version-nbr	Parameter type: <Sip::CasTimerProfVersionNbr> - a version number of the profile - range: [1...65535]	a version number of the profile. <i>This element is always shown.</i>

151.32 Voice Sip Cas Signaling Profile Status Commands

Command Description

this command allows the operator to show the Voice Sip Cas Signaling profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip cas-sig-prof [ (prof-name) ]
```

Command Parameters

Table 151.32-1 "Voice Sip Cas Signaling Profile Status Commands" Resource Parameters

Resource Identifier	Type	Description
(prof-name)	Format: - name of the signal profile - length: 1<=x<=32	The unique name identifier of an row in the sipCasSignalingProfileTable.

Command Output

Table 151.32-2 "Voice Sip Cas Signaling Profile Status Commands" Display parameters

Specific Information		
name	Type	Description
prof-idx	Parameter type: <Sip::CasSignalProfIdx> - index of the cas signaling profile - range: [1...32]	The unique identifier of an row in the sipCasSignalingProfileTable. <i>This element is always shown.</i>
used-status	Parameter type: <Sip::CasSignalProfUsedStatus> - the used status of the profile - range: [0...144]	Indicates the number of entities using this profile <i>This element is always shown.</i>
version-nbr	Parameter type: <Sip::CasSignalProfVersionNbr> - version number of the signaling profile - range: [1...65535]	a version number of the profile. <i>This element is always shown.</i>

151.33 Voice Sip Isdn And Cas Nsm Profile Index Status Commands

Command Description

this command allows the operator to show the Voice Sip Isdn and Cas Nsm profile next free Index and Max index.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

> show voice sip profiles

Command Output

Table 151.33-2 "Voice Sip Isdn And Cas Nsm Profile Index Status Commands" Display parameters

Specific Information		
name	Type	Description
isdn-nsm-prof-idx-next	Parameter type: <SipNextProfileIndex> - a profile index - range: [0...65535]	the index of the next free row in the sipIsdnNsmProfileTable. <i>This element is always shown.</i>
isdn-nsm-prof-idx-max	Parameter type: <SipMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	the maximum number of sipIsdnNsmProfiles that can be created <i>This element is always shown.</i>
cas-nsm-prof-idx-next	Parameter type: <SipNextProfileIndex> - a profile index - range: [0...65535]	the index of the next free row in the sipCasNsmProfileTable. <i>This element is always shown.</i>
cas-nsm-prof-idx-max	Parameter type: <SipMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	the maximum number of sipCasNsmProfiles that can be created <i>This element is always shown.</i>
cas-tmr-prof-idx-next	Parameter type: <SipNextProfileIndex> - a profile index - range: [0...65535]	the index of the next free row in the sipCasTimerProfileTable. <i>This element is always shown.</i>
cas-tmr-prof-idx-max	Parameter type: <SipMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	the maximum number of sipCasTimerProfiles that can be created <i>This element is always shown.</i>
cas-sig-prof-idx-next	Parameter type: <SipNextProfileIndex> - a profile index - range: [0...65535]	the index of the next free row in the sipCasSignalingProfileTable. <i>This element is always shown.</i>
cas-sig-prof-idx-max	Parameter type: <SipMaxProfileIndex>	the maximum number of

151 Voice Status Commands

name	Type	Description
	- a maximum value of a profile index - range: [0...65535]	sipCasSignalingProfiles that can be created <i>This element is always shown.</i>
isdn-uus-prof-idx-next	Parameter type: <SipNextProfileIndex> - a profile index - range: [0...65535]	the index of the next free row in the sipPriUserToUserProfileTable. <i>This element is always shown.</i>
isdn-uus-prof-idx-max	Parameter type: <SipMaxProfileIndex> - a maximum value of a profile index - range: [0...65535]	the maximum number of sipPriUserToUserProfiles that can be created. <i>This element is always shown.</i>

151.34 Voice Sip Isdn Cas E1 Interface B channel Status Commands

Command Description

this command allows the operator to show the B channel status of Voice sip isdn cas E1 interface.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip e1itf-bchannel-status [ (if-index) [ interface <Itf::IsdnLine> ] [ b-chan-id <Sip::BearerChannelId> ] ]
```

Command Parameters

Table 151.34-1 "Voice Sip Isdn Cas E1 Interface B channel Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the Ifindex of the SIP termination that has been created on top of the E1 Cluster / Virtual E1 Group
interface	Parameter type: <Itf::IsdnLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The Ifindex of the E1 interface that belongs to E1 cluster / Virtual E1 Group
b-chan-id	Parameter type: <Sip::BearerChannelId>	The identity of the B channel

Resource Identifier	Type	Description
	Format: - the index of a B channel on E1 interface - range: [1...30]	

Command Output

Table 151.34-2 "Voice Sip Isdn Cas E1 Interface B channel Status Commands" Display parameters

Specific Information		
name	Type	Description
b-chan-status	Parameter type: <Sip::BearerChannelStatus> (idle used oos) Possible values: - idle : The B-channel is In-Service but neither involved in a call nor under test - used : The B-channel is In-Service and has been allocated to carry media traffic for an call. - oos : The B-channel is under test or really been put Out-Of-Service	The status of the B channel. The status can be idle/used/oos <i>This element is always shown.</i>

151.35 Voice Sip Isdn/Cas Termination Status Commands

Command Description

This command shows the ISDN PRI / Cas SIP termination data.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip pri-cas-tksg-term [ (if-index) [ tksg-id <Sip::TrunkSubGroupId> ] ]
```

Command Parameters

Table 151.35-1 "Voice Sip Isdn/Cas Termination Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The ifIndex of the ISDN PRI / CAS SIP termination
tksg-id	Parameter type: <Sip::TrunkSubGroupId> Format: - The index of E1/T1 interface trunk sub-group. - range: [0...256]	The E1/T1 Trunk sub-group ID.

Command Output

Table 151.35-2 "Voice Sip Isdn/Cas Termination Status Commands" Display parameters

Specific Information		
name	Type	Description
contact-user-info	Parameter type: <SIP::SipTerminationContact> - The user-info of contact field in SIP message associated with the user	The user-info of the contact header in the SIP message generated for this ISDN PRI /

151 Voice Status Commands

name	Type	Description
	- length: 1<=x<=128	CAS SIP termination. <i>This element is always shown.</i>
oper-status	Parameter type: <Sip::IsdnCasTermOperStatus> (up down) Possible values: - up : The GDN-EXT has successfully registered - down : The GDN-EXT's operational status is down	The operational status of the ISDN PRI / CAS SIP termination <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <Sip::IsdnCasTermOpDownReason> (registering registrationfailure admin-status-down unknown noregsipserveroos) Possible values: - : The operational status of the GDN-EXT is UP - registering : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration is in progress. - registrationfailure : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration has failed. - admin-status-down : The operational state of the GDN-EXT is DOWN; Reason: termination admin status is down. - unknown : The operational state of the GDN-EXT is DOWN; Reason: LT is down or IOCM communication failure. - noregsipserveroos : The operational state of the GDN-EXT is DOWN; Reason: The First hop SIP server is not reachable anymore (redundancy = disabled) or none of the First hop servers are reachable (redundancy = enabled).	The operational status down reason of the ISDN PRI/ CAS SIP termination <i>This element is always shown.</i>
termination-group	Parameter type: <SIP::sipIsdnCasTerminationGroupID> - the termination group termination belongs to - range: [0...300]	The SIP Termination Group this ISDN PRI / CAS SIP termination belongs to <i>This element is always shown.</i>
sip-server-address	Parameter type: <Sip::sipServerAddr> - name of the SipServer that can be resolved to an IP address via a DNS Server - length: 7<=x<=64	The First Hop SIP server via which the ISDN PRI / CAS SIP termination has registered. <i>This element is always shown.</i>
nbr-idle-ds0-channels	Parameter type: <Sip::TksgBChannelNumber> - value of bearer channel number for pri-cas-tksg-term - range: [0...960]	The number of idle DS0 channels for the ISDN PRI / CAS SIP termination <i>This element is always shown.</i>
nbr-used-ds0-channels	Parameter type: <Sip::TksgBChannelNumber> - value of bearer channel number for pri-cas-tksg-term - range: [0...960]	The number of used DSO-channels for the ISDN PRI / CAS SIP termination <i>This element is always shown.</i>
nbr-oos-ds0-channels	Parameter type: <Sip::TksgBChannelNumber> - value of bearer channel number for pri-cas-tksg-term - range: [0...960]	The number of out of service DS0-channels for the ISDN PRI / CAS SIP termination <i>This element is always shown.</i>
provider-name	Parameter type: <Sip::TermUserProviderName> - identify the user VSG name for this port - length: x<=32	The name of the VSG this ISDN PRI / CAS SIP termination is associated with <i>This element is always shown.</i>
signalling-type	Parameter type: <Sip::TksgTermSignallingType>	The signalling type of this ISDN

name	Type	Description
	(isdn-pra cas-2bit-mfc-gr-fw-bw cas-2bit-dtmf cas-1bit-dtmf cas-1bit-mfc-gr-fw-bw cas-1bit-decadic cas-1bit-mfc-fw) Possible values: - isdn-pra : Q931/Q921 protocol based communication between the CPE side and the NIAT-A board - cas-2bit-mfc-gr-fw-bw : 2 bit line signaling and MFC register signaling in compliance with ITU-T Q.400-490 CAS R2 specification (supporting groups, forward and backward signals) - cas-2bit-dtmf : 2 bit line signaling and DTMF register signaling - cas-1bit-dtmf : 1 bit line signaling and DTMF register signaling - cas-1bit-mfc-gr-fw-bw : 1 bit line signaling and MFC register signaling (supporting groups, forward and backward signals). This ENUM value is actually NOT supported. - cas-1bit-decadic : 1 bit line signaling and DECADIC register signaling. This ENUM value is actually NOT supported. - cas-1bit-mfc-fw : 1 bit line signaling and MFC register signaling in compliance with ITU-T Q.310-Q322 CAS R1 specification (supporting only forward signals). This ENUM value is actually NOT supported.	PRI / CAS SIP termination. <i>This element is always shown.</i>
trunk-group-name	Parameter type: <Sip::SipPriCasTksgTermTrunkGroupName> - Name of the E1/T1 Trunk Group - length: x<=32	The Name of the E1/T1 Trunk (sub-)Group on top of which the ISDN PRI / CAS SIP termination is created. <i>This element is always shown.</i>
puids	Parameter type: <Sip::IsdnCasTermPuids> - identify the user puids for this port - length: x<=2560	The list of DDI-EXTs associated with this ISDN PRI / CAS SIP termination <i>This element is only shown in detail mode.</i>

151.36 Voice Sip Isdn PUID Termination Status Commands

Command Description

This command shows the DDI-EXT data

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip pri-cas-tksg-puid [ (if-index) [ tksg-id <Sip::TrunkSubGroupId> ] [ directory-number <Sip::TermDnumber> ] ]
```

Command Parameters

Table 151.36-1 "Voice Sip Isdn PUID Termination Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The Ifindex of the associated ISDN PRI / CAS SIP termination
tksg-id	Parameter type: <Sip::TrunkSubGroupId> Format: - The index of E1/T1 interface trunk sub-group. - range: [0...256]	The E1/T1 Trunk (sub-)group ID
directory-number	Parameter type: <Sip::TermDnumber> Format: - identify the DN of the subscriber line - length: x<=32	The directory number of the DDI-EXT

Command Output

Table 151.36-2 "Voice Sip Isdn PUID Termination Status Commands" Display parameters

Specific Information		
name	Type	Description
contact-user-info	Parameter type: <SIP::SipTerminationContact> - The user-info of contact field in SIP message associated with the user - length: 1<=x<=128	The user-info of the contact header in the SIP message generated for this DDI-EXT <i>This element is always shown.</i>
oper-status	Parameter type: <Sip::TermOperStatus> (up down) Possible values: - up : the status of the termination opera is up - down : the status of the termination is down	The operational status of the DDI-EXT <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <Sip::IsdnCasPUIDOpDownReason> (registering registrationfailure partiallyregistered admin-status-down unknown noregsipserveroos notregistered) Possible values: - : The operational status of the GDN-EXT is UP - registering : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration is in progress - registrationfailure : The operational state of the GDN-EXT is DOWN; Reason: The GDN-EXT's registration has failed - partiallyregistered : The operational state of the DDI-EXT is DOWN; Reason: The DDI-EXT's registration has failed for at least one Virtual E1 Group - admin-status-down : The operational state of the DDI-EXT is DOWN; Reason: The admin-status of the GDN_EXTs is down - unknown : The operational state of the DDI-EXT is DOWN; Reason: LT is down or IOCM communication failure - noregsipserveroos : The operational state of the DDI-EXT is DOWN; Reason: The First hop SIP server is not reachable anymore (redundancy = disabled) or none of the First hop servers are reachable (redundancy = enabled). - notregistered : The operational state of the DDI-EXT is DOWN; The DDI-EXT's registration was not initiated yet.	The operational status down reason of the DDI-EXT <i>This element is always shown.</i>

151.37 Voice Sip Pri User To User Profile Status Commands

Command Description

this command allows the operator to show the Voice Sip Pri User To User Profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip user-to-user-prof [ (prof-name) ]
```

Command Parameters

Table 151.37-1 "Voice Sip Pri User To User Profile Status Commands" Resource Parameters

Resource Identifier	Type	Description
(prof-name)	Format: - The unique name identifier of a row in the sipPriUserToUserProfileTable - length: 1<=x<=32	The unique name identifier of a row in the sipPriUserToUserProfileTable.

Command Output

Table 151.37-2 "Voice Sip Pri User To User Profile Status Commands" Display parameters

Specific Information		
name	Type	Description
prof-idx	Parameter type: <Sip::UserToUserProfIdx> - the index of an pri user to user profile - range: [1...32]	The unique identifier of a row in the sipPriUserToUserProfileTable. <i>This element is always shown.</i>
used-status	Parameter type: <Sip::UserToUserProfUsedCnt> - the number of entities using this profile - range: [0...300]	Indicates the number of entities using this profile. <i>This element is always shown.</i>
version-nbr	Parameter type: <Sip::UserToUserProfVersionNbr> - The version number of the pri user to user profile - range: [1...65535]	The version number of the profile. <i>This element is always shown.</i>

151.38 Voice Sip Physical Interface Status Commands

Command Description

This command allows the operator to show the Voice Sip physical interface profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip phys-itf [ (if-index) ]
```

Command Parameters

Table 151.38-1 "Voice Sip Physical Interface Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the physical E1/T1 interface

