ont entry <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
	- channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	

Only Show Details: current alarm status		
name	Type	Description
cust-alm1	Parameter type: <Alarm::HguCustAlm1> (yes no) Possible values: - yes : customized alarm 1 exist - no : customized alarm 1 not exist	current status of customized alarm 1 <i>This element is only shown in detail mode.</i>
cust-alm2	Parameter type: <Alarm::HguCustAlm2> (yes no) Possible values: - yes : customized alarm 2 exist - no : customized alarm 2 not exist	current status of customized alarm 2 <i>This element is only shown in detail mode.</i>
cust-alm3	Parameter type: <Alarm::HguCustAlm3> (yes no) Possible values: - yes : customized alarm 3 exist - no : customized alarm 3 not exist	current status of customized alarm 3 <i>This element is only shown in detail mode.</i>
cust-alm4	Parameter type: <Alarm::HguCustAlm4> (yes no) Possible values: - yes : customized alarm 4 exist - no : customized alarm 4 not exist	current status of customized alarm 4 <i>This element is only shown in detail mode.</i>
cust-alm5	Parameter type: <Alarm::HguCustAlm5> (yes no) Possible values: - yes : customized alarm 5 exist - no : customized alarm 5 not exist	current status of customized alarm 5 <i>This element is only shown in detail mode.</i>
cust-alm6	Parameter type: <Alarm::HguCustAlm6> (yes no) Possible values: - yes : customized alarm 6 exist - no : customized alarm 6 not exist	current status of customized alarm 6 <i>This element is only shown in detail mode.</i>
cust-alm7	Parameter type: <Alarm::HguCustAlm7> (yes no) Possible values: - yes : customized alarm 7 exist - no : customized alarm 7 not exist	current status of customized alarm 7 <i>This element is only shown in detail mode.</i>
cust-alm8	Parameter type: <Alarm::HguCustAlm8> (yes no) Possible values: - yes : customized alarm 8 exist - no : customized alarm 8 not exist	current status of customized alarm 8 <i>This element is only shown in detail mode.</i>

name	Type	Description
cust-alm9	Parameter type: <Alarm::HguCustAlm9> (yes no) Possible values: - yes : customized alarm 9 exist - no : customized alarm 9 not exist	current status of customized alarm 9 <i>This element is only shown in detail mode.</i>
cust-alm10	Parameter type: <Alarm::HguCustAlm10> (yes no) Possible values: - yes : customized alarm 10 exist - no : customized alarm 10 not exist	current status of customized alarm 10 <i>This element is only shown in detail mode.</i>
cust-alm11	Parameter type: <Alarm::HguCustAlm11> (yes no) Possible values: - yes : customized alarm 11 exist - no : customized alarm 11 not exist	current status of customized alarm 11 <i>This element is only shown in detail mode.</i>
cust-alm12	Parameter type: <Alarm::HguCustAlm12> (yes no) Possible values: - yes : customized alarm 12 exist - no : customized alarm 12 not exist	current status of customized alarm 12 <i>This element is only shown in detail mode.</i>
cust-alm13	Parameter type: <Alarm::HguCustAlm13> (yes no) Possible values: - yes : customized alarm 13 exist - no : customized alarm 13 not exist	current status of customized alarm 13 <i>This element is only shown in detail mode.</i>
cust-alm14	Parameter type: <Alarm::HguCustAlm14> (yes no) Possible values: - yes : customized alarm 14 exist - no : customized alarm 14 not exist	current status of customized alarm 14 <i>This element is only shown in detail mode.</i>
cust-alm15	Parameter type: <Alarm::HguCustAlm15> (yes no) Possible values: - yes : customized alarm 15 exist - no : customized alarm 15 not exist	current status of customized alarm 15 <i>This element is only shown in detail mode.</i>
cust-alm16	Parameter type: <Alarm::HguCustAlm16> (yes no) Possible values: - yes : customized alarm 16 exist - no : customized alarm 16 not exist	current status of customized alarm 16 <i>This element is only shown in detail mode.</i>
cust-alm17	Parameter type: <Alarm::HguCustAlm17> (yes no) Possible values: - yes : customized alarm 17 exist - no : customized alarm 17 not exist	current status of customized alarm 17 <i>This element is only shown in detail mode.</i>
cust-alm18	Parameter type: <Alarm::HguCustAlm18> (yes no)	current status of customized alarm 18 <i>This element is only shown in</i>

104 Current Alarm Status Commands

name	Type	Description
	Possible values: - yes : customized alarm 18 exist - no : customized alarm 18 not exist	<i>detail mode.</i>
cust-alm19	Parameter type: <Alarm::HguCustAlm19> (yes no) Possible values: - yes : customized alarm 19 exist - no : customized alarm 19 not exist	current status of customized alarm 19 <i>This element is only shown in detail mode.</i>
cust-alm20	Parameter type: <Alarm::HguCustAlm20> (yes no) Possible values: - yes : customized alarm 20 exist - no : customized alarm 20 not exist	current status of customized alarm 20 <i>This element is only shown in detail mode.</i>
cust-alm21	Parameter type: <Alarm::HguCustAlm21> (yes no) Possible values: - yes : customized alarm 21 exist - no : customized alarm 21 not exist	current status of customized alarm 21 <i>This element is only shown in detail mode.</i>
cust-alm22	Parameter type: <Alarm::HguCustAlm22> (yes no) Possible values: - yes : customized alarm 22 exist - no : customized alarm 22 not exist	current status of customized alarm 22 <i>This element is only shown in detail mode.</i>
cust-alm23	Parameter type: <Alarm::HguCustAlm23> (yes no) Possible values: - yes : customized alarm 23 exist - no : customized alarm 23 not exist	current status of customized alarm 23 <i>This element is only shown in detail mode.</i>
cust-alm24	Parameter type: <Alarm::HguCustAlm24> (yes no) Possible values: - yes : customized alarm 24 exist - no : customized alarm 24 not exist	current status of customized alarm 24 <i>This element is only shown in detail mode.</i>
cust-alm25	Parameter type: <Alarm::HguCustAlm25> (yes no) Possible values: - yes : customized alarm 25 exist - no : customized alarm 25 not exist	current status of customized alarm 25 <i>This element is only shown in detail mode.</i>
cust-alm26	Parameter type: <Alarm::HguCustAlm26> (yes no) Possible values: - yes : customized alarm 26 exist - no : customized alarm 26 not exist	current status of customized alarm 26 <i>This element is only shown in detail mode.</i>
cust-alm27	Parameter type: <Alarm::HguCustAlm27> (yes no) Possible values: - yes : customized alarm 27 exist - no : customized alarm 27 not exist	current status of customized alarm 27 <i>This element is only shown in detail mode.</i>

name	Type	Description
cust-alm28	Parameter type: <Alarm::HguCustAlm28> (yes no) Possible values: - yes : customized alarm 28 exist - no : customized alarm 28 not exist	current status of customized alarm 28 <i>This element is only shown in detail mode.</i>
cust-alm29	Parameter type: <Alarm::HguCustAlm29> (yes no) Possible values: - yes : customized alarm 29 exist - no : customized alarm 29 not exist	current status of customized alarm 29 <i>This element is only shown in detail mode.</i>
cust-alm30	Parameter type: <Alarm::HguCustAlm30> (yes no) Possible values: - yes : customized alarm 30 exist - no : customized alarm 30 not exist	current status of customized alarm 30 <i>This element is only shown in detail mode.</i>
cust-alm31	Parameter type: <Alarm::HguCustAlm31> (yes no) Possible values: - yes : customized alarm 31 exist - no : customized alarm 31 not exist	current status of customized alarm 31 <i>This element is only shown in detail mode.</i>

104.154 Equipment Holder Extended Current Alarm Status Command

Command Description

This command displays the equipment holder extended current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current eqpt-psu [ (index) ]
```

Command Parameters

Table 104.154-1 "Equipment Holder Extended Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.154-2 "Equipment Holder Extended Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
shelf	Parameter type: <Equipm::Shelf> <Eqpt::RackId> / <Eqpt::ShelfId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	specify which shelf the alarm occurred on. <i>This element is only shown in detail mode.</i>

104.155 Ethernet Ring Current Alarm Status Command

Command Description

This command displays ethernet ring Current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current ethernet-ring [(index)]

Command Parameters

Table 104.155-1 "Ethernet Ring Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm log table index

Command Output

Table 104.155-2 "Ethernet Ring Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
eth-ring-instance-id	Parameter type: <UnsignedSignedInteger> - an unsigned integer	ethernet ring instance id where the alarm has occurred <i>This element is only shown in detail mode.</i>
eth-ring-path	Parameter type: <Alarm::EthernetRingPath> (path-a path-b n/a) Possible values: - path-a : path-a of the ethernet ring instance - path-b : path-b of the ethernet ring instance - n/a : not applicable for the alarm, fop-pm	unique identification for the alarm, Which identifies the path of the ethernet ring instance <i>This element is only shown in detail mode.</i>
Only Show Details: current alarm status		
name	Type	Description
eth-ring-fwd-st	Parameter type: <Alarm::EthernetRingPathFwdState> (blocked	specifies the forward state of the ethernet ring path

104 Current Alarm Status Commands

name	Type	Description
	unblocked) Possible values: - blocked : ethernet ring path fwd state blocked - unblocked : ethernet ring path fwd state unblocked	<i>This element is only shown in detail mode.</i>
eth-ring-fop-to	Parameter type: <Alarm::EthernetRingFOPTIMEOUT> (yes no) Possible values: - yes : fop-to occurred - no : fop-to not occurred	specifies ethernet ring fop-to failure of protocol timeout <i>This element is only shown in detail mode.</i>
eth-ring-fop-pm	Parameter type: <Alarm::EthernetRingFOPPM> (yes no) Possible values: - yes : fop-pm occurred - no : fop-pm not occurred	specifies ethernet ring failure of protocol provision mismatch alarm(fop-pm) <i>This element is only shown in detail mode.</i>

104.156 LldpMed Current Alarm Status Command

Command Description

This command displays the LLDP-MED current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current lldpmed [(index)]

Command Parameters

Table 104.156-1 "LldpMed Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.156-2 "LldpMed Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
lldpmed	Parameter type: <LLDPMed::LLDPMedPort> (uni : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> uni:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> uni:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - uni : uni - uni:ng2 : ngpon2 UNI style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	identify the lldpmed port where the alarm has occurred. <i>This element is always shown.</i>

104 Current Alarm Status Commands

name	Type	Description
	Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	
lldpmed-portcfg-mis	Parameter type: <Alarm::LLDPMED-portcfg-mismatch> (yes no) Possible values: - yes : configuration request not accepted - no : configuration accepted	current status of the alarm specifying if the configuration for a provisioned lldpmed port is accepted or not. <i>This element is always shown.</i>
lldpmed-mediapl-mis	Parameter type: <Alarm::LLDPMED-mediapl-mismatch> (yes no) Possible values: - yes : configuration request not accepted - no : configuration accepted	current status of the alarm specifying if the configuration for a provisioned lldpmed port is accepted or not. <i>This element is always shown.</i>

104.157 Lag group Current Alarm Status Command

Command Description

This command displays the lag group current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show alarm current link-agg [(index)]

Command Parameters

Table 104.157-1 "Lag group Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.157-2 "Lag group Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
group	Parameter type: <Itf::LaGroupIndex> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identifies lag group index <i>This element is only shown in detail mode.</i>
la-oper-down	Parameter type: <Alarm::LaGroupDown> (yes no) Possible values: - yes : link group operation down - no : link group operation up	current status of la group operation <i>This element is only shown in detail mode.</i>
standby-not-available	Parameter type: <Alarm::StandbyUnavailable> (yes	current status of available of standby slot

104 Current Alarm Status Commands

name	Type	Description
	no) Possible values: - yes : lack of link-up ports on standby slot - no : link-up ports enough on standby slot	<i>This element is only shown in detail mode.</i>
switch-fail	Parameter type: <Alarm::LaSwitchFail> (yes no) Possible values: - yes : switchover failed for cross-lt la group - no : switchover is successful for cross-lt la group	current status of lag switchover <i>This element is only shown in detail mode.</i>
la-degrade	Parameter type: <Alarm::LaDegrade> (yes no) Possible values: - yes : lack of link-up ports on active slot - no : link-up ports enough on active slot	current status of lag degradation <i>This element is only shown in detail mode.</i>

104.158 40GBase-KR4 fcs exceed Current Alarm Status Command

Command Description

This command displays the 40GBase-KR4 fcs exceed current alarm status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show alarm current fcs-exceed [ (index) ]
```

Command Parameters

Table 104.158-1 "40GBase-KR4 fcs exceed Current Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - index of a current alarm entry	alarm type

Command Output

Table 104.158-2 "40GBase-KR4 fcs exceed Current Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
slot	Parameter type: <Equipm::EqptSlotIndex> (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F)	identifies index <i>This element is only shown in detail mode.</i>

104 Current Alarm Status Commands

name	Type	Description
	- nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	
nta/b	Parameter type: <UnsignedSignedInteger> - an unsigned integer	identifies index2 <i>This element is only shown in detail mode.</i>
fcs-is-exceed	Parameter type: <Alarm::almtypeFCSthreshexceed> (yes no) Possible values: - yes : FCS auto-recovery counter exceeded threshold - no : FCS auto-recovery counter not exceeded threshold	current status of whether fcs auto-recovery counter is exceed or not <i>This element is only shown in detail mode.</i>

105- ATM Status Commands

105.1 ATM Status Command Tree	105-5224
105.2 ATM Interface Status Command	105-5225
105.3 PVC Status Command	105-5227
105.4 TC Adapter Protocol Interval Status Command	105-5229
105.5 TC Adapter Protocol Current Quarter Performance Data Command	105-5231
105.6 TC Adapter Protocol Current Day Performance Data Command	105-5233
105.7 TC Adapter Protocol Performance Data for Previous Quarter Intervals Command	105-5235
105.8 TC Adapter Protocol Performance Data for Previous Day Intervals Command	105-5237

105.1 ATM Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "ATM Status Commands".

Command Tree

```
----show
  ----atm
    ----interface
      - (port)
    ----pvc
      - (port-index)
    ----tc-int
      - (port)
    ----tc-current-int
      ----fifteen-min
        - (port)
      ----one-day
        - (port)
    ----tc-15min-int
      - (port)
      - intvl-number
    ----tc-1day-int
      - (port)
      - intvl-number
```

105.2 ATM Interface Status Command

Command Description

This command displays the ATM interface configuration table.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show atm interface [ (port) ]
```

Command Parameters

Table 105.2-1 "ATM Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	ATM interface

Command Output

Table 105.2-2 "ATM Interface Status Command" Display parameters

Specific Information		
name	Type	Description
type	Parameter type: <Atm::asamAtmIrfType> (not-specified network-termination access-to-access user-to-access internal-server external-server) Possible values: - not-specified : not specified - network-termination : network termination - access-to-access : access to access interface	type of ATM interface. <i>This element is always shown.</i>

105 ATM Status Commands

name	Type	Description
	- user-to-access : user to access interface - internal-server : internal server interface - external-server : external server interface	
number-of-pvcs	Parameter type: <Atm::CrossConnectedPVccs> - the number of Vcttp connections - range: [0...65535]	specifies the number of vcttp connections on this ATM interface (only PVC). <i>This element is always shown.</i>

105.3 PVC Status Command

Command Description

This command displays the status of the PVC.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show atm pvc [ (port-index) ]
```

Command Parameters

Table 105.3-1 "PVC Status Command" Resource Parameters

Resource Identifier	Type	Description
(port-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiMandatoryId> : <Eqpt::VciMandatoryId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiMandatoryId> - atm VPI Field type <Eqpt::VciMandatoryId> - atm VCI	the ATM PVC

Command Output

Table 105.3-2 "PVC Status Command" Display parameters

Specific Information		
name	Type	Description
admin-status	Parameter type: <Atm::adminStatus> (admin-up admin-down) Possible values: - admin-up : enable traffic flow - admin-down : disable traffic flow	specifies the desired administrative state of the VCL. <i>This element is always shown.</i>

105 ATM Status Commands

name	Type	Description
operational-status	Parameter type: <Atm::atmVclOperStatus> (up down unknown) Possible values: - up : traffic flow is enabled in the virtual link - down : traffic flow is disabled in the virtual link - unknown : state is unknown	indicates the current operational status of the VCL. <i>This element is always shown.</i>
last-change	Parameter type: <Atm::ExtLastChangeTime> - the time elapsed since a certain event - 64-bit	time the VCL entered its current operational state. <i>This element is always shown.</i>
curr-encap-type	Parameter type: <Atm::CurVccEncapType> (llc-snap llc-snap-routed llc-nlpid vc-mux-bridged-8023 vc-mux-routed vc-mux-pppoa other unknown none) Possible values: - llc-snap : logical link control encapsulation bridged protocol - llc-snap-routed : logical link control encapsulation routed protocol - llc-nlpid : logical link control encapsulation pppoa protocol - vc-mux-bridged-8023 : virtual channel multiplex bridged protocol - vc-mux-routed : virtual channel multiplex routed protocol - vc-mux-pppoa : virtual channel multiplex pppoa protocol - other : other encapsulation type - unknown : unknown encapsulation type - none : no encapsulation type	the current established encapsulation type. <i>This element is always shown.</i>

105.4 TC Adapter Protocol Interval Status Command

Command Description

This command displays the TC adapter protocol interval status.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show atm tc-int [ (port) ]
```

Command Parameters

Table 105.4-1 "TC Adapter Protocol Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	ATM interface index (rack/shelf/slot/port)

Command Output

Table 105.4-2 "TC Adapter Protocol Interval Status Command" Display parameters

Specific Information		
name	Type	Description
valid-15-min-intervals	Parameter type: <SignedInteger> - a signed integer	the number of previous intervals (maximum 192) for which valid data has been stored. The value of this object will be 192 unless the device was brought online within the last nx15 minutes, in which case the value will be the

105 ATM Status Commands

name	Type	Description
		number of complete 15 minute intervals the device has been online <i>This element is always shown.</i>
valid-1-day-intervals	Parameter type: <SignedInteger> - a signed integer	The number of previous intervals (maximum 2) for which valid data has been stored. The value of this object will be 2 unless the device was brought online within the last nx24 hours, in which case the value will be the number of complete 24 hours intervals the device has been online <i>This element is always shown.</i>

105.5 TC Adapter Protocol Current Quarter Performance Data Command

Command Description

This command displays the TC adapter protocol current quarter performance data.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show atm tc-current-int fifteen-min [ (port) ]
```

Command Parameters

Table 105.5-1 "TC Adapter Protocol Current Quarter Performance Data Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	ATM interface

Command Output

Table 105.5-2 "TC Adapter Protocol Current Quarter Performance Data Command" Display parameters

Specific Information		
name	Type	Description
ocd-far-end	Parameter type: <Counter> - 32 bit counter	the number of out of cell delineations anomalies for incoming cells on a far end ATM interface connected to this ATM interface

105 ATM Status Commands

name	Type	Description
		<i>This element is always shown.</i>
hec-far-end	Parameter type: <Counter> - 32 bit counter	the number of ATM cells discarded on the far end ATM interface connected to this ATM interface due to HEC errors <i>This element is always shown.</i>
ocd-near-end	Parameter type: <Counter> - 32 bit counter	the number of out of cell delineations anomalies for incoming cells on an ATM interface. An out of cell delineation anomaly occurs when there are 7 consecutive ATM cells received which contain HEC errors. <i>This element is always shown.</i>
hec-near-end	Parameter type: <Counter> - 32 bit counter	number of ATM cells discarded on the ATM interface due to HEC errors <i>This element is always shown.</i>

105.6 TC Adapter Protocol Current Day Performance Data Command

Command Description

This command displays the TC adapter protocol current day performance data.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show atm tc-current-int one-day [ (port) ]
```

Command Parameters

Table 105.6-1 "TC Adapter Protocol Current Day Performance Data Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	ATM interface

Command Output

Table 105.6-2 "TC Adapter Protocol Current Day Performance Data Command" Display parameters

Specific Information		
name	Type	Description
ocd-far-end	Parameter type: <Counter> - 32 bit counter	the number of out of cell delineations anomalies for incoming cells on a far end ATM interface connected to this ATM interface

105 ATM Status Commands

name	Type	Description
		<i>This element is always shown.</i>
hec-far-end	Parameter type: <Counter> - 32 bit counter	the number of ATM cells discarded on the far end ATM interface connected to this ATM interface due to HEC errors <i>This element is always shown.</i>
ocd-near-end	Parameter type: <Counter> - 32 bit counter	the number of out of cell delineations anomalies for incoming cells on an ATM interface. An out of cell delineation anomaly occurs when there are 7 consecutive ATM cells received which contain HEC errors. <i>This element is always shown.</i>
hec-near-end	Parameter type: <Counter> - 32 bit counter	number of ATM cells discarded on the ATM interface due to HEC errors <i>This element is always shown.</i>

105.7 TC Adapter Protocol Performance Data for Previous Quarter Intervals Command

Command Description

This command displays the TC adapter protocol-monitoring 15-min interval data parameters.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show atm tc-15min-int [ (port) [ intvl-number <Atm::AtmItvlNumber> ] ]
```

Command Parameters

Table 105.7-1 "TC Adapter Protocol Performance Data for Previous Quarter Intervals Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	ATM interface
intvl-number	Parameter type: <Atm::AtmItvlNumber> Format: - interval for which statistics is available - range: [1...192]	interval for which statistics are available

Command Output

Table 105.7-2 "TC Adapter Protocol Performance Data for Previous Quarter Intervals Command" Display parameters

Specific Information		
name	Type	Description
ocd-near-end	Parameter type: <Counter>	the number of out of cell

105 ATM Status Commands

name	Type	Description
	- 32 bit counter	delineations anomalies for incoming cells on an ATM interface. An out of cell delineation anomaly occurs when there are 7 consecutive ATM cells received which contain HEC errors <i>This element is always shown.</i>
hec-near-end	Parameter type: <Counter> - 32 bit counter	number of ATM cells discarded on the ATM interface due to HEC errors <i>This element is always shown.</i>
ocd-far-end	Parameter type: <Counter> - 32 bit counter	the number of out of cell delineations anomalies for incoming cells on a far end ATM interface connected to this ATM interface <i>This element is always shown.</i>
hec-far-end	Parameter type: <Counter> - 32 bit counter	the number of ATM cells discarded on the far end ATM interface connected to this ATM interface due to HEC errors <i>This element is always shown.</i>

105.8 TC Adapter Protocol Performance Data for Previous Day Intervals Command

Command Description

This command displays the TC adapter protocol-monitoring 1-day interval data parameters.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show atm tc-1day-int [ (port) [ intvl-number <Atm::AtmItvlNo1day> ] ]
```

Command Parameters

Table 105.8-1 "TC Adapter Protocol Performance Data for Previous Day Intervals Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	ATM interface
intvl-number	Parameter type: <Atm::AtmItvlNo1day> Format: - itvl for which statistics is available - range: [1...2]	interval for which statistics are available

Command Output

Table 105.8-2 "TC Adapter Protocol Performance Data for Previous Day Intervals Command" Display parameters

Specific Information		
name	Type	Description
ocd-near-end	Parameter type: <Counter>	the number of out of cell

106.2 Global VLAN Status Command

Command Description

This command displays information common to all VLANs.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan global
```

Command Output

Table 106.2-2 "Global VLAN Status Command" Display parameters

Common Information:vlan parameters		
name	Type	Description
configured-vlans	Parameter type: <Vlan::Gauge> - an unsigned integer	current number of configured and auto configured vlans <i>This element is always shown.</i>
management	Parameter type: <Vlan::MgmtVlanMode> (inband outband inband-outband) Possible values: - inband : inband - outband : outband - inband-outband : inband and outband	specifies how the node is managed <i>This element is always shown.</i>
max-rb-vlan	Parameter type: <Vlan::Gauge> - an unsigned integer	maximum number of residential bridge vlans that are supported <i>This element is always shown.</i>
max-layer2-term-vlan	Parameter type: <Vlan::Gauge> - an unsigned integer	maximum number of layer2 terminated vlans that are supported <i>This element is always shown.</i>

106.3 Residential Bridge VLAN Summary Status Command

Command Description

This command displays a list of ports attached to a particular VLAN of the type residential bridge VLAN.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan residential-bridge summary [ (vlan-id) [ vlan-port <Itf::VlanPortInterface> ] ]
```

Command Parameters

Table 106.3-1 "Residential Bridge VLAN Summary Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	network vlan id
vlan-port	Parameter type: <Itf::VlanPortInterface> Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> :	vlan port

Resource Identifier	Type	Description
	<pre> <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - vlan-port : vlan port - vlan-port:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VcId> - atm VCI Field type <Eqpt::PonId> </pre>	

Resource Identifier	Type	Description
	- the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Ng2::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE - Possible values: - stacked : stacked vlan identity - Field type <Eqpt::UnstackedVlan> - unstacked vlan id - Field type <Eqpt::SVlan> - service vlan id - Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 106.3-2 "Residential Bridge VLAN Summary Status Command" Display parameters

Specific Information		
name	Type	Description
association type	Parameter type: <Vlan::AssociationType> (static dynamic) Possible values: - static : association type is dynamic - dynamic : association type is static	The type of association is static or dynamic <i>This element is always shown.</i>

106.4 Residential Bridge VLAN Extensive Status Command

Command Description

This command displays a list of ports, each with an extensive set of parameters, for a particular VLAN of the type residential bridge VLAN in detail mode. Execution of this command may take a long time.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan residential-bridge extensive [ (vlan-id) [ vlan-port <Itf::VlanPortInterface> ] ]
```

Command Parameters

Table 106.4-1 "Residential Bridge VLAN Extensive Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	network vlan id
vlan-port	Parameter type: <Itf::VlanPortInterface> Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /	vlan port

Resource Identifier	Type	Description
	<Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - vlan-port : vlan port - vlan-port:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	

Resource Identifier	Type	Description
	Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

	(priority : <Vlan::Priority> profile : none profile : trusted-port profile : best-effort profile : cl-all-prio-3 profile : cl-all-prio-4 profile : background profile : be-cl-voice profile : be-cl-1d-voice profile : be-voice profile : l2-vpn-3 profile : l2-vpn-4 profile : 11 profile : 12 profile : 13 profile : 14 profile : 15 profile : 16 profile : 17 profile : 18 profile : 19 profile : 20 profile : 21 profile : 22 profile : 23 profile : 24 profile : 25 profile : 26 profile : 27 profile : 28 profile : 29 profile : 30 profile : 31 profile : 32 prio-regen-name : none prio-regen-name : name : <Vlan::IgnoredVlanProfileName>) Possible values: - priority : fixed priority identify - profile : regeneration profile identify - prio-regen-name : priority regeneration profile name Field type <Vlan::Priority> - priority of ethernet frames - range: [0...7] Possible values: - none : default value - trusted-port : trusted port - best-effort : best effort - cl-all-prio-3 : controlled load, all priority 3 traffic - cl-all-prio-4 : controlled load, all priority 4 traffic - background : background - be-cl-voice : best effort, controlled load, voice - be-cl-1d-voice : best effort, controlled load, 802.Id Annex G voice - be-voice : best effort voice - l2-vpn-3 : L2 VPN with 3 traffic classes - l2-vpn-4 : L2 VPN with 4 traffic classes	<i>This element is always shown.</i>

106 VLAN Status Commands

name	Type	Description
	- 11 : operator-defined profile - 12 : operator-defined profile - 13 : operator-defined profile - 14 : operator-defined profile - 15 : operator-defined profile - 16 : operator-defined profile - 17 : operator-defined profile - 18 : operator-defined profile - 19 : operator-defined profile - 20 : operator-defined profile - 21 : operator-defined profile - 22 : operator-defined profile - 23 : operator-defined profile - 24 : operator-defined profile - 25 : operator-defined profile - 26 : operator-defined profile - 27 : operator-defined profile - 28 : operator-defined profile - 29 : operator-defined profile - 30 : operator-defined profile - 31 : operator-defined profile - 32 : operator-defined profile Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
prio-regen-name	Parameter type: <Vlan::PrioRegenProfileName> (none name : <Vlan::IgnoredVlanProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	priority regeneration profile name <i>This element is always shown.</i>
transmit-mode	Parameter type: <Vlan::PortUntagStatus> (untagged single-tagged priority-tagged) Possible values: - untagged : untagged outgoing frames - single-tagged : singletagged outgoing frames - priority-tagged : prioritytagged outgoing frames	transmit mode on egress forwarding interface as tagged, untagged or priority tagged <i>This element is always shown.</i>

106.5 Cross-connect VLAN Status Command

Command Description

This command displays all parameters for the ports attached to a particular VLAN of the type cross-connect VLAN.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan cross-connect [ (vlan-id) [ vlan-port <Itf::VlanPortInterface> ] ]
```

Command Parameters

Table 106.5-1 "Cross-connect VLAN Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	network vlan id
vlan-port	Parameter type: <Itf::VlanPortInterface> Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /	vlan port

transmit-mode	Parameter type: <Vlan::PortUntagStatus> (untagged single-tagged priority-tagged) Possible values: - untagged : untagged outgoing frames - single-tagged : singletagged outgoing frames - priority-tagged : prioritytagged outgoing frames	transmit mode on egress forwarding interface as tagged, untagged or priority tagged <i>This element is always shown.</i>

106.6 Stacked VLAN Status Command

Command Description

This command displays the stacked VLANs configured in the system.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan stacked-vlan [ (s-vlanid) [ vlan-id <Vlan::StackedVlan> ] ]
```

Command Parameters

Table 106.6-1 "Stacked VLAN Status Command" Resource Parameters

Resource Identifier	Type	Description
(s-vlanid)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan id
vlan-id	Parameter type: <Vlan::StackedVlan> Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	customer vlan

106.7 Stacked QoS VLAN Status Command

Command Description

This command displays the stacked VLANs configured in the system.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan stacked-qos-vlan [ (s-vlanid) [ vlan-id <Vlan::StackedVlan> ] ]
```

Command Parameters

Table 106.7-1 "Stacked QoS VLAN Status Command" Resource Parameters

Resource Identifier	Type	Description
(s-vlanid)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan id
vlan-id	Parameter type: <Vlan::StackedVlan> Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	customer vlan

106.8 QoS C-VLAN Status Command

Command Description

This command shows the QoS CVlans configured in the system.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

> show vlan qos-cvlan-list [(vlan-id)]

Command Parameters

Table 106.8-1 "QoS C-VLAN Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: - vlan id - range: [1...4093]	customer vlan

106.9 Layer-2 Terminated VLAN Status Command

Command Description

This command displays all parameters for a particular VLAN of the type Layer 2 terminated VLAN.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan layer2-terminated [ (vlanid) ]
```

Command Parameters

Table 106.9-1 "Layer-2 Terminated VLAN Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlanid)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan id

Command Output

Table 106.9-2 "Layer-2 Terminated VLAN Status Command" Display parameters

Specific Information		
name	Type	Description
fdb-id	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096]	identity of the filtering database <i>This element is always shown.</i>

106 VLAN Status Commands

name	Type	Description
	Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	
filter-entries	Parameter type: <Vlan::Counter> - an unsigned integer	number of entries in the filtering database <i>This element is always shown.</i>
network-ifindex	Parameter type: <Vlan::Integer> - a signed integer	interface index of the IpoE interface related to this VLAN, at the network side <i>This element is always shown.</i>

106.10 VLAN Name Mapping Status Command

Command Description

This command displays the VLAN identity that corresponds to a given VLAN name.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan name [ (name) ]
```

Command Parameters

Table 106.10-1 "VLAN Name Mapping Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - char string - length: x<=80	name used to identify the vlan

Command Output

Table 106.10-2 "VLAN Name Mapping Status Command" Display parameters

Specific Information		
name	Type	Description
id	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	the vlan identity <i>This element is always shown.</i>

106.11 VLAN Filtering Database Per LIM Status

Command

Command Description

This command displays, given a particular VLAN, a unicast MAC address and a vlan port, an entry of the filtering database, if any. The filtering database is used by the bridging function in determining how to propagate a received frame. This command displays information about an entry of the filtering database associated to a network VLAN. It can also be used to display all fdb entries associated to a network VLAN.

The status parameter indicates what the trigger was for creation of the filtering database entry, that is, a filtering entry can be configured or dynamically learned.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan fdb-board [ (slot) [ fdb-id <Network::StackedVlan> ] [ mac <Vlan::MacAddr> ] ]
```

Command Parameters

Table 106.11-1 "VLAN Filtering Database Per LIM Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical slot position
fdb-id	Parameter type: <Network::StackedVlan> Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093]	fdb id

Resource Identifier	Type	Description
	Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	
mac	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	the network mac address

Command Output

Table 106.11-2 "VLAN Filtering Database Per LIM Status Command" Display parameters

status	Parameter type: <Vlan::FdbEntryStatus> (other invalid learned self static) Possible values: - other : entry does not determine the forwarding of frames - invalid : entry is being removed - learned : entry has been learned dynamically - self : entry represents one of the device's addresses - static : entry has been configured by a manager	the origin of the entry, unless invalid. Invalid indicates the entry is in progress of being deleted. <i>This element is always shown.</i>
sub-mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	the user mac address ,when vmac is enabled, it identifies a vmac <i>This element is always shown.</i>

106.12 Bridge Port Filtering Database Status Command

Command Description

This command displays information about an entry of the filtering database on a particular vlan port. The filtering database is used by the bridging function in determining how to propagate a received frame. It can also be used to display all fdb entries on a vlan port or all fdb entries on a bridge port.

The status parameter indicates what the trigger was for creation of the filtering database entry, that is, a filtering entry can be configured or dynamically learned.

The command should be executed with atleast the bridgeport as mandatory input otherwise it will take longer execution time to retrieve the information in larger systems where large number of bridgeports / vlan ports are configured while limited fdb entries on part of the vlan ports.

For 7362 uplink LTs and FELT-B, a vlanport together with the bridgeport are mandatory inputs of the command. Assigning a bridgeport is not enough, because for these LT, there could be thousands of vlan ports attached to one bridgeport, it will take a long time to retrieve them all, which is different from user side.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan bridge-port-fdb [ (port) [ vlan-id <Vlan::StackedVlan> ] [ mac <Vlan::MacAddr> ] ]
```

Command Parameters

Table 106.12-1 "Bridge Port Filtering Database Status Command" Resource Parameters

status	Parameter type: <Vlan::FdbEntryStatus> (other invalid learned self static) Possible values: - other : entry does not determine the forwarding of frames - invalid : entry is being removed - learned : entry has been learned dynamically - self : entry represents one of the device's addresses - static : entry has been configured by a manager	the origin of the entry, unless invalid <i>This element is always shown.</i>
vmac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	unicast virtual mac address <i>This element is always shown.</i>

106.13 VLAN Priority Regeneration Profile Status Command

Command Description

This command displays, for a given priority regeneration profile, the mapping of the external p-bit codepoints versus the internal priority. Such a profile provides a mapping for both the upstream and the downstream direction.

These priority regeneration profiles and their contents are predetermined and cannot be changed by the operator.

A priority regeneration profile is assigned to a bridge port when configuring the bridge port.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan priority-regen [ (profile-id) ]
```

Command Parameters

Table 106.13-1 "VLAN Priority Regeneration Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(profile-id)	Format: (trusted-port best-effort cl-all-prio-3 cl-all-prio-4 background be-cl-voice be-cl-1d-voice be-voice l2-vpn-3 l2-vpn-4 11 12 13 14 15 16 17 18 19 20 21	profile id

106.14 VLAN Priority Regeneration Profile Name Status Command

Command Description

This command displays, for a given priority regeneration profile Name, the mapping of the external p-bit codepoints versus the internal priority. Such a profile provides a mapping for both the upstream and the downstream direction.

These priority regeneration profiles and their contents are predetermined and cannot be changed by the operator.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan prio-regen-name [ (name) ]
```

Command Parameters

Table 106.14-1 "VLAN Priority Regeneration Profile Name Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A unique profile name

106.15 Show Next Free ID of VLAN Priority Regeneration Profile

Command Description

This command displays next free id of VLAN Priority Regeneration Profile.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan prio-regen-next
```

Command Output

Table 106.15-2 "Show Next Free ID of VLAN Priority Regeneration Profile " Display parameters

Specific Information		
name	Type	Description
next-free-index	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next free profile index <i>This element is always shown.</i>

106.16 Duplicate MAC Alarm Status Command

Command Description

This command is useful when a duplicate MAC alarm has occurred. A duplicate MAC alarm is raised when a new MAC address could not be learned on a port because this MAC address already exists on another port for the same VLAN, that is, within the same filtering database. The information displayed indicates the port where the MAC address is assigned, that is, the original port.

The duplicate MAC alarm information is available as long as the alarm is on.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan dup-mac-alarm [ (dup-port) [ dup-fdb-id <Network::StackedVlan> ] [ dup-mac <Vlan::MacAddr> ] ]
```

Command Parameters

Table 106.16-1 "Duplicate MAC Alarm Status Command" Resource Parameters

106.17 Port Event Status Command

Command Description

This command displays all the kinds of events that occurred on a given port. These events relate to error cases.

*The display element **no-mac-learn** that indicates that not all mac addresses are learned, is not applicable for intel/CATE boards.*

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan port-event [ (port) ]
```

Command Parameters

Table 106.17-1 "Port Event Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identity of a port(e.g. atm PVC, EFM port, ...)

Resource Identifier	Type	Description
	Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

Table 106.17-2 "Port Event Status Command" Display parameters

Specific Information		
name	Type	Description
event-time	Parameter type: <Equipm::restartTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	the time in seconds when the event occurred <i>This element is always shown.</i>
aal5-fcs-error short name: aal5-fcs	Parameter type: <Vlan::Aal5FcsError> ((aal5-fcs yes) (no-aal5-fcs no)) Possible values: - aal5-fcs : aal5 or fcs error - yes : aal5 or fcs error - no-aal5-fcs : no aal5 or fcs error - no : no aal5 or fcs error	error of the aal5 frame or fcs error <i>This element is always shown.</i>
llc-error short name: llc	Parameter type: <Vlan::LlcError> ((llc yes) (no-llc no)) Possible values: - llc : incorrect llc - yes : incorrect llc - no-llc : correct llc	incorrect llc format <i>This element is always shown.</i>

106 VLAN Status Commands

name	Type	Description
	- no : correct llc	
no-mac-learn short name: no-mac	Parameter type: <Vlan::MacNoLearnError> ((mac-learn-error yes) (no-mac-learn-error no)) Possible values: - mac-learn-error : mac learn error - yes : mac learn error - no-mac-learn-error : no mac learn error - no : no mac learn error	new MAC address could not be learned, upstream pkt is discarded <i>This element is always shown.</i>
dup-mac	Parameter type: <Vlan::MacDuplicateError> ((mac-dup-error yes) (no-mac-dup-error no)) Possible values: - mac-dup-error : mac duplicate error - yes : mac duplicate error - no-mac-dup-error : no mac duplicate error - no : no mac duplicate error	failure of MAC address learning while MAC address already exists on another port within the same VLAN <i>This element is always shown.</i>

106.18 Port Statistics for Current Quarter Status Command

Command Description

This command displays performance statistics for the current quarter for a particular port. Counters for upstream and downstream traffic are displayed. These counters include all traffic on the port, including PPPoE relayed and PPPoE terminated traffic.

Counters for discarded frames are displayed. Frames are discarded as a result of buffer acceptance control or policing.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan port-curr-15min-stats [ (port) ]
```

Command Parameters

Table 106.18-1 "Port Statistics for Current Quarter Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni) Possible values: - ng2 : ngpon2 vlan bridge port	identity of a port(e.g. atm PVC, EFM port, ...)

Resource Identifier	Type	Description
	Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

106.19 Port Statistics for Current Day Status Command

Command Description

This command shows Performance Statistics for the current day for a particular port. Counters for upstream and downstream traffic are displayed. These counters include all traffic on the port, including PPPoE Relayed and PPPoE terminated traffic.

Counters for discarded frames are displayed. Frames are discarded as a result of buffer acceptance control or policing.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan port-curr-day-stats [ (port) ]
```

Command Parameters

106.20 Port Statistics for Previous Quarter Intervals

Status Command

Command Description

This command displays performance statistics for the previous quarter intervals, for a particular port. Counters for upstream and downstream traffic are displayed. These counters include all traffic on the port, including PPPoE relayed and PPPoE terminated traffic.

Counters for discarded frames are displayed. Frames are discarded as a result of buffer acceptance control or policing.

The interval is specified. Interval number 1 identifies the most recent completed quarter interval. From there onward, interval numbers are incremented by 1. Higher interval numbers relate to less recent intervals.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan port-15min-stats [ (port) [ interval-number <Vlan::IntervalNumber> ] ]
```

Command Parameters

Table 106.20-1 "Port Statistics for Previous Quarter Intervals Status Command" Resource Parameters

106.22 VLAN Port Statistics for Current Quarter

Status Command

Command Description

This command displays performance statistics for the current quarter for a particular VLAN and port. Counters for upstream and downstream traffic are displayed. These counters include all traffic on the port, including PPPoE relayed and PPPoE terminated traffic.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan current-15min-stats [ (vlanid) [ port <Vlan::BridgePort> ] ]
```

Command Parameters

Table 106.22-1 "VLAN Port Statistics for Current Quarter Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlanid)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan id

name	Type	Description
		interval <i>This element is only shown in detail mode.</i>

106.23 VLAN Port Statistics for Current Day Status Command

Command Description

This command displays performance statistics for the current day for a particular VLAN and port. Counters for upstream and downstream traffic are displayed. These counters include all traffic on the port, including PPPoE relayed and PPPoE terminated traffic.

Counters for discarded frames are displayed. Frames are discarded as a result of buffer acceptance control or policing.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan current-day-stats [ (vlanid) [ port <Vlan::BridgePort> ] ]
```

Command Parameters

Table 106.23-1 "VLAN Port Statistics for Current Day Status Command" Resource Parameters

Resource Identifier	Type	Description

106.24 VLAN Port Statistics for Previous Quarter Intervals Status Command

Command Description

This command displays performance statistics for the previous quarter intervals for a particular VLAN and port. Counters for upstream and downstream traffic are displayed. These counters include all traffic on the port, including PPPoE relayed and PPPoE terminated traffic.

The interval is specified. Interval number 1 identifies the most recent completed quarter interval. From there onward, interval numbers are incremented by 1. Higher interval numbers relate to less recent intervals.

Counters for discarded frames are displayed. Frames are discarded as a result of buffer acceptance control or policing.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan previous-15min-stats [ (vlanid) [ port <Vlan::BridgePort> ] [ interval-number <Vlan::IntervalNumber> ] ]
```

Command Parameters

106.26 VLAN Filtering Database Status Command

Command Description

Obsolete command, replaced by `show vlan bridge-port-fdb`.

This command displays the contents of the virtual MAC table. The display can be filtered by Vlan, bridge port, and/or subscriber MAC address.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan vmac-bridge-port-fdb [ (port) [ vlan-id <Vlan::StackedVlan> ] [ mac <Vlan::MacAddr> ] ]
```

Obsolete command, replaced by `show vlan bridge-port-fdb`.

Command Parameters

106.27 P-bit Traffic Counters Status Command

Command Description

This command allows the operator to show the p-bit traffic counters.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan pbit-statistics port [ (vlan-port) [ min-dot1p <Vlan::Dot1pMin> ] [ max-dot1p <Vlan::Dot1pMax> ] ]
```

Command Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan>	vlan port

Resource Identifier	Type	Description
	vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - vlan-port : vlan port - vlan-port:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VcId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId>	

Resource Identifier	Type	Description
	- the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
min-dot1p	Parameter type: <Vlan::Dot1pMin> Format: - dot1p value range - range: [0...7]	the min pbit value
max-dot1p	Parameter type: <Vlan::Dot1pMax> Format: - dot1p value range - range: [0...7]	the max pbit value

Command Output

Table 106.27-2 "P-bit Traffic Counters Status Command" Display parameters

Specific Information		
name	Type	Description
up-forward-byte	Parameter type: <Vlan::Dot1pTraffCounter> - 64 bit counter,range:[0-9223372036854775808]	all forwarded bytes in upstream directions on a vlan port for the given P-bit range. <i>This element is always shown.</i>
dn-forward-byte	Parameter type: <Vlan::Dot1pTraffCounter> - 64 bit counter,range:[0-9223372036854775808]	all forwarded bytes in downstream directions on a vlan port for the given P-bit range. <i>This element is always shown.</i>

106.28 Current VLAN Filtering Database Status Command

Command Description

This command displays filtering database used by this VLAN.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan fdbid [ (vlan-id) ]
```

Command Parameters

Table 106.28-1 "Current VLAN Filtering Database Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	network vlan id

Command Output

Table 106.28-2 "Current VLAN Filtering Database Status Command" Display parameters

Specific Information		
name	Type	Description
fdb-id	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values:	identity of the filtering database <i>This element is always shown.</i>

106 VLAN Status Commands

name	Type	Description
	- stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	

106.29 Accumulated Port Statistics

Command Description

This command displays performance statistics for a particular port. Counters for upstream and downstream traffic are displayed. These counters do not include broadcast/multicast frames per bridge port in downstream direction.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show vlan port-accumu-stats [ (port) ]
```

Command Parameters

Table 106.29-1 "Accumulated Port Statistics" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni) Possible values: - ng2 : ngpon2 vlan bridge port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	identity of a port(e.g. atm PVC, EFM port, ...)

Resource Identifier	Type	Description
	- the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Ng2::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

107.2 QoS Session Profile Status Command

Command Description

This command displays the QoS session profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS session profiles. The QoS session profile usage represents the total user sessions (both for statically configured and dynamic sessions).

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage session [ (name) ]
```

Command Parameters

Table 107.2-1 "QoS Session Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A session profile name

Command Output

Table 107.2-2 "QoS Session Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.3 QoS Marker Profile Status Command

Command Description

This command displays the QoS marker profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS marker profiles. The QoS marker profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage marker [ (name) ]
```

Command Parameters

Table 107.3-1 "QoS Marker Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A marker profile name

Command Output

Table 107.3-2 "QoS Marker Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile 'is in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.4 QoS Policer Profile Status Command

Command Description

This command displays the QoS policer profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS policer profiles. The QoS policer profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage policer [ (name) ]
```

Command Parameters

Table 107.4-1 "QoS Policer Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A policer profile name

Command Output

Table 107.4-2 "QoS Policer Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.5 QoS Queue Profile Status Command

Command Description

This command displays the QoS queue profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS queue profiles. The QoS queue profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage queue [ (name) ]
```

Command Parameters

Table 107.5-1 "QoS Queue Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A queue profile name

Command Output

Table 107.5-2 "QoS Queue Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile. If the reference count is not 0, then this profile is 'in use', and can not be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.6 QoS Scheduler Node Profile Status Command

Command Description

This command displays the QoS scheduler-node profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS scheduler-node profiles. The QoS scheduler-node profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage scheduler-node [ (name) ]
```

Command Parameters

Table 107.6-1 "QoS Scheduler Node Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A scheduler-node profile name

Command Output

Table 107.6-2 "QoS Scheduler Node Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.7 QoS CAC Profile Status Command

Command Description

This command displays the QoS CAC profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS CAC profiles. The QoS CAC profile usage displays the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage cac [ (name) ]
```

Command Parameters

Table 107.7-1 "QoS CAC Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A unique profile name

Command Output

Table 107.7-2 "QoS CAC Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount> - number of entities using this particular profile - range: [0...65535]	indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.8 QoS Policy Profile Status Command

Command Description

This command displays the QoS policy profile status. A QoS profile in use cannot be deleted. Use this command to display the usage of QoS policy profiles. The QoS policy profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage policy [ (name) ]
```

Command Parameters

Table 107.8-1 "QoS Policy Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A unique policy profile name

Command Output

Table 107.8-2 "QoS Policy Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.9 QoS L2 Filter Profile Status Command

Command Description

This command displays the QoS L2 filter profile status. A QoS profile in use cannot be deleted. Use this command to display the usage of QoS L2 filter profiles. The QoS L2 filter profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage l2-filter [ (name) ]
```

Command Parameters

Table 107.9-1 "QoS L2 Filter Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A l2 filter name

Command Output

Table 107.9-2 "QoS L2 Filter Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.10 QoS L3 Filter Profile Status Command

Command Description

This command displays the QoS L3 filter profile status. A QoS profile in use cannot be deleted. Use this command to display the usage of QoS L3 Filter profiles. The QoS L3 filter profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage l3-filter [ (name) ]
```

Command Parameters

Table 107.10-1 "QoS L3 Filter Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A l3 filter name

Command Output

Table 107.10-2 "QoS L3 Filter Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.11 QoS Policy Action Profile Status Command

Command Description

This command displays the QoS policy action profile status. A QoS profile in use cannot be deleted. Use this command to display the usage of policy action profiles. The QoS policy action profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage policy-action [ (name) ]
```

Command Parameters

Table 107.11-1 "QoS Policy Action Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A policy action profile name

Command Output

Table 107.11-2 "QoS Policy Action Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.12 QoS IngressQoS Profile Status Command

Command Description

This command displays the QoS Ingress profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS Ingress profiles. The QoS Ingress profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage ingress-qos [ (name) ]
```

Command Parameters

Table 107.12-1 "QoS IngressQoS Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	An ingress profile name

Command Output

Table 107.12-2 "QoS IngressQoS Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.13 QoS Shaper Profile Status Command

Command Description

This command displays the QoS shaper profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS shaper profiles. The QoS shaper profile usage shows the reference from existing QoS shaper profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage shaper [ (name) ]
```

Command Parameters

Table 107.13-1 "QoS Shaper Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A shaper profile name

Command Output

Table 107.13-2 "QoS Shaper Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.14 QoS Bandwidth Profile Status Command

Command Description

This command displays the QoS Bandwidth profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS scheduler-node profiles. The QoS Bandwidth profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage bandwidth [ (name) ]
```

Command Parameters

Table 107.14-1 "QoS Bandwidth Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A scheduler profile name

Command Output

Table 107.14-2 "QoS Bandwidth Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.15 QoS Rate Limit Profile Status Command

Command Description

This command displays the QoS Rate Limit profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS rate limit profiles. The QoS rate limit profile usage shows the reference from existing QoS rate limit profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage rate-limit [ (name) ]
```

Command Parameters

Table 107.15-1 "QoS Rate Limit Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	Protocol Rate Limit profile name

Command Output

Table 107.15-2 "QoS Rate Limit Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.16 QoS DSCP to PBIT Profile Status Command

Command Description

This command displays the QoS DSCP to PBIT profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS DSCP to PBIT profiles. The QoS DSCP to PBIT profile usage shows the references from existing QoS Marker profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage dscp-pbit [ (name) ]
```

Command Parameters

Table 107.16-1 "QoS DSCP to PBIT Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A DSCP to PBIT profile name

Command Output

Table 107.16-2 "QoS DSCP to PBIT Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile 'is in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.17 QoS Policer Per Tc Profile Status Command

Command Description

This command displays the QoS Policer Per Tc profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS Policer Per Tc profiles. The QoS Policer Per Tc profile usage shows the references from existing QoS session profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage policer-per-tc [ (name) ]
```

Command Parameters

Table 107.17-1 "QoS Policer Per Tc Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A policer per tc profile name

Command Output

Table 107.17-2 "QoS Policer Per Tc Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile 'is in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.18 QoS Policer Threshold Profile Status

Command

Command Description

This command displays the QoS policer threshold profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS policer threshold profiles. The QoS policer threshold profile usage shows the references from existing QoS policer profiles because these profiles are not applied on their own.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage cos-threshold [ (name) ]
```

Command Parameters

Table 107.18-1 "QoS Policer Threshold Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A cos threshold profile name

Command Output

Table 107.18-2 "QoS Policer Threshold Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.19 QoS aggrQueuesConfig Profile Status Command

Command Description

This command displays the QoS aggrQueuesConfig profile status. A QoS profile that is in use cannot be deleted, so the operator can use this command to display the usage of QoS aggrQueuesConfig profiles. The QoS aggrQueuesConfig profile usage shows the references of the profile.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos profile-usage aggrqueuesconfig [ (name) ]
```

Command Parameters

Table 107.19-1 "QoS aggrQueuesConfig Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A aggrQueuesConfig profile name

Command Output

Table 107.19-2 "QoS aggrQueuesConfig Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount32> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile. If the reference count is not 0, then this profile is 'in use', and can not be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

107.20 QoS Ingress filter Resource Usage Status Command

Command Description

This command displays QoS resource usage information for line cards of type NELT-B: -the available and used ingress hardware filters. Qos ingress hardware filters are used for next QoS items: 1. The supported QoS Policies of a sessionprofile attached to a bridge/vlan port. 2. The supported Policers (SAP level) of a sessionprofile attached to a bridge/vlan port. 3. DSCP enforcement (SAP level) of a sessionprofile attached to a bridge/vlan port. - the number of ingress hardware filters which must be released, via adapting QoS configuration, to be able to apply ip antispoofing on ports of type HC-UNI. These values are only applicable for NELT_B boards. In particular, the command is to be used in case secure forwarding enablement or static ip address configuration fails on a NELT-B HC-UNI interface, due to insufficient resources.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos resource-usage ingress-hw-filter [ (equip-slot) ]
```

Command Parameters

Table 107.20-1 "QoS Ingress filter Resource Usage Status Command" Resource Parameters

Resource Identifier	Type	Description
(equip-slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	physical position of the board

Command Output

Table 107.20-2 "QoS Ingress filter Resource Usage Status Command" Display parameters

Specific Information		
name	Type	Description
max-val	Parameter type: <UnsignedInteger> - an unsigned integer	The actual available Qos Ingress hardware filters. The displayed maximum value applies on each of the two port-groups of the NELT-B. <i>This element is always shown.</i>
cur-val-portgrp1	Parameter type: <UnsignedInteger> - an unsigned integer	The number of used Qos Ingress hardware filters on the first port-group of the concerned NELT-B. The first port-group consists out of lines 1-18. <i>This element is always shown.</i>
cur-val-portgrp2	Parameter type: <UnsignedInteger> - an unsigned integer	The number of used Qos Ingress hardware filters on the second port-group of the concerned NELT-B. The second port-group consists out of lines 19-36. <i>This element is always shown.</i>
excess-ipantispoof-pg1	Parameter type: <UnsignedInteger> - an unsigned integer	The number of Qos ingress hardware filters which must be released for interfaces 1 until 18, to be able to apply IpAntispoofing on ports of type Hicap-UNI. <i>This element is always shown.</i>
excess-ipantispoof-pg2	Parameter type: <UnsignedInteger> - an unsigned integer	The number of Qos ingress hardware filters which must be released for interfaces 19 until 36, to be able to apply IpAntispoofing on ports of type Hicap-UNI. <i>This element is always shown.</i>

107.21 QoS DSL Bandwidth Status Command

Command Description

Obsolete command, replaced by `show qos interface-bandwidth`.

This command displays the bandwidth allocation and usage for each DSL link.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos dsl-bandwidth [ (index) ]
```

Obsolete command, replaced by `show qos interface-bandwidth`.

Command Parameters

Table 107.21-1 "QoS DSL Bandwidth Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	physical port of a dsl link

Command Output

Table 107.21-2 "QoS DSL Bandwidth Status Command" Display parameters

Specific Information		
name	Type	Description
frame-net-bw	Parameter type: <SignedInteger> - a signed integer	Represents an approximation of the bandwidth available for Ethernet frames. This approximation is made by using an appropriate overhead factor (ATM, EFM, ..). The basis for the calculus can be minimum

name	Type	Description
		sync rate or actual sync rate, or the native bandwidth for non-xDSL interfaces. <i>This element is always shown.</i>
res-data-bw	Parameter type: <SignedInteger> - a signed integer	The portion the frame-net-bw that is reserved for all data services (typically HSI user traffic). This is a reserved value per DSL interface (and not per user session) and applicable in the downstream direction only. <i>This element is only shown in detail mode.</i>
res-voice-bw	Parameter type: <SignedInteger> - a signed integer	The portion of the frame-net-bw that is reserved for all voice services (typically HSI user traffic). This is a reserved value per DSL interface (and not per voice call) and applicable in the downstream direction only. The usage of this value is to set apart a minimum rate such that video and voice services can never impact each other. <i>This element is only shown in detail mode.</i>
m-cast-max-bw	Parameter type: <SignedInteger> - a signed integer	Represents the rate limitation imposed by the operator upon the maximum bandwidth to be consumed by user multicast video sessions. This limit can enforce a smaller value than actually available on the DSL link. <i>This element is only shown in detail mode.</i>
m-cast-avail-bw	Parameter type: <SignedInteger> - a signed integer	Represents the bandwidth available for multicast services, calculated by the ISAM. This value is what is left from frame-net-bw after deducting from it res-data-bw and res-voice-bw. The minimum of m-cast-avail-bw and m-cast-max-bw will be the actual limitation for user multicast bandwidth usage per DSL link. <i>This element is always shown.</i>
m-cast-used-bw	Parameter type: <SignedInteger> - a signed integer	Shows the bandwidth currently in use by pre-configured multicast streams. <i>This element is always shown.</i>

107.22 QoS Shdsl Bandwidth Status Command

Command Description

Obsolete command, replaced by **show qos interface-bandwidth**.

This command displays the bandwidth allocation and usage for each Shdsl link.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos shdsl-bandwidth [ (index) ]
```

Obsolete command, replaced by **show qos interface-bandwidth**.

Command Parameters

Table 107.22-1 "QoS Shdsl Bandwidth Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	physical port of a shdsl link

Command Output

Table 107.22-2 "QoS Shdsl Bandwidth Status Command" Display parameters

Specific Information		
name	Type	Description
frame-net-bw	Parameter type: <SignedInteger> - a signed integer	Represents the approximate bandwidth available for Ethernet frames, which is guaranteed to be available by the physical layer. This approximation is made by the configurable ATM overhead factor.

name	Type	Description
		<i>This element is always shown.</i>
res-data-bw	Parameter type: <SignedInteger> - a signed integer	The portion the frame-net-bw that is reserved for all data services (typically HSI user traffic). This is a reserved value per DSL interface (and not per user session) and applicable in the downstream direction only. <i>This element is only shown in detail mode.</i>
res-voice-bw	Parameter type: <SignedInteger> - a signed integer	The portion of the frame-net-bw that is reserved for all voice services (typically HSI user traffic). This is a reserved value per DSL interface (and not per voice call) and applicable in the downstream direction only. The usage of this value is to set apart a minimum rate such that video and voice services can never impact each other. <i>This element is only shown in detail mode.</i>
m-cast-max-bw	Parameter type: <SignedInteger> - a signed integer	Represents the rate limitation imposed by the operator upon the maximum bandwidth to be consumed by user multicast video sessions. This limit can enforce a smaller value than actually available on the DSL link. <i>This element is only shown in detail mode.</i>
m-cast-avail-bw	Parameter type: <SignedInteger> - a signed integer	Represents the bandwidth available for multicast services, calculated by the ISAM. This value is what is left from frame-net-bw after deducting from it res-data-bw and res-voice-bw. The minimum of m-cast-avail-bw and m-cast-max-bw will be the actual limitation for user multicast bandwidth usage per DSL link. <i>This element is always shown.</i>
m-cast-used-bw	Parameter type: <SignedInteger> - a signed integer	Shows the bandwidth currently in use by pre-configured multicast streams. <i>This element is always shown.</i>

107.23 QoS Ethernet Bandwidth Status Command

Command Description

Obsolete command, replaced by **show qos interface-bandwidth**.

This command displays the bandwidth allocation and usage for each Ethernet link.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

> show qos ethernet-bandwidth [(index)]

Obsolete command, replaced by **show qos interface-bandwidth**.

Command Parameters

Table 107.23-1 "QoS Ethernet Bandwidth Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	physical port of a ethernet link

Command Output

Table 107.23-2 "QoS Ethernet Bandwidth Status Command" Display parameters

Specific Information		
name	Type	Description
frame-net-bw	Parameter type: <SignedInteger> - a signed integer	Represents the approximate bandwidth available for Ethernet frames, which is guaranteed to be available by the physical layer. This approximation is made by the configurable ATM overhead factor.

name	Type	Description
		<i>This element is always shown.</i>
res-data-bw	Parameter type: <SignedInteger> - a signed integer	The portion the frame-net-bw that is reserved for all data services (typically HSI user traffic). This is a reserved value per DSL interface (and not per user session) and applicable in the downstream direction only. <i>This element is only shown in detail mode.</i>
res-voice-bw	Parameter type: <SignedInteger> - a signed integer	The portion of the frame-net-bw that is reserved for all voice services (typically HSI user traffic). This is a reserved value per DSL interface (and not per voice call) and applicable in the downstream direction only. The usage of this value is to set apart a minimum rate such that video and voice services can never impact each other. <i>This element is only shown in detail mode.</i>
m-cast-max-bw	Parameter type: <SignedInteger> - a signed integer	Represents the rate limitation imposed by the operator upon the maximum bandwidth to be consumed by user multicast video sessions. This limit can enforce a smaller value than actually available on the DSL link. <i>This element is only shown in detail mode.</i>
m-cast-avail-bw	Parameter type: <SignedInteger> - a signed integer	Represents the bandwidth available for multicast services, calculated by the ISAM. This value is what is left from frame-net-bw after deducting from it res-data-bw and res-voice-bw. The minimum of m-cast-avail-bw and m-cast-max-bw will be the actual limitation for user multicast bandwidth usage per DSL link. <i>This element is always shown.</i>
m-cast-used-bw	Parameter type: <SignedInteger> - a signed integer	Shows the bandwidth currently in use by pre-configured multicast streams. <i>This element is always shown.</i>

107.24 QoS Interface Bandwidth Status Command

Command Description

This command displays the bandwidth allocation and usage for each interface.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos interface-bandwidth [ (index) ]
```

Command Parameters

Table 107.24-1 "QoS Interface Bandwidth Status Command" Resource Parameters

Resource Identifier	Type	Description

Command Output

Table 107.24-2 "QoS Interface Bandwidth Status Command" Display parameters

Specific Information		
name	Type	Description
frame-net-bw	Parameter type: <SignedInteger> - a signed integer	Represents the approximate bandwidth available for Ethernet

name	Type	Description
		frames, which is guaranteed to be available by the physical layer. This approximation is made by the configurable ATM overhead factor. <i>This element is always shown.</i>
res-data-bw	Parameter type: <Qos::IgnoredSignedInteger> - a signed integer	The portion the frame-net-bw that is reserved for all data services (typically HSI user traffic). This is a reserved value per DSL interface (and not per user session) and applicable in the downstream direction only. <i>This element is only shown in detail mode.</i>
res-voice-bw	Parameter type: <Qos::IgnoredSignedInteger> - a signed integer	The portion of the frame-net-bw that is reserved for all voice services (typically HSI user traffic). This is a reserved value per DSL interface (and not per voice call) and applicable in the downstream direction only. The usage of this value is to set apart a minimum rate such that video and voice services can never impact each other. <i>This element is only shown in detail mode.</i>
m-cast-max-bw	Parameter type: <Qos::IgnoredSignedInteger> - a signed integer	Represents the rate limitation imposed by the operator upon the maximum bandwidth to be consumed by user multicast video sessions. This limit can enforce a smaller value than actually available on the DSL link. <i>This element is only shown in detail mode.</i>
m-cast-avail-bw	Parameter type: <SignedInteger> - a signed integer	Represents the bandwidth available for multicast services, calculated by the ISAM. This value is what is left from frame-net-bw after deducting from it res-data-bw and res-voice-bw. The minimum of m-cast-avail-bw and m-cast-max-bw will be the actual limitation for user multicast bandwidth usage per DSL link. <i>This element is always shown.</i>
m-cast-used-bw	Parameter type: <SignedInteger> - a signed integer	Shows the bandwidth currently in use by pre-configured multicast streams. <i>This element is always shown.</i>
u-cast-avail-us-bw	Parameter type: <SignedInteger> - a signed integer	Shows the up stream bandwidth currently available. <i>This element is always shown.</i>
u-cast-avail-ds-bw	Parameter type: <SignedInteger>	Shows the down stream

name	Type	Description
	- a signed integer	bandwidth currently available. <i>This element is always shown.</i>
cur-tcont-per-frame	Parameter type: <SignedInteger> - a signed integer	Shows the current tconts number per frame. <i>This element is always shown.</i>
free-tcont-per-frame	Parameter type: <SignedInteger> - a signed integer	Shows the free tconts number per frame. <i>This element is always shown.</i>

107.25 QoS Total Buffer Overflow Statistics for Previous Quarter

Command Description

This command displays the buffer overflow for each unit applicable on dedicated buffer pools and not on individual queues. These counters are supported on L3 units. Under normal working conditions, all these counters should read zero.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics buffer-overflow prev-15min [ (equip-slot) [ interval-num <Qos::CounterInterval> ] ]
```

Command Parameters

Table 107.25-1 "QoS Total Buffer Overflow Statistics for Previous Quarter" Resource Parameters

Resource Identifier	Type	Description
(equip-slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	physical position of the board
interval-num	Parameter type: <Qos::CounterInterval> Format: - time interval interms of 15 mins - range: [1...32]	time interval interms of 15 min

Command Output

Table 107.25-2 "QoS Total Buffer Overflow Statistics for Previous Quarter" Display parameters

Specific Information

107 QOS Status Commands

name	Type	Description
upstream	Parameter type: <Counter> - 32 bit counter	the number of buffer overflows on an LIM module in the upstream direction on a 15 minute interval basis. The upstream direction on the LIM is non-blocking, hence this value should always read zero under normal working conditions. <i>This element is always shown.</i>
upstream-obc	Parameter type: <Counter> - 32 bit counter	the number of buffer overflows on an LIM module for the OBC-directed traffic upstream on a 15 minute interval basis. In some special conditions such as system startup or re-start packet loss may occur here but under normal circumstances this counter should read zero. <i>This element is always shown.</i>
downstream-obc	Parameter type: <Counter> - 32 bit counter	the number of buffer overflows on an LIM module for the OBC-directed traffic downstream on a 15 minute interval basis. Under normal circumstances this counter should always read zero. <i>This element is always shown.</i>
downstream-unicast	Parameter type: <Counter> - 32 bit counter	a counter for the event of total buffer overflow of the downstream unicast pool. This even should not occur. Queue fill-up and tail drop is a normal condition for data traffic (individual queues) but not for voice and video on demand services (individual queues). If the total downstream pool is filled, that means that non-QoS aware packet loss will occur. <i>This element is always shown.</i>
downstream-multicast	Parameter type: <Counter> - 32 bit counter	a counter for the event of total buffer overflow of the downstream multicast pool. This even should be a rather rare event. On the long term, buffer overflow in the multicast pool may occur a few times a day (less than a few tens under heavy multicast usage). <i>This element is always shown.</i>
obc-injected	Parameter type: <Counter> - 32 bit counter	Previous 15 minute for OBC-injected buffer overflow event on LIM, This event happens if the processor cannot cope with the extensive load of the system and cannot reassemble a frame in due time. This event should not occur under normal

name	Type	Description
		working conditions. This counter is used for both upstream and downstream OBC-injected frames on an LIM. <i>This element is always shown.</i>
measured-time	Parameter type: <Qos::TimeTicks> - timer value for parameters - unit: sec	the amount of time, that statistics for this entry have been counted. <i>This element is always shown.</i>
partial-aggr-buf-ovflw	Parameter type: <Vlan::OctetCounter> - vlan counter	the number of lower traffic class packets discarded due to global buffer occupancy threshold overflow <i>This element is always shown.</i>
inv-data-flag	Parameter type: <Qos::DataFlag> (yes no) Possible values: - yes : data is not valid - no : data is valid	Indicates the validity of the corresponding PM data. <i>This element is always shown.</i>

107.26 QoS Total Buffer Overflow Statistics for Current Quarter

Command Description

This command displays the buffer overflow for each unit applicable on dedicated buffer pools and not on individual queues. These counters are supported on L3 units. Under normal working conditions, all these counters should read zero.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics buffer-overflow current-15min [ (equip-slot) ]
```

Command Parameters

107.29 QoS Total Buffer Overflow Statistics Total Status Command

Command Description

This command displays the buffer overflow for each unit applicable on dedicated buffer pools and not on individual queues. The L3 units have four isolated buffer pools for upstream, downstream, multicast, and OBC-injected traffic. Under normal working conditions, all these counters should read zero. Check these counters for QoS problems, which can occur under heavy load conditions.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics buffer-overflow total [ (equip-slot) ]
```

Command Parameters

Table 107.29-1 "QoS Total Buffer Overflow Statistics Total Status Command" Resource Parameters

Resource Identifier	Type	Description

policers-in-ppp	Parameter type: <SignedInteger> - a signed integer	this counter is no longer applicable. <i>This element is only shown in detail mode.</i>
policers-in-ip	Parameter type: <SignedInteger> - a signed integer	this counter is no longer applicable. <i>This element is only shown in detail mode.</i>
policers-in-subflow	Parameter type: <SignedInteger> - a signed integer	this counter is no longer applicable. <i>This element is only shown in detail mode.</i>
total-downstr-bytes	Parameter type: <Vlan::OctetCounter> - vlan counter	the number of LIM physical bus total-downstream passed bytes per LIM module at subscriber side since the statistics were last reset. <i>This element is always shown.</i>
total-downstr-frames	Parameter type: <Vlan::OctetCounter> - vlan counter	the number of LIM physical bus total-downstream passed frames

107 QOS Status Commands

name	Type	Description
		per LIM module at subscriber side since the statistics were last reset. <i>This element is always shown.</i>
partial-aggr-buf-ovflw	Parameter type: <Vlan::OctetCounter> - vlan counter	the number of buffer overflows on a LIM module for the discarded lower traffic class packets due to global buffer occupancy threshold overflow since the statistic was last reset. <i>This element is always shown.</i>

107.30 QoS Interface Buffer Overflow Statistics for Previous Quarter

Command Description

This command displays the interface-level QoS buffer overflow statistics of the previous 15 minute interval.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics queue prev-15min [ (index) [ queue <Qos::ExpandQueues> ] [ interval-num
<Qos::NumInterval> ] ]
```

Command Parameters

Table 107.30-1 "QoS Interface Buffer Overflow Statistics for Previous Quarter" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni ellid : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> epon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> eont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	physical port or lag port of a dsl link

inv-data-flag	Parameter type: <Qos::DataFlag> (yes no) Possible values: - yes : data is not valid - no : data is valid	Indicates the validity of the corresponding PM data. <i>This element is always shown.</i>

107.31 QoS Interface Buffer Overflow Statistics for Current Quarter

Command Description

This command displays the interface-level QoS buffer overflow statistics of the current 15 minute interval.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics queue current-15min [ (index) [ queue <Qos::ExpandQueues> ] ]
```

Command Parameters

Table 107.31-1 "QoS Interface Buffer Overflow Statistics for Current Quarter" Resource Parameters

107.32 QoS Fan Out Statistics for Previous Quarter

Command Description

This command shows the QoS Fan Out statistics of the previous 15 minute interval.

Currently, only traffic classes [0...3] are supported for traffic class voice, resp. video, CL, BE and traffic class 8 for the aggregate of the previous mentioned traffic classes

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics lt-cos prev-15min [ (equip-slot) [ traffic-class <Qos::TrafficClass> ] [ interval-num
<Qos::NumIntervalExpand> ] ]
```

Command Parameters

Table 107.32-1 "QoS Fan Out Statistics for Previous Quarter" Resource Parameters

Resource Identifier	Type	Description
(equip-slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	physical position of the board
traffic-class	Parameter type: <Qos::TrafficClass> Format: - value of traffic class, the received frame is mapped to - range: [0...8]	This object is used to index the traffic class on the LIM
interval-num	Parameter type: <Qos::NumIntervalExpand> Format: - time interval in terms of 15 mins - range: [1...96]	time interval in terms of 15 min

Command Output

Table 107.32-2 "QoS Fan Out Statistics for Previous Quarter" Display parameters

Specific Information		
name	Type	Description
load	Parameter type: <Qos::Load> - load percentage - range: [0...100]	traffic class load percentage <i>This element is always shown.</i>
forward-byte	Parameter type: <Qos::OctetCounter> - qos counter	number of bytes forwarded in this traffic class. <i>This element is always shown.</i>
forward-frame	Parameter type: <Qos::OctetCounter> - qos counter	number of frames forwarded in this traffic class. <i>This element is always shown.</i>
measured-time	Parameter type: <Qos::TimeTicks> - timer value for parameters - unit: sec	The measured time interval since the last measurement period started. <i>This element is always shown.</i>
inv-data-flag	Parameter type: <Qos::DataFlag> (yes no) Possible values: - yes : data is not valid - no : data is valid	Indicates the validity of the corresponding PM data. <i>This element is always shown.</i>

107.33 QoS Fan Out Statistics for Current 15 minutes

Command Description

This command shows the QoS Fan Out statistics of the current 15 minutes interval.

Currently, only traffic classes [0...3] are supported for traffic class voice, resp. video, CL, BE and traffic class 8 for the aggregate of the previous mentioned traffic classes

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics lt-cos current-15min [ (equip-slot) [ traffic-class <Qos::TrafficClass> ] ]
```

Command Parameters

Table 107.33-1 "QoS Fan Out Statistics for Current 15 minutes" Resource Parameters

Resource Identifier	Type	Description
(equip-slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	physical position of the board
traffic-class	Parameter type: <Qos::TrafficClass> Format: - value of traffic class, the received frame is mapped to - range: [0...8]	This object is used to index the traffic class on the LIM

Command Output

forward-frame	Parameter type: <Qos::OctetCounter> - qos counter	number of frames forwarded in this traffic class. <i>This element is always shown.</i>
elapsed-time	Parameter type: <Qos::TimeTicks> - timer value for parameters - unit: sec	The elapsed time interval since the last measurement epoch started. <i>This element is always shown.</i>
measured-time	Parameter type: <Qos::TimeTicks> - timer value for parameters - unit: sec	The measured time interval since the last measurement period started. <i>This element is always shown.</i>
inv-data-flag	Parameter type: <Qos::DataFlag> (yes no) Possible values: - yes : data is not valid - no : data is valid	Indicates the validity of the corresponding PM data. <i>This element is always shown.</i>

107.34 QoS Fan Out Statistics for Previous Day

Command Description

This command shows the QoS Fan Out statistics of the previous 1 day interval.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics lt-cos prev-1day [ (equip-slot) [ interval-num <Qos::NumInterval> ] ]
```

Command Parameters

Table 107.34-1 "QoS Fan Out Statistics for Previous Day " Resource Parameters

Resource Identifier	Type	Description
(equip-slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	physical position of the board
interval-num	Parameter type: <Qos::NumInterval> Format: - time interval interms of 15 mins - range: [1]	time interval interms of one day

Command Output

Table 107.34-2 "QoS Fan Out Statistics for Previous Day " Display parameters

Specific Information		
name	Type	Description
forward-byte	Parameter type: <Qos::OctetCounter> - qos counter	number of bytes forwarded in this LIM. <i>This element is always shown.</i>
forward-frame	Parameter type: <Qos::OctetCounter>	number of frames forwarded in

107 QOS Status Commands

name	Type	Description
	- qos counter	this LIM. <i>This element is always shown.</i>
measured-time	Parameter type: <Qos::TimeTicks> - timer value for parameters - unit: sec	The measured time interval since the last measurement period started. <i>This element is always shown.</i>
inv-data-flag	Parameter type: <Qos::DataFlag> (yes no) Possible values: - yes : data is not valid - no : data is valid	Indicates the validity of the corresponding PM data. <i>This element is always shown.</i>

107.35 QoS Fan Out Statistics for Current Day

Command Description

This command shows the QoS fan out statistics of the current 1 day interval.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics lt-cos current-1day [ (equip-slot) ]
```

Command Parameters

Table 107.35-1 "QoS Fan Out Statistics for Current Day" Resource Parameters

Resource Identifier	Type	Description
(equip-slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	physical position of the board

Command Output

Table 107.35-2 "QoS Fan Out Statistics for Current Day" Display parameters

Specific Information		
name	Type	Description
forward-byte	Parameter type: <Qos::OctetCounter> - qos counter	number of bytes forwarded in this LIM. <i>This element is always shown.</i>
forward-frame	Parameter type: <Qos::OctetCounter> - qos counter	number of frames forwarded in this LIM. <i>This element is always shown.</i>
elapsed-time	Parameter type: <Qos::TimeTicks> - timer value for parameters	The elapsed time interval since the last measurement epoch

107 QOS Status Commands

name	Type	Description
	- unit: sec	started. <i>This element is always shown.</i>
measured-time	Parameter type: <Qos::TimeTicks> - timer value for parameters - unit: sec	The measured time interval since the last measurement period started. <i>This element is always shown.</i>
inv-data-flag	Parameter type: <Qos::DataFlag> (yes no) Possible values: - yes : data is not valid - no : data is valid	Indicates the validity of the corresponding PM data. <i>This element is always shown.</i>

107.36 QoS LT Queue Overflow Statistics for Previous Quarter

Command Description

This command displays the previous 15 min QoS statistics on a per GLT LIM basis of packets discarded towards OBC and backplane.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics lt-queue prev-15min [ (index) ]
```

Command Parameters

Table 107.36-1 "QoS LT Queue Overflow Statistics for Previous Quarter" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	physical position of the board

Command Output

Specific Information		
name	Type	Description
bckpln-low-dis-frame	Parameter type: <Counter> - 32 bit counter	Current discarded packet count towards backplane due to low water mark crossing. <i>This element is always shown.</i>
bckpln-low-dis-bytes	Parameter type: <Counter> - 32 bit counter	Current discarded bytes count towards backplane due to low water mark crossing. <i>This element is always shown.</i>

107 QOS Status Commands

name	Type	Description
bckpln-high-dis-frame	Parameter type: <Counter> - 32 bit counter	Current discarded packet count towards backplane due to high water mark crossing. <i>This element is always shown.</i>
bckpln-high-dis-bytes	Parameter type: <Counter> - 32 bit counter	Current discarded bytes count towards backplane due to high water mark crossing. <i>This element is always shown.</i>
obc-low-discard-frame	Parameter type: <Counter> - 32 bit counter	Current discarded packet count towards OBC due to low water mark crossing. <i>This element is always shown.</i>
obc-low-discard-bytes	Parameter type: <Counter> - 32 bit counter	Current discarded bytes count towards OBC due to low water mark crossing. <i>This element is always shown.</i>
obc-high-discard-frame	Parameter type: <Counter> - 32 bit counter	Current discarded packet count towards OBC due to high water mark crossing. <i>This element is always shown.</i>
obc-high-discard-bytes	Parameter type: <Counter> - 32 bit counter	Current discarded byte count towards OBC due to high water mark crossing. <i>This element is always shown.</i>
bckpln_down_dis_frame	Parameter type: <Counter> - 32 bit counter	Current discarded downstream packets due to congestion or oversized. <i>This element is always shown.</i>

107.37 QoS LT Queue Overflow Statistics for current Quarter

Command Description

This command displays the current 15 min QoS statistics on a per GLT LIM basis of packets discarded towards OBC and backplane.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics lt-queue current-15min [ (index) ]
```

Command Parameters

Table 107.37-1 "QoS LT Queue Overflow Statistics for current Quarter" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	physical position of the board

Command Output

107.38 QoS Interface Color Queue Statistics for Previous 15 minutes Quarter

Command Description

This command displays the interface-level QoS color queue statistics of the previous 15 minute interval.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics color-queue prev-15min [ (index) [ queue <Qos::ExpandQueues> ] [ interval-num
<Qos::NumInterval> ] ]
```

Command Parameters

Table 107.38-1 "QoS Interface Color Queue Statistics for Previous 15 minutes Quarter" Resource Parameters

107.39 QoS Interface Color Queue Statistics for Current 15 minutes Quarter

Command Description

This command displays the interface-level QoS color queue statistics of the current 15 minute interval.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos statistics color-queue current-15min [ (index) [ queue <Qos::ExpandQueues> ] ]
```

Command Parameters

Table 107.39-1 "QoS Interface Color Queue Statistics for Current 15 minutes Quarter" Resource Parameters

Resource Identifier	Type	Description

107.40 QoS TC2QMapping Status Command

Command Description

This command shows the mapping between the traffic class and the queue of a UNI. Three rows in the table will be automatically created with default values and can only be edited but the operator. Row 1 is used for the case when the LIM has 4 queues per UNI and 4 TCs, Row 2 is used for the case when the LIM has 4 queues per UNI but 8 TCs, Row 3 is used for the case when the LIM has 8 queues per UNI but 8 TCs.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos tc-to-qmap [ (name) ]
```

Command Parameters

Table 107.40-1 "QoS TC2QMapping Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: (legacy4queue 4queuemapping 8queuemapping) Possible values: - legacy4queue : LIM has 4 queues per UNI and 4 TCs - 4queuemapping : LIM has 4 queues per UNI but 8 TCs - 8queuemapping : LIM has 8 queues per UNI but 8 TCs	name of the mapping

Command Output

Table 107.40-2 "QoS TC2QMapping Status Command" Display parameters

Specific Information		
name	Type	Description
traffic-class0	Parameter type: <Vlan::NibbleMask_0> - nibble mask	the queue corresponding to Traffic Class 0. <i>This element is always shown.</i>

name	Type	Description
	- nibble mask	Traffic Class 3. <i>This element is always shown.</i>
traffic-class4	Parameter type: <Vlan::NibbleMask_4> - nibble mask	the queue corresponding to Traffic Class 4. <i>This element is always shown.</i>
traffic-class5	Parameter type: <Vlan::NibbleMask_5> - nibble mask	the queue corresponding to Traffic Class 5. <i>This element is always shown.</i>
traffic-class6	Parameter type: <Vlan::NibbleMask_6> - nibble mask	the queue corresponding to Traffic Class 6. <i>This element is always shown.</i>
traffic-class7	Parameter type: <Vlan::NibbleMask_7> - nibble mask	the queue corresponding to Traffic Class 7. <i>This element is always shown.</i>

107.41 QoS Bandwidth Profile Actuals Command

Command Description

This command displays the QoS Bandwidth profile actual values. The values like eir, cir, air and dt configured by operator are adjusted based on the pon-type to which the profile is attached to.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show qos bandwidth-profile [ (name) [ pon-type <Qos::PonType> ] ]
```

Command Parameters

Table 107.41-1 "QoS Bandwidth Profile Actuals Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	A bandwidth profile name
pon-type	Parameter type: <Qos::PonType> Format: (gpon xgpon ngpon2 25gpon) Possible values: - gpon : gpon type - xgpon : xgpon type - ngpon2 : ngpon2 type - 25gpon : 25gpon type	pon technology

Command Output

name	Type	Description
cfg-excess-info-rate short name: config-eir	Parameter type: <Qos::BwExcessiveInfoRate> - excessive information rate - unit: kbps - range: [0...25000000]	operator configured excessive information rate <i>This element is only shown in detail mode.</i>

name	Type	Description
actl-excess-info-rate short name: actual-eir	Parameter type: <Qos::BwExcessiveInfoRate> - excessive information rate - unit: kbps - range: [0...25000000]	actual excessive information rate <i>This element is always shown.</i>
cfg-commitd-info-rate short name: config-cir	Parameter type: <Qos::CommittedInfoRate> - information rate - unit: kbps - range: [0...2147483647]	operator configured committed information rate <i>This element is only shown in detail mode.</i>
actl-commitd-info-rate short name: actual-cir	Parameter type: <Qos::CommittedInfoRate> - information rate - unit: kbps - range: [0...2147483647]	actual committed information rate <i>This element is always shown.</i>
cfg-assurd-info-rate short name: config-air	Parameter type: <Qos::BwAssuredInfoRate> - assured information rate - unit: kbps - range: [0...25000000]	operator configured assured information rate <i>This element is only shown in detail mode.</i>
actl-assurd-info-rate short name: actual-air	Parameter type: <Qos::BwAssuredInfoRate> - assured information rate - unit: kbps - range: [0...25000000]	actual assured information rate <i>This element is always shown.</i>
cfg-delay-tolerance short name: config-dt	Parameter type: <Qos::DelayTolerance> - delay tolerance - range: [1...240]	operator configured delay tolerance <i>This element is only shown in detail mode.</i>
actl-delay-tolerance short name: actual-dt	Parameter type: <Qos::DelayTolerance> - delay tolerance - range: [1...240]	actual delay tolerance <i>This element is always shown.</i>

108- ARP-RELAY Status Commands

108.1 ARP-RELAY Status Command Tree	108-5409
108.2 ARP-RELAY statistics Status Command	108-5410
108.3 ARP-RELAY summary statistics Status Command	108-5412
108.4 ARP-RELAY detailed statistics Status Command	108-5415

108.1 ARP-RELAY Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "ARP-RELAY Status Commands".

Command Tree

```
----show
  ----arp-relay-stats
    - (user-port)
      ----vlan
        - (subscr-vlan)
          ----summary
          ----extensive
```

108.2 ARP-RELAY statistics Status Command

Command Description

This command displays the detailed and summary ARP-RELAY statistics for static/dynamic VLAN-ports associated to a user interface.

User Level

The command can be accessed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> show arp-relay-stats (user-port) vlan [ (subscr-vlan) ]
```

Command Parameters

Table 108.2-1 "ARP-RELAY statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(user-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	identification of the port or virtual channel

Resource Identifier	Type	Description
	- the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity - Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] - Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] - Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

108.3 ARP-RELAY summary statistics Status Command

Command Description

This command displays the summary ARP-RELAY statistics for static/dynamic VLAN-ports associated to a user interface.

User Level

The command can be accessed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> show arp-relay-stats (user-port) vlan (subscr-vlan) summary
```

Command Parameters

Table 108.3-1 "ARP-RELAY summary statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(user-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	identification of the port or virtual channel

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::Vcild> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

Command Output

Table 108.3-2 "ARP-RELAY summary statistics Status Command" Display parameters

Specific Information		
name	Type	Description
error-summary-ctr	Parameter type: <ArpRelay::Counter> - an unsigned integer	all ARP pkts dropped because of errors

108 ARP-RELAY Status Commands

name	Type	Description
		<i>This element is always shown.</i>
antispoof-disc-ctr	Parameter type: <ArpRelay::Counter> - an unsigned integer	all ARP pkts dropped because of anti-spoofing check failed <i>This element is always shown.</i>

108.4 ARP-RELAY detailed statistics Status

Command

Command Description

This command displays the detailed ARP-RELAY statistics for static/dynamic VLAN-ports associated to a user interface.

User Level

The command can be accessed by operators with ip privileges.

Command Syntax

The command has the following syntax:

> show arp-relay-stats (user-port) vlan (subscr-vlan) extensive

Command Parameters

Table 108.4-1 "ARP-RELAY detailed statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(user-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	identification of the port or virtual channel

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::Vcild> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

Command Output

Table 108.4-2 "ARP-RELAY detailed statistics Status Command" Display parameters

Specific Information		
name	Type	Description
unsupported-hwtype	Parameter type: <ArpRelay::Counter> - an unsigned integer	wrong hardware type in ARP pkt header

name	Type	Description
		<i>This element is always shown.</i>
unsupported-l3proto	Parameter type: <ArpRelay::Counter> - an unsigned integer	wrong protocol type in ARP pkt header <i>This element is always shown.</i>
unsupported-addrlen	Parameter type: <ArpRelay::Counter> - an unsigned integer	wrong adress length in ARP pkt header <i>This element is always shown.</i>
unsupported-probepkt	Parameter type: <ArpRelay::Counter> - an unsigned integer	nbr ARP probe pkts(i.e source ip address all zero's) <i>This element is always shown.</i>
inv-pktlen	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid ARP pkt length <i>This element is always shown.</i>
inv-opcode	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid /not supported opcode in ARP pkt <i>This element is always shown.</i>
inv-arpreq-srcmac	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid source mac addr in ARP request <i>This element is always shown.</i>
inv-arpreq-dstip	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid target IP addr in ARP request <i>This element is always shown.</i>
inv-arpreq-srcip	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid source IP addr in ARP request <i>This element is always shown.</i>
inv-arpreply-srcmac	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid source mac addr in ARP reply <i>This element is always shown.</i>
inv-arpreply-dstip	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid target IP addr in ARP reply <i>This element is always shown.</i>
inv-arpreply-srcip	Parameter type: <ArpRelay::Counter> - an unsigned integer	invalid target IP addr in ARP request <i>This element is always shown.</i>
arpreq-same-itf	Parameter type: <ArpRelay::Counter> - an unsigned integer	arp-req pkts dropped because sender and target IP addr learnt on same user interface <i>This element is always shown.</i>
arpreq-antispoof	Parameter type: <ArpRelay::Counter> - an unsigned integer	arp-req IP antispoofing check failure <i>This element is always shown.</i>
arpreq-up	Parameter type: <ArpRelay::Counter> - an unsigned integer	nbr upstream arp-request pkts relayed <i>This element is always shown.</i>
arpreq-dn	Parameter type: <ArpRelay::Counter> - an unsigned integer	nbr downstream arp-request pkts relayed <i>This element is always shown.</i>
arpreply-same-itf	Parameter type: <ArpRelay::Counter> - an unsigned integer	arp-req pkts dropped because sender and target IP addr learnt on same user interface <i>This element is always shown.</i>
arpreply-antispoof	Parameter type: <ArpRelay::Counter> - an unsigned integer	arp-reply IP antispoofing check failure <i>This element is always shown.</i>
arpreply-up	Parameter type: <ArpRelay::Counter> - an unsigned integer	nbr upstream arp-reply pkts relayed <i>This element is always shown.</i>

109.2 xDSL Profiles Status Command

Command Description

This command displays xDSL profiles.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

> show xdsl profiles

Command Output

Table 109.2-2 "xDSL Profiles Status Command" Display parameters

Specific Information		
name	Type	Description
next-av-serv-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available service profile index <i>This element is always shown.</i>
max-serv-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of service profiles that can be created <i>This element is always shown.</i>
next-av-spec-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available spectrum profile index <i>This element is always shown.</i>
max-spec-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of spectrum profiles that can be created <i>This element is always shown.</i>
next-av-dpbo-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available dpbo profile index <i>This element is always shown.</i>
max-dpbo-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of dpbo profiles that can be created <i>This element is always shown.</i>
next-av-rtx-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available rtx profile index <i>This element is always shown.</i>
max-rtx-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of rtx profiles that can be created <i>This element is always shown.</i>
next-av-vect-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available vectoring profile index <i>This element is always shown.</i>
max-vect-pr	Parameter type: <AsamMaxProfileIndex>	max number of vectoring profiles

109 xDSL Status Commands

name	Type	Description
	- a maximum value of a profile index - range: [0...65535]	that can be created <i>This element is always shown.</i>
next-av-vce-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available vectoring control entity profile index <i>This element is always shown.</i>
max-vce-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of vectoring control entity profiles that can be created <i>This element is always shown.</i>
next-av-sos-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available sos profile index <i>This element is always shown.</i>
max-sos-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of sos profiles that can be created <i>This element is always shown.</i>
max-leg-upbo-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of xdsl legacy upbo profiles that can be created <i>This element is always shown.</i>
next-av-leg-upbo-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available legacy upbo profile index <i>This element is always shown.</i>

109.3 xDSL PM Interval Per Interface Status Command

Command Description

This command displays the number of available pm intervals per xdsl interface.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl xdsl-int [ (if-index) ]
```

Command Parameters

Table 109.3-1 "xDSL PM Interval Per Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.3-2 "xDSL PM Interval Per Interface Status Command" Display parameters

Specific Information		
name	Type	Description
cur-int-elapsetime	Parameter type: <SignedInteger> - a signed integer	nbr of sec elapsed in cur intvl err-measurement <i>This element is always shown.</i>
cur-1day-elapsetime	Parameter type: <SignedInteger> - a signed integer	nbr of sec elapsed in cur one day err-measurement <i>This element is always shown.</i>
valid-intervals	Parameter type: <SignedInteger>	nbr of prev intvl for which valid

109 xDSL Status Commands

name	Type	Description
	- a signed integer	data has been stored <i>This element is always shown.</i>
valid-1days	Parameter type: <SignedInteger> - a signed integer	nbr of prev 1Days for which valid data has been stored <i>This element is always shown.</i>

Only Show Details: global settings		
name	Type	Description
xdsl-coding-type	Parameter type: <Xdsl::Coding> (other dmt cap) Possible values: - other : other type - dmt : DMT type - cap : CAP type	type of modulation technique <i>This element is only shown in detail mode.</i>

109.4 xDSL Operational Data Near End Line Status Command

Command Description

This command displays the xDSL operational data for the near end of line. It displays the XTU-O controlled parameters that can be receiver related or transmitted related.