Command Output

Table 151.38-2 "Voice Sip Physical Interface Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <Sip::PhysItfOperStatus> (up down) Possible values: - up : the status of the physical interface opera is up - down : the status of the physical interface opera is down	The operational state of the physical interface <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <Sip::PhysItfOperStatusDownReason>	The operational status down

name	Type	Description
	(l1inactive l2inactive cas-sig-failure admin-status-down unknown intest) Possible values: - : The operational status of the E1/T1 interface is UP - l1inactive : The operational state of the E1/T1 interface is DOWN; Reason: The interface's Layer1 is disabled - l2inactive : The operational state of the E1/T1 interface is DOWN; Reason: The interface's Layer1 is enabled, but the Layer2 is disconnected - cas-sig-failure : The operational state of the E1/T1 interface is DOWN; Reason: The E1/T1 interface's CAS Layer1 could not successfully be established towards the CPE side - admin-status-down : The operational state of the E1/T1 interface is DOWN; Reason: The admin-status of the interface is set to down - unknown : The operational state of the E1/T1 interface is DOWN; Reason: The correct operational state cannot be retrieved since the communication with the LT board failed. The LT board is down or the IOCM communication failed - intest : The operational state of the E1/T1 interface is DOWN; Reason: A loopback test is running at the interface	reason of the physical interface <i>This element is always shown.</i>
interface-type	Parameter type: <Sip::PhysItfTypeForShow> (e1 t1) Possible values: - e1 : E1 interface with 30 B channels. - t1 : T1 interface with 23 B channels.	The type of physical interface <i>This element is always shown.</i>
nbr-idle-ts-channels	Parameter type: <Sip::ItfBChannelNumber> - value of bearer channel number for an interface - range: [0...30]	The number of TS channels that are actually in idle state for the interface <i>This element is always shown.</i>
nbr-used-ts-channels	Parameter type: <Sip::ItfBChannelNumber> - value of bearer channel number for an interface - range: [0...30]	The number of TS channels that are actual in used for the interface. <i>This element is always shown.</i>
nbr-oos-ts-channels	Parameter type: <Sip::ItfBChannelNumber> - value of bearer channel number for an interface - range: [0...30]	the test status of a termination <i>This element is always shown.</i>
test-state	Parameter type: <Sip::PhysItfTestState> (no-testing loopback-testing loopback-envset reserved-for-test) Possible values: - no-testing : The interface is not under test - loopback-testing : The interface is involved in local or cable loopback testing - loopback-envset : A remote or payload loopback environment is created for the interface - reserved-for-test : The interface is reserved for loopback testing	The test status of the interface <i>This element is always shown.</i>

name	Type	Description
ch0	Parameter type: <Sip::TsByteMask0> (framing-signal-ts idle busy blocked testing itf-admin-down l1l2-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - l1l2-disconnect : - unknown :	channel 0 <i>This element is only shown in detail mode.</i>
ch1	Parameter type: <Sip::TsByteMask1> (framing-signal-ts idle busy blocked testing itf-admin-down l1l2-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - l1l2-disconnect : - unknown :	channel 1 <i>This element is only shown in detail mode.</i>
ch2	Parameter type: <Sip::TsByteMask2> (framing-signal-ts idle busy blocked testing itf-admin-down l1l2-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - l1l2-disconnect : - unknown :	channel 2 <i>This element is only shown in detail mode.</i>
ch3	Parameter type: <Sip::TsByteMask3> (framing-signal-ts idle	channel 3 <i>This element is only shown in detail mode.</i>

151 Voice Status Commands

name	Type	Description
	busy blocked testing itf-admin-down 1112-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - 1112-disconnect : - unknown :	
ch23	Parameter type: <Sip::TsByteMask23> (framing-signal-ts idle busy blocked testing itf-admin-down 1112-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - 1112-disconnect : - unknown :	channel 23 <i>This element is only shown in detail mode.</i>
ch24	Parameter type: <Sip::TsByteMask24> (framing-signal-ts idle busy blocked testing itf-admin-down 1112-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - 1112-disconnect : - unknown :	channel 24 <i>This element is only shown in detail mode.</i>
ch25	Parameter type: <Sip::TsByteMask25> (framing-signal-ts idle busy blocked testing	channel 25 <i>This element is only shown in detail mode.</i>

name	Type	Description
	itf-admin-down l1l2-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - l1l2-disconnect : - unknown :	
ch26	Parameter type: <Sip::TsByteMask26> (framing-signal-ts idle busy blocked testing itf-admin-down l1l2-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - l1l2-disconnect : - unknown :	channel 26 <i>This element is only shown in detail mode.</i>
ch27	Parameter type: <Sip::TsByteMask27> (framing-signal-ts idle busy blocked testing itf-admin-down l1l2-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - l1l2-disconnect : - unknown :	channel 27 <i>This element is only shown in detail mode.</i>
ch28	Parameter type: <Sip::TsByteMask28> (framing-signal-ts idle busy blocked testing itf-admin-down l1l2-disconnect unknown)	channel 28 <i>This element is only shown in detail mode.</i>

151 Voice Status Commands

name	Type	Description
	Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - 1112-disconnect : - unknown :	
ch29	Parameter type: <Sip::TsByteMask29> (framing-signal-ts idle busy blocked testing itf-admin-down 1112-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - 1112-disconnect : - unknown :	channel 29 <i>This element is only shown in detail mode.</i>
ch30	Parameter type: <Sip::TsByteMask30> (framing-signal-ts idle busy blocked testing itf-admin-down 1112-disconnect unknown) Possible values: - framing-signal-ts : - idle : - busy : - blocked : - testing : - itf-admin-down : - 1112-disconnect : - unknown :	channel 30 <i>This element is only shown in detail mode.</i>
ch31	Parameter type: <Sip::TsByteMask31> (framing-signal-ts idle busy blocked testing itf-admin-down 1112-disconnect unknown) Possible values: - framing-signal-ts : - idle :	channel 31 <i>This element is only shown in detail mode.</i>

name	Type	Description
	- busy : - blocked : - testing : - itf-admin-down : - l1l2-disconnect : - unknown :	

151.39 Voice Sip Trunk Sub-group Status Commands

Command Description

this command allows the operator to show the Voice sip trunk sub-group oper-status.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip tksg [ (if-index) [ tksg-id <Sip::TksgId> ] [ interface <Itf::IsdnLine> ] ]
```

Command Parameters

Table 151.39-1 "Voice Sip Trunk Sub-group Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The ifIndex of the ISDN PRI / CAS SIP termination that has been created on top of the E1/T1 trunk sub-group.
tksg-id	Parameter type: <Sip::TksgId> Format: - The index of trunk sub-group - range: [1...256]	The unique Identifier of the trunk sub-group (chosen by the operator in the range [1..256]).
interface	Parameter type: <Itf::IsdnLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId>	The Ifindex of the E1/T1 interface at which the trunk sub-group is created.

Resource Identifier	Type	Description
	- the port number	

Command Output

Table 151.39-2 "Voice Sip Trunk Sub-group Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <Sip::TksgOperStatus> (up down) Possible values: - up : the status of the E1/T1 trunk sub-group is up - down : the status of the E1/T1 trunk sub-group is down	The operational status of the E1/T1 trunk sub-group <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <Sip::TksgOpDownReason> (admin-status-down physical-layer-down intest unknown) Possible values: - : The operational status of the trunk sub-group is UP - admin-status-down : The operational state of the trunk sub-group is DOWN; Reason: The admin-status of the trunk sub-group is set to down - physical-layer-down : The operational state of the trunk sub-group is DOWN; Reason: The operational state of the underlying E1/T1 interface(s) is DOWN - intest : The operational state of the trunk sub-group is DOWN; Reason: A loopback test is running at the underlying E1/T1 interfaces - unknown : The operational state of the trunk sub-group is DOWN; Reason: The LT board is down or the IOCM communication failed	The detailed down reason when operational status is down <i>This element is always shown.</i>

151.40 Voice Sip L1 Transport Statistics Commands

Command Description

This command allows the operator to show the Voice Sip L1 Transport Statistics.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip l1-trans-statistics [ (if-index) ]
```

Command Parameters

Table 151.40-1 "Voice Sip L1 Transport Statistics Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the physical E1/T1 interface

Command Output

Table 151.40-2 "Voice Sip L1 Transport Statistics Commands" Display parameters

Specific Information		
name	Type	Description
l1-tot-slip	Parameter type: <Sip::L1Counter> - 32 bit counter	The number of times the frequency of the receive route clock not equal to the receive system interface working clock <i>This element is always shown.</i>
l1-oof	Parameter type: <Sip::L1Counter> - 32 bit counter	The number of multiframe periods in the asynchronous state

name	Type	Description
		<i>This element is always shown.</i>
l1-fac	Parameter type: <Sip::L1Counter> - 32 bit counter	The number of detected changes of frame/multiframe alignment <i>This element is always shown.</i>
l1-err-sec	Parameter type: <Sip::L1Counter> - 32 bit counter	The number of errors occurred during the time interval of one second <i>This element is always shown.</i>
l1-crc4	Parameter type: <Sip::L1Counter> - 32 bit counter	The number of CRC-sub-multiframes with a CRC error <i>This element is always shown.</i>
l1-fas	Parameter type: <Sip::L1Counter> - 32 bit counter	The number l1 frame align signalling words with an error received <i>This element is always shown.</i>
reset-time	Parameter type: <Sip::SipTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	The absolute time of the time stamp that the E1/T1 interface has been operationally enabled or the time stamp of the most recent reset of the L1 transport statistics <i>This element is always shown.</i>

151.41 Voice Sip NE Board Status Commands

Command Description

This command allows the operator to show the Voice Sip NE board status.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip ne-board [ cap-id <Sip::CapId> ] [ ne-id <Sip::NeId> ] [ board <Equipm::LtSlotIndex> ]
```

Command Parameters

Table 151.41-1 "Voice Sip NE Board Status Commands" Resource Parameters

Resource Identifier	Type	Description
cap-id	Parameter type: <Sip::CapId> Format: - the central access point id - range: [1...16]	The unique name identify of this central access point
ne-id	Parameter type: <Sip::NeId> Format: - the network element id - range: [1...8]	The unique identifier of the Network element.
board	Parameter type: <Equipm::LtSlotIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	The slot identifier of the NIAT-A LT board.

Command Output

Table 151.41-2 "Voice Sip NE Board Status Commands" Display parameters

Specific Information		
name	Type	Description
admin-status	Parameter type: <Sip::NeBoardAdminStatus> (up down)	administrative status of this NIAT-A LT board. <i>This element is always shown.</i>

name	Type	Description
	Possible values: - up : the NIAT-A LT board has been planned and has been physically pulled in - down : the NIAT-A LT board has not been planned yet or the NIAT-A LT board has been planned but is not physical plugged in.	
xhub-port	Parameter type: <Sip::xHubPort> - The xHUB port to which the NIAT-A LT board is connected. - range: [1...32]	The xHUB port to which the NIAT-A LT board is connected <i>This element is always shown.</i>
int-com-status	Parameter type: <Sip::IntComStatus> (up down unknown) Possible values: - up : The status of the internal communication is up - down : The status of the internal communication is down - unknown : The status of the internal communication is unknown	The status of the internal communication between the NIAT-A LT board and the Central Access Point <i>This element is always shown.</i>

151.42 Call Query state show command

Command Description

This command allows the operator to get the state of the call query.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip call-query [ (id) ]
```

Command Parameters

Table 151.42-1 "Call Query state show command" Resource Parameters

Resource Identifier	Type	Description
(id)	Format: - the index of call query session - range: [1]	The unique identify of this call query session

Command Output

Table 151.42-2 "Call Query state show command" Display parameters

Specific Information		
name	Type	Description
query-state	Parameter type: <Sip::CallQueryState> (running successful timeout) Possible values: - running : the call query is in progress - successful : all query results are received from LT boards - timeout : the timeout-period timer is time out before all query results are received	This actual state of the call query action being triggered <i>This element is always shown.</i>

151.43 Call Query result show command

Command Description

This command allows the operator to get the result of the call query.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice sip call-query-result [ (id) [ result-index <Sip::CallQueryResultId> ] ]
```

Command Parameters

Table 151.43-1 "Call Query result show command" Resource Parameters

Resource Identifier	Type	Description
(id)	Format: - the index of call query session - range: [1]	The unique identifier of this call query session
result-index	Parameter type: <Sip::CallQueryResultId> Format: - the index of the call query result - range: [1...3360]	The identifier of the call query result

Command Output

Table 151.43-2 "Call Query result show command" Display parameters

Specific Information		
name	Type	Description
calling	Parameter type: <Sip::CallQueryCalling> - the calling number of the call - length: 1<=x<=32	The calling number of the call <i>This element is always shown.</i>
called	Parameter type: <Sip::CallQueryCalled> - the called number of the call - length: 1<=x<=32	The called number of the call <i>This element is always shown.</i>
interface	Parameter type: <Sip::CallQueryLine> (pots : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> pri-cas : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Possible values: - pots : physical pots line - pri-cas : physical line for isdn-pri and cas	The Ifindex of the POTS/E1/T1 interface at which the active call is created <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	
timeslot	Parameter type: <Sip::CallQueryTimeSlot> - The timeslot of an E1/T1 interface which is used by the active call. In case type = POTS, then the timeslot is not relevant and will be indicated by white space. - range: [-1...31]	The timeslot of an E1/T1 interface which is used by the active call. In case type = POTS, then the timeslot is not relevant and will be indicated by -1. <i>This element is always shown.</i>

151.44 Voice Megaco Equipment Board Status Commands

Command Description

This command allows the operator to show the Voice board communication status.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice cluster (cluster-id) board [ (equip-id) [ board-id <Equipm::PortSlotIndex> ] ]
```

Command Parameters

Table 151.44-1 "Voice Megaco Equipment Board Status Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(equip-id)	Format: - id of equipment - range: [1...32]	uniquely identify of this equipment
board-id	Parameter type: <Equipm::PortSlotIndex> Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number	uniquely identify of this board. the CLI slot numbering method is based on logical concept. for XD shelf, CLI logic slot-id(1 to 16) is mapped to physical slot-id from 4 to 19. for FD shelf, CLI logic slot-id(1 to 16) is mapped to physical slot-id from 1 to 8 and 12 to 19.