Note: the applicability of parameters displayed in the command output, depends on the operational mode of the line ADSLx/VDSLx, VDSL2, G.Fast

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl operational-data near-end line [ (if-index) ]
```

Command Parameters

Table 109.4-1 "xDSL Operational Data Near End Line Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.4-2 "xDSL Operational Data Near End Line Status Command" Display parameters

Specific Information		
name	Type	Description
rel-cap-occ-up	Parameter type: <Xdsl::CapacityUtil> - utilization of the capacity available - unit: % - range: [0...100]	ratio of actual bitrate over the max attainable bitrate. Only applicable for ADSLx/VDSLx. <i>This element is always shown.</i>

109 xDSL Status Commands

name	Type	Description
noise-margin-up	Parameter type: <Xdsl::NoiseValue> - a noise value - unit: 1/10 dB	current noise margin for the upstream direction. Applicable for all operational modes. For GFast a special value -512 is reported when no data is available. <i>This element is always shown.</i>
output-power-down short name: output-pwr-dn	Parameter type: <Xdsl::OutputPwr> - a power value - unit: 1/10 dBm	actual aggregate output power for the downstream carriers <i>This element is always shown.</i>
sig-attenuation-up short name: sig-attn-up	Parameter type: <Xdsl::SigAttenuation> - an attenuation value - unit: 1/10 dB	diff btw pwr at near-end rx-ver and that tx-ed from far-end. Only applicable for ADSLx/VDSLx. <i>This element is only shown in detail mode.</i>
loop-attenuation-up short name: loop-attn-up	Parameter type: <Xdsl::SigAttenuation> - an attenuation value - unit: 1/10 dB	diff btw pwr at near-end rx-ver and tx-ed from far-end over all sub-carriers. Only applicable for ADSLx/VDSLx. <i>This element is only shown in detail mode.</i>
actual-opmode	Parameter type: <Xdsl::OneOpModeTypeLinePreDef> (ansi-t1413 etsi-dts g992-1-a g992-1-b g992-2-a g992-3-a g992-3-b g992-3-aj g992-3-l1 g992-3-l2 g992-3-am g992-5-a g992-5-b ansi-t1.424 etsi-ts itu-g993-1 ieee-802.3ah g992-5-aj g992-5-am g993-2-8a g993-2-8b g993-2-8c g993-2-8d g993-2-12a g993-2-12b g993-2-17a g993-2-30a g993-2-35b gfast default) Possible values: - ansi-t1413 : ANSI T1.413-1998 - etsi-dts : ETSI DTS/TM06006 - g992-1-a : G.992.1 POTS non-overlapped spectrum - g992-1-b : G.992.1 ISDN non-overlapped spectrum	actual value of the operational mode <i>This element is only shown in detail mode.</i>

name	Type	Description
	- g993-2-17a : G.993.2_17A VDSL-2 with profile 17A	
g993-2-30a	Parameter type: <Xdsl::GProfile30A> (dis-g993-2-30a g993-2-30a) Possible values: - dis-g993-2-30a : disable G.993.2_30A VDSL-2 with profile 30A - g993-2-30a : G.993.2_30A VDSL-2 with profile 30A	VDSL-2 with profile 30A <i>This element is only shown in detail mode.</i>
g993-2-35b	Parameter type: <Xdsl::GProfile35B> (dis-g993-2-35b g993-2-35b) Possible values: - dis-g993-2-35b : disable G.993.2_35B VDSL-2 with profile 35B - g993-2-35b : G.993.2_35B VDSL-2 with profile 35B	VDSL-2 with profile 35B <i>This element is only shown in detail mode.</i>
actual-psd-down short name: act-psd-dn	Parameter type: <Xdsl::SignedIntegerDBHZ> - a power spectral density value - unit: 1/10 dBm/Hz	avg transmit power spectrum density over used carriers. Only applicable for ADSLx/VDSLx. <i>This element is always shown.</i>
power-mgnt-state short name: pwr-mgnt	Parameter type: <Xdsl::PowerMgtState> (10 12 13) Possible values: - 10 : full transmission - 12 : downstream net data rate is reduced - 13 : no transmission	actual power management state of the line <i>This element is always shown.</i>
per-bnd-lp-att-up	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	loop attenuation for each upstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
pr-bnd-sgn-att-up	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	signal attenuation for each upstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
pr-bnd-nois-mg-up	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	noise margin for each upstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
high-freq-up	Parameter type: <Xdsl::HighFreqType> - a frequency - unit: kHz	highest carrier frequency used in the upstream direction in case of VDSL2 and G.Fast <i>This element is only shown in detail mode.</i>
elect-length	Parameter type: <Xdsl::ElectrLengthType> - Electrical length. When ELE-M1 is used, value 255 specifies that this parameter is not supported. - unit: 1/2 * dB @ 1MHz - range: [0...255]	Line Electrical Length actually used by XTU-C when mode is VDSL2. <i>This element is only shown in detail mode.</i>
time-adv-corr	Parameter type: <Xdsl::TimingAdvanceType> - a time value - unit: ns * 10 - range: [-25000...25000]	the timing advance of transmitted symbol with respect to the received symbol when mode is VDSL2 <i>This element is only shown in detail mode.</i>
actual-tps-tc-mode	Parameter type: <Xdsl::ActualTpsTcMode> (no-value	actual transfer mode <i>This element is only shown in</i>

name	Type	Description
	atm ptm system-default) Possible values: - no-value : no value - atm : atm mode - ptm : ptm mode - system-default : determined by the system, based on board type	detail mode.
actual-ra-mode-up	Parameter type: <Xdsl::ActualRaMode> (no-value operator-ctrlld automatic dynamic sos-dynamic) Possible values: - no-value : not supported - operator-ctrlld : operatorControlledRateAdaptive - automatic : automaticRateAdaptiveAtStartup - dynamic : dynamicRateAdaptive - sos-dynamic : dynamic rate adaptive mode with SOS	actual ra mode for upstream. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>
vect-cpe-type	Parameter type: <Xdsl::ActualVectCpeType> (gvector gvect-friendly gvect-friendly-dn legacy unknown) Possible values: - gvector : g.vector capable cpe type - gvect-friendly : full vector friendly cpe type (downstream/upstream) - gvect-friendly-dn : vector friendly cpe type downstream - legacy : legacy cpe type - unknown : unknown,not supported cpe type	actual operating mode of the cpe connected to the line in case of VDSL2. <i>This element is only shown in detail mode.</i>
vect-fallback	Parameter type: <Xdsl::ActualVectFallbackState> ((normal-mode normal) (fallback-mode fallback)) Possible values: - normal-mode : line is operating using normal profiles - normal : line is operating using normal profiles - fallback-mode : line is operating using vectoring fallback configured profiles - fallback : line is operating using vectoring fallback configured profiles	actual vectoring fallback state of the line in case of VDSL2. <i>This element is only shown in detail mode.</i>
vect-legacy-cancel	Parameter type: <Xdsl::ActualVectLegacyFextCancelMethodDownstream> (no-legacy-fext-cancel method-1 method-2) Possible values: - no-legacy-fext-cancel : crosstalk cancellation of legacy line is disabled - method-1 : method 1 is used to cancel crosstalk of legacy lines into g.vect lines - method-2 : method 2 is used to cancel crosstalk of legacy lines into g.vect lines	method used to cancel crosstalk from legacy VDSL2 lines into g.vect lines. <i>This element is only shown in detail mode.</i>
upbo-aele-mode	Parameter type: <Xdsl::UpboAeleModeUsed>	the actual AELE mode of a line

name	Type	Description
	- the actual electrical length estimation mode used in AeLe Method - range: [0...3]	in case of VDSL2. <i>This element is only shown in detail mode.</i>
upbo-aele-pb-up	Parameter type: <Xdsl::ElectricalLengthTypeUp> - First two octets represent value for band 0 and specifies supported range 0..1280 and 2047. Similarly next two octets represent value for band 1 and so on. Default value 0xFFFF per band specifies that no data is available. - unit: 1/10dB - length: 10	the Line Electrical Length Estimation per band calculated by the XTU-C when mode is VDSL2 <i>This element is only shown in detail mode.</i>
upbo-aele-rx-thrs-up	Parameter type: <Xdsl::UpboAEleRxThrsUp> - the upstream received signal level threshold value used in AELE. This parameter represents an offset from -100 dBm/Hz - unit: dB - range: [-64...0,255]	the upstream received signal level threshold value when mode is VDSL2. Special value 255 is reported when not applicable. <i>This element is only shown in detail mode.</i>
roc-bitrate-impact-up	Parameter type: <Xdsl::RocBitRateKbps> (roc-disabled <Xdsl::BitRateKbps>) Possible values: - roc-disabled : ROC channel for SOS is disabled Field type <Xdsl::BitRateKbps> - Bitrate in kbps - unit: kbps	actual loss of bitrate or ETR due to ROC is active in upstream when mode is VDSL2. Special value -1 is reported when no data available or ROC not active. <i>This element is only shown in detail mode.</i>
actual-inp-roc-up	Parameter type: <Xdsl::ActInpRoc> - actual impulse noise protection for ROC - unit: 1/10 DMT symbols - range: [0...255]	actual impulse noise protection of the ROC in upstream when mode is VDSL2. Special value 255 is reported when no data available or data out-of-range. <i>This element is only shown in detail mode.</i>
actual-snr-m-roc-up	Parameter type: <Xdsl::ActSnrMROC> - actual SNR Margin for ROC - unit: 1/10 dB - range: [-5120,-640...630]	actual SNR Margin of the ROC in upstream when mode is VDSL2. Special value -5120 is reported when no data available or data out-of-range. <i>This element is only shown in detail mode.</i>
vdsl2-lr-support	Parameter type: <Xdsl::LongReachSupportNE> (not-supported supported) Possible values: - not-supported : xtuc does not support vdsl2 lr - supported : xtuc supports vdsl2 lr	Status of long reach support by XTU-C <i>This element is only shown in detail mode.</i>

109.5 xDSL Operational Data Near End Channel Status Command

Command Description

This command displays the xDSL operational data for the near and of line. It displays the XTU-O controlled parameters that can be receiver related or transmitted related.

Note: the applicability of parameters displayed in the command output, depends on the operational mode of the line ADSLx/VDSLx, VDSL2, G.Fast. For G.Fast, RTX is always in use.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl operational-data near-end channel [ (if-index) ]
```

Command Parameters

Table 109.5-1 "xDSL Operational Data Near End Channel Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.5-2 "xDSL Operational Data Near End Channel Status Command" Display parameters

Specific Information		
name	Type	Description
actual-bitrate-up	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	bitrate or expected throughput for upstream fast or interleaved data flow <i>This element is always shown.</i>

name	Type	Description
attain-bitrate-up	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	maximum attainable bit rate or expected throughput the modem can support <i>This element is always shown.</i>
interleave-delay-down	Parameter type: <Xdsl::SignedIntegerMSEC> - milli-second - unit: msec	delay caused by the interleaving and deinterleaving functionality or delay caused by rtx functionality. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
imp-noise-prot-down	Parameter type: <Xdsl::SignedIntegerSYMBOL> - impulse noise protection - unit: 1/10 symbols	actual impulse noise protection or actual impulse noise protection against shine when the rtx functionality is in use. Value 2047 for ADSLx/VDSLx and 20470 for G.Fast indicates a reported value equal to or higher than the value. <i>This element is always shown.</i>
net-data-rate-rtx-up	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	actual net data rate in upstream direction <i>This element is only shown in detail mode.</i>
inp-rein-dn	Parameter type: <Xdsl::SignedIntegerSYMBOL> - impulse noise protection - unit: 1/10 symbols	actual impulse noise protection or actual impulse noise protection against rein when the rtx functionality is in use. Special value 255 for ADSLx/VDSLx and 630 for G.Fast indicates a reported value equal to or higher than the special value. <i>This element is only shown in detail mode.</i>
attain-netrate-rtx-up	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	maximum attainable net data rate in upstream direction <i>This element is only shown in detail mode.</i>
prev-bitrate-up	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	previous bit rate in upstream direction. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>
actual-dtusize-up	Parameter type: <Xdsl::DtuSizeUS> - dtu size in units of 1/10000 symbols - range: [0,2500...40000]	actual dtu size in upstream direction <i>This element is only shown in detail mode.</i>

109.6 xDSL Operational Data Far End Line Status Command

Command Description

This command displays the xDSL operational data for the line far end. It displays the XTU-R controlled parameters that can be receiver related or transmitted related.

Note: the applicability of parameters displayed in the command output, depends on the operational mode of the line ADSLx/VDSLx, VDSL2, G.Fast

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl operational-data far-end line [ (if-index) ]
```

Command Parameters

Table 109.6-1 "xDSL Operational Data Far End Line Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.6-2 "xDSL Operational Data Far End Line Status Command" Display parameters

Specific Information		
name	Type	Description
rel-cap-occ-down	Parameter type: <Xdsl::CapacityUtil> - utilization of the capacity available - unit: % - range: [0...100]	ratio of actual bitrate over the max attainable bitrate. Only applicable for ADSLx/VDSLx. <i>This element is always shown.</i>

109 xDSL Status Commands

name	Type	Description
noise-margin-down	Parameter type: <Xdsl::NoiseValue> - a noise value - unit: 1/10 dB	current noise margin for the downstream direction. Applicable for all operational modes. For G.Fast, -512 is reported when no data is available. <i>This element is always shown.</i>
output-power-up	Parameter type: <Xdsl::OutputPwr> - a power value - unit: 1/10 dBm	actual aggregate output power for the upstream carriers <i>This element is always shown.</i>
sig-attenuation-down short name: sig-attn-dn	Parameter type: <Xdsl::SigAttenuation> - an attenuation value - unit: 1/10 dB	diff btw pwr at far-end rx-ver and tx-ed from near-end. Only applicable for ADSLx/VDSLx. <i>This element is only shown in detail mode.</i>
loop-attenuation-down short name: loop-attn-dn	Parameter type: <Xdsl::SigAttenuation> - an attenuation value - unit: 1/10 dB	diff btw pwr at far-end rx-ver and tx-ed from near-end over all sub-carriers. Only applicable for ADSLx/VDSLx. <i>This element is only shown in detail mode.</i>
xtu-r-opmode	Parameter type: <Xdsl::OpModeTypeLinePreDef> (ansi-t1413 etsi-dts g992-1-a g992-1-b g992-2-a g992-3-a g992-3-b g992-3-aj g992-3-l1 g992-3-l2 g992-3-am g992-5-a g992-5-b ansi-t1.424 etsi-ts itu-g993-1 ieee-802.3ah g992-5-aj g992-5-am g993-2-8a g993-2-8b g993-2-8c g993-2-8d g993-2-12a g993-2-12b g993-2-17a g993-2-30a g993-2-35b gfast default <Xdsl::OpModeType>) Possible values: - ansi-t1413 : ANSI T1.413-1998 - etsi-dts : ETSI DTS/TM06006 - g992-1-a : G.992.1 POTS non-overlapped spectrum - g992-1-b : G.992.1 ISDN non-overlapped spectrum	bitmap which represents the operational modes <i>This element is only shown in detail mode.</i>

g993-2-12a	Parameter type: <Xdsl::GProfile12A> (dis-g993-2-12a g993-2-12a) Possible values: - dis-g993-2-12a : disable G.993.2_12A VDSL-2 with profile 12A - g993-2-12a : G.993.2_12A VDSL-2 with profile 12A	VDSL-2 with profile 12A <i>This element is only shown in detail mode.</i>
g993-2-12b	Parameter type: <Xdsl::GProfile12B> (dis-g993-2-12b g993-2-12b) Possible values: - dis-g993-2-12b : disable G.993.2_12B VDSL-2 with profile 12B - g993-2-12b : G.993.2_12B VDSL-2 with profile 12B	VDSL-2 with profile 12B <i>This element is only shown in detail mode.</i>
g993-2-17a	Parameter type: <Xdsl::GProfile17A> (dis-g993-2-17a g993-2-17a) Possible values: - dis-g993-2-17a : disable G.993.2_17A VDSL-2 with profile 17A - g993-2-17a : G.993.2_17A VDSL-2 with profile 17A	VDSL-2 with profile 17A <i>This element is only shown in detail mode.</i>
g993-2-30a	Parameter type: <Xdsl::GProfile30A> (dis-g993-2-30a g993-2-30a) Possible values: - dis-g993-2-30a : disable G.993.2_30A VDSL-2 with profile 30A - g993-2-30a : G.993.2_30A VDSL-2 with profile 30A	VDSL-2 with profile 30A <i>This element is only shown in detail mode.</i>
g993-2-35b	Parameter type: <Xdsl::GProfile35B> (dis-g993-2-35b g993-2-35b) Possible values:	VDSL-2 with profile 35B <i>This element is only shown in detail mode.</i>

name	Type	Description
	- dis-g993-2-35b : disable G.993.2_35B VDSL-2 with profile 35B - g993-2-35b : G.993.2_35B VDSL-2 with profile 35B	
actual-psd-up	Parameter type: <Xdsl::SignedIntegerDBHZ> - a power spectral density value - unit: 1/10 dBm/Hz	avg transmit power spectrum density over used carriers. Only applicable for ADSLx/VDSLx. <i>This element is always shown.</i>
pr-bnd-lp-att-dn	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	loop attenuation for each downstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
pr-bnd-sig-att-dn	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	loop attenuation for each downstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
pr-bnd-nmgn-dn	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	loop attenuation for each downstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
elect-length-est	Parameter type: <Xdsl::ElectrLengthType> - Electrical length. When ELE-M1 is used, value 255 specifies that this parameter is not supported. - unit: 1/2 * dB @ 1MHz - range: [0...255]	Line Electrical Length actually estimated by XTU-R when mode is VDSL2 <i>This element is only shown in detail mode.</i>
time-adv-prp	Parameter type: <Xdsl::TimingAdvanceType> - a time value - unit: ns * 10 - range: [-25000...25000]	the timing advance of transmitted symbol with respect to the received symbol when mode is VDSL2 <i>This element is only shown in detail mode.</i>
high-freq-dn	Parameter type: <Xdsl::HighFreqType> - a frequency - unit: kHz	highest carrier frequency used in the downstream direction in case of VDSL2 and G.Fast <i>This element is only shown in detail mode.</i>
actual-ra-mode-dn	Parameter type: <Xdsl::ActualRaMode> (no-value operator-ctrlld automatic dynamic sos-dynamic) Possible values: - no-value : not supported - operator-ctrlld : operatorControlledRateAdaptive - automatic : automaticRateAdaptiveAtStartup - dynamic : dynamicRateAdaptive - sos-dynamic : dynamic rate adaptive mode with SOS	actual ra mode for downstream. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>
cpecap-recvd	Parameter type: <Xdsl::VectCpeReceived> (no yes yes yes yes yes	vectoring CPE capabilities are received from the CPE. "no" is reported in case of G.Fast. <i>This element is only shown in detail mode.</i>

name	Type	Description
	yes yes yes yes yes yes yes yes yes yes) Possible values: - no : Vectoring Cpe Capabilities are not reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported - yes : Vectoring Cpe Capabilities are reported	
cpecap-gvector	Parameter type: <Xdsl::GvectorCpeShow> (no yes) Possible values: - no : not g.vector capable cpe - yes : g.vector capable cpe	g.vector capable cpe <i>This element is only shown in detail mode.</i>
cpecap-gvect-friendly	Parameter type: <Xdsl::FullVectFriendlyCpeShow> (no yes) Possible values: - no : no full vector friendly (dn/up) cpe - yes : full vector friendly (dn/up) cpe	full g.vector friendly cpe <i>This element is only shown in detail mode.</i>
cpecap-gvect-friend-dn	Parameter type: <Xdsl::VectFriendlyCpeShow> (no yes) Possible values: - no : not vector friendly downstream cpe - yes : vector friendly downstream cpe	g.vector friendly downstream cpe <i>This element is only shown in detail mode.</i>
cpecap-legacy	Parameter type: <Xdsl::LegacyCpeShow> (no yes) Possible values: - no : no legacy cpe - yes : legacy cpe	legacy cpe <i>This element is only shown in detail mode.</i>
upbo-aele-pb-dn	Parameter type: <Xdsl::ElectricalLengthTypeDn> - First two octets represent value for band 0 and specifies supported range 0..1280 and 2047. Similarly next two octets represent value for band 1 and so on. Default value 0xFFFF per band specifies that no data is available. - unit: 1/10dB	the Line Electrical Length Estimation per band calculated by the XTU-R when mode is VDSL2 <i>This element is only shown in detail mode.</i>

name	Type	Description
	- length: 10	
upbo-aele-rx-thrs-dn	Parameter type: <Xdsl::UpboAEleRxThrsDn> - the downstream received signal level threshold value used in AELE. This parameter represents an offset from -100 dBm/Hz - unit: dB - range: [-64...0,255]	the downstream received signal level threshold value when mode is VDSL2. Special value 255 is reported when not applicable. <i>This element is only shown in detail mode.</i>
roc-bitrate-impact-dn	Parameter type: <Xdsl::RocBitRateKbps> (roc-disabled <Xdsl::BitRateKbps>) Possible values: - roc-disabled : ROC channel for SOS is disabled Field type <Xdsl::BitRateKbps> - Bitrate in kbps - unit: kbps	actual loss of bitrate or ETR due to ROC is active in downstream when mode is VDSL2. Special value -1 is reported when no data available or ROC not active. <i>This element is only shown in detail mode.</i>
actual-inp-roc-dn	Parameter type: <Xdsl::ActInpRoc> - actual impulse noise protection for ROC - unit: 1/10 DMT symbols - range: [0...255]	actual impulse noise protection of the ROC in downstream when mode is VDSL2. Special value 255 is reported when no data available or data out-of-range. <i>This element is only shown in detail mode.</i>
actual-snr-m-roc-dn	Parameter type: <Xdsl::ActSnrMroc> - actual SNR Margin for ROC - unit: 1/10 dB - range: [-5120,-640...630]	actual SNR Margin of the ROC in downstream when mode is VDSL2. Special value -5120 is reported when no data available or data out-of-range. <i>This element is only shown in detail mode.</i>
vdsl2-lr-support	Parameter type: <Xdsl::LongReachSupportFE> (not-supported supported) Possible values: - not-supported : xtur does not support vdsl2 lr - supported : xtur supports vdsl2 lr	Status of long reach support by XTU-R <i>This element is only shown in detail mode.</i>
vdsl2-cpecap-fdps	Parameter type: <Xdsl::Vdsl2FdpsSupportFE> (not-supported supported) Possible values: - not-supported : xtur does not support fdps - supported : xtur supports fdps	Status of vdsl2 fdps support by XTU-R <i>This element is only shown in detail mode.</i>

109.7 xDSL Operational Data Far End Channel Status Command

Command Description

This command displays the xDSL operational data for the far end of the channel. It displays the XTU-R controlled parameters that can be receiver related or transmitted related.

Note: the applicability of parameters displayed in the command output, depends on the operational mode of the line ADSLx/VDSLx, VDSL2, G.Fast. For G.Fast, RTX is always in use.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl operational-data far-end channel [ (if-index) ]
```

Command Parameters

Table 109.7-1 "xDSL Operational Data Far End Channel Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.7-2 "xDSL Operational Data Far End Channel Status Command" Display parameters

Specific Information		
name	Type	Description
actual-bitrate-down short name: act-br-down	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	bitrate or expected throughput for downstream fast or interleaved data flow <i>This element is always shown.</i>

name	Type	Description
attain-bitrate-down short name: att-br-down	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	maximum attainable bit rate or expected throughput the modem can support <i>This element is always shown.</i>
interleave-delay-up	Parameter type: <Xdsl::SignedIntegerMSEC> - milli-second - unit: msec	delay caused by the interleaving and deinterleaving functionality or delay caused by rtx functionality. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
imp-noise-prot-up	Parameter type: <Xdsl::SignedIntegerSYMBOL> - impulse noise protection - unit: 1/10 symbols	actual impulse noise protection or actual impulse noise protection against shine when the rtx functionality is in use. Value 2047 for ADSLx/VDSLx and 20470 for G.Fast indicates a reported value equal to or higher than the value. <i>This element is always shown.</i>
act-l2-bitrt-down short name: act-l2-br-dn	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	actual L2 bitrate when in L2 state. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
net-data-rate-rtx-dn	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	actual net data rate in downstream direction <i>This element is only shown in detail mode.</i>
inp-rein-up	Parameter type: <Xdsl::SignedIntegerSYMBOL> - impulse noise protection - unit: 1/10 symbols	actual impulse noise protection or actual impulse noise protection against rein when the rtx functionality is in use. Special value 255 for ADSLx/VDSLx and 630 for G.Fast indicates a reported value equal to or higher than the special value. <i>This element is only shown in detail mode.</i>
attain-netrate-rtx-dn	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	maximum attainable net data rate in downstream direction <i>This element is only shown in detail mode.</i>
prev-bitrate-dw	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	previous bit rate in downstream direction. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>
actual-dtusize-down	Parameter type: <Xdsl::DtuSizeDS> - dtu size in units of 1/10000 symbols - range: [0,2500...40000]	actual dtu size in downstream direction <i>This element is only shown in detail mode.</i>

109.8 xDSL Operational Data Statistics

Command Description

This command displays the xDSL operational data statistics.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl operational-data line [ (if-index) ]
```

Command Parameters

Table 109.8-1 "xDSL Operational Data Statistics" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.8-2 "xDSL Operational Data Statistics" Display parameters

Specific Information		
name	Type	Description
adm-state	Parameter type: <Itf::ifAdminStatus> (not-appl up down testing) Possible values: - not-appl : not-applicable - up : admin status is up - down : admin status is down - testing : no operational packets can be passed	specifies state of the interface <i>This element is always shown.</i>

name	Type	Description
opr-state/tx-rate-ds	Parameter type: <Xdsl::combinedCol> (down testing unknown dormant up : <Xdsl::bitrate>) Possible values: - up : up,traffic can pass - down : down,no traffic is passing - testing : testing,no traffic is passing - unknown : unknown - dormant : dormant,no traffic is passing Field type <Xdsl::bitrate> - bitrate - unit: kbits/sec	current operational state of the interface. <i>This element is always shown.</i>
tx-rate/us	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	bitrate or expected throughput for upstream fast or interleaved data flow <i>This element is always shown.</i>
tx-rate/ds	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	bitrate or expected throughput for downstream fast or interleaved data flow <i>This element is always shown.</i>
max-tx-rate-us	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	maximum attainable bit rate or expected throughput the modem can support <i>This element is only shown in detail mode.</i>
max-tx-rate-ds	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	maximum attainable bit rate or expected throughput the modem can support <i>This element is only shown in detail mode.</i>
inp-up	Parameter type: <Xdsl::SignedIntegerSYMBOL> - impulse noise protection - unit: 1/10 symbols	actual impulse noise protection or actual impulse noise protection against shine when the rtx functionality is in use. Value 2047 for ADSLx/VDSLx and 20470 for G.Fast indicates a reported value equal to or higher than the value. <i>This element is only shown in detail mode.</i>
inp-dn	Parameter type: <Xdsl::SignedIntegerSYMBOL> - impulse noise protection - unit: 1/10 symbols	actual impulse noise protection or actual impulse noise protection against shine when the rtx functionality is in use. Value 2047 for ADSLx/VDSLx and 20470 for G.Fast indicates a reported value equal to or higher than the value. <i>This element is only shown in detail mode.</i>
interl-us	Parameter type: <Xdsl::SignedIntegerMSEC> - milli-second - unit: msec	delay caused by the interleaving and deinterleaving functionality or delay caused by the rtx functionality. Only applicable for

rinit-1d	Parameter type: <Counter> - 32 bit counter	number of times the modem re-initialize the line in a day. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>
actual-tps-tc-mode	Parameter type: <Xdsl::ActualTpsTcMode> (no-value atm ptm system-default) Possible values: - no-value : no value - atm : atm mode - ptm : ptm mode - system-default : determined by the system, based on board type	actual transfer mode <i>This element is only shown in detail mode.</i>
rtx-mode-up	Parameter type: <Xdsl::ActualRtxModeType> (in-use forbidden no-xtuc no-xtur no-xtuc-xtur supported unknown) Possible values: - in-use : retransmission in use - forbidden : retransmission not_in_use forbidden - no-xtuc : retransmission not_in_use and not_supported for xtuc - no-xtur : retransmission not_in_use and not_supported for xtur - no-xtuc-xtur : retransmission not_in_use and not_supported for xtuc and xtur - supported : retransmission not selected but supported - unknown : retransmission not supported	actual retransmission mode in upstream direction. "in-use" is reported in case of G.Fast. <i>This element is only shown in detail mode.</i>

109 xDSL Status Commands

name	Type	Description
rtx-mode-dn	Parameter type: <Xdsl::ActualRtxModeType> (in-use forbidden no-xtuc no-xtur no-xtuc-xtur supported unknown) Possible values: - in-use : retransmission in use - forbidden : retransmission not_in_use forbidden - no-xtuc : retransmission not_in_use and not_supported for xtuc - no-xtur : retransmission not_in_use and not_supported for xtur - no-xtuc-xtur : retransmission not_in_use and not_supported for xtuc and xtur - supported : retransmission not selected but supported - unknown : retransmission not supported	actual retransmission mode in downstream direction. "in-use" is reported in case of G.Fast. <i>This element is only shown in detail mode.</i>
total-reset-attempt	Parameter type: <Counter> - 32 bit counter	total number of auto-port-reset attempts for line <i>This element is only shown in detail mode.</i>
success-reset-attempt	Parameter type: <Counter> - 32 bit counter	number of successful auto-port-reset attempts for line <i>This element is only shown in detail mode.</i>
cur-init-state	Parameter type: <Xdsl::CurrentInitStateType> (idle handshake wait-for-start channel-discovery training channel-analysis showtime loop-diagnostics selt shutdown not-available) Possible values: - idle : No activity on the line - handshake : Handshake started - wait-for-start : Handshake on hold for vectoring - channel-discovery : Channel discovery phase started - training : Training phase started - channel-analysis : Channel analysis and exchange phase started - showtime : Showtime achieved - loop-diagnostics : Loop Diagnostics test mode active - selt : SELT test mode active - shutdown : Line not allowed to start-up - not-available : Line state not available	xdsl line actual interim initialization state <i>This element is only shown in detail mode.</i>
actual-vdsl2-lr-mode	Parameter type: <Xdsl::LongReachMode> (not-operational short-loop-lr medium-loop-lr long-loop-lr)	actual vdsl2-lr mode in which the line operates <i>This element is only shown in detail mode.</i>

name	Type	Description
	Possible values: - not-operational : vdsl2 lr is not operational - short-loop-lr : vdsl2 lr short loop operation mode - medium-loop-lr : vdsl2 lr medium loop operation mode - long-loop-lr : vdsl2 lr long loop operation mode	

109.9 xDSL Carrier Data Near End Status Command

Command Description

This command displays xDSL carrier data near end.

Carrier data is displayed in raw format so the actual data interpretation is described in this section.

The XDSL passband (downstream or upstream) is composed of one or more bands (max 5, including VDSL optional band). Each carrier is coded as a bitmap. When the data are not available because the measurement is not completed, not enabled or not supported, an empty string will be returned. Below is the definition of the carrier specific bitmap.

Carrier load (Load-distribution-down) : When the modem is not in showtime this object will have the previously measured value. Each carrier can carry up to 15 bits. The carrier load is coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER (0..8191), index of the start carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..8191), index of the stop carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTET 4: contains the bit load of the first two carrier groups of the band. The load of the first carrier group uses the most significant 4 bits nibble. Range is 0-15 bits per carrier group, with a granularity of 1 bit/carrier group.
- OCTETS 5..L: and so on, up to the last carrier group of the first downstream band. The last nibble of OCTET L is set to 0x0 if not used.
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier load of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier load of the third downstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier load of the fourth downstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier load of the fifth downstream band when available.

Carrier gain (gain-allocation-down) : When the modem is not in showtime this object will have the previously measured value. The gain has a range of approximately 0 - 8, in steps of 1/512. The gain value is represented as $gi/512$ on a linear scale with gi a 12 bits unsigned integer in the 0 to 4095 range given by the 12 LSB bits of a 2 bytes integer. The carrier gain allocation is coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER (0..8191), index of the start carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..8191), index of the stop carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER, contains the gain of the first carrier group of the band (start carrier group).
- OCTETS 6..L: and so on until the last carrier group of the first downstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier gain of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier gain of the third downstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier gain of the fourth downstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier gain of the fifth downstream band when available.

Carrier snr (snr-up): When the modem is not in showtime this object will have the previously measured value. The SNR has a range from -32 to 95 dB in steps of 0.5 dB. It is represented as $SNR_i = -32 + snr_i/2$, with snr_i an 8 bit unsigned integer in the range 0 to 254. The special value 255 indicates that no measurement is available for the carrier or that the measurement is out of range. The carrier snrs are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..8191), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..8191), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6: INTEGER, contains the snr of the first carrier group of the band (start carrier group).
- OCTETS 7..L: and so on until the last carrier group of the first upstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier snr of the second upstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier snr of the third upstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier snr of the fourth upstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier snr of the fifth upstream band when available.

Carrier qln (qln-up): The QLN has a range from -150 dBm/Hz to -23 dBm/Hz in steps of 0.5 dB. It is represented as $QLN_i = -23 - qln_i/2$, with qln_i an 8 bit unsigned integer in the range 0 to 254. The special value 255 indicates that no measurement is available for the carrier or that the measurement is out of range. The carrier qlns are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..8191), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..8191), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6: INTEGER, contains the qln of the first carrier group of the band (start carrier group).
- OCTETS 7..L: and so on until the last carrier group of the first upstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier qln of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier qln of the third upstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier qln of the fourth upstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier qln of the fifth upstream band when available.

Carrier HLIN (char-func-complex): HLIN has a range of approximately +6 dB to -90 dB, with a granularity of 2^{-15} . The Hlin is represented as $HLIN_i = (scale/2^{15}) * ((ai + j*bi)/2^{15})$, with ai and bi 2 bytes signed integers in the range -32767 to 32767. The special value -32768 indicates that no measurement is available for the carrier or that the measurement is out of range. The scale factor is a 2 bytes unsigned integer. The scale factor must be chosen such that: $\max(|Ai|, |Bi|)$ over all i is equal to $2^{15}-1$, i.e. over all carriers of the XDSL band(s) of the corresponding direction. The carrier HLINs are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER(0..65535), contains the scale factor to apply to the hlin values, over the upstream band(s). The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..8191), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6,7: INTEGER (0..8191), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 8,9: SIGNED INTEGER, contains the ai for the first carrier group of the band (start carrier group). The value is defined as MSB-LSB (big-endian).
- OCTETS 10,11: SIGNED INTEGER, contains the bi for the first carrier group of the band (start carrier

- group). The value is defined as MSB-LSB (big-endian).
- OCTETS 12..L: ai and bi for the next carrier group and so on until the last carrier group of the first upstream band (stop carrier group).
 - OCTETS L+1..M: contain the start/stop carrier groups and the HLIN ai and bi of the second upstream band when available.
 - OCTETS M+1..N: contain the start/stop carrier groups and the HLIN ai and bi of the third upstream band when available.
 - OCTETS N+1..P: contain the start/stop carrier groups and the HLIN ai and bi of the fourth upstream band when available.
 - OCTETS P+1..Q: contain the start/stop carrier groups and the HLIN ai and bi of the fifth upstream band when available.

Carrier HLOG (char-func-real): Hlog has a range of approximately +6 dB to -96 dB in steps of 0.1 dB. The Hlog is represented as $HLOG_i = 6 - mi/10$, with mi a 10 bits unsigned integer in the range 0 to 1022. The special value 1023 indicates that no measurement is available for the carrier or that the measurement is out of range. The carrier HLOGs are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..8191), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..8191), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6,7: INTEGER (0..1023), contains the HLOG mi of the first carrier group of the band (start carrier group). The value is defined as MSB-LSB (big-endian).
- OCTETS 8..L: mi for the next carrier group and so on until the last carrier group of the first upstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the HLOG mi of the second upstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the HLOG mi of the third upstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the HLOG mi of the fourth upstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the HLOG mi of the fifth upstream band when available.

Carrier Tx PSD (tx-psd-dn): When the modem is not in showtime this object will have the previously measured value. The PSD has a range from -127 dBm/Hz to 0 dBm/Hz in steps of 0.5 dB. It is represented as $PSD_i = -psdi/2$, with psdi an 8 bit unsigned integer in the range 0 to 254. The special value 255 indicates that no measurement is available for the carrier, the carrier is not loaded, or that the measurement is out of range. The carrier Tx PSD is coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER (0..8191), index of the start carrier group of the downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..8191), index of the stop carrier group of the downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4: INTEGER(0..255), PSD of the first carrier group of the band (start carrier group).
- OCTETS 5..L: and so on until the last carrier group of the first downstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier PSD of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier PSD of the third downstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier PSD of the fourth downstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier PSD of the fifth downstream band when available.

For G.Fast, the configured carrier-data-mode is ignored and the system behaves as if the carrier data collection is enabled. Each carrier is coded as a bitmap. When the data are not available because the measurement is not completed, or not supported, an empty string will be returned. The carrier group parameters hlog-carr-grp and qln-carr-grp are supported for both G.Fast and ADSLx/VDSLx. All other carrier group related parameters are not

applicable for G.Fast, value 1 will be returned. Below is the definition of the carrier specific bitmap for the G.Fast related parameters.

The bit allocation values on RMC sub-carriers in RMC symbols in the downstream direction (rmc-carr-load-dn): The bit loading allocation for RMC sub-carriers is defined as follows:

- OCTETS 0,1: INTEGER (0..4095), index of the first RMC sub-carrier.
- OCTETS 2: INTEGER (0,2..6), bit allocation value for the first RMC sub-carrier.
- OCTETS 3*N-2..3*N: reports the sub-carrier index and the bit allocation value of the successive RMC sub-carrier #N (N is less or equals 512).

GFast Quiet Line Noise in the upstream direction (gf-qln-up) : When the modem is not in showtime this object will have the previously measured value. The quiet Line Noise has a range from -160 dBm/Hz to -35.5 dBm/Hz in steps of 0.5 dB. It is represented as $QLNi = -35 - qlni/2$, with qlni an 8-bit unsigned integer in the range 1 to 250. Special value 0 indicates that the measurement for the sub-carrier group is greater than or equal to -35dBm/Hz. Special value 251 indicates that the measurement for the sub-carrier group is less than or equal to -160.5 dBm/Hz. Special value 254 indicates that no measurement could be done for the sub-carrier group because it is out of the upstream MEDLEY set. Special value 255 indicates that no measurement is available for the sub-carrier group. The carrier measurements are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0.2047), index of the start carrier group of the reported data. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0.2047), index of the stop carrier group of the reported data. The value is defined as MSB-LSB (big-endian).
- OCTET 6: INTEGER, contains the qln of the first sub-carrier group.
- OCTET 7...N: and so on until the last sub-carrier group.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl carrier-data near-end [ (if-index) ]
```

Command Parameters

Table 109.9-1 "xDSL Carrier Data Near End Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.9-2 "xDSL Carrier Data Near End Status Command" Display parameters

Specific Information		
name	Type	Description
spacing	Parameter type: <Xdsl::CarrierSpacingType> (single double half quarter gfast) Possible values: - single : single - double : double - half : half - quarter : quarter - gfast : gfast	the actual carrier spacing used on the XDSL line in the downstream direction <i>This element is always shown.</i>
load-distribution-down	Parameter type: <Xdsl::OctetStingType> - a binary string	nbr of bits per carrier group over the downstream passband <i>This element is always shown.</i>
gain-allocation-down	Parameter type: <Xdsl::OctetStingType> - a binary string	gain allocation (i.e. gi) per carrier group over the downstream passband. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
snr-up	Parameter type: <Xdsl::OctetStingType> - a binary string	signal to noise ratio per carrier group over the upstream passband <i>This element is always shown.</i>
qln-up	Parameter type: <Xdsl::OctetStingType> - a binary string	quiet line noise per carrier group over the upstream passband. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
char-func-complex	Parameter type: <Xdsl::OctetStingType> - a binary string	provides the channel characteristics function complex values in linear scale for each carrier group over upstream passband (hlin). Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
char-func-real	Parameter type: <Xdsl::OctetStingType> - a binary string	char func real values in dB over upstream passband (hlog) <i>This element is always shown.</i>
tx-psd-dn	Parameter type: <Xdsl::OctetStingType> - a binary string	the actual transmit PSD per carrier group over the downstream passband <i>This element is always shown.</i>
tx-psd-carr-grop	Parameter type: <Xdsl::SubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [1,2,4,8,16]	the grouping factor for Actual Tx Power Spectrum Density carrier data octet-string. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
load-carr-grp	Parameter type: <Xdsl::SubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [1,2,4,8,16]	Provides the grouping factor for carrier load data octet-string. Only applicable for ADSLx/VDSLx

name	Type	Description
		<i>This element is always shown.</i>
gain-carr-grp	Parameter type: <Xdsl::SubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [1,2,4,8,16]	Provides the grouping factor for carrier gain allocation data octet-string. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
snr-carr-grp	Parameter type: <Xdsl::SubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [1,2,4,8,16]	Provides the grouping factor for Signal to Noise Ratio per carrier data octet-string. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
qln-carr-grp	Parameter type: <Xdsl::SubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [1,2,4,8,16]	Provides the grouping factor for Quiet Line Noise data octet-string <i>This element is always shown.</i>
hlin-carr-grp	Parameter type: <Xdsl::SubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [1,2,4,8,16]	Provides the grouping factor for Complex Channel Characteristics data in linear scale. Only applicable for ADSLx/VDSLx <i>This element is always shown.</i>
hlog-carr-grp	Parameter type: <Xdsl::SubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [1,2,4,8,16]	Provides the grouping factor for Channel Characteristics data in dB <i>This element is always shown.</i>
vect-qln-mode-up	Parameter type: <Xdsl::ActualQlnMode> (with-cancel without-cancel unknown) Possible values: - with-cancel : with xtalk cancellation - without-cancel : without xtalk cancellation - unknown : qln reporting mode not known	actual reported line carrier data quiet line noise. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>

109.10 xDSL Carrier Data Far End Status Command

Command Description

This command displays xDSL carrier data far end.

Carrier data is displayed in raw format so the actual data interpretation is described in this section.

Several parameters have similar definitions for far end and near end. Hence, for more details related to the bitmap definition and the description of ranges, specific values,... of the carriers, we refer to the command description section of the "xDSL Carrier Data Near End Status Command" section. When reading this in scope of "Far End", "downstream" becomes "upstream" and vice versa. Parameters which are only reported for far end are explained below.

GFast Active Line Noise in the Downstream direction (gf-aln-down) : When the modem is not in showtime this object will have the previously measured value. The Active Line Noise has a range from -160 dBm/Hz to -35.5 dBm/Hz in steps of 0.5 dB. It is represented as $ALNi = -35 - alni/2$, with alni an 8-bit unsigned integer in the range 1 to 250. Special value 0 indicates that the measurement for the sub-carrier group is greater than or equal to -35dBm/Hz. Special value 251 indicates that the measurement for the sub-carrier group is less than or equal to -160.5 dBm/Hz. Special value 254 indicates that no measurement could be done for the sub-carrier group because it is out of the downstream MEDLEY set. Special value 255 indicates that no measurement is available for the sub-carrier group. The carrier measurements are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0.2047), index of the start carrier group of the reported data. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0.2047), index of the stop carrier group of the reported data. The value is defined as MSB-LSB (big-endian).
- OCTET 6: INTEGER, contains the aln of the first sub-carrier group.
- OCTET 7...N: and so on until the last sub-carrier group.

The Far End Carrier Data also reports the carrier group parameter gf-aln-carr-grp, which is only applicable for G.Fast. Default value 1 is returned for ADSLx/VDSLx.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl carrier-data far-end [ (if-index) ]
```

vect-qln-mode-down	Parameter type: <Xdsl::ActualQlnMode> (with-cancel without-cancel unknown) Possible values: - with-cancel : with xtalk cancellation - without-cancel : without xtalk cancellation - unknown : qln reporting mode not known	actual reported line carrier data quiet line noise. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>

109.11 xDSL Failure Status Near End Status Command

Command Description

This command displays the xDSL failure status near end.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl failure-status near-end [ (if-index) ]
```

Command Parameters

Table 109.11-1 "xDSL Failure Status Near End Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.11-2 "xDSL Failure Status Near End Status Command" Display parameters

Specific Information		
name	Type	Description
line-defect	Parameter type: <Xdsl::FailureStatusNearEnd> (yes no) Possible values: - yes : defect in the near-end failure status - no : no defect in the near-end failure status	specifies the defect status in the near-end <i>This element is always shown.</i>
los	Parameter type: <Xdsl::FailureStatusNELOS>	specifies status of the Loss of

109 xDSL Status Commands

name	Type	Description
	(no yes) Possible values: - no : no LOS in upstream direction - yes : LOS in the upstream direction	Signal in upstream direction <i>This element is always shown.</i>
lof	Parameter type: <Xdsl::FailureStatusNELOF> (no yes) Possible values: - no : no LOF in upstream direction - yes : LOF in the upstream direction	specifies status of the Loss of Frame in upstream direction <i>This element is always shown.</i>
lom	Parameter type: <Xdsl::FailureStatusNELOM> (no yes) Possible values: - no : no LOM in upstream direction - yes : LOM in the upstream direction	specifies status of the Loss of Margin in upstream direction <i>This element is always shown.</i>
lpr	Parameter type: <Xdsl::FailureStatusNELPR> (no yes) Possible values: - no : no LPR of the ATU-C - yes : LPR of the ATU-C	specifies status of the Loss of Power of the ATU-C <i>This element is always shown.</i>
ese	Parameter type: <Xdsl::FailureStatusNEESE> (no yes) Possible values: - no : no ESE in upstream direction - yes : ESE in the upstream direction	specifies status of the Excessive Severe Errors in upstream direction <i>This element is always shown.</i>
act-fail-conf-err	Parameter type: <Xdsl::NEActFailConfErr> (no yes) Possible values: - no : no Activation Failure due to configuration error - yes : Line Activation Fail due to configuration error	specifies status of line Activation <i>This element is always shown.</i>
act-fail-conf-not-feas	Parameter type: <Xdsl::NEActFailConfNotFeasible> (no yes) Possible values: - no : Line Activation Fail due to configuration not feasible - yes : no Activation Failure due to configuration not feasible	specifies status of line Activation <i>This element is always shown.</i>
bitrate-threshold	Parameter type: <Xdsl::FailureStatusNEBitRateThrs> (no-low-rate low-rate) Possible values: - no-low-rate : no Bit rate threshold for the upstream direction - low-rate : Bit rate threshold for upstream direction	specifies status of Bit Rate Threshold <i>This element is always shown.</i>
tpstc-mismatch	Parameter type: <Xdsl::FailureStatusNETpstcMism> (no yes) Possible values: - no : no TpsTc mismatch is detected - yes : a TpsTc mismatch is detected	indicates a Tpstc mismatch <i>This element is always shown.</i>
forced-rtx-init-fail	Parameter type: <Xdsl::FailureStatusNERTxInitFail> (no	specifies status of line initialisation when forced RTX

name	Type	Description
	yes) Possible values: - no : No line initialisation failure due to forced Rtx request - yes : Line Initialisation failure due to forced Rtx request	<i>This element is always shown.</i>
vect-dle	Parameter type: <Xdsl::FailureStatusNEDLE> (yes no) Possible values: - yes : loss of us signal due to disorderly leaving event - no : no disorderly leaving detected	counter for disorderly leaving failure events <i>This element is always shown.</i>
act-fail-err-code	Parameter type: <SignedInteger> - a signed integer	activation failure error code <i>This element is always shown.</i>
act-fail-err-descr	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	activation failure error description <i>This element is only shown in detail mode.</i>

109.12 xDSL Failure Status Far End Status Command

Command Description

This command displays the xDSL failure of the far end.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl failure-status far-end [ (if-index) ]
```

Command Parameters

Table 109.12-1 "xDSL Failure Status Far End Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Specific Information		
name	Type	Description
line-defect	Parameter type: <Xdsl::FailureStatusNoDefect> (yes no) Possible values: - yes : defect in the far-end failure status - no : no defect in the far-end failure status	specifies the defect status in the far-end <i>This element is always shown.</i>
los	Parameter type: <Xdsl::FailureStatusFELOS>	specifies status of the Loss of

name	Type	Description
	(no yes) Possible values: - no : no LOS in downstream direction - yes : LOS in the downstream direction	Signal in downstream direction <i>This element is always shown.</i>
lof	Parameter type: <Xdsl::FailureStatusFELOF> (no yes) Possible values: - no : no LOF in downstream direction - yes : LOF in the downstream direction	specifies status of the Loss of Frame in downstream direction <i>This element is always shown.</i>
lom	Parameter type: <Xdsl::FailureStatusFELOM> (no yes) Possible values: - no : no LOM in downstream direction - yes : LOM in the downstream direction	specifies status of the Loss of Margin in downstream direction <i>This element is always shown.</i>
lpr	Parameter type: <Xdsl::FailureStatusFELPR> (no yes) Possible values: - no : no LPR of the XTU-R - yes : LPR of the XTU-R	specifies status of the Loss of Power of the XTU-C <i>This element is always shown.</i>
lol	Parameter type: <Xdsl::FailureStatusFELOL> (no yes) Possible values: - no : no LOL in line - yes : LOL in line	specifies status of the Loss of Link <i>This element is always shown.</i>
ese	Parameter type: <Xdsl::FailureStatusFEESE> (no yes) Possible values: - no : no ESE in downstream direction - yes : ESE in the downstream direction	specifies status of the Excessive Severe Errors <i>This element is always shown.</i>
act-fail-comm-prob	Parameter type: <Xdsl::FEActFailCommProb> (no yes) Possible values: - no : no Activation Failure due to communication problems - yes : Line Activation Fail due to communication problems	specifies status of line Activation <i>This element is always shown.</i>
act-fail-no-xtu-r	Parameter type: <Xdsl::FEActFailNoXTUR> (no yes) Possible values: - no : Line Activation Fail due to no XTU-R detected - yes : no Activation Failure due to no XTU-R detected	specifies status of line Activation <i>This element is always shown.</i>
bitrate-threshold	Parameter type: <Xdsl::FailureStatusFEBitRateThrs> (no-low-rate low-rate) Possible values: - no-low-rate : no Bit rate threshold for the downstream direction - low-rate : Bit rate threshold for downstream direction	specifies status of Bit Rate Threshold <i>This element is always shown.</i>
upbo-vio	Parameter type: <Xdsl::FailureStatusFEUPBOViolate> (no yes)	specifies far end UPBO violation status <i>This element is always shown.</i>

109 xDSL Status Commands

name	Type	Description
	Possible values: - no : no far end UPBO violation - yes : far end UPBO violation	
cpe-pol	Parameter type: <Xdsl::FailureStatusFECPEPolicing> (no yes) Possible values: - no : no activation failure due to CPE policing - yes : activation failure due to CPE policing	specifies Activation Failure status due to CPE policing <i>This element is always shown.</i>
mis-peer-35b	Parameter type: <Xdsl::FailureStatusMismatchPeer35B> (no yes) Possible values: - no : no VDSL2 35b opmode mismatch between XTU-C and XTU-R - yes : VDSL2 35b opmode mismatch between XTU-C and XTU-R	VDSL2 35b opmode mismatch between XTU-C and XTU-R <i>This element is always shown.</i>
act-fail-err-code	Parameter type: <SignedInteger> - a signed integer	activation failure error code <i>This element is always shown.</i>
act-fail-err-descr	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	activation failure error description <i>This element is only shown in detail mode.</i>

109.13 xDSL Vectored Line Failure Status Command

Command Description

This command displays the xDSL vectored line failure status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl failure-status vect-line-near-end [ (if-index) ]
```

Command Parameters

Table 109.13-1 "xDSL Vectored Line Failure Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.13-2 "xDSL Vectored Line Failure Status Command" Display parameters

Specific Information		
name	Type	Description
xtc-variation-vict	Parameter type: <Xdsl::FailureStatusXTCVARVICT> (excessive normal) Possible values: - excessive : abnormal amplitude variation in xtc coefficients - normal : no excessive xtc coefficients variation	specifies status of excessive victim crosstalk coefficient variation <i>This element is always shown.</i>

109 xDSL Status Commands

name	Type	Description
xtc-variation-dist	Parameter type: <Xdsl::FailureStatusXTCVARDIST> (excessive normal) Possible values: - excessive : abnormal amplitude variation in xtc coefficients - normal : no excessive xtc coefficients variation	specifies status of excessive disturber crosstalk coefficient variation <i>This element is always shown.</i>
corrupted-errf	Parameter type: <Xdsl::FailureStatusCorpERRF> (yes no) Possible values: - yes : at least 10% corrupted or missing errorf samples received - no : received errorf samples ok	specifies status of received corrupted errorf samples <i>This element is always shown.</i>
vect-cpe-cap-mismatch	Parameter type: <Xdsl::FailureStatusVectCpeCapMism> (yes no) Possible values: - yes : not allowed Vectoring CPE connected - no : allowed Vectoring CPE connected	specifies if an allowed Vectoring CPE is connected or not <i>This element is always shown.</i>
vect-conf-not-feas	Parameter type: <Xdsl::FailureStatusVectConfigNotFeas> (yes no) Possible values: - yes : Vectoring Configuration Not Feasible - no : Vectoring Configuration Feasible	specifies if the vectoring configuration is feasible <i>This element is always shown.</i>

109.14 xDSL Vectoring Board Failure Status Command

Command Description

This command displays the xDSL vectoring board failure status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl failure-status vect-board [ (board-index) ]
```

Command Parameters

Table 109.14-1 "xDSL Vectoring Board Failure Status Command" Resource Parameters

Resource Identifier	Type	Description
(board-index)	Format: (ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Possible values: - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	interface index of the board

Command Output

Table 109.14-2 "xDSL Vectoring Board Failure Status Command" Display parameters

Specific Information		
name	Type	Description
vp-lt-mismatch	Parameter type: <Xdsl::FailureStatusVPLTMISM> (yes no) Possible values: - yes : mismatch between expected and actual vp-lt mapping or incompatible sw version on vp and lt. - no : expected and actual vp-lt in line or vp and lt have	specifies failure status of vp and its expected connected lt's OR incompatible sw versions. In case vplt-autodiscovery disabled on vp, failure reported on vp-board. In case vplt-autodiscovery enabled on lt, failure reported on

109 xDSL Status Commands

name	Type	Description
	compatible sw versions OR autodiscovery enabled on vp, autodiscovery disabled on lt	lt-board. <i>This element is always shown.</i>
qsfp-id	Parameter type: <Xdsl::FailureStatusINVQSFP> (invalid valid) Possible values: - invalid : QSFP does not have a valid Nokia ID - valid : QSFP has a valid Nokia ID or no QSFP detected or not applicable.	specifies the failure status of the detected qsfp-id of the frontcable <i>This element is always shown.</i>
vp-lt-link short name: vp-lt-link-fail	Parameter type: <Xdsl::FailureStatusVPLTLINKFAIL> ((linkdown yes) (linkup no/not-app)) Possible values: - linkdown : vp-lt link problem - yes : vp-lt link problem - linkup : vp-lt link ok or no lt-expected OR autodiscovery enabled on vp, autodiscovery disabled on lt - no/not-app : vp-lt link ok or no lt-expected OR autodiscovery enabled on vp, autodiscovery disabled on lt	specifies the failure status of the VP-LT Link. In case vplt-autodiscovery disabled on vp, failure reported on vp-board when an lt was expected but no valid connection between vp-lt. In case vplt-autodiscovery enabled on lt, failure reported on lt-board when no valid connection between vp-lt. <i>This element is always shown.</i>

109.15 xDSL Counters Near End Line Current 15 Min

Command Description

This command displays xDSL counters near end line current 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters near-end line current-interval [ (if-index) ]
```

Command Parameters

Table 109.15-1 "xDSL Counters Near End Line Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.15-2 "xDSL Counters Near End Line Current 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOS failure event <i>This element is always shown.</i>
loss	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOSS failure event <i>This element is always shown.</i>
lof	Parameter type: <Counter>	number of occurrences of an LOF

name	Type	Description
	- 32 bit counter	failure event <i>This element is always shown.</i>
lom	Parameter type: <Counter> - 32 bit counter	number of occurrences of a LOM failure event <i>This element is always shown.</i>
ese	Parameter type: <Counter> - 32 bit counter	number of occurrences of an ESE failure event <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds encountered by the line <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds encountered by the line <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds encountered by the line <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of times the modem re-initialize the line. Only applicable for ADSLx/VDSLx. <i>This element is always shown.</i>
failed-init	Parameter type: <Counter> - 32 bit counter	number of times the modem failed to initialize the line <i>This element is always shown.</i>
measured-time	Parameter type: <Xdsl::PrevCurIntervalMeasureTime> - the measured time interval - unit: sec - range: [0...900]	amount of time in sec that statistics have been counted <i>This element is only shown in detail mode.</i>
in-valid-flag	Parameter type: <Xdsl::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data <i>This element is only shown in detail mode.</i>
ra-upshift short name: rau	Parameter type: <Counter> - 32 bit counter	number of occurrences of a Upshift Rate Adaptation <i>This element is always shown.</i>
ra-downshift short name: rad	Parameter type: <Counter> - 32 bit counter	number of occurrences of a Downshift Rate Adaptation <i>This element is always shown.</i>
leftrs	Parameter type: <Counter> - 32 bit counter	number of leftr seconds encountered by the line <i>This element is always shown.</i>
err-free-bits	Parameter type: <Counter> - 32 bit counter	count of the number of error freebits divided by 2 ¹⁶ <i>This element is always shown.</i>
min-eftr	Parameter type: <Xdsl::SignedIntegerKbps> - 1000 bits per second - unit: kbits/sec	minimum error free throughput observed <i>This element is always shown.</i>
dle	Parameter type: <Counter> - 32 bit counter	counter for disorderly leaving failure events, not applicable for GFAST a zero value will be returned <i>This element is always shown.</i>
fecs	Parameter type: <Counter> - 32 bit counter	forward error correction second <i>This element is always shown.</i>
init-count	Parameter type: <Counter>	full init counter

name	Type	Description
	- 32 bit counter	<i>This element is always shown.</i>
sos-success-count	Parameter type: <Counter> - 32 bit counter	counts number of sos are successful. Only applicable for VDSL2. <i>This element is always shown.</i>

109.16 xDSL Counters Near End Line Current Day

Command Description

This command displays the xDSL counters near end line current day.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters near-end line current-1day [ (if-index) ]
```

Command Parameters

Table 109.16-1 "xDSL Counters Near End Line Current Day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.16-2 "xDSL Counters Near End Line Current Day" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOS failure event <i>This element is always shown.</i>
loss	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOSS failure event <i>This element is always shown.</i>
lof	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOF failure event <i>This element is always shown.</i>
lom	Parameter type: <Counter>	number of occurrences of a LOM

name	Type	Description
	- 32 bit counter	failure event <i>This element is always shown.</i>
ese	Parameter type: <Counter> - 32 bit counter	number of occurrences of an ESE failure event <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds encountered by the line <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds encountered by the line <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds encountered by the line <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of times the modem re-initialize the line. Only applicable for ADSLx/VDSLx. <i>This element is always shown.</i>
failed-init	Parameter type: <Counter> - 32 bit counter	number of times the modem failed to initialize the line <i>This element is always shown.</i>
measured-time	Parameter type: <Xdsl::IntervalMeasureTime> - the measured time interval - unit: sec - range: [0...86400]	amount of time in sec that statistics have been counted <i>This element is only shown in detail mode.</i>
in-valid-flag	Parameter type: <Xdsl::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data <i>This element is only shown in detail mode.</i>
ra-upshift short name: rau	Parameter type: <Counter> - 32 bit counter	number of occurrences of a Upshift Rate Adaptation <i>This element is always shown.</i>
ra-downshift short name: rad	Parameter type: <Counter> - 32 bit counter	number of occurrences of a Downshift Rate Adaptation <i>This element is always shown.</i>
leftrs	Parameter type: <Counter> - 32 bit counter	number of leftr seconds encountered by the line <i>This element is always shown.</i>
err-free-bits	Parameter type: <Counter> - 32 bit counter	count of the number of error freebits divided by 2^{16} <i>This element is always shown.</i>
min-eftr	Parameter type: <Xdsl::SignedIntegerKbps> - 1000 bits per second - unit: kbits/sec	minimum error free throughput observed <i>This element is always shown.</i>
dle	Parameter type: <Counter> - 32 bit counter	counter for disorderly leaving failure events <i>This element is always shown.</i>
fecs	Parameter type: <Counter> - 32 bit counter	forward error correction second <i>This element is always shown.</i>
init-count	Parameter type: <Counter> - 32 bit counter	full init counter <i>This element is always shown.</i>
sos-success-count	Parameter type: <Counter> - 32 bit counter	counts number of sos are successful. Only applicable for VDSL2. <i>This element is always shown.</i>

109.17 xDSL Counters Near End Line Previous 15 Min

Command Description

This command displays the xDSL counters near end line previous 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters near-end line previous-interval [ (if-index) [ interval-no <Xdsl::IntervalNumber15min> ] ]
```

Command Parameters

Table 109.17-1 "xDSL Counters Near End Line Previous 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Xdsl::IntervalNumber15min> Format: - a number identifying 15 minutes interval time - range: [1...192]	identifies prev 15min intvls, val 1 as the latest intvl

Command Output

Table 109.17-2 "xDSL Counters Near End Line Previous 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOS failure event <i>This element is always shown.</i>

init-count	Parameter type: <Counter> - 32 bit counter	full init counter <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>
sos-success-count	Parameter type: <Counter> - 32 bit counter	counts number of sos are successful. Only applicable for VDSL2. <i>This element is always shown.</i>

109.18 xDSL Counters Near End Of Line Previous Day

Command Description

This command displays the xDSL counters near end of the previous day.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters near-end line previous-1day [ (if-index) [ interval-no <Xdsl::IntervalNumber1day> ] ]
```

Command Parameters

Table 109.18-1 "xDSL Counters Near End Of Line Previous Day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Xdsl::IntervalNumber1day> Format: - a number identifying 1 day interval time - range: [1...7]	nbr identifying previous 1 day intvl time, value 1 is the most recently completed 1 day intvl

109.19 xDSL Counters Near End Channel Current 15 Min

Command Description

CEC parameter only applies to VDSL2.

CEC: Number of uncorrected codewords encountered by near-end (or far-end) channel in VDSL2 mode.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

> show xdsl counters near-end channel current-interval [(if-index)]

Command Parameters

Table 109.19-1 "xDSL Counters Near End Channel Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.19-2 "xDSL Counters Near End Channel Current 15 Min" Display parameters

Specific Information		
name	Type	Description
cv	Parameter type: <Counter> - 32 bit counter	number of coding violations encountered by the channel <i>This element is always shown.</i>

109 xDSL Status Commands

name	Type	Description
		case of vdsl1 G.993.1 <i>This element is always shown.</i>
cec	Parameter type: <Counter> - 32 bit counter	the number of non-corrected erroneous codewords encountered by the near end channel <i>This element is always shown.</i>
measured-time	Parameter type: <Xdsl::PrevCurIntervalMeasureTime> - the measured time interval - unit: sec - range: [0...900]	amt of time in sec that statistics have been counted <i>This element is always shown.</i>
in-valid-flag	Parameter type: <Xdsl::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data <i>This element is always shown.</i>
rtx-c-up	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have been successfully corrected by a retransmission as seen by the near-end receiver. Only applicable for VDSL2. <i>This element is always shown.</i>
rtx-uc-up	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have not been corrected by one or more retransmissions <i>This element is always shown.</i>
rtx-tx-down	Parameter type: <Counter> - 32 bit counter	the total number of retransmitted DTUs by the transmitter <i>This element is always shown.</i>

109.20 xDSL Counters Near End Channel Current Day

Command Description

CEC parameter only applies to VDSL2.

CEC: Number of uncorrected codewords encountered by near-end (or far-end) channel in VDSL2 mode.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters near-end channel current-1day [ (if-index) ]
```

Command Parameters

109.21 xDSL Counters Near End Channel Previous 15 Min

Command Description

CEC parameter only applies to VDSL2.

CEC: Number of uncorrected codewords encountered by near-end (or far-end) channel in VDSL2 mode.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters near-end channel previous-interval [ (if-index) [ interval-no <Xdsl::IntervalNumber15min> ] ]
```

Command Parameters

cec	Parameter type: <Counter> - 32 bit counter	the number of non-corrected erroneous codewords encountered by the near end channel <i>This element is always shown.</i>
measured-time	Parameter type: <Xdsl::PrevCurIntervalMeasureTime> - the measured time interval - unit: sec - range: [0...900]	amt of time in sec that statistics have been counted <i>This element is always shown.</i>
in-valid-flag	Parameter type: <Xdsl::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data <i>This element is always shown.</i>
rtx-c-up	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have been successfully corrected by a retransmission as seen by the near-end receiver. Only applicable for VDSL2. <i>This element is always shown.</i>
rtx-uc-up	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have not been corrected by one or more retransmissions <i>This element is always shown.</i>
rtx-tx-down	Parameter type: <Counter> - 32 bit counter	the total number of retransmitted DTUs by the transmitter <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

109.22 xDSL Counters Near End Channel Previous Day

Command Description

CEC parameter only applies to VDSL2.

CEC: Number of uncorrected codewords encountered by near-end (or far-end) channel in VDSL2 mode.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters near-end channel previous-1day [ (if-index) [ interval-no <Xdsl::IntervalNumber1day> ] ]
```

Command Parameters

Table 109.22-1 "xDSL Counters Near End Channel Previous Day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Xdsl::IntervalNumber1day> Format: - a number identifying 1 day interval time - range: [1...7]	nbr identifying previous 1 day intvl time, value 1 is the most recently completed 1 day intvl

Command Output

Table 109.22-2 "xDSL Counters Near End Channel Previous Day" Display parameters

Specific Information		
name	Type	Description
cv	Parameter type: <Counter> - 32 bit counter	number of coding violations encountered by the channel

name	Type	Description
		<i>This element is always shown.</i>
fecc	Parameter type: <Counter> - 32 bit counter	number of corrected codewords encountered by the channel, respectively corrected octets in case of vdsl1 G.993.1 <i>This element is always shown.</i>
cec	Parameter type: <Counter> - 32 bit counter	the number of non-corrected erroneous codewords encountered by the near end channel <i>This element is always shown.</i>
measured-time	Parameter type: <Xdsl::IntervalMeasureTime> - the measured time interval - unit: sec - range: [0...86400]	amount of time in sec that statistics have been counted <i>This element is always shown.</i>
in-valid-flag	Parameter type: <Xdsl::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data <i>This element is always shown.</i>
rtx-c-up	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have been successfully corrected by a retransmission as seen by the near-end receiver. Only applicable for VDSL2. <i>This element is always shown.</i>
rtx-uc-up	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have not been corrected by one or more retransmissions <i>This element is always shown.</i>
rtx-tx-down	Parameter type: <Counter> - 32 bit counter	the total number of retransmitted DTUs by the transmitter <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

109.23 xDSL Counters Far End Line Current 15 Min

Command Description

This command displays xDSL counters far end line current 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

> show xdsl counters far-end line current-interval [(if-index)]

Command Parameters

Table 109.23-1 "xDSL Counters Far End Line Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the xdsl port

Command Output

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an los failure event <i>This element is always shown.</i>
loss	Parameter type: <Counter> - 32 bit counter	number of occurrences of an loss failure event <i>This element is always shown.</i>
lof	Parameter type: <Counter> - 32 bit counter	number of occurrences of an lof failure event <i>This element is always shown.</i>
lom	Parameter type: <Counter>	number of occurrences of an lom

109 xDSL Status Commands

name	Type	Description
	- 32 bit counter	failure event <i>This element is always shown.</i>
lpr	Parameter type: <Counter> - 32 bit counter	number of occurrences of an lpr failure event <i>This element is always shown.</i>
lol	Parameter type: <Counter> - 32 bit counter	number of occurrences of an lol failure event <i>This element is always shown.</i>
ese	Parameter type: <Counter> - 32 bit counter	number of occurrences of an ese failure event <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds encountered by the line <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds encountered by the line <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds encountered by the line <i>This element is always shown.</i>
measured-time	Parameter type: <Xdsl::PrevCurIntervalMeasureTime> - the measured time interval - unit: sec - range: [0...900]	amount of time in sec that statistics have been counted <i>This element is always shown.</i>
in-valid-flag	Parameter type: <Xdsl::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data <i>This element is always shown.</i>
ra-upshift short name: rau	Parameter type: <Counter> - 32 bit counter	number of occurrences of a Upshift Rate Adaptation <i>This element is always shown.</i>
ra-downshift short name: rad	Parameter type: <Counter> - 32 bit counter	number of occurrences of a Downshift Rate Adaptation <i>This element is always shown.</i>
leftrs	Parameter type: <Counter> - 32 bit counter	number of leftrs seconds encountered by the line <i>This element is always shown.</i>
err-free-bits	Parameter type: <Counter> - 32 bit counter	count of the number of error freebits divided by 2 ¹⁶ <i>This element is always shown.</i>
min-eftr	Parameter type: <Xdsl::SignedIntegerKbps> - 1000 bits per second - unit: kbits/sec	count of the minimum of the error free throughput observed <i>This element is always shown.</i>
fecs	Parameter type: <Counter> - 32 bit counter	forward error correction second <i>This element is always shown.</i>
sos-success-count	Parameter type: <Counter> - 32 bit counter	counts number of sos are successful. Only applicable for VDSL2. <i>This element is always shown.</i>

109.24 xDSL Counters Far End Line Current Day

Command Description

This command displays xDSL counters far end line current day.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl counters far-end line current-1day [ (if-index) ]
```

Command Parameters

Table 109.24-1 "xDSL Counters Far End Line Current Day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Xdsl::IntervalNumber1day> Format: - a number identifying 1 day interval time - range: [1...7]	nbr identifying previous 1 day intvl time, value 1 is the most recently completed 1 day intvl

Command Output

Table 109.30-2 "xDSL Counters Far End Channel Previous Day" Display parameters

Specific Information		
name	Type	Description
cv	Parameter type: <Counter> - 32 bit counter	number of coding violations in the previous one day

109 xDSL Status Commands

name	Type	Description
		<i>This element is always shown.</i>
fecc	Parameter type: <Counter> - 32 bit counter	number of corrected codewords encountered by the channel, respectively corrected octets in case of vdsl1 G.993.1 <i>This element is always shown.</i>
cec	Parameter type: <Counter> - 32 bit counter	the number of non-corrected erroneous codewords encountered by the far end channel <i>This element is always shown.</i>
measured-time	Parameter type: <Xdsl::IntervalMeasureTime> - the measured time interval - unit: sec - range: [0...86400]	amt of time in sec that statistics have been counted <i>This element is always shown.</i>
in-valid-flag	Parameter type: <Xdsl::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data <i>This element is always shown.</i>
rtx-c-down	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have been successfully corrected by a retransmission as seen by the far-end receiver. Only applicable for VDSL2. <i>This element is always shown.</i>
rtx-uc-down	Parameter type: <Counter> - 32 bit counter	the total number of detected errored DTUs which have not been corrected by one or more retransmissions <i>This element is always shown.</i>
rtx-tx-up	Parameter type: <Counter> - 32 bit counter	the total number of retransmitted DTUs by the transmitter <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

109.31 xDSL XTU-R Inventory Status Command

Command Description

This command displays the xDSL XTU-R inventory data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl cpe-inventory [ (if-index) ]
```

Command Parameters

Table 109.31-1 "xDSL XTU-R Inventory Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.31-2 "xDSL XTU-R Inventory Status Command" Display parameters

Specific Information		
name	Type	Description
modem-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID retrieved during handshaking <i>This element is always shown.</i>
sys-serial-no	Parameter type: <Xdsl::SystemSerialNumber> - an octet string defining system serial number - length: x<=32	serial number that identifies the vendor equipment <i>This element is only shown in detail mode.</i>
sys-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID retrieved via the xdsl EOC <i>This element is always shown.</i>

109 xDSL Status Commands

name	Type	Description
sys-version-no	Parameter type: <Xdsl::XturSystemVersionNo> - an octet string defining xtur system version number - length: x<=34	version number retrieved via the the xdsl EOC <i>This element is only shown in detail mode.</i>
self-test-result	Parameter type: <Xdsl::SelfTestResult> - an octet string defining self test result - length: x<=8	self test results value retrieved via the the xdsl EOC <i>This element is always shown.</i>

109.32 xDSL XTU-C Inventory Status Command

Command Description

This command displays the xDSL XTU-C inventory data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl co-inventory [ (if-index) ]
```

Command Parameters

Table 109.32-1 "xDSL XTU-C Inventory Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.32-2 "xDSL XTU-C Inventory Status Command" Display parameters

Specific Information		
name	Type	Description
modem-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID retrieved during handshaking <i>This element is always shown.</i>
sys-serial-no	Parameter type: <Xdsl::SystemSerialNumber> - an octet string defining system serial number - length: x<=32	serial number that identifies the vendor equipment <i>This element is only shown in detail mode.</i>
sys-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID <i>This element is always shown.</i>

109 xDSL Status Commands

name	Type	Description
sys-version-no	Parameter type: <Xdsl::SystemVersionNo> - an octet string defining system version number - length: x<=32	version number <i>This element is only shown in detail mode.</i>
modem-sw-ver-no	Parameter type: <Xdsl::ModemSwVersionNo> - display string of modem software version - length: x<=32	modem sw version number <i>This element is only shown in detail mode.</i>
self-test-result	Parameter type: <Xdsl::SelfTestResult> - an octet string defining self test result - length: x<=8	self test results value <i>This element is always shown.</i>

109.33 xDSL Board Capability Status Command

Command Description

This command displays xDSL board capability.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl board [ (if-index) ]
```

Command Parameters

Table 109.33-1 "xDSL Board Capability Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

109.34 xDSL Low Rate Alarm Timestamp Command

Command Description

This command displays the latest configured timestamp. This timestamp value will be used to build-up the line-bitmap table.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl link-up-changes [ (linkup-timestamp) ]
```

Command Parameters

Table 109.34-1 "xDSL Low Rate Alarm Timestamp Command" Resource Parameters

Resource Identifier	Type	Description
(linkup-timestamp)	Format: - Printable string	the latest link up timestamp

109.35 xDSL Low Rate Alarm Line Bitmap Status Command

Command Description

This command displays in a bitmap all the lines (of the specified slot) which have changed state after the specified timestamp. - to the Up-state and current bitrate is less than planned-bit-rate - to the Down-state.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl link-up-changes (linkup-timestamp) slot [ (slot) ]
```

Command Parameters

Table 109.35-1 "xDSL Low Rate Alarm Line Bitmap Status Command" Resource Parameters

Resource Identifier	Type	Description
(linkup-timestamp)	Format: - Printable string	the latest link up timestamp
(slot)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical slot position

Command Output

Table 109.35-2 "xDSL Low Rate Alarm Line Bitmap Status Command" Display parameters

Specific Information		
name	Type	Description
port	Parameter type: <Xdsl::PortList> - Printable string	displays all the lines with state change after specified time <i>This element is always shown.</i>

109.36 xDSL Low Rate Alarm Linkup Record Data Command

Command Description

This command displays the linkup record for the line. This command is only applicable for ADSLx/VDSLx.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl linkup-record [ (line) ]
```

Command Parameters

Table 109.36-1 "xDSL Low Rate Alarm Linkup Record Data Command" Resource Parameters

Resource Identifier	Type	Description
(line)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the physical slot position

Command Output

Table 109.36-2 "xDSL Low Rate Alarm Linkup Record Data Command" Display parameters

Specific Information		
name	Type	Description
link-timestamp-down	Parameter type: <Xdsl::timeInSecs> - Printable string	Displays the latest link down timestamp <i>This element is always shown.</i>
link-timestamp-up	Parameter type: <Xdsl::timeInSecs> - Printable string	Displays the latest link up timestamp <i>This element is always shown.</i>
act-bitrate-up	Parameter type: <Xdsl::BitRateKbps>	Displays the actual net data or

name	Type	Description
	- Bitrate in kbps - unit: kbps	expected throughput for the upstream fast or interleaved channel <i>This element is always shown.</i>
act-bitrate-down	Parameter type: <Xdsl::BitRateKbps> - Bitrate in kbps - unit: kbps	Displays the actual net data or expected throughput for the downstream fast or interleaved channel <i>This element is always shown.</i>
act-noise-margin-up	Parameter type: <Xdsl::NoiseMargindB> - Noise Margin in dB - unit: 1/10 dB	Displays the realised noise margin for the upstream direction <i>This element is always shown.</i>
act-noise-margin-down	Parameter type: <Xdsl::NoiseMargindB> - Noise Margin in dB - unit: 1/10 dB	Displays the realised noise margin for the downstream direction <i>This element is always shown.</i>
attenuation-up	Parameter type: <Xdsl::AttenuationdB> - an attenuation value - unit: 1/10 dB	Displays the link up attenuation on upstream <i>This element is always shown.</i>
attenuation-down	Parameter type: <Xdsl::AttenuationdB> - an attenuation value - unit: 1/10 dB	Displays the link up attenuation on downstream <i>This element is always shown.</i>
attained-bitrate-up	Parameter type: <Xdsl::BitRateKbps> - Bitrate in kbps - unit: kbps	Displays maximum attainable net data rate or expected throughput the modem can support in upstream <i>This element is always shown.</i>
attained-bitrate-down	Parameter type: <Xdsl::BitRateKbps> - Bitrate in kbps - unit: kbps	Displays maximum attainable net data rate or expected throughput the modem can support in downstream <i>This element is always shown.</i>
max-bitrate-up	Parameter type: <Xdsl::SignedIntegerKbps> - 1000 bits per second - unit: kbits/sec	Displays the configured maximum bitrate for the upstream <i>This element is always shown.</i>
max-bitrate-down	Parameter type: <Xdsl::SignedIntegerKbps> - 1000 bits per second - unit: kbits/sec	Displays the configured maximum bitrate for the downstream <i>This element is always shown.</i>
threshold-bitrate-up	Parameter type: <Xdsl::BitRateKbps> - Bitrate in kbps - unit: kbps	Displays the configured threshold bitrate for upstream <i>This element is always shown.</i>
threshold-bitrate-down	Parameter type: <Xdsl::BitRateKbps> - Bitrate in kbps - unit: kbps	Displays the configured threshold bitrate for downstream <i>This element is always shown.</i>
max-delay-up	Parameter type: <Xdsl::Delay> - Delay in kbps - unit: msec	Displays the configured maximum interleaving delay for upstream <i>This element is always shown.</i>
max-delay-down	Parameter type: <Xdsl::Delay> - Delay in kbps - unit: msec	Displays the configured maximum interleaving delay for downstream <i>This element is always shown.</i>
tgt-noise-margin-up	Parameter type: <Xdsl::NoiseMargindB> - Noise Margin in dB - unit: 1/10 dB	Displays the configured target noise margin for upstream <i>This element is always shown.</i>

name	Type	Description
tgt-noise-margin-down	Parameter type: <Xdsl::NoiseMargindB> - Noise Margin in dB - unit: 1/10 dB	Displays the configured target noise margin for downstream <i>This element is always shown.</i>

109.37 xDSL INS Near End Operational Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end operational data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end oper-data [ (if-index) ]
```

Command Parameters

Table 109.37-1 "xDSL INS Near End Operational Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.37-2 "xDSL INS Near End Operational Data Status Command" Display parameters

Specific Information		
name	Type	Description
sensitivity	Parameter type: <Xdsl::InsSensitivity> - impulse noise sensitivity - unit: dB / 10 - range: [-128...127]	impulse noise sensitivity <i>This element is always shown.</i>
equiv-inp-mode	Parameter type: <Xdsl::InmEquivInpMode> (mode-0 mode-1	equivalent INP mode actually used to construct the INM equivalent INP histograms.

name	Type	Description
	mode-2 mode-3 not-supported) Possible values: - mode-0 : impulse length - mode-1 : cluster length - mode-2 : sum of impulse length in cluster - mode-3 : gap compensated impulse length in cluster - not-supported : INM not supported by modem	<i>This element is always shown.</i>

109.38 xDSL INS Near End Current 15Min Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end current 15Min data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end current-interval [ (if-index) ]
```

Command Parameters

Table 109.38-1 "xDSL INS Near End Current 15Min Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.38-2 "xDSL INS Near End Current 15Min Data Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>

109.39 xDSL INS Near End Current 15Min IAT Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end current 15Min Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end current-interval (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.39-1 "xDSL INS Near End Current 15Min IAT Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring inter arrival time histogram - range: [1...8]	class interval

Command Output

Table 109.39-2 "xDSL INS Near End Current 15Min IAT Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.40 xDSL INS Near End Current 15Min EINP Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end current 15Min Equivalent-Impulse-Noise-Protection histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end current-interval (if-index) inm-equiv-inp-histo [ (class-interval) ]
```

Command Parameters

Table 109.40-1 "xDSL INS Near End Current 15Min EINP Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring equivalent INP histogram - range: [1...17]	class interval

Command Output

Table 109.40-2 "xDSL INS Near End Current 15Min EINP Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.41 xDSL INS Near End Current Day Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end current day data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end current-1day [ (if-index) ]
```

Command Parameters

Table 109.41-1 "xDSL INS Near End Current Day Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.41-2 "xDSL INS Near End Current Day Data Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>

109.42 xDSL INS Near End Current Day IAT Histogram

Command Description

This command displays the xDSL impulse-Noise-Sensor near-end current day Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end current-1day (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.42-1 "xDSL INS Near End Current Day IAT Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring inter arrival time histogram - range: [1...8]	class interval

Command Output

Table 109.42-2 "xDSL INS Near End Current Day IAT Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.43 xDSL INS Near End Current Day EINP Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end current day Equivalent-Impulse-Noise-Protection histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end current-1day (if-index) inm-equiv-inp-histo [ (class-interval) ]
```

Command Parameters

Table 109.43-1 "xDSL INS Near End Current Day EINP Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring equivalent INP histogram - range: [1...17]	class interval

Command Output

Table 109.43-2 "xDSL INS Near End Current Day EINP Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.44 xDSL INS Near End Previous 15Min Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end previous 15Min data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end previous-interval [ (if-index) ]
```

Command Parameters

Table 109.44-1 "xDSL INS Near End Previous 15Min Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.44-2 "xDSL INS Near End Previous 15Min Data Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

109.45 xDSL INS Near End Previous 15Min IAT Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end previous 15Min Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end previous-interval (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.45-1 "xDSL INS Near End Previous 15Min IAT Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring inter arrival time histogram - range: [1...8]	class interval

Command Output

Table 109.45-2 "xDSL INS Near End Previous 15Min IAT Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.46 xDSL INS Near End Previous 15Min EINP Histogram

Command Description

This command displays the xDSL impulse-Noise-Sensor near-end previous 15Min Equivalent-Impulse-Noise-Protection histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end previous-interval (if-index) inm-equiv-inp-histo [ (class-interval) ]
```

Command Parameters

Table 109.46-1 "xDSL INS Near End Previous 15Min EINP Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring equivalent INP histogram - range: [1...17]	class interval

Command Output

Table 109.46-2 "xDSL INS Near End Previous 15Min EINP Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.47 xDSL INS Near End Previous Day Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end previous day data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end previous-1day [ (if-index) ]
```

Command Parameters

Table 109.47-1 "xDSL INS Near End Previous Day Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.47-2 "xDSL INS Near End Previous Day Data Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

109.48 xDSL INS Near End Previous Day IAT Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end previous day Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end previous-1day (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.48-1 "xDSL INS Near End Previous Day IAT Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring inter arrival time histogram - range: [1...8]	class interval

Command Output

Table 109.48-2 "xDSL INS Near End Previous Day IAT Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.49 xDSL INS Near End Previous Day EINP Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor near-end previous day Equivalent-Impulse-Noise-Protection histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor near-end previous-1day (if-index) inm-equiv-inp-histo [ (class-interval) ]
```

Command Parameters

Table 109.49-1 "xDSL INS Near End Previous Day EINP Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring equivalent INP histogram - range: [1...17]	class interval

Command Output

Table 109.49-2 "xDSL INS Near End Previous Day EINP Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.50 xDSL INS Far End Operational Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end operational data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end oper-data [ (if-index) ]
```

Command Parameters

Table 109.50-1 "xDSL INS Far End Operational Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.50-2 "xDSL INS Far End Operational Data Status Command" Display parameters

Specific Information		
name	Type	Description
ins-sensitivity	Parameter type: <Xdsl::InsSensitivity> - impulse noise sensitivity - unit: dB / 10 - range: [-128...127]	impulse noise sensitivity <i>This element is always shown.</i>
equiv-inp-mode	Parameter type: <Xdsl::InmEquivInpMode> (mode-0 mode-1	equivalent INP mode actually used to construct the INM equivalent INP histograms.

name	Type	Description
	mode-2 mode-3 not-supported) Possible values: - mode-0 : impulse length - mode-1 : cluster length - mode-2 : sum of impulse length in cluster - mode-3 : gap compensated impulse length in cluster - not-supported : INM not supported by modem	<i>This element is always shown.</i>

109.51 xDSL INS Far End Current 15Min Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end current 15Min data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end current-interval [ (if-index) ]
```

Command Parameters

Table 109.51-1 "xDSL INS Far End Current 15Min Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.51-2 "xDSL INS Far End Current 15Min Data Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>

109.52 xDSL INS Far End Current 15Min IAT Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end current 15Min Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end current-interval (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.52-1 "xDSL INS Far End Current 15Min IAT Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring inter arrival time histogram - range: [1...8]	class interval

Command Output

Table 109.52-2 "xDSL INS Far End Current 15Min IAT Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.53 xDSL INS Far End Current 15Min EINP Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end current 15Min Equivalent-Impulse-Noise-Protection histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

> show xdsl imp-noise-sensor far-end current-interval (if-index) inm-equiv-inp-histo [(class-interval)]

Command Parameters

Table 109.53-1 "xDSL INS Far End Current 15Min EINP Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring equivalent INP histogram - range: [1...17]	class interval

Command Output

Table 109.53-2 "xDSL INS Far End Current 15Min EINP Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.54 xDSL INS Far End Current Day Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end current day data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end current-1day [ (if-index) ]
```

Command Parameters

Table 109.54-1 "xDSL INS Far End Current Day Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.54-2 "xDSL INS Far End Current Day Data Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>

109.55 xDSL INS Far End Current Day IAT Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end current day Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end current-1day (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.55-1 "xDSL INS Far End Current Day IAT Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring inter arrival time histogram - range: [1...8]	class interval

Command Output

Table 109.55-2 "xDSL INS Far End Current Day IAT Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.56 xDSL INS Far End Current Day EINP Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end current day Equivalent-Impulse-Noise-Protection histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end current-1day (if-index) inm-equiv-inp-histo [ (class-interval) ]
```

Command Parameters

Table 109.56-1 "xDSL INS Far End Current Day EINP Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring equivalent INP histogram - range: [1...17]	class interval

Command Output

Table 109.56-2 "xDSL INS Far End Current Day EINP Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.57 xDSL INS Far End Previous 15Min Data Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end previous 15Min data. Note: Timestamp value will be displayed only when actual Impulse-Noise counter values are retrieved.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end previous-interval [ (if-index) ]
```

Command Parameters

Table 109.57-1 "xDSL INS Far End Previous 15Min Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.57-2 "xDSL INS Far End Previous 15Min Data Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

109.58 xDSL INS Far End Previous 15Min IAT Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end previous 15Min Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end previous-interval (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.58-1 "xDSL INS Far End Previous 15Min IAT Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring inter arrival time histogram - range: [1...8]	class interval

Command Output

Table 109.58-2 "xDSL INS Far End Previous 15Min IAT Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.59 xDSL INS Far End Previous 15Min EINP Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end previous 15Min Equivalent-Impulse-Noise-Protection histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end previous-interval (if-index) inm-equiv-inp-histo [ (class-interval) ]
```

Command Parameters

Table 109.59-1 "xDSL INS Far End Previous 15Min EINP Histogram" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(class-interval)	Format: - impulse noise monitoring equivalent INP histogram - range: [1...17]	class interval

Command Output

Table 109.59-2 "xDSL INS Far End Previous 15Min EINP Histogram" Display parameters

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.60 xDSL INS Far End Previous Day Status Command

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end previous day data. Note: Timestamp value will be displayed only when actual Impulse-Noise counter values are retrieved.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end previous-1day [ (if-index) ]
```

Command Parameters

Table 109.60-1 "xDSL INS Far End Previous Day Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 109.60-2 "xDSL INS Far End Previous Day Status Command" Display parameters

Specific Information		
name	Type	Description
inm-data-symb-cnt	Parameter type: <Xdsl::DataSymbolCounter> - an unsigned integer	number of monitored data symbols <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

109.61 xDSL INS Far End Previous Day IAT Histogram

Command Description

This command displays the xDSL Impulse-Noise-Sensor far-end previous day Inter-Arrival-Time histogram.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl imp-noise-sensor far-end previous-1day (if-index) inm-iat-histo [ (class-interval) ]
```

Command Parameters

Table 109.61-1 "xDSL INS Far End Previous Day IAT Histogram" Resource Parameters

Resource Identifier	Type	Description

Specific Information		
name	Type	Description
counter	Parameter type: <SignedInteger> - a signed integer	counter <i>This element is always shown.</i>

109.63 xDSL Downstream Vectoring Disturberlist Status Command

Command Description

Obsolete command, replaced by `show xdsl vect-disturber-list downstream r/s/p`.

This command displays the downstream disturber list for a specified victim line. The operator can also specify the maximum number of disturbers to be reported through the `max-reported-dist` parameter.

The disturber list will contain the following information per reported disturber:

- disturber line identifier
- Average Magnitude (available for both G.Fast and G.Vect lines), range [-32768,-1400 -400], unit 0.1dBm/Hz or Equal level FEXT (available for G.Vect lines), range [-32768,-1000,200], unit 0.1dB.
- Special value -32768 indicates that the averaged xtalk magnitude or elfext magnitude could not be estimated.
- cancelled line indicator [false,true,low,high]

User Level

The command can be accessed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl vect-disturbers [ (victim-line) ] [ no max-reported-dist | max-reported-dist <Xdsl::VectMaxNbrDist> ]
```

Obsolete command, replaced by `show xdsl vect-disturber-list downstream r/s/p`.

Command Parameters

Table 109.63-1 "xDSL Downstream Vectoring Disturberlist Status Command" Resource Parameters

Resource Identifier	Type	Description
(victim-line)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 109.63-2 "xDSL Downstream Vectoring Disturberlist Status Command" Command Parameters

Parameter	Type	Description
[no] max-reported-dist	Parameter type: <Xdsl::VectMaxNbrDist> Format: - max number of vector disturbers to be reported - range: [1...767]	<i>optional parameter with default value: 10</i> defines the maximum number of disturbers to be reported

Command Output

Table 109.63-3 "xDSL Downstream Vectoring Disturberlist Status Command" Display parameters

Specific Information		
name	Type	Description
max-reported-dist	Parameter type: <Xdsl::VectMaxNbrDist> - max number of vector disturbers to be reported - range: [1...767]	defines the maximum number of disturbers to be reported <i>This element is only shown in detail mode.</i>
disturber-list	Parameter type: <Xdsl::VectDistPrintableString> - the vector disturber list	sorted list of disturber lines. The strongest disturbers are listed first. Data per reported disturber in the list : disturber identifier, average magnitude 0.1dBm/Hz, cancelled line indicator. <i>This element is only shown in detail mode.</i>

109.64 xDSL Upstream Vectoring Disturberlist Status Command

Command Description

This command displays the upstream disturber list for a specified victim line. The operator can also specify the maximum number of disturbers to be reported through the max-reported-dist parameter.

The disturber list will contain the following information per reported disturber:

- disturber line identifier
- Average Magnitude, range [-32768,-1400 -400], unit 0.1dBm/Hz
- Special value -32768 indicates that the averaged xtalk magnitude could not be estimated.
- cancelled line indicator [false,true,low,high]

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl vect-disturber-list upstream [ (victim-line) ] [ no max-reported-dist | max-reported-dist
<Xdsl::VectMaxNbrDist> ]
```

Command Parameters

Table 109.64-1 "xDSL Upstream Vectoring Disturberlist Status Command" Resource Parameters

Resource Identifier	Type	Description
(victim-line)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 109.64-2 "xDSL Upstream Vectoring Disturberlist Status Command" Command Parameters

Parameter	Type	Description
[no] max-reported-dist	Parameter type: <Xdsl::VectMaxNbrDist> Format: - max number of vector disturbers to be reported - range: [1...767]	optional parameter with default value: 10 defines the maximum number of disturbers to be reported

Command Output

Table 109.64-3 "xDSL Upstream Vectoring Disturberlist Status Command" Display parameters

Specific Information		
name	Type	Description
max-reported-dist	Parameter type: <Xdsl::VectMaxNbrDist> - max number of vector disturbers to be reported - range: [1...767]	defines the maximum number of disturbers to be reported <i>This element is only shown in detail mode.</i>
disturber-list	Parameter type: <Xdsl::MultiVectDistPrintableString> - the vector disturber list	sorted list of disturber lines. The strongest disturbers are listed first. Data per reported disturber in the list : disturber identifier, average magnitude 0.1dBm/Hz, cancelled line indicator. <i>This element is only shown in detail mode.</i>

109.65 xDSL Downstream Vectoring Disturberlist Status Command

Command Description

This command displays the downstream disturber list for a specified victim line. The operator can also specify the maximum number of disturbers to be reported through the max-reported-dist parameter.

The disturber list will contain the following information per reported disturber:

- disturber line identifier
- Average Magnitude (available for both G.Fast and G.Vect lines), range [-32768,-1400 -400], unit 0.1dBm/Hz or Equal level FEXT (available for G.Vect lines), range [-32768,-1000,200], unit 0.1dB.
- Special value -32768 indicates that the averaged xtalk magnitude or elfext magnitude could not be estimated.
- cancelled line indicator [false,true,low,high]

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl vect-disturber-list downstream [ (victim-line) ] [ no max-reported-dist | max-reported-dist
<Xdsl::VectMaxNbrDist> ] [ no calc-mode | calc-mode <Xdsl::VectCalcMode> ]
```

Command Parameters

Resource Identifier	Type	Description
(victim-line)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 109.65-2 "xDSL Downstream Vectoring Disturberlist Status Command" Command Parameters

Parameter	Type	Description
[no] max-reported-dist	Parameter type: <Xdsl::VectMaxNbrDist>	optional parameter with default

Parameter	Type	Description
	Format: - max number of vector disturbers to be reported - range: [1...767]	<i>value: 10</i> defines the maximum number of disturbers to be reported
[no] calc-mode	Parameter type: <Xdsl::VectCalcMode> Format: (avmag elfext) Possible values: - avmag : calculates avg magnitude of disturber - elfext : calculates elfext magnitude of disturber	<i>optional parameter with default value: "avmag"</i> defines the calculation mode for disturbers to be reported

Command Output

Table 109.65-3 "xDSL Downstream Vectoring Disturberlist Status Command" Display parameters

Specific Information		
name	Type	Description
max-reported-dist	Parameter type: <Xdsl::VectMaxNbrDist> - max number of vector disturbers to be reported - range: [1...767]	defines the maximum number of disturbers to be reported <i>This element is only shown in detail mode.</i>
disturber-list	Parameter type: <Xdsl::MultiVectDistPrintableString> - the vector disturber list	sorted list of disturber lines. The strongest disturbers are listed first. Data per reported disturber in the list : disturber identifier, average magnitude 0.1dBm/Hz or ELFEXT 0.1dB, cancelled line indicator. <i>This element is only shown in detail mode.</i>

109.66 xDSL Vectoring Carrier Data Near End

Status Command

Command Description

This command displays xDSL vectoring carrier data near end.

Carrier data is displayed in raw format so the actual data interpretation is described in this section.

The XDSL passband (downstream or upstream) is composed of one or more bands (max 5, including VDSL optional band). Each carrier is coded as a bitmap. When the data are not available because the measurement is not completed, not enabled or not supported, an empty string will be returned. Below is the definition of the carrier specific bitmap.

Crosstalk Matrix : *The carrier XLINs is coded as a bitmap defined as follows:*

- OCTETS 0,1: INTEGER, (1..512) contains the carrier group size. The value is defined as MSB-LSB (big-endian)
- OCTETS 2,3: INTEGER(0..65535), contains the scale factor to apply to the xlin values, over the upstream band(s). The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5 : INTEGER (0..8191), index of the start carrier index of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6,7 : INTEGER (0..8191), index of the stop carrier index of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 8,9 : SIGNED INTEGER , contains the ai for the first carrier index of the band (start carrier index). The value is defined as MSB-LSB (big-endian).
- OCTETS 10,11: SIGNED INTEGER , contains the bi for the first carrier index of the band (start carrier index). The value is defined as MSB-LSB (big-endian).
- OCTETS 12..L: ai and bi for the next carrier index and so on until the last carrier index of the first upstream band (stop carrier index).
- OCTETS L+1..M: contain the start/stop carrier groups and the XLIN ai and bi of the second upstream band when available.
- OCTETS M+1..N: contain the start/stop carrier index and the XLIN ai and bi of the third upstream band when available.
- OCTETS N+1..P: contain the start/stop carrier index and the XLIN ai and bi of the fourth upstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier index and the XLIN ai and bi of the fifth upstream band when available.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl vect-carrier-data near-end [ (line) ] disturber-line <Xdsl::MultiXdslLine> [ no vgr-link | vgr-link <Xdsl::VectGrpLink> ] [ no group-sampling | group-sampling <Xdsl::ReqSamplingRate> ]
```

Command Parameters

Table 109.66-1 "xDSL Vectoring Carrier Data Near End Status Command" Resource Parameters

Resource Identifier	Type	Description
(line)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 109.66-2 "xDSL Vectoring Carrier Data Near End Status Command" Command Parameters

Parameter	Type	Description
disturber-line	Parameter type: <Xdsl::MultiXdslLine> Format: <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> / <Eqpt::MultiLtSlotId> / <Eqpt::MultiPortId> Field type <Eqpt::MultiRackId> - the rack number Field type <Eqpt::MultiShelfId> - the shelf number Field type <Eqpt::MultiLtSlotId> - the LT board slot number Field type <Eqpt::MultiPortId> - the port number	<i>optional parameter</i> the interface identifier of the disturber
[no] vgr-link	Parameter type: <Xdsl::VectGrpLink> Format: (local <Xdsl::VectGrpLink>) Possible values: - local : vp-slv and disturber-line are managed by the local isam Field type <Xdsl::VectGrpLink> - specifies the vectgroup link - range: [1...16]	<i>optional parameter with default value: "local"</i> the vector grouplink is mandatory when the vp-slv and/or the disturber-line are managed by a remote isam
[no] group-sampling	Parameter type: <Xdsl::ReqSamplingRate> Format: - the requested group sampling rate. Note that while values less than 4 are accepted, the min actual group sampling rate will be 4 if the crosstalk matrix is available. - range: [1...50]	<i>optional parameter with default value: 1</i> the requested group sampling rate of the reported xlin.