Command Output

Table 151.44-2 "Voice Megaco Equipment Board Status Commands" Display parameters

Specific Information		
name	Type	Description
comm-status	Parameter type: <MEGACO::BoardCommStatus> (up	the communication status of board

151 Voice Status Commands

name	Type	Description
	down unknown) Possible values: - up : The communication status is up - down : the communication status is down - unknown : the communication status is unknown	<i>This element is always shown.</i>
actual-type	Parameter type: <Equipm::ActBoardType> Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	the actual type of board <i>This element is always shown.</i>

151.45 Voice Megaco Equipment Status Commands

Command Description

This command allows the operator to show the Voice termination operational status.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice cluster (cluster-id) termination [ (equip-id) [ port-id <Itf::MegacoPotsLine> ] ]
```

Command Parameters

Table 151.45-1 "Voice Megaco Equipment Status Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(equip-id)	Format: - id of equipment - range: [1...32]	uniquely identify of this equipment
port-id	Parameter type: <Itf::MegacoPotsLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> / <Eqpt::MegacoPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number Field type <Eqpt::MegacoPortId> - the port number of Megaco	uniquely identify of this board. the CLI slot numbering method is based on logical concept.for XD shelf, CLI logic slot-id(1 to 16) is mapped to physical slot-id from 4 to 19. for FD shelf, CLI logic slot-id(1 to 16) is mapped to physical slot-id from 1 to 8 and 12 to 19.

Command Output

Table 151.45-2 "Voice Megaco Equipment Status Commands" Display parameters

Specific Information

151 Voice Status Commands

name	Type	Description
termination-id	Parameter type: <MEGACO::accessTerminationId> - the termination id, if it is not specified, system will automatically assign a free one in range - range: [0...32767]	the unique identifier of termination. <i>This element is always shown.</i>
port-type	Parameter type: <MEGACO::accTerminationUserPortType> (pstn isdn) Possible values: - pstn : the termination type is pstn - isdn : the termination type is isdn	the type of termination port. <i>This element is always shown.</i>
oper-status	Parameter type: <MEGACO::TerminationOperStatus> (up down shuttingdown) Possible values: - up : The operational status is up - down : the operational status is down - shuttingdown : the operational status is shuttingdown	the operational status of termination. <i>This element is always shown.</i>
admin-status	Parameter type: <MEGACO::accTerminationAdminStatus> (locked unlocked) Possible values: - locked : the admin status of termination is locked - unlocked : the admin status of termination is unlocked	the admin status of termination. <i>This element is always shown.</i>
call-status	Parameter type: <MEGACO::accTerminationCallStatus> (on-hook off-hook dialing calling connected idle-offhook busy-tone howler-tone ringing releasing ringback caller-connected callee-connected shared-cutoff) Possible values: - : the call status is unknown - on-hook : the call status is on-hook - off-hook : the call status is off-hook - dialing : the call status is dialing - calling : the call status is calling - connected : the call status is connected - idle-offhook : the call status is idle-offhook - busy-tone : the call status is busy tone - howler-tone : the call status is howler tone - ringing : the call status is ringing - releasing : the call status is releasing - ringback : the call status is releasing - caller-connected : the call status is caller connected - callee-connected : the call status is callee connected - shared-cutoff : the call status is cut off by paired	the call status of a termination <i>This element is always shown.</i>

name	Type	Description
	termination	
test-status	Parameter type: <MEGACO::accTerminationTestStatus> (no-testing mta-testing ilt-testing) Possible values: - no-testing : the termination is not under testing - mta-testing : the termination is under mta testing - ilt-testing : the termination is under integrated line testing	the test status of a termination <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <MEGACO::accTerminationOpDownReason> (registering registrationfailure physicalfailure) Possible values: - : the term opera status down reason is none - registering : the term opera status down reason is registering - registrationfailure : the term opera status down reason is registration failure - physicalfailure : the term opera status down reason is physical failure	the reason of operational status of termination is down <i>This element is always shown.</i>
channel-status	Parameter type: <MEGACO::accTerminationChannelStatus> (idle b1-busy b2-busy both-channels-busy) Possible values: - : the term opera status down reason is none - idle : both channels are idle. - b1-busy : B1 channel is busy. B2 is idle - b2-busy : B2 channel is busy. B1 is idle - both-channels-busy : both channels are busy	The channel status of this access termination <i>This element is always shown.</i>
ps1	Parameter type: <MEGACO::accTerminationPowerSourceStatus> (normal abnormal) Possible values: - : the term opera status power source is none - normal : - abnormal :	The power source 1 status of this access termination <i>This element is always shown.</i>
ps2	Parameter type: <MEGACO::accTerminationPowerSourceStatus> (normal abnormal) Possible values: - : the term opera status power source is none - normal : - abnormal :	The power source 2 status of this access termination <i>This element is always shown.</i>

151.46 Voice Megaco Equipment Secondary Termination Status Commands

Command Description

This command allows the operator to show the Voice secondary termination operational status.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice cluster (cluster-id) sharedlineterm [ (equip-id) [ port-id <Itf::MegacoPotsLine> ] ]
```

Command Parameters

Table 151.46-1 "Voice Megaco Equipment Secondary Termination Status Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(equip-id)	Format: - id of equipment - range: [1...32]	uniquely identify of this equipment
port-id	Parameter type: <Itf::MegacoPotsLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> / <Eqpt::MegacoPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number Field type <Eqpt::MegacoPortId> - the port number of Megaco	uniquely identify of this board. the CLI slot numbering method is based on logical concept. for FD shelf, CLI logic slot-id(1 to 16) is mapped to physical slot-id from 1 to 8 and 12 to 19.

Command Output

Table 151.46-2 "Voice Megaco Equipment Secondary Termination Status Commands" Display parameters

Specific Information		
name	Type	Description
termination-id	Parameter type: <MEGACO::accessTerminationId> - the termination id, if it is not specified, system will automatically assign a free one in range - range: [0...32767]	the unique identifier of the secondary termination. <i>This element is always shown.</i>
oper-status	Parameter type: <MEGACO::TerminationOperStatus> (up down shuttingdown) Possible values: - up : The operational status is up - down : the operational status is down - shuttingdown : the operational status is shuttingdown	the operational status of the secondary termination. <i>This element is always shown.</i>
admin-status	Parameter type: <MEGACO::accTerminationAdminStatus> (locked unlocked) Possible values: - locked : the admin status of termination is locked - unlocked : the admin status of termination is unlocked	the admin status of the secondary termination. <i>This element is always shown.</i>
call-status	Parameter type: <MEGACO::accTerminationCallStatus> (on-hook off-hook dialing calling connected idle-offhook busy-tone howler-tone ringing releasing ringback caller-connected callee-connected shared-cutoff) Possible values: - : the call status is unknown - on-hook : the call status is on-hook - off-hook : the call status is off-hook - dialing : the call status is dialing - calling : the call status is calling - connected : the call status is connected - idle-offhook : the call status is idle-offhook - busy-tone : the call status is busy tone - howler-tone : the call status is howler tone - ringing : the call status is ringing - releasing : the call status is releasing - ringback : the call status is releasing - caller-connected : the call status is caller connected - callee-connected : the call status is callee connected - shared-cutoff : the call status is cut off by paired termination	the call status of the secondary termination <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <MEGACO::accTerminationOpDownReason> (registering registrationfailure	the reason of operational status of the secondary termination is down <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	physicalfailure) Possible values: - : the term opera status down reason is none - registering : the term opera status down reason is registering - registrationfailure : the term opera status down reason is registration failure - physicalfailure : the term opera status down reason is physical failure	

151.47 Voice Megaco MGI Status Commands

Command Description

this command allows the operator to show the voice mgi operational status and the currently-associated mgc.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

> show voice cluster (cluster-id) media-gateway [(media-gateway-id)]

Command Parameters

Table 151.47-1 "Voice Megaco MGI Status Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(media-gateway-id)	Format: - the media gateway table index - range: [1]	uniquely identify of this media gateway

Command Output

Table 151.47-2 "Voice Megaco MGI Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <MEGACO::MGIOperStatus> (up down shuttingdown) Possible values: - up : The operational status is up - down : the operational status is down - shuttingdown : the operational status is shuttingdown	the operational status of MGI <i>This element is always shown.</i>
active-mgc	Parameter type: <MEGACO::MGICtrlrActiveAddress> (primary secondary none other tertiary quaternary	the currently associated MGC <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	esa) Possible values: - primary : the primary MGC is currently associated - secondary : the secondary MGC is currently associated - none : No MGC is currently associated - other : Another MGC(neither primary MGC nor secondary MGC is currently associated - tertiary : the tertiary MGC is currently associated - quaternary : the quaternary MGC is currently associated - esa : the esa MGC is currently associated	
mg-sgi	Parameter type: <MEGACO::mediaGatewaySGI> - a signed integer	the unique signaling gateway id which identifies this media gateway <i>This element is always shown.</i>
prim-mgc-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the primary media gateway controller <i>This element is only shown in detail mode.</i>
prim-mgc-port	Parameter type: <MEGACO::medGwyCtrlrPrimaryUDPPort> - the primary udp port of media gateway controller - range: [1...65534]	the udp port of primary mgc <i>This element is only shown in detail mode.</i>
sec-mgc-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the secondary media gateway controller <i>This element is only shown in detail mode.</i>
sec-mgc-port	Parameter type: <MEGACO::medGwyCtrlrSecondaryUDPPort> - the secondary udp port of media gateway controller - range: [1...65534]	the udp port of secondary mgc <i>This element is only shown in detail mode.</i>
tert-mgc-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the tertiary media gateway controller <i>This element is only shown in detail mode.</i>
tert-mgc-port	Parameter type: <MEGACO::medGwyCtrlrTertiaryUDPPort> - the tertiary udp port of media gateway controller - range: [1...65534]	the udp port of tertiary mgc <i>This element is only shown in detail mode.</i>
quat-mgc-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the quaternary media gateway controller <i>This element is only shown in detail mode.</i>
quat-mgc-port	Parameter type: <MEGACO::medGwyCtrlrQuaternaryUDPPort> - the quaternary udp port of media gateway controller - range: [1...65534]	the udp port of quaternary mgc <i>This element is only shown in detail mode.</i>
esa-mgc-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the esa media gateway controller <i>This element is only shown in detail mode.</i>
esa-mgc-port	Parameter type: <MEGACO::medGwyCtrlrESAMgcUDPPort> - the esa mgc udp port of media gateway controller - range: [0...65535]	the udp port of esa mgc <i>This element is only shown in detail mode.</i>

151.48 Voice Megaco Database Status Commands

Command Description

This command allows the operator to show the voice megaco xvps database status.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

> show voice cluster (cluster-id) database

Command Parameters

Table 151.48-1 "Voice Megaco Database Status Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster

Command Output

Table 151.48-2 "Voice Megaco Database Status Commands" Display parameters

Specific Information		
name	Type	Description
progress-status	Parameter type: <MEGACO::SaveStatus> (ongoing successful failed) Possible values: - ongoing : save ongoing - successful : save successful - failed : save failed	the current db save progress status of the cluster <i>This element is always shown.</i>

151.49 Voice Megaco IP Status Commands

Command Description

This command allows the operator to show the xvps signaling udp port status.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

> show voice cluster (cluster-id) ip

Command Parameters

Table 151.49-1 "Voice Megaco IP Status Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster

Command Output

Table 151.49-2 "Voice Megaco IP Status Commands" Display parameters

Specific Information		
name	Type	Description
udp-port	Parameter type: <MEGACO::ivpsXLESUDPPort> - the signaling udp port of xvps - range: [0...65535]	the signaling udp port of the xvps cluster <i>This element is always shown.</i>

151.50 Voice Megaco SGI Status Commands

Command Description

this command allows the operator to show the voice sgi operational status and sctp port and the currently-associated sgi.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

> show voice cluster (cluster-id) signal-gateway [(signal-gateway-id)]

Command Parameters

Table 151.50-1 "Voice Megaco SGI Status Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(signal-gateway-id)	Format: - the signal gateway table index - range: [1]	uniquely identify of this signal gateway

Command Output

Table 151.50-2 "Voice Megaco SGI Status Commands" Display parameters

Specific Information		
name	Type	Description
sgi-ass-asp	Parameter type: <MEGACO::SGIAssocASP> (none primary secondary both tertiary quaternary) Possible values: - none : No SGI is currently associated - primary : the primary SGI is currently associated - secondary : the secondary SGI is currently associated - both : the both SGI is currently associated - tertiary : the tertiary SGI is currently associated - quaternary : the quaternary SGI is currently associated	the currently associated SGI <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
sctp-port	Parameter type: <MEGACO::SGISCTPPort> - the sctp port of the signal gateway - range: [0...65535]	the sctp port of the signal gateway <i>This element is always shown.</i>
oper-status	Parameter type: <MEGACO::SGIOperStatus> (up down) Possible values: - up : The operational status is up - down : the operational status is down	the operational status of SGI <i>This element is always shown.</i>
prim-asp-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the primary asp <i>This element is only shown in detail mode.</i>
prim-sctp-port	Parameter type: <MEGACO::signallingGatewayInterfacePrimarySCTPPort> - the sctp port of the primary asp - range: [1...65534]	the sctp port of primary asp <i>This element is only shown in detail mode.</i>
sec-asp-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the secondary asp <i>This element is only shown in detail mode.</i>
sec-sctp-port	Parameter type: <MEGACO::signallingGatewayInterfaceSecondarySCTPPort> - the sctp port of the secondary asp - range: [1...65534]	the sctp port of secondary asp <i>This element is only shown in detail mode.</i>
tert-asp-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the tertiary asp <i>This element is only shown in detail mode.</i>
tert-sctp-port	Parameter type: <MEGACO::signallingGatewayInterfaceTertiarySCTPPort> - the sctp port of the tertiary asp - range: [1...65534]	the sctp port of tertiary asp <i>This element is only shown in detail mode.</i>
quat-asp-ip	Parameter type: <Ip::V4Address> - IPv4-address	the ip address of the quaternary asp <i>This element is only shown in detail mode.</i>
quat-sctp-port	Parameter type: <MEGACO::signallingGatewayInterfaceQuaternarySCTPPort> - the sctp port of the quaternary asp - range: [1...65534]	the sctp port of quaternary asp <i>This element is only shown in detail mode.</i>

151.51 Summary of Current Operational Parameters for ONT VoIP

Command Description

This command reports a summary of current operational parameters for a specified ONT VoIP service.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont service [ (voip-index) ]
```

Command Parameters

Table 151.51-1 "Summary of Current Operational Parameters for ONT VoIP" Resource Parameters

Resource Identifier	Type	Description
(voip-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier	a unique interface index

Resource Identifier	Type	Description
	Possible values: - 1 : Gpon voip Port	

Command Output

Table 151.51-2 "Summary of Current Operational Parameters for ONT VoIP" Display parameters

Specific Information		
name	Type	Description
net-gw-ipaddr	Parameter type: <Gpon::IpAddress> - IPv4-address	IP Address of the network media gateway. <i>This element is always shown.</i>
next-hop-addr	Parameter type: <Gpon::IpAddress> - IPv4-address	default next hop IP Address used by the VoIP Client. <i>This element is always shown.</i>
client-ipaddr	Parameter type: <Gpon::IpAddress> - IPv4-address	IP Address of the ONT VoIP Client. <i>This element is always shown.</i>
client-sub-netmask	Parameter type: <Gpon::IpAddress> - IPv4-address	subnet mask for the VoIP client's subnet. <i>This element is always shown.</i>
ftp-server-ip	Parameter type: <Gpon::IpAddress> - IPv4-address	IP Address of the FTP Server that contains the VoIP configuration files that the ONT needs to download. <i>This element is always shown.</i>
act-config-filename	Parameter type: <Gpon::FileName> - a variable length octet string defining rf band list - length: x<=49	Used to identify the name of the Actual Configuration File that the VoIP Client is using for VoIP configuration. <i>This element is always shown.</i>

151.52 Summary of Call History Operational Parameters

Command Description

This command reports current operational parameters related to call history for a POTS line.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont call-hist [ (ont-slot-idx) [ call-hist-num <Gpon::CallHistIndex> ] ]
```

Command Parameters

Table 151.52-1 "Summary of Call History Operational Parameters" Resource Parameters

Resource Identifier	Type	Description
(ont-slot-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	identification of the ont-slot (mandatory parameter)

Resource Identifier	Type	Description
	- Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	
call-hist-num	Parameter type: <Gpon::CallHistIndex> Format: - pots call history number index value - range: [1...32]	number to distinguish the calls from one another. (mandatory parameter)

Command Output

Table 151.52-2 "Summary of Call History Operational Parameters" Display parameters

Specific Information		
name	Type	Description
call-date	Parameter type: <Gpon::DateTime> - printable string	Date (YY-MM-DD) when the call was initiated . <i>This element is always shown.</i>
call-time	Parameter type: <Gpon::DateTime> - printable string	Time (HH:MM:SS) when the call was initiated. <i>This element is always shown.</i>
call-duration	Parameter type: <SignedInteger> - a signed integer	Duration of call (in seconds). <i>This element is always shown.</i>
called-num	Parameter type: <Gpon::CallNum> - printable string	Called number (character string). <i>This element is always shown.</i>
calling-num	Parameter type: <Gpon::CallNum> - printable string	Calling number (character string). <i>This element is always shown.</i>
rtp-tx-pkts	Parameter type: <SignedInteger> - a signed integer	Number of RTP packets received. <i>This element is only shown in detail mode.</i>
rtp-rx-pkts	Parameter type: <SignedInteger> - a signed integer	Number of RTP packets received. <i>This element is only shown in detail mode.</i>
rtp-pkts-lost	Parameter type: <SignedInteger> - a signed integer	Number of RTP packets that were not received. <i>This element is only shown in detail mode.</i>
rtp-pkts-discard	Parameter type: <SignedInteger> - a signed integer	Number of RTP packets discarded due to errors. <i>This element is only shown in detail mode.</i>
rtp-overruns	Parameter type: <SignedInteger> - a signed integer	Number of jitter buffer over-runs. <i>This element is only shown in detail mode.</i>
rtp-underruns	Parameter type: <SignedInteger> - a signed integer	Number of jitter buffer under-runs. <i>This element is only shown in detail mode.</i>
rtp-avg-jitter	Parameter type: <SignedInteger> - a signed integer	Average jitter (msec) in the received RTP stream. <i>This element is only shown in detail mode.</i>
rtcp	Parameter type: <SignedInteger> - a signed integer	Whether or not the far end participated in RTCP. <i>This element is only shown in detail mode.</i>

name	Type	Description
rtp-pk-jitter	Parameter type: <SignedInteger> - a signed integer	Peak jitter (msec) in the received RTP stream. <i>This element is only shown in detail mode.</i>
avg-jitter	Parameter type: <SignedInteger> - a signed integer	Average jitter buffer depth (msec) for the call. <i>This element is only shown in detail mode.</i>
rtcp-xr	Parameter type: <SignedInteger> - a signed integer	Whether or not the far-end participated in RTCP-XR. <i>This element is only shown in detail mode.</i>
callhist-avg-mos	Parameter type: <Gpon::CallHistAvgMos> - pots call history average mos value - range: [-1...50]	Average Mean Opinion Score (MOS) units in tenths <i>This element is only shown in detail mode.</i>
peak-rt-delay	Parameter type: <SignedInteger> - a signed integer	Peak round trip delay (msec). <i>This element is only shown in detail mode.</i>
avg-rt-delay	Parameter type: <SignedInteger> - a signed integer	Average round trip delay (msec). <i>This element is only shown in detail mode.</i>

151.53 Voice ONT POTS MLT Test Status Command

Command Description

This command displays the mlt test results for the pots lines on the ont.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

> show voice ont pots diagnostics [(uni-idx)]

Command Parameters

Table 151.53-1 "Voice ONT POTS MLT Test Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	interface index of the pots uni

Resource Identifier	Type	Description
	- Gpon Ont Slot - range: [1...14] - Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Command Output

Table 151.53-2 "Voice ONT POTS MLT Test Status Command" Display parameters

Specific Information		
name	Type	Description
ringer	Parameter type: <Gpon::Ringer> (failed passed) Possible values: - failed : ringer failed - passed : ringer passed	ringer pass/failure <i>This element is always shown.</i>
receiver-off-hook	Parameter type: <Gpon::RcvOffHook> (failed passed) Possible values: - failed : receiver off-hook failed - passed : receiver off-hook passed	receiver off-hook pass/failure <i>This element is always shown.</i>
resistive-faults	Parameter type: <Gpon::ResistiveFaults> (failed passed) Possible values: - failed : resistive faults failed - passed : resistive faults passed	resistive faults pass/failure <i>This element is always shown.</i>
foreign-emf	Parameter type: <Gpon::ForeignEmf> (failed passed) Possible values: - failed : foreign emf failed - passed : foreign emf passed	foreign emf pass/failure <i>This element is always shown.</i>
hazard-potential	Parameter type: <Gpon::HazardPotential> (failed passed) Possible values: - failed : hazardous potential failed - passed : hazardous potential passed	hazardous potential pass/failure <i>This element is always shown.</i>
dc-tip-ground	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	tip-ground dc voltage test summary result <i>This element is always shown.</i>
dc-ring-ground	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data	ring-ground dc voltage test summary result <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	
ac-tip-ground	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	tip-ground ac voltage test summary result <i>This element is always shown.</i>
ac-ring-ground	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	ring-ground ac voltage test summary result <i>This element is always shown.</i>
tip-ground-resist	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	tip-ground resistance test summary result <i>This element is always shown.</i>
ring-ground-resist	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	ring-ground resistance test summary result <i>This element is always shown.</i>

name	Type	Description
tip-ring-resist	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	tip-ring resistance test summary result <i>This element is always shown.</i>
ringer-load	Parameter type: <Gpon::TestSummaryResult> (not_run failed_with_data failed_no_data passed_with_data passed_no_data) Possible values: - not_run : test not run - failed_with_data : test failed, measurement reported - failed_no_data : test failed, measurement not reported - passed_with_data : test passed, measurement reported - passed_no_data : test passed, measurement not reported	tip-ring resistance test summary result <i>This element is always shown.</i>
meas-dc-tip-ground	Parameter type: <Gpon::DcMeasure> - dc voltage measurement in volts.Valid only if test summary result is failed with data or passed with data. - unit: volts - range: [-32768...32768]	tip ground dc voltage measurement in volts <i>This element is always shown.</i>
meas-dc-ring-ground	Parameter type: <Gpon::DcMeasure> - dc voltage measurement in volts.Valid only if test summary result is failed with data or passed with data. - unit: volts - range: [-32768...32768]	ring ground dc voltage measurement in volts <i>This element is always shown.</i>
meas-ac-tip-ground	Parameter type: <Gpon::AcMeasure> - ac voltage measurement in volts rms.Valid only if test summary result is failed with data or passed with data. - unit: volts RMS - range: [0...255]	ac voltage measurement in volts rms <i>This element is always shown.</i>
meas-ac-ring-ground	Parameter type: <Gpon::AcMeasure> - ac voltage measurement in volts rms.Valid only if test summary result is failed with data or passed with data. - unit: volts RMS - range: [0...255]	ac voltage measurement in volts rms <i>This element is always shown.</i>
meas-tip-ground-resist	Parameter type: <Gpon::ResistanceMeasure> - resistance measurement in ohms.Valid only if test summary result is failed with data or passed with data. - unit: ohms - range: [0...65535]	resistance measurement in ohms <i>This element is always shown.</i>
meas-rng-ground-resist	Parameter type: <Gpon::ResistanceMeasure> - resistance measurement in ohms.Valid only if test summary result is failed with data or passed with data. - unit: ohms - range: [0...65535]	resistance measurement in ohms <i>This element is always shown.</i>
meas-tip-ring-resist	Parameter type: <Gpon::ResistanceMeasure> - resistance measurement in ohms.Valid only if test summary result is failed with data or passed with data.	resistance measurement in ohms <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	- unit: ohms - range: [0...65535]	
meas-ringer-load	Parameter type: <Gpon::RingerLoadMeasure> - ringer load measurement in 0.1rens.Valid only if test summary result is failed with data or passed with data. - unit: REN - range: [0...25.5]	ringer load measurement in 0.1rens <i>This element is always shown.</i>

151.54 Voice ONT POTS PB Dialtone Test Status Command

Command Description

This command displays the pull or break dial tone test results for the pots lines on the ont.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots pb-dial-tone [ (uni-idx) ]
```

Command Parameters

Table 151.54-1 "Voice ONT POTS PB Dialtone Test Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	interface index of the pots uni

Resource Identifier	Type	Description
	- Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Command Output

Table 151.54-2 "Voice ONT POTS PB DIALTONE Test Status Command" Display parameters

Specific Information		
name	Type	Description
pull-result	Parameter type: <Gpon::PullResult> (not_run failed_no_data slow_no_data passed_no_data failed_with_data slow_with_data passed_with_data) Possible values: - not_run : ont did not run test - failed_no_data : test failed to draw dialtone, no measurement reported - slow_no_data : slow draw of dialtone, no measurement reported - passed_no_data : test passed, no measurement reported - failed_with_data : test failed to draw dialtone, measurement reported - slow_with_data : slow draw of dialtone, measurement reported - passed_with_data : test passed, measurement reported	result of the make part of the dialtone test <i>This element is always shown.</i>
pull-measure	Parameter type: <Gpon::PullorBreakMeasure> - measured time to make or break dialtone from the make-break dialtone test in 0.1secs.Valid only if the test result is failed with data or slow with data or passed with data. - unit: sec - range: [0...25.5]	measured time to make dialtone from the make-break dialtone test in 0.1secs <i>This element is always shown.</i>
break-result	Parameter type: <Gpon::BreakResult> (not_run failed_no_data slow_no_data passed_no_data failed_with_data slow_with_data passed_with_data) Possible values: - not_run : ont did not run test - failed_no_data : test failed to break dialtone, no measurement reported - slow_no_data : slow break of dialtone, no measurement reported - passed_no_data : test passed, no measurement reported - failed_with_data : test failed to break dialtone, measurement reported - slow_with_data : slow break of dialtone, measurement	result of the break part of the dialtone test <i>This element is always shown.</i>

name	Type	Description
	reported - passed_with_data : test passed, measurement reported	
break-measure	Parameter type: <Gpon::PullorBreakMeasure> - measured time to make or break dialtone from the make-break dialtone test in 0.1secs.Valid only if the test result is failed with data or slow with data or passed with data. - unit: sec - range: [0...25.5]	measured time to break dialtone from the make-break dialtone test in 0.1secs <i>This element is always shown.</i>

151.55 Voice ONT POTS SIP Dialtone Test Status Command

Command Description

This command displays SIP pull-break dialtone test results for the pots lines on the ont.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

> show voice ont pots sip-dial-tone [(uni-idx)]

Command Parameters

Table 151.55-1 "Voice ONT POTS SIP Dialtone Test Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	interface index of the pots uni

Resource Identifier	Type	Description
	- Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Command Output

Table 151.55-2 "Voice ONT POTS SIP Dialtone Test Status Command" Display parameters

Specific Information		
name	Type	Description
summary-result	Parameter type: <Gpon::SipSummaryResult> (failed passed not_forced not_run) Possible values: - failed : failed - passed : passed - not_forced : ont did not run test and test mode was not forced - not_run : ont did not run the test	summary result of the sip dial tone test <i>This element is always shown.</i>
delay	Parameter type: <Gpon::SipDelayMeasure> - measured post delay in tenth of a second - unit: sec - range: [0...6553.5]	measured post delay in tenth of a second <i>This element is always shown.</i>
result-text	Parameter type: <Gpon::SipResultText> - readable text regarding the result of the test - length: x<=29	readable text regarding the result of the test <i>This element is always shown.</i>

151.56 Summary of Actual Operational data for ONT VoIP Config Command

Command Description

This command retrieves the actual operational data from an ONT's VOIP configuration

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots operational-data [ (uni-index) ]
```

Command Parameters

Table 151.56-1 "Summary of Actual Operational data for ONT VoIP Config Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier	interface index of the ces ont uni

Resource Identifier	Type	Description
	Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Command Output

	(idle off-hook dialling ringalert ringback cnncting cnncted discnnt offhook-no-tone offhook-tone unknown unknown unsupported) Possible values: - idle : Idle or on-hook - off-hook : Off-hook dial tone - dialling : Dialling - ringalert : Ringing or FSK alerting/data - ringback : Audible ringback - cnncting : Connecting - cnncted : Connected - discnnt : Disconnecting, audible indication - offhook-no-tone : Receiver off hook (ROH), no tone - offhook-tone : Receiver off hook (ROH) with tone - unknown : Unknown or undefined - unknown : OLT cannot communicate with ONT for OMCI discovery purposes - unsupported : ONT does NOT support GET of this attribute	voip line for this pots port <i>This element is only shown in detail mode.</i>