Command Output

Table 109.66-3 "xDSL Vectoring Carrier Data Near End Status Command" Display parameters

Specific Information		
name	Type	Description
disturber	Parameter type: <Xdsl::MultiXdslLine> <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> /	the interface identifier of the disturber

109 xDSL Status Commands

name	Type	Description
	<Eqpt::MultiLtSlotId> / <Eqpt::MultiPortId> Field type <Eqpt::MultiRackId> - the rack number Field type <Eqpt::MultiShelfId> - the shelf number Field type <Eqpt::MultiLtSlotId> - the LT board slot number Field type <Eqpt::MultiPortId> - the port number	<i>This element is always shown.</i>
vgr-link	Parameter type: <Xdsl::VectGrpLink> (local <Xdsl::VectGrpLink>) Possible values: - local : vp-slv and disturber-line are managed by the local isam Field type <Xdsl::VectGrpLink> - specifies the vectgroup link - range: [1...16]	the vectorgroup link identifier or local <i>This element is always shown.</i>
group-sampling	Parameter type: <Xdsl::SamplingRate> - the group sampling rate of reported xlin - range: [1...50]	the actual selected group sampling rate of the reported xlin <i>This element is always shown.</i>
xtalk-mat-complex	Parameter type: <Xdsl::OctetStingType> - a binary string	provides the crosstalk matrix values in linear scale for each carrier group over the upstream passband(xlin) <i>This element is always shown.</i>

109.67 xDSL Vectoring Carrier Data Far End Status Command

Command Description

This command displays xDSL vectoring carrier data far end.

Carrier data is displayed in raw format so the actual data interpretation is described in this section.

The XDSL passband (downstream or upstream) is composed of one or more bands (max 5, including VDSL optional band). Each carrier is coded as a bitmap. When the data are not available because the measurement is not completed, not enabled or not supported, an empty string will be returned. Below is the definition of the carrier specific bitmap.

Crosstalk Matrix : *The carrier XLINs is coded as a bitmap defined as follows:*

- OCTETS 0,1: INTEGER, (1..512) contains the carrier group size. The value is defined as MSB-LSB (big-endian)
- OCTETS 2,3: INTEGER(0..65535), contains the scale factor to apply to the xlin values, over the downstream band(s). The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5 : INTEGER (0..8191), index of the start carrier index of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6,7 : INTEGER (0..8191), index of the stop carrier index of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 8,9 : SIGNED INTEGER , contains the ai for the first carrier index of the band (start carrier index). The value is defined as MSB-LSB (big-endian).
- OCTETS 10,11: SIGNED INTEGER , contains the bi for the first carrier index of the band (start carrier index). The value is defined as MSB-LSB (big-endian).
- OCTETS 12..L: ai and bi for the next carrier index and so on until the last carrier index of the first downstream band (stop carrier index).
- OCTETS L+1..M: contain the start/stop carrier groups and the XLIN ai and bi of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier index and the XLIN ai and bi of the third downstream band when available.
- OCTETS N+1..P: contain the start/stop carrier index and the XLIN ai and bi of the fourth downstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier index and the XLIN ai and bi of the fifth downstream band when available.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl vect-carrier-data far-end [ (line) ] disturber-line <Xdsl::MultiXdslLine> [ no vgr-link | vgr-link <Xdsl::VectGrpLink> ] [ no group-sampling | group-sampling <Xdsl::ReqSamplingRate> ]
```

Command Parameters

Table 109.67-1 "xDSL Vectoring Carrier Data Far End Status Command" Resource Parameters

Resource Identifier	Type	Description

Table 109.67-2 "xDSL Vectoring Carrier Data Far End Status Command" Command Parameters

Parameter	Type	Description
disturber-line	Parameter type: <Xdsl::MultiXdslLine> Format: <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> / <Eqpt::MultiLtSlotId> / <Eqpt::MultiPortId> Field type <Eqpt::MultiRackId> - the rack number Field type <Eqpt::MultiShelfId> - the shelf number Field type <Eqpt::MultiLtSlotId> - the LT board slot number Field type <Eqpt::MultiPortId> - the port number	<i>optional parameter</i> the interface identifier of the disturber
[no] vgr-link	Parameter type: <Xdsl::VectGrpLink> Format: (local <Xdsl::VectGrpLink>) Possible values: - local : vp-slv and disturber-line are managed by the local isam Field type <Xdsl::VectGrpLink> - specifies the vectgroup link - range: [1...16]	<i>optional parameter with default value: "local"</i> the vector grouplink is mandatory when the vp-slv and/or the disturber-line are managed by a remote isam
[no] group-sampling	Parameter type: <Xdsl::ReqSamplingRate> Format: - the requested group sampling rate. Note that while values less than 4 are accepted, the min actual group sampling rate will be 4 if the crosstalk matrix is available. - range: [1...50]	<i>optional parameter with default value: 1</i> the requested group sampling rate of the reported xlin.

Command Output

Table 109.67-3 "xDSL Vectoring Carrier Data Far End Status Command" Display parameters

Specific Information		
name	Type	Description
disturber	Parameter type: <Xdsl::MultiXdslLine> <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> /	the interface identifier of the disturber

name	Type	Description
	<Eqpt::MultiLtSlotId> / <Eqpt::MultiPortId> Field type <Eqpt::MultiRackId> - the rack number Field type <Eqpt::MultiShelfId> - the shelf number Field type <Eqpt::MultiLtSlotId> - the LT board slot number Field type <Eqpt::MultiPortId> - the port number	<i>This element is always shown.</i>
vgr-link	Parameter type: <Xdsl::VectGrpLink> (local <Xdsl::VectGrpLink>) Possible values: - local : vp-slv and disturber-line are managed by the local isam Field type <Xdsl::VectGrpLink> - specifies the vectgroup link - range: [1...16]	the vectorgroup link identifier or local <i>This element is always shown.</i>
group-sampling	Parameter type: <Xdsl::SamplingRate> - the group sampling rate of reported xlin - range: [1...50]	the actual selected group sampling rate of the reported xlin <i>This element is always shown.</i>
xtalk-mat-complex	Parameter type: <Xdsl::OctetStingType> - a binary string	provides the crosstalk matrix values in linear scale for each carrier group over the upstream passband(xlin) <i>This element is always shown.</i>

109.68 xDSL Vectoring Processing Board Status Command

Command Description

This command allows the operator to show which LTs are actual connected to the vp-board. It also gives status information on the cable connection and the related vectoring control entity.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl vp-board [ (board-index) [ vp-link <Xdsl::VectVpLink> ] ]
```

Command Parameters

Table 109.68-1 "xDSL Vectoring Processing Board Status Command" Resource Parameters

Resource Identifier	Type	Description
(board-index)	Format: (ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Possible values: - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	vp board index
vp-link	Parameter type: <Xdsl::VectVpLink> Format: - specifies the vp-link or the soft-link on the vp-board - range: [1...16]	the (soft) link on the vp board

Command Output

Table 109.68-2 "xDSL Vectoring Processing Board Status Command" Display parameters

Specific Information		
name	Type	Description
lt-detect	Parameter type: <Xdsl::ActLsmBoardOrZero> (<Eqpt::MultiRackId> / <Eqpt::MultiShelfId> /	actual detected lt board slot index or value "none"

name	Type	Description
	<Eqpt::MultiSlotId> none) Possible values: - none : lt board not specified Field type <Eqpt::MultiRackId> - the rack number Field type <Eqpt::MultiShelfId> - the shelf number Field type <Eqpt::MultiSlotId> - the LT slot number	<i>This element is always shown.</i>
lt-link-nr short name: lt-lnk	Parameter type: <Xdsl::VectLtLink> - specifies the lt-link on the lt-board - range: [0...2]	link id of the slv lt <i>This element is always shown.</i>
link-status	Parameter type: <Xdsl::VpLinkStatus> ((not-connected not-connect) (connected connect) (operational oper) not-appl) Possible values: - not-connected : missing cable, invalid qsfp or connected lt not active OR in case of a soft-link: no SLV-LT plugged in - not-connect : missing cable, invalid qsfp or connected lt not active OR in case of a soft-link: no SLV-LT plugged in - connected : vp-lt communication possible - connect : vp-lt communication possible - operational : vp-lt communication operational - oper : vp-lt communication operational - not-appl : the link status is not applicable	the status of the cable connected to the vp-link OR the soft-link status <i>This element is always shown.</i>
vce-status	Parameter type: <Xdsl::VceStatus> ((not-operational not-oper) (operational oper) not-appl) Possible values: - not-operational : link-status not operational or lt not synchronized with vp-board - not-oper : link-status not operational or lt not synchronized with vp-board - operational : link-status operational and lt synchronized with vp-board - oper : link-status operational and lt synchronized with vp-board - not-appl : not applicable	the status of the vectoring control entity <i>This element is always shown.</i>
qsfp-status	Parameter type: <Xdsl::QsfpStatus> (not-present invalid valid not-appl) Possible values: - not-present : the hw does not detect a qsfp connector - invalid : the detected qsfp does not contain a valid qsfp string - valid : the detected qsfp connector is valid and operational - not-appl : the qsfp status is not applicable	the vp-qsfp connector status OR not applicable in case of soft-links <i>This element is always shown.</i>
isam-ip	Parameter type: <Xdsl::IpAddress> - IPv4-address	the ip address of the isam which holds the detected lt board <i>This element is always shown.</i>
system-id	Parameter type: <Sys::systemId>	a unique system identification

109 xDSL Status Commands

name	Type	Description
	- system ID - range: printable string (no white-spaces) - length: x<=64	<i>This element is only shown in detail mode.</i>

109.69 xDSL Vectoring Processing Group Status Command

Command Description

This command allows the operator to retrieve, for a specified lt board (optional parameter), the vectoring group information and its own info.

A vectoring group exists of a vp board and, per vgr-link, the detected lt's which passed their identification over the vp-lt-link to the vp board.

Every update in the vectoring group e.g. new detected lt or vp has lost connectivity with an lt, is broadcasted by the vp to all lt's within the group.

Therefore:

- vectoring group info: contains the **last retrieved data from the vp board when the vp-lt-link was operational!**
 - vp info: id of the vp board , the IP@ and system-id of the system which holds the vp board, vce status
 - info per vgr-link:
 - the qsf status of the connector on the vp board
 - id of the detected lt, the IP@ and system-id of the system which holds the detected lt, the link status and vce status
- own info: contains the actual status of its vp-lt-link, the qsf status of the connector on the lt, the IP@ and system-id of the system which holds the lt
- own2 info: contains the actual status of its second vp-lt-link, the qsf status of the connector on the lt, the IP@ and system-id of the system which holds the lt

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl vect-group [ (board-index) [ vgr-link <Xdsl::VectGroupLink> ] ]
```

Command Parameters

Table 109.69-1 "xDSL Vectoring Processing Group Status Command" Resource Parameters

Resource Identifier	Type	Description
(board-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	vp board index

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number	
vgr-link	Parameter type: <Xdsl::VectGroupLink> Format: (vp own own2 <Xdsl::VectGroupLink>) Possible values: - vp : vp-board entry in the vectgroup table - own : own lt entry in the vectgroup table - own2 : second own lt entry in the vectgroup table Field type <Xdsl::VectGroupLink> - specifies the vp-link or the soft-link on the vp-board - range: [1...16]	the vector group link

Command Output

Table 109.69-2 "xDSL Vectoring Processing Group Status Command" Display parameters

Specific Information		
name	Type	Description
board-detect	Parameter type: <Xdsl::VectGroupActLsmBoardOrZero> (lt : <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> / <Eqpt::MultiLtSlotId> ctrl : <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> acu : <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> <Eqpt::MultiRackId> / <Eqpt::MultiShelfId> / <Eqpt::MultiLtSlotId> none) Possible values: - none : lt board not specified - lt : lt-slot - ctrl : ctrl-slot - acu : acu-slot Field type <Eqpt::MultiRackId> - the rack number Field type <Eqpt::MultiShelfId> - the shelf number Field type <Eqpt::MultiLtSlotId> - the LT board slot number	a board slot index or value "none" <i>This element is always shown.</i>
lt-link-nr short name: lt-lnk	Parameter type: <Xdsl::VectLtLink> - specifies the lt-link on the lt-board - range: [0...2]	link id of the slv lt <i>This element is always shown.</i>
link-status	Parameter type: <Xdsl::VpLinkStatus> ((not-connected not-connect) (connected connect) (operational oper) not-appl) Possible values: - not-connected : missing cable, invalid qsfp or connected lt not active OR in case of a soft-link: no SLV-LT plugged in - not-connect : missing cable, invalid qsfp or connected lt not active OR in case of a soft-link: no SLV-LT plugged in - connected : vp-lt communication possible - connect : vp-lt communication possible - operational : vp-lt communication operational	the status of the cable connected to the vp-link of the vp-board OR the soft-link status. The vp-link value is equal to the vgr-link. <i>This element is always shown.</i>

name	Type	Description
	- oper : vp-lt communication operational - not-appl : the link status is not applicable	
vce-status	Parameter type: <Xdsl::VceStatus> ((not-operational not-oper) (operational oper) not-appl) Possible values: - not-operational : link-status not operational or lt not synchronized with vp-board - not-oper : link-status not operational or lt not synchronized with vp-board - operational : link-status operational and lt synchronized with vp-board - oper : link-status operational and lt synchronized with vp-board - not-appl : not applicable	the status of the vectoring control entity <i>This element is always shown.</i>
qsfp-status	Parameter type: <Xdsl::QsfpStatus> (not-present invalid valid not-appl) Possible values: - not-present : the hw does not detect a qsfp connector - invalid : the detected qsfp does not contain a valid qsfp string - valid : the detected qsfp connector is valid and operational - not-appl : the qsfp status is not applicable	the qsfp connector status OR not applicable in case of soft-links <i>This element is always shown.</i>
isam-ip	Parameter type: <Xdsl::IpAddress> - IPv4-address	the ip address of the isam which holds the detected board <i>This element is always shown.</i>
system-id	Parameter type: <Sys::systemId> - system ID - range: printable string (no white-spaces) - length: x<=64	a unique system identification <i>This element is only shown in detail mode.</i>

110- Configuration Data Status Commands

110.1 Configuration Data Status Command Tree	110-5577
110.2 xDSL Port Configuration Status Command	110-5578
110.3 xDSL Port ATM Configuration Status Command	110-5584
110.4 xDSL Port ATM Interface Configuration Status Command	110-5586
110.5 xDSL Port Interface Configuration Status Command	110-5588
110.6 xDSL IGMP Configuration Status Command	110-5590
110.7 xDSL Security PAE Configuration Status Command	110-5592
110.8 xDSL BridgePort Configuration Status Command	110-5595
110.9 xDSL QoS Configuration Status Command	110-5599
110.10 xDSL PPPoX Relay Configuration Status Command	110-5601
110.11 xDSL Bonding Group Configuration Status Command	110-5603

110.1 Configuration Data Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Configuration Data Status Commands".

Command Tree

```

```

110.2 xDSL Port Configuration Status Command

Command Description

This command displays the xDSL Port Configuration data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) xdsl
```

Command Parameters

Table 110.2-1 "xDSL Port Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 110.2-2 "xDSL Port Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
service-profile	Parameter type: <AsamProfilePointer> - a pointer to a profile or profile index - range: [0...65535]	ADSLx/VDSLx service profile configured on this port <i>This element is always shown.</i>
spectrum-profile	Parameter type: <AsamProfilePointer> - a pointer to a profile or profile index - range: [0...65535]	ADSLx/VDSLx spectrum profile configured on this port <i>This element is always shown.</i>
dpbo-profile	Parameter type: <Xdsl::DpboProfilePointer> - profile index - range: [0...50]	ADSLx/VDSLx dpbo profile configured on this port <i>This element is always shown.</i>
rtx-profile	Parameter type: <AsamProfilePointer>	ADSLx/VDSLx rtx profile

name	Type	Description
	- a pointer to a profile or profile index - range: [0...65535]	configured on this port <i>This element is always shown.</i>
vect-profile	Parameter type: <AsamProfilePointer> - a pointer to a profile or profile index - range: [0...65535]	VDLS2 vectoring profile configured on this port <i>This element is always shown.</i>
ansi-t1413	Parameter type: <Xdsl::T1413> (dis-ansi-t1413 ansi-t1413) Possible values: - dis-ansi-t1413 : disable ANSI T1.413-1998 - ansi-t1413 : ANSI T1.413-1998	ANSI T1.413-1998 <i>This element is always shown.</i>
etsi-dts	Parameter type: <Xdsl::Etsidts> (dis-etsi-dts etsi-dts) Possible values: - dis-etsi-dts : disable ETSI DTS/TM06006 - etsi-dts : ETSI DTS/TM06006	ETSI DTS/TM06006 <i>This element is always shown.</i>
g992-1-a	Parameter type: <Xdsl::G21potsnos> (dis-g992-1-a g992-1-a) Possible values: - dis-g992-1-a : disable G.992.1 POTS non-overlapped spectrum - g992-1-a : G.992.1 POTS non-overlapped spectrum	G.992.1 POTS non-overlapped spectrum <i>This element is always shown.</i>
g992-1-b	Parameter type: <Xdsl::G21isdnnos> (dis-g992-1-b g992-1-b) Possible values: - dis-g992-1-b : disable G.992.1 ISDN non-overlapped spectrum - g992-1-b : G.992.1 ISDN non-overlapped spectrum	G.992.1 ISDN non-overlapped spectrum <i>This element is always shown.</i>
g992-2-a	Parameter type: <Xdsl::G22potsnos> (dis-g992-2-a g992-2-a) Possible values: - dis-g992-2-a : disable G.992.2 POTS non-overlapped spectrum - g992-2-a : G.992.2 POTS non-overlapped spectrum	G.992.2 POTS non-overlapped spectrum <i>This element is always shown.</i>
g992-3-a	Parameter type: <Xdsl::G23potsnos> (dis-g992-3-a g992-3-a) Possible values: - dis-g992-3-a : disable G.992.3 POTS non-overlapped spectrum - g992-3-a : G.992.3 POTS non-overlapped spectrum	G.992.3 POTS non-overlapped spectrum <i>This element is always shown.</i>
g992-3-b	Parameter type: <Xdsl::G23isdnnos> (dis-g992-3-b g992-3-b) Possible values: - dis-g992-3-b : disable G.992.3 ISDN non-overlapped spectrum - g992-3-b : G.992.3 ISDN non-overlapped spectrum	G.992.3 ISDN non-overlapped spectrum <i>This element is always shown.</i>
g992-3-aj	Parameter type: <Xdsl::G23AllDigNos> (dis-g992-3-aj g992-3-aj) Possible values: - dis-g992-3-aj : disable G.992.3 all digital mode	G.992.3 all digital mode non-overlapped spectrum <i>This element is always shown.</i>

110 Configuration Data Status Commands

name	Type	Description
	non-overlapped spectrum - g992-3-aj : G.992.3 all digital mode non-overlapped spectrum	
g992-3-l1	Parameter type: <Xdsl::G23PotsnosUs1> (dis-g992-3-l1 g992-3-l1) Possible values: - dis-g992-3-l1 : disable G.992.3 POTS non-overlapped spectrum US mask 1 - g992-3-l1 : G.992.3 POTS non-overlapped spectrum US mask 1	G.992.3 POTS non-overlapped spectrum US mask 1 <i>This element is always shown.</i>

g993-2-8a	Parameter type: <Xdsl::GProfile8A> (dis-g993-2-8a g993-2-8a) Possible values: - dis-g993-2-8a : disable G.993.2_8A VDSL-2 with profile 8A - g993-2-8a : G.993.2_8A VDSL-2 with profile 8A	VDSL-2 with profile 8A <i>This element is always shown.</i>
g993-2-8b	Parameter type: <Xdsl::GProfile8B> (dis-g993-2-8b g993-2-8b) Possible values: - dis-g993-2-8b : disable G.993.2_8B VDSL-2 with profile 8B - g993-2-8b : G.993.2_8B VDSL-2 with profile 8B	VDSL-2 with profile 8B <i>This element is always shown.</i>
g993-2-8c	Parameter type: <Xdsl::GProfile8C> (dis-g993-2-8c g993-2-8c) Possible values: - dis-g993-2-8c : disable G.993.2_8C VDSL-2 with profile 8C - g993-2-8c : G.993.2_8C VDSL-2 with profile 8C	VDSL-2 with profile 8C <i>This element is always shown.</i>
g993-2-8d	Parameter type: <Xdsl::GProfile8D> (dis-g993-2-8d g993-2-8d) Possible values: - dis-g993-2-8d : disable G.993.2_8D VDSL-2 with profile 8D - g993-2-8d : G.993.2_8D VDSL-2 with profile 8D	VDSL-2 with profile 8D <i>This element is always shown.</i>
g993-2-12a	Parameter type: <Xdsl::GProfile12A> (dis-g993-2-12a g993-2-12a) Possible values: - dis-g993-2-12a : disable G.993.2_12A VDSL-2 with	VDSL-2 with profile 12A <i>This element is always shown.</i>

110 Configuration Data Status Commands

name	Type	Description
	profile 12A - g993-2-12a : G.993.2_12A VDSL-2 with profile 12A	
g993-2-12b	Parameter type: <Xdsl::GProfile12B> (dis-g993-2-12b g993-2-12b) Possible values: - dis-g993-2-12b : disable G.993.2_12B VDSL-2 with profile 12B - g993-2-12b : G.993.2_12B VDSL-2 with profile 12B	VDSL-2 with profile 12b <i>This element is always shown.</i>
g993-2-17a	Parameter type: <Xdsl::GProfile17A> (dis-g993-2-17a g993-2-17a) Possible values: - dis-g993-2-17a : disable G.993.2_17A VDSL-2 with profile 17A - g993-2-17a : G.993.2_17A VDSL-2 with profile 17A	VDSL-2 with profile 17A <i>This element is always shown.</i>
g993-2-30a	Parameter type: <Xdsl::GProfile30A> (dis-g993-2-30a g993-2-30a) Possible values: - dis-g993-2-30a : disable G.993.2_30A VDSL-2 with profile 30A - g993-2-30a : G.993.2_30A VDSL-2 with profile 30A	VDSL-2 with profile 30A <i>This element is always shown.</i>
g993-2-35b	Parameter type: <Xdsl::GProfile35B> (dis-g993-2-35b g993-2-35b) Possible values: - dis-g993-2-35b : disable G.993.2_35B VDSL-2 with profile 35B - g993-2-35b : G.993.2_35B VDSL-2 with profile 35B	VDSL-2 with profile 35B <i>This element is always shown.</i>
carrier-data-mode	Parameter type: <Xdsl::CarrierDataMode> (off on on-init) Possible values: - off : disable the collection - on : enable the collection - on-init : enable and re-initialize the line	carrier data measurement collection <i>This element is always shown.</i>
admin-state	Parameter type: <Xdsl::XdslAdminStatus> (not-applicable up down testing) Possible values: - not-applicable : not-applicable - up : admin status is up - down : admin status is down - testing : no operational packets can be passed	specifies state of the interface <i>This element is only shown in detail mode.</i>
bonding-mode	Parameter type: <Xdsl::BondingMode> (native atm-bonding bonding) Possible values: - native : (deprecated)native mode for channel-1 - atm-bonding : (deprecated)atm bonding mode for channel-1 obsolete alternative replaced by bonding	channel-1 bonding mode <i>This element is always shown.</i>

name	Type	Description
	- bonding : (deprecated)bonding mode for channel-1	
transfer-mode	Parameter type: <Xdsl::ActualTpsTcMode> (no-value atm ptm system-default) Possible values: - no-value : no value - atm : atm mode - ptm : ptm mode - system-default : determined by the system, based on board type	transfer mode which the node will apply to the line <i>This element is only shown in detail mode.</i>
override-state	Parameter type: <Xdsl::OverrideState> (not-created created-no-overrules created-overrules) Possible values: - not-created : not created - created-no-overrules : created no overrides - created-overrules : created overrides	indicates whether an override record is configured and not all 'no-overrules' <i>This element is only shown in detail mode.</i>

110.3 xDSL Port ATM Configuration Status Command

Command Description

This command displays the xDSL port atm configuration data.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) atm-pvc [ (port-index) ]
```

Command Parameters

Table 110.3-1 "xDSL Port ATM Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port-index)	Format: (dsl : <Eqpt::VpiMandatoryId> : <Eqpt::VciMandatoryId> dsl) Possible values: - dsl : ADSL/SHDSL board Field type <Eqpt::VpiMandatoryId> - atm VPI Field type <Eqpt::VciMandatoryId> - atm VCI	the ATM PVC

Command Output

Table 110.3-2 "xDSL Port ATM Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <Xdsl::XdslAdminStatusAtm> (up down) Possible values: - up : enable traffic flow - down : disable traffic flow	specifies the administrative state of the VCL. <i>This element is only shown in detail mode.</i>
aal5-encap-type	Parameter type: <Atm::VccEncapType> (llc-snap llc-snap-routed llc-nlpid vc-mux-bridged-8023 vc-mux-routed vc-mux-pppoa none automatic : ip automatic : ppp automatic : pppoa automatic : ipoe-ppp) Possible values: - llc-snap : logical link control encapsulation bridged protocol - llc-snap-routed : logical link control encapsulation routed protocol - llc-nlpid : logical link control encapsulation pppoa protocol - vc-mux-bridged-8023 : virtual channel multiplex bridged protocol - vc-mux-routed : virtual channel multiplex routed protocol - vc-mux-pppoa : virtual channel multiplex pppoa protocol - automatic : automatic detection of encapsulation type - none : no encapsulation type Possible values: - ip : autodetection of the used ip encapsulation - ppp : autodetection of the used ppp encapsulation - pppoa : autodetection of the used pppoa encapsulation - ipoe-ppp : autodetection of the used ip or ppp encapsulation	displays the encapsulations method for carrying network interconnect traffic over AAL type 5 over ATM <i>This element is always shown.</i>

110.4 xDSL Port ATM Interface Configuration Status Command

Command Description

This command displays the xDSL port atm-interface configuration data.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) interface-atm-pvc [ (pvc-index) ]
```

Command Parameters

Table 110.4-1 "xDSL Port ATM Interface Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(pvc-index)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl) Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	the ATM PVC

Command Output

Table 110.4-2 "xDSL Port ATM Interface Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
customer-id	Parameter type: <ltf::asamIfExtCustomerId> - a string identifying the customer or user - length: x<=64	the customerId per PVC <i>This element is always shown.</i>

110.5 xDSL Port Interface Configuration Status Command

Command Description

This command displays the xDSL port interface configuration data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) interface-port
```

Command Parameters

Table 110.5-1 "xDSL Port Interface Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 110.5-2 "xDSL Port Interface Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <Xdsl::XdslAdminStatus> (not-applicable up down testing) Possible values: - not-applicable : not-applicable	the state of the interface <i>This element is always shown.</i>

name	Type	Description
	- up : admin status is up - down : admin status is down - testing : no operational packets can be passed	
link-updown-trap	Parameter type: <Itf::ifLinkUpDownTrapEnable> ((link-updown-trap enabled) (no-link-updown-trap disabled)) Possible values: - link-updown-trap : enable link-up/link-down traps - enabled : enable link-up/link-down traps - no-link-updown-trap : disable link-up/link-down traps - disabled : disable link-up/link-down traps	indicates whether link-up/link-down traps are generated <i>This element is always shown.</i>
user	Parameter type: <Itf::asamIfExtCustomerId> - a string identifying the customer or user - length: x<=64	description of the user connected to this interface <i>This element is always shown.</i>
severity	Parameter type: <Itf::asamIfExtAlmReportingSeverity> (indeterminate warning minor major critical no-alarms default no-value) Possible values: - indeterminate : not a definite known severity - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking - no-alarms : do not report alarm - default : take default as specified via Interface Alarm Configuration command - no-value : no entry in the table	severity for alarm to be reported <i>This element is always shown.</i>

110.6 xDSL IGMP Configuration Status Command

Command Description

This command displays the xDSL IGMP configuration data.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) igmp [ (port) ]
```

Command Parameters

Table 110.6-1 "xDSL IGMP Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl vlan : dsl : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : dsl : <Eqpt::UnstackedVlan> vlan : dsl : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : dsl : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>) Possible values: - vlan : vlan port Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Possible values:	identification of the port or virtual channel

Resource Identifier	Type	Description
	- stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 110.6-2 "xDSL IGMP Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
perm-pkg-bitmap	Parameter type: <Igmp::PermPkgBitMap> - a binary string - length: 128	packages, the user is allowed to join <i>This element is only shown in detail mode.</i>
max-num-group	Parameter type: <Igmp::ChannelMaxNumGroup> - Max group number this port can support.The value depends on the board type and port type,please refer to the product information document for detail. - range: [0...2048]	max group number this port (ADSL, PVC) can support <i>This element is only shown in detail mode.</i>

110.7 xDSL Security PAE Configuration Status Command

Command Description

This command displays the xDSL security PAE configuration data.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) security-pae [ (port) ]
```

Command Parameters

Table 110.7-1 "xDSL Security PAE Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl) Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	identification of the port or virtual channel

Command Output

Table 110.7-2 "xDSL Security PAE Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
controlled-port	Parameter type: <Aaa::PaeControlledPortControl> (force-unauthorized auto force-authorized) Possible values: - force-unauthorized : force unauthorized control - auto : automatic control - force-authorized : force authorized control	current value of the controlled Port <i>This element is always shown.</i>
quiet-period	Parameter type: <Aaa::paeQuitTime> - quietPeriod - unit: sec - range: [0...65535]	quietPeriod constant currently used, value in seconds <i>This element is always shown.</i>
tx-period	Parameter type: <Aaa::paeTime> - authentication time - unit: sec - range: [1...65535]	txPeriod constant currently used, value in seconds <i>This element is always shown.</i>
supp-timeout	Parameter type: <Aaa::paeTime> - authentication time - unit: sec - range: [1...65535]	suppTimeout constant currently used, value in seconds <i>This element is always shown.</i>
server-timeout	Parameter type: <Aaa::paeTime> - authentication time - unit: sec - range: [1...65535]	serverTimeout constant currently used, value in seconds <i>This element is always shown.</i>
max-req	Parameter type: <Aaa::paeMaxReq> - max number of requests - range: [1...10]	maxReq constant currently used <i>This element is always shown.</i>
authentication	Parameter type: <Aaa::PortAuthState> (authentication no-authen) Possible values: - authentication : enable 802.1x authentication - no-authen : disable 802.1x authentication	enable 802.1x authentication <i>This element is always shown.</i>
init-authreq-off	Parameter type: <Aaa::PortAuthReq> (initiate-authreq init-authreq-off) Possible values: - initiate-authreq : enable initiate authentication request to supplicant - init-authreq-off : disable initiate authentication request to supplicant	specify initiate authentication request to supplicant <i>This element is always shown.</i>
handshake	Parameter type: <Aaa::PortHandShakeMode> (handshake no-handshake) Possible values: - handshake : enable handshake for this port - no-handshake : disable handshake for this port	enable handshake for this port <i>This element is always shown.</i>
handshake-period	Parameter type: <Aaa::PortHandShakePeriod> - handshake time interval - unit: sec - range: [5...90]	specify the handshake time interval <i>This element is always shown.</i>
initialize	Parameter type: <Aaa::InitCont> (initialize no-initialize) Possible values: - initialize : initialize this port	initialization control for this port <i>This element is always shown.</i>

110 Configuration Data Status Commands

name	Type	Description
	- no-initialize : don't initialize this port	

110.8 xDSL BridgePort Configuration Status Command

Command Description

This command displays the Bridge Port configured data.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) bridge-port [ (port) ]
```

Command Parameters

Table 110.8-1 "xDSL BridgePort Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl) Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	identification of the port or virtual channel

Command Output

Table 110.8-2 "xDSL BridgePort Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
pvid	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	default vlan id for untagged frames <i>This element is only shown in detail mode.</i>
default-priority	Parameter type: <Vlan::Priority> - priority of ethernet frames - range: [0...7]	priority to be set in upstream frames <i>This element is only shown in detail mode.</i>
mac-learn-off	Parameter type: <Vlan::learnStatus> (mac-learning mac-learn-off) Possible values: - mac-learning : enable self learning of mac address - mac-learn-off : disable self learning of mac address	self learning of mac address <i>This element is only shown in detail mode.</i>
max-unicast-mac	Parameter type: <Vlan::MaxMac> - number of unicast mac addresses - range: [1...65535]	max unicast mac addresses <i>This element is only shown in detail mode.</i>
accept-frame-type	Parameter type: <Vlan::VlanFrameTypes> (single-tagged untagged mixed-tagged) Possible values: - single-tagged : admit only vlan tagged - untagged : admit only vlan untagged - mixed-tagged : admit vlan tagged and vlan untagged	accept frame types <i>This element is only shown in detail mode.</i>
prio-regen-prof	Parameter type: <Vlan::PrioRegenProfile> (none trusted-port best-effort cl-all-prio-3 cl-all-prio-4 background be-cl-voice be-cl-1d-voice be-voice l2-vpn-3 l2-vpn-4 11 12 13 14 15 16 17 18 19	priority regeneration profile <i>This element is only shown in detail mode.</i>

name	Type	Description
	20 21 22 23 24 25 26 27 28 29 30 31 32) Possible values: - none : default value - trusted-port : trusted port - best-effort : best effort - cl-all-prio-3 : controlled load, all priority 3 traffic - cl-all-prio-4 : controlled load, all priority 4 traffic - background : background - be-cl-voice : best effort, controlled load, voice - be-cl-1d-voice : best effort, controlled load, 802.Id Annex G voice - be-voice : best effort voice - l2-vpn-3 : L2 VPN with 3 traffic classes - l2-vpn-4 : L2 VPN with 4 traffic classes - 11 : operator-defined profile - 12 : operator-defined profile - 13 : operator-defined profile - 14 : operator-defined profile - 15 : operator-defined profile - 16 : operator-defined profile - 17 : operator-defined profile - 18 : operator-defined profile - 19 : operator-defined profile - 20 : operator-defined profile - 21 : operator-defined profile - 22 : operator-defined profile - 23 : operator-defined profile - 24 : operator-defined profile - 25 : operator-defined profile - 26 : operator-defined profile - 27 : operator-defined profile - 28 : operator-defined profile - 29 : operator-defined profile - 30 : operator-defined profile - 31 : operator-defined profile - 32 : operator-defined profile	
prio-regen-name	Parameter type: <Vlan::PrioRegenProfileName> (none name : <Vlan::IgnoredVlanProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software.	priority regeneration profile name <i>This element is only shown in detail mode.</i>

110 Configuration Data Status Commands

name	Type	Description
	The currently allowed values can be shown with online-help.	
qos-profile	Parameter type: <Vlan::QosProfileName> (none name : <Vlan::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <Vlan::IgnoredQosProfileName> - name of the QoS profile - length: 1<=x<=64	qos profile name <i>This element is always shown.</i>

110.9 xDSL QoS Configuration Status Command

Command Description

This command displays the xDSL QoS configuration data.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) qos
```

Command Parameters

Table 110.9-1 "xDSL QoS Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 110.9-2 "xDSL QoS Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
scheduler-profile	Parameter type: <Qos::QoS Scheduler Profile Name> (none name : <Qos::IgnoredQoS Profile Name>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	the name of the scheduler profile to be mapped on this dsl link <i>This element is only shown in detail mode.</i>

110 Configuration Data Status Commands

name	Type	Description
cac-profile	Parameter type: <Qos::QosCacProfileName> (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	the name of the cac profile to be mapped on this dsl link2 <i>This element is only shown in detail mode.</i>

110.10 xDSL PPPoX Relay Configuration Status Command

Command Description

This command displays the xDSL PPPoX relay client port configuration data.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) pppox-relay [ (port) ]
```

Command Parameters

Table 110.10-1 "xDSL PPPoX Relay Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl vlan : dsl : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : dsl : <Eqpt::UnstackedVlan> vlan : dsl : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : dsl : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>) Possible values: - vlan : vlan port Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI	client port identification

Resource Identifier	Type	Description
	Field type <Eqpt::Vcild> - atm VCI Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 110.10-2 "xDSL PPPoX Relay Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
vlan-id	Parameter type: <Vlan::StackedVlanSigned> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	client port associated to cc-engine <i>This element is only shown in detail mode.</i>
default-priority	Parameter type: <PPPoX::DefaultPriority> - indicates the p-bit for the client port - range: [0...7]	indicates the p-bit for the client port <i>This element is only shown in detail mode.</i>
max-cc	Parameter type: <PPPoX::MaxNumPppCc> - max no. of PPP cross connection on a port - range: [1...64], [9...64] = 8 with MAC concentration.	max no. of PPP cross connection on a port <i>This element is only shown in detail mode.</i>
qos-profile	Parameter type: <PPPoX::QosProfileName> (none name : <PPPoX::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <PPPoX::IgnoredQosProfileName> - name of the QoS profile - length: 1<=x<=32	qos profile name associated with client port <i>This element is only shown in detail mode.</i>

110.11 xDSL Bonding Group Configuration Status Command

Command Description

This command displays the xDSL bonding group configuration data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl config-data-port (if-index) bonding-group
```

Command Parameters

Table 110.11-1 "xDSL Bonding Group Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 110.11-2 "xDSL Bonding Group Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
group-profile	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the bonding group profile <i>This element is always shown.</i>
group-rtx-profile	Parameter type: <Xdsl::IgnoredPrintableString> - ignored printable string	name of the bonding group rtx profile <i>This element is always shown.</i>
admin-state	Parameter type: <Xdsl::XdslAdminStatusGroup>	the admin-state of the primary

110 Configuration Data Status Commands

name	Type	Description
	(up down) Possible values: - up : admin-state of the group to up - down : admin-state of the group to down	link of the bonding group <i>This element is always shown.</i>

111- Operational Data Status Commands

111.1 Operational Data Status Command Tree	111-5606
111.2 xDSL Port Operational Status Command	111-5607
111.3 xDSL BridgePort Operational Status Command	111-5611
111.4 xDSL Port ATM Operational Status Command	111-5613
111.5 xDSL Port Interface Configuration Status Command	111-5615
111.6 xDSL IGMP Operational Status Command	111-5617
111.7 xDSL Port Ip Bridge Operational Status Command	111-5620
111.8 xDSL QoS Opertaional Status Command	111-5622

111.1 Operational Data Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Operational Data Status Commands".

Command Tree

```
----show
  ----xdsl
    ----oper-data-port
      - (if-index)
        ----xdsl
          ----bridge-port
            - (port)
              ----atm-pvc
                - (port-index)
              ----interface-port
            ----igmp
              - (port)
            ----ip-bridge-port
              - (ip-bridge-port)
          ----qos
```

111.2 xDSL Port Operational Status Command

Command Description

This command displays the xDSL Port Operational data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl oper-data-port (if-index) xdsl
```

Command Parameters

Table 111.2-1 "xDSL Port Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 111.2-2 "xDSL Port Operational Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <If::ifAdminStatus> (not-appl up down testing) Possible values: - not-appl : not-applicable - up : admin status is up - down : admin status is down - testing : no operational packets can be passed	specifies state of the interface <i>This element is only shown in detail mode.</i>

111 Operational Data Status Commands

name	Type	Description
opr-state/tx-rate-ds	Parameter type: <Xdsl::combinedCol> (down testing unknown dormant up : <Xdsl::bitrate>) Possible values: - up : up,traffic can pass - down : down,no traffic is passing - testing : testing,no traffic is passing - unknown : unknown - dormant : dormant,no traffic is passing Field type <Xdsl::bitrate> - bitrate - unit: kbits/sec	current operational state of the interface. <i>This element is only shown in detail mode.</i>
cur-op-mode	Parameter type: <Xdsl::OneOpModeTypeLinePreDef> (ansi-t1413 etsi-dts g992-1-a g992-1-b g992-2-a g992-3-a g992-3-b g992-3-aj g992-3-l1 g992-3-l2 g992-3-am g992-5-a g992-5-b ansi-t1.424 etsi-ts itu-g993-1 ieee-802.3ah g992-5-aj g992-5-am g993-2-8a g993-2-8b g993-2-8c g993-2-8d g993-2-12a g993-2-12b g993-2-17a g993-2-30a g993-2-35b gfast default) Possible values: - ansi-t1413 : ANSI T1.413-1998 - etsi-dts : ETSI DTS/TM06006 - g992-1-a : G.992.1 POTS non-overlapped spectrum - g992-1-b : G.992.1 ISDN non-overlapped spectrum - g992-2-a : G.992.2 POTS non-overlapped spectrum - g992-3-a : G.992.2 POTS non-overlapped spectrum - g992-3-b : G.992.3 ISDN non-overlapped spectrum - g992-3-aj : G.992.3 All Digital Mode with non-overlapped spectrum - g992-3-l1 : G.992.3 POTS non-overlapped spectrum US	operational mode allowed by this profile <i>This element is only shown in detail mode.</i>

name	Type	Description
	mask 1 - g992-3-l2 : G.992.3 POTS non-overlapped spectrum US mask 2 - g992-3-am : G.992.3 extended POTS with non-overlapped spectrum - g992-5-a : G.992.5 POTS non-overlapped spectrum - g992-5-b : G.992.5 POTS non-overlapped spectrum - ansi-t1.424 : ANSI T1.424 - etsi-ts : ETSI TS - itu-g993-1 : ITU G993-1 - ieee-802.3ah : IEEE 802.3ah - g992-5-aj : G.992.5 All Digital Mode with non-overlapped spectrum - g992-5-am : G.992.5 extended POTS non-overlapped spectrum - g993-2-8a : VDSL-2 with profile 8A - g993-2-8b : VDSL-2 with profile 8B - g993-2-8c : VDSL-2 with profile 8C - g993-2-8d : VDSL-2 with profile 8D - g993-2-12a : VDSL-2 with profile 12A - g993-2-12b : VDSL-2 with profile 12B - g993-2-17a : VDSL-2 with profile 17A - g993-2-30a : VDSL-2 with profile 30A - g993-2-35b : VDSL-2 with profile 35B - gfast : gfast profile - default : default value	
tx-rate-us	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	bitrate or expected throughput for upstream fast or interleaved data flow <i>This element is only shown in detail mode.</i>
tx-rate-ds	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	bitrate or expected throughput for downstream fast or interleaved data flow <i>This element is only shown in detail mode.</i>
noise-margin-down	Parameter type: <Xdsl::NoiseValue> - a noise value - unit: 1/10 dB	current noise margin for the downstream direction. For G.Fast, value -512 is reported when no data is available. <i>This element is only shown in detail mode.</i>
noise-margin-up	Parameter type: <Xdsl::NoiseValue> - a noise value - unit: 1/10 dB	current noise margin for the upstream direction. For G.Fast, value -512 is reported when no data is available. <i>This element is only shown in detail mode.</i>
actual-tps-tc-mode	Parameter type: <Xdsl::ActualTpsTcMode> (no-value atm ptm system-default) Possible values: - no-value : no value - atm : atm mode - ptm : ptm mode	actual transfer mode <i>This element is only shown in detail mode.</i>

111 Operational Data Status Commands

name	Type	Description
	- system-default : determined by the system, based on board type	
override-state	Parameter type: <Xdsl::OverrideState> (not-created created-no-overrules created-overrules) Possible values: - not-created : not created - created-no-overrules : created no overrules - created-overrules : created overrules	indicates whether an override record is configured and not all 'no-overrules'. Only applicable for ADSLx/VDSLx <i>This element is only shown in detail mode.</i>
rtx-mode-up	Parameter type: <Xdsl::ActualRtxModeType> (in-use forbidden no-xtuc no-xtur no-xtuc-xtur supported unknown) Possible values: - in-use : retransmission in use - forbidden : retransmission not_in_use forbidden - no-xtuc : retransmission not_in_use and not_supported for xtuc - no-xtur : retransmission not_in_use and not_supported for xtur - no-xtuc-xtur : retransmission not_in_use and not_supported for xtuc and xtur - supported : retransmission not selected but supported - unknown : retransmission not supported	actual retransmission mode in upstream direction. "in-use" is reported in case of G.Fast. <i>This element is only shown in detail mode.</i>
rtx-mode-dn	Parameter type: <Xdsl::ActualRtxModeType> (in-use forbidden no-xtuc no-xtur no-xtuc-xtur supported unknown) Possible values: - in-use : retransmission in use - forbidden : retransmission not_in_use forbidden - no-xtuc : retransmission not_in_use and not_supported for xtuc - no-xtur : retransmission not_in_use and not_supported for xtur - no-xtuc-xtur : retransmission not_in_use and not_supported for xtuc and xtur - supported : retransmission not selected but supported - unknown : retransmission not supported	actual retransmission mode in downstream direction. "in-use" is reported in case of G.Fast. <i>This element is only shown in detail mode.</i>

111.3 xDSL BridgePort Operational Status Command

Command Description

This command displays the Bridge Port Operational data.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl oper-data-port (if-index) bridge-port [ (port) ]
```

Command Parameters

Table 111.3-1 "xDSL BridgePort Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl) Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	identity of the PVC

Command Output

Table 111.3-2 "xDSL BridgePort Operational Status Command" Display parameters

111 Operational Data Status Commands

Specific Information		
name	Type	Description
pvid	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	default vlan id for untagged frames <i>This element is only shown in detail mode.</i>
default-priority	Parameter type: <Vlan::Priority> - priority of ethernet frames - range: [0...7]	port dynamic or static (if no dynamic) default priority <i>This element is only shown in detail mode.</i>
qos-profile	Parameter type: <Vlan::QosProfileName> (none name : <Vlan::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <Vlan::IgnoredQosProfileName> - name of the QoS profile - length: 1<=x<=64	qos profile name <i>This element is always shown.</i>

111.4 xDSL Port ATM Operational Status Command

Command Description

This command displays the xDSL port atm operational data.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl oper-data-port (if-index) atm-pvc [ (port-index) ]
```

Command Parameters

Table 111.4-1 "xDSL Port ATM Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port-index)	Format: (dsl : <Eqpt::VpiMandatoryId> : <Eqpt::VciMandatoryId> dsl) Possible values: - dsl : ADSL/SHDSL board Field type <Eqpt::VpiMandatoryId> - atm VPI Field type <Eqpt::VciMandatoryId> - atm VCI	the ATM PVC

Command Output

Table 111.4-2 "xDSL Port ATM Operational Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <Xdsl::XdslAdminStatusAtm>	specifies the desired

111 Operational Data Status Commands

name	Type	Description
	(up down) Possible values: - up : enable traffic flow - down : disable traffic flow	administrative state of the VCL. <i>This element is only shown in detail mode.</i>
oper-state	Parameter type: <Atm::atmVclOperStatus> (up down unknown) Possible values: - up : traffic flow is enabled in the virtual link - down : traffic flow is disabled in the virtual link - unknown : state is unknown	indicates the current operational status of the VCL. <i>This element is only shown in detail mode.</i>
curr-encap-type	Parameter type: <Atm::CurVccEncapType> (llc-snap llc-snap-routed llc-nlpid vc-mux-bridged-8023 vc-mux-routed vc-mux-pppoa other unknown none) Possible values: - llc-snap : logical link control encapsulation bridged protocol - llc-snap-routed : logical link control encapsulation routed protocol - llc-nlpid : logical link control encapsulation pppoa protocol - vc-mux-bridged-8023 : virtual channel multiplex bridged protocol - vc-mux-routed : virtual channel multiplex routed protocol - vc-mux-pppoa : virtual channel multiplex pppoa protocol - other : other encapsulation type - unknown : unknown encapsulation type - none : no encapsulation type	the current established encapsulation type. <i>This element is only shown in detail mode.</i>

111.5 xDSL Port Interface Configuration Status Command

Command Description

This command displays the xDSL port interface configuration data.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl oper-data-port (if-index) interface-port
```

Command Parameters

Table 111.5-1 "xDSL Port Interface Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 111.5-2 "xDSL Port Interface Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <Xdsl::XdslAdminStatus> (not-applicable up down testing) Possible values: - not-applicable : not-applicable	the desired state of the interface <i>This element is always shown.</i>

111 Operational Data Status Commands

name	Type	Description
	- up : admin status is up - down : admin status is down - testing : no operational packets can be passed	
oper-state	Parameter type: <If::ifOperStatus> (up down testing unknown dormant no-value) Possible values: - up : up,traffic can pass - down : down,no traffic is passing - testing : testing,no traffic is passing - unknown : unknown - dormant : dormant,no traffic is passing - no-value : no entry in the table	the operational state of the interface <i>This element is only shown in detail mode.</i>

111.6 xDSL IGMP Operational Status Command

Command Description

This command displays the xDSL IGMP operational data.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl oper-data-port (if-index) igmp [ (port) ]
```

Command Parameters

Table 111.6-1 "xDSL IGMP Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::Vpild> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::Vpild> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> :	identification of the port or virtual channel

Resource Identifier	Type	Description
	<code><Eqpt::CVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> /</code> <code><Eqpt::OntPortId> : <Eqpt::UnstackedVlan></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> /</code> <code><Eqpt::OntPortId></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / voip : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / voip :</code> <code><Eqpt::UnstackedVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / vuni :</code> <code><Eqpt::UnstackedVlan></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / voip</code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / vuni</code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> :</code> <code><Eqpt::UnstackedVlan></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId></code> <code> vlan.ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan.ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> :</code> <code><Eqpt::UnstackedVlan>)</code> Possible values: - vlan : vlan port - vlan.ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId>	

Resource Identifier	Type	Description
	- the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier - the ONT SLOT identifier Field type <Eqpt::OntSlotId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 111.6-2 "xDSL IGMP Operational Status Command" Display parameters

Specific Information		
name	Type	Description
curr-num-group	Parameter type: <Gauge> - gauge	Indicates the current group number in this port <i>This element is only shown in detail mode.</i>
curr-preview-num	Parameter type: <Counter> - 32 bit counter	Indicates the number of preview multicast group that igmp channel joins currently <i>This element is only shown in detail mode.</i>
curr-uncfg-num	Parameter type: <Counter> - 32 bit counter	Indicates the current unconfig group number in this port <i>This element is only shown in detail mode.</i>

111.7 xDSL Port Ip Bridge Operational Status Command

Command Description

This command displays the xDSL Port Ip Bridge Operational data.

User Level

The command can be accessed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl oper-data-port (if-index) ip-bridge-port [ (ip-bridge-port) ]
```

Command Parameters

Table 111.7-1 "xDSL Port Ip Bridge Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(ip-bridge-port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl) Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	identification of the port or virtual channel

Command Output

Table 111.7-2 "xDSL Port Ip Bridge Operational Status Command" Display parameters

Specific Information		
name	Type	Description
rx-pkts	Parameter type: <Equipm::Octet-8> - a binary string - length: 8	show the number of received packets <i>This element is always shown.</i>
rx-drop-pkts	Parameter type: <Equipm::Octet-8> - a binary string - length: 8	show the number of received packets which are dropped <i>This element is always shown.</i>
tx-pkts	Parameter type: <Equipm::Octet-8> - a binary string - length: 8	show the number of transmitted packets <i>This element is always shown.</i>

111.8 xDSL QoS Operational Status Command

Command Description

This command displays the xDSL QoS operational data.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl oper-data-port (if-index) qos
```

Command Parameters

Table 111.8-1 "xDSL QoS Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 111.8-2 "xDSL QoS Operational Status Command" Display parameters

Specific Information		
name	Type	Description
frame-net-bw	Parameter type: <SignedInteger> - a signed integer	Represents the approximate bandwidth available for Ethernet frames, which is guaranteed to be available by the physical layer. This approximation is made by the configurable ATM overhead factor. <i>This element is only shown in detail mode.</i>
m-cast-avail-bw	Parameter type: <SignedInteger>	Represents the bandwidth

name	Type	Description
	- a signed integer	available for multicast services, calculated by the ISAM. This value is what is left from frame-net-bw after deducting from it res-data-bw and res-voice-bw. The minimum of m-cast-avail-bw and m-cast-max-bw will be the actual limitation for user multicast bandwidth usage per DSL link. <i>This element is only shown in detail mode.</i>
m-cast-used-bw	Parameter type: <SignedInteger> - a signed integer	Shows the bandwidth currently in use by pre-configured multicast streams. <i>This element is only shown in detail mode.</i>

112- Gpon xDSL Status Commands

112.1 Gpon xDSL Status Command Tree	112-5625
112.2 Gpon xDSL Profiles Status Command	112-5627
112.3 Gpon xDSL PM Interval Per Interface Status Command	112-5628
112.4 Gpon xDSL Operational Data Near End Line Status Command	112-5630
112.5 Gpon xDSL Operational Data Near End Channel Status Command	112-5635
112.6 Gpon xDSL Operational Data Far End Line Status Command	112-5637
112.7 Gpon xDSL Operational Data Far End Channel Status Command	112-5641
112.8 Gpon xDSL Carrier Data Near End Status Command	112-5643
112.9 Gpon xDSL Carrier Data Far End Status Command	112-5648
112.10 Gpon xDSL Failure Status Near End Status Command	112-5651
112.11 Gpon xDSL Failure Status Far End Status Command	112-5654
112.12 Gpon xDSL Counters Near End Line Current 15 Min	112-5657
112.13 Gpon xDSL Counters Near End Line Previous 15 Min	112-5659
112.14 Gpon xDSL Counters Near End Channel Current 15 Min	112-5661
112.15 Gpon xDSL Counters Near End Channel Previous 15 Min	112-5663
112.16 Gpon xDSL Counters Far End Line Current 15 Min	112-5665
112.17 Gpon xDSL Counters Far End Line Previous 15 Min	112-5667
112.18 Gpon xDSL Counters Far End Channel Current 15 Min	112-5669
112.19 Gpon xDSL Counters Far End Channel Previous 15 Min	112-5671
112.20 Gpon xDSL XTU-R Inventory Status Command	112-5673
112.21 Gpon xDSL XTU-C Inventory Status Command	112-5675

112.1 Gpon xDSL Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Gpon xDSL Status Commands".

112.2 Gpon xDSL Profiles Status Command

Command Description

This command displays Gpon xDSL profiles.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont profiles
```

Command Output

Table 112.2-2 "Gpon xDSL Profiles Status Command" Display parameters

Specific Information		
name	Type	Description
next-av-serv-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available service profile index <i>This element is always shown.</i>
max-serv-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of service profiles that can be created <i>This element is always shown.</i>
next-av-spec-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available spectrum profile index <i>This element is always shown.</i>
max-spec-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of spectrum profiles that can be created <i>This element is always shown.</i>
next-av-dpbo-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available dpbo profile index <i>This element is always shown.</i>
max-dpbo-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of dpbo profiles that can be created <i>This element is always shown.</i>
next-av-rtx-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available Rtx profile index <i>This element is always shown.</i>
max-rtx-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of rtx profiles that can be created <i>This element is always shown.</i>

112.3 Gpon xDSL PM Interval Per Interface Status Command

Command Description

This command displays the number of available pm intervals per xdsl interface.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont xdsl-int [ (if-index) ]
```

Command Parameters

Table 112.3-1 "Gpon xDSL PM Interval Per Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 112.3-2 "Gpon xDSL PM Interval Per Interface Status Command" Display parameters

Specific Information		
name	Type	Description
valid-intervals	Parameter type: <SignedInteger> - a signed integer	nbr of prev intvl for which valid data has been stored <i>This element is always shown.</i>

112.4 Gpon xDSL Operational Data Near End Line Status Command

Command Description

This command displays the xDSL operational data for the near and of line.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont operational-data near-end line [ (if-index) ]
```

Command Parameters

Table 112.4-1 "Gpon xDSL Operational Data Near End Line Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	interface index of the port

Resource Identifier	Type	Description

112 Gpon xDSL Status Commands

name	Type	Description
actual-psd-down short name: act-psd-dn	Parameter type: <Xdsl::SignedIntegerDBHZ> - a power spectral density value - unit: 1/10 dBm/Hz	avg transmit power spectrum density over used carriers <i>This element is always shown.</i>
power-mgnt-state short name: pwr-mgnt	Parameter type: <Xdsl::PowerMgtState> (10 12 13) Possible values: - 10 : full transmission - 12 : downstream net data rate is reduced - 13 : no transmission	actual power management state of the line <i>This element is always shown.</i>
per-bnd-lp-att-up	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	loop attenuation for each upstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
pr-bnd-sgn-att-up	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	signal attenuation for each upstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
pr-bnd-nois-mg-up	Parameter type: <Xdsl::PerBandOperDataType> - printable string - length: 10	noise margin for each upstream band in case of VDSL2 <i>This element is only shown in detail mode.</i>
high-freq-up	Parameter type: <Xdsl::GHighFreqType> - a frequency - unit: kHz	highest carrier frequency used in the upstream direction in case of VDSL2 and G.Fast <i>This element is always shown.</i>
elect-length	Parameter type: <Xdsl::ElectrLengthType> - Electrical length. When ELE-M1 is used, value 255 specifies that this parameter is not supported. - unit: 1/2 * dB @ 1MHz - range: [0...255]	Line Electrical Length actually used by XTU-C when mode is VDSL2 <i>This element is only shown in detail mode.</i>
actual-tps-tc-mode	Parameter type: <Xdsl::ActualTpsTcMode> (no-value atm ptm system-default) Possible values: - no-value : no value - atm : atm mode - ptm : ptm mode - system-default : determined by the system, based on board type	actual transfer mode <i>This element is only shown in detail mode.</i>
actual-v-noise-snr-up	Parameter type: <Xdsl::SnrmModeUp> (mode-1 mode-2 mode-3) Possible values: - mode-1 : virtual noise disabled - mode-2 : Tx referred virtual noise enabled - mode-3 : Rx referred virtual noise enabled	upstream operational mode of virtual noise SNR margin <i>This element is only shown in detail mode.</i>

112.5 Gpon xDSL Operational Data Near End Channel Status Command

Command Description

This command displays the xDSL operational data for the near and of line.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont operational-data near-end channel [ (if-index) ]
```

Command Parameters

Table 112.5-1 "Gpon xDSL Operational Data Near End Channel Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	interface index of the port

Specific Information		
name	Type	Description
actual-bitrate-up	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	atm bitrate for upstream fast or interleaved data flow <i>This element is always shown.</i>
attain-bitrate-up	Parameter type: <Xdsl::SignedIntegerKBPS> - bitrate - unit: kbits/sec	maximum attainable atm rate the modem can support <i>This element is always shown.</i>
interleave-delay-down	Parameter type: <Xdsl::SignedIntegerMSEC> - milli-second - unit: msec	delay caused by the interleaving and deinterleaving functionality <i>This element is always shown.</i>
imp-noise-prot-down	Parameter type: <Xdsl::SignedIntegerSYMBOL> - impulse noise protection - unit: 1/10 symbols	actual impulse noise protection <i>This element is always shown.</i>

112.6 Gpon xDSL Operational Data Far End Line Status Command

Command Description

This command displays the xDSL operational data for the line far end.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont operational-data far-end line [ (if-index) ]
```

Command Parameters

112.8 Gpon xDSL Carrier Data Near End Status Command

Command Description

This command displays xDSL carrier data near end.

Carrier data is displayed in raw format so the actual data interpretation is described in this section.

The XDSL passband (downstream or upstream) is composed of one or more bands (max 5, including VDSL optional band). Each carrier is coded as a bitmap. When the data are not available because the measurement is not completed, not enabled or not supported, an empty string will be returned. Below is the definition of the carrier specific bitmap.

Carrier load (Load-distribution-down) : When the modem is not in showtime this object will have the previously measured value. Each carrier can carry up to 15 bits. The carrier load is coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER (0..4096), index of the start carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..4096), index of the stop carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTET 4: contains the bit load of the first two carrier groups of the band. The load of the first carrier group uses the most significant 4 bits nibble. Range is 0-15 bits per carrier group, with a granularity of 1 bit/carrier group.
- OCTETS 5..L: and so on, up to the last carrier group of the first downstream band. The last nibble of OCTET L is set to 0x0 if not used.
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier load of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier load of the third downstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier load of the fourth downstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier load of the fifth downstream band when available.

Carrier gain (gain-allocation-down) : When the modem is not in showtime this object will have the previously measured value. The gain has a range of approximately 0 - 8, in steps of 1/512. The gain value is represented as $gi/512$ on a linear scale with gi a 12 bits unsigned integer in the 0 to 4095 range given by the 12 LSB bits of a 2 bytes integer. The carrier gain allocation is coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER (0..4096), index of the start carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..4096), index of the stop carrier group of the first downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER, contains the gain of the first carrier group of the band (start carrier group).
- OCTETS 6..L: and so on until the last carrier group of the first downstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier gain of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier gain of the third downstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier gain of the fourth downstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier gain of the fifth downstream band when available.

Carrier snr (snr-up): When the modem is not in showtime this object will have the previously measured value. The SNR has a range from -32 to 95 dB in steps of 0.5 dB. It is represented as $SNR_i = -32 + snr_i/2$, with snr_i an 8 bit unsigned integer in the range 0 to 254. The special value 255 indicates that no measurement is available for the carrier or that the measurement is out of range. The carrier snrs are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..4096), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..4096), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6: INTEGER, contains the snr of the first carrier group of the band (start carrier group).
- OCTETS 7..L: and so on until the last carrier group of the first upstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier snr of the second upstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier snr of the third upstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier snr of the fourth upstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier snr of the fifth upstream band when available.

Carrier qln (qln-up): The QLN has a range from -150 dBm/Hz to -23 dBm/Hz in steps of 0.5 dB. It is represented as $QLN_i = -23 - qln_i/2$, with qln_i an 8 bit unsigned integer in the range 0 to 254. The special value 255 indicates that no measurement is available for the carrier or that the measurement is out of range. The carrier qlns are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..4096), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..4096), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6: INTEGER, contains the qln of the first carrier group of the band (start carrier group).
- OCTETS 7..L: and so on until the last carrier group of the first upstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier qln of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier qln of the third upstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier qln of the fourth upstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier qln of the fifth upstream band when available.

Carrier HLIN (char-func-complex): HLIN has a range of approximately +6 dB to -90 dB, with a granularity of 2^{-15} . The Hlin is represented as $HLIN_i = (scale/2^{15}) * ((ai + j*bi)/2^{15})$, with ai and bi 2 bytes signed integers in the range -32767 to 32767. The special value -32768 indicates that no measurement is available for the carrier or that the measurement is out of range. The scale factor is a 2 bytes unsigned integer. The scale factor must be chosen such that: $\max(|Ai|, |Bi|)$ over all i is equal to $2^{15}-1$, i.e. over all carriers of the XDSL band(s) of the corresponding direction. The carrier HLINs are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER(0..65535), contains the scale factor to apply to the hlin values, over the upstream band(s). The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..4096), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6,7: INTEGER (0..4096), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 8,9: SIGNED INTEGER , contains the ai for the first carrier group of the band (start carrier group). The value is defined as MSB-LSB (big-endian).
- OCTETS 10,11: SIGNED INTEGER , contains the bi for the first carrier group of the band (start carrier

- group). The value is defined as MSB-LSB (big-endian).
- OCTETS 12..L: *ai* and *bi* for the next carrier group and so on until the last carrier group of the first upstream band (stop carrier group).
 - OCTETS L+1..M: contain the start/stop carrier groups and the HLIN *ai* and *bi* of the second upstream band when available.
 - OCTETS M+1..N: contain the start/stop carrier groups and the HLIN *ai* and *bi* of the third upstream band when available.
 - OCTETS N+1..P: contain the start/stop carrier groups and the HLIN *ai* and *bi* of the fourth upstream band when available.
 - OCTETS P+1..Q: contain the start/stop carrier groups and the HLIN *ai* and *bi* of the fifth upstream band when available.

Carrier HLOG (char-func-real): Hlog has a range of approximately +6 dB to -96 dB in steps of 0.1 dB. The Hlog is represented as $HLOG_i = 6 - mi/10$, with *mi* a 10 bits unsigned integer in the range 0 to 1022. The special value 1023 indicates that no measurement is available for the carrier or that the measurement is out of range. The carrier HLOGs are coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER, contains the number of symbols used to measure the data. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..4096), index of the start carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 4,5: INTEGER (0..4096), index of the stop carrier group of the first upstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 6,7: INTEGER (0..1023), contains the HLOG *mi* of the first carrier group of the band (start carrier group). The value is defined as MSB-LSB (big-endian).
- OCTETS 8..L: *mi* for the next carrier group and so on until the last carrier group of the first upstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the HLOG *mi* of the second upstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the HLOG *mi* of the third upstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the HLOG *mi* of the fourth upstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the HLOG *mi* of the fifth upstream band when available.

Carrier Tx PSD (tx-psd-dn): When the modem is not in showtime this object will have the previously measured value. The PSD has a range from -127 dBm/Hz to 0 dBm/Hz in steps of 0.5 dB. It is represented as $PSD_i = -psdi/2$, with *psdi* an 8 bit unsigned integer in the range 0 to 254. The special value 255 indicates that no measurement is available for the carrier, the carrier is not loaded, or that the measurement is out of range. The carrier Tx PSD is coded as a bitmap defined as follows:

- OCTETS 0,1: INTEGER (0..4096), index of the start carrier group of the downstream band. The value is defined as MSB-LSB (big-endian).
- OCTETS 2,3: INTEGER (0..4096), index of the stop carrier group of the downstream band. The value is defined as MSB-LSB (big-endian).
- OCTET 4: INTEGER(0..255), PSD of the first carrier group of the band (start carrier group).
- OCTETS 5..L: and so on until the last carrier group of the first downstream band (stop carrier group).
- OCTETS L+1..M: contain the start/stop carrier groups and the carrier PSD of the second downstream band when available.
- OCTETS M+1..N: contain the start/stop carrier groups and the carrier PSD of the third downstream band when available.
- OCTETS N+1..P: contain the start/stop carrier groups and the carrier PSD of the fourth downstream band when available.
- OCTETS P+1..Q: contain the start/stop carrier groups and the carrier PSD of the fifth downstream band when available.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont carrier-data near-end [ (if-index) ]
```

Command Parameters

Table 112.8-1 "Gpon xDSL Carrier Data Near End Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	interface index of the port

Command Output

Table 112.8-2 "Gpon xDSL Carrier Data Near End Status Command" Display parameters

Specific Information		
name	Type	Description
spacing	Parameter type: <Xdsl::CarrierSpacingType> (single double half quarter	the actual carrier spacing used on the XDSL line in the downstream direction <i>This element is always shown.</i>

name	Type	Description
	gfast) Possible values: - single : single - double : double - half : half - quarter : quarter - gfast : gfast	
load-distribution-down	Parameter type: <Xdsl::OctetStingType> - a binary string	nbr of bits per carrier group over the downstream passband <i>This element is always shown.</i>
gain-allocation-down	Parameter type: <Xdsl::OctetStingType> - a binary string	gain allocation (i.e. gi) per carrier group over the downstream passband <i>This element is always shown.</i>
snr-up	Parameter type: <Xdsl::OctetStingType> - a binary string	signal to noise ratio per carrier group over the upstream passband <i>This element is always shown.</i>
qln-up	Parameter type: <Xdsl::OctetStingType> - a binary string	quiet line noise per carrier group over the upstream passband <i>This element is always shown.</i>
char-func-complex	Parameter type: <Xdsl::OctetStingType> - a binary string	provides the channel characteristics function complex values in linear scale for each carrier group over upstream passband (hlin) <i>This element is always shown.</i>
char-func-real	Parameter type: <Xdsl::OctetStingType> - a binary string	char func real values in dB over upstream passband (hlog) <i>This element is always shown.</i>
load-carr-grp	Parameter type: <Gpon::GSubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [0...2,4,8,16]	Provides the grouping factor for carrier load data octet-string <i>This element is always shown.</i>
gain-carr-grp	Parameter type: <Gpon::GSubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [0...2,4,8,16]	Provides the grouping factor for carrier gain allocation data octet-string <i>This element is always shown.</i>
snr-carr-grp	Parameter type: <Gpon::GSubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [0...2,4,8,16]	Provides the grouping factor for Signal to Noise Ratio per carrier data octet-string <i>This element is always shown.</i>
qln-carr-grp	Parameter type: <Gpon::GSubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [0...2,4,8,16]	Provides the grouping factor for Quiet Line Noise data octet-string <i>This element is always shown.</i>
hlin-carr-grp	Parameter type: <Gpon::GSubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [0...2,4,8,16]	Provides the grouping factor for Complex Channel Characteristics data in linear scale <i>This element is always shown.</i>
hlog-carr-grp	Parameter type: <Gpon::GSubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [0...2,4,8,16]	Provides the grouping factor for Channel Characteristics data in dB <i>This element is always shown.</i>

112.9 Gpon xDSL Carrier Data Far End Status Command

Command Description

This command displays xDSL carrier data far end.

Each carrier is coded as a bitmap. For more details related to : the bitmap definition and the description of ranges, specific values,.. of the carriers, we refer to the command description section of the "xDSL Carrier Data Near End Status Command" section. When reading this in scope of "Far End", "downstream" becomes "upstream" and vice versa.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont carrier-data far-end [ (if-index) ]
```

Command Parameters

Table 112.9-1 "Gpon xDSL Carrier Data Far End Status Command" Resource Parameters

hlog-carr-grp	Parameter type: <Gpon::GSubCarrierGroupSizeType> - grouping factor per carrier data octet-string - range: [0...2,4,8,16]	Provides the grouping factor for Channel Characteristics data in dB <i>This element is always shown.</i>

112.10 Gpon xDSL Failure Status Near End Status Command

Command Description

This command displays the Gpon xDSL failure status near end.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont failure-status near-end [ (if-index) ]
```

Command Parameters

Table 112.10-1 "Gpon xDSL Failure Status Near End Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Command Output

Table 112.10-2 "Gpon xDSL Failure Status Near End Status Command" Display parameters

Specific Information		
name	Type	Description
line-defect	Parameter type: <Xdsl::FailureStatusNearEnd> (yes no) Possible values: - yes : defect in the near-end failure status - no : no defect in the near-end failure status	specifies the defect status in the near-end <i>This element is always shown.</i>
los	Parameter type: <Xdsl::FailureStatusNELOS> (no yes) Possible values: - no : no LOS in upstream direction - yes : LOS in the upstream direction	specifies status of the Loss of Signal in upstream direction <i>This element is always shown.</i>
lof	Parameter type: <Xdsl::FailureStatusNELOF> (no yes) Possible values: - no : no LOF in upstream direction - yes : LOF in the upstream direction	specifies status of the Loss of Frame in upstream direction <i>This element is always shown.</i>
lom	Parameter type: <Xdsl::FailureStatusNELOM> (no yes) Possible values: - no : no LOM in upstream direction - yes : LOM in the upstream direction	specifies status of the Loss of Margin in upstream direction <i>This element is always shown.</i>
lpr	Parameter type: <Xdsl::FailureStatusNELPR> (no yes) Possible values: - no : no LPR of the ATU-C - yes : LPR of the ATU-C	specifies status of the Loss of Power of the ATU-C <i>This element is always shown.</i>
lol	Parameter type: <Xdsl::FailureStatusNELOL> (no yes) Possible values: - no : no LOL in line - yes : LOL in line	specifies status of the Loss of Link <i>This element is always shown.</i>
ese	Parameter type: <Xdsl::FailureStatusNEESE> (no yes) Possible values: - no : no ESE in upstream direction - yes : ESE in the upstream direction	specifies status of the Excessive Severe Errors in upstream direction <i>This element is always shown.</i>
act-fail-conf-err	Parameter type: <Xdsl::NEActFailConfErr> (no yes) Possible values:	specifies status of line Activation <i>This element is always shown.</i>

name	Type	Description
	- no : no Activation Failure due to configuration error - yes : Line Activation Fail due to configuration error	
act-fail-conf-not-feas	Parameter type: <Xdsl::NEActFailConfNotFeasible> (no yes) Possible values: - no : Line Activation Fail due to configuration not feasible - yes : no Activation Failure due to configuration not feasible	specifies status of line Activation <i>This element is always shown.</i>
line-init-fail	Parameter type: <Xdsl::FailureStatusNELineInitFail> (no yes) Possible values: - no : no line initialization failure - yes : line initialization failure	specifies status of line initialization failure <i>This element is always shown.</i>
bitrate-threshold	Parameter type: <Xdsl::FailureStatusNEBitRateThrs> (no-low-rate low-rate) Possible values: - no-low-rate : no Bit rate threshold for the upstream direction - low-rate : Bit rate threshold for upstream direction	specifies status of Bit Rate Threshold <i>This element is always shown.</i>

112.11 Gpon xDSL Failure Status Far End Status Command

Command Description

This command displays the Gpon xDSL failure of the far end.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont failure-status far-end [ (if-index) ]
```

Command Parameters

Table 112.11-1 "Gpon xDSL Failure Status Far End Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description

Specific Information		
name	Type	Description
line-defect	Parameter type: <Xdsl::FailureStatusNoDefect> (yes no) Possible values: - yes : defect in the far-end failure status - no : no defect in the far-end failure status	specifies the defect status in the far-end <i>This element is always shown.</i>
los	Parameter type: <Xdsl::FailureStatusFELOS> (no yes) Possible values: - no : no LOS in downstream direction - yes : LOS in the downstream direction	specifies status of the Loss of Signal in downstream direction <i>This element is always shown.</i>
lof	Parameter type: <Xdsl::FailureStatusFELOF> (no yes) Possible values: - no : no LOF in downstream direction - yes : LOF in the downstream direction	specifies status of the Loss of Frame in downstream direction <i>This element is always shown.</i>
lom	Parameter type: <Xdsl::FailureStatusFELOM> (no yes) Possible values: - no : no LOM in downstream direction - yes : LOM in the downstream direction	specifies status of the Loss of Margin in downstream direction <i>This element is always shown.</i>
lpr	Parameter type: <Xdsl::FailureStatusFELPR> (no yes) Possible values: - no : no LPR of the XTU-R - yes : LPR of the XTU-R	specifies status of the Loss of Power of the XTU-C <i>This element is always shown.</i>
lol	Parameter type: <Xdsl::FailureStatusFELOL> (no yes) Possible values: - no : no LOL in line - yes : LOL in line	specifies status of the Loss of Link <i>This element is always shown.</i>
ese	Parameter type: <Xdsl::FailureStatusFEESE> (no yes) Possible values: - no : no ESE in downstream direction - yes : ESE in the downstream direction	specifies status of the Excessive Severe Errors <i>This element is always shown.</i>
act-fail-comm-prob	Parameter type: <Xdsl::FEActFailCommProb> (no yes) Possible values:	specifies status of line Activation <i>This element is always shown.</i>

112 Gpon xDSL Status Commands

name	Type	Description
	- no : no Activation Failure due to communication problems - yes : Line Activation Fail due to communication problems	
act-fail-no-xtu-r	Parameter type: <Xdsl::FEActFailNoXTUR> (no yes) Possible values: - no : Line Activation Fail due to no XTU-R detected - yes : no Activation Failure due to no XTU-R detected	specifies status of line Activation <i>This element is always shown.</i>
bitrate-threshold	Parameter type: <Xdsl::FailureStatusFEBitRateThrs> (no-low-rate low-rate) Possible values: - no-low-rate : no Bit rate threshold for the downstream direction - low-rate : Bit rate threshold for downstream direction	specifies status of Bit Rate Threshold <i>This element is always shown.</i>

112.12 Gpon xDSL Counters Near End Line Current 15 Min

Command Description

This command displays xDSL counters near end line current 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters near-end line current-interval [ (if-index) ]
```

Command Parameters

Table 112.12-1 "Gpon xDSL Counters Near End Line Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 112.12-2 "Gpon xDSL Counters Near End Line Current 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOS failure event <i>This element is always shown.</i>
lof	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOF failure event <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds encountered by the line <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds encountered by the line <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds encountered by the line <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of times the modem re-initialize the line <i>This element is always shown.</i>
failed-init	Parameter type: <Counter> - 32 bit counter	number of times the modem failed to initialize the line <i>This element is always shown.</i>
init-timeout	Parameter type: <Counter> - 32 bit counter	number of initialization timeouts <i>This element is always shown.</i>

112.13 Gpon xDSL Counters Near End Line Previous 15 Min

Command Description

This command displays the xDSL counters near end line previous 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters near-end line previous-interval [ (if-index) [ interval-no <Xdsl::IntervalNumber15min> ] ]
```

Command Parameters

Table 112.13-1 "Gpon xDSL Counters Near End Line Previous 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-no	Parameter type: <Xdsl::IntervalNumber15min> Format: - a number identifying 15 minutes interval time - range: [1...192]	identifies prev 15min intvls, val 1 as the latest intvl

Command Output

Table 112.13-2 "Gpon xDSL Counters Near End Line Previous 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOS failure event <i>This element is always shown.</i>
lof	Parameter type: <Counter> - 32 bit counter	number of occurrences of an LOF failure event <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds encountered by the line <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds encountered by the line <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds encountered by the line <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of times the modem re-initialize the line <i>This element is always shown.</i>
fail-init	Parameter type: <Counter> - 32 bit counter	number of times the modem failed to initialize the line <i>This element is always shown.</i>
init-timeout	Parameter type: <Counter> - 32 bit counter	number of initialization timeouts <i>This element is always shown.</i>

112.14 Gpon xDSL Counters Near End Channel Current 15 Min

Command Description

This command displays xDSL counters near end channel current 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters near-end channel current-interval [ (if-index) ]
```

Command Parameters

Table 112.14-1 "Gpon xDSL Counters Near End Channel Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 112.14-2 "Gpon xDSL Counters Near End Channel Current 15 Min" Display parameters

Specific Information		
name	Type	Description
cv	Parameter type: <Counter> - 32 bit counter	number of coding violations encountered by the channel <i>This element is always shown.</i>
fecc	Parameter type: <Counter> - 32 bit counter	number of corrected codewords encountered by the channel, respectively corrected octets in case of vdsl1 G.993.1 <i>This element is always shown.</i>

112.15 Gpon xDSL Counters Near End Channel Previous 15 Min

Command Description

This command displays xDSL counters near end channel previous 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters near-end channel previous-interval [ (if-index) [ interval-no
<Xdsl::IntervalNumber15min> ] ]
```

Command Parameters

Table 112.15-1 "Gpon xDSL Counters Near End Channel Previous 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	interface index of the port

Resource Identifier	Type	Description
	- Gpon Ont Slot - range: [1...14] - Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-no	Parameter type: <Xdsl::IntervalNumber15min> Format: - a number identifying 15 minutes interval time - range: [1...192]	previous 15 minute interval number, value 1 is the most recently completed 15 minute interval

Command Output

Table 112.15-2 "Gpon xDSL Counters Near End Channel Previous 15 Min" Display parameters

Specific Information		
name	Type	Description
cv	Parameter type: <Counter> - 32 bit counter	number of coding violations encountered by the channel <i>This element is always shown.</i>
fecc	Parameter type: <Counter> - 32 bit counter	number of corrected codewords encountered by the channel, respectively corrected octets in case of vdsl1 G.993.1 <i>This element is always shown.</i>

112.16 Gpon xDSL Counters Far End Line Current 15 Min

Command Description

This command displays xDSL counters far end line current 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters far-end line current-interval [ (if-index) ]
```

Command Parameters

Table 112.16-1 "Gpon xDSL Counters Far End Line Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 112.16-2 "Gpon xDSL Counters Far End Line Current 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an los failure event <i>This element is always shown.</i>
lof	Parameter type: <Counter> - 32 bit counter	number of occurrences of an lof failure event <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds encountered by the line <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds encountered by the line <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds encountered by the line <i>This element is always shown.</i>

112.17 Gpon xDSL Counters Far End Line Previous 15 Min

Command Description

This command displays xDSL counters far end line previous 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters far-end line previous-interval [ (if-index) [ interval-no <Xdsl::IntervalNumber15min> ] ]
```

Command Parameters

Table 112.17-1 "Gpon xDSL Counters Far End Line Previous 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-no	Parameter type: <Xdsl::IntervalNumber15min> Format: - a number identifying 15 minutes interval time - range: [1...192]	nbr identifying previous 15 min intvl time, value 1 is the most recently completed 15 min intvl

Command Output

Table 112.17-2 "Gpon xDSL Counters Far End Line Previous 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	number of occurrences of an los failure event <i>This element is always shown.</i>
lof	Parameter type: <Counter> - 32 bit counter	number of occurrences of an lof failure event <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds encountered by the line <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds encountered by the line <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds encountered by the line <i>This element is always shown.</i>

112.18 Gpon xDSL Counters Far End Channel Current 15 Min

Command Description

This command displays xDSL counters far end channel current 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters far-end channel current-interval [ (if-index) ]
```

Command Parameters

Table 112.18-1 "Gpon xDSL Counters Far End Channel Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 112.18-2 "Gpon xDSL Counters Far End Channel Current 15 Min" Display parameters

Specific Information		
name	Type	Description
cv	Parameter type: <Counter> - 32 bit counter	nbr of coding violations encountered by far end channel <i>This element is always shown.</i>

112.19 Gpon xDSL Counters Far End Channel Previous 15 Min

Command Description

This command displays xDSL counters far end channel current 15 min.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont counters far-end channel previous-interval [ (if-index) [ interval-no <Xdsl::IntervalNumber15min> ] ]
```

Command Parameters

Table 112.19-1 "Gpon xDSL Counters Far End Channel Previous 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	interface index of the port

Resource Identifier	Type	Description
	- Gpon Ont Slot - range: [1...14] - Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-no	Parameter type: <Xdsl::IntervalNumber15min> Format: - a number identifying 15 minutes interval time - range: [1...192]	previous 15 minute interval number, value 1 is the most recently completed 15 minute interval

Table 112.19-2 "Gpon xDSL Counters Far End Channel Previous 15 Min" Display parameters

Specific Information		
name	Type	Description
cv	Parameter type: <Counter> - 32 bit counter	number of coding violations in the previous 15 min <i>This element is always shown.</i>
fecc	Parameter type: <Counter> - 32 bit counter	number of corrected codewords encountered by the channel, respectively corrected octets in case of vdsl1 G.993.1 <i>This element is always shown.</i>

112.20 Gpon xDSL XTU-R Inventory Status Command

Command Description

This command displays xDSL inventory XT/RT.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont cpe-tur-inventory [ (if-index) ]
```

Command Parameters

Table 112.20-1 "Gpon xDSL XTU-R Inventory Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 112.20-2 "Gpon xDSL XTU-R Inventory Status Command" Display parameters

Specific Information		
name	Type	Description
modem-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID retrieved during handshaking <i>This element is always shown.</i>
sys-serial-no	Parameter type: <Xdsl::SystemSerialNumber> - an octet string defining system serial number - length: x<=32	serial number that identifies the vendor equipment <i>This element is only shown in detail mode.</i>
sys-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID retrieved via the xdsl EOC <i>This element is always shown.</i>
sys-version-no	Parameter type: <Xdsl::SystemVersionNo> - an octet string defining system version number - length: x<=32	version number retrieved via the the xdsl EOC <i>This element is only shown in detail mode.</i>
self-test-result	Parameter type: <Xdsl::SelfTestResult> - an octet string defining self test result - length: x<=8	self test results value retrieved via the the xdsl EOC <i>This element is always shown.</i>

112.21 Gpon xDSL XTU-C Inventory Status Command

Command Description

This command displays xDSL inventory XT/RT.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl ont cpe-tuc-inventory [ (if-index) ]
```

Command Parameters

Table 112.21-1 "Gpon xDSL XTU-C Inventory Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the port

Resource Identifier	Type	Description
	- range: [1...14] - Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 112.21-2 "Gpon xDSL XTU-C Inventory Status Command" Display parameters

Specific Information		
name	Type	Description
modem-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID retrieved during handshaking <i>This element is always shown.</i>
sys-serial-no	Parameter type: <Xdsl::SystemSerialNumber> - an octet string defining system serial number - length: x<=32	serial number that identifies the vendor equipment <i>This element is only shown in detail mode.</i>
sys-vendor-id	Parameter type: <Xdsl::VendorID> - an octet string defining vendor identification - length: x<=16	vendor ID retrieved via the xdsl EOC <i>This element is always shown.</i>
sys-version-no	Parameter type: <Xdsl::SystemVersionNo> - an octet string defining system version number - length: x<=32	version number retrieved via the xdsl EOC <i>This element is only shown in detail mode.</i>

113- xDSL Bonding Status Commands

113.1 xDSL Bonding Status Command Tree	113-5678
113.2 xDSL Bonding Group Profiles Status Command	113-5679
113.3 xDSL Bonding Group Rtx Profiles Status Command	113-5681
113.4 xDSL Bonding Near End Operational Data Status Command	113-5683
113.5 xDSL Bonding Far End Operational Data Status Command	113-5685
113.6 xDSL Bonding Group Operational Data Command	113-5687
113.7 xDSL Bonding Link Operational Data Command	113-5690
113.8 xDSL Bonding Near End Failure Status Command	113-5692
113.9 xDSL Bonding Far End Failure Status Command	113-5694
113.10 xDSL Bonding Group Failure Status Command	113-5696
113.11 xDSL Bonding Group Summary Info Command	113-5698
113.12 xDSL Bonding actual PTM Initialization Mode status command	113-5699

113.1 xDSL Bonding Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "xDSL Bonding Status Commands".

Command Tree

```
----show
  ----xdsl-bonding
    ----profiles
      - (index)
    ----group-rtx-profiles
      - (index)
    ----operational-data
      ----X near-end
        - (if-index)
      ----X far-end
        - (if-index)
      ----group
        - (if-index)
      ----link
        - (bonding-link-id)
    ----failure-status
      ----near-end
        - (if-index)
      ----far-end
        - (if-index)
      ----group
        - (if-index)
    ----summary
      - (index)
  ----actual-ptm-init-mode
```

113.2 xDSL Bonding Group Profiles Status Command

Command Description

This command displays the usage of the xDSL bonding group profiles.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding profiles [ (index) ]
```

Command Parameters

Table 113.2-1 "xDSL Bonding Group Profiles Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - bonding group profile index - range: [1...100]	a unique interface index

Command Output

Table 113.2-2 "xDSL Bonding Group Profiles Status Command" Display parameters

Common Information:profile		
name	Type	Description
next-av-bond-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available index for the bonding group profile <i>This element is always shown.</i>
max-bond-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of bonding group profile indices that can be created <i>This element is always shown.</i>
Specific Information		
name	Type	Description
name	Parameter type: <AsamProfileName> - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of the bonding group profile <i>This element is always shown.</i>
used-status	Parameter type: <Xdsl::UsedStatus> - number of entities using this profile - range: [0...65535]	specifies the number of entities using this profile. <i>This element is always shown.</i>

113.3 xDSL Bonding Group Rtx Profiles Status Command

Command Description

This command displays the usage of the xDSL bonding group rtx profiles.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding group-rtx-profiles [ (index) ]
```

Command Parameters

Table 113.3-1 "xDSL Bonding Group Rtx Profiles Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a profile index value - range: [1...1024]	a unique interface index

Command Output

Table 113.3-2 "xDSL Bonding Group Rtx Profiles Status Command" Display parameters

Common Information:profile		
name	Type	Description
next-av-bond-rtx-pr	Parameter type: <AsamNextProfileIndex> - a profile index - range: [0...65535]	next available index for the bonding group rtx profile <i>This element is always shown.</i>
max-bond-rtx-pr	Parameter type: <AsamMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	max number of bonding group rtx profile indices that can be created <i>This element is always shown.</i>
Specific Information		
name	Type	Description
name	Parameter type: <AsamProfileName> - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of the bonding group rtx profile <i>This element is always shown.</i>
used-status	Parameter type: <Xdsl::UsedStatus> - number of entities using this profile - range: [0...65535]	specifies the number of entities using this profile. <i>This element is always shown.</i>

113.4 xDSL Bonding Near End Operational Data Status Command

Command Description

Obsolete command, replaced by `show xdsl-bonding operational-data group`.

This command shows the operational data near end statistics.

User Level

The command can be accessed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding operational-data near-end [ (if-index) ]
```

Obsolete command, replaced by `show xdsl-bonding operational-data group`.

Command Parameters

Table 113.4-1 "xDSL Bonding Near End Operational Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	a unique interface index

Command Output

Table 113.4-2 "xDSL Bonding Near End Operational Data Status Command" Display parameters

Specific Information		
name	Type	Description
actual-bitrate-up	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual bitrate and 0 when not in service also in case no data is available.

113 xDSL Bonding Status Commands

name	Type	Description
		<i>This element is always shown.</i>
actaggr-ndr-up	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual net data rate in upstream direction. Value 0 means bonding group not in service or no data available. <i>This element is always shown.</i>

113.5 xDSL Bonding Far End Operational Data Status Command

Command Description

Obsolete command, replaced by `show xdsl-bonding operational-data group`.

This command shows the operational data far end statistics.