151.57 Voice ONT POTS Hook State Command

Command Description

This command displays the hook state for the pots lines on the ont.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots hookstate [ (uni-idx) ]
```

Command Parameters

Table 151.57-1 "Voice ONT POTS Hook State Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId>	interface index of the pots uni

Resource Identifier	Type	Description
	- Gpon Ont Pots Port - range: [1...24]	

Command Output

Table 151.57-2 "Voice ONT POTS Hook State Command" Display parameters

Specific Information		
name	Type	Description
hook-state	Parameter type: <Gpon::HookState> (on-hook off-hook unknown unsupported) Possible values: - on-hook : on-hook - off-hook : off-hook - unknown : OLT cannot communicate with ONT for OMCI discovery purposes - unsupported : ONT does NOT support GET of this attribute	hook state <i>This element is always shown.</i>

151.58 Voice TC Olt-side Current Interval Status Command

Command Description

This command displays the entries of the voice oltside tc's current interval.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots tc-layer olt-side current-interval [ (uni-index) ]
```

Command Parameters

Table 151.58-1 "Voice TC Olt-side Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Possible values:	gpon ont index

Resource Identifier	Type	Description
	- 1 : Gpon voip Port	

Command Output

Table 151.58-2 "Voice TC Olt-side Current Interval Status Command" Display parameters

Specific Information		
name	Type	Description
lost-frags-up	Parameter type: <Counter> - 32 bit counter	a count of lost gem fragments upstream <i>This element is always shown.</i>
receive-frags	Parameter type: <Counter> - 32 bit counter	a count of received gem fragments <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	a count of transmitted gem fragments <i>This element is always shown.</i>
receive-blocks	Parameter type: <Counter> - 32 bit counter	a count of received gem blocks <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	a count of transmitted gem blocks <i>This element is always shown.</i>

151.59 Voice TC Olt-side Previous Interval Status Command

Command Description

This command displays the entries of the voice oltside tc's previous interval.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots tc-layer olt-side previous-interval [ (uni-index) [ interval-nbr <Gpon::UniIntervalnbr> ] ]
```

Command Parameters

Table 151.59-1 "Voice TC Olt-side Previous Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Possible values:	gpon ont index

Resource Identifier	Type	Description
	- 1 : Gpon voip Port	
interval-nbr	Parameter type: <Gpon::UniIntervalnbr> Format: - the interval number - range: [1...32]	the interval number

Command Output

receive-blocks	Parameter type: <Counter> - 32 bit counter	a count of received gem blocks <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	a count of transmitted gem blocks <i>This element is always shown.</i>

151.60 Voice TC Ont-side Current Interval Status Command

Command Description

This command displays the entries of the voice outside tc's current interval.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots tc-layer ont-side current-interval [ (uni-index) ]
```

Command Parameters

Table 151.60-1 "Voice TC Ont-side Current Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Possible values:	gpon ont index

Specific Information		
name	Type	Description
lost-frags-down	Parameter type: <Counter> - 32 bit counter	a count of lost gem fragments downstream <i>This element is always shown.</i>
lost-frags-up	Parameter type: <Counter> - 32 bit counter	a count of lost gem fragments upstream <i>This element is always shown.</i>
receive-frags	Parameter type: <Counter> - 32 bit counter	a count of received gem fragments <i>This element is always shown.</i>
transmit-frags	Parameter type: <Counter> - 32 bit counter	a count of transmitted gem fragments <i>This element is always shown.</i>
receive-blocks	Parameter type: <Counter> - 32 bit counter	a count of received gem blocks <i>This element is always shown.</i>
transmit-blocks	Parameter type: <Counter> - 32 bit counter	a count of transmitted gem blocks <i>This element is always shown.</i>

151.61 Voice TC Ont-side Previous Interval Status Command

Command Description

This command displays the entries of the voice outside tc's previous interval.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots tc-layer ont-side previous-interval [ (uni-index) [ interval-nbr <Gpon::UniIntervalnbr> ] ]
```

Command Parameters

Table 151.61-1 "Voice TC Ont-side Previous Interval Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Possible values:	gpon ont index

transmit-blocks	Parameter type: <Counter> - 32 bit counter	a count of transmitted gem blocks <i>This element is always shown.</i>

151.62 GPON Voip Configuration Status Command

Command Description

This command retrieves the actual operational data from an ONT VOIP configuration

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont voip-config operational-data [ (voip-index) ]
```

Command Parameters

Table 151.62-1 "GPON Voip Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(voip-index)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostID> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostID>) Possible values: - ont:ng2 : ngpon2 ont - ont : ont Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Gpon::IpHostID> - iphost id Field type <Ng2::IpHostID> - iphost id (ngpon2)	a unique interface index

Command Output

Table 151.62-2 "GPON Voip Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
config-status	Parameter type: <Gpon::ConfigStatus> (inactive active initializing fault unknown not-supported) Possible values: - inactive : ont reported the configuration retrieval has not been attempted - active : ont reported that the configuration has been retrieved - initializing : ont reported that the configuration is being retrieved - fault : ont reported - unknown : cant reach the ont or the ont didnt return a response to the query - not-supported : not supported	Retrieval status of the VOIP configuration <i>This element is always shown.</i>
profile-version	Parameter type: <Gpon::ProfVersion> (null <PrintableString>) Possible values: - null : ONT reported that no version was reported Field type <PrintableString> - printable string	profile version <i>This element is always shown.</i>

Only Show Details: voip signalling protocols		
name	Type	Description
is-valid	Parameter type: <Gpon::SigValidity> (true false) Possible values: - true : voip signalling protocol details are valid - false : voip signalling protocol details are not valid	indicates whether the available voip signalling protocols is valid or not <i>This element is only shown in detail mode.</i>
sip-client	Parameter type: <Gpon::SipClient> (not-supported supported) Possible values: - not-supported : sip client is not supported - supported : sip client is supported	sip-client support <i>This element is only shown in detail mode.</i>
h248-client	Parameter type: <Gpon::H248Client> (not-supported supported) Possible values: - not-supported : h248 client is not supported - supported : h248 client is supported	h248-client support <i>This element is only shown in detail mode.</i>
mgcp-client	Parameter type: <Gpon::MgcpClient> (not-supported supported) Possible values: - not-supported : mgcp client is not supported	mgcp-client support <i>This element is only shown in detail mode.</i>

name	Type	Description
	- supported : mgcp client is supported	

Only Show Details: voip configuration methods		
name	Type	Description
is-valid-config	Parameter type: <Gpon::ConfValidity> (true false) Possible values: - true : voip configuration method details are valid - false : voip configuration method details are not valid	indicates whether the available voip configuration methods is valid or not <i>This element is only shown in detail mode.</i>
omci-support	Parameter type: <Gpon::Omci> (not-supported supported) Possible values: - not-supported : omci client is not supported - supported : omci client is supported	omci support <i>This element is only shown in detail mode.</i>
file-support	Parameter type: <Gpon::File> (not-supported supported) Possible values: - not-supported : file client is not supported - supported : file client is supported	file support <i>This element is only shown in detail mode.</i>
tr69-support	Parameter type: <Gpon::Tr69> (not-supported supported) Possible values: - not-supported : tr69 client is not supported - supported : tr69 client is supported	tr69 support <i>This element is only shown in detail mode.</i>
sipping-support	Parameter type: <Gpon::Sipping> (not-supported supported) Possible values: - not-supported : sipping server framework is not supported - supported : sipping server framework is supported	sipping server framework support <i>This element is only shown in detail mode.</i>
hybrid-support	Parameter type: <Gpon::Hybrid> (not-supported supported) Possible values: - not-supported : hybrid mix of omci and file transfer is not supported - supported : hybrid mix of omci and file transfer is supported	alu hybrid mix of omci and file transfer support <i>This element is only shown in detail mode.</i>

151.63 Voice GPON POTS RTP Current Statistics Command

Command Description

This command allows the operator to show the GPON POTS RTP Performance Statistics for current 15 minutes interval

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots-rtp statistics current-15min [ (uni-index) ]
```

Command Parameters

Table 151.63-1 "Voice GPON POTS RTP Current Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier	gpon ont port index

Resource Identifier	Type	Description
	Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Command Output

Table 151.63-2 "Voice GPON POTS RTP Current Statistics Command" Display parameters

Specific Information		
name	Type	Description
rtp-errors	Parameter type: <Counter> - 32 bit counter	count of rtp packet errors during this interval <i>This element is always shown.</i>
packet-loss	Parameter type: <Counter> - 32 bit counter	fraction of packets lost during this interval <i>This element is always shown.</i>
max-jitter	Parameter type: <Counter> - 32 bit counter	maximum jitter identified during this interval <i>This element is always shown.</i>
max-rtcp-int	Parameter type: <Counter> - 32 bit counter	maximum time between RTCP packets during the measured interval during this interval <i>This element is always shown.</i>
buff-underflow	Parameter type: <Counter> - 32 bit counter	Counts the number of times the reassembly buffer underflows during this interval <i>This element is always shown.</i>
buff-overflow	Parameter type: <Counter> - 32 bit counter	Counts the number of times the reassembly buffer overflows during this interval <i>This element is always shown.</i>

151.64 Voice GPON POTS RTP Prev Statistics

Command

Command Description

This command allows the operator to show the GPON POTS RTP Performance Statistics for previous 15 minutes interval

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots-rtp statistics prev-15min [ (uni-index) [ interval-num <Pots::IntervalNumber15min> ] ]
```

Command Parameters

Table 151.64-1 "Voice GPON POTS RTP Prev Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId>	gpon ont port index

Resource Identifier	Type	Description
	- Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-num	Parameter type: <Pots::IntervalNumber15min> Format: - the interval number - range: [1...32]	the interval number

Command Output

Table 151.64-2 "Voice GPON POTS RTP Prev Statistics Command" Display parameters

Specific Information		
name	Type	Description
rtp-errors	Parameter type: <Counter> - 32 bit counter	count of rtp packet errors during this interval <i>This element is always shown.</i>
packet-loss	Parameter type: <Counter> - 32 bit counter	fraction of packets lost during this interval <i>This element is always shown.</i>
max-jitter	Parameter type: <Counter> - 32 bit counter	maximum jitter identified during this interval <i>This element is always shown.</i>
max-rtcp-int	Parameter type: <Counter> - 32 bit counter	maximum time between RTCP packets during the measured interval during this interval <i>This element is always shown.</i>
buff-underflow	Parameter type: <Counter> - 32 bit counter	Counts the number of times the reassembly buffer underflows during this interval <i>This element is always shown.</i>
buff-overflow	Parameter type: <Counter> - 32 bit counter	Counts the number of times the reassembly buffer overflows during this interval <i>This element is always shown.</i>

151.65 Current Interval PM stats of ONT MGC Agent Command

Command Description

This command allows the operator to show the Gpon MGC Agent Performance Statistics for current 15 minutes interval

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont mgc-agent statistics current-15min [ (index) ]
```

Command Parameters

Table 151.65-1 "Current Interval PM stats of ONT MGC Agent Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier	ifindex of iphost uni

Resource Identifier	Type	Description
	Possible values: - 1 : Gpon voip Port	

Command Output

Table 151.65-2 "Current Interval PM stats of ONT MGC Agent Command" Display parameters

Specific Information		
name	Type	Description
rx-msgs	Parameter type: <Counter> - 32 bit counter	A count number of received Megaco messages on this association, as defined by ITU-T H.341 <i>This element is always shown.</i>
rx-octets	Parameter type: <Counter> - 32 bit counter	A count of total number of octets received over this association, as defined by ITU-T H.341. <i>This element is always shown.</i>
tx-msgs	Parameter type: <Counter> - 32 bit counter	A count of number of sent Megaco messages on this association, as defined by ITU-T H.341. <i>This element is always shown.</i>
tx-octets	Parameter type: <Counter> - 32 bit counter	A count of total number of octets sent over this association, as defined by ITU-T H.341 <i>This element is always shown.</i>
protocol-err	Parameter type: <Counter> - 32 bit counter	A count of total number of errors detected on this association, as defined by ITU-T H.341 <i>This element is always shown.</i>
tx-losses	Parameter type: <Counter> - 32 bit counter	A count of total number of transport losses <i>This element is always shown.</i>
last-event	Parameter type: <Counter> - 32 bit counter	This attribute reports the last detected event on this association <i>This element is always shown.</i>
last-event-time	Parameter type: <Counter> - 32 bit counter	This attribute reports the time in seconds since the last event on this association was detected, as defined by ITU-T H.341 <i>This element is always shown.</i>
last-reset-time	Parameter type: <Counter> - 32 bit counter	This attribute reports the time in seconds since these statistics were last reset, as defined by ITU-T H.341 <i>This element is always shown.</i>

151.66 Voice Gpon POTS Call Statistics Command for Current 15 Minutes

Command Description

This command allows the operator to show the Gpon POTS Call Performance Statistics for current 15 minutes interval

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots-call statistics current-15min [ (uni-idx) ]
```

Command Parameters

Table 151.66-1 "Voice Gpon POTS Call Statistics Command for Current 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId>	identification of the ont interface index

Resource Identifier	Type	Description
	- the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Command Output

Table 151.66-2 "Voice Gpon POTS Call Statistics Command for Current 15 Minutes" Display parameters

Specific Information		
name	Type	Description
setup-fails	Parameter type: <Counter> - 32 bit counter	count of call setup failures during this interval <i>This element is always shown.</i>
setup-timer	Parameter type: <Counter> - 32 bit counter	count of longest duration of a single call setup detected during this interval <i>This element is always shown.</i>
terminate-fails	Parameter type: <Counter> - 32 bit counter	count of call terminate failures during this interval <i>This element is always shown.</i>
releases	Parameter type: <Counter> - 32 bit counter	count of the analog port releases without dialing during this interval <i>This element is always shown.</i>
off-hook-timer	Parameter type: <Counter> - 32 bit counter	count of longest period of a single off-hook detected on the analog port during this interval <i>This element is always shown.</i>

151.67 Voice Gpon POTS Call Statistics Command for Previous 15 Minutes

Command Description

This command allows the operator to show the Gpon POTS Call Performance Statistics for previous 15 minutes interval

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont pots-call statistics prev-15min [ (uni-idx) [ interval-num <Gpon::IntervalNo> ] ]
```

Command Parameters

Table 151.67-1 "Voice Gpon POTS Call Statistics Command for Previous 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identification of the ont interface index

Resource Identifier	Type	Description
	Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	
interval-num	Parameter type: <Gpon::IntervalNo> Format: - a number of a previous interval number - range: [1...32]	identifies prev 15min intvls, val 1 as the latest intvl

Command Output

Table 151.67-2 "Voice Gpon POTS Call Statistics Command for Previous 15 Minutes" Display parameters

Specific Information		
name	Type	Description
setup-fails	Parameter type: <Counter> - 32 bit counter	count of call setup failures during this interval <i>This element is always shown.</i>
setup-timer	Parameter type: <Counter> - 32 bit counter	count of longest duration of a single call setup detected during this interval <i>This element is always shown.</i>
terminate-fails	Parameter type: <Counter> - 32 bit counter	count of call terminate failures during this interval <i>This element is always shown.</i>
releases	Parameter type: <Counter> - 32 bit counter	count of the analog port releases without dialing during this interval <i>This element is always shown.</i>
off-hook-timer	Parameter type: <Counter> - 32 bit counter	count of longest period of a single off-hook detected on the analog port during this interval <i>This element is always shown.</i>

151.68 GPON Ont Sip Status Command

Command Description

This command retrieves the actual operational data from an ONT VoIP configuration.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont sip-config operational-data [ (sip-index) ]
```