User Level

The command can be accessed by operators with `xdsl` privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding operational-data far-end [ (if-index) ]
```

Obsolete command, replaced by `show xdsl-bonding operational-data group`.

Command Parameters

Table 113.5-1 "xDSL Bonding Far End Operational Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	a unique interface index

Command Output

Table 113.5-2 "xDSL Bonding Far End Operational Data Status Command" Display parameters

Specific Information		
name	Type	Description
actual-bitrate-down	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual bitrate and 0 when not in service also in case no data is available.

113 xDSL Bonding Status Commands

name	Type	Description
		<i>This element is always shown.</i>
actaggr-ndr-dn	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual net data rate in downstream direction. Value 0 means bonding group not in service or no data available. <i>This element is always shown.</i>

113.6 xDSL Bonding Group Operational Data Command

Command Description

This command displays the xDSL bonding oper-data group statistics.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding operational-data group [ (if-index) ]
```

Command Parameters

Table 113.6-1 "xDSL Bonding Group Operational Data Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	a unique interface index

Command Output

Table 113.6-2 "xDSL Bonding Group Operational Data Command" Display parameters

Specific Information		
name	Type	Description
running-time	Parameter type: <SignedInteger> - a signed integer	specifies accumulated time of bonding group normal operation <i>This element is always shown.</i>
actual-bitrate-up	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual net data rate in upstream direction or the expected

113 xDSL Bonding Status Commands

name	Type	Description
		throughput for the upstream retransmission bonded data flow. Value 0 means bonding group not in service or no data available. <i>This element is always shown.</i>
actual-bitrate-down	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual net data rate in downstream direction or the expected throughput for the downstream retransmission bonded data flow. Value 0 means bonding group not in service also or no data available. <i>This element is always shown.</i>
actaggr-ndr-up	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual net data rate in upstream direction. Value 0 means bonding group not in service or no data available. <i>This element is always shown.</i>
actaggr-ndr-dn	Parameter type: <Xdsl::maxBitRate> - a bit rate value - unit: kbps - range: [0...4294967295]	when the bonding group is in service, this will give the actual net data rate in downstream direction. Value 0 means bonding group not in service or no data available. <i>This element is always shown.</i>
nbr-contributing-links short name: contrib-lnks	Parameter type: <SignedInteger> - a signed integer	the number of operational links, selected by bandwidth split, contributing to the overall bonding group actual bitrate <i>This element is always shown.</i>
vect-fallback short name: vect-fb	Parameter type: <Xdsl::ActualVectFallbackState> ((normal-mode normal) (fallback-mode fallback)) Possible values: - normal-mode : line is operating using normal profiles - normal : line is operating using normal profiles - fallback-mode : line is operating using vectoring fallback configured profiles - fallback : line is operating using vectoring fallback configured profiles	actual vectoring fallback state of the group <i>This element is always shown.</i>
opr-status short name: oper/status	Parameter type: <If::ifOperStatus> (up down testing unknown dormant no-value) Possible values: - up : up, traffic can pass - down : down, no traffic is passing - testing : testing, no traffic is passing - unknown : unknown - dormant : dormant, no traffic is passing	The current operational state of the interface. <i>This element is always shown.</i>

name	Type	Description
	- no-value : no entry in the table	

113.7 xDSL Bonding Link Operational Data Command

Command Description

This command displays the xDSL bonding oper-data link statistics.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding operational-data link [ (bonding-link-id) ]
```

Command Parameters

Table 113.7-1 "xDSL Bonding Link Operational Data Command" Resource Parameters

Resource Identifier	Type	Description
(bonding-link-id)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	a bonding link interface index

Command Output

Table 113.7-2 "xDSL Bonding Link Operational Data Command" Display parameters

Specific Information		
name	Type	Description
link-status	Parameter type: <Xdsl::BondingGroupLinkStatus> (not-training training not-selected up-no-traffic up-traffic) Possible values:	the operational and selection status of a bonding group link <i>This element is always shown.</i>

name	Type	Description
	- not-training : no training allowed - training : training triggered - not-selected : line not selected by BW-split algorithm. This value is not applicable for PTM bonding group initialization mode2. - up-no-traffic : selected by BW-split algorithm, not selected for traffic(only for ATM lines) - up-traffic : selected by BW-split algorithm, selected for traffic	
link-group-idx	Parameter type: <Xdsl::BondingInterfaceIndex> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the bonding group index of which the link is a member <i>This element is always shown.</i>

113.8 xDSL Bonding Near End Failure Status Command

Command Description

This command displays the xDSL bonding failure near end statistics.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding failure-status near-end [ (if-index) ]
```

Command Parameters

Table 113.8-1 "xDSL Bonding Near End Failure Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	a unique interface index

Command Output

Table 113.8-2 "xDSL Bonding Near End Failure Status Command" Display parameters

Specific Information		
name	Type	Description
defect	Parameter type: <Xdsl::FailureStatusNEDefect> (yes none) Possible values: - yes : defect in the near-end failure status - none : no defect in the near-end failure status	specifies the defect status in the near-end <i>This element is always shown.</i>
up-min-bitrate	Parameter type: <Xdsl::FailureStatusMinBitrate>	specifies the upstream minimum

name	Type	Description
	(ok failure) Possible values: - ok : actual group bitrate is above the group minimum bitrate - failure : actual group bitrate is below the group minimum bitrate	bitrate threshold alarm status <i>This element is always shown.</i>
up-config	Parameter type: <Xdsl::FailureStatusConfig> (feasible not-feasible) Possible values: - feasible : configuration feasible - not-feasible : configuration not feasible e.g. actual group bitrate is not high enough	specifies the upstream configured alarm status <i>This element is always shown.</i>
up-plan-bitrate	Parameter type: <Xdsl::FailureStatusPlanBitrate> (ok failure) Possible values: - ok : actual group bitrate is above the group planned bitrate - failure : actual group bitrate is above the minimum bitrate but below the group planned bitrate	specifies the upstream planned bitrate threshold alarm status <i>This element is always shown.</i>
defect-count	Parameter type: <Counter> - 32 bit counter	Indicates the number of failures during the accumulation period <i>This element is always shown.</i>
rxlos-count	Parameter type: <Counter> - 32 bit counter	Indicates the number of lost ATM cells or ETH fragments due to sequence ID errors. <i>This element is only shown in detail mode.</i>

113.9 xDSL Bonding Far End Failure Status Command

Command Description

This command displays the xDSL bonding failure far end statistics.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding failure-status far-end [ (if-index) ]
```

Command Parameters

Table 113.9-1 "xDSL Bonding Far End Failure Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	a unique interface index

Command Output

Table 113.9-2 "xDSL Bonding Far End Failure Status Command" Display parameters

Specific Information		
name	Type	Description
defect	Parameter type: <Xdsl::FailureStatusFEDefect> (yes none) Possible values: - yes : defect in the far-end failure status - none : no defect in the far-end failure status	specifies the defect status in the far-end <i>This element is always shown.</i>
down-min-bitrate	Parameter type: <Xdsl::FailureStatusMinBitrate>	specifies the downstream

name	Type	Description
	(ok failure) Possible values: - ok : actual group bitrate is above the group minimum bitrate - failure : actual group bitrate is below the group minimum bitrate	minimum bitrate threshold alarm status <i>This element is always shown.</i>
down-config	Parameter type: <Xdsl::FailureStatusConfig> (feasible not-feasible) Possible values: - feasible : configuration feasible - not-feasible : configuration not feasible e.g. actual group bitrate is not high enough	specifies the downstream configured alarm status <i>This element is always shown.</i>
down-plan-bitrate	Parameter type: <Xdsl::FailureStatusPlanBitrate> (ok failure) Possible values: - ok : actual group bitrate is above the group planned bitrate - failure : actual group bitrate is above the minimum bitrate but below the group planned bitrate	specifies the downstream planned bitrate threshold alarm status <i>This element is always shown.</i>
peer-cpe	Parameter type: <Xdsl::FailureStatusFEPeerCpeConn> (conn not-conn) Possible values: - conn : peer cpe is connected - not-conn : peer cpe is not connected	specifies the peer cpe connected alarm status <i>This element is only shown in detail mode.</i>
bond-cpe	Parameter type: <Xdsl::FailureStatusFEBondCpeConn> (conn not-conn) Possible values: - conn : bonding capable cpe is connected - not-conn : bonding capable cpe is not connected	specifies the bonding capable cpe connected alarm status <i>This element is only shown in detail mode.</i>
bg-conn-cpes	Parameter type: <Xdsl::FailureStatusFEBondGrpConnCpe> (one-cpe several-cpe) Possible values: - one-cpe : bonding group has one cpe connected - several-cpe : bonding group has multiple cpe connected	specifies the bonding group multiple cpe connected alarm status <i>This element is only shown in detail mode.</i>
bg-reg-fail	Parameter type: <Xdsl::FailureStatusFEBondGrpRegFail> (no yes) Possible values: - no : bonding group register failure not encountered - yes : bonding group register failure encountered	specifies the bonding group discovery or aggregation register failure alarm status <i>This element is only shown in detail mode.</i>
defect-count	Parameter type: <Counter> - 32 bit counter	Indicates the number of failures during the accumulation period <i>This element is always shown.</i>
rxlos-count	Parameter type: <Counter> - 32 bit counter	Indicates the number of lost ATM cells or ETH fragments due to sequence ID errors. <i>This element is only shown in detail mode.</i>

113.10 xDSL Bonding Group Failure Status

Command

Command Description

This command displays the xDSL bonding failure group statistics.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding failure-status group [ (if-index) ]
```

Command Parameters

Table 113.10-1 "xDSL Bonding Group Failure Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	a unique interface index

Command Output

Table 113.10-2 "xDSL Bonding Group Failure Status Command" Display parameters

Specific Information		
name	Type	Description
defect	Parameter type: <Xdsl::BondingGroupFailureStatusDefect> (none not-feasible min-bitrate no-host diff-delay incomplete)	specifies the current failure reason of a bonding group <i>This element is always shown.</i>

name	Type	Description
	Possible values: - none : no defect on the bonding group failure status - not-feasible : bonding group configuration not feasible - min-bitrate : bonding group minimum data rate not met - no-host : bonding group host not reachable - diff-delay : bonding group differential delay tolerance exceeded - incomplete : bonding group incomplete	
failure-count	Parameter type: <Counter> - 32 bit counter	specifies the number of times a bonding group is declared unavailable <i>This element is always shown.</i>
rx-error-count	Parameter type: <Counter> - 32 bit counter	specifies the number of errored cells received <i>This element is always shown.</i>
unavailable-time	Parameter type: <Xdsl::IntervalMeasureTime> - the measured time interval - unit: sec - range: [0...86400]	specifies accumulated time of bonding group unavailability <i>This element is always shown.</i>

113.11 xDSL Bonding Group Summary Info Command

Command Description

This command displays the xDSL bonding group summary information.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding summary [ (index) ]
```

Command Parameters

Table 113.11-1 "xDSL Bonding Group Summary Info Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical number of the slot

Command Output

Table 113.11-2 "xDSL Bonding Group Summary Info Command" Display parameters

Specific Information		
name	Type	Description
occupancy	Parameter type: <SignedInteger> - a signed integer	indicates the occupancy per slot of the bonding host function <i>This element is always shown.</i>

113.12 xDSL Bonding actual PTM Initialization Mode status command

Command Description

This command displays the xDSL Bonding actual PTM Initialization Mode effective on the system.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show xdsl-bonding actual-ptm-init-mode
```

Command Output

Table 113.12-2 "xDSL Bonding actual PTM Initialization Mode status command" Display parameters

Specific Information		
name	Type	Description
actual-ptm-init-mode	Parameter type: <Xdsl::BondingInitMode> (mode1 mode2) Possible values: - mode1 : Double initialization with probe-training - mode2 : Single initialization without probe-training	Actual PTM bonding initialization mode effective in the system <i>This element is always shown.</i>

114- PPPoE Status Commands

114.1 PPPoE Status Command Tree	114-5701
114.2 PPPoE Client Emulation Status Command	114-5702
114.3 PPPoE Interface Status Command	114-5706

114.1 PPPoE Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoE Status Commands".

Command Tree

```
----show
  ----pppoe-client
    ----emulation
      - (ifindex)
      - client-id
    ----session
      - (ifindex)
```

114.2 PPPoE Client Emulation Status Command

Command Description

This command displays the PPPoE client emulation parameters, such as emulation state, and error code for failed PPPoE emulation.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppoe-client emulation [ (ifindex) [ client-id <PPPoE::ClientId> ] ]
```

Command Parameters

Table 114.2-1 "PPPoE Client Emulation Status Command" Resource Parameters

Resource Identifier	Type	Description
(ifindex)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip :	interface index of the PPPoE client port

Resource Identifier	Type	Description
	<pre> <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - vlan-port : vlan port - vlan-port:ng2 : an NGPON2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier </pre>	

Resource Identifier	Type	Description
	Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
client-id	Parameter type: <PPPoE::ClientId> Format: - the PPPoE client id - range: [1]	the PPPoE client id

Command Output

Table 114.2-2 "PPPoE Client Emulation Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <PPPoE::pppoeClientEmulationState> (initied ongoing failed succeeded stopped) Possible values: - initied : PPPoE emulation has never been executed since initialization - ongoing : emulation is in progress - failed : emulation failed - succeeded : emulation succeeded and PPPoE session established - stopped : PPPoE session has been terminated	the state of the PPPoE client emulation. <i>This element is always shown.</i>
error-code	Parameter type: <PPPoE::pppoeClientEmulationErrorCode> (none port-failure padi-timeout padr-timeout lcp-timeout auth-timeout auth-failure ncp-failure internal other onu-timeout onu-omci-failure) Possible values: - none : no errcode - port-failure : port-failure - padi-timeout : padi-timeout - padr-timeout : padr-timeout - lcp-timeout : lcp-timeout - auth-timeout : auth-timeout	the failure reason for failed PPPoE emulation. <i>This element is always shown.</i>

name	Type	Description
	- auth-failure : auth-failure - ncp-failure : ncp-failure - internal : internal err - other : other err - onu-timeout : onu-timeout - onu-omci-failure : onu-omci-failure	

114.3 PPPoE Interface Status Command

This command displays the PPPoE interface parameters.

Command Description

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppoe-client session [ (ifindex) ]
```

Command Parameters

Table 114.3-1 "PPPoE Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(ifindex)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan>	interface index of the PPP session

Resource Identifier	Type	Description
	vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - vlan-port : vlan port - vlan-port:ng2 : an NGPON2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId>	

Resource Identifier	Type	Description
	- the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 114.3-2 "PPPoE Interface Status Command" Display parameters

Specific Information		
name	Type	Description
ipv4-addr	Parameter type: <Ip::V4Address> - IPv4-address	IPv4 address of the system on which PPP connection is established. <i>This element is always shown.</i>
ipv6-addr	Parameter type: <Ip::V6Prefix> - IPv6-address	IPv6 address of the system on which PPP connection is established. <i>This element is always shown.</i>
mru	Parameter type: <PPPoE::PppProfileMru> - the MRU of PPP - range: [0...65535]	The MRU of the system link, on which PPPoE session is established. <i>This element is always shown.</i>

115- PPPoEL2 Statistics Status Commands

115.1 PPPoEL2 Statistics Status Command Tree	115-5710
115.2 PPPoEL2 Statistics Status Command	115-5711
115.3 PPPoEL2 detailed Statistics Status Command	115-5713
115.4 PPPoEL2 On-demand Statistics Status Command	115-5716

115.1 PPPoEL2 Statistics Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoEL2 Statistics Status Commands".

Command Tree

```
----show
  ----pppoel2-stats
    - (user-port)
      ----vlan
        - (subscr-vlan)
          ----summary
          ----extensive
```

115.2 PPPoEL2 Statistics Status Command

Command Description

This command displays the detailed and summary (on-demand) PPPoE L2 packet statistics that are counted on vlan-port associated to a user interface.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppoel2-stats (user-port) vlan [ (subscr-vlan) ]
```

Command Parameters

Table 115.2-1 "PPPoEL2 Statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(user-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	identification of the port

Resource Identifier	Type	Description
	- the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity - Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] - Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] - Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

115.3 PPPoEL2 detailed Statistics Status

Command

Command Description

This command displays the detailed PPPoE L2 packet statistics that are counted on vlan-port associated to a user interface.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppoel2-stats (user-port) vlan (subscr-vlan) summary
```

Command Parameters

Table 115.3-1 "PPPoEL2 detailed Statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(user-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	identification of the port

	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

Command Output

Table 115.3-2 "PPPoEL2 detailed Statistics Status Command" Display parameters

Specific Information		
name	Type	Description
rx-error-count	Parameter type: <PPPoE::Counter> - an unsigned integer	total number of pppoe packet errors after the pppoe relay

name	Type	Description
		module received for upstream direction <i>This element is always shown.</i>
up-discovery-count	Parameter type: <PPPoE::Counter> - an unsigned integer	total number of pppoe discovery packet received from upstream direction <i>This element is always shown.</i>

115.4 PPPoEL2 On-demand Statistics Status Command

Command Description

This command displays the on-demand PPPoE L2 packet statistics that are counted on vlan-port associated to a user interface.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppoel2-stats (user-port) vlan (subscr-vlan) extensive
```

Command Parameters

Table 115.4-1 "PPPoEL2 On-demand Statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(user-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	identification of the port

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

Command Output

Table 115.4-2 "PPPoEL2 On-demand Statistics Status Command" Display parameters

Specific Information		
name	Type	Description
rx-inv-version	Parameter type: <PPPoE::Counter> - an unsigned integer	total number of pppoe invalid header packets received. The

116.2 PON Bit Error Status Command

Command Description

This command reports a summary of current operational parameters for a specified PON.

For each PON matched and for each ONT on that PON, the following response is presented

Bit Error Count in Downstream Direction

Bit Error Count in Upstream Direction

Indication that the ONT is currently Ranged

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon ber-stats [ (pon-idx) [ ont-num <Gpon::OntNum> ] ]
```

Command Parameters

Table 116.2-1 "PON Bit Error Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of pon
ont-num	Parameter type: <Gpon::OntNum>	number of the ont on the pon

Resource Identifier	Type	Description
	Format: - number of the ONT on the PON - range: [1...128]	

Command Output

Table 116.2-2 "PON Bit Error Status Command" Display parameters

Specific Information		
name	Type	Description
bit-err-down	Parameter type: <Gpon::Counter> (n/a <Counter>) Possible values: - n/a : olt has not yet support Field type <Counter> - 32 bit counter	number of downstream bit error counts for an ont. <i>This element is always shown.</i>
bit-err-up	Parameter type: <Gpon::Counter> (n/a <Counter>) Possible values: - n/a : olt has not yet support Field type <Counter> - 32 bit counter	number of upstream bit error counts for an ont <i>This element is always shown.</i>
ranged-ind	Parameter type: <Gpon::RangedInd> (not-ranged ranged manually-disabled auto-disabled) Possible values: - not-ranged : this ont is not ranged (and not disabled) - ranged : this ont is ranged - manually-disabled : this ont is manually-disabled (by the operator) - auto-disabled : enable port-to-port traffic exchange	indicates whether this ont is currently ranged or not <i>This element is always shown.</i>

116.3 Aggregate Pon Gem Port Current Interval Status Command

Command Description

Current interval table contains various statistics collected for aggregate PON GEM ports (from OLT side of the PON) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon interface tc-layer current-interval [ (pon-idx) ]
```

Command Parameters

Table 116.3-1 "Aggregate Pon Gem Port Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon

Command Output

Table 116.3-2 "Aggregate Pon Gem Port Current Interval Status Command" Display parameters

Specific Information		
name	Type	Description
err-frags-up	Parameter type: <Counter> - 32 bit counter	a count of errored gem fragments (upstream) <i>This element is always shown.</i>

116.4 Aggregate Pon Gem Port Previous Interval Status Command

Command Description

Previous interval table contains various statistics collected for aggregate PON GEM ports (from OLT side of the PON) over the previous 8 hours of operation.

The past 8 hours are broken into 32 completed 15 minute intervals. Each row in this table represents one such interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon interface tc-layer previous-interval [ (pon-idx) [ interval-nbr <Gpon::GemPortInterval> ] ]
```

Command Parameters

Table 116.4-1 "Aggregate Pon Gem Port Previous Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon

Resource Identifier	Type	Description
interval-nbr	Parameter type: <Gpon::GemPortInterval> Format: - time interval interms of 15 mins - range: [1...32]	aggregate gem port interval number

Command Output

Table 116.4-2 "Aggregate Pon Gem Port Previous Interval Status Command" Display parameters

Specific Information		
name	Type	Description
err-frags-up	Parameter type: <Counter> - 32 bit counter	a count of errored gem fragments (upstream) <i>This element is always shown.</i>

116.5 Multicast TC-layer Current Interval Performance Data Status Command

Command Description

This command displays various statistics collected for OLT-side Multicast TC-layer during the current 15 minute interval of operation.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon interface mcast-tc-layer current-interval [ (pon-idx) ]
```

Command Parameters

Table 116.5-1 "Multicast TC-layer Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	pon index

Command Output

Table 116.5-2 "Multicast TC-layer Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
transmit-blocks	Parameter type: <Counter> - 32 bit counter	count of transmitted gem blocks on gem 4095 <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	count of transmitted gem fragments on gem 4095 <i>This element is always shown.</i>

116.6 Multicast TC-layer Previous Interval Performance Data Status Command

Command Description

This command displays various statistics collected for OLT-side Multicast TC-layer over the previous 8 hours of operations which is broken in to 32 completed 15 minute intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon interface mcast-tc-layer previous-interval [ (pon-idx) [ interval-no <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 116.6-1 "Multicast TC-layer Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	pon index
interval-no	Parameter type: <Gpon::IntervalNo> Format:	identifies prev 15min intvls, val 1 as the latest intvl

Resource Identifier	Type	Description
	- a number of a previous interval number - range: [1...32]	

Command Output

Table 116.6-2 "Multicast TC-layer Previous Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
transmit-blocks	Parameter type: <Counter> - 32 bit counter	count of transmitted gem blocks on gem 4095 <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	count of transmitted gem fragments on gem 4095 <i>This element is always shown.</i>

116.7 Pon FEC Current Interval Status Command

Command Description

Current interval table contains various FEC counters collected for XGPON ports (from OLT side of the PON) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show pon interface fec-tc-layer current-interval [(pon-idx)]

Command Parameters

Table 116.7-1 "Pon FEC Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ont index

Command Output

Table 116.7-2 "Pon FEC Current Interval Status Command" Display parameters

Specific Information

name	Type	Description
corrected-bytes	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of number of bytes that were corrected by the FEC function <i>This element is always shown.</i>
corrected-code-words	Parameter type: <Counter> - 32 bit counter	A count of number of code words that were corrected by the FEC function. <i>This element is always shown.</i>
uncorrected-words	Parameter type: <Counter> - 32 bit counter	A count of number of errored code words that could not be corrected by the FEC function. <i>This element is always shown.</i>
total-code-words	Parameter type: <Counter> - 32 bit counter	A count of total number of received code words. <i>This element is always shown.</i>

116.8 Pon Physical LayerCurrent Interval Status Command

Command Description

Current interval table contains various physical layer counters collected for XGPON ports (from OLT side of the PON) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon interface phy-layer current-interval [ (pon-idx) ]
```

Command Parameters

Table 116.8-1 "Pon Physical LayerCurrent Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ont index

Command Output

Table 116.8-2 "Pon Physical LayerCurrent Interval Status Command" Display parameters

Specific Information		
name	Type	Description
bip32-prot-words	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of total number of BIP32 words on physical PON <i>This element is always shown.</i>
bip32-bit-errors	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of number of BIP32 errors on physical PON. <i>This element is always shown.</i>

116.9 PON XGPON tc-layer Current Interval Status Command

Command Description

Current interval table contains XGPON tc-layer counters collected for XGPON ports (from OLT side of the PON) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon interface xg-tc-layer current-interval [ (pon-idx) ]
```

Command Parameters

Table 116.9-1 "PON XGPON tc-layer Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ont index

Command Output

Table 116.9-2 "PON XGPON tc-layer Current Interval Status Command" Display parameters

Specific Information		
name	Type	Description
rng-time-msgs	Parameter type: <Counter> - 32 bit counter	A count of number of ranging time messages that were sent on this PON. <i>This element is always shown.</i>

116.10 PON XGPON TC-layer Previous Interval Performance Data Status Command

Command Description

This command displays XGPON tc-layer counters collected for XGPON ports (from OLT side of the PON) over the previous 8 hours of operations which is broken in to 32 completed 15 minute intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon interface xg-tc-layer previous-interval [ (pon-idx) [ interval-no <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 116.10-1 "PON XGPON TC-layer Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ont index
interval-no	Parameter type: <Gpon::IntervalNo> Format:	identifies prev 15min intvls, val 1 as the latest intvl

Resource Identifier	Type	Description
	- a number of a previous interval number - range: [1...32]	

Command Output

Table 116.10-2 "PON XGPON TC-layer Previous Interval Performance Data Status Command"
Display parameters

Specific Information		
name	Type	Description
rng-time-msgs	Parameter type: <Counter> - 32 bit counter	A count of number of ranging time messages that were sent on this PON. <i>This element is always shown.</i>

116.11 PON Optics Operational Information Status Command

Command Description

OLT-SIDE current operational information regarding a PON (primarily optical transmit levels and laser parameters).

The content of the special feature register is reflected in the display parameters with the specific information name "otdr". In case the spf is otdr capable, "yes" is reflected. All other special feature values are mapped to "no".

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon sfp-inventory [ (pon-idx) ]
```

Command Parameters

Table 116.11-1 "PON Optics Operational Information Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of pon

Command Output

Table 116.11-2 "PON Optics Operational Information Status Command" Display parameters

Specific Information		
name	Type	Description
sfp-vendor	Parameter type: <Gpon::OpVendorName> - printable string	vendor name associated with the optics module for this pon <i>This element is always shown.</i>
part-num	Parameter type: <Gpon::OpPartNumber> - printable string	model part number associated with the optics module for this pon <i>This element is always shown.</i>
serial-num	Parameter type: <Gpon::OpSerialNumber> - printable string	serial number associated with the optics module for this pon <i>This element is always shown.</i>
mfg-date	Parameter type: <Gpon::OpMfgDateCode> - printable string	manufacturing date code associated with the optics module for this pon <i>This element is always shown.</i>
otdr	Parameter type: <Gpon::OpSpecFeat> (yes no) Possible values: - yes : sfp is otdr capable - no : sfp is not otdr capable	special features supported by the sfp <i>This element is always shown.</i>

116.12 PON Software Download Status Command

Command Description

Shows individual PON fine-grain status associated with any SW download activity.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show pon sw-download [(pon-idx)]

Command Parameters

Table 116.12-1 "PON Software Download Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon

Command Output

Table 116.12-2 "PON Software Download Status Command" Display parameters

Specific Information

116 Pon Status Commands

name	Type	Description
status	Parameter type: <Gpon::SwDownloadStatus> - pon software download status	software download status <i>This element is always shown.</i>

116.13 PON Optics Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon optics [ (pon-idx) ]
```

Command Parameters

Table 116.13-1 "PON Optics Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	access identifier for the pon

Command Output

Table 116.13-2 "PON Optics Status Command" Display parameters

Specific Information		
name	Type	Description
olt-tx-signal-lvl	Parameter type: <Gpon::OltOpticalSignalLevel>	this attribute indicates the current

name	Type	Description
	(invalid not-supported <Gpon::OltOpticalSignalLevel>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltOpticalSignalLevel> - olt optical signal level - unit: db - range: [-30.0...6553.5]	level of the olt's transmit optical signal. <i>This element is always shown.</i>
olt-temperature	Parameter type: <Gpon::OltTemperature> (invalid not-supported <Gpon::OltTemperature>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltTemperature> - temperature of olt optical module - unit: degree C - range: [-655.35...655.35]	this attribute indicates the current level of the olt's transmit optical signal <i>This element is always shown.</i>
olt-voltage	Parameter type: <Gpon::OltVoltage> (invalid not-supported <Gpon::OltVoltage>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltVoltage> - power feed voltage of olt optical module - unit: Volts - range: [0...655.35]	this attribute indicates the current voltage of the optics module associated with this pon. <i>This element is always shown.</i>
olt-laser-curr	Parameter type: <Gpon::OltLaserBias> (invalid not-supported <Gpon::OltLaserBias>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltLaserBias> - indicates the current bias current of the laser - unit: mA - range: [0...65535]	this attribute indicates the current bias current of the laser associated with this pon. <i>This element is always shown.</i>

116.14 PON Diagnostic Status Command

Command Description

This command reports a summary of current background Diagnostic Tests for specified PON.

For each PON matched , the following response is presented

Background Stuck Laser Rogue Test

Background Pattern Rogue Test

Background Rogue Test Interval

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon pon-diagnostics [ (index) ]
```

Command Parameters

Table 116.14-1 "PON Diagnostic Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of pon

Command Output

Table 116.14-2 "PON Diagnostic Status Command" Display parameters

Specific Information		
name	Type	Description
bkg-stucklaser-test	Parameter type: <Gpon::BkgdRogueDispEnableDisable> (stopped initiated) Possible values: - stopped : background test is stopped - initiated : background test is initiated	background stuck laser test. <i>This element is always shown.</i>
bkg-pattern-test	Parameter type: <Gpon::BkgdRogueDispEnableDisable> (stopped initiated) Possible values: - stopped : background test is stopped - initiated : background test is initiated	background pattern test. <i>This element is always shown.</i>
bkg-roguetest-interval	Parameter type: <SignedInteger> - a signed integer	Frequency of background rogue ont test execution in units of minutes <i>This element is always shown.</i>
bkg-alien-test	Parameter type: <Gpon::BkgdRogueDispEnableDisable> (stopped initiated) Possible values: - stopped : background test is stopped - initiated : background test is initiated	background alien test. <i>This element is always shown.</i>
bkg-alientest-interval	Parameter type: <Gpon::BkgdAlienTestInterval> - Numbers divisible by 30 are permitted. - unit: Minutes - range: [30...240]	Frequency of background alien ont test execution in units of minutes <i>This element is always shown.</i>

116.15 Show Pon Unprovisioned Onu Command

Command Description

This command displays the pon unprovisioned onu.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show pon unprovision-onu [ (alarm-idx) ]
```

Command Parameters

Table 116.15-1 " Show Pon Unprovisioned Onu Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-idx)	Format: - index of a current alarm entry	current alarm index

Command Output

Table 116.15-2 " Show Pon Unprovisioned Onu Command" Display parameters

Specific Information		
name	Type	Description
gpon-index	Parameter type: <Gpon::PonId> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier	identifies the epon where the alarm has occurred. <i>This element is always shown.</i>

name	Type	Description
	Field type <Eqpt::M25GPonId> - the 25G PON identifier	
newont-index	Parameter type: <SignedInteger> - a signed integer	the newonu index for the pon alarm <i>This element is only shown in detail mode.</i>
sernum	Parameter type: <Gpon::SerNum1> - serv num - length: 12	new ONT Serial Num <i>This element is always shown.</i>
subscriber-locid	Parameter type: <Gpon::SubsLocId> - subsloc id, 0 to 12 (36 for ngpon2/xgs/25g) ASCII character string or 0 to 24 (72 for ngpon2/xgs/25g) HEX string depending on slidmode - length: x<=72	new ONT Subscriber Location ID <i>This element is always shown.</i>
logical-authid	Parameter type: <Gpon::LogAuthId> - ont logical id - length: x<=24	new ONT logical AuthId <i>This element is always shown.</i>
actual-us-rate	Parameter type: <Gpon::ActualUsRate> (2.5g 10g 1.25g 25g) Possible values: - : unknown - 2.5g : 2.5 GBit/sec - 10g : 10 GBit/sec - 1.25g : 1.25 GBit/sec - 25g : 25 GBit/sec	new ONT actual upstream rate <i>This element is always shown.</i>
equip-id	Parameter type: <Gpon::EquipId> - ont equip Id - length: x<=20	new ONT Equipment Id <i>This element is only shown in detail mode.</i>

116.16 PON Configure File Download Status Command

Command Description

Show individual PON fine-grain status associated with any configure file download activity.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon cfg-download [ (pon-idx) ]
```

Command Parameters

Table 116.16-1 "PON Configure File Download Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon

Command Output

Table 116.16-2 "PON Configure File Download Status Command" Display parameters

Specific Information		
name	Type	Description
cfgfile1-status	Parameter type: <Gpon::cfgDownloadStatus> - pon configure file download status	configure file 1 download status <i>This element is always shown.</i>
cfgfile2-status	Parameter type: <Gpon::cfgDownloadStatus> - pon configure file download status	configure file 2 download status <i>This element is always shown.</i>

116.17 PON Utilization Current Interval PM Command

Command Description

This command retrieves PON utilization current interval performance monitoring data.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show pon utilization current-interval [(pon-idx)]

Command Parameters

Table 116.17-1 "PON Utilization Current Interval PM Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon

Command Output

Table 116.17-2 "PON Utilization Current Interval PM Command" Display parameters

Specific Information		
name	Type	Description
txtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	transmit (downstream) total utilization (percentage) relative to the total bandwidth <i>This element is always shown.</i>
txbcutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) broadcast utilization (percentage) relative to the non-multicast bandwidth [because the broadcast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>
txmcutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	transmit (downstream) multicast utilization (percentage) relative to the configured multicast bandwidth <i>This element is always shown.</i>
txucutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) unicast utilization (percentage) relative to the non-multicast bandwidth [because the unicast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>
dbacongperiod	Parameter type: <Gpon::FloatPonUtilDbapercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	dba (upstream) congestion period (percentage) [the percentage of the dba granting windows in which the dba congestion threshold was exceeded] <i>This element is always shown.</i>
rxtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	receive (upstream) total utilization (percentage) relative to the total bandwidth <i>This element is always shown.</i>

Only Show Details: transmitted/received counts		
name	Type	Description
txtotbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
txbcbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of broadcast bytes transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
txmcbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of multicast bytes transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
txucbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of unicast bytes transmitted on the pon

116 Pon Status Commands

name	Type	Description
		(downstream) <i>This element is only shown in detail mode.</i>
rxatotbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
txtotfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of packets transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
txbcfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of broadcast packets transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
txmcfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of multicast packets transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
txucfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of unicast packets transmitted on the pon (downstream) <i>This element is only shown in detail mode.</i>
rxtotfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of packets received on the pon (upstream) <i>This element is only shown in detail mode.</i>

Only Show Details: number of active onts on pon

name	Type	Description
numactiveonts	Parameter type: <Gpon::NumActiveOnt> - number of active onts that carry atleast a minimum amount of traffic - range: [0...128]	number of active ONTs on the PON (carrying more than a minimum amount of traffic) <i>This element is only shown in detail mode.</i>

116.18 PON Utilization Current Interval Top Five ONT Downstream PM Command

Command Description

This command retrieves the top 5 ONTs on the PON ranked by downstream traffic for the current interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon utilization cur-intvl-top-ont-tx [ (pon-idx) [ rank <Gpon::PonUtilOntRank> ] ]
```

Command Parameters

Table 116.18-1 "PON Utilization Current Interval Top Five ONT Downstream PM Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon
rank	Parameter type: <Gpon::PonUtilOntRank> Format: - rank of the ont	rank of the ont within the pon

Resource Identifier	Type	Description
	- range: [1...5]

rxucutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	receive (upstream) unicast utilization (percentage) relative to total pon bandwidth <i>This element is always shown.</i>

116.20 PON Utilization Previous Interval PM Command

Command Description

This command retrieves PON utilization previous interval performance monitoring data.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon utilization previous-interval [ (pon-idx) [ interval-num <Gpon::FiveMinIntvlNo> ] ]
```

Command Parameters

Table 116.20-1 "PON Utilization Previous Interval PM Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon
interval-num	Parameter type: <Gpon::FiveMinIntvlNo> Format: - a number of a previous five minute interval number - range: [1...288]	identifies prev five-min interval (1 is the most recent)

Command Output

Table 116.20-2 "PON Utilization Previous Interval PM Command" Display parameters

Specific Information		
name	Type	Description
txtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	transmit (downstream) total utilization (percentage) relative to the total bandwidth <i>This element is always shown.</i>
txbcutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) broadcast utilization (percentage) relative to the non-multicast bandwidth [because the broadcast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>
txmcutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	transmit (downstream) multicast utilization (percentage) relative to the configured multicast bandwidth <i>This element is always shown.</i>
txucutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) unicast utilization (percentage) relative to the non-multicast bandwidth [because the unicast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>
dbacongperiod	Parameter type: <Gpon::FloatPonUtilDbapercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	dba (upstream) congestion period (percentage) [the percentage of the dba granting windows in which the dba congestion threshold was exceeded] <i>This element is always shown.</i>
rxtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	receive (upstream) total utilization (percentage) relative to the total bandwidth <i>This element is always shown.</i>

txpkucutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) peak unicast utilization (percentage) relative to the non-multicast pon bandwidth [because the unicast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>

116.25 PON Peak Utilization Current Interval Top Five ONT Upstream PM Command

Command Description

This command retrieves the top 5 ONTs on the PON ranked by peak upstream traffic for the current interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon peak-utilization cur-intvl-top-ont-rx [ (pon-idx) [ rank <Gpon::PonUtilOntRank> ] ]
```

Command Parameters

Table 116.25-1 "PON Peak Utilization Current Interval Top Five ONT Upstream PM Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon

116.26 PON Peak Utilization Previous Interval PM Command

Command Description

This command retrieves PON peak utilization previous interval performance monitoring data.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon peak-utilization previous-interval [ (pon-idx) [ interval-num <Gpon::FiveMinIntvlNo> ] ]
```

Command Parameters

Table 116.26-1 "PON Peak Utilization Previous Interval PM Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	ifindex of the pon
interval-num	Parameter type: <Gpon::FiveMinIntvlNo> Format: - a number of a previous five minute interval number - range: [1...288]	identifies prev five-min interval (1 is the most recent)

Command Output

116.27 PON Peak Utilization Previous Interval Top Five ONT Downstream PM Command

Command Description

This command retrieves the top 5 ONTs on the PON ranked by peak downstream traffic for previous intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show pon peak-utilization prv-intvl-top-ont-tx [ (pon-idx) [ interval-num <Gpon::FiveMinIntvlNo> ] [ rank
<Gpon::PonUtilOntRank> ] ]
```

Command Parameters

117.2 Aggregate Channel Pair XGEM Ports Current Interval Status Command

Command Description

Current interval table contains various statistics collected for aggregate channel pair XGEM ports (from OLT side of the channel pair) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair tc-layer current-interval [ (chanpair-idx) ]
```

Command Parameters

Table 117.2-1 "Aggregate Channel Pair XGEM Ports Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	ifindex of the channel pair

Command Output

Table 117.2-2 "Aggregate Channel Pair XGEM Ports Current Interval Status Command" Display parameters

Specific Information		
name	Type	Description
err-frags-up	Parameter type: <Counter> - 32 bit counter	a count of errored gem fragments (upstream) <i>This element is always shown.</i>

117.3 Aggregate Channel Pair XGEM Ports

Previous Interval Status Command

Command Description

Previous interval table contains various statistics collected for aggregate channel pair XGEM ports (from OLT side of the channel pair) over the previous 8 hours of operation.

The past 8 hours are broken into 32 completed 15 minute intervals. Each row in this table represents one such interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair tc-layer previous-interval [ (chanpair-idx) [ interval-nbr <Gpon::GemPortInterval> ] ]
```

Command Parameters

Table 117.3-1 "Aggregate Channel Pair XGEM Ports Previous Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	ifindex of the channel pair
interval-nbr	Parameter type: <Gpon::GemPortInterval> Format: - time interval in terms of 15 mins - range: [1...32]	aggregate gem port interval number

Command Output

Table 117.3-2 "Aggregate Channel Pair XGEM Ports Previous Interval Status Command" Display parameters

Specific Information		
name	Type	Description
err-frags-up	Parameter type: <Counter> - 32 bit counter	a count of errored gem fragments (upstream) <i>This element is always shown.</i>

117.4 Multicast TC-layer Current Interval Performance Data Status Command

Command Description

This command displays various statistics collected for OLT-side Multicast TC-layer during the current 15 minute interval of operation.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair mcast-tc-layer current-interval [ (chanpair-idx) ]
```

Command Parameters

Table 117.4-1 "Multicast TC-layer Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair index

Command Output

Table 117.4-2 "Multicast TC-layer Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
transmit-blocks	Parameter type: <Counter> - 32 bit counter	count of transmitted gem blocks on gem 4095 <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter>	count of transmitted gem

117 Channel Pair Status Commands

name	Type	Description
	- 32 bit counter	fragments on gem 4095 <i>This element is always shown.</i>

117.5 Multicast TC-layer Previous Interval Performance Data Status Command

Command Description

This command displays various statistics collected for OLT-side Multicast TC-layer over the previous 8 hours of operations which is broken in to 32 completed 15 minute intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair mcast-tc-layer previous-interval [ (chanpair-idx) [ interval-no <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 117.5-1 "Multicast TC-layer Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel-pair index
interval-no	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	identifies prev 15min intvl, val 1 as the latest intvl

Command Output

Table 117.5-2 "Multicast TC-layer Previous Interval Performance Data Status Command" Display parameters

Specific Information

117 Channel Pair Status Commands

name	Type	Description
transmit-blocks	Parameter type: <Counter> - 32 bit counter	count of transmitted gem blocks on gem 4095 <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	count of transmitted gem fragments on gem 4095 <i>This element is always shown.</i>

117.6 Pon FEC Current Interval Status Command

Command Description

Current interval table contains various FEC counters collected for XGPON ports (from OLT side of the PON) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair fec-tc-layer current-interval [ (chanpair-idx) ]
```

Command Parameters

Table 117.6-1 "Pon FEC Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair index

Command Output

Table 117.6-2 "Pon FEC Current Interval Status Command" Display parameters

Specific Information		
name	Type	Description
corrected-bytes	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of number of bytes that were corrected by the FEC function <i>This element is always shown.</i>
corrected-code-words	Parameter type: <Counter> - 32 bit counter	A count of number of code words that were corrected by the FEC function. <i>This element is always shown.</i>
uncorrected-words	Parameter type: <Counter>	A count of number of errored

117 Channel Pair Status Commands

name	Type	Description
	- 32 bit counter	code words that could not be corrected by the FEC function. <i>This element is always shown.</i>
total-code-words	Parameter type: <Counter> - 32 bit counter	A count of total number of received code words. <i>This element is always shown.</i>

117.7 Channel Pair Physical LayerCurrent Interval Status Command

Command Description

Current interval table contains various physical layer counters collected for NGPON2 ports (from OLT side of the channel pair) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair phy-layer current-interval [ (chanpair-idx) ]
```

Command Parameters

Table 117.7-1 "Channel Pair Physical LayerCurrent Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	ont index

Command Output

Specific Information		
name	Type	Description
bip32-prot-words	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of total number of BIP32 words on physical channel pair. <i>This element is always shown.</i>
bip32-bit-errors	Parameter type: <OctetCounter64>	A count of number of BIP32

117 Channel Pair Status Commands

name	Type	Description
	- 64 bit counter,range:[0-9223372036854775808]	errors on physical channel pair. <i>This element is always shown.</i>

117.8 Channel pair NGPON2 tc-layer Current Interval Status Command

Command Description

Current interval table contains NGPON2 tc-layer counters collected for channel pair ports (from OLT side of the channel pair) in the current 15 minutes interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair xg-tc-layer current-interval [ (chanpair-idx) ]
```

Command Parameters

Table 117.8-1 "Channel pair NGPON2 tc-layer Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair index

Command Output

Table 117.8-2 "Channel pair NGPON2 tc-layer Current Interval Status Command" Display parameters

Specific Information		
name	Type	Description
rng-time-msgs	Parameter type: <Counter> - 32 bit counter	A count of number of ranging time messages that were sent on this channel pair. <i>This element is always shown.</i>

117.9 Channel Pair NGPON2 TC-layer Previous Interval Performance Data Status Command

Command Description

This command displays NGPON2 tc-layer counters collected for channel pair ports (from OLT side of the channel pair) over the previous 8 hours of operations which is broken in to 32 completed 15 minute intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show channel-pair xg-tc-layer previous-interval [(chanpair-idx) [interval-no <Gpon::IntervalNo>]]

Command Parameters

Table 117.9-1 "Channel Pair NGPON2 TC-layer Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	ont index
interval-no	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	identifies prev 15min intvls, val 1 as the latest intvl

Command Output

Table 117.9-2 "Channel Pair NGPON2 TC-layer Previous Interval Performance Data Status Command" Display parameters

Specific Information

117 Channel Pair Status Commands

name	Type	Description
rng-time-msgs	Parameter type: <Counter> - 32 bit counter	A count of number of ranging time messages that were sent on this channel pair. <i>This element is always shown.</i>

117.10 PON Optics Operational Information Status Command

Command Description

OLT-SIDE current operational information regarding a PON (primarily optical transmit levels and laser parameters).

The content of the special feature register is reflected in the display parameters with the specific information name "otdr". In case the *spf* is *otdr* capable, "yes" is reflected. All other special feature values are mapped to "no".

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair sfp-inventory [ (chanpair-idx) ]
```

Command Parameters

Table 117.10-1 "PON Optics Operational Information Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	ifindex of channel pair

Command Output

Table 117.10-2 "PON Optics Operational Information Status Command" Display parameters

Specific Information		
name	Type	Description
sfp-vendor	Parameter type: <Gpon::OpVendorName> - printable string	vendor name associated with the optics module for this pon <i>This element is always shown.</i>
part-num	Parameter type: <Gpon::OpPartNumber>	model part number associated

117 Channel Pair Status Commands

name	Type	Description
	- printable string	with the optics module for this pon <i>This element is always shown.</i>
serial-num	Parameter type: <Gpon::OpSerialNumber> - printable string	serial number associated with the optics module for this pon <i>This element is always shown.</i>
mfg-date	Parameter type: <Gpon::OpMfgDateCode> - printable string	manufacturing date code associated with the optics module for this pon <i>This element is always shown.</i>
otdr	Parameter type: <Gpon::OpSpecFeat> (yes no) Possible values: - yes : sfp is otdr capable - no : sfp is not otdr capable	special features supported by the sfp <i>This element is always shown.</i>

117.11 Channel Pair Optics Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show channel-pair optics [(chanpair-idx)]

Command Parameters

Table 117.11-1 "Channel Pair Optics Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	access identifier for the channel pair

Command Output

Table 117.11-2 "Channel Pair Optics Status Command" Display parameters

Specific Information		
name	Type	Description
olt-tx-signal-lvl	Parameter type: <Gpon::OltOpticalSignalLevel> (invalid not-supported <Gpon::OltOpticalSignalLevel>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltOpticalSignalLevel> - olt optical signal level - unit: db	this attribute indicates the current level of the olt's transmit optical signal. <i>This element is always shown.</i>

name	Type	Description
olt-temperature	- range: [-30.0...6553.5] Parameter type: <Gpon::OltTemperature> (invalid not-supported <Gpon::OltTemperature>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltTemperature> - temperature of olt optical module - unit: degree C - range: [-655.35...655.35]	this attribute indicates the current level of the olt's transmit optical signal <i>This element is always shown.</i>
olt-voltage	Parameter type: <Gpon::OltVoltage> (invalid not-supported <Gpon::OltVoltage>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltVoltage> - power feed voltage of olt optical module - unit: Volts - range: [0...655.35]	this attribute indicates the current voltage of the optics module associated with this channel pair. <i>This element is always shown.</i>
olt-laser-curr	Parameter type: <Gpon::OltLaserBias> (invalid not-supported <Gpon::OltLaserBias>) Possible values: - invalid : a valid measurement is currently unattainable for some reason - not-supported : the measurement functionality is not supported by this particular unit Field type <Gpon::OltLaserBias> - indicates the current bias current of the laser - unit: mA - range: [0...65535]	this attribute indicates the current bias current of the laser associated with this channel pair. <i>This element is always shown.</i>

117.12 NGPON2 Diagnostic Status Command

Command Description

This command reports a summary of current background Diagnostic Tests for specified channel pair.

For each channel pair matched, the following response is presented

Background Stuck Laser Rogue Test

Background Pattern Rogue Test

Background Rogue Test Interval

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair diagnostics [ (chanpair-idx) ]
```

Command Parameters

Table 117.12-1 "NGPON2 Diagnostic Status Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	ifindex of channel pair

Command Output

Table 117.12-2 "NGPON2 Diagnostic Status Command" Display parameters

Specific Information		
name	Type	Description
bkg-stucklaser-test	Parameter type: <Gpon::BkgdRogueDispEnableDisable> (stopped initiated) Possible values:	background stuck laser test. <i>This element is always shown.</i>

name	Type	Description
	- stopped : background test is stopped - initiated : background test is initiated	
bkg-pattern-test	Parameter type: <Gpon::BkgdRogueDispEnableDisable> (stopped initiated) Possible values: - stopped : background test is stopped - initiated : background test is initiated	background pattern test. <i>This element is always shown.</i>
bkg-roguetest-interval	Parameter type: <SignedInteger> - a signed integer	Frequency of background pattern test execution in units of minutes <i>This element is always shown.</i>
bkg-alien-test	Parameter type: <Gpon::BkgdRogueDispEnableDisable> (stopped initiated) Possible values: - stopped : background test is stopped - initiated : background test is initiated	background alien test. <i>This element is always shown.</i>
bkg-alientest-interval	Parameter type: <Gpon::BkgdAlienTestInterval> - Numbers divisible by 30 are permitted. - unit: Minutes - range: [30...240]	Frequency of background alien ont test execution in units of minutes <i>This element is always shown.</i>

117.13 Show Channel Pair Unprovisioned Onu Command

Command Description

This command displays the channel pair unprovisioned onu.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair unprovision-onu [ (alarm-idx) ]
```

Command Parameters

Table 117.13-1 " Show Channel Pair Unprovisioned Onu Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-idx)	Format: - index of a current alarm entry	current alarm index

Command Output

Table 117.13-2 " Show Channel Pair Unprovisioned Onu Command" Display parameters

Specific Information		
name	Type	Description
chanpair-idx	Parameter type: <Ng2::ChannelPairIndexOrZero> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> -) Possible values: - - : ont not ranged Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	identifies the channel pair where the alarm has occurred. <i>This element is always shown.</i>
newont-index	Parameter type: <SignedInteger> - a signed integer	the newonu index for the channel pair alarm

name	Type	Description
		<i>This element is only shown in detail mode.</i>
sernum	Parameter type: <Gpon::SerNum1> - serv num - length: 12	new ONT Serial Num <i>This element is always shown.</i>
subscriber-locid	Parameter type: <Gpon::SubsLocId> - subsloc id, 0 to 12 (36 for ngpon2/xgs/25g) ASCII character string or 0 to 24 (72 for ngpon2/xgs/25g) HEX string depending on slidmode - length: x<=72	new ONT Subscriber Location ID <i>This element is always shown.</i>
logical-authid	Parameter type: <Gpon::LogAuthId> - ont logical id - length: x<=24	new ONT logical AuthId <i>This element is always shown.</i>
actual-us-rate	Parameter type: <Gpon::ActualUsRate> (2.5g 10g 1.25g 25g) Possible values: - : unknown - 2.5g : 2.5 GBit/sec - 10g : 10 GBit/sec - 1.25g : 1.25 GBit/sec - 25g : 25 GBit/sec	new ONT actual upstream rate <i>This element is always shown.</i>

117.14 Channel Pair Utilization Current Interval PM Command

Command Description

This command retrieves channel-pair utilization current interval performance monitoring data.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair utilization current-interval [ (chanpair-idx) ]
```

Command Parameters

Table 117.14-1 "Channel Pair Utilization Current Interval PM Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair ifindex

Command Output

Table 117.14-2 "Channel Pair Utilization Current Interval PM Command" Display parameters

Specific Information		
name	Type	Description
txtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	transmit (downstream) total utilization (percentage) relative to the total bandwidth <i>This element is always shown.</i>
txbcutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage	transmit (downstream) broadcast utilization (percentage) relative to the non-multicast bandwidth

name	Type	Description
	- range: [0.00...1000.00]	[because the broadcast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>
txmcutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	transmit (downstream) multicast utilization (percentage) relative to the configured multicast bandwidth <i>This element is always shown.</i>
txucutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) unicast utilization (percentage) relative to the non-multicast bandwidth [because the unicast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>
dbacongperiod	Parameter type: <Gpon::FloatPonUtilDbapercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	dba (upstream) congestion period (percentage) [the percentage of the dba granting windows in which the dba congestion threshold was exceeded] <i>This element is always shown.</i>
rxtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	receive (upstream) total utilization (percentage) relative to the total bandwidth <i>This element is always shown.</i>

Only Show Details: transmitted/received counts		
name	Type	Description
txtotbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txbcbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of broadcast bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txmcbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of multicast bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txucbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of unicast bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
rxtotbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes received on the channel pair (upstream) <i>This element is only shown in detail mode.</i>
txtotfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of packets transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>

117 Channel Pair Status Commands

name	Type	Description
		<i>detail mode.</i>

Only Show Details: number of active onts on channel pair		
name	Type	Description
numactiveonts	Parameter type: <Gpon::NumActiveOnt> - number of active onts that carry atleast a minimum amount of traffic - range: [0...128]	number of active onts on the channel pair (carry more than a minimum amount of traffic) <i>This element is only shown in detail mode.</i>

117.15 Channel Pair Utilization Current Interval Top Five ONT Downstream PM Command

Command Description

This command retrieves the top 5 ONTs on the channel-pair ranked by downstream traffic for the current interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair utilization cur-intvl-top-ont-tx [ (chanpair-idx) [ rank <Gpon::PonUtilOntRank> ] ]
```

Command Parameters

Table 117.15-1 "Channel Pair Utilization Current Interval Top Five ONT Downstream PM Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair ifindex
rank	Parameter type: <Gpon::PonUtilOntRank> Format: - rank of the ont - range: [1...5]	rank of the ont within the channel pair

Command Output

Table 117.15-2 "Channel Pair Utilization Current Interval Top Five ONT Downstream PM Command" Display parameters

Specific Information		
name	Type	Description
ont-idx	Parameter type: <Gpon::OntIndex>	ont ifindex

name	Type	Description
	(<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	<i>This element is always shown.</i>
txucutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) unicast utilization (percentage) relative to the non-multicast channel-pair bandwidth [because the unicast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>

117.16 Channel Pair Utilization Current Interval Top Five ONT Upstream PM Command

Command Description

This command retrieves the top 5 ONTs on the channel-pair ranked by upstream traffic for the current interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair utilization cur-intvl-top-ont-rx [ (chanpair-idx) [ rank <Gpon::PonUtilOntRank> ] ]
```

Command Parameters

Table 117.16-1 "Channel Pair Utilization Current Interval Top Five ONT Upstream PM Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair ifindex
rank	Parameter type: <Gpon::PonUtilOntRank> Format: - rank of the ont - range: [1...5]	rank of the ont within the channel pair

Command Output

Table 117.16-2 "Channel Pair Utilization Current Interval Top Five ONT Upstream PM Command" Display parameters

Specific Information		
name	Type	Description
ont-idx	Parameter type: <Gpon::OntIndex>	ont ifindex

name	Type	Description
	(<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	<i>This element is always shown.</i>
rxucutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	receive (upstream) unicast utilization (percentage) relative to total channel-pair bandwidth <i>This element is always shown.</i>

117.17 Channel Pair Utilization Previous Interval PM Command

Command Description

This command retrieves channel-pair utilization previous interval performance monitoring data.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair utilization previous-interval [ (chanpair-idx) [ interval-num <Gpon::FiveMinIntvlNo> ] ]
```

Command Parameters

Table 117.17-1 "Channel Pair Utilization Previous Interval PM Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair ifindex
interval-num	Parameter type: <Gpon::FiveMinIntvlNo> Format: - a number of a previous five minute interval number - range: [1...288]	previous five-min interval number (1 is the most recent)

Command Output

Table 117.17-2 "Channel Pair Utilization Previous Interval PM Command" Display parameters

Specific Information		
name	Type	Description
txtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage	transmit (downstream) total utilization (percentage) relative to the total bandwidth

name	Type	Description
	- range: [0.00...100.00]	<i>This element is always shown.</i>
txbcutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) broadcast utilization (percentage) relative to the non-multicast bandwidth [because the broadcast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>

txucutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) unicast utilization (percentage) relative to the non-multicast bandwidth [because the unicast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>
dbacongperiod	Parameter type: <Gpon::FloatPonUtilDbapercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	dba (upstream) congestion period (percentage) [the percentage of the dba granting windows in which the dba congestion threshold was exceeded] <i>This element is always shown.</i>
rxtotutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	receive (upstream) total utilization (percentage) relative to the total bandwidth <i>This element is always shown.</i>

Only Show Details: transmitted/received counts

name	Type	Description
txtotbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txbcbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of broadcast bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txmcbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of multicast bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txucbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of unicast bytes transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
rxtotbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes received on the channel pair (upstream) <i>This element is only shown in detail mode.</i>

117 Channel Pair Status Commands

name	Type	Description
txtotfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of packets transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txbcfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of broadcast packets transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txmcfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of multicast packets transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txucfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of unicast packets transmitted on the channel pair (downstream) <i>This element is only shown in detail mode.</i>
rxtotfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of packets received on the channel pair (upstream) <i>This element is only shown in detail mode.</i>

Only Show Details: dropped counts		
name	Type	Description
txtotdropbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txbcdropbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of broadcast bytes dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txmcdropbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of multicast bytes dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txucdropbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of unicast bytes dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
rxtotdropbyte	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of bytes dropped received on the channel pair (upstream) <i>This element is only shown in detail mode.</i>
txtotdropfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of packets dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txbcdropfrm	Parameter type: <OctetCounter64>	number of broadcast packets

117 Channel Pair Status Commands

name	Type	Description
	- 64 bit counter,range:[0-9223372036854775808]	dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txmcdropfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of multicast packets dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
txucdropfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	number of unicast packets dropped destined for the channel pair (downstream) <i>This element is only shown in detail mode.</i>
rxtotdropfrm	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	total number of packets dropped received on the channel pair (upstream) <i>This element is only shown in detail mode.</i>

Only Show Details: number of active onts on channel pair		
name	Type	Description
numactiveonts	Parameter type: <Gpon::NumActiveOnt> - number of active onts that carry atleast a minimum amount of traffic - range: [0...128]	number of active Onts on the channel pair (carry more than a minimum amount of traffic) <i>This element is only shown in detail mode.</i>

117.18 Channel Pair Utilization Previous Interval Top Five ONT Downstream PM Command

Command Description

This command retrieves the top 5 ONTs on the channel-pair ranked by downstream traffic for previous intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair utilization prv-intvl-top-ont-tx [ (chanpair-idx) [ interval-num <Gpon::FiveMinIntvlNo> ] [ rank <Gpon::PonUtilOntRank> ] ]
```

Command Parameters

Table 117.18-1 "Channel Pair Utilization Previous Interval Top Five ONT Downstream PM Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair ifindex
interval-num	Parameter type: <Gpon::FiveMinIntvlNo> Format: - a number of a previous five minute interval number - range: [1...288]	previous five-min interval number (1 is the most recent)
rank	Parameter type: <Gpon::PonUtilOntRank> Format: - rank of the ont - range: [1...5]	rank of the ont within the channel pair

Command Output

Command" Display parameters

Specific Information		
name	Type	Description
ont-idx	Parameter type: <Gpon::OntIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	ont ifindex <i>This element is always shown.</i>
txucutil	Parameter type: <Gpon::FloatPonUtilThousandPercent> - utilization percentage - unit: percentage - range: [0.00...1000.00]	transmit (downstream) unicast utilization (percentage) relative to the non-multicast channel-pair bandwidth [because the unicast bandwidth can exceed the non-multicast bandwidth, this value can exceed 100%] <i>This element is always shown.</i>

117.19 Channel Pair Utilization Previous Interval Top Five ONT Upstream PM Command

Command Description

This command retrieves the top 5 ONTs on the channel-pair ranked by upstream traffic for previous intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair utilization prv-intvl-top-ont-rx [ (chanpair-idx) [ interval-num <Gpon::FiveMinIntvlNo> ] [ rank <Gpon::PonUtilOntRank> ] ]
```

Command Parameters

rxucutil	Parameter type: <Gpon::FloatPonUtilPercent> - utilization percentage - unit: percentage - range: [0.00...100.00]	receive (upstream) unicast utilization (percentage) relative to total channel-pair bandwidth <i>This element is always shown.</i>

117.20 Channel Pair Peak Utilization Current Interval PM Command

Command Description

This command retrieves channel-pair peak utilization current interval performance monitoring data.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show channel-pair peak-utilization current-interval [(chanpair-idx)]

Command Parameters

Table 117.20-1 "Channel Pair Peak Utilization Current Interval PM Command" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair ifindex

Command Output

117.21 Channel Pair Peak Utilization Current Interval Top Five ONT Downstream PM Command

Command Description

This command retrieves the top 5 ONTs on the channel-pair ranked by peak downstream traffic for the current interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show channel-pair peak-utilization cur-intvl-top-ont-tx [ (chanpair-idx) [ rank <Gpon::PonUtilOntRank> ] ]
```

Command Parameters

118.2 Uni Gem-port Olt-side Current Interval Status Command

Command Description

This command displays the entries of the uni oltside gemport's current interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show uni ont tc-layer olt-side current-interval [ (ont-index) ]
```

Command Parameters

receive-blocks	Parameter type: <Counter> - 32 bit counter	a count of received gem blocks <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	a count of transmitted gem blocks <i>This element is always shown.</i>

118.3 Uni Gem-port Olt-side Previous Interval Status Command

Command Description

This command displays the entries of the uni oltside gemport's previous interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show uni ont tc-layer olt-side previous-interval [ (ont-index) [ interval-nbr <Gpon::UniIntervalnbr> ] ]
```

Command Parameters

Table 118.3-1 "Uni Gem-port Olt-side Previous Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	gpon ont index

Resource Identifier	Type	Description

118.4 Uni Gem-port Ont-side Current Interval Status Command

Command Description

This command displays the entries of the uni onside gemport's current interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show uni ont tc-layer ont-side current-interval [ (ont-index) ]
```

Command Parameters

Table 118.4-1 "Uni Gem-port Ont-side Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	gpon ont index

118.5 Uni Gem-port Ont-side Previous Interval Status Command

Command Description

This command displays the entries of the uni onside gemport's previous interval.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show uni ont tc-layer ont-side previous-interval [ (ont-index) [ interval-nbr <Gpon::UniIntervalnbr> ] ]
```

Command Parameters

Table 118.5-1 "Uni Gem-port Ont-side Previous Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	gpon ont index

119.2 CES Service Operational Information

Command Description

This command displays operational information regarding a CES service.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ces ont service operational-data [ (uni-idx) ]
```

Command Parameters

Table 119.2-1 "CES Service Operational Information" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	interface index of the ces ont uni

Command Output

Table 119.2-2 "CES Service Operational Information" Display parameters

Specific Information		
name	Type	Description
source-mac-address	Parameter type: <Ces::SourceMacAddress> - a mac-address (example : 01:02:03:04:05:06) (L2 only) - length: 6	source mac address <i>This element is always shown.</i>

119.3 CESPW Service Current Interval Statistics Command

Command Description

This command displays various statistics collected for a CES Service (pseudowire) during the current 15 minute interval of operation.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ces ont service pseudo-wire current-interval [ (uni-idx) ]
```

Command Parameters

Table 119.3-1 "CESPW Service Current Interval Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	interface index of the ces ont uni

Command Output

Table 119.3-2 "CESPW Service Current Interval Statistics Command" Display parameters

Specific Information

name	Type	Description
rx-pkts	Parameter type: <Counter> - 32 bit counter	number of received packets <i>This element is always shown.</i>
tx-pkts	Parameter type: <Counter> - 32 bit counter	number of transmitted packets <i>This element is always shown.</i>
missing-pkts	Parameter type: <Counter> - 32 bit counter	number of lost packets <i>This element is always shown.</i>
misorder-pkts-usable	Parameter type: <Counter> - 32 bit counter	number of packets received out of order that can be successfully re-ordered <i>This element is always shown.</i>
misorder-pkts-dropped	Parameter type: <Counter> - 32 bit counter	number of packets received out of sequence that were discarded <i>This element is always shown.</i>
buff-over-under-runs	Parameter type: <Counter> - 32 bit counter	number of packets that were discarded as they arrived too late or too early <i>This element is always shown.</i>
malformed-pkts	Parameter type: <Counter> - 32 bit counter	number of malformed packets <i>This element is always shown.</i>
stray-pkts	Parameter type: <Counter> - 32 bit counter	number of packets whose ECID or RTP SSRC failed to match the expected value or were misdelivered <i>This element is always shown.</i>
lost-remote-pkts	Parameter type: <Counter> - 32 bit counter	number of received packets whose R bit is set indicating the loss of packets <i>This element is always shown.</i>
tx-tdm-lbit-pkts	Parameter type: <Counter> - 32 bit counter	number of packets transmitted with the L bit set indicating a near-end TDM fault <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	count of errored seconds <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	count of severely errored seconds <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	count of unavailable seconds <i>This element is always shown.</i>

119.4 CESPW Service Previous Interval Statistics Command

Command Description

This command displays CES psuedowire service statistics collected at an ONT over the previous 8 hours of operation. The past 8 hours are broken into 32 completed 15 minute intervals.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ces ont service pseudo-wire previous-interval [ (uni-idx) [ interval-nbr <Ces::IntervalNumber> ] ]
```

Command Parameters

Table 119.4-1 "CESPW Service Previous Interval Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	interface index of the ces ont uni
interval-nbr	Parameter type: <Ces::IntervalNumber> Format: - interval number - range: [1...32]	interval number

Command Output

Specific Information		
name	Type	Description
rx-pkts	Parameter type: <Counter> - 32 bit counter	number of received packets <i>This element is always shown.</i>
tx-pkts	Parameter type: <Counter> - 32 bit counter	number of transmitted packets <i>This element is always shown.</i>
missing-pkts	Parameter type: <Counter> - 32 bit counter	number of lost packets <i>This element is always shown.</i>
misorder-pkts-usable	Parameter type: <Counter> - 32 bit counter	number of packets received out of order that can be successfully re-ordered <i>This element is always shown.</i>
misorder-pkts-dropped	Parameter type: <Counter> - 32 bit counter	number of packets received out of sequence that were discarded <i>This element is always shown.</i>
buff-over-under-runs	Parameter type: <Counter> - 32 bit counter	number of packets that were discarded as they arrived too late or too early <i>This element is always shown.</i>
malformed-pkts	Parameter type: <Counter> - 32 bit counter	number of malformed packets <i>This element is always shown.</i>
stray-pkts	Parameter type: <Counter> - 32 bit counter	number of packets whose ECID or RTP SSRC failed to match the expected value or were misdelivered <i>This element is always shown.</i>
lost-remote-pkts	Parameter type: <Counter> - 32 bit counter	number of received packets whose R bit is set indicating the loss of packets <i>This element is always shown.</i>
tx-tdm-lbit-pkts	Parameter type: <Counter> - 32 bit counter	number of packets transmitted with the L bit set indicating a near-end TDM fault <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	count of errored seconds <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	count of severely errored seconds <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	count of unavailable seconds <i>This element is always shown.</i>

119.5 Current Interval OLT side PM status Command

Command Description

This command retrieves OLT-side TC layer performance monitoring data for current Interval

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show ces ont service tc-layer olt-side current-interval [(uni-idx)]

Command Parameters

Table 119.5-1 "Current Interval OLT side PM status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	This index is the ifIndex of the physical UNI

Command Output

Table 119.5-2 "Current Interval OLT side PM status Command" Display parameters

Specific Information

name	Type	Description
lost-frags-down	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (downstream) <i>This element is always shown.</i>
lost-frags-up	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (upstream) <i>This element is always shown.</i>
receive-frags	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Fragments. <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Fragments. <i>This element is always shown.</i>
receive-blocks	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Blocks. <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Blocks. <i>This element is always shown.</i>

119.6 Previous Interval OLT side PM status

Command

Command Description

This command retrieves OLT-side TC layer performance monitoring data for previous Interval

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ces ont service tc-layer olt-side previous-interval [ (uni-idx) [ interval-nbr <Ces::IntervalNumber> ] ]
```

Command Parameters

Table 119.6-1 "Previous Interval OLT side PM status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	This index is the ifIndex of the physical UNI
interval-nbr	Parameter type: <Ces::IntervalNumber> Format: - interval number - range: [1...32]	identifies prev 15min intvls, val 1 as the latest intvl

Command Output

Table 119.6-2 "Previous Interval OLT side PM status Command" Display parameters

Specific Information		
name	Type	Description
lost-frags-down	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (downstream) <i>This element is always shown.</i>
lost-frags-up	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (upstream) <i>This element is always shown.</i>
receive-frags	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Fragments <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Fragments <i>This element is always shown.</i>
receive-blocks	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Blocks. <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Blocks <i>This element is always shown.</i>

119.7 Current Interval ONT side PM status Command

Command Description

This command retrieves ONT-side TC layer performance monitoring data for current Interval

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show ces ont service tc-layer ont-side current-interval [(uni-idx)]

Command Parameters

Table 119.7-1 "Current Interval ONT side PM status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	This index is the ifIndex of the physical UNI

Command Output

Table 119.7-2 "Current Interval ONT side PM status Command" Display parameters

Specific Information

name	Type	Description
lost-frags-down	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (downstream) <i>This element is always shown.</i>
lost-frags-up	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (upstream) <i>This element is always shown.</i>
receive-frags	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Fragments. <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Fragments. <i>This element is always shown.</i>
receive-blocks	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Blocks. <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Blocks. <i>This element is always shown.</i>

119.8 Previous Interval ONT side PM status Command

Command Description

This command retrieves ONT-side TC layer performance monitoring data for previous Interval

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ces ont service tc-layer ont-side previous-interval [ (uni-idx) [ interval-nbr <Ces::IntervalNumber> ] ]
```

Command Parameters

Table 119.8-1 "Previous Interval ONT side PM status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	This index is the ifIndex of the physical UNI
interval-nbr	Parameter type: <Ces::IntervalNumber> Format: - interval number - range: [1...32]	identifies prev 15min intvls, val 1 as the latest intvl

Command Output

Specific Information		
name	Type	Description
lost-frags-down	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (downstream) <i>This element is always shown.</i>
lost-frags-up	Parameter type: <Counter> - 32 bit counter	A count of Lost GEM Fragments (upstream) <i>This element is always shown.</i>
receive-frags	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Fragments <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Fragments <i>This element is always shown.</i>
receive-blocks	Parameter type: <Counter> - 32 bit counter	A count of Received GEM Blocks. <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	A count of Transmitted GEM Blocks <i>This element is always shown.</i>

119.9 CESUNI Current Interval PM status Command

Command Description

This command retrieves current Interval CESUNI performance monitoring data from the ONT(s)

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ces ont line port current-interval [ (ont-idx) ]
```

Command Parameters

Table 119.9-1 "CESUNI Current Interval PM status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the ces ont uni

Resource Identifier	Type	Description
	- range: [1...16]	

Command Output

Table 119.9-2 "CESUNI Current Interval PM status Command" Display parameters

Specific Information		
name	Type	Description
es	Parameter type: <Counter> - 32 bit counter	A count of Errored Seconds during this CurrentInterval <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	A count of Severely Errored Seconds during this CurrentInterval <i>This element is always shown.</i>
bes	Parameter type: <Counter> - 32 bit counter	A count of Bursty Errored Seconds during this CurrentInterval <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	A count of Unavailable Seconds during this CurrentInterval <i>This element is always shown.</i>
css	Parameter type: <Counter> - 32 bit counter	A count of Controlled Slip Seconds during this CurrentInterval <i>This element is always shown.</i>

119.10 CESUNI Previous Interval PM status

Command

Command Description

This command retrieves previous Interval CESUNI performance monitoring data from the ONT(s)

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ces ont line port previous-interval [ (ont-idx) [ interval-nbr <Ces::IntervalNumber> ] ]
```

Command Parameters

Table 119.10-1 "CESUNI Previous Interval PM status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the ces ont uni

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-nbr	Parameter type: <Ces::IntervalNumber> Format: - interval number - range: [1...32]	identifies prev 15min intvl, val 1 as the latest intvl

Command Output

120- ANI ONT Show Commands

120.1 ANI ONT Show Command Tree	120-5865
120.2 ANI ONT Operational-Data Status Command	120-5866
120.3 ANI ONT Video Status Command	120-5868
120.4 ANI ONT Video Stats Command	120-5871

120.1 ANI ONT Show Command Tree

Description

This chapter gives an overview of nodes that are handled by "ANI ONT Show Commands".

Command Tree

```
----show
  ----ani
    ----ont
      ----operational-data
        - (ont-index)
      ----video
        - (ont-index)
      ----video-stats
        - (ont-index)
```

120.2 ANI ONT Operational-Data Status Command

Command Description

This command reports a summary of current operational parameters for a specified ONT ANI.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ani ont operational-data [ (ont-index) ]
```

Command Parameters

Table 120.2-1 "ANI ONT Operational-Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	a unique interface index

Command Output

Table 120.2-2 "ANI ONT Operational-Data Status Command" Display parameters

Specific Information

name	Type	Description
optical-signal-level1	Parameter type: <Gpon::OntOpticalSignalLevel> (unknown unsupported <Gpon::OpticalSignalLevel>) Possible values: - unknown : olt has not yet communicated with ont - unsupported : ont does not support the measurement of this attribute Field type <Gpon::OpticalSignalLevel> - ont receive / transmit optical signal level - unit: dbm - range: [-65.536...65.538]	indicates the current measurement of the total receive optical signal level. <i>This element is always shown.</i>

120.3 ANI ONT Video Status Command

Command Description

This command retrieves provisioned and discovered parameters for ONTVIDANIs.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show ani ont video [(ont-index)]

Command Parameters

Table 120.3-1 "ANI ONT Video Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	interface index of the port

Command Output

Table 120.3-2 "ANI ONT Video Status Command" Display parameters

Specific Information

name	Type	Description
freq-range-low	Parameter type: <Gpon::Freqlow> (no low band 50 - 550 mhz 50 - 750 mhz 50 - 870 mhz unknown) Possible values: - no low band : no low band is supported - 50 - 550 mhz : 50 - 550 mhz is supported - 50 - 750 mhz : 50 - 750 mhz is supported - 50 - 870 mhz : 50 - 870 mhz is supported - unknown : unknown	Indicates the lower of two frequency ranges supported. <i>This element is always shown.</i>
freq-range-high	Parameter type: <Gpon::Freqhigh> (no high band 550 - 750 mhz 550 - 870 mhz 950 - 2050 mhz 2150 - 3250 mhz 950 - 3250 mhz unknown) Possible values: - no high band : no high band is supported - 550 - 750 mhz : 550 - 750 mhz is supported - 550 - 870 mhz : 550 - 870 mhz is supported - 950 - 2050 mhz : 950 - 2050 mhz is supported - 2150 - 3250 mhz : 2150 - 3250 mhz is supported - 950 - 3250 mhz : 950 - 3250 mhz is supported - unknown : Unknown	Indicates the higher of two frequency ranges supported <i>This element is always shown.</i>
signal-capability	Parameter type: <Gpon::SignalCapability> (no-signal optical-power fixed-freq optical-fixed var-freq optical-var bb-rfpower optical-rfpower unknown) Possible values: - no-signal : no signal level capability is supported - optical-power : total optical power level is supported - fixed-freq : fixed freq pilot tone is supported - optical-fixed : total optical power level and fixed freq pilot tone is supported - var-freq : variable freq pilot tone is supported - optical-var : total optical power level and variable freq pilot tone is supported - bb-rfpower : broadband RF power level is supported - optical-rfpower : total optical power level and broadband RF power level is supported - unknown : unknown	Indicates the capability of the ONT to measure the video signal level. <i>This element is always shown.</i>
min-signal-level	Parameter type: <Gpon::SignalLevel> - Indicates the maximum/minimum optical RF power per channel - unit: dBuW - range: [0...256]	Indicates the minimum optical RF power per channel <i>This element is always shown.</i>
max-signal-level	Parameter type: <Gpon::SignalLevel>	Indicates the maximum optical

120 ANI ONT Show Commands

name	Type	Description
	- Indicates the maximum/minimum optical RF power per channel - unit: dBuW - range: [0...256]	RF power per channel <i>This element is always shown.</i>
planned-agc-mode	Parameter type: <Gpon::AgcMode> (no-agc broad-band-agc) Possible values: - no-agc : No AGC is used - broad-band-agc : Broadband RF AGC is used	Indicates the discovered value of ONT's AGC capabilities. <i>This element is always shown.</i>
actual-agc-mode	Parameter type: <Gpon::AgcMode> (no-agc broad-band-agc) Possible values: - no-agc : No AGC is used - broad-band-agc : Broadband RF AGC is used	Indicates the discovered value of ONT's AGC capabilities. <i>This element is always shown.</i>
state	Parameter type: <Gpon::OperState> (enabled disabled) Possible values: - enabled : enable the service - disabled : disable the service	Indicates operational state of the 1550 overlay reception capability <i>This element is always shown.</i>
min-signal-level-dbm	Parameter type: <Gpon::SignalLevelDbm> - Indicates the maximum/minimum optical RF power per channel in dBm - unit: dBm - range: [-30...226]	Indicates the minimum optical RF power per channel in dbm <i>This element is always shown.</i>
max-signal-level-dbm	Parameter type: <Gpon::SignalLevelDbm> - Indicates the maximum/minimum optical RF power per channel in dBm - unit: dBm - range: [-30...226]	Indicates the maximum optical RF power per channel in dbm <i>This element is always shown.</i>

120.4 ANI ONT Video Stats Command

Command Description

This command reports a summary of current operational parameters for a specified ONTVIDANI.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show ani ont video-stats [ (ont-index) ]
```

Command Parameters

Table 120.4-1 "ANI ONT Video Stats Command" Resource Parameters

Resource Identifier	Type	Description
(ont-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	interface index of the port

Command Output

Table 120.4-2 "ANI ONT Video Stats Command" Display parameters

Specific Information

120 ANI ONT Show Commands

name	Type	Description
opt-sig-level	Parameter type: <Gpon::SignalLevel> - Indicates the maximum/minimum optical RF power per channel - unit: dBuW - range: [0...256]	Total optical signal level in dBuW optical. <i>This element is always shown.</i>
pilot-level	Parameter type: <Gpon::SigPwrLevel> - Indicates the measurement of the pilot signal level or the broadband RF power level - unit: dBuV - range: [0...256]	Signal level of the Pilot frequency in dBuV optical <i>This element is always shown.</i>
opt-sig-level-dbm	Parameter type: <Gpon::SignalLevelDbm> - Indicates the maximum/minimum optical RF power per channel in dBm - unit: dBm - range: [-30...226]	Total optical signal level in dBm optical. <i>This element is always shown.</i>

121.2 Current L2UNI ONT Status Command

Command Description

This retrieves Current Ethernet L2 performance monitoring data from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show l2uni ont performance-data current-interval [ (if-index) ]
```

Command Parameters

Table 121.2-1 "Current L2UNI ONT Status Command" Resource Parameters

121.3 Previous L2UNI ONT Status Command

Command Description

This retrieves Previous Ethernet L2 performance monitoring data from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show l2uni ont performance-data previous-interval [ (if-index) [ interval-nbr <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 121.3-1 "Previous L2UNI ONT Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

Resource Identifier	Type	Description
	- range: [1...16]	
interval-nbr	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	A number between 1 and 32

Command Output

Table 121.3-2 "Previous L2UNI ONT Status Command" Display parameters

Specific Information		
name	Type	Description
tx-frames	Parameter type: <Counter> - 32 bit counter	A count of Transmitted Ethernet Frames. <i>This element is always shown.</i>

rx-undersz-frame	Parameter type: <Counter> - 32 bit counter	Number of rx packets that were less than 64 octets long but were otherwise well formed

name	Type	Description
		<i>This element is only shown in detail mode.</i>
rx-oversz-frame	Parameter type: <Counter> - 32 bit counter	No of rx packets that were longer than 1518 octets and were otherwise well formed <i>This element is only shown in detail mode.</i>
rx-64-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 64 octets long <i>This element is only shown in detail mode.</i>
rx-65to127-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 65 to 127 octets long <i>This element is only shown in detail mode.</i>
rx-128to255-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 128 to 255 octets long <i>This element is only shown in detail mode.</i>
rx-256to511-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 256 to 511 octets long <i>This element is only shown in detail mode.</i>
rx-512to1023-oct	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 512 to 1023 octets long <i>This element is only shown in detail mode.</i>
rx-1024to1518-oct	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>
tx-dropped-evt	Parameter type: <Counter> - 32 bit counter	Number of events in which tx packets were dropped due to lack of resources <i>This element is only shown in detail mode.</i>
tx-frame-brdcast	Parameter type: <Counter> - 32 bit counter	The total number of transmitted good packets directed to the broadcast address <i>This element is only shown in detail mode.</i>
tx-crc-errframe	Parameter type: <Counter> - 32 bit counter	Number of tx packets that had crc error <i>This element is only shown in detail mode.</i>
tx-undersz-frame	Parameter type: <Counter> - 32 bit counter	Number of tx packets that were less than 64 octets long but were otherwise well formed <i>This element is only shown in detail mode.</i>
tx-oversz-frame	Parameter type: <Counter> - 32 bit counter	No of tx packets that were longer than 1518 octets and were otherwise well formed <i>This element is only shown in detail mode.</i>
tx-64-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 64 octets long

121.4 Current L2UNI ONT Status Command

Command Description

This retrieves Current Ethernet L2 performance monitoring data(64 bit) from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show l2uni ont performance-data-64bit current-interval [ (if-index) ]
```

Command Parameters

Table 121.4-1 "Current L2UNI ONT Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

Specific Information		
name	Type	Description
tx-frames	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of Transmitted Ethernet Frames. <i>This element is always shown.</i>
rx-frames	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of Received Ethernet Frames. <i>This element is always shown.</i>
tx-bytes	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of Transmitted Ethernet Bytes. <i>This element is always shown.</i>
rx-bytes	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of Received Ethernet Bytes. <i>This element is always shown.</i>
tx-frames-multicast	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of Transmitted Multicast Ethernet Frames. <i>This element is always shown.</i>
rx-frames-multicast	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	A count of Received Multicast Ethernet Frames. <i>This element is always shown.</i>
rx-dropped-evt	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Number of events in which rx packets were dropped due to lack of resources <i>This element is only shown in detail mode.</i>
rx-frame-brdcast	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of received good packets directed to the broadcast address. <i>This element is only shown in detail mode.</i>
rx-crc-errframe	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Number of rx packets that had crc error <i>This element is only shown in detail mode.</i>
rx-undersz-frame	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Number of rx packets that were less than 64 octets long but were otherwise well formed <i>This element is only shown in detail mode.</i>
rx-oversz-frame	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of rx packets that were longer than 1518 octets and were otherwise well formed <i>This element is only shown in detail mode.</i>
rx-64-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of rx packets that were 64 octets long <i>This element is only shown in detail mode.</i>
rx-65to127-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of rx packets that were 65 to 127 octets long <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
rx-128to255-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of rx packets that were 128 to 255 octets long <i>This element is only shown in detail mode.</i>
rx-256to511-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of rx packets that were 256 to 511 octets long <i>This element is only shown in detail mode.</i>
rx-512to1023-oct	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of rx packets that were 512 to 1023 octets long <i>This element is only shown in detail mode.</i>
rx-1024to1518-oct	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of rx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>
tx-dropped-evt	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Number of events in which tx packets were dropped due to lack of resources <i>This element is only shown in detail mode.</i>
tx-frame-brdcast	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of transmitted good packets directed to the broadcast address <i>This element is only shown in detail mode.</i>
tx-crc-errframe	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Number of tx packets that had crc error <i>This element is only shown in detail mode.</i>
tx-undersz-frame	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Number of tx packets that were less than 64 octets long but were otherwise well formed <i>This element is only shown in detail mode.</i>
tx-oversz-frame	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of tx packets that were longer than 1518 octets and were otherwise well formed <i>This element is only shown in detail mode.</i>
tx-64-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of tx packets that were 64 octets long <i>This element is only shown in detail mode.</i>
tx-65to127-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of tx packets that were 65 to 127 octets long <i>This element is only shown in detail mode.</i>
tx-128to255-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of tx packets that were 128 to 255 octets long <i>This element is only shown in detail mode.</i>
tx-256to511-octet	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of tx packets that were 256 to 511 octets long <i>This element is only shown in detail mode.</i>

tx-1024to1518-oct	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	No of tx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>

121.5 Previous L2UNI ONT Status Command

Command Description

This retrieves Previous Ethernet L2 performance monitoring data(64 bit) from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show l2uni ont performance-data-64bit previous-interval [ (if-index) [ interval-nbr <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 121.5-1 "Previous L2UNI ONT Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

Resource Identifier	Type	Description
	- range: [1...16]	
interval-nbr	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	A number between 1 and 15

tx-64-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 64 octets long <i>This element is only shown in detail mode.</i>
tx-65to127-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 65 to 127 octets long <i>This element is only shown in detail mode.</i>
tx-128to255-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 128 to 255 octets long <i>This element is only shown in detail mode.</i>
tx-256to511-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 256 to 511 octets long <i>This element is only shown in detail mode.</i>

121 L2UNI Show Commands

name	Type	Description
tx-512to1023-oct	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 512 to 1023 octets long <i>This element is only shown in detail mode.</i>
tx-1024to1518-oct	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>

121.7 Previous L2UNI ONT Status Command

Command Description

This retrieves Previous Ethernet L2 performance monitoring extended data(32 bit) from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show l2uni ont performance-data-ext previous-interval [ (if-index) [ interval-nbr <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 121.7-1 "Previous L2UNI ONT Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

Resource Identifier	Type	Description
	- range: [1...16]	
interval-nbr	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	A number between 1 and 15

Command Output

Table 121.7-2 "Previous L2UNI ONT Status Command" Display parameters

Specific Information		
name	Type	Description
tx-frames	Parameter type: <Counter> - 32 bit counter	A count of Transmitted Ethernet Frames. <i>This element is always shown.</i>
rx-frames	Parameter type: <Counter> - 32 bit counter	A count of Received Ethernet Frames. <i>This element is always shown.</i>
tx-bytes	Parameter type: <Counter> - 32 bit counter	A count of Transmitted Ethernet Bytes. <i>This element is always shown.</i>
rx-bytes	Parameter type: <Counter> - 32 bit counter	A count of Received Ethernet Bytes. <i>This element is always shown.</i>
tx-frames-multicast	Parameter type: <Counter> - 32 bit counter	A count of Transmitted Multicast Ethernet Frames. <i>This element is always shown.</i>
rx-frames-multicast	Parameter type: <Counter> - 32 bit counter	A count of Received Multicast Ethernet Frames. <i>This element is always shown.</i>
rx-dropped-evt	Parameter type: <Counter> - 32 bit counter	Number of events in which rx packets were dropped due to lack of resources <i>This element is only shown in detail mode.</i>
rx-frame-brdcast	Parameter type: <Counter> - 32 bit counter	The total number of received good packets directed to the broadcast address. <i>This element is only shown in detail mode.</i>
rx-crc-errframe	Parameter type: <Counter> - 32 bit counter	Number of rx packets that had crc error <i>This element is only shown in detail mode.</i>
rx-undersz-frame	Parameter type: <Counter> - 32 bit counter	Number of rx packets that were less than 64 octets long but were otherwise well formed <i>This element is only shown in detail mode.</i>
rx-oversz-frame	Parameter type: <Counter> - 32 bit counter	No of rx packets that were longer than 1518 octets and were otherwise well formed <i>This element is only shown in detail mode.</i>
rx-64-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 64 octets long <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
rx-65to127-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 65 to 127 octets long <i>This element is only shown in detail mode.</i>
rx-128to255-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 128 to 255 octets long <i>This element is only shown in detail mode.</i>
rx-256to511-octet	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 256 to 511 octets long <i>This element is only shown in detail mode.</i>
rx-512to1023-oct	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 512 to 1023 octets long <i>This element is only shown in detail mode.</i>
rx-1024to1518-oct	Parameter type: <Counter> - 32 bit counter	No of rx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>
tx-dropped-evt	Parameter type: <Counter> - 32 bit counter	Number of events in which tx packets were dropped due to lack of resources <i>This element is only shown in detail mode.</i>
tx-frame-brdcast	Parameter type: <Counter> - 32 bit counter	The total number of transmitted good packets directed to the broadcast address <i>This element is only shown in detail mode.</i>
tx-crc-errframe	Parameter type: <Counter> - 32 bit counter	Number of tx packets that had crc error <i>This element is only shown in detail mode.</i>
tx-undersz-frame	Parameter type: <Counter> - 32 bit counter	Number of tx packets that were less than 64 octets long but were otherwise well formed <i>This element is only shown in detail mode.</i>
tx-oversz-frame	Parameter type: <Counter> - 32 bit counter	No of tx packets that were longer than 1518 octets and were otherwise well formed <i>This element is only shown in detail mode.</i>
tx-64-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 64 octets long <i>This element is only shown in detail mode.</i>
tx-65to127-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 65 to 127 octets long <i>This element is only shown in detail mode.</i>
tx-128to255-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 128 to 255 octets long <i>This element is only shown in detail mode.</i>

121 L2UNI Show Commands

name	Type	Description
tx-256to511-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 256 to 511 octets long <i>This element is only shown in detail mode.</i>
tx-512to1023-oct	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 512 to 1023 octets long <i>This element is only shown in detail mode.</i>
tx-1024to1518-oct	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>

121.8 Show muticast subscriber monitor Command

Command Description

This retrieves muticast subscriber monitor general data except ipv4 active group list.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show l2uni ont mcast-subscriber general [ (if-index) ]
```

Command Parameters

Table 121.8-1 "Show muticast subscriber monitor Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

Resource Identifier	Type	Description
	- range: [1...16]	

Command Output

Table 121.8-2 "Show muticast subscriber monitor Command" Display parameters

Specific Information		
name	Type	Description
cur-mcast-bw	Parameter type: <Counter> - 32 bit counter	ONU's best effort estimate of the actual bandwidth currently being delivered to this particular MAC bridge port. <i>This element is always shown.</i>
join-messages	Parameter type: <Counter> - 32 bit counter	The number of times the corresponding subscriber sent a join message that was accepted. <i>This element is always shown.</i>
bw-exceeded-num	Parameter type: <Counter> - 32 bit counter	A count of Transmitted Ethernet Bytes. <i>This element is always shown.</i>
act-grp-records	Parameter type: <Counter> - 32 bit counter	A count of Active group list record. <i>This element is always shown.</i>

121.9 Show active group list

Command Description

This retrieves ipv4 active group list detail data.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show l2uni ont mcast-subscriber active-groups [ (if-index) [ index <SignedInteger> ] ]
```

Command Parameters

Table 121.9-1 "Show active group list" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

Resource Identifier	Type	Description
	- range: [1...16]	
index	Parameter type: <SignedInteger> Format: - a signed integer	ipv4 active group record index, between 0 and (Uni's active group records number -1)

Command Output

Table 121.9-2 "Show active group list" Display parameters

Specific Information		
name	Type	Description
vlan-id	Parameter type: <Vlan::VlanIndexOrZero> - vlan id - range: [0...4092]	vlan-id. <i>This element is always shown.</i>
src-ip-address	Parameter type: <Ip::V4Address> - IPv4-address	Source IP address. <i>This element is always shown.</i>
dest-ip-address	Parameter type: <Ip::V4Address> - IPv4-address	Multicast destination IP address. <i>This element is always shown.</i>
current-mcast-bw	Parameter type: <SignedInteger> - a signed integer	Best efforts actual bandwidth estimate. <i>This element is always shown.</i>
client-ip-addr	Parameter type: <Ip::V4Address> - IPv4-address	the IP address of the device currently joined. <i>This element is always shown.</i>
join-time	Parameter type: <SignedInteger> - a signed integer	Time passed in second(s) since the client joined the mcast group <i>This element is always shown.</i>

122- HPNA Show Commands

122.1 HPNA Show Command Tree	122-5904
122.2 Current HPNA ONT Status Command	122-5905
122.3 Previous L2UNI ONT Status Command	122-5909

122.1 HPNA Show Command Tree

Description

This chapter gives an overview of nodes that are handled by "HPNA Show Commands".

Command Tree

```
----show
  ----hpna
    ----ont
      ----performance-data
        ----current-interval
          - (if-index)
        ----previous-interval
          - (if-index)
          - interval-nbr
```

122.2 Current HPNA ONT Status Command

Command Description

This retrieves Current HPNA performance monitoring data from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show hpna ont performance-data current-interval [ (if-index) ]
```

Command Parameters

Table 122.2-1 "Current HPNA ONT Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

tx-1024to1518-oct	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>
rx-packets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of upstream packets received <i>This element is only shown in detail mode.</i>
tx-packets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of downstream packets transmitted <i>This element is only shown in detail mode.</i>

122.3 Previous L2UNI ONT Status Command

Command Description

This retrieves Previous HPNA performance monitoring data from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show hpna ont performance-data previous-interval [ (if-index) [ interval-nbr <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 122.3-1 "Previous L2UNI ONT Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port	interface index of the port

Resource Identifier	Type	Description
	- range: [1...16]	
interval-nbr	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	A number between 1 and 32

Command Output

tx-256to511-octet	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 256 to 511 octets long <i>This element is only shown in detail mode.</i>
tx-512to1023-oct	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 512 to 1023 octets long <i>This element is only shown in detail mode.</i>
tx-1024to1518-oct	Parameter type: <Counter> - 32 bit counter	No of tx packets that were 1024 to 1518 octets long <i>This element is only shown in detail mode.</i>
rx-packets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of upstream packets received <i>This element is only shown in detail mode.</i>
tx-packets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of downstream packets transmitted <i>This element is only shown in detail mode.</i>

123- Voice Ont IP Host Show Commands

123.1 Voice Ont IP Host Show Command Tree	123-5914
123.2 ONT IP Host Operational Data Status Command	123-5915
123.3 ONT IP Host Current 15min Statistics Status Command	123-5918

123.1 Voice Ont IP Host Show Command Tree

Description

This chapter gives an overview of nodes that are handled by "Voice Ont IP Host Show Commands".

Command Tree

```
----show
  ----iphost
    ----ont
      ----operational-data
        - (index)
      ----statistics
        ----current-15min
          - (index)
```

123.2 ONT IP Host Operational Data Status Command

Command Description

This command displays the latest operational information for an IP stack on the ONT

User Level

The command can be accessed by operators with sip,megaco,vlan privileges.

Command Syntax

The command has the following syntax:

```
> show iphost ont operational-data [ (index) ]
```

Command Parameters

Table 123.2-1 "ONT IP Host Operational Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - ont:ng2 : ngpon2 ont - vlanport:ng2 : ngpon2 vlanport - ont : ont - vlanport : vlanport Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	a unique interface index

Resource Identifier	Type	Description
	- the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Gpon::IpHostID> - iphost id Field type <Ng2::IpHostID> - iphost id (ngpon2) Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 123.2-2 "ONT IP Host Operational Data Status Command" Display parameters

Specific Information		
name	Type	Description
ip-address	Parameter type: <Gpon::ActualIpAddr> (undefined unknown not-supported <Ip::V4Address>) Possible values: - undefined : DHCP is unavailable - unknown : OLT could not communicate with ONT for discovery - not-supported : ONT doesnot support this activity Field type <Ip::V4Address> - IPv4-address	the current IP address for the IP host service <i>This element is always shown.</i>
net-mask	Parameter type: <Gpon::ActualIpAddr> (undefined unknown not-supported <Ip::V4Address>) Possible values: - undefined : DHCP is unavailable - unknown : OLT could not communicate with ONT for discovery	the current network mask for the IP host service <i>This element is always shown.</i>

name	Type	Description
	- not-supported : ONT doesnot support this activity Field type <Ip::V4Address> - IPv4-address	
default-router	Parameter type: <Gpon::ActualIpAddr> (undefined unknown not-supported <Ip::V4Address>) Possible values: - undefined : DHCP is unavailable - unknown : OLT could not communicate with ONT for discovery - not-supported : ONT doesnot support this activity Field type <Ip::V4Address> - IPv4-address	the current default router IP address for the IP host service <i>This element is always shown.</i>
dns-addr	Parameter type: <Gpon::ActualIpAddr> (undefined unknown not-supported <Ip::V4Address>) Possible values: - undefined : DHCP is unavailable - unknown : OLT could not communicate with ONT for discovery - not-supported : ONT doesnot support this activity Field type <Ip::V4Address> - IPv4-address	the current IP address of the primary DNS server for the IP host service <i>This element is always shown.</i>
sec-dns-addr	Parameter type: <Gpon::ActualIpAddr> (undefined unknown not-supported <Ip::V4Address>) Possible values: - undefined : DHCP is unavailable - unknown : OLT could not communicate with ONT for discovery - not-supported : ONT doesnot support this activity Field type <Ip::V4Address> - IPv4-address	the current IP address of the secondary DNS server for the IP host service <i>This element is always shown.</i>
host-name	Parameter type: <Gpon::HostName> (undefined unknown <Gpon::hostname>) Possible values: - undefined : DHCP is unavailable or ONT returns null string - unknown : OLT could not communicate with ONT for discovery Field type <Gpon::hostname> - host name address - length: x<=255	the hostname for the IP host service <i>This element is only shown in detail mode.</i>

123.3 ONT IP Host Current 15min Statistics Status Command

Command Description

This command displays the IP Host Performance statistics during the current 15 minute interval of operation

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show iphost ont statistics current-15min [ (index) ]
```

Command Parameters

Table 123.3-1 "ONT IP Host Current 15min Statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - ont:ng2 : ngpon2 ont - vlanport:ng2 : ngpon2 vlanport - ont : ont - vlanport : vlanport Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	a unique interface index

Resource Identifier	Type	Description
	- the shelf number - Field type <Eqpt::SlotId> - the LT slot number - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Gpon::IpHostID> - iphost id - Field type <Ng2::IpHostID> - iphost id (ngpon2) - Possible values: - stacked : stacked vlan identity - Field type <Eqpt::UnstackedVlan> - unstacked vlan id - Field type <Eqpt::SVlan> - service vlan id - Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 123.3-2 "ONT IP Host Current 15min Statistics Status Command" Display parameters

Specific Information		
name	Type	Description
icmp-err	Parameter type: <Counter> - 32 bit counter	a count of number of ICMP errors received <i>This element is always shown.</i>
dns-err	Parameter type: <Counter> - 32 bit counter	a count of number of DNS errors received <i>This element is always shown.</i>
dhcp-timeout	Parameter type: <Counter> - 32 bit counter	a count of number of DHCP timeouts <i>This element is always shown.</i>
addr-conflict	Parameter type: <Counter> - 32 bit counter	a count of conflicting IP address(one that has the same value as the one currently assigned to the ONT) <i>This element is always shown.</i>
out-of-mem	Parameter type: <Counter> - 32 bit counter	a count of out of memory condition in the IP stack <i>This element is always shown.</i>
internal-err	Parameter type: <Counter> - 32 bit counter	a count of internal error condition(such as a driver interface failure in the IP stack) <i>This element is always shown.</i>

124- MoCA Status Commands

124.1 MoCA Status Command Tree	124-5922
124.2 MoCA ONT Uni Operational Data Status Command	124-5923
124.3 MoCA ONT Current PM Data Status Command	124-5926
124.4 MoCA ONT Historical PM Data Status Command	124-5928

124.1 MoCA Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "MoCA Status Commands".

Command Tree

```
----show
  ----moca
    ----ont
      ----operational-data
        - (uni-index)
      ----performance-data
        ----current-interval
          - (uni-index)
        ----previous-interval
          - (uni-index)
          - interval-nbr
```

124.2 MoCA ONT Uni Operational Data Status Command

Command Description

This retrieves MoCA operational data from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show moca ont operational-data [ (uni-index) ]
```

Command Parameters

Table 124.2-1 "MoCA ONT Uni Operational Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the moca uni

Resource Identifier	Type	Description
	- range: [1...14] - Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 124.2-2 "MoCA ONT Uni Operational Data Status Command" Display parameters

Specific Information		
name	Type	Description
network-status	Parameter type: <Moca::NetworkStatus> (not-joined joined master) Possible values: - not-joined : has not joined a MoCA network - joined : has joined a MoCA network - master : network coordinator of a MoCA network	networking state <i>This element is only shown in detail mode.</i>
rf-channel short name: freq	Parameter type: <SignedInteger> - a signed integer	frequency to which the MoCA interface is tuned, in MHz <i>This element is always shown.</i>
last-op-freq	Parameter type: <SignedInteger> - a signed integer	frequency to which the MoCA interface was last tuned, in MHz <i>This element is only shown in detail mode.</i>
link-status short name: stat	Parameter type: <Moca::LinkStatus> ((no-carrier los) (carrier ok) low-bw) Possible values: - no-carrier : no carrier detected - los : no carrier detected - carrier : carrier detected - ok : carrier detected - low-bw : carrier detected, but low bandwidth	MoCA network link status <i>This element is always shown.</i>
tx-power	Parameter type: <SignedInteger> - a signed integer	transmitter power level, in dBm <i>This element is only shown in detail mode.</i>
ont-mac-address short name: ont-mac	Parameter type: <Gpon::MacAddress> - a mac-address (example : 01:02:03:04:05:06) - length: 6	mac address of the ont moca uni <i>This element is only shown in detail mode.</i>
bhr-mac-address short name: bhr-mac	Parameter type: <Gpon::MacAddress> - a mac-address (example : 01:02:03:04:05:06) - length: 6	mac address of the bhr/rgw moca device <i>This element is always shown.</i>
phy-tx-rate short name: tx-rate	Parameter type: <UnsignedInteger> - an unsigned integer	transmit rate from the ONT MoCA interface to the RGW/BHR <i>This element is always shown.</i>
phy-rx-rate short name: rx-rate	Parameter type: <UnsignedInteger> - an unsigned integer	receive rate to the ONT MoCA interface from the RGW/BHR <i>This element is always shown.</i>
version short name: ver	Parameter type: <Moca::Version> ((unknown ?) 1.0 1.1 2.0	MoCA version <i>This element is always shown.</i>

name	Type	Description
	2.5) Possible values: - unknown : MoCA version unknown - ? : MoCA version unknown - 1.0 : MoCA version 1.0 - 1.1 : MoCA version 1.1 - 2.0 : MoCA version 2.0 - 2.5 : MoCA version 2.5	
power-state	Parameter type: <Moca::PowerState> (unknown normal idle standby sleep) Possible values: - unknown : unknown power state - normal : normal power state - idle : idle low power state - standby : standby low power state - sleep : sleep low power state	MoCA version <i>This element is only shown in detail mode.</i>

124.3 MoCA ONT Current PM Data Status Command

Command Description

This retrieves Current MoCA physical layer performance monitoring data from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show moca ont performance-data current-interval [ (uni-index) ]
```

Command Parameters

Table 124.3-1 "MoCA ONT Current PM Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the moca uni

Resource Identifier	Type	Description
	- range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Command Output

Table 124.3-2 "MoCA ONT Current PM Data Status Command" Display parameters

Specific Information		
name	Type	Description
rx-packets	Parameter type: <Counter> - 32 bit counter	received packets counter <i>This element is always shown.</i>
rx-err-packets	Parameter type: <Counter> - 32 bit counter	received errored packets counter <i>This element is always shown.</i>

124.4 MoCA ONT Historical PM Data Status Command

Command Description

This retrieves Previous MoCA physical layer performance monitoring data from the ONT UNI(s).

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show moca ont performance-data previous-interval [ (uni-index) [ interval-nbr <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 124.4-1 "MoCA ONT Historical PM Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	interface index of the moca uni

Resource Identifier	Type	Description
	- range: [1...14] - Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-nbr	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	15 minute interval identifier from 1(most recent) to 32(oldest)

Command Output

Table 124.4-2 "MoCA ONT Historical PM Data Status Command" Display parameters

Specific Information		
name	Type	Description
rx-packets	Parameter type: <Counter> - 32 bit counter	received packets counter <i>This element is always shown.</i>
rx-err-packets	Parameter type: <Counter> - 32 bit counter	received errored packets counter <i>This element is always shown.</i>

125- Epon Status Commands

125.1 Epon Status Command Tree	125-5931
125.2 EPON Optics Status Command	125-5932
125.3 Epon Profile Status Command	125-5936
125.4 Epon Queue Profile Status Command	125-5937
125.5 Epon Filter Profile Status Command	125-5938
125.6 Epon Digitmap Profile Status Command	125-5939
125.7 Epon Alarm Control Profile Status Command	125-5940
125.8 Epon Pon Interface Status Command	125-5941
125.9 Epon Pon Interface Current 15min Status Command	125-5942
125.10 Epon Pon Interface Current 1day Status Command	125-5946
125.11 Epon Pon Interface Previous 15min Status Command	125-5950
125.12 Epon Pon Interface Previous 15min Status Command	125-5951
125.13 Epon Pon Interface Previous 1Day Status Command	125-5955
125.14 Epon Pon Interface Previous 1Day Status Command	125-5956
125.15 Epon Pon Interface Information Command	125-5960
125.16 EPON Rogue Onu Test Result	125-5962
125.17 Ima-Group Alarm Log Status Command	125-5964

125.1 Epon Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Epon Status Commands".

Command Tree

```

----show

```

125.2 EPON Optics Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show epon optics [ (pon-idx) ]
```

Command Parameters

Table 125.2-1 "EPON Optics Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface

Command Output

Table 125.2-2 "EPON Optics Status Command" Display parameters

Specific Information		
name	Type	Description
olt-tx-sig-lvl 0.1uw	Parameter type: <Epon::OpticalSignalLevel> (unknown <Epon::OpticalSignalLevel>) Possible values: - unknown : a valid measurement is currently unattainable for some reason Field type <Epon::OpticalSignalLevel> - olt optical signal level - unit: 0.1 uW - range: [0...65535]	This attribute indicates the current measurement of the OLT transmit optical signal level in 0.1uw <i>This element is always shown.</i>
olt-tx-sig-lvl dbm	Parameter type: <Epon::OptPwrDbm> (nopower <Epon::floatoptpwr>	This attribute indicates the current measurement of the OLT

name	Type	Description
	<Epon::float> <Epon::floatoptpwr>) Possible values: - nopower : a valid measurement is currently unattainable for some reason Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2] Field type <Epon::floatoptpwr> - Power of Optical Unit in Dbm - unit: dbm - range: [-99.0...8.164]	transmit optical signal level in dBm <i>This element is only shown in detail mode.</i>
olt-temperature 1/256c	Parameter type: <Epon::Temperature> (unknown <Epon::Temperature>) Possible values: - unknown : a valid measurement is currently unattainable for some reason Field type <Epon::Temperature> - temperature of olt optical module - unit: 1/256 Celsius - range: [-32768...32768]	This attribute indicates the current temperature of the optics module associated with this PON <i>This element is always shown.</i>
olt-temperature c	Parameter type: <Epon::OpticalTempC> - temperature of optical unit - unit: degree C - range: [-128...128]	This attribute indicates the current temperature of the optics module associated with this PON <i>This element is only shown in detail mode.</i>
olt-voltage 0.1mv	Parameter type: <Epon::Voltage> (unknown <Epon::Voltage>) Possible values: - unknown : a valid measurement is currently unattainable for some reason Field type <Epon::Voltage> - power feed voltage of olt optical module - unit: 100u Volts - range: [0...65500]	This attribute indicates the current voltage of the optics module associated with this PON <i>This element is always shown.</i>
olt-voltage v	Parameter type: <Epon::OpticalVoltageV> - voltage of optical unit - unit: volts - range: [0...6.55]	This attribute indicates the current voltage of the optics module associated with this PON <i>This element is only shown in detail mode.</i>
olt-bias 2ua	Parameter type: <Epon::LaserBias> (unknown <Epon::LaserBias>) Possible values: - unknown : a valid measurement is currently unattainable for some reason Field type <Epon::LaserBias> - indicates the current bias current of the laser - unit: 2uA - range: [0...131000]	This attribute indicates the current bias current of the laser associated with this PON <i>This element is always shown.</i>
olt-bias ma	Parameter type: <Epon::OpticalBiasMa> - bias of optical unit - unit: mA - range: [0...262]	This attribute indicates the current bias current of the laser associated with this PON <i>This element is only shown in detail mode.</i>

125 Epon Status Commands

name	Type	Description
olt-sig-lvl-10g 0.1uw	Parameter type: <Epon::OpticalSignalLevel> (unknown <Epon::OpticalSignalLevel>) Possible values: - unknown : a valid measurement is currently unattainable for some reason Field type <Epon::OpticalSignalLevel> - olt optical signal level - unit: 0.1 uW - range: [0...65535]	This attribute indicates the current measurement of the OLT 10G PON transmit optical signal level in 0.1uw <i>This element is always shown.</i>
olt-sig-lvl-10g dbm	Parameter type: <Epon::OptPwrDbm> (nopower <Epon::floatoptpwr> <Epon::float> <Epon::floatoptpwr>) Possible values: - nopower : a valid measurement is currently unattainable for some reason Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2] Field type <Epon::floatoptpwr> - Power of Optical Unit in Dbm - unit: dbm - range: [-99.0...8.164]	This attribute indicates the current measurement of the OLT 10G PON transmit optical signal level in dBm <i>This element is only shown in detail mode.</i>
olt-bias-10g 2ua	Parameter type: <Epon::LaserBias> (unknown <Epon::LaserBias>) Possible values: - unknown : a valid measurement is currently unattainable for some reason Field type <Epon::LaserBias> - indicates the current bias current of the laser - unit: 2uA - range: [0...131000]	This attribute indicates the current bias current of the laser associated with 10G PON <i>This element is always shown.</i>
olt-bias-10g ma	Parameter type: <Epon::OpticalBiasMa> - bias of optical unit - unit: mA - range: [0...262]	This attribute indicates the current bias current of the laser associated with 10G PON <i>This element is only shown in detail mode.</i>
otdr	Parameter type: <Epon::OpSpecFeat> (yes no) Possible values: - yes : sfp is otdr capable - no : sfp is not otdr capable	special features supported by the sfp <i>This element is always shown.</i>
curidlepwr 0.1uw	Parameter type: <Epon::CurIdlePwr> (nopower <Epon::floatidlepwr> <Epon::float> <Epon::floatidlepwr>) Possible values: - nopower : a valid measurement is currently unattainable for some reason Field type <Epon::float> - OLT side TCA threshold - unit: dbm - range: [-40...8.2] Field type <Epon::floatidlepwr> - OLT side TCA threshold	current idle pwr of the pon <i>This element is always shown.</i>

name	Type	Description
	- unit: dbm - range: [-40...8.164]	

125.3 Epon Profile Status Command

Command Description

This command indicates the number of entities using this profile.

If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted.

If the value is 0, then this profile is 'not in use', and can be deleted.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon profiles-usage

125.4 Epon Queue Profile Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show epon profiles-usage queue [ (profile-idx) ]
```

Command Parameters

Table 125.4-1 "Epon Queue Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(profile-idx)	Format: - a profile index - range: [1...250]	index to the Profile

Command Output

Table 125.4-2 "Epon Queue Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <Epon::RefCnt> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile <i>This element is always shown.</i>

125.5 Epon Filter Profile Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon profiles-usage filter [(profile-idx)]

Command Parameters

Table 125.5-1 "Epon Filter Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(profile-idx)	Format: - filter profile id - range: [1...8192]	index to the Profile

Command Output

Table 125.5-2 "Epon Filter Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <Epon::RefCnt> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile <i>This element is always shown.</i>

125.6 Epon Digitmap Profile Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show epon profiles-usage digitmap [ (profile-idx) ]
```

Command Parameters

Table 125.6-1 "Epon Digitmap Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(profile-idx)	Format: - a profile index - range: [1...250]	index to the Profile

Command Output

Table 125.6-2 "Epon Digitmap Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <Epon::RefCnt> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile <i>This element is always shown.</i>

125.7 Epon Alarm Control Profile Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show epon profiles-usage ontalarm [ (name) ]
```

Command Parameters

Table 125.7-1 "Epon Alarm Control Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the Alarm Control profile - length: 1<=x<=32	A queue profile name

Command Output

Table 125.7-2 "Epon Alarm Control Profile Status Command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <Epon::RefCnt> - number of entities using this particular profile - range: [0...4294967295]	indicates the number of entities using this profile <i>This element is always shown.</i>

125.8 Epon Pon Interface Status Command

Command Description

This command indicates the Epon performance counters specific to a PON port on OLT side.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon interface

125.9 Epon Pon Interface Current 15min Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon interface current-15min [(pon-idx)]

Command Parameters

Table 125.9-1 "Epon Pon Interface Current 15min Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface

Command Output

Table 125.9-2 "Epon Pon Interface Current 15min Status Command" Display parameters

Specific Information		
name	Type	Description
elapsed-time	Parameter type: <SignedInteger> - a signed integer	Elapsed time in interval <i>This element is always shown.</i>
measure-time	Parameter type: <SignedInteger> - a signed integer	Measured time in interval <i>This element is always shown.</i>
octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction <i>This element is always shown.</i>
frames-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in upstream direction

name	Type	Description
		<i>This element is always shown.</i>
segment1octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment2octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment3octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment4octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment5octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment6octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment7octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction <i>This element is always shown.</i>
frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in downstream direction <i>This element is always shown.</i>
segment1octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment2octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment3octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment4octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment5octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment6octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in downstream direction

125 Epon Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
segment7octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
unicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	unicast Frames in upstream direction <i>This element is only shown in detail mode.</i>
unicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	unicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
multicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in upstream direction <i>This element is only shown in detail mode.</i>
multicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in upstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in downstream direction <i>This element is only shown in detail mode.</i>
drpframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in upstream direction <i>This element is only shown in detail mode.</i>
drpframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in downstream direction <i>This element is only shown in detail mode.</i>
errframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in upstream direction <i>This element is only shown in detail mode.</i>
errframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in downstream direction <i>This element is only shown in detail mode.</i>
crcerrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in downstream direction <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
ovrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in upstream direction <i>This element is only shown in detail mode.</i>
ovrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in downstream direction <i>This element is only shown in detail mode.</i>
dropevents-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
dropevents-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
statuschange	Parameter type: <Epon::OctetCounter> - Epon Frames counter	the number of status change on a PON port <i>This element is only shown in detail mode.</i>

125.10 Epon Pon Interface Current 1day Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show epon interface current-1day [ (pon-idx) ]
```

Command Parameters

Table 125.10-1 "Epon Pon Interface Current 1day Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface

Command Output

Table 125.10-2 "Epon Pon Interface Current 1day Status Command" Display parameters

Specific Information		
name	Type	Description
elapsed-time	Parameter type: <SignedInteger> - a signed integer	Elapsed time in interval <i>This element is always shown.</i>
measure-time	Parameter type: <SignedInteger> - a signed integer	Measured time in interval <i>This element is always shown.</i>
octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction <i>This element is always shown.</i>
frames-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in upstream direction

name	Type	Description
		<i>This element is always shown.</i>
segment1octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment2octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment3octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment4octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment5octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment6octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment7octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction <i>This element is always shown.</i>
frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in downstream direction <i>This element is always shown.</i>
segment1octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment2octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment3octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment4octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment5octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment6octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in downstream direction

125 Epon Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
segment7octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>

unicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	unicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
multicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in upstream direction <i>This element is only shown in detail mode.</i>
multicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in upstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in downstream direction <i>This element is only shown in detail mode.</i>
drpframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in upstream direction <i>This element is only shown in detail mode.</i>
drpframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in downstream direction <i>This element is only shown in detail mode.</i>
errframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in upstream direction <i>This element is only shown in detail mode.</i>
errframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in downstream direction <i>This element is only shown in detail mode.</i>
crcerrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in downstream direction <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
ovrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in upstream direction <i>This element is only shown in detail mode.</i>
ovrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in downstream direction <i>This element is only shown in detail mode.</i>
dropevents-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
dropevents-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
statuschange	Parameter type: <Epon::OctetCounter> - Epon Frames counter	the number of status change on a PON port <i>This element is only shown in detail mode.</i>

125.11 Epon Pon Interface Previous 15min Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon interface previous-15min [(pon-idx)]

Command Parameters

Table 125.11-1 "Epon Pon Interface Previous 15min Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface

125.12 Epon Pon Interface Previous 15min Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon interface previous-15min (pon-idx) interval-num [(interval-num)]

Command Parameters

Table 125.12-1 "Epon Pon Interface Previous 15min Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface
(interval-num)	Format: - Previous interval reference - range: [1...192]	Previous interval reference

Command Output

Table 125.12-2 "Epon Pon Interface Previous 15min Status Command" Display parameters

Specific Information		
name	Type	Description
measure-time	Parameter type: <SignedInteger> - a signed integer	Measured time in interval <i>This element is always shown.</i>
octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction <i>This element is always shown.</i>
frames-up	Parameter type: <Epon::OctetCounter>	Total Frames transferred in

125 Epon Status Commands

name	Type	Description
	- Epon Frames counter	upstream direction <i>This element is always shown.</i>
segment1octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment2octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment3octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment4octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment5octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment6octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment7octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction <i>This element is always shown.</i>
frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in downstream direction <i>This element is always shown.</i>
segment1octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment2octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment3octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment4octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment5octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment6octets-down	Parameter type: <Epon::OctetCounter>	1024-1518 Octet Frames in

name	Type	Description
	- Epon Frames counter	downstream direction <i>This element is only shown in detail mode.</i>
segment7octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
unicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	unicast Frames in upstream direction <i>This element is only shown in detail mode.</i>
unicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	unicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
multicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in upstream direction <i>This element is only shown in detail mode.</i>
multicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in upstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in downstream direction <i>This element is only shown in detail mode.</i>
drpframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in upstream direction <i>This element is only shown in detail mode.</i>
drpframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in downstream direction <i>This element is only shown in detail mode.</i>
errframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in upstream direction <i>This element is only shown in detail mode.</i>
errframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in downstream direction <i>This element is only shown in detail mode.</i>
crcerrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in downstream direction

125 Epon Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
ovrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in upstream direction <i>This element is only shown in detail mode.</i>
ovrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in downstream direction <i>This element is only shown in detail mode.</i>
dropevents-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
dropevents-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
statuschange	Parameter type: <Epon::OctetCounter> - Epon Frames counter	the number of status change on a PON port <i>This element is only shown in detail mode.</i>

125.13 Epon Pon Interface Previous 1Day Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon interface previous-1day [(pon-idx)]

Command Parameters

Table 125.13-1 "Epon Pon Interface Previous 1Day Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface

125.14 Epon Pon Interface Previous 1Day Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon interface previous-1day (pon-idx) interval-num [(interval-num)]

Command Parameters

Table 125.14-1 "Epon Pon Interface Previous 1Day Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface
(interval-num)	Format: - Previous interval reference - range: [1...2]	Previous interval reference

Command Output

Table 125.14-2 "Epon Pon Interface Previous 1Day Status Command" Display parameters

Specific Information		
name	Type	Description
measure-time	Parameter type: <SignedInteger> - a signed integer	Measured time in interval <i>This element is always shown.</i>
octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction <i>This element is always shown.</i>
frames-up	Parameter type: <Epon::OctetCounter>	Total Frames transferred in

name	Type	Description
	- Epon Frames counter	upstream direction <i>This element is always shown.</i>
segment1octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment2octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment3octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment4octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment5octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment6octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment7octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction <i>This element is always shown.</i>
frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in downstream direction <i>This element is always shown.</i>
segment1octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment2octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment3octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment4octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment5octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment6octets-down	Parameter type: <Epon::OctetCounter>	1024-1518 Octet Frames in

125 Epon Status Commands

name	Type	Description
	- Epon Frames counter	downstream direction <i>This element is only shown in detail mode.</i>
segment7octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
unicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	unicast Frames in upstream direction <i>This element is only shown in detail mode.</i>
unicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	unicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
multicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in upstream direction <i>This element is only shown in detail mode.</i>
multicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	multicast Frames in downstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in upstream direction <i>This element is only shown in detail mode.</i>
broadcastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	boardcast Frames in downstream direction <i>This element is only shown in detail mode.</i>
drpframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in upstream direction <i>This element is only shown in detail mode.</i>
drpframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	discard Frames in downstream direction <i>This element is only shown in detail mode.</i>
errframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in upstream direction <i>This element is only shown in detail mode.</i>
errframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	error Frames in downstream direction <i>This element is only shown in detail mode.</i>
crcerrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in upstream direction <i>This element is only shown in detail mode.</i>
undframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes bytes Frames in downstream direction

name	Type	Description
		<i>This element is only shown in detail mode.</i>
ovrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in upstream direction <i>This element is only shown in detail mode.</i>
ovrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames in downstream direction <i>This element is only shown in detail mode.</i>
dropevents-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
dropevents-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
fragments-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in upstream direction on a PON port <i>This element is only shown in detail mode.</i>
jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a PON port <i>This element is only shown in detail mode.</i>
statuschange	Parameter type: <Epon::OctetCounter> - Epon Frames counter	the number of status change on a PON port <i>This element is only shown in detail mode.</i>

125.15 Epon Pon Interface Information Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show epon interface information [(pon-idx)]

Command Parameters

Table 125.15-1 "Epon Pon Interface Information Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface

Command Output

Table 125.15-2 "Epon Pon Interface Information Command" Display parameters

Specific Information		
name	Type	Description
ac-op-module-type	Parameter type: <epon::acopmoduletype> (1000base-px20h 1000base-px20 10/1gbase-prx 10gbase-pr-d3 10g1g/1gbase-prx 10g1g/10gbase-pr unknown) Possible values: - 1000base-px20h : 1000base-px20h - 1000base-px20 : 1000base-px20 - 10/1gbase-prx : 10/1gbase-prx	actual optical module type <i>This element is always shown.</i>

name	Type	Description
	- 10gbase-pr-d3 : 10gbase-pr-d3 - 10g1g/1gbase-prx : 10g1g/1gbase-prx - 10g1g/10gbase-pr : 10g1g/10gbase-pr - unknown : unknown	
next-free-ont	Parameter type: <epon::nextfreeont> (none <Epon::dbaInt>) Possible values: - none : none Field type <Epon::dbaInt> - DBA polling interval per pon interface - range: [0...65535]	next free ont <i>This element is always shown.</i>
max-ont-num	Parameter type: <epon::maxontnum> - Onu num of rogue onu test result - range: [0...128]	max ont number per pon <i>This element is always shown.</i>
free-ont-num	Parameter type: <epon::freeontnum> - Onu num of rogue onu test result - range: [0...128]	free ont number per pon <i>This element is always shown.</i>

125.16 EPON Rogue Onu Test Result

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show epon rogue [ (pon-idx) [ onu-id <Epon::onu-id> ] ]
```

Command Parameters

Table 125.16-1 "EPON Rogue Onu Test Result" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	Pon interface
onu-id	Parameter type: <Epon::onu-id> Format: - Onu num of rogue onu test result - range: [0...128]	onu num of rogue onu test result

Command Output

Table 125.16-2 "EPON Rogue Onu Test Result" Display parameters

Specific Information		
name	Type	Description
testresult	Parameter type: <Epon::rogueTestResult> (unknown unsupport rogueonu notest) Possible values: - unknown : - unsupport :	The test result of rogue onu diagnose <i>This element is always shown.</i>

name	Type	Description
	- rogueonu : - notest :	
mac	Parameter type: <Epon::MacAddr> - mac-address (example : 01:02:03:04:05:06) - length: 6	The Mac of onu of rogue test result <i>This element is always shown.</i>
eontindex	Parameter type: <Epon::rogueontIdx> (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> no-interface) Possible values: - ont : ont - no-interface : no interface Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	The Ifindex of onu of rogue test result <i>This element is always shown.</i>
almstatus	Parameter type: <Epon::roguealmstatus> (noalarm active clear) Possible values: - noalarm : - active : - clear :	The alarm status of onu of rogue test result <i>This element is always shown.</i>

125.17 Ima-Group Alarm Log Status Command

Command Description

This command displays the Ima-Group alarm log status.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show epon unprovision-onu [ (alarm-index) ]
```

Command Parameters

Table 125.17-1 "Ima-Group Alarm Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(alarm-index)	Format: - index of a current alarm entry	current alarm index

Command Output

Table 125.17-2 "Ima-Group Alarm Log Status Command" Display parameters

Specific Information		
name	Type	Description
last-updated-on	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time in seconds when the alarm was logged. <i>This element is only shown in detail mode.</i>
pon-index	Parameter type: <Itf::ComplexPortType> (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId>	identifies the epon where the alarm has occurred. <i>This element is only shown in detail mode.</i>

name	Type	Description
	<pre> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> l2-vlan : <Eqpt::VlanId> ip : <Eqpt::LogicalId> sw-loopback slip uni:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> atm-bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ip-gateway : <Eqpt::VrId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> shdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> e1-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-ima : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ethernet-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bridge-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> voip:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> ip-line : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> ip-line : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> ip-line : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> ip-line : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : </pre>	

name	Type	Description
	<pre> <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : <Eqpt::UnstackedVlan> chgroup : <Eqpt::ChannelGroupId> subchgroup : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> bridge-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> uni : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> voip : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> la-group : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / </pre>

name	Type	Description
	- voip : voip - voip:ng2 : voip - la-group : link aggregation group - dist-router-interface : dist router interface - voicefxs : voicefxs - mpm : multi-pon module Possible values: - vlan : vlan port Possible values: - slot-vlan : slot unstacked - slot-stacked : slot vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier Field type <Eqpt::ComboPonId> - the comboPON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::BundleId> - the BUNDLE identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	

name	Type	Description
	Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id Field type <Eqpt::VlanId> - VLAN id Field type <Eqpt::LogicalId> - logical id Field type <Eqpt::VrflId> - VRF id	
newonu-index	Parameter type: <SignedInteger> - a signed integer	the newonu index for the pon alarm <i>This element is only shown in detail mode.</i>
add-info	Parameter type: <Alarm::AdditionalInfo> - string to identify the owner (example: Tom) - length: x<=512	some additional information about the table entry. <i>This element is only shown in detail mode.</i>
newont-mac	Parameter type: <Alarm::MacAddr> - mac-address (example : 01:02:03:04:05:06) - length: 6	new ONT Mac address <i>This element is only shown in detail mode.</i>
newont-loid	Parameter type: <Alarm::AuthId> - Authentication ID - length: 1<=x<=24	new ONT LOID <i>This element is only shown in detail mode.</i>

Only Show Details: current alarm status

name	Type	Description
onu-unprovisioned	Parameter type: <Alarm::checkNewOnu> (newonu not-newonu) Possible values: - newonu : new onu is exist - not-newonu : new onu is not exist	new onu is exist or not. <i>This element is only shown in detail mode.</i>

126.8 Interface Troubleshooting Ethernet Statistics Commands	126-6004
126.9 Interface Sliding-Window Traffic Statistics Command	126-6007

126.1 Interface Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Interface Status Commands".

Command Tree

```
----show
  ----interface
    ----alarm
      - (interface-type)
    ----phy-itf-status
      - (shelf)
    ----port
      - (port)
    ----test
      - (port)
    ----stack
      - (higher)
      - lower
    ----availability
      - (port-type)
    ----trouble-shooting
      ----ethernet
        ----statistics
          - (slot-id)
    ----statistics
      - (port)
      - period
```

126.2 Interface Alarm Status Command

Command Description

This command shows the alarm configured for the interface and the default minimal severity with which the alarm is reported.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show interface alarm [ (interface-type) ]
```

Command Parameters

Table 126.2-1 "Interface Alarm Status Command" Resource Parameters

Resource Identifier	Type	Description
(interface-type)	Format: (xdsl-line ethernet-line shdsl-line voicefxs pon chpair chgroup subchgroup ont uni epon eont euni ellid lag ds1) Possible values: - xdsl-line : xdsl line - ethernet-line : ethernet line - shdsl-line : shdsl line - voicefxs : voicefxs - pon : pon interface - chpair : channelpair interface - chgroup : channelgroup interface - subchgroup : subchannelgroup interface - ont : ont interface - uni : uni interface	type of the interface

Resource Identifier	Type	Description
	- epon : epon interface - eont : epon ont interface - euni : epon uni interface - ellid : epon llid interface - lag : link aggregation group - ds1 : ds1 interface	

Command Output

Table 126.2-2 "Interface Alarm Status Command" Display parameters

Specific Information		
name	Type	Description
default-severity	Parameter <Itf::asamIfExtAlmReportingSeverityDefault> (indeterminate warning minor major critical) Possible values: - indeterminate : not a definite known severity - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking	type: The default minimal severity for an alarm to be reported that will be used for interfaces. <i>This element is always shown.</i>

126.3 Physical Interface Status Command

Command Description

This command shows the summary of the physical interface, for example, the number of changes which occurred for the physical interface.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show interface phy-itf-status [ (shelf) ]
```

Command Parameters

Table 126.3-1 "Physical Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(shelf)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	the physical position of the shelf

Command Output

Table 126.3-2 "Physical Interface Status Command" Display parameters

Specific Information		
name	Type	Description
no-of-change-occur	Parameter type: <Counter> - 32 bit counter	Number of state changes of physical lines, equipped on boards within this shelf. <i>This element is always shown.</i>

126.4 Interface Status Command

Command Description

This command shows all the parameters related to the interface such as the type of interface, current bandwidth of the interface, maximum size of the packet supported, and the connector present. All interfaces do not support each of these parameters.

Ethernet port interfaces supports 14 ethernet ports.

- Port 1 : **Internal** port used for management
- Port 2 : **External** port used for management
- Port 3 : **Used for L2CP OAM** traffic to BRAS
- Ports 4-14 : **Not used**

Ethernet, loop, slip supports largest-pkt-size, current-bandwidth, phy-addr, admin-status, opr-status, last-chg-opr-stat, in-octets, in-ucast-pkts, in-discard-pkts, in-err-pkts, out-err-pkts, pkts-unknown-proto, out-octets, high-speed, connector-present and media.

ATM supports phy-addr, opr-status, last-chg-opr-stat, in-octets, in-err-pkts, out-err-pkts, pkts-unknown-proto and out-octets.

Xdsl-Line and Bonding supports admin-status, opr-status and last-chg-opr-stat.

Bridge Port supports type and last-chg-opr-stat, the remaining interfaces supports opr-status and last-chg-opr-stat.

Shdsl-line supports info, name, admin-status, opr-status and last-chg-opr-stat.

voicefxs supports info, type, name, admin-status, opr-status, last-chg-opr-stat.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show interface port [ (port) ]
```

Command Parameters

Table 126.4-1 "Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>	the interface index

Resource Identifier	Type	Description
	atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> l2-vlan : <Eqpt::VlanId> ip : <Eqpt::LogicalId> sw-loopback slip uni:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> atm-bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bonding : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ip-gateway : <Eqpt::VrId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> ip-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> shdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> e1-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-ima : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ethernet-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> bridge-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> voip:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> ip-line : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> ip-line : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> /

Command Output

Table 126.4-2 "Interface Status Command" Display parameters

Specific Information		
name	Type	Description
if-index	Parameter type: <SignedInteger> - a signed integer	Specifies a unique value for each interface. <i>This element is only shown in detail mode.</i>
info	Parameter type: <PrintableString> - printable string	A textual string containing information about the interface. This string includes the name of the manufacturer, the product name and the version of the interface hardware/software. <i>This element is only shown in detail mode.</i>
type	Parameter type: <Itf::IANAifType> (ethernet sw-loopback slip atm atm-bonding bonding xdsl-line xdsl-channel atm-vci-ep bridge-port l2-vlan ip-fwd efm atm-ima e1	Specifies the type of interface. <i>This element is only shown in detail mode.</i>

name	Type	Description

name	Parameter type: <PrintableString> - printable string	Name of the interface. <i>This element is only shown in detail mode.</i>
high-speed	Parameter type: <If::ifHighSpeed> - interface bandwidth - unit: Mbit/sec	Specifies interface's current bandwidth. <i>This element is only shown in</i>

126 Interface Status Commands

name	Type	Description
		<i>detail mode.</i>
connector-present	Parameter type: <Ifc::ifConnectorPresent> (not-applicable has-connector no-connector) Possible values: - not-applicable : not-applicable - has-connector : interface sublayer has a physical connector - no-connector : interface sublayer doesn't have a physical connector	Specifies the interface sublayer has a physical connector or not. <i>This element is only shown in detail mode.</i>
media	Parameter type: <Object> - an object identifier	Specifies information about the particular media being used to realize the interface. <i>This element is only shown in detail mode.</i>
largest-pkt-size	Parameter type: <Ifc::MtuSize> - packet size - unit: octets	The size of the largest packet which can be sent/received on the interface, specified in octets. For interfaces that are used for transmitting network datagrams, this is the size of the largest network datagram that can be sent on the interface. <i>This element is only shown in detail mode.</i>
current-bandwidth	Parameter type: <Ifc::ifSpeed> - interface bandwidth - unit: bits/sec	Specifies the interface's current bandwidth. <i>This element is only shown in detail mode.</i>
phy-addr	Parameter type: <Ifc::PhyAddress> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	The interface's address at its protocol sub-layer. <i>This element is only shown in detail mode.</i>
admin-status	Parameter type: <Ifc::ifAdminStatus> (not-appl up down testing) Possible values: - not-appl : not-applicable - up : admin status is up - down : admin status is down - testing : no operational packets can be passed	Specifies state of the interface. <i>This element is always shown.</i>
opr-status	Parameter type: <Ifc::ifOperStatus> (up down testing unknown dormant no-value) Possible values: - up : up, traffic can pass - down : down, no traffic is passing - testing : testing, no traffic is passing - unknown : unknown - dormant : dormant, no traffic is passing - no-value : no entry in the table	The current operational state of the interface. <i>This element is always shown.</i>

name	Type	Description
last-chg-opr-stat	Parameter type: <Itf::ElapsedTime10Msec> - the time elapsed since a certain event	The value of elapsed time since the interface entered its current operational state. <i>This element is only shown in detail mode.</i>
pkts-unknown-proto	Parameter type: <Itf::Counter> - 32 bit counter	Number of packets(for packet-oriented interfaces) or transmission units(for character-oriented interfaces) received via the interface which were discarded because of an unknown or unsupported protocol. <i>This element is only shown in detail mode.</i>
in-octets	Parameter type: <Itf::Counter> - 32 bit counter	The total number of octets received on the interface, including framing characters. <i>This element is only shown in detail mode.</i>
out-octets	Parameter type: <Itf::Counter> - 32 bit counter	The total number of octets transmitted out of the interface, including framing characters. <i>This element is only shown in detail mode.</i>
in-ucast-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-ucast-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-mcast-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The number of packets, transmitted by this sub-layer, which were addressed to a multicast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-mcast-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-broadcast-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The number of packets, delivered by this sub-layer to a higher

126 Interface Status Commands

name	Type	Description
		(sub-)layer, which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-broadcast-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-discard-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. <i>This element is only shown in detail mode.</i>
out-discard-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent them being transmitted. One possible reason for discarding such a packet could be to free up buffer space. <i>This element is only shown in detail mode.</i>
in-err-pkts	Parameter type: <Itf::Counter> - 32 bit counter	Number of inbound packets(for packet-oriented interfaces) or transmission units(for character-oriented interfaces) that contained errors preventing them from being deliverable to a higher-layer protocol. <i>This element is only shown in detail mode.</i>
out-err-pkts	Parameter type: <Itf::Counter> - 32 bit counter	The number of outbound packets(for packet-oriented interfaces) or transmission units(for character-oriented interfaces) that could not be transmitted because of errors. <i>This element is only shown in detail mode.</i>
in-octets-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The total number of octets received on the interface, including framing characters. <i>This element is only shown in detail mode.</i>
out-octets-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The total number of octets transmitted out of the interface,

name	Type	Description
		including framing characters. <i>This element is only shown in detail mode.</i>
in-ucast-pkts-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-ucast-pkts-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The number of packets, transmitted by this sub-layer, which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-mcast-pkts-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-mcast-pkts-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The number of packets, transmitted by this sub-layer, which were addressed to a multicast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-broadcast-pkts-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-broadcast-pkts-hc	Parameter type: <Itf::Counter64> - 64 bit counter	The number of packets, transmitted by this sub-layer, which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>

126.5 Interface Test Status Command

Command Description

This command shows the parameters related to the testing of an interface.

Metallic Test Access is an example of an interface test. The result of the Metallic Test Access interface test is shown with this command.

voicefxs interface is not supported yet but will be supported in future.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show interface test [ (port) ]
```

Command Parameters

Table 126.5-1 "Interface Test Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> l2-vlan : <Eqpt::VlanId> ip : <Eqpt::LogicalId> sw-loopback slip uni:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /	index (1/1/3/0..) of rack/shelf/slot/port

Resource Identifier	Type	Description
	- slot-stacked : slot vlan port - Field type <Eqpt::RackId> - the rack number - Field type <Eqpt::ShelfId> - the shelf number - Field type <Eqpt::SlotId> - the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::XPonId> - the XGS PON identifier - Field type <Eqpt::M25GPonId> - the 25G PON identifier - Field type <Eqpt::ComboPonId> - the comboPON identifier - Field type <Eqpt::ChannelPairId> - the channel pair identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::BundleId> - the BUNDLE identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE - Possible values: - stacked : stacked vlan identity - Field type <Eqpt::UnstackedVlan> - unstacked vlan id - Field type <Eqpt::SVlan> - service vlan id - Field type <Eqpt::CVlan> - customer vlan id	

Resource Identifier	Type	Description
	Field type <Eqpt::VlanId> - VLAN id Field type <Eqpt::LogicalId> - logical id Field type <Eqpt::VrfId> - VRF id	

Command Output

Table 126.5-2 "Interface Test Status Command" Display parameters

Specific Information		
name	Type	Description
id	Parameter type: <TestAndIncr> - TestAndIncr - range: [0...2147483647]	Specifies the current invocation of the interface's test. <i>This element is always shown.</i>
result	Parameter type: <Itf::ifTestResult> (none success in-progress not-supported unable-to-run aborted failed) Possible values: - none : no tests have been requested since the last reset - success : test successfully completed - in-progress : test is still in progress - not-supported : test is not supported - unable-to-run : test is unable to run - aborted : test is aborted - failed : test is failed	Specifies the result of the most recently requested test <i>This element is always shown.</i>
code	Parameter type: <Object> - an object identifier	Specifies a code which contains more specific information on the test result <i>This element is always shown.</i>

126.6 Interface Stack Status Command

Command Description

This command shows the status of the stack.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show interface stack [ (higher) [ lower <Itf::InterfaceStack> ] ]
```

Command Parameters

Table 126.6-1 "Interface Stack Status Command" Resource Parameters

Resource Identifier	Type	Description
(higher)	Format: (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> bridge-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId> l2-vlan : <Eqpt::VlanId> ip : <Eqpt::LogicalId> sw-loopback slip vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> atm-bonding : <Eqpt::RackId> / <Eqpt::ShelfId> /	a higher layer interface index

126.7 Interface Extensive Status Command

Command Description

This command shows the parameters related to an interface such as next available port type, counter indicating number of state changes, and number of network interfaces.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show interface availability [(port-type)]

Command Parameters

Table 126.7-1 "Interface Extensive Status Command" Resource Parameters

Resource Identifier	Type	Description
(port-type)	Format: (xdsl-line ethernet-line voicefxs) Possible values: - xdsl-line : xdsl line - ethernet-line : ethernet line - voicefxs : voicefxs	the port type

Command Output

Table 126.7-2 "Interface Extensive Status Command" Display parameters

Common Information:common		
name	Type	Description
change-count	Parameter type: <Counter> - 32 bit counter	Number of state changes of the physical line. <i>This element is always shown.</i>
interface-cnt	Parameter type: <SignedInteger> - a signed integer	The number of network interfaces (regardless of their current state) present on this system. <i>This element is always shown.</i>
Specific Information		
name	Type	Description
next-available	Parameter type: <Itf::NextAvailable> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>	Specifies the next available physical interface can be retrieved.

name	Type	Description
	<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	<i>This element is always shown.</i>

126.8 Interface Troubleshooting Ethernet Statistics Commands

Command Description

This command shows the interface statistics for trouble shooting counters on FD-REM at far-end side. Statistics regarding frames received and transmitted at the remote LT side are displayed. All these counters are supported only for NDLT-G and NELT-B LT card, "not-supported" will be displayed for other LT cards.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show interface trouble-shooting ethernet statistics [ (slot-id) ]
```

Command Parameters

Table 126.8-1 "Interface Troubleshooting Ethernet Statistics Commands" Resource Parameters

Resource Identifier	Type	Description
(slot-id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> lt-link : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::LtBackPlPortId>) Possible values: - lt : lt-slot - lt-link : lt-slot-port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::LtBackPlPortId> - the lt backplane port number	slot id

Command Output

Table 126.8-2 "Interface Troubleshooting Ethernet Statistics Commands" Display parameters

Specific Information		
name	Type	Description
entry-status	Parameter type: <ETHITF::CounterEntryStatus>	The status of the entry. Valid

name	Type	Description
	(valid invalid) Possible values: - valid : counters for this ifIndex are valid - invalid : entry represents one of the device's addresses	indicates the counters have actual values, invalid means the counters are unreliable. <i>This element is always shown.</i>
in-octets-hc	Parameter type: <If::IfXCounter64> - 64 bit counter	The total number of octets received on the LT interface. <i>This element is always shown.</i>
out-octets-hc	Parameter type: <If::IfXCounter64> - 64 bit counter	The total number of octets transmitted out of the interface, including framing characters. <i>This element is always shown.</i>
in-discard-pkts	Parameter type: <If::IfCounter32> - 32 bit counter	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. <i>This element is only shown in detail mode.</i>
fcs-err	Parameter type: <If::IfCounter32> - 32 bit counter	A count of frames received on a particular interface that has frame check error status is returned by the MAC service to the LLC (or other MAC user). <i>This element is always shown.</i>
align-err	Parameter type: <If::IfCounter32> - 32 bit counter	A count of frames received on a particular interface that has alignment error status returned by MAC service to the LLC(or other MAC user). <i>This element is always shown.</i>
oversize-pkts	Parameter type: <If::IfCounter32> - 32 bit counter	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets). <i>This element is always shown.</i>
undersize-pkts	Parameter type: <If::IfCounter32> - 32 bit counter	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) <i>This element is always shown.</i>
in-ucast-pkts-hc	Parameter type: <If::IfXCounter64> - 64 bit counter	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-mcast-pkts-hc	Parameter type: <If::IfXCounter64> - 64 bit counter	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address

126 Interface Status Commands

name	Type	Description
		at this sub-layer. <i>This element is only shown in detail mode.</i>
in-broadcast-pkts-hc	Parameter type: <Itf::IfXCounter64> - 64 bit counter	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-frames-hc	Parameter type: <Counter64> - 64 bit counter	The total number of packets, delivered by this sub-layer to a higher (sub-)layer <i>This element is only shown in detail mode.</i>
out-broadcast-pkts-hc	Parameter type: <Itf::IfXCounter64> - 64 bit counter	The number of packets, transmitted by this sub-layer, which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-mcast-pkts-hc	Parameter type: <Itf::IfXCounter64> - 64 bit counter	The number of packets, transmitted by this sub-layer, which were addressed to a multicast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-ucast-pkts-hc	Parameter type: <Itf::IfXCounter64> - 64 bit counter	The number of packets, transmitted by this sub-layer, which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-frames-hc	Parameter type: <Counter64> - 64 bit counter	The total number of packets, delivered by this sub-layer to a higher (sub-)layer <i>This element is only shown in detail mode.</i>

126.9 Interface Sliding-Window Traffic Statistics Command

Command Description

This command allows the operator to show sliding-window traffic statistics rate on related interface.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show interface statistics [ (port) [ period <Itf::ifStatsSlidWin> ] ]
```

Command Parameters

Table 126.9-1 "Interface Sliding-Window Traffic Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Possible values: - chpair : channelpair Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	The interface port
period	Parameter type: <Itf::ifStatsSlidWin> Format: (5sec 1min 10min) Possible values: - 5sec : five seconds sliding-window - 1min : one mintue sliding-window - 10min : ten mintues sliding-window	The Sliding window period

Command Output

Table 126.9-2 "Interface Sliding-Window Traffic Statistics Command" Display parameters

Specific Information		
name	Type	Description
tx-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average traffic rate on the interface port in downstream direction in units of packets per second during last appointed period. <i>This element is always shown.</i>
tx-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average traffic rate on the interface port in downstream direction in units of megabits per second during last appointed period. <i>This element is always shown.</i>
tx-discard-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average discard traffic rate on the interface port in downstream direction in units of packets per second during last appointed period. <i>This element is always shown.</i>
tx-discard-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average discard traffic rate on the interface port in downstream direction in units of megabits per second during last appointed period. <i>This element is always shown.</i>
rx-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average traffic rate on the interface port in upstream direction in units of packets per second during last appointed period. <i>This element is always shown.</i>
rx-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average traffic rate on the interface port in upstream direction in units of megabits per second during last appointed period. <i>This element is always shown.</i>
rx-discard-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average discard traffic rate on the interface port in upstream direction in units of packets per second during last appointed period. <i>This element is always shown.</i>
rx-discard-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average discard traffic rate on the interface port in upstream direction in units of megabits per second during last appointed period. <i>This element is always shown.</i>
Only Show Details: traffic statistics rate by pps		
name	Type	Description
tx-ucast-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average unicast traffic rate on the interface port in downstream direction in units of packets per

name	Type	Description
		second during last appointed period. <i>This element is only shown in detail mode.</i>
tx-mcast-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average multicast traffic rate on the interface port in downstream direction in units of packets per second during last appointed period. <i>This element is only shown in detail mode.</i>
tx-bcast-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average broadcast traffic rate on the interface port in downstream direction in units of packets per second during last appointed period. <i>This element is only shown in detail mode.</i>
tx-pps	Parameter type: <Itf::ifStatsRateBypps> - interface statistics rate by Pkts/s - unit: Pkts/s	An average traffic rate on the interface port in downstream direction in units of packets per second during last appointed period. <i>This element is only shown in detail mode.</i>

tx-mcast-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average multicast traffic rate on the interface port in downstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>
tx-bcast-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average broadcast traffic rate on the interface port in downstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>
tx-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average traffic rate on the interface port in downstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>
tx-discard-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average discard traffic rate on the interface port in downstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>
rx-ucast-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average unicast traffic rate on the interface port in upstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>
rx-mcast-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps	An average multicast traffic rate on the interface port in upstream direction in units of megabits per

name	Type	Description
	- range: [0.0...15000.0]	second during last appointed period. <i>This element is only shown in detail mode.</i>
rx-bcast-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average broadcast traffic rate on the interface port in upstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>
rx-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average traffic rate on the interface port in upstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>
rx-discard-mbps	Parameter type: <Itf::ifStatsRateByMbps> - interface statistics rate by Mbps - unit: Mbps - range: [0.0...15000.0]	An average discard traffic rate on the interface port in upstream direction in units of megabits per second during last appointed period. <i>This element is only shown in detail mode.</i>

127- *SNTP Status Commands*

127.1 SNTP Status Command Tree
127.2 SNTP Status Command

127-6013
127-6014

127.1 SNTP Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "SNTP Status Commands".

Command Tree

```
----show
  ----sntp
```

127.2 SNTP Status Command

Command Description

This command displays the information about the SNTP and its related parameters.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show sntp
```

Command Output

Table 127.2-2 "SNTP Status Command" Display parameters

Specific Information		
name	Type	Description
operating-mode	Parameter type: <Sys::SNTPOperatingMode> (unicast anycast multicast) Possible values: - unicast : operating mode unicast value 1 - anycast : operating mode anycast value 2 - multicast : operating mode multicast value 3	specifies the operating mode for the SNTP application at the SNMP agent. <i>This element is always shown.</i>
system-time	Parameter type: <Sys::GaugeTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	specifies the network time. <i>This element is always shown.</i>
system-boot-time	Parameter type: <Sys::GaugeTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	specifies the system boot time in network time. Value is not valid until system-time is updated manually or SNTP packet response is received. <i>This element is always shown.</i>

128- *SNTP Server Commands*

128.1 SNTP Server Command Tree
128.2 SNTP Server Status Command

128-6016
128-6017

128.1 SNTP Server Command Tree

Description

This chapter gives an overview of nodes that are handled by "SNTP Server Commands".

Command Tree

```
----show
  ----sntp
    ----server-table
      - (server-ip-addr)
```

128.2 SNTP Server Status Command

Command Description

This command displays the information about the SNTP Servers and its related parameters.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show sntp server-table [ (server-ip-addr) ]
```

Command Parameters

Table 128.2-1 "SNTP Server Status Command" Resource Parameters

Resource Identifier	Type	Description
(server-ip-addr)	Format: - IPv4-address	specifies the ip address of the sntp server

Command Output

Table 128.2-2 "SNTP Server Status Command" Display parameters

Specific Information		
name	Type	Description
port	Parameter type: <Sys::ServerPortNumber> - port number - range: [0...65535]	specifies the port number of the sntp server <i>This element is always shown.</i>
priority	Parameter type: <Sys::priority> - sntp server priority(1 - high) [1...6] for ipv6 management supported boards,[1...3] for others	specifies the priority number of the sntp server <i>This element is always shown.</i>
issyncsource	Parameter type: <Sys::issyncsrc> (yes no) Possible values: - yes : this server is the current source of time synchronization - no : this server is not the current source of time synchronization	display whether this sntp server is the current source of time synchronization <i>This element is always shown.</i>

129- *SNTP Server Commands*

129.1 SNTP Server Command Tree
129.2 SNTP Server Status Command

129-6019
129-6020

129.1 SNTP Server Command Tree

Description

This chapter gives an overview of nodes that are handled by "SNTP Server Commands".

Command Tree

```
----show
  ----sntp
    ----server-tablev6
      - (server-ip-addrv6)
```

129.2 SNTP Server Status Command

Command Description

This command displays the information about the SNTP Servers and its related parameters.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show sntp server-tablev6 [ (server-ip-addrv6) ]
```

Command Parameters

Table 129.2-1 "SNTP Server Status Command" Resource Parameters

Resource Identifier	Type	Description
(server-ip-addrv6)	Format: - IPv6-address	specifies the ip address of the sntp server

Command Output

Table 129.2-2 "SNTP Server Status Command" Display parameters

Specific Information		
name	Type	Description
port	Parameter type: <Sys::ServerPortNumber> - port number - range: [0...65535]	specifies the port number of the sntp server <i>This element is always shown.</i>
priority	Parameter type: <Sys::priority> - sntp server priority(1 - high) [1...6] for ipv6 management supported boards,[1...3] for others	specifies the priority number of the sntp server <i>This element is always shown.</i>
issyncsource	Parameter type: <Sys::issyncsrc> (yes no) Possible values: - yes : this server is the current source of time synchronization - no : this server is not the current source of time synchronization	display whether this sntp server is the current source of time synchronization <i>This element is always shown.</i>

130.2 System Statistics Command

Command Description

This command displays the status of the list commands.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show system entry

Command Output

Table 130.2-2 "System Statistics Command" Display parameters

Specific Information		
name	Type	Description
status-bit-map	Parameter type: <Sys::AsamSysStatusBitMap> - status bitmap	Specifies the status bitmap. <i>This element is always shown.</i>
mib-version	Parameter type: <Sys::asamMibVersion> - a printable string - length: x<=21	Specifies the version of the management interface. <i>This element is always shown.</i>
init-progress	Parameter type: <Sys::AsamSystemInitProgress> - progress of system initialisation indicated as percent - unit: percent - range: [0...100]	Specifies the progress of the system initialization indicated as a percentage. <i>This element is always shown.</i>
act-nt-intercon-vlan	Parameter type: <Ihub::CurrentVlanId> - the vlan-id used for current communication between stacked Broadcom switching devices on the NT - range: [1...4093]	the value of the act-nt-intercon-vlan <i>This element is always shown.</i>
cfg-nt-intercon-vlan	Parameter type: <Ihub::StackingVlanId> - the vlan-id used for stacked Broadcom switching devices of NT - range: [1...4093]	the value of the cfg-nt-intercon-vlan <i>This element is always shown.</i>
act-internal-nw-vlan	Parameter type: <Ihub::InternalNwVlanId> - the vlan-id for internal handling of packets on network ports - range: [1...4093]	Specifies the currently used vlan-id for internal handling of packets on network ports <i>This element is always shown.</i>
cfg-internal-nw-vlan	Parameter type: <Ihub::InternalNwVlanId> - the vlan-id for internal handling of packets on network ports - range: [1...4093]	Specifies the configured vlan-id for internal handling of packets on network ports <i>This element is always shown.</i>

130.3 System Licenses Status Command

Command Description

This command displays the routing-license indicating the status of the L3 routing protocols and displays also the number of software licenses for the following features.

For ADSL2+, the counter indicates the number of XDSL lines for which an ADSL2+ operational mode (POTS and/or ISDN) is enabled in its configuration, and supported by the LT board, and for which the XDSL board is equipped.

For READSL2 operational mode (US mode 1 and/or US mode 2), the counter is enabled in its configuration, and supported by the LT board, and for which the XDSL board is equipped.

For IGMP, the counter indicates the number of DSL subscriber lines for which an IGMP control channel has been configured.

For xDSL Annex-M, the counter indicates the number of DSL subscriber line which is configured for Annex-M.

For IP-Forwarding, the counter indicates the number of DSL subscriber lines configured.

For PPPoX Relay, the counter indicates the number of DSL subscriber lines configured.

For 802.1x, the counter indicates the number of DSL subscriber lines for which 802.1x has been configured as 'enabled'.

For IPoA-CC/RB, the counter indicates the number of DSL subscriber lines which are configured for IPoA cross connect mode and enhanced i-bridge mode .In Release 3.6 IPOA-CC is replaced by IPOA-CC/RB

For UPBO Policing, the counter indicates the number of XDSL lines for which a VDSL2 opmode has been selected, for which UPBO Policing pbo mode has been enabled in its configuration and supported by the LT board and for which the XDSL board is equipped. The counter is decremented when one of these conditions is not met anymore.

For XDSL-Perline-Override, the counter indicates the number of XDSL lines for which the per-line override data has been used in its configuration and for which the XDSL board is equipped.

For Impulse Noise Sensor, the counter indicates the number of XDSL lines for which the Impulse Noise Sensor is enabled and for which the XDSL board is equipped.

For ADSL1/2 PSD Shaping, the counter indicates the number of XDSL line configured for which ADSL1 or ADSL2 opMode is enabled with DBPO shaping and supported by the LT board and for which the XDSL board is equipped. The counter is decremented if the DPBO profile is unassigned or if the XDSL line is unconfigured.

For xDSL Annex-J, the counter indicates the number of DSL subscriber line which is configured for Annex-J.

For syncE clock source, the counter indicates the number of Synchronous Ethernet ports are configured as a clock source.

For 2dot5gbps-lt, the counter indicates the number of LTs that operate at 2.5Gbps link speed.

For redcy, the counter indicates the number protection groups are enabled (unlocked).

Shdsl-ctc: this key isn't used, the counter remains zero.

For VDSL2, the counter indicates the number of xdsl lines for which Seamless Rate Adaptation and VDSL2 is enabled.

For ARQ, the counter indicates the number of XDSL lines for which ARQ is enabled in the configuration, supported by the LT board and for which the XDSL board is equipped.

For 10 Gbps enabled LT, the counter indicates the number of LTs that have an uplink that is running at 10 Gbps speed.

For 20 Gbps enabled LT, the counter indicates the number of LTs that have an uplink that is running at 20 Gbps

speed.

For ipv6 security, the counter indicates the number of access lines (DSL, Ethernet or ONT UNI) where one or more IPv6 security features are activated.

For Higig NT, the counter indicates whether lawful intercept is enabled (value 1) or Disabled (value 0).

For vectoring, the counter indicates the number of lines where a vectoring profile has been assigned to.

For Green DSL L2 mode, the counter indicates the number of xDSL lines which are equipped and configured with L2 mode enabled.

For Ethernet OAM Advanced Monitoring Functions, the counter indicates the number of MEPS which can send and/or receive CFM Continuity Check Messages.

For MPLS Advanced Resiliency, the counter indicates whether MPLS-FRR or MPLS LSR is being used (value 1) or not used (value 0).

For 40 Gbps enabled LT, the counter indicates the number of LTs that have an uplink that is running at 40 Gbps speed.

For Type-B protection, the counter indicates the number of protection groups in the system that are configured by the operator. The counter is only valid on NANT-E and FANT-F boards. For other NTs, the value should always be 0, as protection group creation is not allowed. The value is between 0 (no protection group) and 62 (maximum allowed by the system).

For vectoring legacy fext cancellation, the counter indicates the number of lines where a vectoring profile has been assigned to in which the legacy fext cancellation feature is enabled.

For Vlan Translation resources extended usage vxlt-ext-usage, the counter indicates the number of line cards making use of VLAN translation resources in an extended way.

For Ethernet OAM Y1731 Performance monitoring functions, the counter indicates the number of MEPS in the system in which Y1731 performance monitoring functions have been enabled.

For VDSL2-35b-mode, the counter indicates the number of xdsl lines for which VDSL2-35b-mode is enabled.

For G.Fast the counter indicates the number of xdsl lines for which G.fast operational mode is enabled by configuration. The value should always be zero for systems which do not support G.Fast.

For VULA, the counter indicates the number of FELT-B planned as uplink_mode.

For Multiple SG, the counter indicates the number of SIP terminations created in the local access node.

For ethernet-ring, the counter indicates whether Ethernet Ring Protection Switching is enabled or not. For non-supported platforms, the value will be 0 by default.

For LSA and Emergency call, the counter indicates the number of SIP terminations created in local access node

For VDSL2-LR, the counter indicates the number of xdsl lines for which VDSL2-LR is enabled.

For 10G-PON LT upgrade, the counter indicates the number of LTs that have been upgraded from GPON to 10G-PON technology.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system license [ (feature) ]
```

Command Parameters

Table 130.3-1 "System Licenses Status Command" Resource Parameters

Resource Identifier	Type	Description
(feature)	Format: (adsl2-plus readsl2 igmp annex-m ip-forward pppox-relay 802dot1x ipoa-cc ipoa-cc/rb upbo-policing xdsl-line-override xdsl-ins adsl-adsl2-dpbo annex-j synce-if-timing 2dot5gbps-lt redcy shdsl-ctc vdsl2 arq 10gbps-lt 20gbps-lt ipv6-security lawful-intercept vectoring green-dsl-l2-mode eth-oam-adv-mon eth-y1731-pm-mon mpls-adv-resilien 40gbps-lt port-protection vectoring-legacy vxlt-ext-usage vdsl2-35b-mode gfast vula multi-vsg ethernet-ring lsa vdsl2-lr 100gbps-lt 25gbps-lt 50gbps-lt 10g-pon-lt-upgrade) Possible values: - adsl2-plus : number of xdsl lines for which ADSL2 is enabled - readsl2 : number of xdsl lines for which READSL2 is enabled - igmp : number of DSL subscribers configured for IGMP - annex-m : number of DSL subscribers configured for	table index

Resource Identifier	Type	Description
	annex-m - ip-forward : number of DSL subscribers configured for Ip-forwarding - pppox-relay : number of DSL subscribers configured for PPPoX relay - 802dot1x : number of DSL subscribers configured for 802.1x - ipoa-cc : number of DSL subscribers configured for IPoA-CC obsolete alternative replaced by ipoa-cc/rb - ipoa-cc/rb : number of DSL subscribers configured for IPoA-CC/RB - upbo-policing : number of lines configured with UPBO policing - xdsl-line-override : number of xdsl lines for which override data is used - xdsl-ins : number of lines for which impulse noise sensor is enabled - adsl-adsl2-dpbo : number of ADSL/ADSL2 lines for which DPBO is enabled - annex-j : number of DSL subscribers configured for annex-j - synce-if-timing : number of Synchronous Ethernet ports are configured as a clock source - 2dot5gbps-lt : number of LTs that operate at 2.5Gbps link speed - redcy : number of protection groups enabled (unlocked) - shdsl-ctc : number of equipped SHDSL lines configured for which cross-talk cancellation (CTC) is enabled - vdsl2 : number of xdsl lines for which Seamless Rate Adaptation and VDSL2 is enabled - arq : number of xdsl lines for which ARQ is enabled - 10gbps-lt : number of LTs that operate at 10Gbps link - 20gbps-lt : number of LTs that operate at 20Gbps link - ipv6-security : the number of access lines (DSL, Ethernet or ONT UNI) where one or more IPv6 security features are activated - lawful-intercept : indicates whether lawful intercept is enabled or disabled - vectoring : number of xdsl lines where a vectoring profile has been associated to - green-dsl-l2-mode : number of xdsl lines where green-dsl-l2-mode is on - eth-oam-adv-mon : number of MEPS where Ethernet OAM Advanced Monitoring Functions are enabled - eth-y1731-pm-mon : number of MEPS where Ethernet y1731 performance monitoring functions are enabled - mpls-adv-resilien : indicates whether MPLS-FRR or MPLS LSR is being used (value 1) or not used (value 0) - 40gbps-lt : number of LTs that operate at 40Gbps link - port-protection : number of port-protection groups - vectoring-legacy : number of xdsl lines where vectoring legacy FEXT cancellation is enabled - vxlt-ext-usage : indicates the number of line cards that are extendedly using Vlan Translation Hardware Resources. - vdsl2-35b-mode : number of xdsl lines for which VDSL2-35b-mode is enabled	

Resource Identifier	Type	Description
	- gfast : number of xdsl lines for which G.fast operational mode is enabled by configuration. - vula : number of ethernet lines cards for which VULA mode is enabled by configuration. - multi-vsg : the number of SIP terminations created in the local access node - ethernet-ring : indicates whether ethernet ring is enabled or not - lsa : the number of SIP terminations created in the local access node which can register to the LSA server. - vdsl2-lr : number of xdsl lines for which VDSL2-lr is enabled - 100gbps-lt : number of LTs that operate at 100Gbps link - 25gbps-lt : number of LTs that operate at 25Gbps link - 50gbps-lt : number of LTs that operate at 50Gbps link - 10g-pon-lt-upgrade : number of LTs that have been upgraded from GPON to 10G-PON technology	

Command Output

Table 130.3-2 "System Licenses Status Command" Display parameters

Specific Information		
name	Type	Description
number-license	Parameter type: <SignedInteger> - a signed integer	Specifies number of license. <i>This element is always shown.</i>

130.4 System License Usage Command

Command Description

This command shows the authorized and utilized license count of restricted license feature, and the entities that are license enabled

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show system license-usage [(feature)]

Command Parameters

Table 130.4-1 "System License Usage Command" Resource Parameters

Resource Identifier	Type	Description
(feature)	Format: 10g-pon-lt-upgrade Possible values: - 10g-pon-lt-upgrade : number of LTs that have been upgraded from GPON to 10G-PON technology	Name of configurable license feature

Command Output

Table 130.4-2 "System License Usage Command" Display parameters

Common Information:license-config		
name	Type	Description
authorized	Parameter type: <Sys::licenseConfig> - license configuration data type	<i>This element is always shown.</i>
utilized	Parameter type: <Sys::licenseConfig> - license configuration data type	<i>This element is always shown.</i>
Specific Information		
name	Type	Description
entity	Parameter type: <Equipm::NtLtSlotIndex1> (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot	License enabled entity <i>This element is always shown.</i>

130 System Status Commands

name	Type	Description
	- nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	

130.5 System Clock Status Command

Command Description

This command displays three display elements named actual-priority, clock-status, and clock-selection.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system clock-mgmt
```

Command Output

Table 130.5-2 "System Clock Status Command" Display parameters

Specific Information		
name	Type	Description
actual-priority	Parameter type: <Sys::SysClkSrcPriorityScheme> (autoselect local external-local) Possible values: - autoselect : select based on location - local : always select local clock - external-local : external clock > local clock	Shows the actual priority of clock sources. <i>This element is always shown.</i>
selection	Parameter type: <Sys::asamSysClkSrcSelection> (active-external active-local) Possible values: - active-external : external clock on active NT - active-local : local clock on active NT	Shows the clock source selected by system <i>This element is always shown.</i>
ext-source	Parameter type: <Sys::SysClkExtSource> (e1 ds1 khz2048 autoselect) Possible values: - e1 : select E1 Source - ds1 : select DS1 Source - khz2048 : select 2048KHz Source - autoselect : autoselect Source	Shows the clock source selected by system E1/DS1/2048KHz <i>This element is always shown.</i>
external-nt-a	Parameter type: <Sys::clkSrcExtAFailure> (failure available) Possible values:	Shows the status of the External clock on NT A <i>This element is always shown.</i>

130 System Status Commands

name	Type	Description
	- failure : failure of external clock on NT A - available : availability of external of clock on NT A	
external-nt-b	Parameter type: <Sys::clkSrcExtBFailure> (failure available) Possible values: - failure : failure of external clock on NT B - available : availability of external of clock on NT B	Shows the status of the External clock on NT B <i>This element is always shown.</i>
local-nt-a	Parameter type: <Sys::clkSrcLocAFailure> (failure available) Possible values: - failure : failure of local of clock on NT A - available : availability of local of clock on NT A	Shows the status of the Local clock on NT A <i>This element is always shown.</i>
local-nt-b	Parameter type: <Sys::clkSrcLocBFailure> (failure available) Possible values: - failure : faiulre of local of clock on NT B - available : availablity of local of clock on NT B	Shows the status of the Local clock on NT B <i>This element is always shown.</i>

130.6 Show syslog parameters

Command Description

This command displays the system related parameters for syslog.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show system syslog
```

Command Output

Table 130.6-2 "Show syslog parameters" Display parameters

Specific Information		
name	Type	Description
max-msg-size	Parameter type: <Sys::MaxMsgSize> - the maximum size of the syslog message - unit: bytes - range: [0...1024]	maximum size of the syslog message <i>This element is always shown.</i>
available-on-disk	Parameter type: <Sys::MaxStorageSize> - total storage size available to store the messages - unit: bytes - range: [0...2147483647]	total storage size available to store the messages <i>This element is always shown.</i>
used-on-disk	Parameter type: <Sys::UsedSize> - indicates inuse storage size by the messages - unit: bytes - range: [0...2147483647]	indicates inuse storage size by the messages <i>This element is always shown.</i>
reserved-on-disk	Parameter type: <Sys::ReservedSize> - indicates inuse storage size by the messages - unit: bytes - range: [0...2147483647]	indicate the reserved storage size for the messages <i>This element is always shown.</i>
free-on-disk	Parameter type: <Sys::FreeSize> - free memory available for storing syslog messages from total allocated memory - unit: bytes - range: [0...2147483647]	total free memory available to store syslog messages <i>This element is always shown.</i>

130.7 System Memory Usage Status Command

Command Description

This command displays the various memory usage parameters.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system memory-usage [ (slot) ]
```

Command Parameters

Table 130.7-1 "System Memory Usage Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ntio-1) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	slot index

Command Output

Table 130.7-2 "System Memory Usage Status Command" Display parameters

Specific Information		
name	Type	Description
total(mb)	Parameter type: <Sys::totalMem>	the size of the total memory on

name	Type	Description
	- memory size - unit: Mbyte	this board <i>This element is always shown.</i>
used(mb)	Parameter type: <Sys::memusageAbsolute> - memory size - unit: Mbyte	the size of the memory actually in use <i>This element is always shown.</i>
used-portion(%)	Parameter type: <Sys::memusagePrecent> - the size of the memory actually in use, expressed as a portion of the total memory - unit: percentage - range: [0...100]	the size of the memory actually in use, expressed as a portion of the total memory <i>This element is always shown.</i>

130.8 System CPU Load Status Command

Command Description

This command shows the various CPU load parameters, including the start time of monitoring, the average load for the measurement period and the current condition of the CPU load monitoring activity. CPU Load monitoring can be started and stopped using the command "admin system cpu-load".

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system cpu-load [ (slot) ]
```

Command Parameters

Table 130.8-1 "System CPU Load Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ntio-1) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	slot index

Command Output

Table 130.8-2 "System CPU Load Status Command" Display parameters

Specific Information

name	Type	Description
monitor-start-time	Parameter type: <Sys::startMonitorTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	the start time of last 3 minutes or less monitoring <i>This element is always shown.</i>
average(%)	Parameter type: <Sys::cpuloadaverage> - average load for the measurement period , expressed in percentage - unit: percentage - range: [0...100]	average load for the measurement period , expressed in percentage <i>This element is always shown.</i>
oper-status	Parameter type: <Sys::operateStatus> (proceeding idle not-operational) Possible values: - proceeding : cpu load monitoring is ongoing - idle : monitoring is either not started or already completed - not-operational : monitoring cannot be performed as the board is not operational	current condition of the cpu load monitoring activity <i>This element is always shown.</i>

130.9 System Compact Flash Usage Status Command

Command Description

This command shows the compact flash life usage parameters, including smart interface supported, inconsistent behaviour on smart interface, current utilization in raw value and in percentage."

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system cf-usage [ (slot) ]
```

Command Parameters

Table 130.9-1 "System Compact Flash Usage Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (nt-a nt-b) Possible values: - nt-a : nt-a slot - nt-b : nt-b slot	slot index

Command Output

Table 130.9-2 "System Compact Flash Usage Status Command" Display parameters

Specific Information		
name	Type	Description
smart	Parameter type: <Sys::smartInterfaceSupported> (yes no) Possible values: - yes : The installed compact flash supports SMART interface - no : The installed compact flash doesn't support SMART interface	The parameter indicates if an installed compact flash supports SMART interface. <i>This element is always shown.</i>
inconsistency	Parameter type: <Sys::smartInterfaceInconsistent> (yes no)	The parameter indicates if an installed compact flash shows inconsistent behaviour on

name	Type	Description
	Possible values: - yes : The installed compact flash shows inconsistent behaviour on SMART interface - no : The installed compact flash doesn't show inconsistent behaviour on SMART interface.	SMART interface. <i>This element is always shown.</i>
erase-counts-raw-value	Parameter type: <Sys::eraseCount> - Current utilization in terms of life expectancy in raw value. - length: x<=21	Current utilization in terms of life expectancy in raw value <i>This element is always shown.</i>
life-used-percentage	Parameter type: <Sys::lifeUsedPercentage> - Current utilization in terms of life expectancy in percentage and the percentage is rounded to the nearest integer. - unit: percentage - range: [0...100]	Current utilization in terms of life expectancy in percentage <i>This element is always shown.</i>

130.10 System CDE Command

Command Description

This command displays the activated Customer Dependent Engineering feature bitmap.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system cde-bitmap
```

Command Output

Table 130.10-2 "System CDE Command" Display parameters

Specific Information		
name	Type	Description
cde-bitmap	Parameter type: <Sys::cdeBitMap> <Sys::printableCdeBitMap> Field type <Sys::printableCdeBitMap> - printable cde bitmap	show activated cde feature bitmap <i>This element is always shown.</i>

130.11 System CDE Extended Command

Command Description

This command displays the activated Customer Dependent Engineering feature extended bitmap.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show system cde-bitmap-extended

Command Output

Table 130.11-2 "System CDE Extended Command" Display parameters

Specific Information		
name	Type	Description
cde-bitmap-extended	Parameter type: <Hex-32-32> - a binary string - length: 32	show activated cde feature bitmap (up to 256 bits, big endian) <i>This element is always shown.</i>

130.12 System Clock Management Status Command

Command Description

This command shows the status of the clock sources configured for selection.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show system sync-if-timing [(priority)]

Command Parameters

Table 130.12-1 "System Clock Management Status Command" Resource Parameters

Resource Identifier	Type	Description
(priority)	Format: - priority index of the system clock source - range: [1...3]	priority configured for the clock source

Command Output

Table 130.12-2 "System Clock Management Status Command" Display parameters

Common Information:bits-mode		
name	Type	Description
bits-mode	Parameter type: <Sys::ActualSysClkExtSource> (e1 ds1 khz2048) Possible values: - e1 : select E1 Source - ds1 : select DS1 Source - khz2048 : select 2048KHz Source	external clock type E1 or DS1 or 2048Khz <i>This element is always shown.</i>

Specific Information		
name	Type	Description
clock-source	Parameter type: <Sys::SysClkSrc> (bits-a bits-b synce-1 synce-2	The clock source configured for selection <i>This element is always shown.</i>

name	Type	Description
	local ieee1588 ieee1588-a ieee1588-b none) Possible values: - bits-a : select BITS-A for this priority - bits-b : select BITS-B for this priority - synce-1 : select SyncE reference 1 for this priority - synce-2 : select SyncE reference 2 for this priority - local : holdover specified (always enable last priority) - ieee1588 : select IEEE 1588 clock for this priority - ieee1588-a : select IEEE 1588-A clock for this priority - ieee1588-b : select IEEE 1588-B clock for this priority - none : remove clock source for this priority	
ql	Parameter type: <Ntr::SysClkSrcQL> (clk-ql-stu clk-ql-prs clk-ql-prc clk-ql-inv3 clk-ql-ssu-a-tnc clk-ql-ssu-a clk-ql-tnc clk-ql-inv5 clk-ql-inv6 clk-ql-st2 clk-ql-ssu-b clk-ql-inv9 clk-ql-st3 clk-ql-sec clk-ql-smc clk-ql-st3e clk-ql-prov clk-ql-dnu-dus clk-ql-dnu clk-ql-dus) Possible values: - clk-ql-stu : Synchronized-Traceability Unknown - clk-ql-prs : Primary Reference Source - clk-ql-prc : Primary Reference Clock - clk-ql-inv3 : Quality Level unallocated - clk-ql-ssu-a-tnc : Traced to Sync Supply Unit-A/Transmit Node Clock - clk-ql-ssu-a : Traced to Sync Supply Unit-A(ETSI) - clk-ql-tnc : Traced to Transmit Node Clock(ANSI) - clk-ql-inv5 : Quality Level unallocated - clk-ql-inv6 : Quality Level unallocated - clk-ql-st2 : Traceable to Stratum 2 - clk-ql-ssu-b : Traced to Sync Supply Unit-B - clk-ql-inv9 : Quality Level unallocated - clk-ql-st3 : Traceable to Stratum 3 - clk-ql-sec : Traceable to SDH Equipment Clock - clk-ql-smc : Traceable to SONET Clock SelfTimed - clk-ql-st3e : Traceable to Stratum 3E - clk-ql-prov : Operator Provisioned - clk-ql-dnu-dus : Signal should not be used for sync - clk-ql-dnu : Signal should not be used for sync(ETSI)	Quality level of the clock <i>This element is always shown.</i>

130 System Status Commands

name	Type	Description
	- clk-ql-dus : Signal should not be used for sync(ANSI)	
status	Parameter type: <Sys::SysClkStatusActual> (reference valid fail donotuse unknown forced nosynceconfig nosyncesupport onnonreadypeernt syncenotavailable noieee1588config missing invalid) Possible values: - reference : clock is selected as the reference clock - valid : clock is available for selection - fail : clock is not available for selection - donotuse : clock must not be used as indicated by SSM - unknown : clock status unknown - forced : clock is manually selected - nosynceconfig : syncE clock (ref1/2) is not bound to a port - nosyncesupport : SyncE clock (ref1/2) is bound to a port that does not support syncE clock extraction - onnonreadypeernt : clock configured on the face plate of the peer NT is not eligible due to the state of the peer NT - syncenotavailable : SyncE clock not available - noieee1588config : ieee1588 is not configured - missing : no SSM-QL received - invalid : clock not available for selection	Operational status of the configured clock <i>This element is always shown.</i>

130.13 PTP master clock device detailed information Command

Command Description

This command shows the detailed information of PTP master clock device.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system sync-ptp-mstrport [ (ptpdev-index) ]
```

Command Parameters

Table 130.13-1 "PTP master clock device detailed information Command" Resource Parameters

Resource Identifier	Type	Description
(ptpdev-index)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId>) Possible values: - lt : lt slot - ont : ont index - ont:ng2 : ngpon2 index Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier	ptp master port index

Command Output

Table 130.13-2 "PTP master clock device detailed information Command" Display parameters

Specific Information		
name	Type	Description
log-var	Parameter type: <Sys::portNumber> - index number - range: [0...65535]	OffsetScaledLogVariance <i>This element is always shown.</i>
clkid	Parameter type: <Sys::SysClkPtpDefaultDSIdentity> - Hexadecimal Clock Identity (example : 01:02:03:04:05:06:07:08) - length: 8	the clock identity of ptp master clock device <i>This element is always shown.</i>
prio1	Parameter type: <Ntr::Priority> - priority of the acceptable master - range: [0...255]	the priority1 of ptp master clock device <i>This element is always shown.</i>
prio2	Parameter type: <Ntr::Priority> - priority of the acceptable master - range: [0...255]	the priority2 of ptp master clock device <i>This element is always shown.</i>
clkclass	Parameter type: <Sys::SysClkPtpClockQuality> - clock quality of the PTP source - range: [0...255]	the clock class of ptp master clock device <i>This element is always shown.</i>
clkaccuracy	Parameter type: <Sys::SysClkPtpClockAccuracy> - ptp clock accuracy - range: [0...255]	the clock accuracy of current ptp master clock <i>This element is always shown.</i>
stepremoved	Parameter type: <Sys::stepRemoved> - index number - range: [0...65535]	the steps removed of ptp master clock device <i>This element is only shown in detail mode.</i>
grandmasterclkid	Parameter type: <Sys::SysClkPtpDefaultDSIdentity> - Hexadecimal Clock Identity (example : 01:02:03:04:05:06:07:08) - length: 8	the ptp grand master identity of ptp master clock device <i>This element is always shown.</i>
domain	Parameter type: <Ntr::PtpDomain> - ptp domain - range: [0...255]	the domain of ptp master clock device <i>This element is always shown.</i>
portnumber	Parameter type: <Sys::portNumber> - index number - range: [0...65535]	the port number of ptp master clock device <i>This element is always shown.</i>
time-source	Parameter type: <Sys::PtpTimeSource> (atomic gps radio ptp ntp handset other internal unknown) Possible values: - atomic : ATOMIC_CLOCK - gps : GPS - radio : TERRESTRIAL_RADIO - ptp : PTP - ntp : NTP - handset : HAND_SET - other : OTHER	ptp time source <i>This element is only shown in detail mode.</i>

name	Type	Description
	- internal : INTERNAL_OSCILLATOR - unknown : No information	
leap61	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	leap61 <i>This element is only shown in detail mode.</i>
leap59	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	leap59 <i>This element is only shown in detail mode.</i>
utc-offset-valid	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	the current utc offset valid <i>This element is only shown in detail mode.</i>
ptp-timescale	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	ptp time scale <i>This element is only shown in detail mode.</i>
time-traceable	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	time traceable <i>This element is only shown in detail mode.</i>
frequency-traceable	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	frequency traceable <i>This element is only shown in detail mode.</i>
announce-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogAnnounceInterval <i>This element is only shown in detail mode.</i>
sync-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogSyncInterval <i>This element is only shown in detail mode.</i>
delay-interval	Parameter type: <Sys::SysSignedCharInt>	LogMinDelayReqInterval

130 System Status Commands

name	Type	Description
	- signed char - range: [-128...127]	<i>This element is only shown in detail mode.</i>
mac-addr	Parameter type: <Sys::PTPMacAddr> (xx:xx:xx:xx:xx:xx xx:xx:xx:xx:xx:xx <Sys::MacAddr>) Possible values: - xx:xx:xx:xx:xx:xx : Invalid MAC address - xx:xx:xx:xx:xx:xx : Invalid MAC address Field type <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6	mac address <i>This element is only shown in detail mode.</i>
announce-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	announce packets <i>This element is only shown in detail mode.</i>
sync-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	sync packets <i>This element is only shown in detail mode.</i>
delay-req-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	delay req packets <i>This element is only shown in detail mode.</i>
delay-resp-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	delay req packets <i>This element is only shown in detail mode.</i>
portstate	Parameter type: <Ntr::PtpMode> (port-fault port-disabled port-listen port-pre-master port-master port-passive port-uncalibrated port-slave) Possible values: - port-fault : unicast ptp packet processing mode - port-disabled : unicast multicast packet processing mode - port-listen : unicast multicast packet processing mode - port-pre-master : unicast multicast packet processing mode - port-master : unicast multicast packet processing mode - port-passive : unicast multicast packet processing mode - port-uncalibrated : unicast multicast packet processing mode - port-slave : unicast multicast packet processing mode	the ster port state of ptp master clock device <i>This element is only shown in detail mode.</i>
utc-offset	Parameter type: <Sys::SysSignedShortInt> - signed short - range: [-32768...32767]	CurrentUtcOffset <i>This element is only shown in detail mode.</i>
tai-time	Parameter type: <Sys::TAITime> - time-of-day in TAI format	tai second <i>This element is only shown in detail mode.</i>
utc-time	Parameter type: <Sys::UTCTime> - time-of-day in UTC format	tai nanosecond <i>This element is only shown in detail mode.</i>

130.14 PTP client detailed information Command

Command Description

This command shows the detailed information of PTP cliet.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system sync-ptp-client [ (ptpdev-index) [ client-index <Sys::PtpClientNo> ] ]
```

Command Parameters

Table 130.14-1 "PTP client detailed information Command" Resource Parameters

Resource Identifier	Type	Description
(ptpdev-index)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> uni : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> uni.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> uni.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - lt : lt slot - uni : uni - uni.ng2 : ngpon2 UNI style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId>	ptp master index

Resource Identifier	Type	Description
	- the NG2 ONT identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	
client-index	Parameter type: <Sys::PtpClientNo> Format: - client number of ptp device - range: [0...1023]	ptp master index

Command Output

Table 130.14-2 "PTP client detailed information Command" Display parameters

Specific Information		
name	Type	Description
clkid	Parameter type: <Sys::SysClkPtpDefaultDSIdentity> - Hexadecimal Clock Identity (example : 01:02:03:04:05:06:07:08) - length: 8	the clock identity of ptp client <i>This element is always shown.</i>
portnumber	Parameter type: <Sys::portNumber> - index number - range: [0...65535]	the port number of ptp client <i>This element is always shown.</i>
domain	Parameter type: <Ntr::PtpDomain> - ptp domain - range: [0...255]	the domain of ptp client <i>This element is always shown.</i>
mac-addr	Parameter type: <Sys::PTPMacAddr> (xx:xx:xx:xx:xx:xx xx:xx:xx:xx:xx:xx <Sys::MacAddr>) Possible values: - xx:xx:xx:xx:xx:xx : Invalid MAC address - xx:xx:xx:xx:xx:xx : Invalid MAC address Field type <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6	mac address <i>This element is always shown.</i>
announce-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogAnnounceInterval <i>This element is always shown.</i>
sync-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogSyncInterval <i>This element is always shown.</i>
delay-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogMinDelayReqInterval <i>This element is always shown.</i>

130.15 System Clock Management ToD Status Command

Command Description

This command shows the status of the ToD clock sources configured for selection.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show system sync-if-timing-tod [(priority)]

Command Parameters

Table 130.15-1 "System Clock Management ToD Status Command" Resource Parameters

Resource Identifier	Type	Description
(priority)	Format: - priority index of the system clock source - range: [1...3]	priority configured for the ToD clock source

Command Output

Table 130.15-2 "System Clock Management ToD Status Command" Display parameters

Common Information:time		
name	Type	Description
tai-time	Parameter type: <Sys::TAITime> - time-of-day in TAI format	Specifies TAI time(International Atomic Time) <i>This element is always shown.</i>
utc-time	Parameter type: <Sys::UTCTime> - time-of-day in UTC format	Specifies UTC time(Coordinated Universal Time) <i>This element is always shown.</i>
Specific Information		
name	Type	Description
tod-source	Parameter type: <Sys::SysClkToDSrc> (ieee1588-a ieee1588 ieee1588-b gnss-a gnss-b none	The ToD clock source configured for selection <i>This element is always shown.</i>

130 System Status Commands

name	Type	Description
	- local) Possible values: - ieee1588-a : select IEEE 1588-A clock for this ToD priority - ieee1588 : select IEEE 1588 clock for this ToD priority - ieee1588-b : select IEEE 1588-B clock for this ToD priority - gnss-a : select GNSS-A clock for this ToD priority - gnss-b : select GNSS-B clock for this ToD priority - none : remove clock source for this ToD priority - local : holdover specified (always enable last priority)	
clockclass	Parameter type: <Sys::SysClkPtpClockQuality> - clock quality of the PTP source - range: [0...255]	the clock class of the ToD clock source <i>This element is always shown.</i>
tod-status	Parameter type: <Sys::SysClkToDStatusActual> (reference valid fail donotuse unknown) Possible values: - reference : tod clock is selected as the reference clock - valid : tod clock is available for selection - fail : tod clock is not available for selection - donotuse : tod clock must not be used as indicated by SSM - unknown : tod clock status unknown	Operational status of the ToD configured clock <i>This element is always shown.</i>

130.16 System T4 Clock Management Status Command

Command Description

This command shows the operational status of the configured clocks for the T4 PLL

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system sync-if-timing-t4 [ (priority) ]
```

Command Parameters

Table 130.16-1 "System T4 Clock Management Status Command" Resource Parameters

Resource Identifier	Type	Description
(priority)	Format: - priority index of the system clock source - range: [1...3]	priority configured for the clock source

Command Output

Table 130.16-2 "System T4 Clock Management Status Command" Display parameters

Specific Information		
name	Type	Description
clock-source	Parameter type: <Ntr::T4PrioRef> (none local synce-1 synce-2 assysclk) Possible values: - none : no clock is specified for this priority - local : This option cannot be configured - synce-1 : 1st SyncE clock is specified for this priority - synce-2 : 2nd SyncE clock is specified for this priority - assysclk : This option cannot be configured	The clock source configured for selection <i>This element is always shown.</i>
ql	Parameter type: <Ntr::SysClkSrcQL> (clk-ql-stu clk-ql-prs	Quality level of the configured clock source <i>This element is always shown.</i>

name	Type	Description
	clk-ql-prc clk-ql-inv3 clk-ql-ssu-a-tnc clk-ql-ssu-a clk-ql-tnc clk-ql-inv5 clk-ql-inv6 clk-ql-st2 clk-ql-ssu-b clk-ql-inv9 clk-ql-st3 clk-ql-sec clk-ql-smc clk-ql-st3e clk-ql-prov clk-ql-dnu-dus clk-ql-dnu clk-ql-dus) Possible values: - clk-ql-stu : Synchronized-Traceability Unknown - clk-ql-prs : Primary Reference Source - clk-ql-prc : Primary Reference Clock - clk-ql-inv3 : Quality Level unallocated - clk-ql-ssu-a-tnc : Traced to Sync Supply Unit-A/Transmit Node Clock - clk-ql-ssu-a : Traced to Sync Supply Unit-A(ETSI) - clk-ql-tnc : Traced to Transmit Node Clock(ANSI) - clk-ql-inv5 : Quality Level unallocated - clk-ql-inv6 : Quality Level unallocated - clk-ql-st2 : Traceable to Stratum 2 - clk-ql-ssu-b : Traced to Sync Supply Unit-B - clk-ql-inv9 : Quality Level unallocated - clk-ql-st3 : Traceable to Stratum 3 - clk-ql-sec : Traceable to SDH Equipment Clock - clk-ql-smc : Traceable to SONET Clock SelfTimed - clk-ql-st3e : Traceable to Stratum 3E - clk-ql-prov : Operator Provisioned - clk-ql-dnu-dus : Signal should not be used for sync - clk-ql-dnu : Signal should not be used for sync(ETSI) - clk-ql-dus : Signal should not be used for sync(ANSI)	
status	Parameter type: <Ntr::SysClkStatusActual> (reference valid fail donotuse unknown forced nosynceconfig nosyncesupport onnonreadypeernt syncenotavailable noieee1588config missing invalid) Possible values: - reference : clock is selected as the reference clock - valid : clock is available for selection	Operational status of the t4 configured clock sources <i>This element is always shown.</i>

name	Type	Description
	- fail : clock is not available for selection - donotuse : clock must not be used as indicated by SSM - unknown : clock status unknown - forced : clock is manually selected - nosynceconfig : syncE clock (ref1/2) is not bound to a port - nosyncesupport : SyncE clock (ref1/2) is bound to a port that does not support syncE clock extraction - onnonreadypeernt : clock configured on the face plate of the peer NT is not eligible due to the state of the peer NT - syncenotavailable : SyncE clock not available - noieee1588config : ieee1588 is not configured - missing : no SSM-QL received - invalid : clock not available for selection	

130.17 System Clock IEEE1588 master profile detailed info command

Command Description

This command is used to configure the Packet Processing Mode for the PTP-communication between the slave clock device on the ISAM and the GrandMaster device.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system sync-ptp-mstrprofile [ (name) ]
```

Command Parameters

Table 130.17-1 "System Clock IEEE1588 master profile detailed info command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name for the profile of the PTP Master Port DataSet

Command Output

Table 130.17-2 "System Clock IEEE1588 master profile detailed info command" Display parameters

Specific Information		
name	Type	Description
ref-count	Parameter type: <AsamProfileRefCount> - number of entities using this particular profile - range: [0...65535]	Indicates the number of entities using this profile. If the reference count is greater than 0, then this profile is 'in use', and may NOT be deleted. If the value is 0, then this profile is 'not in use', and can be deleted. <i>This element is always shown.</i>

130.18 System Clock Management IEE1588 Status Command

Command Description

This command shows the status of the ieee1588 clock devices configured for selection.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system sync-ptp-slaveport [ (ptp-port) ]
```

Command Parameters

Table 130.18-1 "System Clock Management IEE1588 Status Command" Resource Parameters

Resource Identifier	Type	Description
(ptp-port)	Format: (ieee1588-a ieee1588-b ieee1588-a:1 ieee1588-b:1 ieee1588) Possible values: - ieee1588-a : ieee1588 port on nt-a excluding FANT-G NT type - ieee1588-b : ieee1588 port on nt-b excluding FANT-G NT type - ieee1588-a:1 : ieee1588 port 1 on nt-a of FANT-G - ieee1588-b:1 : ieee1588 port 1 on nt-b of FANT-G - ieee1588 : ieee1588 port on nt of FNAT-H	ieee1588 ptp port index

Command Output

Table 130.18-2 "System Clock Management IEE1588 Status Command" Display parameters

Specific Information		
name	Type	Description
ptp-mode	Parameter type: <Ntr::PtpMode> (port-fault port-disabled port-listen	operational mode of the ne for ptp functionality <i>This element is always shown.</i>

130 System Status Commands

name	Type	Description
	port-pre-master port-master port-passive port-uncalibrated port-slave) Possible values: - port-fault : unicast ptp packet processing mode - port-disabled : unicast multicast packet processing mode - port-listen : unicast multicast packet processing mode - port-pre-master : unicast multicast packet processing mode - port-master : unicast multicast packet processing mode - port-passive : unicast multicast packet processing mode - port-uncalibrated : unicast multicast packet processing mode - port-slave : unicast multicast packet processing mode	
clkid	Parameter type: <Sys::SysClkPtpDefaultDSIdentity> - Hexadecimal Clock Identity (example : 01:02:03:04:05:06:07:08) - length: 8	the clock identity of current ptp slave <i>This element is always shown.</i>
mac-addr	Parameter type: <Sys::PTPMacAddr> (xx:xx:xx:xx:xx:xx xx:xx:xx:xx:xx:xx <Sys::MacAddr>) Possible values: - xx:xx:xx:xx:xx:xx : Invalid MAC address - xx:xx:xx:xx:xx:xx : Invalid MAC address Field type <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6	mac address <i>This element is always shown.</i>

130.19 System Clock IEEE1588 current master detailed info Command

Command Description

This command show the detailed information of IEEE1588 current master.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system sync-ptp-currmaster [ (ptp-port) ]
```

Command Parameters

Table 130.19-1 "System Clock IEEE1588 current master detailed info Command" Resource Parameters

Resource Identifier	Type	Description
(ptp-port)	Format: (ieee1588-a ieee1588-b ieee1588-a:1 ieee1588-b:1 ieee1588) Possible values: - ieee1588-a : ieee1588 port on nt-a excluding FANT-G NT type - ieee1588-b : ieee1588 port on nt-b excluding FANT-G NT type - ieee1588-a:1 : ieee1588 port 1 on nt-a of FANT-G - ieee1588-b:1 : ieee1588 port 1 on nt-b of FANT-G - ieee1588 : ieee1588 port on nt of FNAT-H	ieee1588 ptp port index

Command Output

Table 130.19-2 "System Clock IEEE1588 current master detailed info Command" Display parameters

Specific Information		
name	Type	Description
leap61	Parameter type: <Sys::FlagValue> (false	leap61 <i>This element is only shown in</i>

130 System Status Commands

name	Type	Description
	true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	<i>detail mode.</i>

utc-offset-valid	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	the current utc offset valid <i>This element is only shown in detail mode.</i>
ptp-timescale	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	ptp time scale <i>This element is only shown in detail mode.</i>
time-traceable	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	time traceable <i>This element is only shown in detail mode.</i>
frequency-traceable	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	frequency traceable <i>This element is only shown in detail mode.</i>
announce-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogAnnounceInterval <i>This element is only shown in detail mode.</i>
sync-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogSyncInterval <i>This element is only shown in detail mode.</i>
delay-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogMinDelayReqInterval <i>This element is only shown in detail mode.</i>
ip-addr	Parameter type: <Ip::V4Address> - IPv4-address	ip address <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
mac-addr	Parameter type: <Sys::PTPMacAddr> (xx:xx:xx:xx:xx:xx xx:xx:xx:xx:xx:xx <Sys::MacAddr>) Possible values: - xx:xx:xx:xx:xx:xx : Invalid MAC address - xx:xx:xx:xx:xx:xx : Invalid MAC address Field type <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6	mac address <i>This element is only shown in detail mode.</i>
announce-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	announce packets <i>This element is only shown in detail mode.</i>
sync-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	sync packets <i>This element is only shown in detail mode.</i>
delay-req-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	delay req packets <i>This element is only shown in detail mode.</i>
delay-resp-packets	Parameter type: <Sys::SysPacketCountInt> - Packets counter - range: [0...4294967295]	delay req packets <i>This element is only shown in detail mode.</i>
utc-offset	Parameter type: <Sys::SysSignedShortInt> - signed short - range: [-32768...32767]	CurrentUtcOffset <i>This element is only shown in detail mode.</i>
log-var	Parameter type: <Sys::portNumber> - index number - range: [0...65535]	OffsetScaledLogVariance <i>This element is always shown.</i>
time-source	Parameter type: <Sys::PtpTimeSource> (atomic gps radio ptp ntp handset other internal unknown) Possible values: - atomic : ATOMIC_CLOCK - gps : GPS - radio : TERRESTRIAL_RADIO - ptp : PTP - ntp : NTP - handset : HAND_SET - other : OTHER - internal : INTERNAL_OSCILLATOR - unknown : No information	ptp time source <i>This element is only shown in detail mode.</i>
lock-time	Parameter type: <Sys::PtpTime> - yyyy-mm-dd:hour:min:sec (example : 2017-11-11:01:02:03) - length: 19	lock time <i>This element is only shown in detail mode.</i>
fail-time	Parameter type: <Sys::PtpTime> - yyyy-mm-dd:hour:min:sec (example : 2017-11-11:01:02:03) - length: 19	fail time <i>This element is only shown in detail mode.</i>

130 System Status Commands

name	Type	Description
fail-reason	Parameter type: <Sys::PtpFailReason> - Ptp Fail Reason - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	fail reason <i>This element is only shown in detail mode.</i>
clkid	Parameter type: <Sys::SysClkPtpDefaultDSIdentity> - Hexadecimal Clock Identity (example : 01:02:03:04:05:06:07:08) - length: 8	the clock identity of current ptp master clock <i>This element is always shown.</i>
prio1	Parameter type: <Ntr::Priority> - priority of the acceptable master - range: [0...255]	the priority1 of current ptp master clock <i>This element is always shown.</i>
prio2	Parameter type: <Ntr::Priority> - priority of the acceptable master - range: [0...255]	the priority2 of current ptp master clock <i>This element is always shown.</i>
clkclass	Parameter type: <Sys::SysClkPtpClockQuality> - clock quality of the PTP source - range: [0...255]	the clock class of current ptp master clock <i>This element is always shown.</i>
clkaccuracy	Parameter type: <Sys::SysClkPtpClockAccuracy> - ptp clock accuracy - range: [0...255]	the clock accuracy of current ptp master clock <i>This element is always shown.</i>
portnumber	Parameter type: <Sys::portNumber> - index number - range: [0...65535]	the port number of current ptp master clock <i>This element is always shown.</i>
stepremoved	Parameter type: <Sys::stepRemoved> - index number - range: [0...65535]	the steps removed of current ptp master clock <i>This element is only shown in detail mode.</i>
grandmasterclkid	Parameter type: <Sys::SysClkPtpDefaultDSIdentity> - Hexadecimal Clock Identity (example : 01:02:03:04:05:06:07:08) - length: 8	the current ptp grand master clock identity <i>This element is always shown.</i>
domain	Parameter type: <Ntr::PtpDomain> - ptp domain - range: [0...255]	the domain of current ptp master clock <i>This element is always shown.</i>
masterselected	Parameter type: <Ntr::MasterSelected> (no yes) Possible values: - no : the current ptp master clock is not selected as reference - yes : the current ptp master clock is selected as reference	current ptp master clock selected as reference <i>This element is only shown in detail mode.</i>

130.20 System Clock IEEE1588 visible master detailed info Command

Command Description

This command show the detailed information of IEEE1588 visible master.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system sync-ptp-inmasters [ (vm-idx) ]
```

Command Parameters

Table 130.20-1 "System Clock IEEE1588 visible master detailed info Command" Resource Parameters

Resource Identifier	Type	Description
(vm-idx)	Format: (ieee1588-vm-a:1 ieee1588-vm-a:2 ieee1588-vm-a:3 ieee1588-vm-b:1 ieee1588-vm-b:2 ieee1588-vm-b:3) Possible values: - ieee1588-vm-a:1 : ieee1588 visible master 1 on nt-a - ieee1588-vm-a:2 : ieee1588 visible master 2 on nt-a - ieee1588-vm-a:3 : ieee1588 visible master 3 on nt-a - ieee1588-vm-b:1 : ieee1588 visible master 1 on nt-b - ieee1588-vm-b:2 : ieee1588 visible master 2 on nt-b - ieee1588-vm-b:3 : ieee1588 visible master 3 on nt-b	ieee1588 visible master index

Command Output

Table 130.20-2 "System Clock IEEE1588 visible master detailed info Command" Display parameters

Specific Information

name	Type	Description
	unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	
leap59	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	leap59 <i>This element is only shown in detail mode.</i>
utc-offset-valid	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	the current utc offset valid <i>This element is only shown in detail mode.</i>
ptp-timescale	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	ptp time scale <i>This element is only shown in detail mode.</i>
time-traceable	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	time traceable <i>This element is only shown in detail mode.</i>
frequency-traceable	Parameter type: <Sys::FlagValue> (false true unknown) Possible values: - false : the flag is false - true : the flag is true - unknown : the flag is not available	frequency traceable <i>This element is only shown in detail mode.</i>
announce-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogAnnounceInterval <i>This element is only shown in detail mode.</i>
sync-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogSyncInterval <i>This element is only shown in detail mode.</i>
delay-interval	Parameter type: <Sys::SysSignedCharInt> - signed char - range: [-128...127]	LogMinDelayReqInterval <i>This element is only shown in detail mode.</i>
ip-addr	Parameter type: <Ip::V4Address> - IPv4-address	ip address <i>This element is only shown in detail mode.</i>

130 System Status Commands

name	Type	Description
mac-addr	Parameter type: <Sys::PTPMacAddr> (xx:xx:xx:xx:xx:xx xx:xx:xx:xx:xx:xx <Sys::MacAddr>) Possible values: - xx:xx:xx:xx:xx:xx : Invalid MAC address - xx:xx:xx:xx:xx:xx : Invalid MAC address Field type <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6	mac address <i>This element is only shown in detail mode.</i>

130.21 Scaling Mode Status Command

Command Description

This command displays the scaling mode.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system scalingmode
```

Command Output

Table 130.21-2 "Scaling Mode Status Command" Display parameters

Specific Information		
name	Type	Description
scaling-mode	Parameter type: <Sys::sysScalingMode> (l2plus l3plus_host l3plus_lpm) Possible values: - l2plus : l2plus-Mode with L2 FDB table - l3plus_host : l3plus_host-Mode with L3 host/ARP table - l3plus_lpm : l3plus_lpm-Mode with L3 LPM/route table	configure scaling mode <i>This element is always shown.</i>
oper-scaling-mode	Parameter type: <Sys::sysScalingMode> (l2plus l3plus_host l3plus_lpm) Possible values: - l2plus : l2plus-Mode with L2 FDB table - l3plus_host : l3plus_host-Mode with L3 host/ARP table - l3plus_lpm : l3plus_lpm-Mode with L3 LPM/route table	operational scaling mode <i>This element is always shown.</i>

130.22 System TechSupport Status Command

Command Description

This command shows the state of the TechSupport functionality and the existing On Demand Sessions

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system techsupport [ (session) ]
```

Command Parameters

Table 130.22-1 "System TechSupport Status Command" Resource Parameters

Resource Identifier	Type	Description
(session)	Format: - number identifying a Tech Support Session - range: [0...65535]	Id of the session to display

Command Output

Table 130.22-2 "System TechSupport Status Command" Display parameters

Common Information:status		
name	Type	Description
status	Parameter type: <Sys::TechSupportStatus> (disabled enabled) Possible values: - disabled : the techsupport functionality is disabled - enabled : the techsupport functionality is enabled	<i>This element is always shown.</i>

Specific Information		
name	Type	Description
type	Parameter type: <Sys::TechSupportSessionType> (crashlog board-on-demand ifindex-on-demand) Possible values: - crashlog : a Tech Support file corresponging to a board crash - board-on-demand : a Tech Support file corresponding to a board-on-demand request - ifindex-on-demand : a Tech Support file corresponding to	show's the type of the Tech Support Entry <i>This element is only shown in detail mode.</i>

name	Type	Description
	an on-demand request for a certain interface	
object	Parameter type: <Equipm::NtLtSlotIndex1> (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	show's the object corresponding to the Tech Support Entry <i>This element is always shown.</i>
server-ip-addr	Parameter type: <Ip::V4Address> - IPv4-address	shows the ip address of the server to which the Tech Support File needs to be uploaded <i>This element is always shown.</i>
file	Parameter type: <PrintableString> - printable string	show's the file corresponding to the Tech Support Entry <i>This element is always shown.</i>
state	Parameter type: <Sys::TechSupportSessionStatus> (busy failed done) Possible values: - busy : the entry is in busy state - failed : the entry failed - done : the entry is completed	show's the state corresponding to the Tech Support Entry <i>This element is always shown.</i>
error	Parameter type: <Sys::TechSupportSessionError> (no-error conv-error send-ping ts-not-avail inv-ping-resp send-gen gen-timeout inv-gen-resp send-info info-timeout inv-info-resp request-data data-timeout inv-data-resp res-acquiring res-acq-timeout incomplete res-not-avail disk-file-error encrytion-error) Possible values:	show's the error corresponding to the Tech Support Entry <i>This element is always shown.</i>

130 System Status Commands

name	Type	Description
	- no-error : the entry is not in error - conv-error : internal error: conversion failure - send-ping : send ping failed - ts-not-avail : techsupport not available at LT - inv-ping-resp : invalid ping response - send-gen : send generation failed - gen-timeout : generation timeout error - inv-gen-resp : invalid generation response - send-info : send data info failed - info-timeout : data info timeout error - inv-info-resp : invalid data info response - request-data : request data failed - data-timeout : data timeout error - inv-data-resp : invalid data response - res-acquiring : resource acquiring failed - res-acq-timeout : resource acquiring timeout - incomplete : not completed request - res-not-avail : resource should be already reserved - disk-file-error : CF file handler error - encrytion-error : encrytion failed	
size	Parameter type: <SignedInteger> - a signed integer	show's the error corresponding to the Tech Support Entry <i>This element is only shown in detail mode.</i>
time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	show's the error corresponding to the Tech Support Entry <i>This element is only shown in detail mode.</i>

130.23 show system fips

Command Description

Obsolete command.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show system fips

Obsolete command.

Command Output

Table 130.23-2 "show system fips" Display parameters

Specific Information		
name	Type	Description
enabled-state	Parameter type: <Sys::sysFipsEnable> (disable enable) Possible values: - disable : Disable FIPS - enable : Enable FIPS	FIPS Enabled Status <i>This element is only shown in detail mode.</i>
run-test-state	Parameter type: <Sys::sysFipsTestState> (idle test-start test-passed) Possible values: - idle : Initial State - test-start : Trigger the self test - test-passed : Test is completed	total storage size available to store the messages <i>This element is only shown in detail mode.</i>

130.24 System Autoboot file timestamps Command

Command Description

This command displays the timestamps of the autoboot files.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system autoboot-config
```

Command Output

Table 130.24-2 "System Autoboot file timestamps Command" Display parameters

Specific Information		
name	Type	Description
last-extern-access	Parameter type: <Sys::LastExtFSAccessAutoBootTime> - yyyy-mm-dd:hour:min:sec (example : 2017-11-11:01:02:03) - length: 19	This parameter holds the timestamp when the autoboot files were last updated.. <i>This element is always shown.</i>
last-autoboot-start	Parameter type: <Sys::LastAutoBootTimeStart> - yyyy-mm-dd:hour:min:sec (example : 2017-11-11:01:02:03) - length: 19	This parameter holds the last timestamp right before the autoboot file was executed. <i>This element is always shown.</i>
last-autoboot-end	Parameter type: <Sys::LastAutoBootTimeEnd> - yyyy-mm-dd:hour:min:sec (example : 2017-11-11:01:02:03) - length: 19	This parameter holds the last timestamp right after the autoboot file was executed. <i>This element is always shown.</i>

131- daylight saving time Status Commands

131.1 daylight saving time Status Command Tree	131-6074
131.2 daylight saving time Status Commands	131-6075

131.1 daylight saving time Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "daylight saving time Status Commands".