Command Parameters

Table 151.68-1 "GPON Ont Sip Status Command" Resource Parameters

Resource Identifier	Type	Description
(sip-index)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId>) Possible values: - ont:ng2 : ngpon2 ont - ont : ont Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Gpon::IpHostId> - iphost id Field type <Ng2::IpHostId> - iphost id (ngpon2)	SIP ONT index

Command Output

Table 151.68-2 "GPON Ont Sip Status Command" Display parameters

Specific Information		
name	Type	Description
sip-status	Parameter type: <Gpon::SipStatus> (init connected icmp malfunc inadeq-resp timeout unknown no-support) Possible values: - init : ok/initial - connected : connected - icmp : failed with icmp error - malfunc : malformed response - inadeq-resp : failed with inadequate info response - timeout : failed because of a timeout - unknown : olt cannot communicate with ont for omci discovery purposes - no-support : means that ont does not support this info	indicates the current status of the SIP agent. <i>This element is always shown.</i>

151.69 Voice Gpon SIP Agent Statistics Command for Current 15 Minutes

Command Description

This command allows the operator to show the Gpon SIP Agent Performance Statistics for current 15 minutes interval.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont sip-agent statistics current-15min [ (ont-idx) ]
```

Command Parameters

Table 151.69-1 "Voice Gpon SIP Agent Statistics Command for Current 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId>) Possible values: - ont:ng2 : ngpon2 ont - ont : ont Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId>	ONT index

Resource Identifier	Type	Description
	- the NG2 ONT identifier Field type <Gpon::IpHostID> - iphost id Field type <Ng2::IpHostID> - iphost id (ngpon2)	

Command Output

Table 151.69-2 "Voice Gpon SIP Agent Statistics Command for Current 15 Minutes" Display parameters

Specific Information		
name	Type	Description
transactions	Parameter type: <Counter> - 32 bit counter	a count of number of new transactions that were initiated during this interval. <i>This element is always shown.</i>
rx-invite-reqs	Parameter type: <Counter> - 32 bit counter	a count of number of received invite messages, including retransmissions during this interval. <i>This element is always shown.</i>
rx-invite-retrans	Parameter type: <Counter> - 32 bit counter	a count of number of received invite retransmission messages during this interval. <i>This element is always shown.</i>
rx-non-invite-reqs	Parameter type: <Counter> - 32 bit counter	a count of number of received non-invite messages, including retransmissions during this interval. <i>This element is always shown.</i>
rx-non-invites-retrans	Parameter type: <Counter> - 32 bit counter	a count of number of received non-invite retransmission messages during this interval. <i>This element is always shown.</i>
rx-responses	Parameter type: <Counter> - 32 bit counter	a count of number of total responses received during this interval. <i>This element is always shown.</i>
rx-response-retrans	Parameter type: <Counter> - 32 bit counter	a count of number of total response retransmissions received during this interval. <i>This element is always shown.</i>
tx-invite-reqs	Parameter type: <Counter> - 32 bit counter	a count of number of transmitted invite messages, including retransmissions during this interval. <i>This element is always shown.</i>
tx-invite-retrans	Parameter type: <Counter> - 32 bit counter	a count of number of transmitted invite retransmission messages during this interval. <i>This element is always shown.</i>
tx-non-invite-reqs	Parameter type: <Counter> - 32 bit counter	a count of number of transmitted non-invite messages, including retransmissions during this interval. <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
tx-non-invite-retrans	Parameter type: <Counter> - 32 bit counter	a count of number of transmitted non-invite retransmission messages during this interval. <i>This element is always shown.</i>
tx-responses	Parameter type: <Counter> - 32 bit counter	a count of number of total responses transmitted during this interval. <i>This element is always shown.</i>
tx-responses-retrans	Parameter type: <Counter> - 32 bit counter	a count of number of total response retransmissions transmitted during this interval. <i>This element is always shown.</i>

151.70 Voice Gpon SIP Call Statistics Command for Current 15 Minutes

Command Description

This command allows the operator to show the Gpon SIP Call Performance Statistics for current 15 minutes interval.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont sip-call statistics current-15min [ (ont-idx) ]
```

Command Parameters

Table 151.70-1 "Voice Gpon SIP Call Statistics Command for Current 15 Minutes" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId>) Possible values: - ont:ng2 : ngpon2 ont - ont : ont Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId>	ONT index

Resource Identifier	Type	Description
	- the NG2 ONT identifier Field type <Gpon::IpHostID> - iphost id Field type <Ng2::IpHostID> - iphost id (ngpon2)	

Command Output

Table 151.70-2 "Voice Gpon SIP Call Statistics Command for Current 15 Minutes" Display parameters

Specific Information		
name	Type	Description
connect-fails	Parameter type: <Counter> - 32 bit counter	a count of number of times the SIP user agent failed to reach/connect its TCP/UDP peer during SIP call initiation. <i>This element is always shown.</i>
validate-fails	Parameter type: <Counter> - 32 bit counter	a count of number of times the SIP user agent failed to validate its peer during SIP call initiation. <i>This element is always shown.</i>
time-outs	Parameter type: <Counter> - 32 bit counter	a count of number of times the SIP user agent timed out during SIP call initiations. <i>This element is always shown.</i>
rx-fails	Parameter type: <Counter> - 32 bit counter	a count of number of times the SIP user agent received a failure error code during SIP call initiations. <i>This element is always shown.</i>
auth-fails	Parameter type: <Counter> - 32 bit counter	a count of number of times the SIP user agent failed to authenticate itself during SIP call initiations. <i>This element is always shown.</i>

151.71 Voice ONT Operational data for pots line profile download status Command

Command Description

This command retrieves the actual pots line profile download status from an ONT

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont voip-pip-prof operational-data input-profile [ (uni-index) ]
```

Command Parameters

Table 151.71-1 "Voice ONT Operational data for pots line profile download status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier	unique ont pots line index

Resource Identifier	Type	Description
	Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Command Output

Display parameters**

Specific Information		
name	Type	Description
status:device	Parameter type: <Gpon::Part1ProfVersion> (null <Gpon::Part1ProfVersion>) Possible values: - null : ONT reported that no version was reported Field type <Gpon::Part1ProfVersion> - part one of profile status	Retrieval of the pots line device profile download status <i>This element is always shown.</i>
status:application	Parameter type: <Gpon::Part2ProfVersion> (null <Gpon::Part2ProfVersion>) Possible values: - null : ONT reported that no version was reported Field type <Gpon::Part2ProfVersion> - part two of profile status	Retrieval of the pots line application profile download status <i>This element is always shown.</i>
status:user	Parameter type: <Gpon::Part3ProfVersion> (null <Gpon::Part3ProfVersion>) Possible values: - null : ONT reported that no version was reported Field type <Gpon::Part3ProfVersion> - part three of profile status	Retrieval of the pots line user profile download status <i>This element is always shown.</i>

151.72 Voice ONT Operational data for voip client profile download status Command

Command Description

This command retrieves the actual voip client profile download status from an ONT

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice ont voip-vip-prof operational-data input-profile [ (voip-index) ]
```

Command Parameters

Table 151.72-1 "Voice ONT Operational data for voip client profile download status Command" Resource Parameters

Resource Identifier	Type	Description
(voip-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / 1 ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / 1) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - 1 : Gpon voip Port Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier	a unique voip service index

Resource Identifier	Type	Description
	Possible values: - 1 : Gpon voip Port	

Command Output

name	Type	Description
status:anchor	Parameter type: <Gpon::Part1ProfVersion> (null <Gpon::Part1ProfVersion>) Possible values: - null : ONT reported that no version was reported Field type <Gpon::Part1ProfVersion> - part one of profile status	Retrieval of the voip client anchor profile download status <i>This element is always shown.</i>
status:localnet	Parameter type: <Gpon::Part2ProfVersion> (null <Gpon::Part2ProfVersion>) Possible values: - null : ONT reported that no version was reported Field type <Gpon::Part2ProfVersion> - part two of profile status	Retrieval of the voip client local network profile download status <i>This element is always shown.</i>

151.73 Voice extline Status Commands

Command Description

This command allows the operator to show the Voice extline profile.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show voice extline [(if-index)]

Command Parameters

Table 151.73-1 "Voice extline Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the extension line

Command Output

Table 151.73-2 "Voice extline Status Commands" Display parameters

Specific Information		
name	Type	Description
local-port	Parameter type: <ExtLine::ExtLinePort> - the extension line local port - range: [1...65534]	The local port of the extension line <i>This element is always shown.</i>
oper-status	Parameter type: <ExtLine::ExtLineOperStatus> (up down) Possible values: - up : the status of the termination opera is up - down : the status of the termination is down	the operational status of application server <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <ExtLine::ExtLineOpDownReason>	the reason of operational status of

151 Voice Status Commands

name	Type	Description
	(physicalfailure) Possible values: - : the term opera status down reason is none - physicalfailure : the term opera status down reason is physical failure	application server is down <i>This element is always shown.</i>

151.74 Voice pseudo wire Status Commands

Command Description

This command allows the operator to show the pseudo wire profile.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show voice pseudo-wire [ (if-index) ]
```

Command Parameters

Table 151.74-1 "Voice pseudo wire Status Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the pseudo wire

Command Output

Table 151.74-2 "Voice pseudo wire Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <PwEncapTdm::OperStatus> (up down) Possible values: - up : the status of the pseudo wire opera is up - down : the status of the pseudo wire is down	the operational status of pseudo wire <i>This element is always shown.</i>
operstatus-downreason	Parameter type: <PwEncapTdm::OpDownReason> (los-signal ais-signal	the reason of operational status of pseudo wire is down <i>This element is always shown.</i>

151 Voice Status Commands

name	Type	Description
	rai-signal packet-loss remote-packet-loss no-dsp-resource board-unreachable establishing pw-connection-failure) Possible values: - : The pseudo wire opera status down reason is none - los-signal : The pseudo wire opera status down reason is los-signal - ais-signal : The received packet payload is discarded. The configurable \"idle code\" is played out on reception DS0 channels instead - rai-signal : The received packet payload (TDM data) is played out on reception DS0 channels - packet-loss : Pseudo wire is out of service due to package loss - remote-packet-loss : Pseudo wire is out of service due to remote package loss - no-dsp-resource : Pseudowire could not be established due to lack of DSP resources - board-unreachable : Pseudowire operational status could not be retrieved due to board communication failure - establishing : Pseudo wire is out of service as there is no RTP received after Pseudo wire's admin-status changed as UP - pw-connection-failure : Pseudo wire is out of service as pseudo wire keep establishing(8) status for (20000 + pwEncapTdmPacketizationIntv * normal_state_threshold) millisecond	

151.75 Voice pseudo wire udp port Commands

Command Description

This command allows the operator to show the pseudo wire source udp port.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

> show voice pseudo-wire-src-port [(if-index)]

Command Parameters

Table 151.75-1 "Voice pseudo wire udp port Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The unique internal identifier of the pseudo wire

Command Output

Table 151.75-2 "Voice pseudo wire udp port Commands" Display parameters

Specific Information		
name	Type	Description
shared-ip-mode	Parameter type: <PwEncapTdm::SrcUDPPort> - the source udp port of pseudo wire - range: [49152...65535]	The pw Shared ip mode udp port of the pseudo wire <i>This element is always shown.</i>
distinct-ip-mode	Parameter type: <PwEncapTdm::SrcUDPPort> - the source udp port of pseudo wire - range: [49152...65535]	the pw distributed ip mode udp port of the pseudo wire <i>This element is always shown.</i>

152- Epon Ont Status Command

152.1 Epon Ont Status Command Tree	152-6557
152.2 ONT Interface Status Command	152-6558
152.3 Epon Ont Voice media gateway Status Command	152-6560
152.4 Epon Ont Voice Sip UserAgent Status Command	152-6562

152.1 Epon Ont Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Epon Ont Status Command".

Command Tree

```
----show
  ----voice
    ----eont
      ----operdata
        - (epon-idx)
      ----media-gateway
        - (ont-idx)
      ----sip-useragent
        - (ont-idx)
```

152.2 ONT Interface Status Command

Command Description

this command reports current operational parameters for the ont.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice eont operdata [ (epon-idx) ]
```

Command Parameters

Table 152.2-1 "ONT Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	identification of EPON ont

Command Output

Table 152.2-2 "ONT Interface Status Command" Display parameters

Specific Information		
name	Type	Description
mac-addr	Parameter type: <Epon::MacAddr> - mac-address (example : 01:02:03:04:05:06) - length: 6	mac address of the iad <i>This element is always shown.</i>
voice-protocol	Parameter type: <Epon::ProtoInfo> (h248 sip notsupport unknown)	voip protocol used by iad <i>This element is always shown.</i>

name	Type	Description
	Possible values: - h248 : h.248 - sip : SIP - notsupport : NOTSUPPORT - unknown : UNKNOWN	
sw-ver-iad	Parameter type: <Epon::EponMnemonic32> - an octet string defining mnemonic of EPON - length: 1<=x<=32	software version used by iad <i>This element is always shown.</i>
swad-time	Parameter type: <Epon::EponMnemonic32> - an octet string defining mnemonic of EPON - length: 1<=x<=32	iad software version time <i>This element is always shown.</i>
pots-num	Parameter type: <Epon::Int32> - a signed integer	number of the pots line in the iad <i>This element is always shown.</i>