Command Tree

```
----show
  ----system
    ----dst
```

131.2 daylight saving time Status Commands

Command Description

This command displays the information about the daylight saving time and its related parameters.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show system dst

Command Output

Table 131.2-2 " daylight saving time Status Commands" Display parameters

Specific Information		
name	Type	Description
isaaffected	Parameter type: <Sys::DstAffected> (yes no) Possible values: - yes : Now daylight saving time is affected - no : Now daylight saving time is not affected	specifies whether daylight saving time is affected. <i>This element is always shown.</i>

132- DST Configuration Commands

132.1 DST Configuration Command Tree	132-6077
132.2 DST Recurring method Command	132-6078

132.1 DST Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "DST Configuration Commands".

Command Tree

```
----show
  ----system
    ----dst
      ----recurring-table
        - (zone)
```

132.2 DST Recurring method Command

Command Description

This command displays the information about the daylight saving time related parameters with recurring method.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system dst recurring-table [ (zone) ]
```

Command Parameters

Table 132.2-1 "DST Recurring method Command" Resource Parameters

Resource Identifier	Type	Description
(zone)	Format: - specify the offset for timezone from GMT/UTC - range: [-780...840]	specifies the timezone

Command Output

Table 132.2-2 "DST Recurring method Command" Display parameters

Specific Information		
name	Type	Description
start-time	Parameter type: <Sys::DSTRecurring> (jan - first - sun : <Sys::DSThour> : <Sys::DSTmin> jan - first - mon : <Sys::DSThour> : <Sys::DSTmin> jan - first - tues : <Sys::DSThour> : <Sys::DSTmin> jan - first - wed : <Sys::DSThour> : <Sys::DSTmin> jan - first - thur : <Sys::DSThour> : <Sys::DSTmin> jan - first - fri : <Sys::DSThour> : <Sys::DSTmin> jan - first - sat : <Sys::DSThour> : <Sys::DSTmin> jan - second - sun : <Sys::DSThour> : <Sys::DSTmin> jan - second - mon : <Sys::DSThour> : <Sys::DSTmin> jan - second - tues : <Sys::DSThour> : <Sys::DSTmin> jan - second - wed : <Sys::DSThour> : <Sys::DSTmin> jan - second - thur : <Sys::DSThour> : <Sys::DSTmin> jan - second - fri : <Sys::DSThour> : <Sys::DSTmin> jan - second - sat : <Sys::DSThour> : <Sys::DSTmin> jan - third - sun : <Sys::DSThour> : <Sys::DSTmin> jan - third - mon : <Sys::DSThour> : <Sys::DSTmin> jan - third - tues : <Sys::DSThour> : <Sys::DSTmin> jan - third - wed : <Sys::DSThour> : <Sys::DSTmin>	specifies start time of daylight saving time <i>This element is always shown.</i>

132 DST Configuration Commands

name	Type	Description
	dec - last - fri : <Sys::DSThour> : <Sys::DSTmin> dec - last - sat : <Sys::DSThour> : <Sys::DSTmin>) Possible values: - jan : january - feb : february - mar : march - apr : april - may : may - jun : june - jul : july - aug : august - sep : september - oct : october - nov : november - dec : december Possible values: - first : first week of the month - second : second week of the month - third : third week of the month - fourth : fourth week of the month - last : last week of the month Possible values: - sun : sunday - mon : monday - tues : tuesday - wed : wednesday - thur : thursday - fri : friday - sat : saturday Field type <Sys::DSThour> - hour - range: [0...23] Field type <Sys::DSTmin> - minutes - unit: minutes - range: [0...59]	
offset	Parameter type: <Sys::DstAdjustment> - The number of minutes that will be adjusted to the time - unit: minutes - range: [0...60]	display the adjustment of daylight saving time <i>This element is always shown.</i>
isaffectedsrc	Parameter type: <Sys::isaffectedsrc> (yes no) Possible values: - yes : this item's timezone matches current OLT timezone - no : this item's timezone doesn't match current OLT timezone	specifies whether this item matches the current OLT timezone <i>This element is always shown.</i>

133- DST Configuration Commands

133.1 DST Configuration Command Tree	133-6096
133.2 DST Date method Command	133-6097

133.1 DST Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "DST Configuration Commands".

Command Tree

```
----show
  ----system
    ----dst
      ----date-table
        - (zone)
```

133.2 DST Date method Command

Command Description

This command displays the information about the daylight saving time related parameters with date method for some year.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show system dst date-table [ (zone) ]
```

Command Parameters

Table 133.2-1 "DST Date method Command" Resource Parameters

Resource Identifier	Type	Description
(zone)	Format: - specify the offset for timezone from GMT/UTC - range: [-780...840]	specifies the timezone

Command Output

Table 133.2-2 "DST Date method Command" Display parameters

Specific Information		
name	Type	Description
start-time	Parameter type: <Sys::GaugeTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	specifies start time of daylight saving time <i>This element is always shown.</i>
end-time	Parameter type: <Sys::GaugeTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	specifies end time of daylight saving time <i>This element is always shown.</i>
offset	Parameter type: <Sys::DstAdjustment> - The number of minutes that will be adjusted to the time - unit: minutes - range: [0...60]	display the adjustment of daylight saving time <i>This element is always shown.</i>
isaffectedsrc	Parameter type: <Sys::isaffectedsrc> (yes no) Possible values: - yes : this item's timezone matches current OLT timezone - no : this item's timezone doesn't match current OLT timezone	specifies whether this item matches the current OLT timezone <i>This element is always shown.</i>

134- Transaction Status Commands

134.1 Transaction Status Command Tree	134-6100
134.2 Transaction Log Status Command	134-6101
134.3 Transaction Log Entry Status Command	134-6103

134.1 Transaction Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Transaction Status Commands".

Command Tree

```
----show
  ----transaction
    ----set-log-table
      - (log-table-index)
    ----log-entry
```

134.2 Transaction Log Status Command

Command Description

This command displays the transaction set log parameters.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show transaction set-log-table [ (log-table-index) ]
```

Command Parameters

Table 134.2-1 "Transaction Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(log-table-index)	Format: - a signed integer	the key in the set Log table

Command Output

Table 134.2-2 "Transaction Log Status Command" Display parameters

Specific Information		
name	Type	Description
log-ipaddr	Parameter type: <Ip::IpXAddress> (<Ip::V4Address> ipv6 : <ipv6::Prefix>) Possible values: - ipv6 : ipv6-address Field type <Ip::V4Address> - IPv4-address Field type <ipv6::Prefix> - IPv6-address	IP address of the Manager who changed this object <i>This element is always shown.</i>
changed-object-id	Parameter type: <Object> - an object identifier	the Object Identifier of an object which has been changed. <i>This element is always shown.</i>
context	Parameter type: <Trans::context> (nt shub xvps1 xvps2 xvps3 xvps4	The context, which the object belongs to <i>This element is always shown.</i>

134 Transaction Status Commands

name	Type	Description
	xvps5 xvps6 xvps7 xvps8 ihub dynamic aint1 ainta1 aintb1 dpoe vvpsa) Possible values: - nt : nt: nt context - shub : shub: shub context - xvps1 : xvps1: xvps1 context - xvps2 : xvps2: xvps2 context - xvps3 : xvps3: xvps3 context - xvps4 : xvps4: xvps4 context - xvps5 : xvps5: xvps5 context - xvps6 : xvps6: xvps6 context - xvps7 : xvps7: xvps7 context - xvps8 : xvps8: xvps8 context - ihub : ihub: ihub context - dynamic : dynamic: dynamic context - aint1 : aint1: aint1 context - ainta1 : ainta1: ainta1 context - aintb1 : aintb1: aintb1 context - dpoe : dpoe: dpoe context - vvpsa : vvpsa: vvpsa context	

134.3 Transaction Log Entry Status Command

Command Description

This command displays the transaction log entry-related parameters.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> show transaction log-entry
```

Command Output

Table 134.3-2 "Transaction Log Entry Status Command" Display parameters

Specific Information		
name	Type	Description
set-log-lastentry	Parameter type: <SignedInteger> - a signed integer	index of the last entry that has been added to the set log table. <i>This element is always shown.</i>
set-log-resettime	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time when set log has been reset <i>This element is always shown.</i>
set-log-overflowed	Parameter type: <Trans::overflowed> (not-overflowed overflowed) Possible values: - not-overflowed : log buffer not overflowed is 1 - overflowed : log buffer overflowed is 2	specifies whether the set log buffer is overflowed or not. <i>This element is always shown.</i>
set-log-buffersize	Parameter type: <SignedInteger> - a signed integer	the size of the internal set log buffer. <i>This element is always shown.</i>
nbr-of-sets	Parameter type: <SignedInteger> - a signed integer	nbr of successful sets since system is up. <i>This element is always shown.</i>

135- Error Status Command

135.1 Error Status Command Tree
135.2 Error Log Status Command

135-6105
135-6106

135.1 Error Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Error Status Command".

Command Tree

```
----show
  ----error
    - (id)
```

135.2 Error Log Status Command

Command Description

This command displays the error log status.

User Level

The command can be accessed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> show error (id)

Command Parameters

Table 135.2-1 "Error Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(id)	Format: - a signed integer	error number

Command Output

Table 135.2-2 "Error Log Status Command" Display parameters

Common Information:error-log related information		
name	Type	Description
last-entry	Parameter type: <Error::ErrLogLastEntry> - index of the last entry of error log table	index of the last entry that is added to the error log table. <i>This element is always shown.</i>
reset-time	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time value when the error log is resetted <i>This element is always shown.</i>
buffer-size	Parameter type: <SignedInteger> - a signed integer	size of the internal log buffer. <i>This element is always shown.</i>
overflowed	Parameter type: <Error::LogOverFlow> (no yes) Possible values: - no : when log buffer is reset - yes : full action set to warp around	specifies whether log buffer is overflowed or not. <i>This element is always shown.</i>
Specific Information		
name	Type	Description
timestamp	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	network time when the error is generated. <i>This element is always shown.</i>

name	Type	Description
originator	Parameter type: <Alarm::ReqIdAndIPAddress> (<SignedInteger> @ <Ip::V4Address> ipv6 : <SignedInteger> @ <Ip::V6Prefix>) Possible values: - ipv6 : ipv6-address Field type <SignedInteger> - a signed integer Field type <Ip::V4Address> - IPv4-address Field type <Ip::V6Prefix> - IPv6-address	request-id and IP address that generated the error <i>This element is only shown in detail mode.</i>
description	Parameter type: <Description-127> - description to help the operator to identify the object - length: x<=127	description of the error. <i>This element is always shown.</i>
info	Parameter type: <PrintableString> - printable string	additional information to guide to correct the error <i>This element is only shown in detail mode.</i>
obj-id	Parameter type: <Alarm::MibName> - representation of the mib name	object identifier in the request that caused the error. <i>This element is always shown.</i>
obj-value	Parameter type: <PrintableString> - printable string	value received from the manager for the object that generated the error. <i>This element is only shown in detail mode.</i>

136- Software Status Commands

136.1 Software Status Command Tree	136-6109
136.2 Database Status Command	136-6110
136.3 Disk Status Command	136-6112
136.4 Overall Software Package Status Command	136-6114
136.5 Software Management Upgrade Plan Command	136-6117
136.6 Software Management Upgrade Status Command	136-6119
136.7 Software Package Status Command	136-6121
136.8 File Status Command	136-6123
136.9 Upload/Download Status Command	136-6125
136.10 Upload/Download Sub-directory Status Command	136-6128
136.11 Software Version For ANSI Status Command	136-6129
136.12 Software Version For ETSI Status Command	136-6130
136.13 TLS CA file download Status Command	136-6131
136.14 Lightspan Migration Status Command	136-6133
136.15 lacm OAM DB save Status Command	136-6135
136.16 Upload/Download Sw ONTSw Status Command	136-6136

136.1 Software Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Software Status Commands".

Command Tree

```

----show

136.2 Database Status Command

Command Description

This command displays the various database parameters.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt database [ (db-container) [ oswp-number <SwMngt::DbmOswpIndex> ] ]
```

Command Parameters

Table 136.2-1 "Database Status Command" Resource Parameters

Resource Identifier	Type	Description
(db-container)	Format: (first second third) Possible values: - first : first container - second : second container - third : third container	the database container ID
oswp-number	Parameter type: <SwMngt::DbmOswpIndex> Format: - index in the database table - range: [1...2]	index in the database table

Command Output

Table 136.2-2 "Database Status Command" Display parameters

Specific Information		
name	Type	Description
name	Parameter type: <SwMngt::dbmDatabaseName> - a printable string - length: x<=32	A string representing the database. The value 'NO-NAME' will be used by the system for the default databases. <i>This element is always shown.</i>
oper-status	Parameter type: <SwMngt::dBaseOperStatus> (actual preferable previous	The operational status of the database. <i>This element is always shown.</i>

name	Type	Description
	failed not-useful) Possible values: - actual : actual oper status - preferable : preferable oper status - previous : previous oper status - failed : failed oper status - not-useful : not useful oper status	
version	Parameter type: <SwMngt::dbmDatabaseVersion> - a printable string - length: x<=32	The version of the database. <i>This element is always shown.</i>

136.3 Disk Status Command

Command Description

This command displays the values of the various attributes of the SWM disk file.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> show software-mngt descriptor-files [(index)]

Command Parameters

Table 136.3-1 "Disk Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - path and name of the oswp ,file name less than 160 char - range: [a-zA-Z0-9-_/.*] - length: 1<=x<=160	index to the swm disk file table

Command Output

Table 136.3-2 "Disk Status Command" Display parameters

Specific Information		
name	Type	Description
type	Parameter type: <SwMngt::diskFileType> (overall-descriptor descriptor file-type-a file-type-b not-specified file-type-c file-type-d file-type-e file-type-f file-type-g file-type-h file-type-i file-type-j file-type-k file-type-l file-type-m file-type-n	Specifies the type of the file. <i>This element is always shown.</i>

name	Type	Description
	file-type-o file-type-p file-type-s file-type-v) Possible values: - overall-descriptor : over all descriptor file - descriptor : descriptor file - file-type-a : file type a - file-type-b : file type b - not-specified : file type not specified - file-type-c : file type c - file-type-d : file type d - file-type-e : file type e - file-type-f : file type f - file-type-g : file type g - file-type-h : file type h - file-type-i : file type i - file-type-j : file type j - file-type-k : file type k - file-type-l : file type l - file-type-m : file type m - file-type-n : file type n - file-type-o : file type o - file-type-p : file type p - file-type-s : file type s - file-type-v : file type v	
file-size	Parameter type: <SwMngt::DiskFileSize> - specifies the size of the file - unit: bytes	Specifies the size of the file. <i>This element is always shown.</i>

136.4 Overall Software Package Status Command

Command Description

This command displays various OSWP states and attributes.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt oswp [ (index) ]
```

Command Parameters

Table 136.4-1 "Overall Software Package Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - id of one of the two oswps - range: [1...2]	index to the swm oswp table

Command Output

Table 136.4-2 "Overall Software Package Status Command" Display parameters

Specific Information		
name	Type	Description
name	Parameter type: <SwMngt::swmOswpName> - The name of OSWP without path - range: [a-zA-Z0-9-_/:*] - length: 1<=x<=160	The name of OSWP without path <i>This element is always shown.</i>
availability	Parameter type: <SwMngt::operAvailStatus> (empty enabled disabled downloading aborting) Possible values: - empty : no OSWP is related to the index - enabled : related OSWP is valid - disabled : download of related OSWP failed - downloading : download of related OSWP is ongoing - aborting : files of the related OSWP are removed	Specifies the availability status of the OSWP. <i>This element is always shown.</i>
act-status	Parameter type: <SwMngt::operActStatus> (active	Specifies the related OSWP is currently active, not active or

name	Type	Description
	not-active act-act-nt act-stb-nt) Possible values: - active : related OSWP is active - not-active : related OSWP is not active - act-act-nt : related OSWP is being activated on the active NT - act-stb-nt : related OSWP is being activated on the standby NT	being activated on active or standby NT. <i>This element is always shown.</i>
commit-status	Parameter type: <SwMngt::operCommitStatus> (committed un-committed committing) Possible values: - committed : Committed - un-committed : Un committed - committing : OSWP is committing	Specifies the OSWP is committed or uncommitted or whether the commit-operation is still ongoing. <i>This element is always shown.</i>
download-error	Parameter type: <SwMngt::oswpDldErr> (invalidftpdaemon invalidftpdaemon invalidsftpdaemon not-defined file-not-found access-violation diskfull-alloc-exced illegal-tftp-operation unknown-transfer-id file-exists no-such-user syntax-error lack-of-storage system-restart no-error synchronization-failed tftp-busy swload-verify-fail crc-verify-fail) Possible values: - invalidftpdaemon : trying to download using ftp when sftp is enabled - invalidtftpdaemon : trying to download using tftp when sftp is enabled - invalidsftpdaemon : trying to download using sftp when tftp is enabled - not-defined : the error is not defined - file-not-found : file is not found - access-violation : access violation - diskfull-alloc-exced : disk is full - illegal-tftp-operation: illegal TFTP operation - unknown-transfer-id : transfer id is unknown - file-exists : file is already existing - no-such-user : no such user - syntax-error : Syntax error - lack-of-storage : Lack of storage resource - system-restart : system restart - no-error : no error in download	Specifies for what reason the download of the OSWP failed for the requested set of files. <i>This element is only shown in detail mode.</i>

name	Type	Description
	- synchronization-failed: synchronization failed - tftp-busy : tftp client is occupied by other task - swload-verify-fail : swload validation failed after successful download - crc-verify-fail : crc validation failed after successful download	
err-file-name	Parameter type: <SwMngt::oswpName> - path and name of the oswp ,file name less than 160 char - range: [a-zA-Z0-9-_/.*] - length: 1<=x<=160	The name of the file that caused the error. <i>This element is only shown in detail mode.</i>
err-file-server	Parameter type: <SwMngt::serverIdv6> (<Ip::V4Address> ipv6 : <Ip::InetAddressType>) Possible values: - ipv6 : Ipv6 address (only for management IPv6 supported boards) Field type <Ip::V4Address> - IPv4-address Field type <Ip::InetAddressType> - IPv6 address	Specifies the IP address of the file server where the file can be found. <i>This element is only shown in detail mode.</i>
auto-activate-error	Parameter type: <SwMngt::OswpAutoActErr> (not-defined no-error another-swdb-on no-compatible-db unknown-err) Possible values: - not-defined : the error is not defined - no-error : no error in download - another-swdb-on : another swdb process ongoing - no-compatible-db : no compatible database - unknown-err : unknown error during activation	the reason the automatic activation of the OSWP failed <i>This element is only shown in detail mode.</i>
on-schedule-act-time	Parameter type: <Sys::TimeIOInMinsRef1970> - the time (yyyy-mm-dd:hour:minutes)	the on-schedule activation time of OSWP, range:[1970-01-01:00:00:00,2035-12-31-12-31] <i>This element is only shown in detail mode.</i>
on-schedule-act-status	Parameter type: <SwMngt::OswpOnScheduleTreatedStatus> (unplanned planned activate-triggered activate-aborted) Possible values: - unplanned : on-schedule activation not planned - planned : on-schedule activation planned - activate-triggered : last on-schedule activation triggered - activate-aborted : last on-schedule activation aborted	the status of on-schedule activation of OSWP <i>This element is only shown in detail mode.</i>

136.5 Software Management Upgrade Plan

Command

Command Description

Views the upgrade plan with the list of planned boards to be upgraded chronologically, depending on the software replacement mode. The output won't change once an OSWP is activated.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt upgrade-plan [ phase <SignedInteger> ] [ slot <Equipm::NtLtSlotIndex> ]
```

Command Parameters

Table 136.5-1 "Software Management Upgrade Plan Command" Resource Parameters

Resource Identifier	Type	Description
phase	Parameter type: <SignedInteger> Format: - a signed integer	The phase id
slot	Parameter type: <Equipm::NtLtSlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	The slot id within the phase

Command Output

Table 136.5-2 "Software Management Upgrade Plan Command" Display parameters

Specific Information		
name	Type	Description
planned-type	Parameter type: <Equipm::BrdType> Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	The actual type of the board <i>This element is always shown.</i>
upgrade-action	Parameter type: <SwMgnt::UpgradePlanUpgradeAction> (preloading-lts via-standby-nt via-active-nt) Possible values: - preloading-lts : NT is preloading the LT board(s) - via-standby-nt : This board will be upgraded via the standby NT - via-active-nt : This board will be upgraded via the active NT	The action associated with this entry <i>This element is always shown.</i>
protected-ports	Parameter type: <SignedInteger> - a signed integer	The number of protected ports for the slot <i>This element is always shown.</i>

136.6 Software Management Upgrade Status Command

Command Description

Views the status table of the list of planned boards in chronological order with its upgrade status, during or after OSWP activation.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt upgrade-status [ phase <SignedInteger> ] [ slot <Equipm::NtLtSlotIndex> ]
```

Command Parameters

Table 136.6-1 "Software Management Upgrade Status Command" Resource Parameters

Resource Identifier	Type	Description
phase	Parameter type: <SignedInteger> Format: - a signed integer	The phase id
slot	Parameter type: <Equipm::NtLtSlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	The slot id within the phase

Command Output

Table 136.6-2 "Software Management Upgrade Status Command" Display parameters

Specific Information		
name	Type	Description
planned-type	Parameter type: <Equipm::BrdType> Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	The actual type of the board <i>This element is always shown.</i>
upgrade-action	Parameter type: <SwMgmt::UpgradeStatusUpgradeAction> (preloading-lts via-standby-nt via-active-nt) Possible values: - preloading-lts : NT is preloading the LT board(s) - via-standby-nt : This board will be upgraded via the standby NT - via-active-nt : This board will be upgraded via the active NT	The action associated with this entry <i>This element is always shown.</i>
protected-ports	Parameter type: <SignedInteger> - a signed integer	The number of protected ports for the slot <i>This element is always shown.</i>
upgrade-state	Parameter type: <SwMgmt::UpgradeStatusUpgradeState> (not-started ongoing failed completed) Possible values: - not-started : The upgrade actions still need to start - ongoing : The upgrade action for this board is ongoing - failed : The upgrade of this board has finished with error - completed : The upgrade of this board has finished	The current state of the board <i>This element is always shown.</i>

136.7 Software Package Status Command

Command Description

This command displays the parameters of the dynamic SWP table, which represent the SWPs that belong to at least one of the OSWPs available in the system.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt swp [ (name) ]
```

Command Parameters

Table 136.7-1 "Software Package Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a printable string - length: x<=32	index to the swm-swp table

Command Output

Table 136.7-2 "Software Package Status Command" Display parameters

Specific Information		
name	Type	Description
type	Parameter type: <SwMngt::swmSwpType> (asam-core voice-gateway ip-server) Possible values: - asam-core : asam core - voice-gateway : voice gateway - ip-server : ip server	Specifies the type of the software package. <i>This element is always shown.</i>
dbase-ver-no	Parameter type: <SwMngt::dBVersionNumber> - a printable string - length: x<=32	Specifies the version number of the database that is compatible with the software package. <i>This element is always shown.</i>
primary-file-id	Parameter type: <SwMngt::serverIdv6> (<Ip::V4Address> ipv6 : <Ip::InetAddressType>) Possible values: - ipv6 : Ipv6 address (only for management IPv6 supported	Specifies the IP address of the TFTP/SFTP server where the software package can be found. <i>This element is always shown.</i>

name	Type	Description
	boards) Field type <Ip::V4Address> - IPv4-address Field type <Ip::InetAddressType> - IPv6 address	
secondary-file-id	Parameter type: <SwMngt::serverIdv6> (<Ip::V4Address> ipv6 : <Ip::InetAddressType>) Possible values: - ipv6 : IPv6 address (only for management IPv6 supported boards) Field type <Ip::V4Address> - IPv4-address Field type <Ip::InetAddressType> - IPv6 address	Specifies the IP address of a possible second TFTP/SFTP server where the software package can be found. <i>This element is always shown.</i>

136.8 File Status Command

Command Description

This command displays information about the relationships between the files known by the system and the available OSWPs.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt swp-disk-file [ (name) [ file-name <SwMngt::swpContainsFileName> ] [ file-board-type
<SwMngt::swpBoardType> ] ]
```

Command Parameters

Table 136.8-1 "File Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a printable string - length: x<=32	index to the Swm_Contains_File table
file-name	Parameter type: <SwMngt::swpContainsFileName> Format: - a printable string - length: x<=32	index to the Swm_Contains_File table
file-board-type	Parameter type: <SwMngt::swpBoardType> Format: - a printable string - length: x<=21	index to the Swm_Contains_File table

Command Output

Table 136.8-2 "File Status Command" Display parameters

Specific Information		
name	Type	Description
file-format	Parameter type: <SwMngt::fileFormat> (tar lz77 ascii exe coff) Possible values: - tar : file format is tar	Specifies the format of the file. <i>This element is always shown.</i>

name	Type	Description
	- lz77 : file format is lz77 - ascii : file format is ascii - exe : file format is exe - coff : file format is coff	
available-status	Parameter type: <SwMngt::availableStatus> (available not-available) Possible values: - available : the file is available - not-available : the file is not available	Specifies whether the file is available on the file disk or not. <i>This element is always shown.</i>
file-priority	Parameter type: <SwMngt::filePriority> (part-min-set no-part-min-set) Possible values: - part-min-set : part min set - no-part-min-set : no part min set	Specifies whether the file belongs to the minimum set of the related OSWPs. <i>This element is only shown in detail mode.</i>
file-size	Parameter type: <SwMngt::SwmFileSize> - specifies the size of the file - unit: bytes	Specifies the size of the file. <i>This element is only shown in detail mode.</i>
file-type	Parameter type: <SwMngt::SwmFileType> (special-file file-type-a file-type-b) Possible values: - special-file : special file type - file-type-a : file type A - file-type-b : file type B	Specifies the type of the file. <i>This element is only shown in detail mode.</i>
file-decompression	Parameter type: <SwMngt::swmFileDecompression> (decompressed no-decompressed) Possible values: - decompressed : file is decompressed - no-decompressed : file is compressed	Specifies whether the file must be decompressed or not before being sent to the applicable boards. <i>This element is only shown in detail mode.</i>

136.9 Upload/Download Status Command

Command Description

This command displays the upload and download parameters.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> show software-mngt upload-download

Command Output

Table 136.9-2 "Upload/Download Status Command" Display parameters

Specific Information		
name	Type	Description
disk-space	Parameter type: <SwMngt::TotalSpaceOnDisk> - total space on file disk that is reserved for storage - unit: bytes	The total space on the file disk that is reserved for the storage of files. <i>This element is always shown.</i>
free-space	Parameter type: <SwMngt::FreeSpaceOnDisk> - total space on the file disk that is still available - unit: bytes	Specifies the space on the file disk that is still available for the storage of files. <i>This element is always shown.</i>
download-progress	Parameter type: <SwMngt::downloadProgress> (download-ongoing download-success download-fail) Possible values: - download-ongoing : download ongoing - download-success : download finished and successfull - download-fail : download finished but failed	Specifies the current status of the database download process. <i>This element is always shown.</i>
download-error	Parameter type: <SwMngt::downloadError> (not-defined file-not-found access-violation diskfull-alloc-exced illegal-tftp-operation unknown-transfer-id file-exists no-such-user corrupted-database system-restart no-error	Specifies the reason in case of a database download failure. <i>This element is always shown.</i>

name	Type	Description
	iss-cksm-fail issprot-cksm-fail another-swdb-on tftp-busy) Possible values: - not-defined : the error is not defined - file-not-found : file is not found - access-violation : access violation - diskfull-alloc-exced : disk is full - illegal-tftp-operation: illegal TFTP operation - unknown-transfer-id : transfer id is unknown - file-exists : file is already existing - no-such-user : no such user - corrupted-database : corrupted/incompleted database - system-restart : system restart - no-error : no error in download - iss-cksm-fail : checksum-failed for iss.conf - issprot-cksm-fail : checksum-failed for issprot.conf - another-swdb-on : another swdb progress ongoing - tftp-busy : tftp client is occupied by other task	
upload-progress	Parameter type: <SwMngt::uploadProgress> (upload-ongoing upload-success upload-fail) Possible values: - upload-ongoing : upload ongoing - upload-success : upload finished and successfull - upload-fail : upload finished but failed	Specifies the current status of the database upload process. <i>This element is always shown.</i>
upload-error	Parameter type: <SwMngt::uploadError> (not-defined file-not-found access-violation diskfull-alloc-exced illegal-tftp-operation unknown-transfer-id file-exists no-such-user database-not-avail system-restart no-error another-swdb-on authentication-failed tftp-busy) Possible values: - not-defined : the error is not defined - file-not-found : file is not found - access-violation : access violation - diskfull-alloc-exced : disk is full - illegal-tftp-operation: illegal TFTP operation - unknown-transfer-id : transfer id is unknown - file-exists : file is already existing - no-such-user : no such user - database-not-avail : selected database not available - system-restart : system restart - no-error : no error in download - another-swdb-on : another swdb progress ongoing - authentication-failed : authentication failed	Specifies the reason in case of a database upload failure. <i>This element is always shown.</i>

name	Type	Description
	- tftp-busy : tftp client is occupied by other task	
auto-activate-error	Parameter type: <SwMngt::DbAutoActErr> (not-defined no-error another-swdb-on no-compat-oswp unknown-err) Possible values: - not-defined : the error is not defined - no-error : no error in download - another-swdb-on : another swdb process ongoing - no-compat-oswp : no compatible OSWP - unknown-err : unknown error during activation	the reason the automatic activation of the Database failed <i>This element is always shown.</i>

136.10 Upload/Download Sub-directory Status Command

Command Description

This command displays the upload and download parameters.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt upload-download-dir
```

136.11 Software Version For ANSI Status Command

Command Description

This command shows the Software version for ANSI market.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> show software-mngt version ansi

Command Output

Table 136.11-2 " Software Version For ANSI Status Command " Display parameters

Specific Information		
name	Type	Description
isam-feature-group	Parameter type: <SwMngt::swAnsiVersion> - the ANSI market version - length: x<=50	the ansi market version <i>This element is always shown.</i>

136.12 Software Version For ETSI Status Command

Command Description

This command shows the Software version for ETSI market.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> show software-mngt version etsi

Command Output

Table 136.12-2 "Software Version For ETSI Status Command" Display parameters

Specific Information		
name	Type	Description
isam-release	Parameter type: <SwMngt::swEtsiVersion> - the ETSI market version - length: x<=50	the ETSI market version <i>This element is always shown.</i>

136.13 TLS CA file download Status Command

Command Description

This command displays the TLS CA file and download status.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt tls-cafile [ (tls-cafile-name) ]
```

Command Parameters

Table 136.13-1 "TLS CA file download Status Command" Resource Parameters

Resource Identifier	Type	Description
(tls-cafile-name)	Format: - string representing the TLS CA file name - length: 1<=x<=13	name of TLS CA file

Command Output

Table 136.13-2 "TLS CA file download Status Command" Display parameters

Specific Information		
name	Type	Description
index	Parameter type: <SwMngt::CAFileIndex> - the TLS CA file table index - range: [1...16]	show index of TLS CA file <i>This element is always shown.</i>
download-progress	Parameter type: <SwMngt::downloadProgress> (download-ongoing download-success download-fail) Possible values: - download-ongoing : download ongoing - download-success : download finished and successfull - download-fail : download finished but failed	show progress of downloading TLS CA file <i>This element is always shown.</i>
download-error	Parameter type: <SwMngt::CAFileDldError> (not-defined file-not-found access-violation diskfull-alloc-exced illegal-tftp-operation unknown-transfer-id	specifies the reason in case of a tls ca file download failure <i>This element is always shown.</i>

name	Type	Description
	no-such-user cafile-error wrong-cafile-size connection-time-out no-error) Possible values: - not-defined : the error is not defined - file-not-found : file is not found - access-violation : access violation - diskfull-alloc-exced : disk is full - illegal-tftp-operation: illegal TFTP operation - unknown-transfer-id : transfer id is unknown - no-such-user : no such user - cafile-error : TLS CA file error - wrong-cafile-size : wrong CA file size - connection-time-out : connection time out - no-error : no error in download	
active-status	Parameter type: <SwMngt::CAFileStatus> (new activated) Possible values: - new : The active-status of TLS CA file is new - activated : The active-status of TLS CA file is activated	show active-status of TLS CA file activated <i>This element is always shown.</i>

136.14 Lightspan Migration Status Command

Command Description

This command shows the status of Lightspan Migration Status.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt ls-migration
```

Command Output

Table 136.14-2 "Lightspan Migration Status Command" Display parameters

Specific Information		
name	Type	Description
package	Parameter type: <SwMngt::lsMigrPkgFile> - name - length: 1<=x<=256	the status of the migration package <i>This element is always shown.</i>
package-status	Parameter type: <SwMngt::lsMigrPkgStatus> (idle downloading invalid download-complete) Possible values: - idle : package file download idle - downloading : package file downloading - invalid : package file invalid - download-complete : package file download complete	the status of the migration package <i>This element is always shown.</i>
default-config	Parameter type: <SwMngt::lsMigrConfigFile> - name - length: 1<=x<=256	the status of default config file <i>This element is always shown.</i>
default-config-status	Parameter type: <SwMngt::lsMigrConfigFileStatus> (idle downloading invalid download-complete) Possible values: - idle : config file download idle - downloading : config file downloading - invalid : config file invalid - download-complete : config file downloadcomplete	the status of default config file <i>This element is always shown.</i>
migration-status	Parameter type: <SwMngt::lsMigrStatus> (not-ready	the status of migration status <i>This element is always shown.</i>

136 Software Status Commands

name	Type	Description
	ready activating activating-failed) Possible values: - not-ready : lightspan migration not ready - ready : lightspan migration ready - activating : lightspan migration activating - activating-failed : lightspan migration activating failed	

136.15 lacm OAM DB save Status Command

Command Description

This command displays the progress of lacm OAM DB save.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt oam-save-protected
```

Command Output

Table 136.15-2 "Iacm OAM DB save Status Command" Display parameters

Specific Information		
name	Type	Description
oam-save-progress	Parameter type: <SwMngt::oamSaveProgress> (oam-save-ongoing oam-save-success oam-save-fail) Possible values: - oam-save-ongoing : oam save ongoing - oam-save-success : oam save finished and successfull - oam-save-fail : oam save finished but failed	Specifies the current status of oam db save process. <i>This element is always shown.</i>
oam-save-error	Parameter type: <SwMngt::oamSaveError> (no-error db-size-exceed dm-dir-null db-internal-err swm-busy sync-busy) Possible values: - no-error : no error - db-size-exceed : oam db size exceeds 10M bytes - dm-dir-null : dm directory is NULL - db-internal-err : dm internal error - swm-busy : swm busy - sync-busy : db sync busy	Specifies the error in case of oam db save failure. <i>This element is always shown.</i>

136.16 Upload/Download Sw ONTSw Status

Command

Command Description

This command displays the upload and download parameters.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> show software-mngt upload-download-info

Command Output

Table 136.16-2 "Upload/Download Sw ONTSw Status Command" Display parameters

Specific Information		
name	Type	Description
free-sw-space	Parameter type: <SwMngt::FreeSpaceOnSwDisk> - total space on the file Sw disk that is still available - unit: bytes	Specifies the space on the file /Sw disk that is still available for the storage of files. <i>This element is always shown.</i>
free-ontsw-space	Parameter type: <SwMngt::FreeSpaceOnONTSwDisk> - total space on the file ONTSw disk that is still available - unit: bytes	Specifies the space on the file /ONT/SW disk that is still available for the storage of files. <i>This element is always shown.</i>

137- Software Load Validation Commands

137.1 Software Load Validation Command Tree	137-6138
137.2 Overall Software Load Validation Status Command	137-6139
137.3 Software Load Validation Root Certificate Display Command	137-6141
137.4 Software Load Validation Status of SWP files Command	137-6142

137.1 Software Load Validation Command Tree

Description

This chapter gives an overview of nodes that are handled by "Software Load Validation Commands".

Command Tree

```
----show
  ----software-mngt
    ----sw-load-valid
      ----oswp-status
        - (index)
      ----oswp-root-certificate
        - (index)
      ----file-status
        - (name)
        - file-name
        - file-board-type
```

137.2 Overall Software Load Validation Status Command

Command Description

This command displays various Sw Load Validation states and attributes of OSWP.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt sw-load-valid oswp-status [ (index) ]
```

Command Parameters

Table 137.2-1 "Overall Software Load Validation Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - id of one of the two oswps - range: [1...2]	index to the swm oswp table

Command Output

Table 137.2-2 "Overall Software Load Validation Status Command" Display parameters

Specific Information		
name	Type	Description
name	Parameter type: <SwMngt::swmOswpName> - The name of OSWP without path - range: [a-zA-Z0-9-_/.*] - length: 1<=x<=160	The name of OSWP without path <i>This element is always shown.</i>
status	Parameter type: <SwMngt::SwLoadValidStatus> (not-executed success failure in-progress) Possible values: - not-executed : SW Load Validation is not executed - success : SW Load Validation success - failure : SW Load Validation failed - in-progress : SW Load Validation in-progress	OSWP Sw Load Validation Status <i>This element is always shown.</i>
error-info	Parameter type: <SwMngt::SwLoadErrInfo>	OSWP Sw Load Validation Error

137 Software Load Validation Commands

name	Type	Description
	- string representing sw load validation error information - length: $1 \leq x \leq 12$	Information <i>This element is always shown.</i>

137.3 Software Load Validation Root Certificate

Display Command

Command Description

This command displays root certificate used for Sw Load Validation of OSWP. An Copy of this certificate shall be obtained on request from Nokia for verification. Nokia shall share this through a digitally signed e-mail

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt sw-load-valid oswp-root-certificate [ (index) ]
```

Command Parameters

Table 137.3-1 "Software Load Validation Root Certificate Display Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - id of one of the two oswps - range: [1...2]	index to the swm oswp table

Command Output

Table 137.3-2 "Software Load Validation Root Certificate Display Command" Display parameters

Specific Information		
name	Type	Description
root-certificate	Parameter type: <PrintableString> - printable string	content of OSWP root certificate <i>This element is only shown in detail mode.</i>

137.4 Software Load Validation Status of SWP files Command

Command Description

This command displays Sw Load Validation status for individual files of SWP.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> show software-mngt sw-load-valid file-status [ (name) [ file-name <SwMngt::swpContainsFileName> ] [
file-board-type <SwMngt::swpBoardType> ] ]
```

Command Parameters

Table 137.4-1 "Software Load Validation Status of SWP files Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a printable string - length: x<=32	index to the Swm_Contains_File table
file-name	Parameter type: <SwMngt::swpContainsFileName> Format: - a printable string - length: x<=32	index to the Swm_Contains_File table
file-board-type	Parameter type: <SwMngt::swpBoardType> Format: - a printable string - length: x<=21	index to the Swm_Contains_File table

Command Output

Table 137.4-2 "Software Load Validation Status of SWP files Command" Display parameters

Specific Information		
name	Type	Description
verify-status	Parameter type: <SwMngt::verifyStatus> (success failure in-progress not-executed not-applicable)	Specifies whether the file is digitally verified. <i>This element is always shown.</i>

name	Type	Description
	Possible values: - success : the digital file verification succeeded - failure : the digital file verification failed - in-progress : the digital file verification is in-progress - not-executed : the digital file verification is not executed - not-applicable : the digital file verification is not applicable for type-s file or non own board NT files	
available-status	Parameter type: <SwMngt::availableStatus> (available not-available) Possible values: - available : the file is available - not-available : the file is not available	Specifies whether the file is available on the file disk or not. <i>This element is always shown.</i>

138- CDE Status Commands

138.1 CDE Status Command Tree	138-6145
138.2 CDE download Status Command	138-6146

138.1 CDE Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "CDE Status Commands".

Command Tree

```
----show
  ----software-mngt
    ----cdeprof
      ----dldstatus
```

138.2 CDE download Status Command

Command Description

This command displays the CDE profile and download status.

User Level

The command can be accessed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> show software-mngt cdeprof dldstatus

Command Output

Table 138.2-2 "CDE download Status Command" Display parameters

Specific Information		
name	Type	Description
server-ip	Parameter type: <SwMngt::serverId> - IPv4-address	show file server Ip address <i>This element is always shown.</i>
path	Parameter type: <SwMngt::cdePath> - path for the cde(example: /path_to_cde/file_name) - range: [a-zA-Z0-9-_/():] - length: 1<=x<=128	show the cde file downloading path <i>This element is always shown.</i>
download-progress	Parameter type: <SwMngt::CDETarDldProgress> (download-ongoing download-success download-fail) Possible values: - download-ongoing : download ongoing - download-success : download finished and successfull - download-fail : download finished but failed	show the cde file download progress <i>This element is always shown.</i>
download-error	Parameter type: <SwMngt::CDETarDldError> (not-defined file-not-found access-violation diskfull-alloc-exced illegal-tftp-operation no-such-user file-name-error corrupted-cde server-ip-error cde-file-error no-error) Possible values: - not-defined : the error is not defined	specifies the reason in case of a cde download failure <i>This element is always shown.</i>

name	Type	Description
	- file-not-found : file is not found - access-violation : access violation - diskfull-alloc-exced : disk is full - illegal-tftp-operation: illegal TFTP operation - no-such-user : no such user - file-name-error : the CDE profile name error - corrupted-cde : corrupted/incompleted CDE profile - server-ip-error : input the server ip address - cde-file-error : CDE file error - no-error : no error in download	

139- IGMP Status Commands

139.1 IGMP Status Command Tree	139-6149
139.2 IGMP System Status Command	139-6150
139.3 IGMP Channel Sources Status Command	139-6152
139.4 IGMP Channel Miscellaneous Status Command	139-6155
139.5 IGMP Channel Protocol Status Command	139-6158
139.6 IGMP package to multicast source Command	139-6162
139.7 IGMP Group to Package Status Command	139-6163
139.8 Show Multicast Source Statistics Command	139-6164
139.9 Show Multicast Channel Statistics Command	139-6166
139.10 IGMP Module Counter Status Command	139-6168
139.11 IGMP Module Time Status Command	139-6171
139.12 IGMP Module Miscellaneous Status Command	139-6173
139.13 IGMP System Status Command	139-6175

139.1 IGMP Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "IGMP Status Commands".

Command Tree

```

----show
  ----igmp
    ----system
    ----channel
      ----counter
        - (port)
      ----miscellaneous
        - (port)
      ----protocol
        - (port)
    ----package-to-src
      - (package-id)
    ----grp-to-package
      - (grp-ip-addr)
      - src-ip-addr
      - vlan-id
    ----X module-mcast-src
      - (slot)
      - mcast-addr
    ----module-mcast-channel
      - (slot)
      - grp-ip-addr
      - src-ip-addr
      - vlan-id
    ----module
      ----counter
        - (slot-index)
      ----time
        - (slot-index)
      ----miscellaneous
        - (slot-index)
    ----mcast-svc-context

```

139.2 IGMP System Status Command

Command Description

This command displays the IGMP system-related parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp system
```

Command Output

Table 139.2-2 "IGMP System Status Command" Display parameters

Specific Information		
name	Type	Description
startup-query-intvl	Parameter type: <Igmp::SysStartUpQueryInt> - interval at which general membership queries transmitted - unit: sec - range: [1...3175]	The interval between general membership queries sent on startup. <i>This element is always shown.</i>
startup-query-count	Parameter type: <Igmp::SystemStartupQueryCount> - queries sent out on startup separated by query interval - range: [1...10]	The number of queries sent out on startup separated by the query interval. <i>This element is always shown.</i>
stats-intvl	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This statistics indicates the network time of when the system-wide statistics were last reset. <i>This element is always shown.</i>
src-ipaddr	Parameter type: <Ip::V4Address> - IPv4-address	This object specifies the source IP address which is contained in every multicast IP datagrams transmitted on all IGMP control channels. <i>This element is always shown.</i>
router-present-timeout	Parameter type: <SignedInteger> - a signed integer	When the system acts as host on the network side of the IGMP proxy, this value is the time how long the system shall wait after hearing a Version 1 Query before it shall send any IGMPv2 messages. <i>This element is always shown.</i>
grp-memb-intvl	Parameter type: <SignedInteger>	The interval that must pass before

name	Type	Description
	- a signed integer	the system decides there are no more members of a group on a network. <i>This element is always shown.</i>

139.3 IGMP Channel Sources Status Command

Command Description

This command displays the IGMP channel source.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp channel counter [ (port) ]
```

Command Parameters

Table 139.3-1 "IGMP Channel Sources Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	<code><Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / voip :</code> <code><Eqpt::UnstackedVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / vuni :</code> <code><Eqpt::UnstackedVlan></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / voip</code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / vuni</code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> :</code> <code><Eqpt::UnstackedVlan></code> <code> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /</code> <code><Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId></code> <code> vlan:ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan:ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> :</code> <code><Eqpt::UnstackedVlan>)</code> Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier	

Resource Identifier	Type	Description
	Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 139.3-2 "IGMP Channel Sources Status Command" Display parameters

Specific Information		
name	Type	Description
noperm-join	Parameter type: <Counter> - 32 bit counter	no of times perm bitmap failure has occurred. <i>This element is always shown.</i>
bitrate-fail	Parameter type: <Counter> - 32 bit counter	no of times IGMP join message failed <i>This element is always shown.</i>
inval-classd	Parameter type: <Counter> - 32 bit counter	indicates the count of IP address states <i>This element is always shown.</i>
numsec-ovld-protappl	Parameter type: <Counter> - 32 bit counter	no of 1sec int for overload protection has been applied <i>This element is always shown.</i>
num-fail	Parameter type: <Counter> - 32 bit counter	Indicates the count of failure join <i>This element is always shown.</i>
sysnum-fail	Parameter type: <Counter> - 32 bit counter	Indicates the count of failure IGMP join <i>This element is always shown.</i>
sysrate-fail	Parameter type: <Counter> - 32 bit counter	Indicates the count of failure IGMP join because of low Bandwidth <i>This element is always shown.</i>

139.4 IGMP Channel Miscellaneous Status Command

Command Description

This command displays the IGMP channel source.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp channel miscellaneous [ (port) ]
```

Command Parameters

Table 139.4-1 "IGMP Channel Miscellaneous Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	<Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values:	

Resource Identifier	Type	Description
	- voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 139.4-2 "IGMP Channel Miscellaneous Status Command" Display parameters

Specific Information		
name	Type	Description
curr-num-group	Parameter type: <Gauge> - gauge	current group number in this port(ADSL,PVC) <i>This element is always shown.</i>
curr-preview-num	Parameter type: <Counter> - 32 bit counter	count of prev mcast grp that igmp channel joins currently <i>This element is always shown.</i>
curr-uncfg-num	Parameter type: <Counter> - 32 bit counter	current unconfig group number in this port(ADSL,PVC) <i>This element is always shown.</i>

139.5 IGMP Channel Protocol Status Command

Command Description

This command shows the IGMP protocol statistics for an IGMP channel

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp channel protocol [ (port) ]
```

Command Parameters

Table 139.5-1 "IGMP Channel Protocol Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description

Resource Identifier	Type	Description
	Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 139.5-2 "IGMP Channel Protocol Status Command" Display parameters

Specific Information		
name	Type	Description
tx-gmq short name: tx/gmq	Parameter type: <Counter> - 32 bit counter	number of general queries transmitted on user interface <i>This element is always shown.</i>
tx-gsq short name: tx/gsq	Parameter type: <Counter> - 32 bit counter	number of group specific queries transmitted <i>This element is always shown.</i>
tx-gssq short name: tx/gssq	Parameter type: <Counter> - 32 bit counter	number of group-source specific queries transmitted <i>This element is always shown.</i>
rx-v1-req short name: rx-req/v1	Parameter type: <Counter> - 32 bit counter	number of V1 membership report received <i>This element is always shown.</i>
rx-v2-req short name: rx-req/v2	Parameter type: <Counter> - 32 bit counter	number of V2 membership report received <i>This element is always shown.</i>
rx-v3-req short name: rx-req/v3	Parameter type: <Counter> - 32 bit counter	number of V3 membership report received <i>This element is always shown.</i>
rx-v2-leaves	Parameter type: <Counter> - 32 bit counter	number of leave messages report received <i>This element is only shown in detail mode.</i>
rx-valid-message short name: rx-msg/ok	Parameter type: <Counter> - 32 bit counter	number of valid IGMP packets received <i>This element is always shown.</i>
rx-invalid-message short name: rx-msg/nok	Parameter type: <Counter> - 32 bit counter	number of invalid IGMP packets received <i>This element is always shown.</i>
rx-unknown-message short name:	Parameter type: <Counter> - 32 bit counter	number of unknown IGMP packets received

name	Type	Description
rx-msg/unknown		<i>This element is always shown.</i>
rx-bad-length	Parameter type: <Counter> - 32 bit counter	number of bad length IGMP packet received/dropped <i>This element is only shown in detail mode.</i>
rx-bad-ip-checksum	Parameter type: <Counter> - 32 bit counter	number of wrong IP checksum IGMP packet received/dropped <i>This element is only shown in detail mode.</i>
rx-bad-igmp-checksum	Parameter type: <Counter> - 32 bit counter	number of wrong IGMP checksum IGMP packets received/dropped <i>This element is only shown in detail mode.</i>
rx-wrong-src-ip-addr	Parameter type: <Counter> - 32 bit counter	number of IGMP signals received where the src-ip-addr of the multicast channel violates the ASM/SSM rules <i>This element is only shown in detail mode.</i>

139.6 IGMP package to multicast source Command

Command Description

This command shows the IGMP package to multicast source parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp package-to-src [ (package-id) ]
```

Command Parameters

Table 139.6-1 "IGMP package to multicast source Command" Resource Parameters

Resource Identifier	Type	Description
(package-id)	Format: - index of the package - range: [1...1024]	name used to identify the packages

Command Output

Table 139.6-2 "IGMP package to multicast source Command" Display parameters

Specific Information		
name	Type	Description
group-address	Parameter type: <Ip::V4Address> - IPv4-address	the multicast group address <i>This element is always shown.</i>
source-address	Parameter type: <Ip::V4Address> - IPv4-address	the multicast group source address <i>This element is always shown.</i>
vlan-id	Parameter type: <Igmp::SrcVlanId> - the multicast vlan id - range: [1...4094]	the multicast vlan id <i>This element is always shown.</i>

139.7 IGMP Group to Package Status Command

Command Description

This command shows the IGMP group to package parameters

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp grp-to-package [ (grp-ip-addr) [ src-ip-addr <Ip::V4Address> ] [ vlan-id <Igmp::SrcVlanId> ] ]
```

Command Parameters

Table 139.7-1 "IGMP Group to Package Status Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr)
vlan-id	Parameter type: <Igmp::SrcVlanId> Format: - the multicast vlan id - range: [1...4094]	identifies a particular vlan id

Command Output

Table 139.7-2 "IGMP Group to Package Status Command" Display parameters

Specific Information		
name	Type	Description
index	Parameter type: <Igmp::PackageIndex> - index of the package - range: [1...1024]	index used to identify the packages <i>This element is always shown.</i>

139.8 Show Multicast Source Statistics Command

Command Description

Obsolete command.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp module-mcast-src [ (slot) [ mcast-addr <Igmp::MulticastAddress> ] ]
```

Obsolete command.

Command Parameters

Table 139.8-1 "Show Multicast Source Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical SlotId
mcast-addr	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	mcast src address in network-byte order(big-endian)

Command Output

Table 139.8-2 "Show Multicast Source Statistics Command" Display parameters

Specific Information		
name	Type	Description
peak-nbr-sub-channels short name: pk-nr-sub-chan	Parameter type: <Counter> - 32 bit counter	The peak number of subscribed IGMP channels which have members connected to the source since the last statistics reset. It is only for those groups configured in multicast source table. <i>This element is always shown.</i>

name	Type	Description
peak-time	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	The network time indicating when the peak number of subscribed IGMP channels for the source occurred. It is only for those groups configured in Multicast Source Table. <i>This element is always shown.</i>
curr-subs-channels	Parameter type: <Gauge> - gauge	Indicates the current number of subscribed IGMP channels for the source. <i>This element is only shown in detail mode.</i>
nbr-connect-fail short name: nr-con-fail	Parameter type: <Counter> - 32 bit counter	Indicates the number of times that an attempt to create a multicast connection fails. <i>This element is always shown.</i>
user-success-join	Parameter type: <Counter> - 32 bit counter	indicates the number of times that users successfully joined a group. <i>This element is always shown.</i>

139.9 Show Multicast Channel Statistics Command

Command Description

This command shows the distribution of statistics information maintained by IGMP channels. The operator should know the slot index (the range is 1/1/0 to 1/1/18), the class D address (the range is 224.0.0.3 to 239.255.255.255) and the source-ip-addr of the mcast server. The following statistics objects measure the popularity of a multicast channel (when and how much the multicast channel is being watched by end users). The term "subscribe" in this context means how many IGMP channels have a group member connected to this multicast source.

- **peak-nbr-subs-channels:** This statistic indicates the peak number of subscribed IGMP channels for which leaf multicast VCLs have connected to the source since the last statistics reset.
- **peak-time:** This statistic indicates the network time, in seconds, when the peak number of subscribed IGMP channels for the source occurred.
- **curr-subs-channels:** This statistic indicates the current number of subscribed IGMP channels for the source.
- **connect-fail-counter:** This statistic indicates the number of times that an attempt to create a multicast connection has failed and the number of times that a multicast connection failure has occurred. The reason for failure is likely because there is insufficient bandwidth in the internal backplane of the Nokia 7302 or 7330 ISAM FTTN to transport the data traffic from the root endpoint of the network interface to the leaf endpoint of the access interface.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp module-mcast-channel [ (slot) [ grp-ip-addr <Igmp::MulticastAddress> ] [ src-ip-addr <Ip::V4Address> ] [ vlan-id <Igmp::McastChannelVlan> ] ]
```

Command Parameters

Table 139.9-1 "Show Multicast Channel Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical SlotId
grp-ip-addr	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address>	ip address of the multicast server

Resource Identifier	Type	Description
	Format: - IPv4-address	originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr)
vlan-id	Parameter type: <Igmp::McastChannelVlan> Format: - vlan id for multicast - range: [1...4093]	vlanid of the multicast channel which is configured in it

Command Output

Table 139.9-2 "Show Multicast Channel Statistics Command" Display parameters

Specific Information		
name	Type	Description
peak-nbr-sub-channels short name: pk-nr-sub-ch	Parameter type: <Counter> - 32 bit counter	The peak number of subscribed IGMP channels which have members connected to the source since the last statistics reset. It is only for those groups configured in Multicast Channel table. <i>This element is always shown.</i>
peak-time	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	The network time indicating when the peak number of subscribed IGMP channels for the source occurred. It is only for those groups configured in Multicast Channel Table. <i>This element is always shown.</i>
curr-sub-channels	Parameter type: <Gauge> - gauge	Indicates the current number of subscribed IGMP channels for the multicast stream/channel. <i>This element is only shown in detail mode.</i>
nbr-connect-fail short name: nr-con-nok	Parameter type: <Counter> - 32 bit counter	Indicates the number of times that an attempt to create a multicast connection fails. <i>This element is always shown.</i>
user-success-join	Parameter type: <Counter> - 32 bit counter	indicates the number of times that users successfully joined a group. <i>This element is only shown in detail mode.</i>

139.10 IGMP Module Counter Status Command

Command Description

This command displays the IGMP module counters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp module counter [ (slot-index) ]
```

Command Parameters

Table 139.10-1 "IGMP Module Counter Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical slot id

Command Output

Table 139.10-2 "IGMP Module Counter Status Command" Display parameters

Specific Information		
name	Type	Description
total-msg	Parameter type: <Counter> - 32 bit counter	The total number of messages received from users, including IGMP messages and invalid messages. <i>This element is always shown.</i>
total-igmp-msg	Parameter type: <Counter> - 32 bit counter	The total number of IGMP messages, which includes join and leave requests from users, (both successful and unsuccessful). <i>This element is always shown.</i>
total-req	Parameter type: <Counter>	The total number of join requests

name	Type	Description
	- 32 bit counter	from users, which includes successful and unsuccessful attempts. <i>This element is always shown.</i>
success-req	Parameter type: <Counter> - 32 bit counter	The total number of successful join requests from users which includes new joins (which make a new connection) and re-joins (which already have a connection). <i>This element is always shown.</i>
unsuccess-req	Parameter type: <Counter> - 32 bit counter	The total number of unsuccessful new join requests from users. The failures could be due to the following reasons: permission bitmap failure, bitrate failure, lack of resource or invalid group address. <i>This element is only shown in detail mode.</i>
total-leave-req	Parameter type: <Counter> - 32 bit counter	The total number of leave requests from users. <i>This element is only shown in detail mode.</i>
total-inval-msg	Parameter type: <Counter> - 32 bit counter	The total number of invalid messages from users. These messages could be invalid for the following reasons: invalid IGMP message type, invalid IGMP message CRC, invalid IGMP message size, non-IGMP frame received, unexpected IGMP Query (GSQ or GMQ) received, RFC 1483 errors, MAC layer errors, or IP layer errors. <i>This element is only shown in detail mode.</i>
num-connects	Parameter type: <Counter> - 32 bit counter	The total number of connects due to successful new IGMP join requests from users. <i>This element is always shown.</i>
num-disconnects	Parameter type: <Counter> - 32 bit counter	The total number of disconnects to users. They can be due to GSQ or GMQ timer expiry or the triggering of fast channel changes. <i>This element is only shown in detail mode.</i>
peak-connects-sec	Parameter type: <Counter> - 32 bit counter	The peak number of multicast branch connections performed per second since the statistics were last cleared. <i>This element is only shown in detail mode.</i>
peak-disconnects-sec	Parameter type: <Counter> - 32 bit counter	The peak number of disconnects to users performed per second. <i>This element is only shown in</i>

139 IGMP Status Commands

name	Type	Description
		<i>detail mode.</i>
peak-msg-sec	Parameter type: <Counter> - 32 bit counter	The peak number of messages received from users per second. <i>This element is only shown in detail mode.</i>
gmq	Parameter type: <Counter> - 32 bit counter	The total number of GMQ requests from network. <i>This element is only shown in detail mode.</i>
gsq	Parameter type: <Counter> - 32 bit counter	The total number of GSQ requests from network. <i>This element is only shown in detail mode.</i>
gssq	Parameter type: <Counter> - 32 bit counter	The total number of GSSQ requests from network. <i>This element is only shown in detail mode.</i>
ovrld-app	Parameter type: <Counter> - 32 bit counter	The number of seconds during which module overload protection has been applied affecting all IGMP channels which are terminated at the IGMP module. <i>This element is only shown in detail mode.</i>

139.11 IGMP Module Time Status Command

Command Description

This command displays the IGMP module time-related parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp module time [ (slot-index) ]
```

Command Parameters

Table 139.11-1 "IGMP Module Time Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical slot id

Command Output

Table 139.11-2 "IGMP Module Time Status Command" Display parameters

Specific Information		
name	Type	Description
peak-connects	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This will show "1970-01-01:00:00:00" by default. In case the peak number of connect occurs , it displays the time at which the event occurred <i>This element is always shown.</i>
peak-disconnects	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This will show "1970-01-01:00:00:00" by default. In case the peak number of disconnect occurs , it displays the time at which the event occurred

139 IGMP Status Commands

name	Type	Description
		<i>This element is always shown.</i>
peak-msg	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This will show "1970-01-01:00:00:00" by default. In case the peak number of messages received occurs, it displays the time at which the event occurred <i>This element is always shown.</i>
stats-intval	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	The network time, when the module-wide statistics were last reset. <i>This element is only shown in detail mode.</i>

139.12 IGMP Module Miscellaneous Status Command

Command Description

This command displays the IGMP module parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp module miscellaneous [ (slot-index) ]
```

Command Parameters

Table 139.12-1 "IGMP Module Miscellaneous Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical slot id

Command Output

Table 139.12-2 "IGMP Module Miscellaneous Status Command" Display parameters

Specific Information		
name	Type	Description
curr-root-conn	Parameter type: <Gauge> - gauge	The number of the connected groups. <i>This element is always shown.</i>
con-cfgd	Parameter type: <Gauge> - gauge	The number of the connected groups who are configured in multicast source table. <i>This element is always shown.</i>
con-un-cfgd	Parameter type: <Gauge> - gauge	The number of the connected groups who aren't configured in

139 IGMP Status Commands

name	Type	Description
		multicast source table. <i>This element is always shown.</i>
con-no-memb	Parameter type: <Gauge> - gauge	The number of the connected groups who is in reserve state(no member). <i>This element is always shown.</i>

139.13 IGMP System Status Command

Command Description

This command displays the next Multicast Service Context Profile Index available.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show igmp mcast-svc-context
```

Command Output

Table 139.13-2 "IGMP System Status Command" Display parameters

Specific Information		
name	Type	Description
next	Parameter type: <Igmp::McastSvcCtxtNextPointer> - mcast service context profile index - range: [0...64]	The next available id for multicast service context profile. <i>This element is always shown.</i>

140- Transport Status Commands

140.1 Transport Status Command Tree	140-6177
140.2 SNMP Protocol Statistics Command	140-6178
140.3 SNMP Engine Status Command	140-6181
140.4 System Status Command	140-6182
140.5 SFP status commands	140-6183
140.6 Interface MAU Status Command	140-6185
140.7 Ethernet Lt Dot3 Status Command	140-6190

140.1 Transport Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Transport Status Commands".

Command Tree

```
----show
  ----transport
    ----snmp
      ----protocol-stats
      ----engine
    ----system-parameters
  ----X ether-ifsfp1t
    - (if-index)
    - index
  ----X ether-ifmault
    - (if-index)
    - index
  ----X ether-dot3lt
    - (stats-index)
```

140.2 SNMP Protocol Statistics Command

Command Description

This command displays the statistics related to the SNMP protocol.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show transport snmp protocol-stats
```

Command Output

Table 140.2-2 "SNMP Protocol Statistics Command" Display parameters

Specific Information		
name	Type	Description
in-pkts	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets. <i>This element is always shown.</i>
out-pkts	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP packets. <i>This element is always shown.</i>
in-get-requests	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP get requests. <i>This element is always shown.</i>
out-get-requests	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP get requests. <i>This element is always shown.</i>
in-get-next-requests	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP get-next requests. <i>This element is always shown.</i>
out-get-next-requests	Parameter type: <Counter> - 32 bit counter	The total number of transmitted get-next requests . <i>This element is always shown.</i>
in-set-requests	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP set requests. <i>This element is always shown.</i>
out-set-requests	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP set requests. <i>This element is always shown.</i>
in-get-responses	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP get responses. <i>This element is always shown.</i>
out-get-responses	Parameter type: <Counter>	The total number of transmitted

name	Type	Description
	- 32 bit counter	SNMP get responsesG. <i>This element is always shown.</i>
in-traps	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP traps. <i>This element is always shown.</i>
out-traps	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP traps. <i>This element is always shown.</i>
success-get-objects	Parameter type: <Counter> - 32 bit counter	The total number of successfully read SNMP objects. <i>This element is always shown.</i>
success-set-objects	Parameter type: <Counter> - 32 bit counter	The total number of successfully altered objects. <i>This element is always shown.</i>
in-too-bigs	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with tooBig error-status. <i>This element is always shown.</i>
out-too-bigs	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP packets with tooBig error-status. <i>This element is always shown.</i>
in-no-such-names	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with noSuchName error-status. <i>This element is always shown.</i>
out-no-such-names	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP packets with noSuchName error-status. <i>This element is always shown.</i>
in-bad-values	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with badValue error-status. <i>This element is always shown.</i>
out-bad-values	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP packets with badValue error-status. <i>This element is always shown.</i>
in-gen-errors	Parameter type: <Counter> - 32 bit counter	The total number received SNMP packets with genErr error-status. <i>This element is always shown.</i>
out-gen-errors	Parameter type: <Counter> - 32 bit counter	The total number of transmitted SNMP packets with genErr error-status. <i>This element is always shown.</i>
in-read-only-s	Parameter type: <Counter> - 32 bit counter	The total number received SNMP packets with readOnly error-status. <i>This element is always shown.</i>
in-bad-versions	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with a bad SNMP version. <i>This element is always shown.</i>
in-unknown-communities	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with an unknown community name. <i>This element is always shown.</i>

140 Transport Status Commands

name	Type	Description
in-bad-communities	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with an operation not allowed for the specified community.. <i>This element is always shown.</i>
in-asn1-errors	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with ASN.1 coding errors. <i>This element is always shown.</i>
in-unknown-contexts	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets targetted to a wrong context. <i>This element is always shown.</i>
in-bad-security-levels	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with an invalid security-level. <i>This element is always shown.</i>
in-not-in-time-windows	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets outside the allowed time-window. <i>This element is always shown.</i>
in-unknown-users	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with an unknown user name. <i>This element is always shown.</i>
in-unknown-engines	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with an unknown engine-id. <i>This element is always shown.</i>
in-wrong-digests	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets with a wrong authentication digest. <i>This element is always shown.</i>
in-decrypt-errors	Parameter type: <Counter> - 32 bit counter	The total number of received SNMP packets that could not be decrypted. <i>This element is always shown.</i>
in-unknown-models	Parameter type: <Counter> - 32 bit counter	nbr of pkts rx which referred an unknown model <i>This element is always shown.</i>
in-invalids	Parameter type: <Counter> - 32 bit counter	The number of received invalid SNMP messages. <i>This element is always shown.</i>
in-unknown-pdu-types	Parameter type: <Counter> - 32 bit counter	The number of received SNMP packets with an unknown PDU type. <i>This element is always shown.</i>

140.3 SNMP Engine Status Command

Command Description

This command displays the status of the SNMP engine.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

> show transport snmp engine

Command Output

Table 140.3-2 "SNMP Engine Status Command" Display parameters

Specific Information		
name	Type	Description
engine-id	Parameter type: <Snmp::EngineID> - SNMP Engine Identifier - length: 5<=x<=32	the unique identifier for the SNMP engine <i>This element is always shown.</i>
boot-cnt	Parameter type: <Snmp::EngineBoots> - SNMP Engine Boots - range: [1...2147483647]	the number of times the SNMP engine booted. <i>This element is always shown.</i>
up-time	Parameter type: <Snmp::EngineTime> - SNMP Engine Time - range: [1...2147483647]	the number of seconds since the last boot <i>This element is always shown.</i>
max-message-size	Parameter type: <Snmp::MessageSize> - SNMP Message Size - range: [484...2147483647]	the maximum length for an SNMP message for this engine <i>This element is always shown.</i>

140.4 System Status Command

Command Description

This command displays the system statistics.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show transport system-parameters
```

Command Output

Table 140.4-2 "System Status Command" Display parameters

Specific Information		
name	Type	Description
description	Parameter type: <Transport::sysDescr> - a printable string - length: x<=255	A textual description which include's the full name and version identification of the system's hardware type, software operating-system, and networking software. <i>This element is always shown.</i>
object-id	Parameter type: <Object> - an object identifier	The vendor's authoritative identification of the network management subsystem contained in the entity. This value is allocated within the SMI enterprises subtree (1.3.6.1.4.1) and provides an easy and unambiguous means for determining 'what kind of box' is being managed. <i>This element is always shown.</i>
up-time	Parameter type: <Transport::TimeTicks> - a timeout value - unit: hundredths of a second	The time since the network management portion of the system was last re-initialized. <i>This element is always shown.</i>
services	Parameter type: <Transport::SysServices> - set of services - unit: milisec - range: [0...127]	A value which indicates the set of services that this entity primarily offers. <i>This element is always shown.</i>

140.5 SFP status commands

Command Description

Obsolete command, replaced by `show ethernet sfp`.

This command displays the Ethernet SFP parameters

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show transport ether-ifsplt [ (if-index) [ index <Transport::Index> ] ]
```

Obsolete command, replaced by `show ethernet sfp`.

Command Parameters

Table 140.5-1 "SFP status commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the sfp
index	Parameter type: <Transport::Index> Format: - port to which the MAU is connected - range: [1...2147483647]	identify sfp, among others connected to same interface

Command Output

Table 140.5-2 "SFP status commands" Display parameters

Specific Information		
name	Type	Description
sfp-status	Parameter type: <Transport::SFPstatus> (operational-up interface-down	identifies the status of the sfp <i>This element is always shown.</i>

140 Transport Status Commands

name	Type	Description
	no-nokia-label los type-mismatch local-power-off brother-power-off active-power-off) Possible values: - operational-up : SFP is operational up - interface-down : SFP is not plugged in, interface is down - no-nokia-label : SFP is plugged in but in power down because no Nokia label - los : SFP is plugged in but detected LOS.Note:if ALS enabled,when RX is LOS,disable TX.when RX out of LOS,enable TX. if ALS disabled,always enable TX - type-mismatch : SFP real type mismatch with configured type - local-power-off : local SFP power off since temperature over - brother-power-off : brother SFP power off since temperature over - active-power-off : SFP power down actively by operator	
sfp-inventory	Parameter type: <Transport::SFPinventory> - specification of Sfp inventory. - length: 1<=x<=128	indicates the information of the sfp vendor <i>This element is only shown in detail mode.</i>

140.6 Interface MAU Status Command

Command Description

Obsolete command, replaced by `show ethernet mau`.

This command displays the Ethernet MAU parameters.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show transport ether-ifmault [ (if-index) [ index <Transport::Index> ] ]
```

Obsolete command, replaced by `show ethernet mau`.

Command Parameters

Table 140.6-1 "Interface MAU Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the mau
index	Parameter type: <Transport::Index> Format: - port to which the MAU is connected - range: [1...2147483647]	identify MAU, among others connected to same interface

Command Output

Table 140.6-2 "Interface MAU Status Command" Display parameters

Specific Information		
name	Type	Description
type	Parameter type: <Ether::MAUType> (10baset 100basexhd	Specifies the MAU type. If the MAU type is unknown, then unknown MAU type will be

140 Transport Status Commands

name	Type	Description
	100basetxfd 100basexhd 100basexfd 1000basexhd 1000basexfd 1000baselxhd 1000baselxfd 1000basesxhd 1000basesxfd 1000basethd 1000basetfd 10gbasex 10gbaser 10gbaseer 10gbaselr 10gbasesr 100basebx10d 100basebx10u 100baselx10 1000basebx10d 1000basebx10u 1000baselx10 2500basex 10gbasetfd - unknown) Possible values: - 10baset : UTP 10M - 100basexhd : UTP 100M half duplex - 100basetxfd : UTP 100M full duplex - 100basexhd : X fiber over PMT half duplex - 100basexfd : X fiber over PMT full duplex - 1000basexhd : PCS/PMA,unknown PMD, half duplex - 1000basexfd : PCS/PMA,unknown PMD, full duplex - 1000baselxhd : fiber over long-wavelength laser half duplex - 1000baselxfd : fiber over long-wavelength laser full duplex - 1000basesxhd : fiber over short-wavelength laser half duplex - 1000basesxfd : fiber over short-wavelength laser full duplex - 1000basethd : UTP 1G half duplex - 1000basetfd : UTP 1G full duplex - 10gbasex : fiber 10G ethernet, PCS 8B/10B - 10gbaser : fiber 10G ethernet, PCS 64B/66B - 10gbaseer : fiber 10G ethernet extended reach, 30km - 10gbaselr : fiber 10G ethernet long reach, 10km - 10gbasesr : fiber 10G ethernet short reach, 300m - 100basebx10d : one single-mode fiber OLT long wavelength, 10km, 100 base - 100basebx10u : one single-mode fiber ONU, long wavelength, 10km, 100 base - 100baselx10 : two single-mode fibers over long wavelength, 10km, 100 base - 1000basebx10d : one single-mode fiber OLT over long wavelength, 10km, 1000 base - 1000basebx10u : one single-mode fiber ONU over long wavelength, 10km, 1000 base	returned. If the MAU is a link or fiber type then media-available is equivalent to the link test fail state/low light function. For an AUI or a coax (including broadband) MAU this indicates whether or not loopback is detected on the DI circuit. The value of this attribute persists between packets for MAU types AUI, 10BASE5, 10BASE2, 10BROAD36, and 10BASE-FP. <i>This element is always shown.</i>

name	Type	Description
	- 1000baselx10 : two single-mode fibers over long wavelength, 10km, 1000 base - 2500basex : single-mode fibers, 2.5G base - 10gbasetfd : UTP 10G full duplex - unknown : unknown type	
media-available	Parameter type: <Transport::MauAvailable> (other unknown available not-available remote-fault invalid-signal remote-jabber remote-link-loss remote-test off-line auto-neg-error) Possible values: - other : MAU in other state - unknown : MAU's true state is unknown - available : - not-available : MAU is fully functional - remote-fault : power down - invalid-signal : reset the MAU - remote-jabber : power down - remote-link-loss : power down - remote-test : power down - off-line : power down - auto-neg-error : power down	Specifies whether the media is available for the MAU or not. <i>This element is always shown.</i>
jabber-state	Parameter type: <Transport::MauJabber> (other unknown no-jabber jabbering) Possible values: - other : if not in any state - unknown : MAU's true state is unknown - no-jabber : MAU not jabbering - jabbering : MAU is jabbering	The jabber-state indicates whether this entity is jabbering, not jabbering, unknown or other state. <i>This element is always shown.</i>
b100basefxfd	Parameter type: <Ether::B100BaseFXFD> (yes no) Possible values: - yes : 100basefxfd supported - no : 100basefxfd not supported	X fiber over PMT full duplex <i>This element is only shown in detail mode.</i>
b100baselx10	Parameter type: <Ether::B100BaseLX10> (yes no) Possible values: - yes : 100baselx10 supported - no : 100baselx10 not supported	two single-mode fibers over long wavelength, 10km, 100 base <i>This element is only shown in detail mode.</i>
b100basebx10d	Parameter type: <Ether::B100BaseBX10D> (yes no) Possible values: - yes : 100basebx10d supported - no : 100basebx10d not supported	one single-mode fiber OLT long wavelength, 10km, 100 base <i>This element is only shown in detail mode.</i>

140 Transport Status Commands

name	Type	Description
b100basebx10u	Parameter type: <Ether::B100BaseBX10U> (yes no) Possible values: - yes : 100basebx10u supported - no : 100basebx10u not supported	one single-mode fiber ONU, long wavelength, 10km, 100 base <i>This element is only shown in detail mode.</i>
b100basetx10d	Parameter type: <Ether::B100BaseTXFD> (yes no) Possible values: - yes : 100basetx10d supported - no : 100basetx10d not supported	UTP 100M full duplex <i>This element is only shown in detail mode.</i>
b1000basetfd	Parameter type: <Ether::B1000BaseTFD> (yes no) Possible values: - yes : 1000basetfd supported - no : 1000basetfd not supported	UTP 1G full duplex <i>This element is only shown in detail mode.</i>
b1000basesx10d	Parameter type: <Ether::B1000BaseSXF10D> (yes no) Possible values: - yes : 1000basesx10d supported - no : 1000basesx10d not supported	fiber over short-wavelength laser full duplex <i>This element is only shown in detail mode.</i>
b1000baselx10	Parameter type: <Ether::B1000BaseLX10> (yes no) Possible values: - yes : 1000baselx10 supported - no : 1000baselx10 not supported	two single-mode fibers over long wavelength, 10km, 1000 base <i>This element is only shown in detail mode.</i>
b1000baselx10d	Parameter type: <Ether::B1000BaseLXFD> (yes no) Possible values: - yes : 1000baselx10d supported - no : 1000baselx10d not supported	fiber over long-wavelength laser full duplex <i>This element is only shown in detail mode.</i>
b1000basebx10u	Parameter type: <Ether::B1000BaseBX10U> (yes no) Possible values: - yes : 1000basebx10u supported - no : 1000basebx10u not supported	one single-mode fiber ONU over long wavelength, 10km, 1000 base <i>This element is only shown in detail mode.</i>
b1000basebx10d	Parameter type: <Ether::B1000BaseBX10D> (yes no) Possible values: - yes : 1000basebx10d supported - no : 1000basebx10d not supported	one single-mode fiber OLT over long wavelength, 10km, 1000 base <i>This element is only shown in detail mode.</i>
b10gbase10r	Parameter type: <Ether::B10GBaseLR> (yes no) Possible values: - yes : 10GbaseLR supported - no : 10GbaseLR not supported	10G optical ethernet long reach 10km <i>This element is only shown in detail mode.</i>
b10gbase30r	Parameter type: <Ether::B10GBaseER> (yes no)	10G optical ethernet extended reach 30km <i>This element is only shown in detail mode.</i>

name	Type	Description
	Possible values: - yes : 10GbaseER supported - no : 10GbaseER not supported	<i>detail mode.</i>
b10gbasesr	Parameter type: <Ether::B10GBaseSR> (yes no) Possible values: - yes : 10GbaseSR supported - no : 10GbaseSR not supported	10G optical ethernet short reach 300m <i>This element is only shown in detail mode.</i>
auto-neg-supported	Parameter type: <Ether::TruthValue> (true false) Possible values: - true : autonegotiation is supported - false : autonegotiation is not supported	Specifies whether or not auto-negotiation is supported on this MAU. <i>This element is always shown.</i>
auto-neg-status	Parameter type: <Ether::AutoNegStatus> (other configuring complete disabled paralleldetectfail) Possible values: - other : unknown auto-negotiation status - configuring : auto-negotiation still ongoing - complete : auto-negotiation completed - disabled : auto-negotiation disabled - paralleldetectfail : parallel detection failed	Displays the auto-negotiation status of this MAU. <i>This element is always shown.</i>
cap100base-tfd	Parameter type: <Ether::ACAP_100BaseTFD> (yes no) Possible values: - yes : 100BaseTFD supported - no : 100BaseTFD not supported	electrical 100M full duplex autonegotiation capable <i>This element is only shown in detail mode.</i>
cap1000base-xfd	Parameter type: <Ether::ACAP_1000BaseXFD> (yes no) Possible values: - yes : 1000BaseXFD supported - no : 1000BaseXFD not supported	optical 1G full duplex autonegotiation capable <i>This element is only shown in detail mode.</i>
cap1000base-tfd	Parameter type: <Ether::ACAP_1000BaseTFD> (yes no) Possible values: - yes : 1000BaseTFD supported - no : 1000BaseTFD not supported	electrical 1G full duplex autonegotiation capable <i>This element is only shown in detail mode.</i>
cap10gbase-tfd	Parameter type: <Ether::ACAP_10GBaseTFD> (yes no) Possible values: - yes : 10GBaseTFD supported - no : 10GBaseTFD not supported	electrical 10G full duplex autonegotiation capable <i>This element is only shown in detail mode.</i>

140.7 Ethernet Lt Dot3 Status Command

Command Description

Obsolete command, replaced by `show ethernet dot3stats`.

This command displays the statistics for a collection of Ethernet-like interfaces attached to a particular system. There will be one row in this table for each Ethernet-like interface in the system. The parameter stats-index gives an index value that uniquely identifies an interface to an Ethernet-like medium.

The alignment-error parameter gives a count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC. This counter does not increment for 8-bit wide group encoding schemes. Discontinuities in the value of this counter can occur at re-initialization of the management system.

The fcs-error parameter gives a count of frames received on a particular interface that are an integral number of octets in length, but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error.

The internal-mac-tx-error parameter gives a count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the late collisions object, the excessive collisions object, or the carrier sense errors object. The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted.

The internal-mac-rx-error parameter gives a count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the frame toolongs object, the alignment errors object, or the FCS errors object. The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show transport ether-dot3lt [ (stats-index) ]
```

Obsolete command, replaced by `show ethernet dot3stats`.

Command Parameters

Table 140.7-1 "Ethernet Lt Dot3 Status Command" Resource Parameters

Resource Identifier	Type	Description
(stats-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	index of the interface to an ethernet-like medium

Resource Identifier	Type	Description
	<Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number

141.2 Efm Oam Mac Statistics Command

Command Description

This command triggers a request to retrieve MAC information from the CPE and displays the result if and when available.

The output of this command is always in detailed format.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show efm-oam mac-stats [ (interface) ]
```

Command Parameters

Table 141.2-1 "Efm Oam Mac Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(interface)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the EFM port / Ethernet port

Command Output

141 Efm Oam Status Commands

name	Type	Description
	- not-available : counter not available Field type <Counter> - 32 bit counter	include frames received with frame-too-long, FCS, length or alignment errors, or frames lost due to internal MAC sublayer error. <i>This element is only shown in detail mode.</i>
len-out-of-range	Parameter type: <Ether::LenOutOfRangeCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	the number of frames (in CPE) with a length field value greater than the maximum allowed LLC data size. <i>This element is only shown in detail mode.</i>
frame-too-long-err	Parameter type: <Ether::FrameTooLongErrorsCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	the number of frames received (by CPE) that exceed the maximum permitted frame size. <i>This element is only shown in detail mode.</i>
octets-tx-ok	Parameter type: <Ether::OctetsTxOkCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	the number of data and padding octets transmitted (by cpe). <i>This element is only shown in detail mode.</i>
octets-rx-ok	Parameter type: <Ether::OctetsRxOkCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	the number of data and padding octets received (by cpe). <i>This element is only shown in detail mode.</i>
bcast-frames-tx-ok	Parameter type: <Ether::BroadcastFramesTxOkCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	the number of frames that are transmitted (by CPE) and are directed to the broadcast group address. <i>This element is only shown in detail mode.</i>
mcast-frames-tx-ok	Parameter type: <Ether::MulticastFramesTxOkCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	the number of frames that are transmitted (by CPE) and are directed to an active nonbroadcast group address. <i>This element is only shown in detail mode.</i>
runts-counter	Parameter type: <Ether::Runts> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	the number of runts event detected (by cpe). <i>This element is only shown in detail mode.</i>

141.3 Efm Oam Pme Statistics Command

Command Description

This command triggers a request to retrieve PME information from the CPE and displays the result if and when available. This commands allows retrieval of PME information for an individual dsl link or for all links in an EFM bonding group.