152.3 Epon Ont Voice media gateway Status Command

Command Description

This command displays EPON ONT voice media gateway operation status.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice eont media-gateway [ (ont-idx) ]
```

Command Parameters

Table 152.3-1 "Epon Ont Voice media gateway Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	Ont Index

Command Output

Table 152.3-2 "Epon Ont Voice media gateway Status Command" Display parameters

Specific Information		
name	Type	Description
actual-mgc	Parameter type: <Epon::proxy> (secondary primary unknown) Possible values:	current active media gateway controller <i>This element is always shown.</i>

name	Type	Description
	- secondary : Secondary - primary : Primary - unknown : Unknown	
actual-tid-num	Parameter type: <Epon::TidNum> - Number of rtp tid - range: [0...255]	The RTP tid number gets from iad <i>This element is always shown.</i>
first-tid-name	Parameter type: <Epon::TidName> - tid name - length: 1<=x<=32	First RTP tid name in the iad. <i>This element is always shown.</i>
iad-operation	Parameter type: <Epon::iadMode> (registering registersuccess iad-failure deregister iad-reset) Possible values: - registering : - registersuccess : - iad-failure : - deregister : - iad-reset :	IAD operation mode. <i>This element is always shown.</i>

152.4 Epon Ont Voice Sip UserAgent Status Command

Command Description

This command displays EPON ONT sip user agent operation status.

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

> show voice eont sip-useragent [(ont-idx)]

Command Parameters

Table 152.4-1 "Epon Ont Voice Sip UserAgent Status Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	Ont Index

Command Output

Table 152.4-2 "Epon Ont Voice Sip UserAgent Status Command" Display parameters

Specific Information		
name	Type	Description
active-proxy	Parameter type: <Epon::proxy> (secondary primary unknown) Possible values:	indicate which sip proxy is in use <i>This element is always shown.</i>

name	Type	Description
	- secondary : Secondary - primary : Primary - unknown : Unknown	

153- Show Epon Ont Pots Command

153.1 Show Epon Ont Pots Command Tree	153-6565
153.2 Epon Ont Pots Information Command	153-6566
153.3 Epon Ont Pots Statistics Command	153-6569

153.1 Show Epon Ont Pots Command Tree

Description

This chapter gives an overview of nodes that are handled by "Show Epon Ont Pots Command".

Command Tree

```
----show
  ----voice
    ----eont
      ----pots
        ----information
          - (uni-idx)
        ----statistics
          - (uni-idx)
```

153.2 Epon Ont Pots Information Command

Command Description

This command displays information of a specific Ont Pots Port

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

> show voice eont pots information [(uni-idx)]

Command Parameters

Table 153.2-1 "Epon Ont Pots Information Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlot> / <Epon::EontPort> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlot> - Epon Ont Slot - range: [1...16] Field type <Epon::EontPort> - Epon Ont Port - range: [1...64]	ONT UNI interface

Command Output

Table 153.2-2 "Epon Ont Pots Information Command" Display parameters

Specific Information		
name	Type	Description
port-state	Parameter type: <Epon::PortState> (registering	pots port state <i>This element is always shown.</i>

name	Type	Description
	idle offhook dialing ringing ringback connecting connected disconnecting regfail inactive) Possible values: - registering : - idle : - offhook : - dialing : - ringing : - ringback : - connecting : - connected : - disconnecting : - regfail : - inactive :	
service-state	Parameter type: <Epon::ServState> (endlocal endremote endauto normal) Possible values: - endlocal : operator disable the port - endremote : MGC command end the port - endauto : auto end caused by MGC failure - normal : in service status	pots port service state <i>This element is always shown.</i>
codec-mode	Parameter type: <Epon::CodecMode> (g711a g729 g711u g723 g726 t38 unknown) Possible values: - g711a : - g729 : - g711u : - g723 : - g726 : - t38 : - unknown :	pots port coding mode <i>This element is always shown.</i>
echo-cancel	Parameter type: <Epon::EchoCancel> (enable disable) Possible values: - enable : echo cancel enable - disable : echo cancel disable	pots port echo cancel <i>This element is always shown.</i>
reversed-polarity	Parameter type: <Epon::ReversedPolarity> (enable disable)	pots port reversed polarity <i>This element is always shown.</i>

153 Show Epon Ont Pots Command

name	Type	Description
	Possible values: - enable : reversed polarity enable - disable : reversed polarity disable	
tx-gain	Parameter type: <Epon::Gain> - gain - range: [-20...20]	pots port TX gain <i>This element is always shown.</i>
rx-gain	Parameter type: <Epon::Gain> - gain - range: [-20...20]	pots port RX gain <i>This element is always shown.</i>

153.3 Epon Ont Pots Statistics Command

Command Description

This command displays statistics of a specific Ont Pots Port

User Level

The command can be accessed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> show voice eont pots statistics [ (uni-idx) ]
```

Command Parameters

Table 153.3-1 "Epon Ont Pots Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlot> / <Epon::EontPort> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlot> - Epon Ont Slot - range: [1...16] Field type <Epon::EontPort> - Epon Ont Port - range: [1...64]	ONT UNI interface

Command Output

Table 153.3-2 "Epon Ont Pots Statistics Command" Display parameters

Specific Information		
name	Type	Description
start-time	Parameter type: <Sip::SipTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	pots port statistics start time <i>This element is always shown.</i>

153 Show Epon Ont Pots Command

name	Type	Description
rtcp-frames-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction on a ont pots port <i>This element is always shown.</i>
rtcp-frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction on a ont pots port <i>This element is always shown.</i>
rtcp-mean-delay	Parameter type: <Epon::MeanDelay> - mean delay - range: [0...65535]	RTCP packets total mean delay on a ont pots port <i>This element is always shown.</i>
rtcp-mean-jitter	Parameter type: <Epon::MeanJitter> - mean jitter - range: [0...65535]	RTCP packets total mean jitter on a ont pots port <i>This element is always shown.</i>
rtcp-losspkt-ration	Parameter type: <Epon::Ration> - ration - range: [0...100]	the total loss ration of lost RTCP packets on a ont pots port <i>This element is always shown.</i>

154- Voice LSA Server System Status Commands

154.1 Voice LSA Server System Status Command Tree	154-6572
154.2 Voice LSA Server System Status Commands	154-6573

154.1 Voice LSA Server System Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Voice LSA Server System Status Commands".

Command Tree

```
----show
  ----voice
    ----lsa-system
      ----state
        - (name)
```

154.2 Voice LSA Server System Status Commands

Command Description

This command allows the operator to show the Voice Sip LSA Server system profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

> show voice lsa-system state [(name)]

Command Parameters

Table 154.2-1 "Voice LSA Server System Status Commands" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - uniquely identify this LSA server system - length: 1<=x<=32	uniquely identify this LSA server system

Command Output

Table 154.2-2 "Voice LSA Server System Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <LSA::SystemOperStatus> (up down) Possible values: - up : the status of the LSA server system opera is up - down : the status of the LSA server system opera is down	the operational status of LSA server system <i>This element is always shown.</i>

155- Voice LSA Server Instance Status Commands

155.1 Voice LSA Server Instance Status Command Tree	155-6575
155.2 Voice LSA Server Instance Status Commands	155-6576

155.1 Voice LSA Server Instance Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Voice LSA Server Instance Status Commands".

Command Tree

```
----show
  ----voice
    ----lsa-instance
      ----state
        - (name)
```

155.2 Voice LSA Server Instance Status Commands

Command Description

This command allows the operator to show the Voice Sip LSA Server Instance profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

> show voice lsa-instance state [(name)]

Command Parameters

Table 155.2-1 "Voice LSA Server Instance Status Commands" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - uniquely identify this LSA server instance - length: 1<=x<=32	uniquely identify this LSA server instance

Command Output

Table 155.2-2 "Voice LSA Server Instance Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <LSA::InstanceOperStatus> (up down) Possible values: - up : the status of the LSA server instance opera is up - down : the status of the LSA server instance opera is down	the operational status of LSA server instance <i>This element is always shown.</i>

156- Voice LSA Server Emergency Status Commands

156.1 Voice LSA Server Emergency Status Command Tree	156-6578
156.2 Voice LSA Server System Status Commands	156-6579

156.1 Voice LSA Server Emergency Status

Command Tree

Description

This chapter gives an overview of nodes that are handled by "Voice LSA Server Emergency Status Commands".

Command Tree

```
----show
  ----voice
    ----lsa-emergency
      ----state
        - dn
        - gateway-dn
```

156.2 Voice LSA Server System Status Commands

Command Description

This command allows the operator to show the Voice Sip LSA Server system profile.

User Level

The command can be accessed by operators with sip privileges.

Command Syntax

The command has the following syntax:

```
> show voice lsa-emergency state [ dn <LSA::Dn> ] [ gateway-dn <LSA::GtwyDn> ]
```

Command Parameters

Table 156.2-1 "Voice LSA Server System Status Commands" Resource Parameters

Resource Identifier	Type	Description
dn	Parameter type: <LSA::Dn> Format: - emergency service directory number - length: 1<=x<=8	emergency service directory number
gateway-dn	Parameter type: <LSA::GtwyDn> Format: - directory number only includes the subscriber number to which the emergency call is to be addressed. - length: 1<=x<=32	directory number only includes the subscriber number to which the emergency call is to be addressed

Command Output

Table 156.2-2 "Voice LSA Server System Status Commands" Display parameters

Specific Information		
name	Type	Description
oper-status	Parameter type: <LSA::EmergStatus> (not-registered available busy detected-busy) Possible values: - not-registered : the emergency service center addressed by the emergency service DN is not registered to the LSA server. - available : the emergency service center addressed by the emergency service DN is registered to the LSA server.No emergency call is actually routed to the emergency service	the operational status of LSA emergency service <i>This element is always shown.</i>

156 Voice LSA Server Emergency Status Commands

name	Type	Description
	centar. - busy : the emergency service center is actually occupied as an emergency call is actually being forwarded by the LSA server to the emergency service center. - detected-busy : the emergency service center is temporary unavailable	

157- L2CP Status Commands

157.1 L2CP Status Command Tree	157-6582
157.2 L2CP Status Command	157-6583
157.3 L2CP Status Command	157-6585
157.4 L2CP Status Command	157-6587
157.5 L2CP Partition Status Command	157-6588

157.1 L2CP Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "L2CP Status Commands".

Command Tree

```
----show
  ----l2cp
    ----session-status
      - (index)
    ----session-peers
      - (index)
    ----session-stats
      - (index)
    ----partition
      - (partition-id)
      - user-port
```

157.2 L2CP Status Command

Command Description

This command allows the operator to display the L2CP session status.

It shows the status of the GSMP Adjacency Protocol.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show l2cp session-status [ (index) ]
```

Command Parameters

Table 157.2-1 "L2CP Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - identity of the l2cp session - range: [1...255]	index to the l2cp session table

Command Output

Table 157.2-2 "L2CP Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <L2cp::State> (null sync-sent sync-rcvd estab) Possible values: - null : null state - sync-sent : sync sent state - sync-rcvd : sync received state - estab : established state	state of the l2cp session <i>This element is always shown.</i>
gsmp-version	Parameter type: <L2cp::Version> - version of the GSMP protocol - range: [3]	version of gsmp protocol <i>This element is always shown.</i>
gsmp-sub-version	Parameter type: <L2cp::SubVersion> - sub version of the GSMP protocol - range: [1...2]	sub version of gsmp protocol <i>This element is always shown.</i>
topo-discovery	Parameter type: <L2cp::AccessTopologyDiscovery>	access topology discovery is

157 L2CP Status Commands

name	Type	Description
short name: topo-disc	((disabled no) (enabled yes)) Possible values: - disabled : no topology discovery - no : no topology discovery - enabled : topology discovery - yes : topology discovery	supported <i>This element is always shown.</i>
layer2-oam short name: l2-oam	Parameter type: <L2cp::Layer2OAM> ((disabled no) (enabled yes)) Possible values: - disabled : no layer2 oam - no : no layer2 oam - enabled : layer2 oam - yes : layer2 oam	layer2 OAM is supported <i>This element is always shown.</i>
sec-since-system-up	Parameter type: <L2cp::UpTime> - a signed integer	the value of sysUpTime when the session came to established state. <i>This element is always shown.</i>
bras-ip-address	Parameter type: <L2cp::InetAddress> - IPv4-address	IPv4 address used for the GSMP session peer <i>This element is always shown.</i>

157.3 L2CP Status Command

Command Description

This command allows the operator to display the L2CP session peers.

This command shows the identity of the peers.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show l2cp session-peers [ (index) ]
```

Command Parameters

Table 157.3-1 "L2CP Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - identity of the l2cp session - range: [1...255]	index to the l2cp session table

Command Output

Table 157.3-2 "L2CP Status Command" Display parameters

Specific Information		
name	Type	Description
dslam-name	Parameter type: <L2cp::DslamName> - a mac-address (example : 01:02:03:04:05:06) - length: 6	the name of the DSLAM <i>This element is always shown.</i>
bras-name	Parameter type: <L2cp::DslamName> - a mac-address (example : 01:02:03:04:05:06) - length: 6	the name of the BRAS <i>This element is always shown.</i>
router-instance	Parameter type: <Ihub::RouterVplsMgnt> (base vpls-management <Ihub::L2cpRouter>) Possible values: - base : base router - vpls-management : vpls-management router Field type <Ihub::L2cpRouter> - vprn service-id - range: [1...2147483646]	router-instance containing own IP address and route table to be used for the connectivity to the GSMP peer. <i>This element is always shown.</i>
dslam-ip-address	Parameter type: <L2cp::InetAddress>	IPv4 address used for the GSMP

157 L2CP Status Commands

name	Type	Description
	- IPv4-address	session peer <i>This element is always shown.</i>
bras-ip-address	Parameter type: <L2cp::InetAddress> - IPv4-address	IPv4 address used for the GSMP session peer <i>This element is always shown.</i>
dslam-instance	Parameter type: <L2cp::Instance> - identity of the instance - range: [0...16777215]	instance number used by the DSLAM during this session. <i>This element is always shown.</i>
bras-instance	Parameter type: <L2cp::Instance> - identity of the instance - range: [0...16777215]	instance number used by the BRAS during this session. <i>This element is always shown.</i>

157.4 L2CP Status Command

Command Description

This command allows the operator to display the L2CP session statistics.