The output of this command is always in detailed format.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show efm-oam pme-stats [ (group) ]
```

Command Parameters

Table 141.3-1 "Efm Oam Pme Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(group)	Format: (link : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Possible values: - link : xdsl-line Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the EFM or XDSL port

Command Output

Table 141.3-2 "Efm Oam Pme Statistics Command" Display parameters

Specific Information		
name	Type	Description
link	Parameter type: <Itf::LinkPmeEthernetIndex> (xdsl : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>	identification of the xdsl port <i>This element is only shown in detail mode.</i>

141 Efm Oam Status Commands

name	Type	Description
	eth : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Possible values: - xdsl : xdsl-line - eth : eth-line Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	
tc-cod-violations	Parameter type: <Ether::CodingViolationsCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	a number of 64/65-octet encapsulation error (in CPE). <i>This element is only shown in detail mode.</i>
fec-corrected-blk	Parameter type: <Ether::FecCorrectedBlkCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	For a 10PASS-TS PME, a number of corrected FEC blocks (in CPE). This counter will not increment for other PHY types. <i>This element is only shown in detail mode.</i>
fec-uncorrect-blk	Parameter type: <Ether::FecUncorrectBlkCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	For a 10PASS-TS PME, a number of uncorrectable FEC blocks (in CPE). This counter will not increment for other PME types. <i>This element is only shown in detail mode.</i>
tc-crc-errors	Parameter type: <Ether::CrcErrorsCounter> (not-available <Counter>) Possible values: - not-available : counter not available Field type <Counter> - 32 bit counter	number of TC-CRC errors recorded on the CPE. <i>This element is only shown in detail mode.</i>

141.4 Efm Oam Local Information Status Command

Command Description

This command displays the local EFM OAM data.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show efm-oam local-oam-info [ (interface) ]
```

Command Parameters

Table 141.4-1 "Efm Oam Local Information Status Command" Resource Parameters

Resource Identifier	Type	Description
(interface)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the EFM port / Ethernet port

Command Output

Table 141.4-2 "Efm Oam Local Information Status Command" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <Ether::OperStatus> (disabled link-fault passive-wait active-snd-local snd-local-rem snd-local-rem-ok peer-local-rej peer-remote-rej operational) Possible values:	operational status of the OAM entity <i>This element is always shown.</i>

141 Efm Oam Status Commands

name	Type	Description
	- disabled : efm oam not enabled - link-fault : interface operational down - passive-wait : passive mode - active-snd-local : send local config - snd-local-rem : send local remote tlv - snd-local-rem-ok : remote config ok - peer-local-rej : remote config locally rejected - peer-remote-rej : local config remotely rejected - operational : fully operational	
max-oam-pdu-size short name: max-pdu/size	Parameter type: <Ether::PduSize> - an integer value - unit: bytes - range: [0,64...1518]	the maximum size of the OAMPDU supported by the CPE. <i>This element is always shown.</i>
config-revision short name: cfg/rev	Parameter type: <Ether::ConfigRevision> - an unsigned short value - range: [0...65535]	the configuration revision of the OAM peer as reflected in the latest OAMPDU. <i>This element is always shown.</i>
version short name: vers	Parameter type: <Ether::Version> - the version of the local OAM entity	the version of the local OAM entity <i>This element is always shown.</i>
support-unidirect short name: support/uni	Parameter type: <Ether::unidirection> (yes no) Possible values: - yes : unidirection supported - no : unidirection not supported	unidirection support function <i>This element is always shown.</i>
support-loopback short name: support/lpbck	Parameter type: <Ether::loopback> (yes no) Possible values: - yes : loopback supported - no : loopback not supported	loopback support function <i>This element is always shown.</i>
support-event short name: support/evnt	Parameter type: <Ether::event> (yes no) Possible values: - yes : event supported - no : event not supported	event support function <i>This element is always shown.</i>
support-variable short name: support/var	Parameter type: <Ether::variable> (yes no) Possible values: - yes : variable functions supported - no : variable functions not supported	variable support function <i>This element is always shown.</i>

141.5 Efm Oam Peer Information Status Command

Command Description

This command displays the peer (CPE) EFM OAM configuration data.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show efm-oam peer-oam-info [ (interface) ]
```

Command Parameters

Table 141.5-1 "Efm Oam Peer Information Status Command" Resource Parameters

Resource Identifier	Type	Description
(interface)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the EFM port / Ethernet port

Command Output

Table 141.5-2 "Efm Oam Peer Information Status Command" Display parameters

Specific Information		
name	Type	Description
mac-address	Parameter type: <Ether::MacAddr> - mac address (aa:bb:cc:a1:02:03) - length: 6	the mac address of the peer OAM entity. <i>This element is always shown.</i>
vendor-oui short name: vendor/oui	Parameter type: <Ether::VendorOui> - an octet string bitmask - length: 3	The oui of the CPE. <i>This element is always shown.</i>
vendor-info short name: vendor/info	Parameter type: <Ether::VendorInfo> <Ether::PrintableVendorInfo> Field type <Ether::PrintableVendorInfo> - description to help the operator to identify the object	the vendor info of the CPE. <i>This element is always shown.</i>

141 Efm Oam Status Commands

name	Type	Description
	- length: 4	
mode	Parameter type: <Ether::Mode> ((passive pas) (active act) (unknown unkn)) Possible values: - passive : passive mode - pas : passive mode - active : active mode - act : active mode - unknown : unknown mode - unkn : unknown mode	the mode of the OAM peer as reflected in the latest information OAMPDU received with a local information tlv. <i>This element is always shown.</i>
max-oam-pdu-size short name: max-pdu/size	Parameter type: <Ether::PduSize> - an integer value - unit: bytes - range: [0,64...1518]	the maximum size of the OAMPDU supported by the CPE. <i>This element is always shown.</i>
config-revision short name: cfg/rev	Parameter type: <Ether::ConfigRevision> - an unsigned short value - range: [0...65535]	the configuration revision of the OAM peer as reflected in the latest OAMPDU. <i>This element is always shown.</i>
support-unidirect short name: support/uni	Parameter type: <Ether::unidirection> (yes no) Possible values: - yes : unidirection supported - no : unidirection not supported	unidirection support function <i>This element is always shown.</i>
support-loopback short name: support/lpbck	Parameter type: <Ether::loopback> (yes no) Possible values: - yes : loopback supported - no : loopback not supported	loopback support function <i>This element is always shown.</i>
support-event short name: support/evnt	Parameter type: <Ether::event> (yes no) Possible values: - yes : event supported - no : event not supported	event support function <i>This element is always shown.</i>
support-variable short name: support/var	Parameter type: <Ether::variable> (yes no) Possible values: - yes : variable functions supported - no : variable functions not supported	variable support function <i>This element is always shown.</i>
flags-linkfault short name: flags/linkfault	Parameter type: <Ether::linkfault> (yes no) Possible values: - yes : peer device's receive path fault - no : peer device's receive path not fault	peer device's receive path states <i>This element is always shown.</i>
flags-dyinggasp short name: flags/dyinggasp	Parameter type: <Ether::dyinggasp> (yes no) Possible values: - yes : peer device unrecoverable failure condition - no : peer device not unrecoverable failure condition	peer device unrecoverable failure condition <i>This element is always shown.</i>
flags-criticalevent	Parameter type: <Ether::criticalevent>	peer device critical event

name	Type	Description
short name: flags/criticalevent	(yes no) Possible values: - yes : peer device critical event - no : peer device not critical event	<i>This element is always shown.</i>
flags-stable short name: flags/stable	Parameter type: <Ether::stable> (unstable evaluating stable) Possible values: - unstable : peer DTE unsatisfied, discovery can not complete - evaluating : peer DTE discovery process has not completed - stable : peer DTE discovery process has completed	peer device evaluating and stable <i>This element is always shown.</i>

141.6 Efm Oam statistics Status Command

Command Description

This command displays the EFM OAM statistics.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show efm-oam oam-stats [ (interface) ]
```

Command Parameters

Table 141.6-1 "Efm Oam statistics Status Command" Resource Parameters

Resource Identifier	Type	Description
(interface)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the EFM port / Ethernet port

Command Output

Table 141.6-2 "Efm Oam statistics Status Command" Display parameters

Specific Information		
name	Type	Description
information-tx short name: information/tx	Parameter type: <Counter> - 32 bit counter	number of information OAMPDUs transmitted. <i>This element is always shown.</i>
information-rx short name: information/rx	Parameter type: <Counter> - 32 bit counter	number of information OAMPDUs received. <i>This element is always shown.</i>
variable-rqst-tx short name: variable/rqst-tx	Parameter type: <Counter> - 32 bit counter	number of variable request OAMPDUs transmitted. <i>This element is always shown.</i>
variable-rsp-rx	Parameter type: <Counter>	number of variable response

name	Type	Description
short name: variable/rsp-rx	- 32 bit counter	OAMPDUs received. <i>This element is always shown.</i>
loopback-control-tx short name: loopback-ctrl/tx	Parameter type: <Counter> - 32 bit counter	number of Loopback Control OAMPDUs transmitted on this interface. <i>This element is always shown.</i>
unsup-codes-rx short name: unsup-codes/rx	Parameter type: <Counter> - 32 bit counter	number of OAMPDUs received with an unsupported op-code. <i>This element is always shown.</i>
org-spec-pdu-tx short name: org-spec-pdu/tx	Parameter type: <Counter> - 32 bit counter	number of org spec OAMPDUs transmitted on this interface. <i>This element is only shown in detail mode.</i>
org-spec-pdu-rx short name: org-spec-pdu/rx	Parameter type: <Counter> - 32 bit counter	number of org spec OAMPDUs received on this interface. <i>This element is only shown in detail mode.</i>

141.7 Efm Oam loopback Status Command

Command Description

This command displays the EFM OAM loopback status.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show efm-oam loopback-info [ (interface) ]
```

Command Parameters

Table 141.7-1 "Efm Oam loopback Status Command" Resource Parameters

Resource Identifier	Type	Description
(interface)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the EFM port / Ethernet port

Command Output

Table 141.7-2 "Efm Oam loopback Status Command" Display parameters

Specific Information		
name	Type	Description
loopback-status	Parameter type: <Ether::LoopbackStatus> (no-loopback initiating-loopback terminating-loopback remote-loopback unknown) Possible values: - no-loopback : no loopback - initiating-loopback : remote loopback is initiated - terminating-loopback : termination of remote loopback ongoing	loopback status of the OAM entity <i>This element is always shown.</i>

name	Type	Description
	- remote-loopback : peer device on this interface is in remote loopback. - unknown : unknown	
parser-action	Parameter type: <Ether::ParserAction> (discard forward) Possible values: - discard : discard looped back packets - forward : forward looped back packets	Loopback parser action <i>This element is always shown.</i>
loopback-timeout	Parameter type: <Ether::LoopbackTimeout> - A timeout value expressed in seconds - unit: seconds - range: [0...3600]	Timeout value for auto clearing remote Loopback configuration. <i>This element is always shown.</i>
loopbck-remaining-time	Parameter type: <Ether::LoopbackRemainingTimeout> - A timeout value expressed in seconds - unit: seconds - range: [0...3600]	Remaining remote loopback timeout time. <i>This element is always shown.</i>

141.8 Efm Oam Internal Traffic generator Status Command

Command Description

Obsolete command.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show efm-oam int-traff-gen [ (interface) ]
```

Obsolete command.

Command Parameters

Table 141.8-1 "Efm Oam Internal Traffic generator Status Command" Resource Parameters

Resource Identifier	Type	Description
(interface)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the EFM port / Ethernet port

Command Output

Table 141.8-2 "Efm Oam Internal Traffic generator Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Ether::TraffGenState> (active not-active) Possible values: - active : Internal traffic generator on specified itf is active - not-active : Internal traffic generator on specified itf is not	State of the internal traffic generator for the specified interface. <i>This element is always shown.</i>

name	Type	Description
	active	
data-length	Parameter type: <Ether::TraffGenDataLengthType> - A value of 1 up to 1500. Indicates length in bytes. - unit: byte - range: [1...1500]	Length of data field, in bytes, of the generated test traffic. <i>This element is always shown.</i>
bitrate	Parameter type: <Ether::TraffGenBitRateType> (100k 1m 10m 100m 1g) Possible values: - 100k : bitrate = 100K bit/sec - 1m : bitrate = 1M bit/sec - 10m : bitrate = 10M bit/sec - 100m : bitrate = 100M bit/sec - 1g : bitrate = 1G bit/sec	Requested bitrate for the generated test traffic. <i>This element is always shown.</i>
smac	Parameter type: <Ether::MacAddr> - mac address (aa:bb:cc:a1:02:03) - length: 6	Source MAC address of the generated test traffic. <i>This element is only shown in detail mode.</i>
dmac	Parameter type: <Ether::MacAddr> - mac address (aa:bb:cc:a1:02:03) - length: 6	Destination MAC address of the generated test traffic. <i>This element is only shown in detail mode.</i>

142- DHCP Relay Status Commands

142.1 DHCP Relay Status Command Tree	142-6211
142.2 DHCP Relay Port Statistics	142-6212
142.3 DHCP Relay Port Statistics Related To Vlan Ports	142-6214
142.4 DHCP Relay Port Summary Statistics Related To Vlan Ports	142-6216
142.5 DHCP Relay Port Detailed Statistics Related To Vlan Ports	142-6219
142.6 DHCP v6 Relay Port Statistics	142-6226
142.7 DHCP v6 Relay Port Statistics Related To Vlan Ports	142-6228
142.8 DHCP v6 Relay Port Summary Statistics Related To Vlan Ports	142-6230
142.9 DHCP v6 Relay Port Detailed Statistics Related To Vlan Ports	142-6233
142.10 DHCP Relay Session Status Command	142-6238

142.1 DHCP Relay Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "DHCP Relay Status Commands".

Command Tree

```
----show
  ----dhcp-relay
    ----port-stats
      - (port-interface)
        ----vlan
          - (subscr-vlan)
            ----summary
            ----extensive
    ----v6-port-stats
      - (port-interface)
        ----vlan
          - (subscr-vlan)
            ----v6summary
            ----v6extensive
  ----session
    - (client)
    - ip-addr
```

142.2 DHCP Relay Port Statistics

Command Description

This command allows the operator to view the DHCP relay port counters. When this show command is invoked, all commands in underlying nodes are automatically executed.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay port-stats [ (port-interface) ]
```

Command Parameters

Table 142.2-1 "DHCP Relay Port Statistics" Resource Parameters

Resource Identifier	Type	Description
(port-interface)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	user port interface

Resource Identifier	Type	Description
	- the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

142.3 DHCP Relay Port Statistics Related To Vlan Ports

Command Description

This command allows the operator to view the DHCP relay port counters. The command will show all counters related to the specified vlan tagged frames.

Both the summary and detailed counters are shown through the underlying nodes.

The detailed counters are only available when the counters are enabled via the related configuration command.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay port-stats (port-interface) vlan [ (subscr-vlan) ]
```

Command Parameters

Table 142.3-1 "DHCP Relay Port Statistics Related To Vlan Ports" Resource Parameters

Resource Identifier	Type	Description
(port-interface)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId>	user port interface

Resource Identifier	Type	Description
	- the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

142.4 DHCP Relay Port Summary Statistics Related To Vlan Ports

Command Description

This command allows the operator to view the DHCP relay port counters. The command will show all counters related to the specified vlan tagged frames. These summary counters are always available.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay port-stats (port-interface) vlan (subscr-vlan) summary
```

Command Parameters

Table 142.4-1 "DHCP Relay Port Summary Statistics Related To Vlan Ports" Resource Parameters

Resource Identifier	Type	Description
(port-interface)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	user port interface

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::Vcild> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

Command Output

Table 142.4-2 "DHCP Relay Port Summary Statistics Related To Vlan Ports" Display parameters

Specific Information		
name	Type	Description
error-summary	Parameter type: <Counter> - 32 bit counter	show the total of DHCP packets that have been dropped because

		of errors <i>This element is only shown in detail mode.</i>
total-in	Parameter type: <Counter> - 32 bit counter	show count of all DHCP packets that have been received <i>This element is only shown in detail mode.</i>
total-out	Parameter type: <Counter> - 32 bit counter	show count of all DHCP packets that have been sent <i>This element is only shown in detail mode.</i>

142.5 DHCP Relay Port Detailed Statistics Related To Vlan Ports

Command Description

This command allows the operator to view the DHCP relay port counters. The command will show all counters related to the specified vlan tagged frames.

The detailed counters are only given when the counters are enabled via the related configuration command.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

> show dhcp-relay port-stats (port-interface) vlan (subscr-vlan) extensive

Command Parameters

Command Output

Table 142.5-2 "DHCP Relay Port Detailed Statistics Related To Vlan Ports" Display parameters

Specific Information

name	Type	Description
internal-ctxt-err	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of ARP packets dropped due to internal context errors <i>This element is only shown in detail mode.</i>
up-corrupt-pkt	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets classified as corrupt and discarded <i>This element is only shown in detail mode.</i>
up-invalid-l2-PROTO	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to invalid Layer 2 protocol configuration <i>This element is only shown in detail mode.</i>
up-unsupp-l3-PROTO	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to unsupported protocol version <i>This element is only shown in detail mode.</i>
up-large-pkt-discard	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to packet size exceeds the MTU <i>This element is only shown in detail mode.</i>
up-frag-pkt-discard	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board	show the number of upstream DHCP packets discarded due to received fragmented packet <i>This element is only shown in detail mode.</i>

142 DHCP Relay Status Commands

name	Type	Description
	Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	
up-malformed-option	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to malformed 'options' field <i>This element is only shown in detail mode.</i>
up-invalid-hops	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to inconsistency between 'giaddr' field and 'hops' field <i>This element is only shown in detail mode.</i>
up-invalid-op-code	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to invalid opcode in packet header <i>This element is only shown in detail mode.</i>
up-not-allowed-pkt	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to invalid packet type <i>This element is only shown in detail mode.</i>
up-opt82-too-long	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of received packets that exceed the MTU after Option 82 insertion <i>This element is only shown in detail mode.</i>
up-not-trusted	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values:	show the number of upstream DHCP packets discarded due to unexpected presence of Option 82

name	Type	Description
	- not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	<i>This element is only shown in detail mode.</i>
up-invalid-chaddr	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to client invalid hardware address <i>This element is only shown in detail mode.</i>
up-dup-chaddr	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to duplicate client hardware address <i>This element is only shown in detail mode.</i>
up-invalid-giaddr	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to IP anti-spoofing failure for 'giaddr' field <i>This element is only shown in detail mode.</i>
up-invalid-ciaddr	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to IP anti-spoofing failure for 'ciaddr' field <i>This element is only shown in detail mode.</i>
up-no-free-context	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show number of upstream DHCP packets discarded due to free session context is unavailable <i>This element is only shown in detail mode.</i>
up-no-assoc-context	Parameter type: <CounterWithDefaultValue>	show the number of upstream

142 DHCP Relay Status Commands

name	Type	Description
	((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	DHCP packets discarded for which no session context could be associated <i>This element is only shown in detail mode.</i>
up-relay-agent-un supp	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to already been relayed by another relay agent <i>This element is only shown in detail mode.</i>
up-no-broadcast-vlan	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of upstream DHCP packets discarded due to no Upstream broadcast Vlan configured <i>This element is only shown in detail mode.</i>
dn-not-trusted	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of downstream DHCP packets discarded due to unexpected presence of Option 82 <i>This element is only shown in detail mode.</i>
dn-invalid-yiaddr	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of downstream DHCP packets discarded due to invalid client IP address <i>This element is only shown in detail mode.</i>
dn-invalid-server-resp	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue>	show the number of downstream DHCP packets discarded due to invalid DHCP Server response received <i>This element is only shown in detail mode.</i>

name	Type	Description
	- Number of times mac filter is matched - range: [0...4294967294]	
dn-no-free-context	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show number of downstream DHCP packets discarded due to free session context is unavailable <i>This element is only shown in detail mode.</i>
option82-inserted	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of all DHCP packets received in the upstream and successfully inserted with option 82 <i>This element is only shown in detail mode.</i>
option82-removed	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of all DHCP packets received in the downstream from which option 82 has been successfully removed <i>This element is only shown in detail mode.</i>
active-snooped-session	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of all the DHCP sessions that have been established and are currently being snooped <i>This element is only shown in detail mode.</i>
total-snooped-session	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of all the DHCP sessions that have been established and are being or have been snooped <i>This element is only shown in detail mode.</i>

142.6 DHCP v6 Relay Port Statistics

Command Description

This command allows the operator to view the DHCP v6 relay port counters. When this show command is invoked, all commands in underlying nodes are automatically executed.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay v6-port-stats [ (port-interface) ]
```

Command Parameters

Table 142.6-1 "DHCP v6 Relay Port Statistics" Resource Parameters

Resource Identifier	Type	Description
(port-interface)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	user port interface

142.7 DHCP v6 Relay Port Statistics Related To Vlan Ports

Command Description

This command allows the operator to view the DHCP v6 relay port counters. The command will show all counters related to the specified vlan tagged frames.

Both the summary and detailed counters are shown through the underlying nodes.

The detailed counters are only available when the counters are enabled via the related configuration command.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay v6-port-stats (port-interface) vlan [ (subscr-vlan) ]
```

Command Parameters

Table 142.7-1 "DHCP v6 Relay Port Statistics Related To Vlan Ports" Resource Parameters

142.8 DHCP v6 Relay Port Summary Statistics Related To Vlan Ports

Command Description

This command allows the operator to view the DHCP v6 relay port counters. The command will show all counters related to the specified vlan tagged frames. These summary counters are always available.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay v6-port-stats (port-interface) vlan (subscr-vlan) v6summary
```

Command Parameters

Table 142.8-1 "DHCP v6 Relay Port Summary Statistics Related To Vlan Ports" Resource Parameters

Command Output

Table 142.8-2 "DHCP v6 Relay Port Summary Statistics Related To Vlan Ports" Display parameters

Specific Information

142 DHCP Relay Status Commands

name	Type	Description
dhcpv6-error-summary	Parameter type: <Counter> - 32 bit counter	show the total of DHCP v6 packets that have been dropped because of errors <i>This element is only shown in detail mode.</i>

142.9 DHCP v6 Relay Port Detailed Statistics Related To Vlan Ports

Command Description

This command allows the operator to view the DHCP v6 relay port counters. The command will show all counters related to the specified vlan tagged frames.

The detailed counters are only given when the counters are enabled via the related configuration command.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay v6-port-stats (port-interface) vlan (subscr-vlan) v6extensive
```

Command Parameters

Table 142.9-1 "DHCP v6 Relay Port Detailed Statistics Related To Vlan Ports" Resource Parameters

Resource Identifier	Type	Description
(port-interface)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId>	user port interface

Resource Identifier	Type	Description
	- the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
(subscr-vlan)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	the subscriber vlan id

Command Output

Table 142.9-2 "DHCP v6 Relay Port Detailed Statistics Related To Vlan Ports" Display parameters

Specific Information

name	Type	Description
dhcipv6-up-corrupt-pkt	Parameter type: <Counter> - 32 bit counter	show the number of upstream DHCP v6 packets classified as corrupt and discarded <i>This element is only shown in detail mode.</i>
dhcipv6-up-lg-pkt-discd	Parameter type: <Counter> - 32 bit counter	show the number of upstream DHCPv6 packets discarded due to packet size exceeds the MTU <i>This element is only shown in detail mode.</i>
dhcipv6-up-not-allowed	Parameter type: <Counter> - 32 bit counter	show the number of upstream DHCPv6 packets discarded due to invalid packet type <i>This element is only shown in detail mode.</i>
dhcipv6-up-untrusted	Parameter type: <Counter> - 32 bit counter	show the number of Relay-Forward messages received from the untrusted client port <i>This element is only shown in detail mode.</i>
dhcipv6-up-opt18-too-lg	Parameter type: <Counter> - 32 bit counter	show the number of received packets that exceed the MTU after option-18 insertion <i>This element is only shown in detail mode.</i>
dhcipv6-up-opt37-too-lg	Parameter type: <Counter> - 32 bit counter	show the number of received packets that exceed the MTU after option-37 insertion <i>This element is only shown in detail mode.</i>
dhcipv6-up-opt53-too-lg	Parameter type: <Counter> - 32 bit counter	show the number of received packets that exceed the MTU after option-53 insertion <i>This element is only shown in detail mode.</i>
dhcipv6-dn-not-allowed	Parameter type: <Counter> - 32 bit counter	show the number of downstream DHCPv6 packets discarded due to invalid packet type <i>This element is only shown in detail mode.</i>
dhcipv6-opt18-inserted	Parameter type: <Counter> - 32 bit counter	show the number of all DHCPv6 packets received in the upstream and successfully inserted with option-18 <i>This element is only shown in detail mode.</i>
dhcipv6-opt37-inserted	Parameter type: <Counter> - 32 bit counter	show the number of all DHCPv6 packets received in the upstream and successfully inserted with option-37 <i>This element is only shown in detail mode.</i>
dhcipv6-opt53-inserted	Parameter type: <Counter> - 32 bit counter	show the number of all DHCPv6 packets received in the upstream and successfully inserted with option-53

142 DHCP Relay Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
dhcpv6-opt18-removed	Parameter type: <Counter> - 32 bit counter	show the number of all DHCPv6 packets received in the downstream from which option-18 has been successfully removed <i>This element is only shown in detail mode.</i>
dhcpv6-opt37-removed	Parameter type: <Counter> - 32 bit counter	show the number of all DHCPv6 packets received in the downstream from which option-37 has been successfully removed <i>This element is only shown in detail mode.</i>
dhcpv6-opt53-removed	Parameter type: <Counter> - 32 bit counter	show the number of all DHCPv6 packets received in the downstream from which option-53 has been successfully removed <i>This element is only shown in detail mode.</i>
dhcpv6-dn-corrupt-pkt	Parameter type: <Counter> - 32 bit counter	show the number of downstream DHCP v6 packets classified as corrupt and discarded <i>This element is only shown in detail mode.</i>
dhcpv6dn-no-free-ctxt	Parameter type: <Counter> - 32 bit counter	show the number of DHCPv6 packets which were discarded in the downstream due to exceed max dimension <i>This element is only shown in detail mode.</i>
dhcpv6-up-opt17-too-lg	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of received packets that exceed the MTU after option-17 insertion <i>This element is only shown in detail mode.</i>
dhcpv6-opt17-inserted	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>) Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	show the number of all DHCPv6 packets received in the upstream and successfully inserted with option-17 <i>This element is only shown in detail mode.</i>
dhcpv6-opt17-removed	Parameter type: <CounterWithDefaultValue> ((not-available na) <CounterWithDefaultValue>)	show the number of all DHCPv6 packets received in the downstream from which

name	Type	Description
	Possible values: - not-available : counter value is not applicable for this type of board - na : counter value is not applicable for this type of board Field type <CounterWithDefaultValue> - Number of times mac filter is matched - range: [0...4294967294]	option-17 has been successfully removed <i>This element is only shown in detail mode.</i>

142.10 DHCP Relay Session Status Command

Command Description

This command displays the dhcp-sessions information.

Note: Once the remaining-lease timer has expired, there will be a delay of 30 seconds for the removal of the session. Until then, the traffic will be forwarded to the corresponding user interface.

User Level

The command can be accessed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> show dhcp-relay session [ (client) [ ip-addr <Ip::V4Address> ] ]
```

Command Parameters

Table 142.10-1 "DHCP Relay Session Status Command" Resource Parameters

Resource Identifier	Type	Description
(client)	Format: (ipox : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> ipox : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ipox : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> ipox : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> ipox : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> ipox : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	Specifies the if-index uniquely indentifying each interface

Resource Identifier	Type	Description
	ipox : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> ipox : vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> ipox : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ipox : ip line interface (supported vlan for Unstacked [1..4093] and stacked cvlan [0..4093]) - vlanport : vlan port(supported vlan for Unstacked [1..4093] and stacked cvlan [0..4093]) - vlanport:ng2 : an NGPON2 vlan port Possible values: - vlan : vlan port Field type <Eqpt::RackId> - the rack number	

Resource Identifier	Type	Description
	Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	client ip address assigned by dhcp server

Command Output

Table 142.10-2 "DHCP Relay Session Status Command" Display parameters

Specific Information		
name	Type	Description
subnet	Parameter type: <Ip::PrefixLength> - IP address prefix length - range: [0...30]	the subnet mask of the client ip address <i>This element is always shown.</i>

name	Type	Description
lease-time	Parameter type: <Ip::LeaseTimeInSec> - the lease time	time period for which DHCP server leases ip address to a client <i>This element is always shown.</i>
gateway-ip-addr	Parameter type: <Ip::V4Address> - IPv4-address	the gateway ip address <i>This element is only shown in detail mode.</i>
dhcp-ip-addr	Parameter type: <Ip::V4Address> - IPv4-address	ip address of dhcp server <i>This element is only shown in detail mode.</i>
forwarder-type	Parameter type: <Dhcp::ForwarderType> (layer2 layer3) Possible values: - layer2 : the session belongs to l2forwarder - layer3 : the session belongs to l3forwarder	the forwarder type to which this session belongs <i>This element is always shown.</i>
forwarder-id	Parameter type: <Dhcp::ForwarderId> (<DHCP::Layer> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex> vrf : <Vrf::UnsignedVrfIndex>) Possible values: - vrf : vrf identity - stacked : stacked vlan identity Field type <DHCP::Layer> - unstacked vlan identity - range: [1...4093] Field type <Vrf::UnsignedVrfIndex> - the VRF ID which uniquely identify a VRF - range: [1...127] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	the id of the forwarder to which this session belongs <i>This element is always shown.</i>
remaining-lease	Parameter type: <Ip::RemainingLeaseTimeInSec> ((session-being-deleted ses-deleting) <Ip::LeaseTimeInSec>) Possible values: - session-being-deleted : session being deleted - ses-deleting : session being deleted Field type <Ip::LeaseTimeInSec> - the lease time	remaining time period for which DHCP server leases ip address to a client <i>This element is always shown.</i>

143- Multicast Status Commands

143.1 Multicast Status Command Tree	143-6243
143.2 Multicast Active Groups Status Command	143-6244
143.3 Multicast Ipv6 Active Groups Status Command	143-6248
143.4 Multicast PON Active Groups Status Command	143-6252
143.5 Multicast ONT Active Groups Status Command	143-6256
143.6 Multicast Channel Pair Active Groups Status Command	143-6260
143.7 Multicast Group Membership Status Command	143-6264

143.1 Multicast Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Multicast Status Commands".

Command Tree

```

----show
  ----mcast
    ----active-groups
      - (port)
      - vlan-id
      - mcast-grp-addr
      - mcast-src-addr
    ----ipv6-active-groups
      - (port)
      - vlan-id
      - mcast-grp-addr
      - mcast-src-addr
    ----pon-active-groups
      - (pon-idx)
      - port
      - vlan-id
      - mcast-grp-addr
      - mcast-src-addr
    ----ont-active-groups
      - (ont-idx)
      - port
      - vlan-id
      - mcast-grp-addr
      - mcast-src-addr
    ----chpair-active-groups

      - port
      - vlan-id
      - mcast-grp-addr
      - mcast-src-addr
    ----grp-membership
      - (mcast-grp-addr)
      - vlan-id
      - mcast-src-addr
      - port
  
```

143.2 Multicast Active Groups Status Command

Command Description

This command shows per user interface the list of active multicast streams.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast active-groups [ (port) [ vlan-id <Vlan::VlanId> ] [ mcast-grp-addr <Igmp::MulticastAddress> ] [ mcast-src-addr <Ip::V4Address> ] ]
```

Command Parameters

Table 143.2-1 "Multicast Active Groups Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	- vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
vlan-id	Parameter type: <Vlan::VlanId> Format: - vlan id - range: [1...4093]	vlan Id
mcast-grp-addr	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	class D address of the multicast stream
mcast-src-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	the multicast group source address

Command Output

Table 143.2-2 "Multicast Active Groups Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Igmp::ActualState> (full-view pre-view black-out) Possible values: - full-view : full view of the stream - pre-view : preview of the stream - black-out : no stream is viewed	The actual state of the multicast stream <i>This element is always shown.</i>
curr-previewed-nbr short name: prev-nbr	Parameter type: <Igmp::PreviewNumber> - number of pre-view sessions already been viewed - range: [0...1000]	number of pre-view sessions that have already been viewed <i>This element is only shown in detail mode.</i>
status	Parameter type: <Igmp::McastStatus> (static static-dynamic dynamic) Possible values: - static : static entry	the current type of multicast group <i>This element is always shown.</i>

name	Type	Description
	- static-dynamic : static dynamic entry - dynamic : dynamic entry	
last-host-ip	Parameter type: <Igmp::MulticastLastHostIp> - IPv4-address	currently joined last HostIP for IGMP control channel <i>This element is only shown in detail mode.</i>

143.3 Multicast Ipv6 Active Groups Status Command

Command Description

This command shows per user interface the list of ipv6 active multicast streams.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast ipv6-active-groups [ (port) [ vlan-id <Vlan::VlanId> ] [ mcast-grp-addr <Ip::V6Prefix> ] [ mcast-src-addr <Ip::V6Prefix> ] ]
```

Command Parameters

Table 143.3-1 "Multicast Ipv6 Active Groups Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId>	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	<pre> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier </pre>	

Resource Identifier	Type	Description
	Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
vlan-id	Parameter type: <Vlan::VlanId> Format: - vlan id - range: [1...4093]	vlan Id
mcast-grp-addr	Parameter type: <Ip::V6Prefix> Format: - IPv6-address	ipv6 address of the multicast stream
mcast-src-addr	Parameter type: <Ip::V6Prefix> Format: - IPv6-address	the multicast group source address

Command Output

status	Parameter type: <Igmp::McastStatus> (static static-dynamic dynamic)	the current type of multicast group <i>This element is only shown in detail mode.</i>

name	Type	Description
	Possible values: - static : static entry - static-dynamic : static dynamic entry - dynamic : dynamic entry	

143.4 Multicast PON Active Groups Status Command

Command Description

This command shows per user interface on a particular PON the list of active multicast streams.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast pon-active-groups [ (pon-idx) [ port <Igmp::IgmpIfIndex> ] [ vlan-id <Vlan::VlanId> ] [ mcast-grp-addr <Igmp::MulticastAddress> ] [ mcast-src-addr <Ip::V4Address> ] ]
```

Command Parameters

Table 143.4-1 "Multicast PON Active Groups Status Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	identification of the PON
port	Parameter type: <Igmp::IgmpIfIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identification of the vlanport

Resource Identifier	Type	Description
	<pre> <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port </pre>

143.5 Multicast ONT Active Groups Status Command

Command Description

This command shows per user interface on a particular ONT the list of active multicast streams.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast ont-active-groups [ (ont-idx) [ port <Igmp::IgmpIfIndex> ] [ vlan-id <Vlan::VlanId> ] [ mcast-grp-addr <Igmp::MulticastAddress> ] [ mcast-src-addr <Ip::V4Address> ] ]
```

Command Parameters

Table 143.5-1 "Multicast ONT Active Groups Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identification of the ONT
port	Parameter type: <Igmp::IgmpIfIndex> Format:	identification of the vlanport

Resource Identifier	Type	Description

Resource Identifier	Type	Description
	- vlan : vlan port - vlan:ng2 : ngpon2 vlan port - Field type <Eqpt::RackId> - the rack number - Field type <Eqpt::ShelfId> - the shelf number - Field type <Eqpt::SlotId> - the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::Vcild> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Field type <Eqpt::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE - Possible values: - stacked : stacked vlan identity - Field type <Eqpt::UnstackedVlan> - unstacked vlan id - Field type <Eqpt::SVlan> - service vlan id - Field type <Eqpt::CVlan> - customer vlan id	
vlan-id	Parameter type: <Vlan::VlanId> Format: - vlan id - range: [1...4093]	vlan Id
mcast-grp-addr	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	class D address of the multicast stream
mcast-src-addr	Parameter type: <Ip::V4Address>	the multicast group source

Resource Identifier	Type	Description
	Format: - IPv4-address	address

Command Output

Table 143.5-2 "Multicast ONT Active Groups Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Igmp::ActualState> (full-view pre-view black-out) Possible values: - full-view : full view of the stream - pre-view : preview of the stream - black-out : no stream is viewed	The actual state of the multicast stream <i>This element is always shown.</i>
curr-previewed-nbr short name: prev-nbr	Parameter type: <Igmp::PreviewNumber> - number of pre-view sessions already been viewed - range: [0...1000]	number of pre-view sessions that have already been viewed <i>This element is only shown in detail mode.</i>
status	Parameter type: <Igmp::McastStatus> (static static-dynamic dynamic) Possible values: - static : static entry - static-dynamic : static dynamic entry - dynamic : dynamic entry	the current type of multicast group <i>This element is always shown.</i>

143.6 Multicast Channel Pair Active Groups Status Command

Command Description

This command shows per user interface on a particular Channel Pair the list of active multicast streams.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast chpair-active-groups [ (chpair-idx) [ port <Igmp::IgmpIfIndex> ] [ vlan-id <Vlan::VlanId> ] [ mcast-grp-addr <Igmp::MulticastAddress> ] [ mcast-src-addr <Ip::V4Address> ] ]
```

Command Parameters

Table 143.6-1 "Multicast Channel Pair Active Groups Status Command" Resource Parameters

Resource Identifier	Type	Description
(chpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	identification of the Channel-Pair
port	Parameter type: <Igmp::IgmpIfIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	identification of the vlanport

Resource Identifier	Type	Description
	vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI	

Resource Identifier	Type	Description
	Field type <Eqpt::VcId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
vlan-id	Parameter type: <Vlan::VlanId> Format: - vlan id - range: [1...4093]	vlan id
mcast-grp-addr	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	class D address of the multicast stream
mcast-src-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	the multicast group source address

Command Output

Table 143.6-2 "Multicast Channel Pair Active Groups Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Igmp::ActualState> (full-view pre-view	The actual state of the multicast stream <i>This element is always shown.</i>

name	Type	Description
	black-out) Possible values: - full-view : full view of the stream - pre-view : preview of the stream - black-out : no stream is viewed	
curr-previewed-nbr short name: prev-nbr	Parameter type: <Igmp::PreviewNumber> - number of pre-view sessions already been viewed - range: [0...1000]	number of pre-view sessions that have already been viewed <i>This element is only shown in detail mode.</i>
status	Parameter type: <Igmp::McastStatus> (static static-dynamic dynamic) Possible values: - static : static entry - static-dynamic : static dynamic entry - dynamic : dynamic entry	the current type of multicast group <i>This element is always shown.</i>

143.7 Multicast Group Membership Status

Command

Command Description

This command shows per multicast stream the list of user interfaces to which the system is currently requested to forward this stream.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast grp-membership [ (mcast-grp-addr) [ vlan-id <Vlan::VlanId> ] [ mcast-src-addr <Ip::V4Address> ] [ port <Igmp::IgmpIfIndex> ] ]
```

Command Parameters

Table 143.7-1 "Multicast Group Membership Status Command" Resource Parameters

Resource Identifier	Type	Description
(mcast-grp-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	multicast group address
vlan-id	Parameter type: <Vlan::VlanId> Format: - vlan id - range: [1...4093]	vlan id
mcast-src-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	the multicast group source address
port	Parameter type: <Igmp::IgmpIfIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	identifies a user interface receiving a multicast stream

Resource Identifier	Type	Description
	vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI	

Resource Identifier	Type	Description
	Field type <Eqpt::VcId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 143.7-2 "Multicast Group Membership Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Igmpp::GroupAddr2UserItfActualstate> (full-view pre-view black-out) Possible values: - full-view : full view of the stream - pre-view : preview of the stream - black-out : no stream is viewed	the actual state of the multicast stream <i>This element is always shown.</i>
status	Parameter type: <Igmpp::McastStatus> (static static-dynamic dynamic) Possible values: - static : static entry	the current status of the static multicast branch <i>This element is always shown.</i>

name	Type	Description
	- static-dynamic : static dynamic entry - dynamic : dynamic entry	

144- CPE Management Status Commands

144.1 CPE Management Status Command Tree	144-6269
144.2 CPE Management Show Command	144-6270

144.1 CPE Management Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "CPE Management Status Commands".

Command Tree

```
----show
  ----cpe-management
    ----snmpproxy-statistics
      - (address)
```

144.2 CPE Management Show Command

Command Description

This chapter shows the global statistics and the statistics per CPE manager

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show cpe-management snmpproxy-statistics [ (address) ]
```

Command Parameters

Table 144.2-1 "CPE Management Show Command" Resource Parameters

Resource Identifier	Type	Description
(address)	Format: - IP address of CPE Management Station	the IP address of a CPE manager

Command Output

Table 144.2-2 "CPE Management Show Command" Display parameters

Common Information:cpeproxy		
name	Type	Description
rx-drop-msgs-cpe	Parameter type: <Counter> - 32 bit counter	the number of discarded msgs received from CPEs <i>This element is only shown in detail mode.</i>
Specific Information		
name	Type	Description
rx-msgs	Parameter type: <Counter> - 32 bit counter	the number of received msgs from a CPE manager <i>This element is always shown.</i>
tx-msgs	Parameter type: <Counter> - 32 bit counter	the number of msgs sent to a CPE manager <i>This element is always shown.</i>
rx-drop-msgs	Parameter type: <Counter> - 32 bit counter	the number of discarded msgs received from a CPE manager <i>This element is always shown.</i>

145- Session Status Commands

145.1 Session Status Command Tree	145-6272
145.2 Session Status Command	145-6273

145.1 Session Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Session Status Commands".

Command Tree

```
----show
  ----session
    - (id)
```

145.2 Session Status Command

Command Description

This command displays the status of all sessions.

User Level

The command can be accessed and executed by an operator with admin privilege.

Command Syntax

The command has the following syntax:

> show session (id)

Command Parameters

Table 145.2-1 "Session Status Command" Resource Parameters

Resource Identifier	Type	Description
(id)	Format: - the session number - range: [1...13]	the session number

Command Output

Table 145.2-2 "Session Status Command" Display parameters

Specific Information		
name	Type	Description
operator	Parameter type: <Sec::SessionOperatorName> - the name of an operator - length: 1<=x<=11	the name of the operator that is actually using the session <i>This element is always shown.</i>
from	Parameter type: <Sec::LoginAddress> - the address from where the operator logged in - length: x<=40	the ip-address from where the user is logged in <i>This element is always shown.</i>
type	Parameter type: <Sec::TerminalType> (craft telnet unused test ssh sftp) Possible values: - craft : craft terminal - telnet : telnet terminal - unused : unused terminal - test : test terminal	the type of connection use. Network means that any supported connection type over ip is possible. <i>This element is always shown.</i>

145 Session Status Commands

name	Type	Description
	- ssh : ssh terminal - sftp : sftp terminal	
status short name: stat	Parameter type: <Sec::SessionStatus> (init free (reserved res) name (passwd pwd) (active act) (logout end) (limited lmt)) Possible values: - init : initialisation ongoing - free : free - reserved : reserved - res : reserved - name : asking the operator name - passwd : asking the password - pwd : asking the password - active : active - act : active - logout : the operator is logging out - end : the operator is logging out - limited : the limited session configured by user - lmt : the limited session configured by user	the status of the session. Special values are : initializing=session is not yet ready to be used, free=session is not used, selected=session is reserved, stopping=the user is logging out, invalid=the session is out-of-service <i>This element is always shown.</i>
login-time	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	the time when the user connected to the terminal. Never if no user is connected. <i>This element is always shown.</i>
idle-time	Parameter type: <ElapsedTime> - the time elapsed since a certain event - unit: sec	the time that this terminal is idle (the operator did not type any character and did not modify its window size) <i>This element is always shown.</i>
numbering-scheme short name: num	Parameter type: <Sec::SlotDesc> ((type-based typ) (position-based pos) (legacy-based leg)) Possible values: - type-based : flat-numbering per slot-type (tl1-like) - typ : flat-numbering per slot-type (tl1-like) - position-based : flat-numbering independent of slot-type - pos : flat-numbering independent of slot-type - legacy-based : numbering used since the early days (position-based-like) - leg : numbering used since the early days (position-based-like)	the numbering scheme for this session <i>This element is always shown.</i>
current-session	Parameter type: <Sec::CurrentSession> (yes no) Possible values: - yes : command is executed in current session - no : command is not executed in current session	the current session status <i>This element is only shown in detail mode.</i>

146- PPPoX-Relay Status Commands

146.1 PPPoX-Relay Status Command Tree	146-6276
146.2 PPPoX CC Engine Statistics	146-6277
146.3 PPPoX CC Client Port Statistics	146-6279
146.4 PPPoX CC Engine Monitor Statistics	146-6282
146.5 PPPoX CC Client Port Monitor Statistics	146-6284
146.6 PPPoX CC Session Engine Status Command	146-6287
146.7 PPPoX CC Session Client Port Status Command	146-6290
146.8 PPPCC Engine Current 15Minute Statistics Command	146-6293
146.9 PPPCC Engine Current 1day Statistics Command	146-6295
146.10 PPPCC Engine Previous 15Minute Statistics Command	146-6297
146.11 PPPCC Engine Previous 1day Statistics Command	146-6299

146.1 PPPoX-Relay Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoX-Relay Status Commands".

Command Tree

```
----show
  ----pppox-relay
    ----cross-connect
      ----statistics
        ----engine
          - (vlan-id)
        ----client-port
          - (client-port)
      ----monitor-statistics

146.2 PPPoX CC Engine Statistics

Command Description

This command displays the statistics for a particular VLAN ID.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect statistics engine [ (vlan-id) ]
```

Command Parameters

Table 146.2-1 "PPPoX CC Engine Statistics" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	engine identification

Command Output

Table 146.2-2 "PPPoX CC Engine Statistics" Display parameters

Specific Information		
name	Type	Description
engine-name	Parameter type: <PPPoX::EngineName> - Engine Name - length: 1<=x<=32	name to identify the engine/service <i>This element is always shown.</i>
in-ctrl-frm	Parameter type: <Counter> - 32 bit counter	number of ingress control messages <i>This element is always shown.</i>
out-ctrl-frm	Parameter type: <Counter>	number of egress control

146 PPPoX-Relay Status Commands

name	Type	Description
	- 32 bit counter	messages <i>This element is always shown.</i>
err-ctrl-frm	Parameter type: <Counter> - 32 bit counter	nbr of errored upstream and downstream control msgs <i>This element is only shown in detail mode.</i>
ppp-cc	Parameter type: <SignedInteger> - a signed integer	nbr of PPP cross-connections currently in use <i>This element is always shown.</i>

146.3 PPPoX CC Client Port Statistics

Command Description

This command displays the statistics of a client port.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect statistics client-port [ (client-port) ]
```

Command Parameters

Table 146.3-1 "PPPoX CC Client Port Statistics" Resource Parameters

Resource Identifier	Type	Description
(client-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip :	client port identification

Resource Identifier	Type	Description
	stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>) Possible values: - vlan-port : vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan>	

Resource Identifier	Type	Description
	- customer vlan id	

Command Output

Table 146.3-2 "PPPoX CC Client Port Statistics" Display parameters

Specific Information		
name	Type	Description
in-ctrl-frm	Parameter type: <Counter> - 32 bit counter	number of ingress control messages <i>This element is always shown.</i>
out-ctrl-frm	Parameter type: <Counter> - 32 bit counter	number of egress control messages <i>This element is always shown.</i>
err-ctrl-frm	Parameter type: <Counter> - 32 bit counter	number of errored control messages <i>This element is always shown.</i>
curr-num-session	Parameter type: <SignedInteger> - a signed integer	number of active PPP sessions on the client port <i>This element is always shown.</i>
fwd-frames-up	Parameter type: <Counter> - 32 bit counter	number of upstream forwarded frames <i>This element is only shown in detail mode.</i>
fwd-frames-down	Parameter type: <Counter> - 32 bit counter	number of downstream forwarded frames <i>This element is only shown in detail mode.</i>
disc-frames-up	Parameter type: <Counter> - 32 bit counter	number of upstream discarded frames <i>This element is only shown in detail mode.</i>
disc-frames-down	Parameter type: <Counter> - 32 bit counter	number of downstream discarded frames <i>This element is only shown in detail mode.</i>

146.4 PPPoX CC Engine Monitor Statistics

Command Description

This command displays the engine monitor statistics for a particular VLAN ID and lists the statistics of a configured engine with a monitor enabled.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect monitor-statistics engine [ (vlan-id) ]
```

Command Parameters

Table 146.4-1 "PPPoX CC Engine Monitor Statistics" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	engine identification

Command Output

Table 146.4-2 "PPPoX CC Engine Monitor Statistics" Display parameters

Specific Information		
name	Type	Description
generic-err-cnt	Parameter type: <Counter> - 32 bit counter	nbr of discovery msgs that carried the Generic Error tag <i>This element is always shown.</i>
inv-serv-name	Parameter type: <Counter> - 32 bit counter	nbr of PAD-S msgs containing Service-Name-Error tag <i>This element is always shown.</i>

146.5 PPPoX CC Client Port Monitor Statistics

Command Description

This command shows the client port monitor statistics and lists the statistics of a configured client port with a monitor enabled.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect monitor-statistics client-port [ (client-port) ]
```

Command Parameters

Table 146.5-1 "PPPoX CC Client Port Monitor Statistics" Resource Parameters

Resource Identifier	Type	Description
(client-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /	client port identification

Resource Identifier	Type	Description
	<Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>) Possible values: - vlan-port : vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id	

Resource Identifier	Type	Description
	Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 146.5-2 "PPPoX CC Client Port Monitor Statistics" Display parameters

Specific Information		
name	Type	Description
unexp-ctrl-msg	Parameter type: <Counter> - 32 bit counter	number of unexpected control messages discarded <i>This element is always shown.</i>
unexp-data-pkts	Parameter type: <Counter> - 32 bit counter	number of discarded data packets on this port <i>This element is always shown.</i>
prt-mru-err-cnt	Parameter type: <Counter> - 32 bit counter	number of long messages discarded on this port <i>This element is only shown in detail mode.</i>
trans-age-out	Parameter type: <Counter> - 32 bit counter	nbr of events cleared because the transaction timed out <i>This element is always shown.</i>
session-age-out	Parameter type: <Counter> - 32 bit counter	nbr of events timed out for this port <i>This element is always shown.</i>
cc-port-max-exceeded	Parameter type: <Counter> - 32 bit counter	number of times a ppp cc set-up process is aborted due to max nbr ppp cc allowed on a port <i>This element is only shown in detail mode.</i>
cc-line-max-exceeded	Parameter type: <Counter> - 32 bit counter	number of times a ppp cc set-up process is aborted due to max nbr ppp cc allowed on a line <i>This element is only shown in detail mode.</i>
cc-board-max-exceeded	Parameter type: <Counter> - 32 bit counter	number of times a ppp cc set-up process is aborted due to max nbr ppp cc allowed on a board <i>This element is only shown in detail mode.</i>

146.6 PPPoX CC Session Engine Status Command

Command Description

This command displays session data for the engine.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect session engine [ (vlan-id) ]
```

Command Parameters

Table 146.6-1 "PPPoX CC Session Engine Status Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	engine identification

Command Output

Table 146.6-2 "PPPoX CC Session Engine Status Command" Display parameters

Specific Information		
name	Type	Description
server-mac-addr	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	mac-addr of the PPPoE Server for this PPP cross-connection <i>This element is always shown.</i>
ext-session-id	Parameter type: <SignedInteger> - a signed integer	PPPoE session id of this PPP cross-connection <i>This element is always shown.</i>

name	Type	Description
client-port	Parameter type: <Itf::PppoxClientPortInterface> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>) Possible values: - vlan-port : vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	Index to which the PPPoE client is directly associated <i>This element is always shown.</i>

name	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::Vcild> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
int-session-id	Parameter type: <SignedInteger> - a signed integer	index that uniquely indicate a PPP cross-connection <i>This element is always shown.</i>
client-mac-addr	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	mac-addr of the PPPoE Client for this PPP cross-connection <i>This element is only shown in detail mode.</i>

146.7 PPPoX CC Session Client Port Status Command

Command Description

This command displays session data for the client port.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect session client-port [ (client-port) ]
```

Command Parameters

Table 146.7-1 "PPPoX CC Session Client Port Status Command" Resource Parameters

Resource Identifier	Type	Description
(client-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> :	client port identification

Resource Identifier	Type	Description
	<Eqpt::OntPortId> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>) Possible values: - vlan-port : vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id	

Resource Identifier	Type	Description
	Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 146.7-2 "PPPoX CC Session Client Port Status Command" Display parameters

Specific Information		
name	Type	Description
vlan-id	Parameter type: <Vlan::StackedVlanSigned> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	vlan id <i>This element is always shown.</i>
server-mac-addr	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	mac-addr of the PPPoE server for this PPP cross-connection <i>This element is always shown.</i>
ext-session-id	Parameter type: <SignedInteger> - a signed integer	PPPoE session id of this PPP cross-connection <i>This element is always shown.</i>
int-session-id	Parameter type: <SignedInteger> - a signed integer	index that uniquely indicate a PPP cross-connection <i>This element is always shown.</i>
client-mac-addr	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	mac-addr of the PPPoE client for this PPP cross-connection <i>This element is only shown in detail mode.</i>

146.8 PPPCC Engine Current 15Minute Statistics Command

Command Description

This command displays the statistics of the transaction ageout and session ageout counters per engine for the Current 15Minute interval.

The counters are updated once in every 3 minute interval.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect trouble-shooting-cntrs engine curr-15min-stats [ (vlan-id) ]
```

Command Parameters

Table 146.8-1 "PPPCC Engine Current 15Minute Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan-id

Command Output

Table 146.8-2 "PPPCC Engine Current 15Minute Statistics Command" Display parameters

Specific Information		
name	Type	Description
engine-name	Parameter type: <PPPoX::EngineName> - Engine Name	engine name <i>This element is always shown.</i>

146 PPPoX-Relay Status Commands

name	Type	Description
	- length: 1<=x<=32	
trans-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of transaction age out counters in current 15 min interval <i>This element is always shown.</i>
sess-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of session age out counters in current 15 min interval <i>This element is always shown.</i>
measured-time	Parameter type: <PPPoX::IntervalMeasureTime15Min> - the measured time interval - unit: sec	amount of time in seconds that statistics for this entry has been counted in the current 15 min interval <i>This element is always shown.</i>
valid-flag	Parameter type: <PPPoX::IntervalValidityFlag> (true false) Possible values: - true : data is valid - false : data is not valid	validity of the counters collected <i>This element is always shown.</i>

146.9 PPPCC Engine Current 1day Statistics Command

Command Description

This command displays the statistics of the transaction ageout and session ageout counters per engine for the current 1day interval.

The counters are updated once in every 3 minute interval.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect trouble-shooting-cntrs engine curr-1day-stats [ (vlan-id) ]
```

Command Parameters

Table 146.9-1 "PPPCC Engine Current 1day Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan-id

Command Output

Table 146.9-2 "PPPCC Engine Current 1day Statistics Command" Display parameters

Specific Information		
name	Type	Description
engine-name	Parameter type: <PPPoX::EngineName> - Engine Name	engine name <i>This element is always shown.</i>

146 PPPoX-Relay Status Commands

name	Type	Description
	- length: 1<=x<=32	
trans-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of transaction age out counters in current 1 day interval <i>This element is always shown.</i>
sess-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of session age out counters in current 1 dayinterval <i>This element is always shown.</i>
measured-time	Parameter type: <PPPoX::IntervalMeasureTime1Day> - the measured time interval - unit: sec	amount of time in seconds that statistics for this entry has been counted in the current 1 day interval <i>This element is always shown.</i>
valid-flag	Parameter type: <PPPoX::IntervalValidityFlag> (true false) Possible values: - true : data is valid - false : data is not valid	validity of the counters collected <i>This element is always shown.</i>

146.10 PPPCC Engine Previous 15Minute Statistics Command

Command Description

This command displays the statistics of the transaction ageout and session ageout counters per engine for the previous 15Minute interval.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect trouble-shooting-cntrs engine prev-15min-stats [ (vlan-id) [ interval-num
<PPPoX::IntervalNumber15min> ] ]
```

Command Parameters

Table 146.10-1 "PPPCC Engine Previous 15Minute Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan-id
interval-num	Parameter type: <PPPoX::IntervalNumber15min> Format: - a number identifying 15 minutes interval time - range: [1...32]	previous 15 min interval number

Command Output

Table 146.10-2 "PPPCC Engine Previous 15Minute Statistics Command" Display parameters

146 PPPoX-Relay Status Commands

Specific Information		
name	Type	Description
engine-name	Parameter type: <PPPoX::EngineName> - Engine Name - length: 1<=x<=32	engine identification <i>This element is always shown.</i>
trans-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of transaction age out in previous 15 min interval <i>This element is always shown.</i>
sess-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of session age out in previous 15 min interval <i>This element is always shown.</i>
measured-time	Parameter type: <PPPoX::IntervalMeasureTime15Min> - the measured time interval - unit: sec	amount of time in seconds that statistics for this entry has been counted in the previous 15 min interval <i>This element is always shown.</i>
valid-flag	Parameter type: <PPPoX::IntervalValidityFlag> (true false) Possible values: - true : data is valid - false : data is not valid	validity of the counters collected <i>This element is always shown.</i>

146.11 PPPCC Engine Previous 1day Statistics Command

Command Description

This command displays the statistics of the transaction ageout and session ageout counters per engine for the previous 1day interval.

User Level

The command can be accessed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> show pppox-relay cross-connect trouble-shooting-cntrs engine prev-1day-stats [ (vlan-id) [ interval-num
<PPPoX::IntervalNumber1day> ] ]
```

Command Parameters

Table 146.11-1 "PPPCC Engine Previous 1day Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan-id
interval-num	Parameter type: <PPPoX::IntervalNumber1day> Format: - a number identifying 1 day interval time - range: [1...7]	previous 1 day interval number

Command Output

Table 146.11-2 "PPPCC Engine Previous 1day Statistics Command" Display parameters

146 PPPoX-Relay Status Commands

Specific Information		
name	Type	Description
engine-name	Parameter type: <PPPoX::EngineName> - Engine Name - length: 1<=x<=32	engine name <i>This element is always shown.</i>
trans-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of transaction age out previous 1 day interval <i>This element is always shown.</i>
sess-age-out-cnt	Parameter type: <Counter> - 32 bit counter	number of session age out counters in previous 1 day interval <i>This element is always shown.</i>
measured-time	Parameter type: <PPPoX::IntervalMeasureTime1Day> - the measured time interval - unit: sec	amount of time in seconds that statistics for this entry has been counted in the previous 1 day interval <i>This element is always shown.</i>
valid-flag	Parameter type: <PPPoX::IntervalValidityFlag> (true false) Possible values: - true : data is valid - false : data is not valid	validity of the counters collected <i>This element is always shown.</i>

147- NAT related Commands

147.1 NAT related Command Tree	147-6302
147.2 Nat dynamic Session Status Command	147-6303

147.1 NAT related Command Tree

Description

This chapter gives an overview of nodes that are handled by "NAT related Commands".

Command Tree

```
----show
  ----nat
    ----session
      - local-addr
      - local-port
```

147.2 Nat dynamic Session Status Command

Command Description

This command displays the nat-sessions information.

Note: Once the remaining-lease timer has expired, esponding user interface.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show nat session [ local-addr <Ip::V4Address> ] [ local-port <CWMP::CwmpPort> ]
```

Command Parameters

Table 147.2-1 "Nat dynamic Session Status Command" Resource Parameters

Resource Identifier	Type	Description
local-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	the local address of the client
local-port	Parameter type: <CWMP::CwmpPort> Format: - nat port - range: [0...65535] - length: x<=65535	the local port of the client

Command Output

Table 147.2-2 "Nat dynamic Session Status Command" Display parameters

Specific Information		
name	Type	Description
global-addr	Parameter type: <Ip::V4Address> - IPv4-address	<i>This element is always shown.</i>
global-port	Parameter type: <CWMP::CwmpPort> - nat port - range: [0...65535] - length: x<=65535	<i>This element is always shown.</i>

148- CWMP Platform Status Commands

148.1 CWMP Platform Status Command Tree	148-6305
148.2 CWMP Platform Status Commands	148-6306
148.3 Cwmp Platform Status Commands	148-6307

148.1 CWMP Platform Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "CWMP Platform Status Commands".

Command Tree

```
----show
  ----cwpmp
    ----plt
```

148.2 CWMP Platform Status Commands

Command Description

This command allows the operator to retrieve CWMP related status.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show cwmp
```

148.3 Cwmp Platform Status Commands

Command Description

This command allows the operator to retrieve CWMP related status.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show cwmp plt
```

Command Output

Table 148.3-2 "Cwmp Platform Status Commands" Display parameters

Specific Information		
name	Type	Description
operstate	Parameter type: <CWMP::OperStatus> (enabled disabled) Possible values: - enabled : the identified resource is operational - disabled : the identified resource is not operational or the status is not known	operational state of cwmp <i>This element is always shown.</i>

149- SHDSL Status Commands

149.1 SHDSL Status Command Tree	149-6309
149.2 SHDSL Inventory Status Command	149-6311
149.3 SHDSL Span Status Command	149-6313
149.4 SHDSL Unit Status Command	149-6320
149.5 SHDSL Segment Status Command	149-6322
149.6 SHDSL Segment Counters Current Interval Status Command	149-6327
149.7 SHDSL Segment Counters Current Day Status Command	149-6330
149.8 SHDSL Segment Counters Previous Interval Status Command	149-6333
149.9 SHDSL Segment Counters Previous Day Status Command	149-6336
149.10 SHDSL Span Current Interval Performance Data Status Command	149-6339
149.11 SHDSL Span Current Day Performance Data Status Command	149-6341
149.12 SHDSL Span Previous Interval Performance Data Status Command	149-6343
149.13 SHDSL Span Previous Day Performance Data Status Command	149-6345

149.1 SHDSL Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "SHDSL Status Commands".

Command Tree

```

----show
  ----shdsl
    ----inventory
      - (if-index)

149.2 SHDSL Inventory Status Command

Command Description

This command displays the SHDSL inventory status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl inventory [ (if-index) [ unit-id <Shdsl::UnitId> ] ]
```

Command Parameters

Table 149.2-1 "SHDSL Inventory Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values: - stu-c : the SHDSL unit is STU-C - stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2 - sru-3 : the SHDSL unit is SRU-3	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	

Command Output

Table 149.2-2 "SHDSL Inventory Status Command" Display parameters

Specific Information		
name	Type	Description
version	Parameter type: <Shdsl::UnitShdslStdVersion> - an SHDSL unit standard version - range: [0...255]	the SHDSL standard version for this unit <i>This element is always shown.</i>
list-no	Parameter type: <Shdsl::UnitVendorListNumber> - string indicates an SHDSL unit's vendor list number - length: x<=3	the vendor list number for this SHDSL unit <i>This element is always shown.</i>
issue-no	Parameter type: <Shdsl::UnitVendorIssueNumber> - string indicates SHDSL unit's vendor issue number - length: x<=2	the vendor issue number for this SHDSL unit <i>This element is always shown.</i>
sw-version	Parameter type: <Shdsl::UnitVendorSwVersion> - string indicates SHDSL unit's vendor softwr version nbr - length: x<=32	the vendor software version number for this SHDSL unit <i>This element is always shown.</i>
clei-code	Parameter type: <Shdsl::UnitCleiCode> - string indicates SHDSL unit's Common Language Equipment Identifier code - length: x<=10	the Common Language Equipment Identifier code for this SHDSL unit <i>This element is always shown.</i>
vendor-id	Parameter type: <Shdsl::UnitVendorID> - a string indicates an SHDSL unit's vendor ID - length: x<=8	the vendor id for this SHDSL unit <i>This element is only shown in detail mode.</i>
model-no	Parameter type: <Shdsl::UnitVendorModelNumber> - a string indicates an SHDSL unit's vendor model number - length: x<=12	the vendor model number for this SHDSL unit <i>This element is only shown in detail mode.</i>
serial-no	Parameter type: <Shdsl::UnitVendorSerialNumber> - a string indicates an SHDSL unit's vendor serial number - length: x<=12	the vendor serial number for this SHDSL unit <i>This element is only shown in detail mode.</i>
other-info	Parameter type: <Shdsl::UnitVendorOtherInfo> - a string indicates an SHDSL unit's vendor specific info - length: x<=12	the vendor other specific information for this SHDSL unit <i>This element is only shown in detail mode.</i>
region-cap	Parameter type: <Shdsl::SpanRegionalSetting> (annex-a/f annex-b/g) Possible values: - annex-a/f : Annex A/F Region 1 - annex-b/g : Annex B/G Region 2	the regional capabilities that can be supported by this unit <i>This element is only shown in detail mode.</i>

149.3 SHDSL Span Status Command

Command Description

This command displays the SHDSL span status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl span-status [ (if-index) ]
```

Command Parameters

Table 149.3-1 "SHDSL Span Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 149.3-2 "SHDSL Span Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Shdsl::SpanState> (unknown unequipped faulty idle startup active testing fwdownloading) Possible values: - unknown : the state is unknown	the overall state of this SHDSL span <i>This element is always shown.</i>

name	Type	Description
	- unequipped : the state is unequipped - faulty : the state is faulty - idle : the state is idle - startup : the state is startup - active : the state is active - testing : the state is testing - fwdownloading : the state is firmware downloading	
det-stu-c	Parameter type: <Shdsl::STUC> (no-stu-c stu-c) Possible values: - no-stu-c : STU-C isn't on this span - stu-c : STU-C is on this span	STU-C <i>This element is only shown in detail mode.</i>
det-stu-r	Parameter type: <Shdsl::STUR> (no-stu-r stu-r) Possible values: - no-stu-r : STU-R isn't on this span - stu-r : STU-R is on this span	STU-R <i>This element is only shown in detail mode.</i>
det-sru-1	Parameter type: <Shdsl::SRU1> (no-sru-1 sru-1) Possible values: - no-sru-1 : SRU-1 isn't on this span - sru-1 : SRU-1 is on this span	SRU-1 <i>This element is only shown in detail mode.</i>
det-sru-2	Parameter type: <Shdsl::SRU2> (no-sru-2 sru-2) Possible values: - no-sru-2 : SRU-2 isn't on this span - sru-2 : SRU-2 is on this span	SRU-2 <i>This element is only shown in detail mode.</i>
det-sru-3	Parameter type: <Shdsl::SRU3> (no-sru-3 sru-3) Possible values: - no-sru-3 : SRU-3 isn't on this span - sru-3 : SRU-3 is on this span	SRU-3 <i>This element is only shown in detail mode.</i>
det-sru-4	Parameter type: <Shdsl::SRU4> (no-sru-4 sru-4) Possible values: - no-sru-4 : SRU-4 isn't on this span - sru-4 : SRU-4 is on this span	SRU-4 <i>This element is only shown in detail mode.</i>
det-sru-5	Parameter type: <Shdsl::SRU5> (no-sru-5 sru-5) Possible values: - no-sru-5 : SRU-5 isn't on this span - sru-5 : SRU-5 is on this span	SRU-5 <i>This element is only shown in detail mode.</i>
det-sru-6	Parameter type: <Shdsl::SRU6> (no-sru-6 sru-6) Possible values: - no-sru-6 : SRU-6 isn't on this span - sru-6 : SRU-6 is on this span	SRU-6 <i>This element is only shown in detail mode.</i>
det-sru-7	Parameter type: <Shdsl::SRU7> (no-sru-7	SRU-7 <i>This element is only shown in</i>

name	Type	Description
	sru-7) Possible values: - no-sru-7 : SRU-7 isn't on this span - sru-7 : SRU-7 is on this span	<i>detail mode.</i>
det-sru-8	Parameter type: <Shdsl::SRU8> (no-sru-8 sru-8) Possible values: - no-sru-8 : SRU-8 isn't on this span - sru-8 : SRU-8 is on this span	SRU-8 <i>This element is only shown in detail mode.</i>
inv-stu-c	Parameter type: <Shdsl::STUC> (no-stu-c stu-c) Possible values: - no-stu-c : STU-C isn't on this span - stu-c : STU-C is on this span	STU-C <i>This element is only shown in detail mode.</i>
inv-stu-r	Parameter type: <Shdsl::STUR> (no-stu-r stu-r) Possible values: - no-stu-r : STU-R isn't on this span - stu-r : STU-R is on this span	STU-R <i>This element is only shown in detail mode.</i>
inv-sru-1	Parameter type: <Shdsl::SRU1> (no-sru-1 sru-1) Possible values: - no-sru-1 : SRU-1 isn't on this span - sru-1 : SRU-1 is on this span	SRU-1 <i>This element is only shown in detail mode.</i>
inv-sru-2	Parameter type: <Shdsl::SRU2> (no-sru-2 sru-2) Possible values: - no-sru-2 : SRU-2 isn't on this span - sru-2 : SRU-2 is on this span	SRU-2 <i>This element is only shown in detail mode.</i>
inv-sru-3	Parameter type: <Shdsl::SRU3> (no-sru-3 sru-3) Possible values: - no-sru-3 : SRU-3 isn't on this span - sru-3 : SRU-3 is on this span	SRU-3 <i>This element is only shown in detail mode.</i>
inv-sru-4	Parameter type: <Shdsl::SRU4> (no-sru-4 sru-4) Possible values: - no-sru-4 : SRU-4 isn't on this span - sru-4 : SRU-4 is on this span	SRU-4 <i>This element is only shown in detail mode.</i>
inv-sru-5	Parameter type: <Shdsl::SRU5> (no-sru-5 sru-5) Possible values: - no-sru-5 : SRU-5 isn't on this span - sru-5 : SRU-5 is on this span	SRU-5 <i>This element is only shown in detail mode.</i>
inv-sru-6	Parameter type: <Shdsl::SRU6> (no-sru-6 sru-6) Possible values: - no-sru-6 : SRU-6 isn't on this span	SRU-6 <i>This element is only shown in detail mode.</i>

149 SHDSL Status Commands

name	Type	Description
	- sru-6 : SRU-6 is on this span	
inv-sru-7	Parameter type: <Shdsl::SRU7> (no-sru-7 sru-7) Possible values: - no-sru-7 : SRU-7 isn't on this span - sru-7 : SRU-7 is on this span	SRU-7 <i>This element is only shown in detail mode.</i>
inv-sru-8	Parameter type: <Shdsl::SRU8> (no-sru-8 sru-8) Possible values: - no-sru-8 : SRU-8 isn't on this span - sru-8 : SRU-8 is on this span	SRU-8 <i>This element is only shown in detail mode.</i>
con-stu-c	Parameter type: <Shdsl::STUC> (no-stu-c stu-c) Possible values: - no-stu-c : STU-C isn't on this span - stu-c : STU-C is on this span	STU-C <i>This element is only shown in detail mode.</i>
con-stu-r	Parameter type: <Shdsl::STUR> (no-stu-r stu-r) Possible values: - no-stu-r : STU-R isn't on this span - stu-r : STU-R is on this span	STU-R <i>This element is only shown in detail mode.</i>
con-sru-1	Parameter type: <Shdsl::SRU1> (no-sru-1 sru-1) Possible values: - no-sru-1 : SRU-1 isn't on this span - sru-1 : SRU-1 is on this span	SRU-1 <i>This element is only shown in detail mode.</i>
con-sru-2	Parameter type: <Shdsl::SRU2> (no-sru-2 sru-2) Possible values: - no-sru-2 : SRU-2 isn't on this span - sru-2 : SRU-2 is on this span	SRU-2 <i>This element is only shown in detail mode.</i>
con-sru-3	Parameter type: <Shdsl::SRU3> (no-sru-3 sru-3) Possible values: - no-sru-3 : SRU-3 isn't on this span - sru-3 : SRU-3 is on this span	SRU-3 <i>This element is only shown in detail mode.</i>
con-sru-4	Parameter type: <Shdsl::SRU4> (no-sru-4 sru-4) Possible values: - no-sru-4 : SRU-4 isn't on this span - sru-4 : SRU-4 is on this span	SRU-4 <i>This element is only shown in detail mode.</i>
con-sru-5	Parameter type: <Shdsl::SRU5> (no-sru-5 sru-5) Possible values: - no-sru-5 : SRU-5 isn't on this span - sru-5 : SRU-5 is on this span	SRU-5 <i>This element is only shown in detail mode.</i>
con-sru-6	Parameter type: <Shdsl::SRU6> (no-sru-6	SRU-6 <i>This element is only shown in</i>

name	Type	Description
	sru-6) Possible values: - no-sru-6 : SRU-6 isn't on this span - sru-6 : SRU-6 is on this span	detail mode.
con-sru-7	Parameter type: <Shdsl::SRU7> (no-sru-7 sru-7) Possible values: - no-sru-7 : SRU-7 isn't on this span - sru-7 : SRU-7 is on this span	SRU-7 <i>This element is only shown in detail mode.</i>
con-sru-8	Parameter type: <Shdsl::SRU8> (no-sru-8 sru-8) Possible values: - no-sru-8 : SRU-8 isn't on this span - sru-8 : SRU-8 is on this span	SRU-8 <i>This element is only shown in detail mode.</i>
stat-losw	Parameter type: <Shdsl::LOSW> (no-losw losw) Possible values: - no-losw : no loss of word - losw : loss of word	loss of word <i>This element is only shown in detail mode.</i>
stat-lp-attn	Parameter type: <Shdsl::LpAttn> (no-lp-attn lp-attn) Possible values: - no-lp-attn : no loop attenuation - lp-attn : loop attenuation	loop attenuation alarm <i>This element is only shown in detail mode.</i>
stat-snr	Parameter type: <Shdsl::SNR> (no-snr snr) Possible values: - no-snr : no snr margin alarm - snr : snr margin alarm	snr margin alarm <i>This element is only shown in detail mode.</i>
stat-dc	Parameter type: <Shdsl::DC> (no-dc dc) Possible values: - no-dc : no dc continuity fault - dc : dc continuity fault	dc continuity fault <i>This element is only shown in detail mode.</i>
stat-dev	Parameter type: <Shdsl::Dev> (no-dev dev) Possible values: - no-dev : no device fault - dev : device fault	device fault <i>This element is only shown in detail mode.</i>
stat-conf	Parameter type: <Shdsl::Conf> (no-conf conf) Possible values: - no-conf : no configuration error - conf : configuration error	configuration error <i>This element is only shown in detail mode.</i>
stat-lp-act	Parameter type: <Shdsl::LpAct> (no-lp-act lp-act) Possible values: - no-lp-act : no loopback active	loopback active <i>This element is only shown in detail mode.</i>

149 SHDSL Status Commands

name	Type	Description
	- lp-act : loopback active	
stat-no-con	Parameter type: <Shdsl::NoCon> (no-no-con no-con) Possible values: - no-no-con : conform to stu-c of stu-r initiated management flow - no-con : not conform to stu-c of stu-r initiated management flow	not conform to stu-c of stu-r initiated management flow <i>This element is only shown in detail mode.</i>
stat-lcd	Parameter type: <Shdsl::LCD> (no-lcd lcd) Possible values: - no-lcd : no ATM loss of cell delineation - lcd : ATM loss of cell delineation	ATM loss of cell delineation <i>This element is only shown in detail mode.</i>
stat-lop	Parameter type: <Shdsl::LOP> (no-lop lop) Possible values: - no-lop : no loss of power - lop : loss of power	loss of power <i>This element is only shown in detail mode.</i>
stat-ncd	Parameter type: <Shdsl::NCD> (no-ncd ncd) Possible values: - no-ncd : disable no-cell-delineation - ncd : no cell delineation	no cell delineation <i>This element is only shown in detail mode.</i>
stat-act-fail	Parameter type: <Shdsl::ActFail> (no-act-fail act-fail) Possible values: - no-act-fail : no activation failure - act-fail : activation failure	activation failure <i>This element is only shown in detail mode.</i>
first-port	Parameter type: <Shdsl::FirstPort> (first-pair second-pair third-pair fourth-pair) Possible values: - first-pair : first pair - second-pair : second pair - third-pair : third pair - fourth-pair : fourth pair	first-port <i>This element is always shown.</i>
second-port	Parameter type: <Shdsl::SecondPort> (first-pair second-pair third-pair fourth-pair) Possible values: - first-pair : first pair - second-pair : second pair - third-pair : third pair - fourth-pair : fourth pair	second-port <i>This element is always shown.</i>
third-port	Parameter type: <Shdsl::ThirdPort> (first-pair second-pair third-pair	third-port <i>This element is always shown.</i>

name	Type	Description
	fourth-pair) Possible values: - first-pair : first pair - second-pair : second pair - third-pair : third pair - fourth-pair : fourth pair	
fourth-port	Parameter type: <Shdsl::FourthPort> (first-pair second-pair third-pair fourth-pair) Possible values: - first-pair : first pair - second-pair : second pair - third-pair : third pair - fourth-pair : fourth pair	fourth-port <i>This element is always shown.</i>
curr-data-rate	Parameter type: <Shdsl::BitRate> - bitrate - unit: kbits/sec	the current SHDSL data rate <i>This element is always shown.</i>
tc-pam-modu	Parameter type: <Shdsl::SpanTCPAMModulation> (tc-pam32 tc-pam16 unknown) Possible values: - tc-pam32 : tcPam32 modulation - tc-pam16 : tcPam16 modulation - unknown : unknown modulation	the current TC-PAM modulation of the span <i>This element is always shown.</i>
efm-hs-mode	Parameter type: <Shdsl::SpanEFMHandshakeMode> (unknown ieee itu not-applicable) Possible values: - unknown : unknown handshake mode - ieee : ieee 2base-tl - itu : itu-t g.991.2 ptm 64/65otc - not-applicable : not-applicable for atm/ima mode	the actual handshake mode for the span <i>This element is always shown.</i>

149.4 SHDSL Unit Status Command

Command Description

This command displays the SHDSL unit status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl unit-status [ (if-index) [ unit-id <Shdsl::UnitId> ] ]
```

Command Parameters

Table 149.4-1 "SHDSL Unit Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values: - stu-c : the SHDSL unit is STU-C - stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2 - sru-3 : the SHDSL unit is SRU-3	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	

Command Output

Table 149.4-2 "SHDSL Unit Status Command" Display parameters

Specific Information		
name	Type	Description
dc-pow	Parameter type: <Shdsl::UnitDCPowering> (local-pow span-pow) Possible values: - local-pow : locally powered - span-pow : span powered	the powering mode of this SHDSL span <i>This element is always shown.</i>

149.5 SHDSL Segment Status Command

Command Description

This command displays the status of individual segment end points in an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl segment-status [ (if-index) [ unit-id <Shdsl::UnitId> ] [ side <Shdsl::SegmentSide> ] [ wire-pair
<Shdsl::SegmentTerminationWirePair> ] ]
```

Command Parameters

Table 149.5-1 "SHDSL Segment Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values: - stu-c : the SHDSL unit is STU-C - stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- sru-3 : the SHDSL unit is SRU-3 - sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	
side	Parameter type: <Shdsl::SegmentSide> Format: (network customer) Possible values: - network : the network side - customer : the customer side	the particular side of an SHDSL unit in an SHDSL segment
wire-pair	Parameter type: <Shdsl::SegmentTerminationWirePair> Format: (one two three four) Possible values: - one : the first pair - two : the second pair - three : the third pair - four : the fourth pair	the particular wire pair of an SHDSL segment

Command Output

Table 149.5-2 "SHDSL Segment Status Command" Display parameters

Specific Information		
name	Type	Description
seg-st-losw	Parameter type: <Shdsl::LOSW> (no-losw losw) Possible values: - no-losw : no loss of word - losw : loss of word	loss of word <i>This element is only shown in detail mode.</i>
seg-st-lp-attn	Parameter type: <Shdsl::LpAttn> (no-lp-attn lp-attn) Possible values: - no-lp-attn : no loop attenuation - lp-attn : loop attenuation	loop attenuation alarm <i>This element is only shown in detail mode.</i>
seg-st-snr	Parameter type: <Shdsl::SNR> (no-snr snr) Possible values: - no-snr : no snr margin alarm - snr : snr margin alarm	snr margin alarm <i>This element is only shown in detail mode.</i>
seg-st-dc	Parameter type: <Shdsl::DC> (no-dc dc) Possible values: - no-dc : no dc continuity fault - dc : dc continuity fault	dc continuity fault <i>This element is only shown in detail mode.</i>
seg-st-dev	Parameter type: <Shdsl::Dev> (no-dev	device fault <i>This element is only shown in</i>

149 SHDSL Status Commands

name	Type	Description
	dev) Possible values: - no-dev : no device fault - dev : device fault	detail mode.
seg-st-conf	Parameter type: <Shdsl::Conf> (no-conf conf) Possible values: - no-conf : no configuration error - conf : configuration error	configuration error <i>This element is only shown in detail mode.</i>
seg-st-lp-act	Parameter type: <Shdsl::LpAct> (no-lp-act lp-act) Possible values: - no-lp-act : no loopback active - lp-act : loopback active	loopback active <i>This element is only shown in detail mode.</i>
seg-st-no-con	Parameter type: <Shdsl::NoCon> (no-no-con no-con) Possible values: - no-no-con : conform to stu-c of stu-r initiated management flow - no-con : not conform to stu-c of stu-r initiated management flow	not conform to stu-c of stu-r initiated management flow <i>This element is only shown in detail mode.</i>
seg-st-lcd	Parameter type: <Shdsl::LCD> (no-lcd lcd) Possible values: - no-lcd : no ATM loss of cell delineation - lcd : ATM loss of cell delineation	ATM loss of cell delineation <i>This element is only shown in detail mode.</i>
seg-st-lop	Parameter type: <Shdsl::LOP> (no-lop lop) Possible values: - no-lop : no loss of power - lop : loss of power	loss of power <i>This element is only shown in detail mode.</i>
seg-st-ncd	Parameter type: <Shdsl::NCD> (no-ncd ncd) Possible values: - no-ncd : disable no-cell-delineation - ncd : no cell delineation	no cell delineation <i>This element is only shown in detail mode.</i>
seg-st-act-fail	Parameter type: <Shdsl::ActFail> (no-act-fail act-fail) Possible values: - no-act-fail : no activation failure - act-fail : activation failure	activation failure <i>This element is only shown in detail mode.</i>
lpbk-stat	Parameter type: <Shdsl::SegmentTermLoopbackState> (no-lpbk norm spec) Possible values: - no-lpbk : no loopback - norm : normal loopback - spec : special loopback	the loopback mode at this SHDSL segment termination <i>This element is always shown.</i>
snr-mgn	Parameter type: <Shdsl::SegmentTerminationSnrMargin>	the SNR margin at this SHDSL

name	Type	Description
	- an SNR margin value measured for an SHDSL segment - unit: db - range: [-128...127]	segment termination <i>This element is always shown.</i>
lp-at	Parameter type: <Shdsl::SegmentTermLoopAttenuation> - a loop attenuation value measured for an SHDSL segment - unit: db - range: [-128...127]	the loop attenuation at this SHDSL segment termination <i>This element is always shown.</i>
pbo-l1	Parameter type: <Shdsl::SegmentTermPowerBackoffLv1> - power backoff level 1 value measured for SHDSL segment - unit: db - range: [0...31,255]	the power backoff level 1 value at this SHDSL segment termination <i>This element is always shown.</i>
tip-ring-reversal	Parameter type: <Shdsl::SegmentTermTRReversal> (normal reversed) Possible values: - normal : normal mode - reversed : reversed mode	the tip/ring pair state at this SHDSL segment termination <i>This element is always shown.</i>
pbo-mode	Parameter type: <Shdsl::SegmentTerminationPBOStatus> (default selected disabled) Possible values: - default : default mode - selected : selected mode - disabled : disable PBO	the power backoff state at this SHDSL segment termination <i>This element is always shown.</i>
curr-data-rate	Parameter type: <Shdsl::SegmentTerminationCurrentDataRate> - the current shdsl data rate of this segment termination - unit: kb/s - range: [0,192...5696]	the current shdsl data rate of this segment termination <i>This element is always shown.</i>
act-state	Parameter type: <Shdsl::SegmentTerminationActivationState> (active idle unknown initialization exception testing fwdownloading) Possible values: - active : the state is active - idle : the state is idle - unknown : the status is unknown - initialization : the state is initializing - exception : the state is exception - testing : the state is testing - fwdownloading : the state is firmware downloading	the state of this segment termination <i>This element is always shown.</i>
act-fail	Parameter type: <UnsignedSignedInteger> - an unsigned integer	the coded reason of activation failure <i>This element is always shown.</i>
tc-pam-modu	Parameter type: <Shdsl::SegmentTerminationTCPAMModulation> (tc-pam32 tc-pam16 unknown) Possible values: - tc-pam32 : tcPam32 modulation	the current TC-PAM modulation of the segment termination <i>This element is always shown.</i>

149 SHDSL Status Commands

name	Type	Description
	- tc-pam16 : tcPam16 modulation - unknown : unknown modulation	

149.6 SHDSL Segment Counters Current Interval Status Command

Command Description

This command displays the operational data of individual segment end points in an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl segment-counters current-15min [ (if-index) [ unit-id <Shdsl::UnitId> ] [ side <Shdsl::SegmentSide> ] [ wire-pair <Shdsl::SegmentTerminationWirePair> ] ]
```

Command Parameters

Table 149.6-1 "SHDSL Segment Counters Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values:	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- stu-c : the SHDSL unit is STU-C - stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2 - sru-3 : the SHDSL unit is SRU-3 - sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	
side	Parameter type: <Shdsl::SegmentSide> Format: (network customer) Possible values: - network : the network side - customer : the customer side	the particular side of an SHDSL unit in an SHDSL segment
wire-pair	Parameter type: <Shdsl::SegmentTerminationWirePair> Format: (one two three four) Possible values: - one : the first pair - two : the second pair - three : the third pair - four : the fourth pair	the particular wire pair of an SHDSL segment

Command Output

Table 149.6-2 "SHDSL Segment Counters Current Interval Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Shdsl::SegmentTermCurr15MTimeElapsed> - an elapsed seconds in the current 15-minute interval - unit: sec	the elapsed seconds in the current 15-minute interval <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
crc	Parameter type: <Counter> - 32 bit counter	number of CRC anomalies <i>This element is always shown.</i>
losws	Parameter type: <Counter> - 32 bit counter	number of loss of sync word <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
va-int	Parameter type: <Shdsl::SegmentTermCurr15MValidIntervals> - a number of previous intervals for which data has been stored - range: [0...96]	the number of previous intervals for which data has been stored <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true	validity flag of the corresponding PM data in current 15 minutes

name	Type	Description
	false) Possible values: - true : data is not valid - false : data is valid	<i>This element is always shown.</i>
re-init-fail	Parameter type: <Counter> - 32 bit counter	number of failed re-inits <i>This element is always shown.</i>

149.7 SHDSL Segment Counters Current Day Status Command

Command Description

This command displays the current day counters of individual segment end points in an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl segment-counters current-1day [ (if-index) [ unit-id <Shdsl::UnitId> ] [ side <Shdsl::SegmentSide> ]  
[ wire-pair <Shdsl::SegmentTerminationWirePair> ] ]
```

Command Parameters

Table 149.7-1 "SHDSL Segment Counters Current Day Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values: - stu-c : the SHDSL unit is STU-C	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2 - sru-3 : the SHDSL unit is SRU-3 - sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	
side	Parameter type: <Shdsl::SegmentSide> Format: (network customer) Possible values: - network : the network side - customer : the customer side	the particular side of an SHDSL unit in an SHDSL segment
wire-pair	Parameter type: <Shdsl::SegmentTerminationWirePair> Format: (one two three four) Possible values: - one : the first pair - two : the second pair - three : the third pair - four : the fourth pair	the particular wire pair of an SHDSL segment

Command Output

Table 149.7-2 "SHDSL Segment Counters Current Day Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Shdsl::SegmentTermCurr1DTimeElapsed> - an elapsed seconds in the current day interval - unit: sec	the elapsed seconds in the current day interval <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
crc	Parameter type: <Counter> - 32 bit counter	number of CRC anomalies <i>This element is always shown.</i>
losws	Parameter type: <Counter> - 32 bit counter	number of loss of sync word <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
va-int	Parameter type: <Shdsl::SegmentTermCurr1DValidIntervals> - a number of previous intervals for which data has been stored - range: [0...30]	the number of previous intervals for which data has been stored <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true false)	validity flag of the corresponding PM data in current day <i>This element is always shown.</i>

149 SHDSL Status Commands

name	Type	Description
	Possible values: - true : data is not valid - false : data is valid	
re-init-fail	Parameter type: <Counter> - 32 bit counter	number of failed re-inits <i>This element is always shown.</i>

149.8 SHDSL Segment Counters Previous Interval Status Command

Command Description

This command displays the previous interval counters of individual segment end points in an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl segment-counters previous-15min [ (if-index) [ unit-id <Shdsl::UnitId> ] [ side
<Shdsl::SegmentSide> ] [ wire-pair <Shdsl::SegmentTerminationWirePair> ] [ int-no <Shdsl::IntervalNumber> ] ]
```

Command Parameters

Table 149.8-1 "SHDSL Segment Counters Previous Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values:	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- stu-c : the SHDSL unit is STU-C - stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2 - sru-3 : the SHDSL unit is SRU-3 - sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	
side	Parameter type: <Shdsl::SegmentSide> Format: (network customer) Possible values: - network : the network side - customer : the customer side	the particular side of an SHDSL unit in an SHDSL segment
wire-pair	Parameter type: <Shdsl::SegmentTerminationWirePair> Format: (one two three four) Possible values: - one : the first pair - two : the second pair - three : the third pair - four : the fourth pair	the particular wire pair of an SHDSL segment
int-no	Parameter type: <Shdsl::IntervalNumber> Format: - a performance interval number - range: [1...96]	the performance interval number

Command Output

Table 149.8-2 "SHDSL Segment Counters Previous Interval Status Command" Display parameters

Specific Information		
name	Type	Description
mon-sec	Parameter type: <Shdsl::PreviousIntervalMoniSecs> - a monitored seconds number - unit: sec	number of actually monitored seconds in this interval <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
crc	Parameter type: <Counter> - 32 bit counter	number of CRC anomalies <i>This element is always shown.</i>
losws	Parameter type: <Counter> - 32 bit counter	number of loss of sync word <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true false) Possible values:	validity flag of the corresponding PM data in previous 15-minutes interval <i>This element is always shown.</i>

name	Type	Description
	- true : data is not valid - false : data is valid	
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>
re-init-fail	Parameter type: <Counter> - 32 bit counter	number of failed re-inits <i>This element is always shown.</i>

149.9 SHDSL Segment Counters Previous Day Status Command

Command Description

This command displays the previous day counters of individual segment end points in an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl segment-counters previous-1day [ (if-index) [ unit-id <Shdsl::UnitId> ] [ side <Shdsl::SegmentSide> ] [ wire-pair <Shdsl::SegmentTerminationWirePair> ] [ int-no <Shdsl::Interval1DayNumber> ] ]
```

Command Parameters

Table 149.9-1 "SHDSL Segment Counters Previous Day Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values: - stu-c : the SHDSL unit is STU-C	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2 - sru-3 : the SHDSL unit is SRU-3 - sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	
side	Parameter type: <Shdsl::SegmentSide> Format: (network customer) Possible values: - network : the network side - customer : the customer side	the particular side of an SHDSL unit in an SHDSL segment
wire-pair	Parameter type: <Shdsl::SegmentTerminationWirePair> Format: (one two three four) Possible values: - one : the first pair - two : the second pair - three : the third pair - four : the fourth pair	the particular wire pair of an SHDSL segment
int-no	Parameter type: <Shdsl::Interval1DayNumber> Format: - a performance interval one day number - range: [1...30]	the performance interval number

Command Output

Table 149.9-2 "SHDSL Segment Counters Previous Day Status Command" Display parameters

Specific Information		
name	Type	Description
mon-sec	Parameter type: <Shdsl::PreviousInterval1DayMoniSecs> - a monitored seconds number - unit: sec	number of actually monitored seconds in this interval <i>This element is always shown.</i>
es	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>
ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
crc	Parameter type: <Counter> - 32 bit counter	number of CRC anomalies <i>This element is always shown.</i>
losws	Parameter type: <Counter> - 32 bit counter	number of loss of sync word <i>This element is always shown.</i>
uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid	validity flag of the corresponding PM data in previous day interval <i>This element is always shown.</i>

149 SHDSL Status Commands

name	Type	Description
	- false : data is valid	
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>
re-init-fail	Parameter type: <Counter> - 32 bit counter	number of failed re-inits <i>This element is always shown.</i>

149.10 SHDSL Span Current Interval Performance Data Status Command

Command Description

This command displays the current interval performance data of an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl span-counters current-15min [ (if-index) ]
```

Command Parameters

Table 149.10-1 "SHDSL Span Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 149.10-2 "SHDSL Span Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Shdsl::PMCurr15MinTimeElapsed> - an elapsed seconds in the current 15-minute interval - unit: sec	the elapsed seconds in the current 15-minute interval <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of total reinitializations <i>This element is always shown.</i>

149 SHDSL Status Commands

name	Type	Description
re-init-lpr	Parameter type: <Counter> - 32 bit counter	number of total reinitializations due to lpr events <i>This element is always shown.</i>
valid-interval	Parameter type: <Shdsl::PM15MinValidIntervals> - number of previous intrvl for which data is stored - range: [0...96]	the number of previous intervals for which data has been stored <i>This element is always shown.</i>
re-init-fail	Parameter type: <Counter> - 32 bit counter	Count of the re-initializations failed <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding PM data in current 15 minutes <i>This element is always shown.</i>

149.11 SHDSL Span Current Day Performance Data Status Command

Command Description

This command displays the current day performance data of an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl span-counters current-1day [ (if-index) ]
```

Command Parameters

Table 149.11-1 "SHDSL Span Current Day Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 149.11-2 "SHDSL Span Current Day Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Shdsl::PMCurr1DayTimeElapsed> - an elapsed seconds in the current day interval - unit: sec	the elapsed seconds in the current day interval <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of total reinitializations <i>This element is always shown.</i>

149 SHDSL Status Commands

name	Type	Description
re-init-lpr	Parameter type: <Counter> - 32 bit counter	number of total reinitializations due to lpr events <i>This element is always shown.</i>
valid-interval	Parameter type: <Shdsl::PM1DayValidIntervals> - number of previous 1day intrvl for which data is stored - range: [0...30]	the number of previous intervals for which data has been stored <i>This element is always shown.</i>
re-init-fail	Parameter type: <Counter> - 32 bit counter	Count of the re-initializations failed <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding PM data in current day <i>This element is always shown.</i>

149.12 SHDSL Span Previous Interval Performance Data Status Command

Command Description

This command displays the previous interval performance data of an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl span-counters previous-15min [ (if-index) [ interval-number <Shdsl::PM15MinIntervalNumber> ] ]
```

Command Parameters

Table 149.12-1 "SHDSL Span Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-number	Parameter type: <Shdsl::PM15MinIntervalNumber> Format: - a performance interval number - range: [1...96]	the performance interval number

Command Output

Table 149.12-2 "SHDSL Span Previous Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
moni-secs	Parameter type: <Shdsl::PM15MinIntevalMoniSecs>	number of actually monitored

149 SHDSL Status Commands

name	Type	Description
	- a monitored seconds in a previous 15-minute interval - unit: sec	seconds in this interval <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of total reinitializations <i>This element is always shown.</i>
re-init-lpr	Parameter type: <Counter> - 32 bit counter	number of total reinitializations due to lpr events <i>This element is always shown.</i>
re-init-fail	Parameter type: <Counter> - 32 bit counter	Count of re-initializations Failed <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data in previous 15-minutes <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

149.13 SHDSL Span Previous Day Performance Data Status Command

Command Description

This command displays the previous day performance data of an SHDSL span.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show shdsl span-counters previous-1day [ (if-index) [ interval-number <Shdsl::PM1DayIntervalNumber> ] ]
```

Command Parameters

Table 149.13-1 "SHDSL Span Previous Day Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-number	Parameter type: <Shdsl::PM1DayIntervalNumber> Format: - a performance interval number - range: [1...30]	the performance interval number

Command Output

Table 149.13-2 "SHDSL Span Previous Day Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
moni-secs	Parameter type: <Shdsl::PM1DayIntevalMoniSecs>	number of actually monitored

149 SHDSL Status Commands

name	Type	Description
	- a monitored seconds in a previous 1 day interval - unit: sec	seconds in this interval <i>This element is always shown.</i>
re-init	Parameter type: <Counter> - 32 bit counter	number of total reinitializations <i>This element is always shown.</i>
re-init-lpr	Parameter type: <Counter> - 32 bit counter	number of total reinitializations due to lpr events <i>This element is always shown.</i>
re-init-fail	Parameter type: <Counter> - 32 bit counter	Count of re-initializations Failed <i>This element is always shown.</i>
inv-flag	Parameter type: <Shdsl::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding PM data in previous day interval <i>This element is always shown.</i>
interval-time	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

150- IMA Status Commands

150.1 IMA Status Command Tree	150-6348
150.2 IMA Group Status Command	150-6349
150.3 IMA Group Near-End Current Interval Performance Data Status Command	150-6354
150.4 IMA Group Near-End Previous Interval Performance Data Status Command	150-6356
150.5 IMA Group Far-End Current Interval Performance Data Status Command	150-6358
150.6 IMA Group Far-End Previous Interval Performance Data Status Command	150-6360
150.7 IMA Link Status Command	150-6362
150.8 IMA Link Near-End Current Interval Performance Data Status Command	150-6366
150.9 IMA Link Near-End Previous Interval Performance Data Status Command	150-6368
150.10 IMA Link Far-End Current Interval Performance Data Status Command	150-6370
150.11 IMA Link Far-End Previous Interval Performance Data Status Command	150-6372

150.1 IMA Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "IMA Status Commands".

Command Tree

```
----show
  ----ima
    ----group
      ----state
        - (if-index)
      ----counters
        ----near-end
          ----current-interval
            - (if-index)
          ----previous-interval
            - (if-index)
            - interval-no
        ----far-end
          ----current-interval
            - (if-index)
          ----previous-interval
            - (if-index)
            - interval-no
      ----link
        ----state
          - (if-index)
        ----counters
          ----near-end

          ----far-end
            ----current-interval
              - (if-index)
            ----previous-interval
              - (if-index)
              - interval-no
```

150.2 IMA Group Status Command

Command Description

This command displays the IMA group status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima group state [ (if-index) ]
```

Command Parameters

Table 150.2-1 "IMA Group Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 150.2-2 "IMA Group Status Command" Display parameters

Specific Information		
name	Type	Description
grp-if-index	Parameter type: <Itf::ImaLine> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the logical interface number assigned to this IMA group <i>This element is only shown in detail mode.</i>

150 IMA Status Commands

name	Type	Description
near-end short name: ne	Parameter type: <Ima::GroupState> ((not-conf nc) (start-up su) (start-up-ack sua) (conf-abt-unsupported cau) (conf-abt-incomp-sym cais) (conf-abt-other cao) (insuff-links il) (blked blk) op) Possible values: - not-conf : not configured - nc : not configured - start-up : start up - su : start up - start-up-ack : start up acknowledgement - sua : start up acknowledgement - conf-abt-unsupported : config abort unsupported m - cau : config abort unsupported m - conf-abt-incomp-sym : config abort incompatible symmetry - cais : config abort incompatible symmetry - conf-abt-other : config abort other - cao : config abort other - insuff-links : insufficient links - il : insufficient links - blked : blocked - blk : blocked - op : operational	the operational state of the near-end IMA group state machine <i>This element is always shown.</i>
far-end short name: fe	Parameter type: <Ima::GroupState> ((not-conf nc) (start-up su) (start-up-ack sua) (conf-abt-unsupported cau) (conf-abt-incomp-sym cais) (conf-abt-other cao) (insuff-links il) (blked blk) op) Possible values: - not-conf : not configured - nc : not configured - start-up : start up - su : start up - start-up-ack : start up acknowledgement - sua : start up acknowledgement - conf-abt-unsupported : config abort unsupported m - cau : config abort unsupported m - conf-abt-incomp-sym : config abort incompatible symmetry - cais : config abort incompatible symmetry - conf-abt-other : config abort other - cao : config abort other - insuff-links : insufficient links - il : insufficient links - blked : blocked - blk : blocked	the operational state of the far-end IMA group state machine <i>This element is always shown.</i>

name	Type	Description
	- op : operational	
failure-status short name: fa-st	Parameter type: <Ima::GroupFailureStatus> ((no-fail nf) (start-up-ne sun) (start-up-fe suf) (inv-m-val-ne imvn) (inv-m-val-fe imvf) (fail-asym-ne fan) (fail-asym-fe faf) (insuff-links-ne iln) (insuff-links-fe ilf) (blked-ne bn) (blked-fe bf) (other-fail of)) Possible values: - no-fail : no failure - nf : no failure - start-up-ne : start up near end - sun : start up near end - start-up-fe : start up far end - suf : start up far end - inv-m-val-ne : invalid m-value near end - imvn : invalid m-value near end - inv-m-val-fe : invalid m-value far end - imvf : invalid m-value far end - fail-asym-ne : failed asymmetric near end - fan : failed asymmetric near end - fail-asym-fe : failed asymmetric far end - faf : failed asymmetric far end - insuff-links-ne : insufficient links near end - iln : insufficient links near end - insuff-links-fe : insufficient links far end - ilf : insufficient links far end - blked-ne : blocked near end - bn : blocked near end - blked-fe : blocked far end - bf : blocked far end - other-fail : other failure - of : other failure	the failure status of the IMA group <i>This element is always shown.</i>
fe-tx-clk-mode	Parameter type: <Ima::GroupTxClkMode> (ctc itc) Possible values: - ctc : the transmit clocking mode is ctc - itc : the transmit clocking mode is itc	the transmit clocking mode of the IMA group far end <i>This element is only shown in detail mode.</i>
tx-timing-ref-link	Parameter type: <Itf::ShdslLine> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the transmit timing reference link interface number <i>This element is only shown in detail mode.</i>
rx-timing-ref-link	Parameter type: <Itf::ShdslLine>	the receive timing reference link

name	Type	Description
	<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface number <i>This element is only shown in detail mode.</i>
rx-ima-id short name: rii	Parameter type: <Ima::GroupRxImaId> - an ima id used by the far-end ima function - range: [0...255]	the ima id used by the far-end ima function <i>This element is always shown.</i>
rx-frm-len	Parameter type: <Ima::GroupFrameLength> (m32 m64 m128 m256) Possible values: - m32 : the frame length is 32 cells - m64 : the frame length is 64 cells - m128 : the frame length is 128 cells - m256 : the frame length is 256 cells	the frame length used by the remote IMA function <i>This element is only shown in detail mode.</i>
least-delay-link	Parameter type: <Itf::ShdslLine> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the interface number identifies the smallest propagation delay link <i>This element is only shown in detail mode.</i>
diff-delay-max-obs	Parameter type: <Ima::GroupDiffDelayMaxObs> - a maximum observed milliseconds of delay differential - unit: ms	the maximum observed milliseconds of delay differential <i>This element is only shown in detail mode.</i>
rs	Parameter type: <SignedInteger> - a signed integer	the running seconds of the ima group <i>This element is only shown in detail mode.</i>
uas	Parameter type: <SignedInteger> - a signed integer	the unavailable seconds of the ima group <i>This element is only shown in detail mode.</i>
near-end-fail short name: ne-fa	Parameter type: <SignedInteger> - a signed integer	the number of failures occurred at the near end <i>This element is always shown.</i>
fe-num-failures short name: fe-fa	Parameter type: <SignedInteger> - a signed integer	the number of failures occurred at the far end <i>This element is always shown.</i>
tx-avail-cell-rate	Parameter type: <SignedInteger> - a signed integer	the available cell rate in transmit direction <i>This element is only shown in detail mode.</i>
rx-avail-cell-rate	Parameter type: <SignedInteger>	the available cell rate in receive

name	Type	Description
	- a signed integer	direction <i>This element is only shown in detail mode.</i>
tx-num-cfg-links short name: tncl	Parameter type: <SignedInteger> - a signed integer	the number of links configured to transmit <i>This element is always shown.</i>
rx-num-cfg-links short name: rncl	Parameter type: <SignedInteger> - a signed integer	the number of links configured to receive <i>This element is always shown.</i>
tx-num-act-links short name: tncl	Parameter type: <SignedInteger> - a signed integer	the number of links configured to transmit and must be active <i>This element is always shown.</i>
rx-num-act-links short name: rncl	Parameter type: <SignedInteger> - a signed integer	the number of links configured to receive and must be active <i>This element is always shown.</i>

150.3 IMA Group Near-End Current Interval Performance Data Status Command

Command Description

This command displays the IMA groups near-end current interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

> show ima group counters near-end current-interval [(if-index)]

Command Parameters

Table 150.3-1 "IMA Group Near-End Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 150.3-2 "IMA Group Near-End Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Ima::GroupCurrentTimeElapsed> - a number of time elapsed in a current interval - range: [0...899]	the number of time elapsed in the current interval <i>This element is always shown.</i>
valid-interval	Parameter type: <Ima::GroupCurrentValidIntervals> - a number of previous valid intervals	the number of previous valid intervals

name	Type	Description
	- range: [0...32]	<i>This element is always shown.</i>
uas	Parameter type: <Gauge> - gauge	the number of unavailable seconds in the current interval <i>This element is always shown.</i>
fc	Parameter type: <Gauge> - gauge	the number of failures in the current interval <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Group-Near-End's PM data in current 15 minutes <i>This element is always shown.</i>

150.4 IMA Group Near-End Previous Interval Performance Data Status Command

Command Description

This command displays the IMA groups near-end previous interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima group counters near-end previous-interval [ (if-index) [ interval-no <Ima::GroupIntervalNumber> ] ]
```

Command Parameters

Table 150.4-1 "IMA Group Near-End Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Ima::GroupIntervalNumber> Format: - a number of a interval number - range: [1...32]	the number of the interval number

Command Output

Table 150.4-2 "IMA Group Near-End Previous Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
uas	Parameter type: <Gauge>	the number of unavailable

name	Type	Description
	- gauge	seconds in the previous interval <i>This element is always shown.</i>
fc	Parameter type: <Gauge> - gauge	the number of failures in the previous interval <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Group-Near-End's PM data in one of the previous 32 intervals of 15-minutes <i>This element is always shown.</i>

150.5 IMA Group Far-End Current Interval Performance Data Status Command

Command Description

This command displays the IMA groups far-end current interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima group counters far-end current-interval [ (if-index) ]
```

Command Parameters

Table 150.5-1 "IMA Group Far-End Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 150.5-2 "IMA Group Far-End Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Ima::GroupFarEndTimeElapsed> - a number of time elapsed in a current interval - range: [0...899]	the number of time elapsed in the far end interval <i>This element is always shown.</i>
valid-interval	Parameter type: <Ima::GroupFarEndValidIntervals> - a number of previous valid intervals	the number of the far end valid intervals

name	Type	Description
	- range: [0...32]	<i>This element is always shown.</i>
fc	Parameter type: <Gauge> - gauge	the number of failures in the far end interval <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Group-Far-End's PM data in current 15 minutes <i>This element is always shown.</i>

150.6 IMA Group Far-End Previous Interval Performance Data Status Command

Command Description

This command displays the IMA groups far-end previous interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima group counters far-end previous-interval [ (if-index) [ interval-no <Ima::GroupFarEndIntervalNumber> ] ]
```

Command Parameters

Table 150.6-1 "IMA Group Far-End Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Ima::GroupFarEndIntervalNumber> Format: - a number of a previous interval number - range: [1...32]	the number of the previous interval number

Command Output

Table 150.6-2 "IMA Group Far-End Previous Interval Performance Data Status Command" Display parameters

Specific Information

name	Type	Description
fc	Parameter type: <Gauge> - gauge	the number of failures in the far end previous interval <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Group-Far-End's PM data in one of the previous 32 intervals of 15-minutes <i>This element is always shown.</i>

150.7 IMA Link Status Command

Command Description

This command displays the IMA link status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima link state [ (if-index) ]
```

Command Parameters

Table 150.7-1 "IMA Link Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 150.7-2 "IMA Link Status Command" Display parameters

Specific Information		
name	Type	Description
ne-tx-state	Parameter type: <Ima::LinkState> (not-in-grp uus-not-gi-rea uus-fau uus-mis-con uus-blk uus-fail use act) Possible values: - not-in-grp : not in group	the mandatory state of the near-end transmit link <i>This element is only shown in detail mode.</i>

name	Type	Description
	- uus-not-gi-rea : unusable not given reason - uus-fau : unusable fault - uus-mis-con : unusable misconnected - uus-blk : unusable blocked - uus-fail : unusable failed - use : usable - act : active	
ne-rx-state	Parameter type: <Ima::LinkState> (not-in-grp uus-not-gi-rea uus-fau uus-mis-con uus-blk uus-fail use act) Possible values: - not-in-grp : not in group - uus-not-gi-rea : unusable not given reason - uus-fau : unusable fault - uus-mis-con : unusable misconnected - uus-blk : unusable blocked - uus-fail : unusable failed - use : usable - act : active	the mandatory state of the near-end receive link <i>This element is only shown in detail mode.</i>
fe-tx-state	Parameter type: <Ima::LinkState> (not-in-grp uus-not-gi-rea uus-fau uus-mis-con uus-blk uus-fail use act) Possible values: - not-in-grp : not in group - uus-not-gi-rea : unusable not given reason - uus-fau : unusable fault - uus-mis-con : unusable misconnected - uus-blk : unusable blocked - uus-fail : unusable failed - use : usable - act : active	the mandatory state of the far-end transmit link <i>This element is only shown in detail mode.</i>
fe-rx-state	Parameter type: <Ima::LinkState> (not-in-grp uus-not-gi-rea uus-fau uus-mis-con uus-blk uus-fail use act) Possible values: - not-in-grp : not in group - uus-not-gi-rea : unusable not given reason - uus-fau : unusable fault - uus-mis-con : unusable misconnected	the mandatory state of the far-end receive link <i>This element is only shown in detail mode.</i>

150 IMA Status Commands

name	Type	Description
	- uus-blk : unusable blocked - uus-fail : unusable failed - use : usable - act : active	
ne-rx-fail-stat	Parameter type: <Ima::LinkFailureStatus> (no-fail ima-lk-fail lif-fail lods-fail mis-con blked fau fe-tx-lk-uus fe-rx-lk-uus) Possible values: - no-fail : no failure - ima-lk-fail : ima link failure - lif-fail : lif failure - lods-fail : lods failure - mis-con : mis connected - blked : blocked - fau : fault - fe-tx-lk-uus : far end tx link unusable - fe-rx-lk-uus : far end rx link unusable	the mandatory link failure status of the near-end receive link <i>This element is only shown in detail mode.</i>
fe-rx-fail-stat	Parameter type: <Ima::LinkFailureStatus> (no-fail ima-lk-fail lif-fail lods-fail mis-con blked fau fe-tx-lk-uus fe-rx-lk-uus) Possible values: - no-fail : no failure - ima-lk-fail : ima link failure - lif-fail : lif failure - lods-fail : lods failure - mis-con : mis connected - blked : blocked - fau : fault - fe-tx-lk-uus : far end tx link unusable - fe-rx-lk-uus : far end rx link unusable	the mandatory link failure status of the far-end receive link <i>This element is only shown in detail mode.</i>
tx-lid short name: tl	Parameter type: <Ima::LinkTxLid> - an outgoing LID used on a link - range: [0...31]	the outgoing LID used on the link <i>This element is always shown.</i>
rx-lid short name: rl	Parameter type: <Ima::LinkRxLid> - an incoming LID used on a link - range: [0...31]	the incoming LID used on the link <i>This element is always shown.</i>
rel-delay short name: rd	Parameter type: <Ima::LinkRelDelay> - a number of milliseconds of a measured delay - unit: ms	the latest measured delay on this link relative to the link <i>This element is always shown.</i>
ima-violations short name: iv	Parameter type: <SignedInteger> - a signed integer	the number of the count of invalid ICP cells <i>This element is always shown.</i>
oif-anomalies	Parameter type: <SignedInteger>	the number of OIF anomalies

name	Type	Description
short name: oa	- a signed integer	during non-SES-IMA <i>This element is always shown.</i>
ne-ses short name: ns	Parameter type: <SignedInteger> - a signed integer	the number of the count of one second intervals containing link defects <i>This element is always shown.</i>
fe-ses	Parameter type: <SignedInteger> - a signed integer	the number of the count of one second intervals containing RDI-IMA defects <i>This element is only shown in detail mode.</i>
ne-uas short name: nu	Parameter type: <SignedInteger> - a signed integer	the number of the count of unavailable seconds at near-end <i>This element is always shown.</i>
fe-uas short name: fu	Parameter type: <SignedInteger> - a signed integer	the number of the count of unavailable seconds at far-end <i>This element is always shown.</i>
ne-tx-uus short name: ntu	Parameter type: <SignedInteger> - a signed integer	the number of the count of unusable seconds at near end Tx <i>This element is always shown.</i>
ne-rx-uus short name: nru	Parameter type: <SignedInteger> - a signed integer	the number of the count of unusable seconds at near end Rx <i>This element is always shown.</i>
fe-tx-uus short name: ftu	Parameter type: <SignedInteger> - a signed integer	the number of the count of unusable seconds at far end Tx <i>This element is always shown.</i>
fe-rx-uus short name: fru	Parameter type: <SignedInteger> - a signed integer	the number of the count of unusable seconds at far end Rx <i>This element is always shown.</i>
ne-tx-fail short name: ntf	Parameter type: <SignedInteger> - a signed integer	the number of the failure of the near end transmit <i>This element is always shown.</i>
ne-rx-fail short name: nrf	Parameter type: <SignedInteger> - a signed integer	the number of the failure of the near end receive <i>This element is always shown.</i>
fe-tx-fail short name: ftf	Parameter type: <SignedInteger> - a signed integer	the number of the failure of the far end transmit <i>This element is always shown.</i>
fe-rx-fail short name: frf	Parameter type: <SignedInteger> - a signed integer	the number of the failure of the far end receive <i>This element is always shown.</i>
tx-stuffs short name: ts	Parameter type: <SignedInteger> - a signed integer	the number of the count of stuff events in transmit <i>This element is always shown.</i>
rx-stuffs short name: rs	Parameter type: <SignedInteger> - a signed integer	the number of the count of stuff events in receive <i>This element is always shown.</i>

150.8 IMA Link Near-End Current Interval Performance Data Status Command

Command Description

This command displays the IMA links near-end current interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima link counters near-end current-interval [ (if-index) ]
```

Command Parameters

Table 150.8-1 "IMA Link Near-End Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 150.8-2 "IMA Link Near-End Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Ima::LinkCurrentTimeElapsed> - a number of time elapsed in a current interval of a link - range: [0...899]	the number of time elapsed in the current interval of the link <i>This element is always shown.</i>
valid-interval	Parameter type: <Ima::LinkCurrentValidIntervals> - a number of previous valid intervals of a link	the number of previous valid intervals of the link

name	Type	Description
	- range: [0...32]	<i>This element is always shown.</i>
iv	Parameter type: <Gauge> - gauge	the number of IMA violation events in the current interval <i>This element is always shown.</i>
oif	Parameter type: <Gauge> - gauge	the number of out of IMA frame events in the current interval <i>This element is always shown.</i>
ses	Parameter type: <Gauge> - gauge	the number of severely errored seconds in the current interval <i>This element is always shown.</i>
uas	Parameter type: <Gauge> - gauge	the number of unavailable seconds in the current interval of the link <i>This element is always shown.</i>
tx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds in the current interval of the transmit link <i>This element is always shown.</i>
rx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds in the current interval of the receive link <i>This element is always shown.</i>
tx-fc	Parameter type: <Gauge> - gauge	the number of failures in the current interval of the transmit link <i>This element is always shown.</i>
rx-fc	Parameter type: <Gauge> - gauge	the number of failures in the current interval of the receive link <i>This element is always shown.</i>
tx-stuffs	Parameter type: <Gauge> - gauge	the number of IMA stuffs in the current interval of the transmit link <i>This element is always shown.</i>
rx-stuffs	Parameter type: <Gauge> - gauge	the number of IMA stuffs in the current interval of the receive link <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Link-Near-End's PM data in current 15 minutes <i>This element is always shown.</i>

150.9 IMA Link Near-End Previous Interval Performance Data Status Command

Command Description

This command displays the IMA links near-end previous interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima link counters near-end previous-interval [ (if-index) [ interval-no <Ima::LinkIntervalNumber> ] ]
```

Command Parameters

Table 150.9-1 "IMA Link Near-End Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Ima::LinkIntervalNumber> Format: - a number of a interval number in a link - range: [1...32]	the number of the interval value in the link

Command Output

Table 150.9-2 "IMA Link Near-End Previous Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
iv	Parameter type: <Gauge>	the number of ima violation

name	Type	Description
	- gauge	events of the link in the previous interval <i>This element is always shown.</i>
oif	Parameter type: <Gauge> - gauge	the number of out of ima frame events of the link in the previous interval <i>This element is always shown.</i>
ses	Parameter type: <Gauge> - gauge	the number of severely errored seconds of the link in the previous interval <i>This element is always shown.</i>
uas	Parameter type: <Gauge> - gauge	the number of unavailable seconds of the link in the previous interval <i>This element is always shown.</i>
tx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds of the transmit link in the previous interval <i>This element is always shown.</i>
rx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds of the receive link in the previous interval <i>This element is always shown.</i>
tx-fc	Parameter type: <Gauge> - gauge	the number of failures of the transmit link in the previous interval <i>This element is always shown.</i>
rx-fc	Parameter type: <Gauge> - gauge	the number of failures of the receive link in the previous interval <i>This element is always shown.</i>
tx-stuffs	Parameter type: <Gauge> - gauge	the number of ima stuff events of the transmit link in the previous interval <i>This element is always shown.</i>
rx-stuffs	Parameter type: <Gauge> - gauge	the number of ima stuff events of the receive link in the previous interval <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Link-Near-End's PM data in one of the previous 32 intervals of 15-minutes <i>This element is always shown.</i>

150.10 IMA Link Far-End Current Interval Performance Data Status Command

Command Description

This command displays the IMA links far-end current interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima link counters far-end current-interval [ (if-index) ]
```

Command Parameters

Table 150.10-1 "IMA Link Far-End Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 150.10-2 "IMA Link Far-End Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
time-el	Parameter type: <Ima::LinkFarEndTimeElapsed> - a number of time elapsed of a link in a far end interval - range: [0...899]	the number of time elapsed of the link in the far end interval <i>This element is always shown.</i>
valid-interval	Parameter type: <Ima::LinkFarEndValidIntervals> - a number of a far end valid intervals of a link	the number of the far end valid intervals of the link

name	Type	Description
	- range: [0...32]	<i>This element is always shown.</i>
ses	Parameter type: <Gauge> - gauge	the number of severely errored seconds of the link in the current interval <i>This element is always shown.</i>
uas	Parameter type: <Gauge> - gauge	the number of unavailable seconds of the link in the current interval <i>This element is always shown.</i>
tx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds of the transmit link in the current interval <i>This element is always shown.</i>
rx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds of the receive link in the current interval <i>This element is always shown.</i>
tx-fc	Parameter type: <Gauge> - gauge	the number of failures of the transmit link in the current interval <i>This element is always shown.</i>
rx-fc	Parameter type: <Gauge> - gauge	the number of failures of the receive link in the current interval <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Link-Far-End's PM data in current 15 minutes <i>This element is always shown.</i>

150.11 IMA Link Far-End Previous Interval Performance Data Status Command

Command Description

This command displays the IMA links far-end previous interval status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show ima link counters far-end previous-interval [ (if-index) [ interval-no <Ima::LinkFarEndIntervalNumber> ] ]
```

Command Parameters

Table 150.11-1 "IMA Link Far-End Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <Ima::LinkFarEndIntervalNumber> Format: - a number of a interval number in a far end link - range: [1...32]	the number of the previous interval number in the far end link

Command Output

Table 150.11-2 "IMA Link Far-End Previous Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
ses	Parameter type: <Gauge>	the number of severely errored

name	Type	Description
	- gauge	seconds of the far end link in the previous interval <i>This element is always shown.</i>
uas	Parameter type: <Gauge> - gauge	the number of unavailable seconds of the far end link in the previous interval <i>This element is always shown.</i>
tx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds of the far end transmit link in the previous interval <i>This element is always shown.</i>
rx-uus	Parameter type: <Gauge> - gauge	the number of unusable seconds of the far end receive link in the previous interval <i>This element is always shown.</i>
tx-fc	Parameter type: <Gauge> - gauge	the number of failures of the far end transmit link in the previous interval <i>This element is always shown.</i>
rx-fc	Parameter type: <Gauge> - gauge	the number of failures of the far end receive link in the previous interval <i>This element is always shown.</i>
inv-flag	Parameter type: <Ima::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding Ima-Link-Far-End's PM data in one of the previous 32 intervals of 15-minutes <i>This element is always shown.</i>

151.2 Voice Sip Server Status Commands

Command Description

This command allows the operator to show the Voice Sip Server profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip server [ (name) ]
```

Command Parameters

Table 151.2-1 "Voice Sip Server Status Commands" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - uniquely identifies this voice server - length: x<=32	uniquely identify of this voice server

Command Output

Table 151.2-2 "Voice Sip Server Status Commands" Display parameters

Specific Information		
name	Type	Description
server-id	Parameter type: <Sip::ServerId> - the SIP server table index - range: [1...128]	server idr <i>This element is always shown.</i>
oper-status	Parameter type: <Sip::ServerOperStatus> (up down) Possible values: - up : the status of the server opera is up - down : the status of the server opera is down	the operational status of server <i>This element is always shown.</i>
server-address	Parameter type: <Sip::ServerAddr> (ipv4 : <Ip::V4Address> ipv6 : <Ip::V6Address> dns : <Sip::ServerAddr>) Possible values: - ipv4 : the address type of the server is IPv4 - ipv6 : the address type of the server is IPv6 - dns : the address type of the server is DNS Field type <Ip::V4Address>	the operational address of server <i>This element is always shown.</i>

name	Type	Description
	- IPv4-address Field type <Ip::V6Address> - IPv6-address Field type <Sip::ServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server - length: 7<=x<=64	

151.3 Voice Sip User Agent Access Point Show Commands

Command Description

This command allows the operator to show the Voice Sip user agent access point profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip user-agent-ap [ (name) [ slot-id <SIP::SlotIndex> ] ]
```

Command Parameters

Table 151.3-1 "Voice Sip User Agent Access Point Show Commands" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - uniquely identifies the User Agent - length: 1<=x<=32	uniquely identify of the user agent
slot-id	Parameter type: <SIP::SlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt ntio <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt : nt-slot - ntio : ntio-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	slot id associated with this user agent access point

Command Output

Table 151.3-2 "Voice Sip User Agent Access Point Show Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <Sip::UaApOperStatus> (up down) Possible values: - up : the sip UaAp oper status is up - down : the sip UaAp oper status is down	the opera status of user agent access point <i>This element is always shown.</i>

151.4 Voice Sip User Agent related IP address information Show Commands

Command Description

This command allows the operator to show the Voice service related IP address information.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip ua-ip-info [ (ua-name) [ slot-id <SIP::SlotIndex> ] ]
```

Command Parameters

Table 151.4-1 "Voice Sip User Agent related IP address information Show Commands" Resource Parameters

Resource Identifier	Type	Description
(ua-name)	Format: - uniquely identifies the User Agent - length: 1<=x<=32	uniquely identify of the user agent
slot-id	Parameter type: <SIP::SlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt ntio <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt : nt-slot - ntio : ntio-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	slot id associated with this user agent access point

Command Output

Table 151.4-2 "Voice Sip User Agent related IP address information Show Commands" Display parameters

Specific Information		
name	Type	Description
vsp-name	Parameter type: <Sip::UserAgentProviderName> - uniquely identifies the user agent provider name - length: x<=32	the provider name <i>This element is always shown.</i>
ip-config-mode	Parameter type: <Sip::IpConfigMode> (dhcp manual) Possible values: - dhcp : The IP related data is acquired from the DHCP server. - manual : The IP related data must be manually configured.	the configuration mode of the IP related data <i>This element is always shown.</i>
ipv4-sig-addr	Parameter type: <SIP::IpAddressAndMask> <Ip::V4Address> / <Sip::PrefixLength> Field type <Ip::V4Address> - IPv4-address Field type <Sip::PrefixLength> - prefix length of the subnet - range: [0...128]	the SIP User Agent signaling IPv4 address and subnet mask <i>This element is always shown.</i>
ipv4-sig-gw-addr	Parameter type: <Sip::UserAgentIPv4Addr> - IPv4-address	the signaling gateway IPv4 address <i>This element is always shown.</i>
ipv4-media-addr	Parameter type: <SIP::IpAddressAndMask> <Ip::V4Address> / <Sip::PrefixLength> Field type <Ip::V4Address> - IPv4-address Field type <Sip::PrefixLength> - prefix length of the subnet - range: [0...128]	the media IPv4 address and subnet mask <i>This element is always shown.</i>
ipv4-media-gw-addr	Parameter type: <Sip::UserAgentIPv4Addr> - IPv4-address	the media gateway IPv4 address <i>This element is always shown.</i>
ipv6-sig-addr	Parameter type: <SIP::IPv6AddressWithPrefix> <Ip::V6Address> / <Ip::V6PrefixLength> Field type <Ip::V6Address> - IPv6-address Field type <Ip::V6PrefixLength> - prefix length of IPv6-address - range: [0...128]	the SIP User Agent signaling IPv6 address and subnet mask <i>This element is always shown.</i>
ipv6-sig-gw-addr	Parameter type: <Sip::UserAgentIPv6Addr> - IPv6-address	the signaling gateway IPv6 address <i>This element is always shown.</i>
ipv6-media-addr	Parameter type: <SIP::IPv6AddressWithPrefix> <Ip::V6Address> / <Ip::V6PrefixLength> Field type <Ip::V6Address> - IPv6-address Field type <Ip::V6PrefixLength> - prefix length of IPv6-address - range: [0...128]	the media IPv6 address and subnet mask <i>This element is always shown.</i>
ipv6-media-gw-addr	Parameter type: <Sip::UserAgentIPv6Addr> - IPv6-address	the media gateway IPv6 address <i>This element is always shown.</i>

151.5 Voice Sip Statistics System Status Command

Command Description

This command allows the operator to show the various system parameters including the number of configured and available sip termination, the number of configured and unavailable sip termination, the number of unconfigured sip termination.

User Level

The command can be accessed by operators with forStatsPerSystem privileges.

Command Syntax

The command has the following syntax:

> show voice sip statistics system

Command Output

Table 151.5-2 "Voice Sip Statistics System Status Command" Display parameters

Specific Information		
name	Type	Description
config-avail-term	Parameter type: <Sip::NumberOfTerm> - the number of termination	The number of configured and available sip termination <i>This element is always shown.</i>
config-unavail-term	Parameter type: <Sip::NumberOfTerm> - the number of termination	The number of configured and unavailable sip termination <i>This element is always shown.</i>
unconfig-term	Parameter type: <Sip::NumberOfTerm> - the number of termination	The number of unconfigured sip termination <i>This element is always shown.</i>

151.6 Voice Sip Statistics Perfinfo Status Command

Command Description

This command allows the operator to show the various parameters including elapsed times for current 15-minutes interval and 1-day interval per termination, the number of pervious 15-minutes interval and 1-day interval per termination.

User Level

The command can be accessed by operators with *forStatsPerLine* privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics perf-info [ (if-index) ]
```

Command Parameters

Table 151.6-1 "Voice Sip Statistics Perfinfo Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of this port

Command Output

Table 151.6-2 "Voice Sip Statistics Perfinfo Status Command" Display parameters

Specific Information		
name	Type	Description
cur-15min-elapsedtime	Parameter type: <Sip::ElapsedTime> - the elapsed time - unit: sec	number of second elapsed in current 15 minutes interval measurement <i>This element is always shown.</i>
cur-1day-elapsedtime	Parameter type: <Sip::ElapsedTime>	number of second elapsed in

151 Voice Status Commands

name	Type	Description
	- the elapsed time - unit: sec	current 1 day interval measurement <i>This element is always shown.</i>
prev-15min-num	Parameter type: <Sip::PerfInterval> - the number of interval	number of previous 15 minutes intervals <i>This element is always shown.</i>
prev-1day-num	Parameter type: <Sip::PerfInterval> - the number of interval	number of previous 1 day intervals <i>This element is always shown.</i>

151.7 Voice Sip Termination Statistics Command for Current 15 Minutes

Command Description

This command allows the operator to show the Voice Sip Termination Statistics for current 15 minutes.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics termination current-15min [ (if-index) ]
```

Command Parameters

Table 151.7-1 "Voice Sip Termination Statistics Command for Current 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of this port

Command Output

Table 151.7-2 "Voice Sip Termination Statistics Command for Current 15 Minutes" Display parameters

Specific Information		
name	Type	Description
meastime(s)	Parameter type: <Sip::IntervalMeasureTime> - the measured time of interval - unit: sec	amount of time in sec that statistics have been counted <i>This element is only shown in detail mode.</i>
invalidflag	Parameter type: <Sip::IntervalValidityFlag>	validity of the corresponding

151 Voice Status Commands

name	Type	Description
	(true false) Possible values: - true : data is not valid - false : data is valid	performance monitoring data in current 15m interval <i>This element is always shown.</i>
sentrtppkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets transmitted by this termination in current 15m interval <i>This element is always shown.</i>
sentoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets transmitted by this termination in current 15m interval <i>This element is always shown.</i>
recvrtpkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets received by this termination in current 15m interval <i>This element is always shown.</i>
recvoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets received by this termination in current 15m interval <i>This element is always shown.</i>
lostrtpkts	Parameter type: <Sip::LostPackets> - the number of lost rtp packets	number of lost receiving rtp packets for this termination in current 15m interval <i>This element is always shown.</i>
avgjbfl(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level percentage for this termination in current 15m interval <i>This element is always shown.</i>
avgjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	average of jitter for this termination in current 15m interval <i>This element is always shown.</i>
avgrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	average of round-trip delay for this termination in current 15m interval <i>This element is always shown.</i>
maxjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	peak inter-arrival for this termination in current 15m interval. <i>This element is always shown.</i>
maxrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	peak of round-trip delay for this termination in current 15m interval. <i>This element is always shown.</i>
avgjbflg711a(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_a percentage for this termination in current 15m interval. <i>This element is always shown.</i>
avgjbflg711u(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_u percentage for this termination in current 15m interval. <i>This element is always shown.</i>
avgjbflg723(%)	Parameter type: <Sip::JBFL>	average of jitter buffer fill level

name	Type	Description
	- average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	encoded with G723 percentage for this termination in current 15m interval. <i>This element is always shown.</i>
avgjbflg729(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G729 percentage for this termination in current 15m interval. <i>This element is always shown.</i>
succregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the successful registration Num during the interval for this termination in current 15m interval <i>This element is always shown.</i>
failregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the failed registration Num during the interval for this termination in current 15m interval <i>This element is always shown.</i>
activereg	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the active Registration Status at the end of the interval for this termination in current 15m interval <i>This element is always shown.</i>
outcallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered out-going call count for this termination in current 15m interval <i>This element is always shown.</i>
incallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered incoming call count for this termination in current 15m interval <i>This element is always shown.</i>
outcallatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Number of all outgoing call requests on the port in current 15 minutes interval <i>This element is always shown.</i>
outcallseizdur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination. - unit: second - range: [0...86400]	Port seizure time of outgoing call attempts in current 15 minutes interval <i>This element is always shown.</i>
outfaillostseiz	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	The number of outgoing call attempts that fail because of an access failure to the voice network (Timer B expiry) in current 15 minutes interval <i>This element is always shown.</i>
outsuccinitinv	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	The number of outgoing call attempts for which the initial invite is successfully responded by the IMS core in current 15 minutes interval. <i>This element is always shown.</i>
incallatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Number of incoming call requests in current 15 minutes interval <i>This element is always shown.</i>
incallseizdur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination.	Port seizure time in seconds of incoming call attempts in current

151 Voice Status Commands

name	Type	Description
	- unit: second - range: [0...86400]	15 minutes interval <i>This element is always shown.</i>
infailllostseiz	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	The number of incoming call attempts that fail because of an access failure to the voice network (Timer B expiry) in current 15 minutes interval. <i>This element is always shown.</i>
exprrtpkts	Parameter type: <Counter> - 32 bit counter	The amount of RTP packets expected in current 15 minutes interval <i>This element is always shown.</i>
accrrtpkts	Parameter type: <Counter> - 32 bit counter	The amount of RTP packets processed by the decoder in current 15 minutes interval <i>This element is always shown.</i>
discrrtpkts	Parameter type: <Counter> - 32 bit counter	Number of discarded RTP packages other than late or early arrival in current 15 minutes interval <i>This element is always shown.</i>
elarrrrtpkts	Parameter type: <Counter> - 32 bit counter	Number of discarded RTP packages due to early or late arrival in current 15 minutes interval <i>This element is always shown.</i>
portregdur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination. - unit: second - range: [0...86400]	Sum of seconds of subscriber connection successfully registered in current 15 minutes interval <i>This element is always shown.</i>
portavaildur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination. - unit: second - range: [0...86400]	Sum of seconds of the port is created without the periods where the port is unavailable in current 15 minutes interval <i>This element is always shown.</i>

151.8 Voice Sip Termination Statistics Command for Current Day

Command Description

This command allows the operator to show the Voice Sip Termination Statistics for current 1 day.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics termination current-1day [ (if-index) ]
```

Command Parameters

Table 151.8-1 "Voice Sip Termination Statistics Command for Current Day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of this port

Command Output

Table 151.8-2 "Voice Sip Termination Statistics Command for Current Day" Display parameters

Specific Information		
name	Type	Description
meastime(s)	Parameter type: <Sip::IntervalMeasureTime> - the measured time of interval - unit: sec	amount of time in sec that statistics have been counted <i>This element is only shown in detail mode.</i>
invalidflag	Parameter type: <Sip::IntervalValidityFlag> (true false)	validity of the corresponding performance monitoring data in current 1day interval

151 Voice Status Commands

name	Type	Description
	Possible values: - true : data is not valid - false : data is valid	<i>This element is always shown.</i>
sentrtppkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets transmitted by this termination in current 1day interval <i>This element is always shown.</i>
sentoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets transmitted by this termination in current 1day interval <i>This element is always shown.</i>
recvrtpkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets received by this termination in current 1day interval <i>This element is always shown.</i>
recvoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets received by this termination in current 1day interval <i>This element is always shown.</i>
lostrtpkts	Parameter type: <Sip::LostPackets> - the number of lost rtp packets	number of lost receiving rtp packets for this termination in current 1day interval <i>This element is always shown.</i>
avgjbfl(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level percentage for this termination in current 1day interval <i>This element is always shown.</i>
avgjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	average of jitter for this termination in current 1day interval <i>This element is always shown.</i>
avgrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	average of round-trip delay for this termination in current 1day interval <i>This element is always shown.</i>
maxjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	peak inter-arrival for this termination in current 1day interval. <i>This element is always shown.</i>
maxrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	peak of round-trip delay for this termination in current 1day interval. <i>This element is always shown.</i>
avgjbflg711a(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_a percentage for this termination in current 1day interval. <i>This element is always shown.</i>
avgjbflg711u(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_u percentage for this termination in current 1day interval. <i>This element is always shown.</i>
avgjbflg723(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination	average of jitter buffer fill level encoded with G723 percentage for this termination in current

name	Type	Description
	- unit: percentage - range: [0...100]	1day interval. <i>This element is always shown.</i>
avgjbflg729(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G729 percentage for this termination in current 1day interval. <i>This element is always shown.</i>
succregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the successful registration Num during the interval for this termination in current 1d interval <i>This element is always shown.</i>
failregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the failed registration Num during the interval for this termination in current 1d interval <i>This element is always shown.</i>
activerereg	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the active Registration Status at the end of the interval for this termination in current 1d interval <i>This element is always shown.</i>
outcallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered out-going call count for this termination in current 1d interval <i>This element is always shown.</i>
incallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered incoming call count for this termination in current 1d interval <i>This element is always shown.</i>

151.9 Voice Sip Termination Statistics Command for Previous 15 Minutes

Command Description

This command allows the operator to show the Voice Sip Termination Statistics for previous 15 minutes.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics termination prev-15min [ (if-index) [ interval-num <Sip::IntervalNumber15min> ] ]
```

Command Parameters

Table 151.9-1 "Voice Sip Termination Statistics Command for Previous 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of this port
interval-num	Parameter type: <Sip::IntervalNumber15min> Format: - the measured time interval - range: [1...96]	identifies prev 15min intervals, value 1 as the latest interval

Command Output

Table 151.9-2 "Voice Sip Termination Statistics Command for Previous 15 Minutes" Display parameters

Specific Information		
name	Type	Description
timestamp	Parameter type: <Sip::SipTimeInSecs>	specifies the start time for this

name	Type	Description
	- the time (yyyy-mm-dd:hour:minutes:secs)	termination in previous 15m interval <i>This element is always shown.</i>
meastime(s)	Parameter type: <Sip::IntervalMeasureTime> - the measured time of interval - unit: sec	amount of time in sec that statistics have been counted <i>This element is only shown in detail mode.</i>
invalidflag	Parameter type: <Sip::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding performance monitoring data in previous 15m interval <i>This element is always shown.</i>
sentrtppkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets transmitted by this termination in previous 15m interval <i>This element is always shown.</i>
sentoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets transmitted by this termination in previous 15m interval <i>This element is always shown.</i>
recvrtpkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets received by this termination in previous 15m interval <i>This element is always shown.</i>
recvoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets received by this termination in previous 15m interval <i>This element is always shown.</i>
lostrtpkts	Parameter type: <Sip::LostPackets> - the number of lost rtp packets	number of lost receiving rtp packets for this termination in previous 15m interval <i>This element is always shown.</i>
avgjbf(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level percentage for this termination in previous 15m interval <i>This element is always shown.</i>
avgjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	average of jitter for this termination in previous 15m interval <i>This element is always shown.</i>
avgrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	average of round-trip delay for this termination in previous 15m interval <i>This element is always shown.</i>
maxjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	peak inter-arrival for this termination in previous 15m interval. <i>This element is always shown.</i>
maxrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	peak of round-trip delay for this termination in previous 15m interval. <i>This element is always shown.</i>
avgjbflg711a(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination	average of jitter buffer fill level encoded with G711_a percentage for this termination in previous

151 Voice Status Commands

name	Type	Description
	- unit: percentage - range: [0...100]	15m interval. <i>This element is always shown.</i>
avgjbflg711u(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_u percentage for this termination in previous 15m interval. <i>This element is always shown.</i>
avgjbflg723(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G723 percentage for this termination in previous 15m interval. <i>This element is always shown.</i>
avgjbflg729(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G729 percentage for this termination in previous 15m interval. <i>This element is always shown.</i>
succregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the successful registration Num during the interval for this termination in previous 15m interval <i>This element is always shown.</i>
failregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the failed registration Num during the interval for this termination in previous 15m interval <i>This element is always shown.</i>
activerereg	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the active Registration Status at the end of the interval for this termination in previous 15m interval <i>This element is always shown.</i>
outcallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered out-going call count for this termination in previous 15m interval <i>This element is always shown.</i>
incallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered incoming call count for this termination in previous 15m interval <i>This element is always shown.</i>
outcallatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Number of all outgoing call requests on the port in this previous 15 minutes interval <i>This element is always shown.</i>
outcallseizdur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination. - unit: second - range: [0...86400]	Port seizure time of outgoing call attempts in previous 15 minutes interval <i>This element is always shown.</i>
outfaillostseiz	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	The number of outgoing call attempts that fail because of an access failure to the voice network (Timer B expiry) in previous 15 minutes interval. <i>This element is always shown.</i>
outsuccinitinv	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	The number of outgoing call attempts for which the initial invite is successfully responded

name	Type	Description
		by the IMS core in previous 15 minutes interval. <i>This element is always shown.</i>
incallatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Number of incoming call requests in previous 15 minutes interval <i>This element is always shown.</i>
incallseizdur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination. - unit: second - range: [0...86400]	Port seizure time in seconds of incoming call attempts in previous 15 minutes interval <i>This element is always shown.</i>
infailllostseiz	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	The number of incoming call attempts that fail because of an access failure to the voice network (Timer B expiry) in previous 15 minutes interval. <i>This element is always shown.</i>
exrtppts	Parameter type: <Counter> - 32 bit counter	The amount of RTP packets expected in previous 15 minutes interval <i>This element is always shown.</i>
accrtppts	Parameter type: <Counter> - 32 bit counter	The amount of RTP packets processed by the decoder in previous 15 minutes interval <i>This element is always shown.</i>
discrtppts	Parameter type: <Counter> - 32 bit counter	Number of discarded RTP packages other than late or early arrival in previous 15 minutes interval <i>This element is always shown.</i>
elarrtpppts	Parameter type: <Counter> - 32 bit counter	Number of discarded RTP packages due to early or late arrival in previous 15 minutes interval <i>This element is always shown.</i>
portregdur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination. - unit: second - range: [0...86400]	Sum of seconds of subscriber connection successfully registered in previous 15 minutes interval <i>This element is always shown.</i>
portavaildur(s)	Parameter type: <Sip::StatsTermTime> - Time duration for statics sip termination. - unit: second - range: [0...86400]	Sum of seconds of the port is created without the periods where the port is unavailable in previous 15 minutes interval <i>This element is always shown.</i>

151.10 Voice Sip Termination Statistics Command for Previous day

Command Description

This command allows the operator to show the Voice Sip Termination Statistics for previous 1 day.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics termination prev-1day [ (if-index) [ interval-num <Sip::IntervalNumber1day> ] ]
```

Command Parameters

Table 151.10-1 "Voice Sip Termination Statistics Command for Previous day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of this port
interval-num	Parameter type: <Sip::IntervalNumber1day> Format: - the measured time interval - range: [1...3]	identifies prev 1 day intervals, value 1 as the latest interval

Command Output

Table 151.10-2 "Voice Sip Termination Statistics Command for Previous day" Display parameters

Specific Information		
name	Type	Description
meastime(s)	Parameter type: <Sip::IntervalMeasureTime> - the measured time of interval - unit: sec	amount of time in sec that statistics have been counted <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
invalidflag	Parameter type: <Sip::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding performance monitoring data in previous 1day interval <i>This element is always shown.</i>
sentrtppkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets transmitted by this termination in previous 1day interval <i>This element is always shown.</i>
sentoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets transmitted by this termination in previous 1day interval <i>This element is always shown.</i>
recvrtpkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets received by this termination in previous 1day interval <i>This element is always shown.</i>
recvoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets received by this termination in previous 1day interval <i>This element is always shown.</i>
lostrtpkts	Parameter type: <Sip::LostPackets> - the number of lost rtp packets	number of lost receiving rtp packets for this termination in previous 1day interval <i>This element is always shown.</i>
avgjbf(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level percentage for this termination in previous 1day interval <i>This element is always shown.</i>
avgjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millise	average of jitter for this termination in previous 1day interval <i>This element is always shown.</i>
avgrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millise	average of round-trip delay for this termination in previous 1day interval <i>This element is always shown.</i>
maxjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millise	peak inter-arrival for this termination in previous 1day interval. <i>This element is always shown.</i>
maxrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millise	peak of round-trip delay for this termination in previous 1day interval. <i>This element is always shown.</i>
avgjbflg711a(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_a percentage for this termination in previous 1day interval. <i>This element is always shown.</i>
avgjbflg711u(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage	average of jitter buffer fill level encoded with G711_u percentage for this termination in previous 1day interval.

151 Voice Status Commands

name	Type	Description
	- range: [0...100]	<i>This element is always shown.</i>
avgjbflg723(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G723 percentage for this termination in previous 1day interval. <i>This element is always shown.</i>
avgjbflg729(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G729 percentage for this termination in previous 1day interval. <i>This element is always shown.</i>
succregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the successful registration Num during the interval for this termination in previous 1d interval <i>This element is always shown.</i>
failregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the failed registration Num during the interval for this termination in previous 1d interval <i>This element is always shown.</i>
activerereg	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the active Registration Status at the end of the interval for this termination in previous 1d interval <i>This element is always shown.</i>
outcallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered out-going call count for this termination in previous 1d interval <i>This element is always shown.</i>
incallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered incoming call count for this termination in previous 1d interval <i>This element is always shown.</i>
timestamp	Parameter type: <Sip::SipTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	specifies the start time for this termination in previous 1d interval <i>This element is always shown.</i>

151.11 Voice Sip MSAN Statistics Command

Command Description

This command allows the operator to show the Voice Sip MSAN Statistics.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics call (if-index) interval [ (interval-num) [ start-time <Sip::SipTimeInSecs> ] [ icid <Sip::ICId> ] ]
```

Command Parameters

Table 151.11-1 "Voice Sip MSAN Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of this port
(interval-num)	Format: - the measured time interval - range: [1...96]	identifies 15min intervals, value 1 as the latest interval
start-time	Parameter type: <Sip::SipTimeInSecs> Format: - the time (yyyy-mm-dd:hour:minutes:secs)	time value in seconds when the call was initialized
icid	Parameter type: <Sip::ICId> Format: - the ims charging id in SIP - length: x<=38	the ims charging id in sip

Command Output

Table 151.11-2 "Voice Sip MSAN Statistics Command" Display parameters

Specific Information

151 Voice Status Commands

name	Type	Description
end-time	Parameter type: <Sys::timeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	time value in seconds when the call was end <i>This element is only shown in detail mode.</i>
send-packets	Parameter type: <Counter> - 32 bit counter	number of rtp packets transmitted in this call portion <i>This element is always shown.</i>
send-octets	Parameter type: <Counter> - 32 bit counter	number of rtp octets transmitted in this call portion <i>This element is always shown.</i>
receive-packets	Parameter type: <Counter> - 32 bit counter	number of rtp packets received in this call portion <i>This element is always shown.</i>
receive-octets	Parameter type: <Counter> - 32 bit counter	number of rtp octets received in this call portion <i>This element is always shown.</i>
avg-jitter	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	average inter-arrival jitter measured in this call portion <i>This element is always shown.</i>
avg-rttrip-delay	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	average round-trip delay measured in this call portion <i>This element is always shown.</i>
peak-jitter	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	peak inter-arrival jitter measured in this call portion <i>This element is always shown.</i>
peak-rttrip-delay	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	peak round-trip delay measured in this call portion <i>This element is always shown.</i>
lost-packets	Parameter type: <Sip::LostPackets> - the number of lost rtp packets	total number of lost receiving rtp packets in this call portion <i>This element is always shown.</i>
dis-pack-jb-over	Parameter type: <Counter> - 32 bit counter	total number of discarded rtp packets due to the jitter buffer over-flow in this call portion <i>This element is always shown.</i>
dialogue-state-flag	Parameter type: <Sip::DialogStateFlag> (single-interval-dialog end-dialog continue-dialog start-dialog) Possible values: - single-interval-dialog: one dialog starts and ends in the same interval - end-dialog : one dialog ends in different intervals - continue-dialog : dialog still continue - start-dialog : one dialog starts not end yet interval reached	per call dialog state flag <i>This element is always shown.</i>

151.12 Voice Sip board Statistics Command for Current one Day

Command Description

This command allows the operator to show the Voice Sip board Statistics for current one day.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics board current-1day [ (slot-id) ]
```

Command Parameters

Table 151.12-1 "Voice Sip board Statistics Command for Current one Day" Resource Parameters

Resource Identifier	Type	Description
(slot-id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	interface index of this LT board.

Command Output

151.13 Voice Sip Board Statistics Command for Previous day

Command Description

This command allows the operator to show the Voice Sip Board Statistics for previous 1 day.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics board prev-1day [ (slot-id) [ interval-num <Sip::IntervalNumber1day> ] ]
```

Command Parameters

Table 151.13-1 "Voice Sip Board Statistics Command for Previous day" Resource Parameters

Resource Identifier	Type	Description
(slot-id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	interface index of this LT board.
interval-num	Parameter type: <Sip::IntervalNumber1day> Format: - the measured time interval - range: [1...3]	identifies prev 1 day intervals, value 1 as the latest interval.

Command Output

Table 151.13-2 "Voice Sip Board Statistics Command for Previous day" Display parameters

Specific Information		
name	Type	Description
meastime(s)	Parameter type: <Sip::IntervalMeasureTime> - the measured time of interval - unit: sec	amount of time in sec that statistics have been counted. <i>This element is only shown in detail mode.</i>

avgjbflg711a(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_a percentage for this board in previous 1day interval. <i>This element is always shown.</i>
avgjbflg711u(%)	Parameter type: <Sip::JBFL>	average of jitter buffer fill level

name	Type	Description
	- average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	encoded with G711_u percentage for this board in previous 1day interval. <i>This element is always shown.</i>
avgjbflg723(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G723 percentage for this board in previous 1day interval. <i>This element is always shown.</i>
avgjbflg729(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G729 percentage for this board in previous 1day interval. <i>This element is always shown.</i>
avgcpu(%)	Parameter type: <Sys::cpuloadaverage> - average load for the measurement period , expressed in percentage - unit: percentage - range: [0...100]	average the CPU load for this board in previous 1day interval. <i>This element is always shown.</i>
avgmemuse(%)	Parameter type: <Sys::memusageUtilization> - memory size - unit: Mbyte	average amount of semi and dynamic memory been used, expressed as a portion of the total memory for this board in previous 1day interval. <i>This element is always shown.</i>
avgmempoolfree(mb)	Parameter type: <Sys::memusageFree> - memory size - unit: Mbyte	average amount of free semi and dynamic memory for this board in previous 1day interval. <i>This element is always shown.</i>
avgmempooluse(mb)	Parameter type: <Sys::memusageAbsolute> - memory size - unit: Mbyte	average amount of semi and dynamic memory been used for this board in previous 1day interval. <i>This element is always shown.</i>
avgmempooltot(mb)	Parameter type: <Sys::totalMem> - memory size - unit: Mbyte	total amount memory on this board in previous 1day interval. <i>This element is always shown.</i>
spareports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of unconfigured sip termination in this board at the end of previous 1day interval. <i>This element is always shown.</i>
actports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of active sip termination in this board at the end of previous 1day interval. <i>This element is always shown.</i>
inactports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of inactive sip termination (locked) in this board at the end of previous 1day interval. <i>This element is always shown.</i>
succregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the successful registration Num for whole board in previous 1 day interval <i>This element is always shown.</i>
failregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the failed registration Num for whole board in previous 1 day interval

151 Voice Status Commands

name	Type	Description
		<i>This element is always shown.</i>
activerег	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the active Registration Status for whole board at the end of previous 1 day interval <i>This element is always shown.</i>
outcallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered out-going call count for whole board in previous 1 day interval <i>This element is always shown.</i>
incallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered incoming call count for whole board in previous 1 day interval <i>This element is always shown.</i>
timestamp	Parameter type: <Sip::SipTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	specifies the start time for this board in previous 1 day interval <i>This element is always shown.</i>

151.14 Voice Sip Board Statistics Command for Current 15 Minutes

Command Description

This command allows the operator to show the Voice Sip Board Statistics for current 15 minutes.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics board current-15min [ (slot-id) ]
```

Command Parameters

Table 151.14-1 "Voice Sip Board Statistics Command for Current 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(slot-id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	interface index of this LT board

Command Output

Table 151.14-2 "Voice Sip Board Statistics Command for Current 15 Minutes" Display parameters

151 Voice Status Commands

Specific Information		
name	Type	Description
meastime(s)	Parameter type: <Sip::IntervalMeasureTime> - the measured time of interval - unit: sec	amount of time in sec that statistics have been counted <i>This element is only shown in detail mode.</i>
invalidflag	Parameter type: <Sip::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding performance monitoring data in current 15m interval <i>This element is always shown.</i>
sentrtppkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets transmitted by this board in current 15m interval <i>This element is always shown.</i>
sentoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets transmitted by this board in current 15m interval <i>This element is always shown.</i>
recvrtpkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets received by this board in current 15m interval <i>This element is always shown.</i>
recvoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets received by this board in current 15m interval <i>This element is always shown.</i>
lostrtpkts	Parameter type: <Sip::LostPackets> - the number of lost rtp packets	number of lost receiving RTP packets for this board in current 15m interval <i>This element is always shown.</i>
avgjbfl(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level percentage for this board in current 15m interval. <i>This element is always shown.</i>
avgjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	average of jitter for this board in current 15m interval. <i>This element is always shown.</i>
avgrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	average of round-trip delay for this board in current 15m interval. <i>This element is always shown.</i>
maxjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	peak inter-arrival for this board in current 15m interval <i>This element is always shown.</i>
maxrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	peak of round-trip delay for this board in current 15m interval. <i>This element is always shown.</i>
avgjbflg711a(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_a percentage for this board in current 15m interval. <i>This element is always shown.</i>
avgjbflg711u(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage	average of jitter buffer fill level encoded with G711_u percentage for this board in current 15m interval.

name	Type	Description
	- range: [0...100]	<i>This element is always shown.</i>
avgjbflg723(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G723 percentage for this board in current 15m interval. <i>This element is always shown.</i>
avgjbflg729(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G729 percentage for this board in current 15m interval. <i>This element is always shown.</i>
avgcpu(%)	Parameter type: <Sys::cpuloadaverage> - average load for the measurement period , expressed in percentage - unit: percentage - range: [0...100]	average the CPU load for this board in current 15m interval. <i>This element is always shown.</i>
avgmemuse(%)	Parameter type: <Sys::memusageUtilization> - memory size - unit: Mbyte	average amount of semi and dynamic memory been used, expressed as a portion of the total memory for this board in current 15m interval. <i>This element is always shown.</i>
avgmempoolfree(mb)	Parameter type: <Sys::memusageFree> - memory size - unit: Mbyte	average amount of free semi and dynamic memory for this board in current 15m interval. <i>This element is always shown.</i>
avgmempooluse(mb)	Parameter type: <Sys::memusageAbsolute> - memory size - unit: Mbyte	average amount of semi and dynamic memory been used for this board in current 15m interval. <i>This element is always shown.</i>
avgmempooltot(mb)	Parameter type: <Sys::totalMem> - memory size - unit: Mbyte	total amount memory on this board in current 15m interval. <i>This element is always shown.</i>
spareports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of unconfigured sip termination in this board at the end of current 15m interval. <i>This element is always shown.</i>
actports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of active sip termination in this board at the end of current 15m interval. <i>This element is always shown.</i>
inactports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of inactive sip termination (locked) in this board at the end of current 15m interval. <i>This element is always shown.</i>
succregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the successful registration Num for whole board in current 15 minutes interval <i>This element is always shown.</i>
failregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the failed registration Num for whole board in current 15 minutes interval <i>This element is always shown.</i>
activerereg	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the active Registration Status for whole board at the end

151 Voice Status Commands

name	Type	Description
		of current 15 minutes interval <i>This element is always shown.</i>
outcallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered out-going call count for whole board in current 15 minutes interval <i>This element is always shown.</i>
incallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered incoming call count for whole board in current 15 minutes interval <i>This element is always shown.</i>
actconn	Parameter type: <Sip::NumberOfTerm> - the number of termination	The amount of Number of active connections in current 15 minutes interval <i>This element is always shown.</i>
brokenports	Parameter type: <Sip::NumberOfTerm> - the number of termination	The amount of Number of broken ports in current 15 minutes interval <i>This element is always shown.</i>
portregdur(s)	Parameter type: <Sip::StatsBoardTime> - Time duration for statics sip board. - unit: second - range: [0...6220800]	Sum of seconds of subscriber connection successfully registered by this board in current 15 minutes interval <i>This element is always shown.</i>
portavaildur(s)	Parameter type: <Sip::StatsBoardTime> - Time duration for statics sip board. - unit: second - range: [0...6220800]	Sum of seconds of the port is created without the periods where the port is unavailable by this board in current 15 minutes interval <i>This element is always shown.</i>

151.15 Voice Sip Board Statistics Command for Previous 15 Minutes

Command Description

This command allows the operator to show the Voice Sip Board Statistics for previous 15 minutes.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics board prev-15min [ (slot-id) [ interval-num <Sip::IntervalNumber15min> ] ]
```

Command Parameters

Table 151.15-1 "Voice Sip Board Statistics Command for Previous 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(slot-id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	interface index of this LT board
interval-num	Parameter type: <Sip::IntervalNumber15min> Format: - the measured time interval - range: [1...96]	identifies prev 15min intervals, value 1 as the latest interval

Command Output

Table 151.15-2 "Voice Sip Board Statistics Command for Previous 15 Minutes" Display parameters

Specific Information		
name	Type	Description
timestamp	Parameter type: <Sip::SipTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	specifies the start time for this board in previous 15 minutes interval <i>This element is always shown.</i>
meastime(s)	Parameter type: <Sip::IntervalMeasureTime> - the measured time of interval - unit: sec	amount of time in sec that statistics have been counted <i>This element is only shown in detail mode.</i>
invalidflag	Parameter type: <Sip::IntervalValidityFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity of the corresponding performance monitoring data in previous 15m interval <i>This element is always shown.</i>
sentrtppkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets transmitted by this board in previous 15m interval <i>This element is always shown.</i>
sentoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets transmitted by this board in previous 15m interval <i>This element is always shown.</i>
recvrtpkts	Parameter type: <Counter> - 32 bit counter	number of rtp packets received by this board in previous 15m interval <i>This element is always shown.</i>
recvoct	Parameter type: <Counter> - 32 bit counter	number of rtp octets received by this board in previous 15m interval <i>This element is always shown.</i>
lostrtpkts	Parameter type: <Sip::LostPackets> - the number of lost rtp packets	number of lost receiving RTP packets for this board in previous 15m interval <i>This element is always shown.</i>
avgjbf(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level percentage for this board in previous 15m interval. <i>This element is always shown.</i>
avgjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	average of jitter for this board in previous 15m interval. <i>This element is always shown.</i>
avgrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination - unit: millisec	average of round-trip delay for this board in previous 15m interval. <i>This element is always shown.</i>
maxjitter(ms)	Parameter type: <Sip::Jitter> - average of jitter for the termination - unit: millisec	peak inter-arrival for this board in previous 15m interval <i>This element is always shown.</i>
maxrtdelay(ms)	Parameter type: <Sip::RoundTripDelay> - average of round-trip delay for this termination	peak of round-trip delay for this board in previous 15m interval.

name	Type	Description
	- unit: millisec	<i>This element is always shown.</i>
avgjbflg711a(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_a percentage for this board in previous 15m interval. <i>This element is always shown.</i>
avgjbflg711u(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G711_u percentage for this board in previous 15m interval. <i>This element is always shown.</i>
avgjbflg723(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G723 percentage for this board in previous 15m interval. <i>This element is always shown.</i>
avgjbflg729(%)	Parameter type: <Sip::JBFL> - average of jitter buffer fill level percentage for the termination - unit: percentage - range: [0...100]	average of jitter buffer fill level encoded with G729 percentage for this board in previous 15m interval. <i>This element is always shown.</i>
avgcpu(%)	Parameter type: <Sys::cpuloadaverage> - average load for the measurement period , expressed in percentage - unit: percentage - range: [0...100]	average the CPU load for this board in previous 15m interval. <i>This element is always shown.</i>
avgmemuse(%)	Parameter type: <Sys::memusageUtilization> - memory size - unit: Mbyte	average amount of semi and dynamic memory been used, expressed as a portion of the total memory for this board in previous 15m interval. <i>This element is always shown.</i>
avgmempoolfree(mb)	Parameter type: <Sys::memusageFree> - memory size - unit: Mbyte	average amount of free semi and dynamic memory for this board in previous 15m interval. <i>This element is always shown.</i>
avgmempooluse(mb)	Parameter type: <Sys::memusageAbsolute> - memory size - unit: Mbyte	average amount of semi and dynamic memory been used for this board in previous 15m interval. <i>This element is always shown.</i>
avgmempooltot(mb)	Parameter type: <Sys::totalMem> - memory size - unit: Mbyte	total amount memory on this board in previous 15m interval. <i>This element is always shown.</i>
spareports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of unconfigured sip termination in this board at the end of previous 15m interval. <i>This element is always shown.</i>
actports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of active sip termination in this board at the end of previous 15m interval. <i>This element is always shown.</i>
inactports	Parameter type: <Sip::NumberOfTerm> - the number of termination	the number of inactive sip termination (locked) in this board at the end of previous 15m interval. <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
succregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the successful registration Num for whole board in previous 15 minutes interval <i>This element is always shown.</i>
failregatt	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the failed registration Num for whole board in previous 15 minutes interval <i>This element is always shown.</i>
activerereg	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Count the active Registration Status for whole board at the end of previous 15 minutes interval <i>This element is always shown.</i>
outcallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered out-going call count for whole board in previous 15 minutes interval <i>This element is always shown.</i>
incallconn	Parameter type: <Sip::SignalCounter> - the counter of CMCC for signal statistics	Answered incoming call count for whole board in previous 15 minutes interval <i>This element is always shown.</i>
actconn	Parameter type: <Sip::NumberOfTerm> - the number of termination	The amount of Number of active connections in previous 15 minutes interval <i>This element is always shown.</i>
brokenports	Parameter type: <Sip::NumberOfTerm> - the number of termination	The amount of Number of broken ports in previous 15 minutes interval <i>This element is always shown.</i>
portregdur(s)	Parameter type: <Sip::StatsBoardTime> - Time duration for statics sip board. - unit: second - range: [0...6220800]	Sum of seconds of subscriber connection successfully registered by this board in previous 15 minutes interval <i>This element is always shown.</i>
portavaildur(s)	Parameter type: <Sip::StatsBoardTime> - Time duration for statics sip board. - unit: second - range: [0...6220800]	Sum of seconds of the port is created without the periods where the port is unavailable by this board in previous 15 minutes interval <i>This element is always shown.</i>

151.16 Voice Sip Statistics Perfinfo Status

Command per board

Command Description

This command allows the operator to show the various parameters including elapsed times for current 15-minutes interval and 1-day interval per Board, the number of pervious 15-minutes interval and 1-day interval per Board

User Level

The command can be accessed by operators with forStatsPerBoard privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip statistics board-perfinfo [ (slot-id) ]
```

Command Parameters

Table 151.16-1 "Voice Sip Statistics Perfinfo Status Command per board" Resource Parameters

Resource Identifier	Type	Description
(slot-id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	interface index of this LT board.

Command Output

Table 151.16-2 "Voice Sip Statistics Perfinfo Status Command per board" Display parameters

151 Voice Status Commands

Specific Information		
name	Type	Description
cur-15min-elapsedtime	Parameter type: <Sip::ElapsedTime> - the elapsed time - unit: sec	number of second elapsed in current 15 minutes interval measurement <i>This element is always shown.</i>
cur-1day-elapsedtime	Parameter type: <Sip::ElapsedTime> - the elapsed time - unit: sec	number of second elapsed in current 1 day interval measurement <i>This element is always shown.</i>
pre-15min-num	Parameter type: <Sip::PerfInterval> - the number of interval	number of previous 15 minutes interval <i>This element is always shown.</i>
pre-1days-num	Parameter type: <Sip::PerfInterval> - the number of interval	number of previous 1 day interval <i>This element is always shown.</i>

151.17 Voice Sip restoration: Redundancy Status Commands

Command Description

This command allows the operator to show the Voice Sip restoration, Redundancy status.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip redundancy-node redundancy-state [ (admin-name) [ slot-id <SIP::SlotIndex> ] ]
```

Command Parameters

Table 151.17-1 "Voice Sip restoration: Redundancy Status Commands" Resource Parameters

Resource Identifier	Type	Description
(admin-name)	Format: - uniquely name of this element - length: x<=32	The name of the administrative domain that hosts the redundancy group.
slot-id	Parameter type: <SIP::SlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt ntio <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt : nt-slot - ntio : ntio-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	slot id associated with redundancy state.

Command Output

Table 151.17-2 "Voice Sip restoration: Redundancy Status Commands" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Sip::netwRedunState> (connect-primary connect-geo-back connect-sos-back server-fo-ongoing server-fb-ongoing geo-fo-ongoing geo-fb-ongoing sos-fo-ongoing sos-fb-ongoing deli-upd-ongoing) Possible values: - connect-primary : Redundancy state :connect-primary - connect-geo-back : Redundancy state : connect-geo-back - connect-sos-back : Redundancy state : connect-sos-back - server-fo-ongoing : Redundancy state :sip-server-fail-over-ongoing - server-fb-ongoing : Redundancy state :sip-server-fail-back-ongoing - geo-fo-ongoing : Redundancy state : geo-fail-over-ongoing - geo-fb-ongoing : Redundancy state :geo-fail-back-ongoing - sos-fo-ongoing : Redundancy state : sos-fail-over-ongoing - sos-fb-ongoing : Redundancy state : sos-fail-back-ongoing - deli-upd-ongoing : Redundancy state : deliberate-update-ongoing	State:connected-to-primary(1),connected-to-geo-back(1),connected-to-sos-back(1) <i>This element is always shown.</i>

151.18 Voice Sip restoration: Redundancy Status Commands

Command Description

This command allows the operator to show the Voice Sip restoration, Redundancy status.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip redundancy-node ext-redundancy-state [ (admin-name) [ slot-id <SIP::SlotIndex> ] [ term-group <SIP::sipIsdnCasTerminationGroupID> ] ]
```

Command Parameters

Table 151.18-1 "Voice Sip restoration: Redundancy Status Commands" Resource Parameters

Resource Identifier	Type	Description
(admin-name)	Format: - uniquely name of this element - length: x<=32	The name of the administrative domain that hosts the redundancy group.
slot-id	Parameter type: <SIP::SlotIndex> Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt ntio <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt : nt-slot - ntio : ntio-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	slot id associated with redundancy state.
term-group	Parameter type: <SIP::sipIsdnCasTerminationGroupID> Format: - the termination group termination belongs to - range: [0...300]	termination group associated with redundancy state.

Command Output

Table 151.18-2 "Voice Sip restoration: Redundancy Status Commands" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Sip::netwRedunNewState> (connect-primary connect-geo-back connect-sos-back server-fo-ongoing server-fb-ongoing geo-fo-ongoing geo-fb-ongoing sos-fo-ongoing sos-fb-ongoing deli-upd-ongoing deli-upd-ongoing-bu server-fo-ongoing-bu server-fb-ongoing-bu) Possible values: - connect-primary : Redundancy state :connect-primary - connect-geo-back : Redundancy state : connect-geo-back - connect-sos-back : Redundancy state : connect-sos-back - server-fo-ongoing : Redundancy state :sip-server-fail-over-ongoing - server-fb-ongoing : Redundancy state : sip-server-fail-back-ongoing - geo-fo-ongoing : Redundancy state : geo-fail-over-ongoing - geo-fb-ongoing : Redundancy state :geo-fail-back-ongoing - sos-fo-ongoing : Redundancy state : sos-fail-over-ongoing - sos-fb-ongoing : Redundancy state : sos-fail-back-ongoing - deli-upd-ongoing : Redundancy state : deliberate-update-ongoing - deli-upd-ongoing-bu : Redundancy state : deliberate-update-ongoing-bu - server-fo-ongoing-bu : Redundancy state :sip-server-fail-over-ongoing-bu - server-fb-ongoing-bu : Redundancy state : sip-server-fail-back-ongoing-bu	State:connected-to-primary(1),connected-to-geo-back(1),connected-to-sos-back(1) <i>This element is always shown.</i>
sip-server-address	Parameter type: <Sip::sipServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server - length: 7<=x<=64	the SIP server termination registered to <i>This element is always shown.</i>

151.19 Voice Sip Redundancy Status Commands

Command Description

This command allows the operator to show the Voice Sip Redundancy status.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

> show voice sip redundancy-node redundancy-cmd [(provider-name)]

Command Parameters

Table 151.19-1 "Voice Sip Redundancy Status Commands" Resource Parameters

Resource Identifier	Type	Description
(provider-name)	Format: - uniquely identifies the transport provider name - length: x<=32	uniquely identify provider name

Command Output

Table 151.19-2 "Voice Sip Redundancy Status Commands" Display parameters

Specific Information		
name	Type	Description
progress	Parameter type: <Sip::FailXProgress> (not-started running successful-completed failed) Possible values: - not-started : geo fo/fb not started - running : geo fo/fb is ongoing - successful-completed : geo fo/fb complete and successful - failed : geo fo/fb failed	Fail X progress <i>This element is always shown.</i>
result	Parameter type: <Sip::FailXResult> - Fail X result. - length: x<=32	Fail X result. <i>This element is always shown.</i>

151.20 Voice Sip Termination Status Commands

Command Description

This command allows the operator to show the Voice Sip termination profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

> show voice sip termination [(if-index)]

Command Parameters

Table 151.20-1 "Voice Sip Termination Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the termination port

Command Output

Table 151.20-2 "Voice Sip Termination Status Commands" Display parameters

Specific Information		
name	Type	Description
contact-user-info	Parameter type: <SIP::SipTerminationContact> - The user-info of contact field in SIP message associated with the user - length: 1<=x<=128	The user-info of contact field in SIP message associated with the user <i>This element is always shown.</i>
oper-status	Parameter type: <Sip::TermOperStatus> (up down) Possible values: - up : the status of the termination opera is up - down : the status of the termination is down	the operational status of application server <i>This element is always shown.</i>

name	Type	Description
operstatus-downreason	Parameter type: <Sip::TermOpDownReason> (registering registrationfailure physicalfailure admin-status-down unknown) Possible values: - : the term opera status down reason is none - registering : the term opera status down reason is registering - registrationfailure : the term opera status down reason is registration failure - physicalfailure : the term opera status down reason is physical failure - admin-status-down : the term opera status down reason is termination admin status down - unknown : the term opera status down reason is LT down or IOCM communication failure	the reason of operational status of application server is down <i>This element is always shown.</i>
call-status	Parameter type: <Sip::TermCallStatus> (unknown on-hook off-hook dialing calling connected idle-offhook ringing releasing ringback shared-cutoff) Possible values: - unknown : the call status is unknown - on-hook : the call status is on-hook - off-hook : the call status is off-hook - dialing : the call status is dialing - calling : the call status is calling - connected : the call status is connected - idle-offhook : the call status is idle-offhook - ringing : the call status is ringing - releasing : the call status is releasing - ringback : the call status is ringback - shared-cutoff : the call status is shared-cutoff	the call status of a termination <i>This element is always shown.</i>
test-status	Parameter type: <Sip::TermTestStatus> (no-testing mta-testing ilt-testing) Possible values: - no-testing : the termination is not under testing - mta-testing : the termination is under mta testing - ilt-testing : the termination is under integrated line testing	the test status of a termination <i>This element is always shown.</i>
termination-group	Parameter type: <Sip::sipTerminationGroupID> - the termination group termination belongs to - range: [0...72]	the group termination belongs to <i>This element is always shown.</i>
sip-server-address	Parameter type: <Sip::sipServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server	the SIP server termination registered to <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	- length: 7<=x<=64	
testaccess-state	Parameter type: <Sip::TestAccessState> (on off) Possible values: - on : turn on TestAccessState - off : turn off TestAccessState	test access status <i>This element is always shown.</i>
busyoverwrite	Parameter type: <Sip::TestAccessBusyOverWrite> (true false) Possible values: - true : enable TestAccessBusyOverWrite parameter - false : disable TestAccessBusyOverWrite parameter	test access busyoverwrite status <i>This element is always shown.</i>
accesson-timeout	Parameter type: <Sip::TestAccessonTimeout> - value of test access on expires. - unit: second - range: [0...900]	test access statatus on timeout value <i>This element is always shown.</i>
provider-name	Parameter type: <Sip::TermUserProviderName> - identify the user VSG name for this port - length: x<=32	the user VSG name for this termination port <i>This element is always shown.</i>

151.21 Voice Sip Shared Line Termination Status Commands

Command Description

This command allows the operator to show the Voice Sip shared line termination profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip sharedline [ (if-index) ]
```

Command Parameters

Table 151.21-1 "Voice Sip Shared Line Termination Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the termination port

Command Output

Table 151.21-2 "Voice Sip Shared Line Termination Status Commands" Display parameters

Specific Information		
name	Type	Description
contact-user-info	Parameter type: <SIP::SipTerminationContact> - The user-info of contact field in SIP message associated with the user - length: 1<=x<=128	The user-info of contact field in SIP message associated with the user <i>This element is always shown.</i>
oper-status	Parameter type: <Sip::TermOperStatus> (up down)	the operational status of a termination <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	Possible values: - up : the status of the termination opera is up - down : the status of the termination is down	
call-status	Parameter type: <Sip::TermCallStatus> (unknown on-hook off-hook dialing calling connected idle-offhook ringing releasing ringback shared-cutoff) Possible values: - unknown : the call status is unknown - on-hook : the call status is on-hook - off-hook : the call status is off-hook - dialing : the call status is dialing - calling : the call status is calling - connected : the call status is connected - idle-offhook : the call status is idle-offhook - ringing : the call status is ringing - releasing : the call status is releasing - ringback : the call status is ringback - shared-cutoff : the call status is shared-cutoff	the call status of a termination <i>This element is always shown.</i>

151.22 Voice Sip Isdn/Cas Termination Status Commands

Command Description

this command allows the operator to show the Voice sip isdn/Cas termination profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip isdn-cas-term [ (if-index) ]
```

Command Parameters

Table 151.22-1 "Voice Sip Isdn/Cas Termination Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the termination port

Command Output

Table 151.22-2 "Voice Sip Isdn/Cas Termination Status Commands" Display parameters

Specific Information		
name	Type	Description
contact-user-info	Parameter type: <SIP::SipTerminationContact> - The user-info of contact field in SIP message associated with the user - length: 1<=x<=128	The user-info of contact field in SIP message associated with the user <i>This element is always shown.</i>
oper-status	Parameter type: <Sip::IsdnCasTermOperStatus> (up down)	The operational status of a termination <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	Possible values: - up : The GDN-EXT has successfully registered - down : The GDN-EXT's operational status is down	
operstatus-downreason	Parameter type: <Sip::IsdnCasTermOpDownReason> (registering registrationfailure admin-status-down unknown noregsipserveroos) Possible values: - : The operational status of the GDN-EXT is UP - registering : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration is in progress. - registrationfailure : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration has failed. - admin-status-down : The operational state of the GDN-EXT is DOWN; Reason: termination admin status is down. - unknown : The operational state of the GDN-EXT is DOWN; Reason: LT is down or IOCM communication failure. - noregsipserveroos : The operational state of the GDN-EXT is DOWN; Reason: The First hop SIP server is not reachable anymore (redundancy = disabled) or none of the First hop servers are reachable (redundancy = enabled).	The detailed down reason when operational status is down <i>This element is always shown.</i>
test-status	Parameter type: <Sip::IsdnCasTermTestStatus> (no-testing ilt-testing loopback-testing loopback-envset) Possible values: - no-testing : the termination is not under testing - ilt-testing : the termination is under integrated line testing - loopback-testing : the PRA ISDN SIP termination is under local, single or cable loopback testing - loopback-envset : the PRA ISDN SIP termination has finished the remote or payload loop back environment configuration	The test status of a termination <i>This element is always shown.</i>
termination-group	Parameter type: <SIP::sipIsdnCasTerminationGroupID> - the termination group termination belongs to - range: [0...300]	The group termination belongs to <i>This element is always shown.</i>
sip-server-address	Parameter type: <Sip::sipServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server - length: 7<=x<=64	The SIP server termination registered to <i>This element is always shown.</i>
testaccess-state	Parameter type: <Sip::TestAccessState> (on off) Possible values: - on : turn on TestAccessState - off : turn off TestAccessState	Test access status <i>This element is always shown.</i>
busyoverwrite	Parameter type: <Sip::TestAccessBusyOverWrite> (true false) Possible values:	Test access busyoverwrite status <i>This element is always shown.</i>

name	Type	Description
	- true : enable TestAccessBusyOverWrite parameter - false : disable TestAccessBusyOverWrite parameter	
accesson-timeout	Parameter type: <Sip::TestAccessonTimeout> - value of test access on expires. - unit: second - range: [0...900]	Test access statatus on timeout value <i>This element is always shown.</i>
b-channel-idle	Parameter type: <Sip::BChannelNumber> - value of bearer channel number for isdn-cas-term - range: [0...240]	Number of idle b-channel for this isdn Primary Rate Interface <i>This element is always shown.</i>
b-channel-used	Parameter type: <Sip::BChannelNumber> - value of bearer channel number for isdn-cas-term - range: [0...240]	Number of used b-channel for this isdn Primary Rate Interface <i>This element is always shown.</i>
b-channel-oos	Parameter type: <Sip::BChannelNumber> - value of bearer channel number for isdn-cas-term - range: [0...240]	Number of Out of service b-channel for this isdn Primary Rate Interface <i>This element is always shown.</i>
provider-name	Parameter type: <Sip::TermUserProviderName> - identify the user VSG name for this port - length: x<=32	The user VSG name for this termination port <i>This element is always shown.</i>
signalling-type	Parameter type: <Sip::TermSignallingType> (isdn-pra cas-r2) Possible values: - isdn-pra : set signalling type to ISDN PRA - cas-r2 : set signalling type to CAS R2	Identify the signalling type for this termination port <i>This element is always shown.</i>
e1-cluster-name	Parameter type: <Sip::IsdnCasTerminationE1ClusterName> - Name of the E1 cluster - length: x<=32	Name of the E1 cluster <i>This element is always shown.</i>
puids	Parameter type: <Sip::IsdnCasTermPuids> - identify the user puids for this port - length: x<=2560	Implicitly registered aors of this termination <i>This element is only shown in detail mode.</i>

151.23 Voice Sip Port State Status Commands

Command Description

This command allows the operator to show the Voice Sip Port State

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

> show voice sip port-state [(if-index)]

Command Parameters

Table 151.23-1 "Voice Sip Port State Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the termination port.

Command Output

Table 151.23-2 "Voice Sip Port State Status Commands" Display parameters

Specific Information		
name	Type	Description
port-state	Parameter type: <Sip::TermPortState> - identify the state for this port - length: x<=63	the operational status of application server <i>This element is always shown.</i>

151.24 Voice Sip SSP Profile Status Commands

Command Description

This command allows the operator to show the Voice Sip SSP Profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

> show voice sip sspprofile [(sspprofile-id)]

Command Parameters

Table 151.24-1 "Voice Sip SSP Profile Status Commands" Resource Parameters

Resource Identifier	Type	Description
(sspprofile-id)	Format: - ID of the SSP profile as present in the downloaded and activated CDE file - range: [1...16]	ID of the SSP profile as present in the downloaded and activated CDE file

Command Output

Table 151.24-2 "Voice Sip SSP Profile Status Commands" Display parameters

Specific Information		
name	Type	Description
sspprofile-name	Parameter type: <Sip::SSPProfileName> - Name of the SSP profile as present in the downloaded and activated CDE file - length: x<=64	Name of the SSP profile as present in the downloaded and activated CDE file <i>This element is always shown.</i>
sspprofile-description	Parameter type: <Sip::SSPProfileDescription> - Description of the SSP profile as present in the downloaded and activated CDE file - length: x<=64	Description of the SSP profile as present in the downloaded and activated CDE file <i>This element is always shown.</i>

151.25 Voice Sip Dhcp Sip Server Status Commands

Command Description

This command allows the operator to show the Voice Sip Dhcp Sip Server.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip dhcpsipserver [ (vsp-name) ]
```

Command Parameters

Table 151.25-1 "Voice Sip Dhcp Sip Server Status Commands" Resource Parameters

Resource Identifier	Type	Description
(vsp-name)	Format: - uniquely identify of this SIP voice service gateway - length: x<=32	uniquely identify of the vsp name

Command Output

Table 151.25-2 "Voice Sip Dhcp Sip Server Status Commands" Display parameters

Specific Information		
name	Type	Description
srv1-addr	Parameter type: <Sip::ServerAddr> (ipv4 : <Ip::V4Address> ipv6 : <Ip::V6Address> dns : <Sip::ServerAddr>) Possible values: - ipv4 : the address type of the server is IPv4 - ipv6 : the address type of the server is IPv6 - dns : the address type of the server is DNS Field type <Ip::V4Address> - IPv4-address Field type <Ip::V6Address> - IPv6-address Field type <Sip::ServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server	the operational address of server <i>This element is always shown.</i>

name	Type	Description
	- length: 7<=x<=64	
srv1-priority	Parameter type: <Sip::ServerPriority> - the SIP server priority - range: [0...65535]	server idr <i>This element is always shown.</i>
srv1-oper-status	Parameter type: <Sip::ServerOperStatus> (up down) Possible values: - up : the status of the server opera is up - down : the status of the server opera is down	the operational status of server <i>This element is only shown in detail mode.</i>
srv2-addr	Parameter type: <Sip::ServerAddr> (ipv4 : <Ip::V4Address> ipv6 : <Ip::V6Address> dns : <Sip::ServerAddr>) Possible values: - ipv4 : the address type of the server is IPv4 - ipv6 : the address type of the server is IPv6 - dns : the address type of the server is DNS Field type <Ip::V4Address> - IPv4-address Field type <Ip::V6Address> - IPv6-address Field type <Sip::ServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server - length: 7<=x<=64	the operational address of server <i>This element is always shown.</i>
srv2-priority	Parameter type: <Sip::ServerPriority> - the SIP server priority - range: [0...65535]	server idr <i>This element is always shown.</i>
srv2-oper-status	Parameter type: <Sip::ServerOperStatus> (up down) Possible values: - up : the status of the server opera is up - down : the status of the server opera is down	the operational status of server <i>This element is only shown in detail mode.</i>
srv3-addr	Parameter type: <Sip::ServerAddr> (ipv4 : <Ip::V4Address> ipv6 : <Ip::V6Address> dns : <Sip::ServerAddr>) Possible values: - ipv4 : the address type of the server is IPv4 - ipv6 : the address type of the server is IPv6 - dns : the address type of the server is DNS Field type <Ip::V4Address> - IPv4-address Field type <Ip::V6Address> - IPv6-address Field type <Sip::ServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server - length: 7<=x<=64	the operational address of server <i>This element is always shown.</i>
srv3-priority	Parameter type: <Sip::ServerPriority> - the SIP server priority - range: [0...65535]	server idr <i>This element is always shown.</i>
srv3-oper-status	Parameter type: <Sip::ServerOperStatus> (up down)	the operational status of server <i>This element is only shown in detail mode.</i>

151 Voice Status Commands

name	Type	Description
	Possible values: - up : the status of the server opera is up - down : the status of the server opera is down	
srv4-addr	Parameter type: <Sip::ServerAddr> (ipv4 : <Ip::V4Address> ipv6 : <Ip::V6Address> dns : <Sip::ServerAddr>) Possible values: - ipv4 : the address type of the server is IPv4 - ipv6 : the address type of the server is IPv6 - dns : the address type of the server is DNS Field type <Ip::V4Address> - IPv4-address Field type <Ip::V6Address> - IPv6-address Field type <Sip::ServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server - length: 7<=x<=64	the operational address of server <i>This element is always shown.</i>
srv4-priority	Parameter type: <Sip::ServerPriority> - the SIP server priority - range: [0...65535]	server idr <i>This element is always shown.</i>
srv4-oper-status	Parameter type: <Sip::ServerOperStatus> (up down) Possible values: - up : the status of the server opera is up - down : the status of the server opera is down	the operational status of server <i>This element is only shown in detail mode.</i>

151.26 Voice Sip All Port State Status Command

Command Description

This command allows the operator to show the Voice Sip All Port State

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip all port-state [ (if-index) ]
```

Command Parameters

Table 151.26-1 "Voice Sip All Port State Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the termination port. an operator should request the port state for a single port

Command Output

Table 151.26-2 "Voice Sip All Port State Status Command" Display parameters

Specific Information		
name	Type	Description
port-state	Parameter type: <Sip::TermPortState> - identify the state for this port - length: x<=63	the operational status of application server <i>This element is always shown.</i>
query-result	Parameter type: <Sip::QueryResult> - Query result. - length: 1<=x<=64	the result description <i>This element is always shown.</i>
admin-status	Parameter type: <Sip::TermAdminStatus> (up down) Possible values:	the administrative status of sip termination <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	- up : unlock the sip termination - down : lock the sip termination	
oper-status	Parameter type: <Sip::TermOperStatus> (up down) Possible values: - up : the status of the termination opera is up - down : the status of the termination is down	the operational status of this sip termination <i>This element is always shown.</i>
line-termination	Parameter type: <Sip::TermHookState> (high-resistance low-resistance) Possible values: - high-resistance : the termination is high resistance - low-resistance : the termination is low resistance	the high/low resistance status of this termination <i>This element is always shown.</i>
uss-state	Parameter type: <Sip::TermUssState> (true false) Possible values: - true : port is in P5.3 and GBsTone is already switched off (Power Down) - false : port is not in Power Down	the loop closure status of a sip termination. <i>This element is always shown.</i>
supp-v-rt(mv)	Parameter type: <Sip::VoltageValue> - the voltage value in mV unit. - range: [-2147483647...2147483647]	Feeded DC voltage of user line (Ring-Tip) <i>This element is always shown.</i>
supp-v-tr(mv)	Parameter type: <Sip::VoltageValue> - the voltage value in mV unit. - range: [-2147483647...2147483647]	Feeded DC voltage of user line (Tip-Ring) <i>This element is always shown.</i>
supp-v-rg(mv)	Parameter type: <Sip::VoltageValue> - the voltage value in mV unit. - range: [-2147483647...2147483647]	Feeded DC voltage of user line (Ring-Groud) <i>This element is always shown.</i>
supp-v-tg(mv)	Parameter type: <Sip::VoltageValue> - the voltage value in mV unit. - range: [-2147483647...2147483647]	Feeded DC voltage of user line (Tip-Groud) <i>This element is always shown.</i>
supply-curr(ua)	Parameter type: <Sip::CurrentValue> - a signed integer	Feeding current(Tip-Ring) <i>This element is always shown.</i>
longi-curr(ua)	Parameter type: <Sip::CurrentValue> - a signed integer	difference between the currents on the a-lead and the b-lead <i>This element is always shown.</i>
validity	Parameter type: <Sip::ValidityBinary> - the validity flag of the status and line test result value. - range: [-2147483647...2147483647]	bitmap to show the validity for items from AdminStatus to longi-cur <i>This element is always shown.</i>

151.27 Voice Sip Isdn/Cas Termination Status Commands

Command Description

this command allows the operator to show the Voice sip isdn/Cas termination profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip isdn-cas-cls-puid [ (name) [ directory-number <Sip::TermDnumber> ] ]
```

Command Parameters

Table 151.27-1 "Voice Sip Isdn/Cas Termination Status Commands" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - Name of the E1 cluster - length: x<=32	Name of E1 or T1 cluster
directory-number	Parameter type: <Sip::TermDnumber> Format: - identify the DN of the subscriber line - length: x<=32	The directory number of this PUID

Command Output

Table 151.27-2 "Voice Sip Isdn/Cas Termination Status Commands" Display parameters

Specific Information		
name	Type	Description
contact-user-info	Parameter type: <SIP::SipTerminationContact> - The user-info of contact field in SIP message associated with the user - length: 1<=x<=128	The user-info of contact field in SIP message associated with the user <i>This element is always shown.</i>
oper-status	Parameter type: <Sip::TermOperStatus> (up down) Possible values: - up : the status of the termination opera is up - down : the status of the termination is down	the operational status of a termination <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <Sip::IsdnCasPUIDOpDownReason>	the detailed down reason when

151 Voice Status Commands

name	Type	Description
	(registering registrationfailure partiallyregistered admin-status-down unknown noregsipserveroos notregistered) Possible values: - : The operational status of the GDN-EXT is UP - registering : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration is in progress - registrationfailure : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration has failed - partiallyregistered : The operational state of the DDI-EXT is DOWN; Reason: The DDI-EXT's registration has failed for at least one Virtual E1 Group - admin-status-down : The operational state of the DDI-EXT is DOWN; Reason: The admin-status of the GDN_EXTs is down - unknown : The operational state of the DDI-EXT is DOWN; Reason: LT is down or IOCM communication failure - noregsipserveroos : The operational state of the DDI-EXT is DOWN; Reason: The First hop SIP server is not reachable anymore (redundancy = disabled) or none of the First hop servers are reachable (redundancy = enabled). - notregistered : The operational state of the DDI-EXT is DOWN; The DDI-EXT's registration was not initiated yet.	operational status is down <i>This element is always shown.</i>

151.28 Voice Sip Isdn Cas E1 Interface Status Commands

Command Description

this command allows the operator to show the Voice sip isdn cas E1 interface oper-status.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip isdn-cas-itf [ (if-index) [ interfaces <Itf::IsdnLine> ] ]
```

Command Parameters

Table 151.28-1 "Voice Sip Isdn Cas E1 Interface Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the ISDN CAS termination
interfaces	Parameter type: <Itf::IsdnLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The ifindex of the E1 interface

Command Output

Table 151.28-2 "Voice Sip Isdn Cas E1 Interface Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <Sip::IsdnCasE1OperStatus> (up down) Possible values: - up : The E1/T1 interface's operational status is UP - down : The E1/T1 interface's operational status is down	The operational status of an E1 interface <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <Sip::IsdnCasE1OpDownReason> (l1inactive l2inactive cas-sig-failure admin-status-down unknown intest) Possible values: - : The operational status of the E1/T1 interface is UP - l1inactive : The operational state of the E1/T1 interface is DOWN; Reason: The E1/T1 interface's ISDN Layer1 is down - l2inactive : The operational state of the E1/T1 interface is DOWN; Reason: The E1/T1 interface's ISDN Layer1 is up, however the ISDN Layer2 is down - cas-sig-failure : The operational state of the E1/T1 interface is DOWN; Reason: The E1/T1 interface's CAS Layer1 could not successfully be established towards the CPE side - admin-status-down : The operational state of the E1/T1 interface is DOWN; Reason: The ISDN/CAS termination admin status is down - unknown : The operational state of the E1/T1 interface is DOWN; Reason: The LT is down and the IOCM communication is failure - intest : The operational state of the E1/T1 interface is DOWN; Reason: The E1/T1 interface is under line test	The detailed down reason when operational status is down <i>This element is always shown.</i>
cluster-name	Parameter type: <Sip::IsdnCasTerminationE1ClusterName> - Name of the E1 cluster - length: x<=32	Name of the E1 cluster <i>This element is always shown.</i>
idle-b-channels	Parameter type: <Sip::ItfBChannelNumber> - value of bearer channel number for an interface - range: [0...30]	Number of idle b-channel on this E1 interface <i>This element is always shown.</i>
used-b-channels	Parameter type: <Sip::ItfBChannelNumber> - value of bearer channel number for an interface - range: [0...30]	Number of used b-channel on this E1 interface <i>This element is always shown.</i>
oos-b-channels	Parameter type: <Sip::ItfBChannelNumber> - value of bearer channel number for an interface - range: [0...30]	Number of out of service b-channel on this E1 interface <i>This element is always shown.</i>

151.29 Voice Sip Isdn Nsm Profile Status Commands

Command Description

this command allows the operator to show the Voice Sip Isdn Nsm profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip isdn-nsm-prof [ (prof-name) ]
```

Command Parameters

Table 151.29-1 "Voice Sip Isdn Nsm Profile Status Commands" Resource Parameters

Resource Identifier	Type	Description
(prof-name)	Format: - the name of a nsm profile - length: x<=32	The unique name identifier of an row in the sipIsdnNsmProfileTable.

Command Output

Table 151.29-2 "Voice Sip Isdn Nsm Profile Status Commands" Display parameters

Specific Information		
name	Type	Description
prof-idx	Parameter type: <Sip::NsmProfileIdx> - the index of a nsm profile - range: [1...32]	The unique identifier of an row in the sipIsdnNsmProfileTable. <i>This element is always shown.</i>
used-status	Parameter type: <Sip::NsmProfileUsedCnt> - the number of entities using this profile - range: [0...300]	Indicates the number of entities using this profile <i>This element is always shown.</i>