The operator may also want to see real activity by checking traffic counters for L2CP messages via this show command.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show l2cp session-stats [ (index) ]
```

Command Parameters

Table 157.4-1 "L2CP Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - identity of the l2cp session - range: [1...255]	index to the l2cp session table

Command Output

Table 157.4-2 "L2CP Status Command" Display parameters

Specific Information		
name	Type	Description
sent-msgs	Parameter type: <Counter> - 32 bit counter	number of messages that have been sent in this session <i>This element is always shown.</i>
rcvd-valid-msgs	Parameter type: <Counter> - 32 bit counter	number of messages that have been received and processed in this session <i>This element is always shown.</i>
discarded-msgs	Parameter type: <Counter> - 32 bit counter	number of messages that in this session have been received and discarded. <i>This element is always shown.</i>

157.5 L2CP Partition Status Command

Command Description

This command lists the interfaces associated to a given partition in the Dslam. This command will not list the interfaces associated to the default partition 0.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show l2cp partition [ (partition-id) [ user-port <Itf::XdslShdslLine> ] ]
```

Command Parameters

Table 157.5-1 "L2CP Partition Status Command" Resource Parameters

Resource Identifier	Type	Description
(partition-id)	Format: - partition id - range: [1...127]	partition id
user-port	Parameter type: <Itf::XdslShdslLine> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

158- Ethernet Lt Configuration Data Status

Commands

158.1 Ethernet Lt Configuration Data Status Command Tree	158-6590
158.2 Ethernet Port Interface Configuration Status Command	158-6591
158.3 Ethernet IGMP Configuration Status Command	158-6593
158.4 Ethernet Security PAE Configuration Status Command	158-6596
158.5 Ethernet BridgePort Configuration Status Command	158-6599
158.6 Ethernet QoS Configuration Status Command	158-6603

158.1 Ethernet Lt Configuration Data Status

Command Tree

Description

This chapter gives an overview of nodes that are handled by "Ethernet Lt Configuration Data Status Commands".

Command Tree

```
----show
  ----config-data-port
    - (if-index)
  ----interface-port
  ----igmp
    - (port)
  ----security-pae
    - (port)
  ----bridge-port
    - (port)
  ----qos
```

158.2 Ethernet Port Interface Configuration Status Command

Command Description

This command displays the Ethernet port interface configuration data.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show config-data-port (if-index) interface-port
```

Command Parameters

Table 158.2-1 "Ethernet Port Interface Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 158.2-2 "Ethernet Port Interface Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <Eth::EthAdminStatus> (not-applicable up down testing) Possible values: - not-applicable : not-applicable	the state of the interface <i>This element is always shown.</i>

158 Ethernet Lt Configuration Data Status Commands

name	Type	Description
	- up : admin status is up - down : admin status is down - testing : no operational packets can be passed	
link-updown-trap	Parameter type: <Itf::ifLinkUpDownTrapEnable> ((link-updown-trap enabled) (no-link-updown-trap disabled)) Possible values: - link-updown-trap : enable link-up/link-down traps - enabled : enable link-up/link-down traps - no-link-updown-trap : disable link-up/link-down traps - disabled : disable link-up/link-down traps	indicates whether link-up/link-down traps are generated <i>This element is always shown.</i>
user	Parameter type: <Itf::asamIfExtCustomerId> - a string identifying the customer or user - length: x<=64	description of the user connected to this interface <i>This element is always shown.</i>
severity	Parameter type: <Itf::asamIfExtAlmReportingSeverity> (indeterminate warning minor major critical no-alarms default no-value) Possible values: - indeterminate : not a definite known severity - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking - no-alarms : do not report alarm - default : take default as specified via Interface Alarm Configuration command - no-value : no entry in the table	severity for alarm to be reported <i>This element is always shown.</i>
port-type	Parameter type: <Itf::asamIfPortType> (uni nni hc-uni uplink) Possible values: - uni : uni port type - nni : nni port type - hc-uni : hicap uni port type - uplink : uplink port type	the port type <i>This element is always shown.</i>

158.3 Ethernet IGMP Configuration Status

Command

Command Description

This command displays the Ethernet IGMP configuration data.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show config-data-port (if-index) igmp [ (port) ]
```

Command Parameters

Table 158.3-1 "Ethernet IGMP Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	identification of the port or virtual channel

Resource Identifier	Type	Description
	vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	

Resource Identifier	Type	Description
	Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 158.3-2 "Ethernet IGMP Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
perm-pkg-bitmap	Parameter type: <Igmp::PermPkgBitMap> - a binary string - length: 128	packages, the user is allowed to join <i>This element is only shown in detail mode.</i>
max-num-group	Parameter type: <Igmp::ChannelMaxNumGroup> - Max group number this port can support.The value depends on the board type and port type,please refer to the product information document for detail. - range: [0...2048]	max group number this port <i>This element is only shown in detail mode.</i>

158.4 Ethernet Security PAE Configuration Status Command

Command Description

This command displays the Ethernet security PAE configuration data.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show config-data-port (if-index) security-pae [ (port) ]
```

Command Parameters

Table 158.4-1 "Ethernet Security PAE Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	identification of the port or virtual channel

Resource Identifier	Type	Description
	- the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE	

Command Output

Table 158.4-2 "Ethernet Security PAE Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
controlled-port	Parameter type: <Aaa::PaeControlledPortControl> (force-unauthorized auto force-authorized) Possible values: - force-unauthorized : force unauthorized control - auto : automatic control - force-authorized : force authorized control	current value of the controlled Port <i>This element is always shown.</i>
quiet-period	Parameter type: <Aaa::paeQuitTime> - quietPeriod - unit: sec - range: [0...65535]	quietPeriod constant currently used, value in seconds <i>This element is always shown.</i>
tx-period	Parameter type: <Aaa::paeTime> - authentication time - unit: sec - range: [1...65535]	txPeriod constant currently used, value in seconds <i>This element is always shown.</i>
supp-timeout	Parameter type: <Aaa::paeTime> - authentication time - unit: sec - range: [1...65535]	suppTimeout constant currently used, value in seconds <i>This element is always shown.</i>
server-timeout	Parameter type: <Aaa::paeTime> - authentication time - unit: sec - range: [1...65535]	serverTimeout constant currently used, value in seconds <i>This element is always shown.</i>
max-req	Parameter type: <Aaa::paeMaxReq> - max number of requests - range: [1...10]	maxReq constant currently used <i>This element is always shown.</i>
authentication	Parameter type: <Aaa::PortAuthState> (authentication	enable 802.1x authentication <i>This element is always shown.</i>

158 Ethernet Lt Configuration Data Status Commands

name	Type	Description
	no-authen) Possible values: - authentication : enable 802.1x authentication - no-authen : disable 802.1x authentication	
init-authreq-off	Parameter type: <Aaa::PortAuthReq> (initiate-authreq init-authreq-off) Possible values: - initiate-authreq : enable initiate authentication request to supplicant - init-authreq-off : disable initiate authentication request to supplicant	specify initiate authentication request to supplicant <i>This element is always shown.</i>
handshake	Parameter type: <Aaa::PortHandShakeMode> (handshake no-handshake) Possible values: - handshake : enable handshake for this port - no-handshake : disable handshake for this port	enable handshake for this port <i>This element is always shown.</i>
handshake-period	Parameter type: <Aaa::PortHandShakePeriod> - handshake time interval - unit: sec - range: [5...90]	specify the handshake time interval <i>This element is always shown.</i>
initialize	Parameter type: <Aaa::InitCont> (initialize no-initialize) Possible values: - initialize : initialize this port - no-initialize : don't initialize this port	initialization control for this port <i>This element is always shown.</i>

158.5 Ethernet BridgePort Configuration Status Command

Command Description

This command displays the Bridge Port configured data.

User Level

The command can be accessed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> show config-data-port (if-index) bridge-port [ (port) ]
```

Command Parameters

Table 158.5-1 "Ethernet BridgePort Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl) Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	identification of the port or virtual channel

Command Output

Table 158.5-2 "Ethernet BridgePort Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
pvid	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	default vlan id for untagged frames <i>This element is only shown in detail mode.</i>
default-priority	Parameter type: <Vlan::Priority> - priority of ethernet frames - range: [0...7]	priority to be set in upstream frames <i>This element is only shown in detail mode.</i>
mac-learn-off	Parameter type: <Vlan::learnStatus> (mac-learning mac-learn-off) Possible values: - mac-learning : enable self learning of mac address - mac-learn-off : disable self learning of mac address	self learning of mac address <i>This element is only shown in detail mode.</i>
max-unicast-mac	Parameter type: <Vlan::MaxMac> - number of unicast mac addresses - range: [1...65535]	max unicast mac addresses <i>This element is only shown in detail mode.</i>
accept-frame-type	Parameter type: <Vlan::VlanFrameTypes> (single-tagged untagged mixed-tagged) Possible values: - single-tagged : admit only vlan tagged - untagged : admit only vlan untagged - mixed-tagged : admit vlan tagged and vlan untagged	accept frame types <i>This element is only shown in detail mode.</i>
prio-regen-prof	Parameter type: <Vlan::PrioRegenProfile> (none trusted-port best-effort cl-all-prio-3 cl-all-prio-4 background be-cl-voice be-cl-1d-voice be-voice l2-vpn-3 l2-vpn-4 11 12 13 14 15 16 17 18 19	priority regeneration profile <i>This element is only shown in detail mode.</i>

name	Type	Description
	20 21 22 23 24 25 26 27 28 29 30 31 32) Possible values: - none : default value - trusted-port : trusted port - best-effort : best effort - cl-all-prio-3 : controlled load, all priority 3 traffic - cl-all-prio-4 : controlled load, all priority 4 traffic - background : background - be-cl-voice : best effort, controlled load, voice - be-cl-1d-voice : best effort, controlled load, 802.Id Annex G voice - be-voice : best effort voice - l2-vpn-3 : L2 VPN with 3 traffic classes - l2-vpn-4 : L2 VPN with 4 traffic classes - 11 : operator-defined profile - 12 : operator-defined profile - 13 : operator-defined profile - 14 : operator-defined profile - 15 : operator-defined profile - 16 : operator-defined profile - 17 : operator-defined profile - 18 : operator-defined profile - 19 : operator-defined profile - 20 : operator-defined profile - 21 : operator-defined profile - 22 : operator-defined profile - 23 : operator-defined profile - 24 : operator-defined profile - 25 : operator-defined profile - 26 : operator-defined profile - 27 : operator-defined profile - 28 : operator-defined profile - 29 : operator-defined profile - 30 : operator-defined profile - 31 : operator-defined profile - 32 : operator-defined profile	
prio-regen-name	Parameter type: <Vlan::PrioRegenProfileName> (none name : <Vlan::IgnoredVlanProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software.	priority regeneration profile name <i>This element is only shown in detail mode.</i>

158 Ethernet Lt Configuration Data Status Commands

name	Type	Description
	The currently allowed values can be shown with online-help.	
qos-profile	Parameter type: <Vlan::QosProfileName> (none name : <Vlan::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <Vlan::IgnoredQosProfileName> - name of the QoS profile - length: 1<=x<=64	qos profile name <i>This element is always shown.</i>

158.6 Ethernet QoS Configuration Status

Command

Command Description

This command displays the Ethernet QoS configuration data.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

> show config-data-port (if-index) qos

Command Parameters

Table 158.6-1 "Ethernet QoS Configuration Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 158.6-2 "Ethernet QoS Configuration Status Command" Display parameters

Specific Information		
name	Type	Description
scheduler-profile	Parameter type: <Qos::QosSchedulerProfileName> (none name : <Qos::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Data driven field type	the name of the scheduler profile to be mapped on this dsl link3 <i>This element is only shown in detail mode.</i>

158 Ethernet Lt Configuration Data Status Commands

name	Type	Description
	Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	
cac-profile	Parameter type: <Qos::QosCacProfileName> (name : <Qos::IgnoredQosProfileName> none) Possible values: - none : no profile name to associated - name : enter profile name to be associated Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	the name of the cac profile to be mapped on this dsl link3 <i>This element is only shown in detail mode.</i>

159- Ethernet Status Commands

159.1 Ethernet Status Command Tree	159-6606
159.2 Interface MAU Status Command	159-6608

159.2 Interface MAU Status Command

Command Description

This command displays the Ethernet MAU parameters.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet mau [ (if-index) [ index <Transport::Index> ] ]
```

Command Parameters

Table 159.2-1 "Interface MAU Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the mau
index	Parameter type: <Transport::Index> Format: - port to which the MAU is connected - range: [1...2147483647]	identify MAU, among others connected to same interface

Command Output

Table 159.2-2 "Interface MAU Status Command" Display parameters

Specific Information		
name	Type	Description
type	Parameter type: <Ether::MAUType> (10baset 100basetxhd 100basetxfd 100basefxhd 100basefxfd	Specifies the MAU type. If the MAU type is unknown, then unknown MAU type will be returned. If the MAU is a link or fiber type then media-available is equivalent to the link test fail

name	Type	Description
	1000basexhd 1000basexfd 1000baselxhd 1000baselxfd 1000basesxhd 1000basesxfd 1000basethd 1000basetfd 10gbasex 10gbaser 10gbaseer 10gbaselr 10gbasesr 1000basebx10d 1000basebx10u 1000baselx10 1000basebx10d 1000basebx10u 1000baselx10 2500basex 10gbasetfd unknown) Possible values: - 10baset : UTP 10M - 100basetxhd : UTP 100M half duplex - 100basetxfd : UTP 100M full duplex - 100basefxhd : X fiber over PMT half duplex - 100basefxfd : X fiber over PMT full duplex - 1000basexhd : PCS/PMA,unknown PMD, half duplex - 1000basexfd : PCS/PMA,unknown PMD, full duplex - 1000baselxhd : fiber over long-wavelength laser half duplex - 1000baselxfd : fiber over long-wavelength laser full duplex - 1000basesxhd : fiber over short-wavelength laser half duplex - 1000basesxfd : fiber over short-wavelength laser full duplex - 1000basethd : UTP 1G half duplex - 1000basetfd : UTP 1G full duplex - 10gbasex : fiber 10G ethernet, PCS 8B/10B - 10gbaser : fiber 10G ethernet, PCS 64B/66B - 10gbaseer : fiber 10G ethernet extended reach, 30km - 10gbaselr : fiber 10G ethernet long reach, 10km - 10gbasesr : fiber 10G ethernet short reach, 300m - 1000basebx10d : one single-mode fiber OLT long wavelength, 10km, 100 base - 1000basebx10u : one single-mode fiber ONU, long wavelength, 10km, 100 base - 1000baselx10 : two single-mode fibers over long wavelength, 10km, 100 base - 1000basebx10d : one single-mode fiber OLT over long wavelength, 10km, 1000 base - 1000basebx10u : one single-mode fiber ONU over long wavelength, 10km, 1000 base - 1000baselx10 : two single-mode fibers over long wavelength, 10km, 1000 base - 2500basex : single-mode fibers, 2.5G base	state/low light function. For an AUI or a coax (including broadband) MAU this indicates whether or not loopback is detected on the DI circuit. The value of this attribute persists between packets for MAU types AUI, 10BASE5, 10BASE2, 10BROAD36, and 10BASE-FP. <i>This element is always shown.</i>

159 Ethernet Status Commands

name	Type	Description
	- 10gbasetfd : UTP 10G full duplex - unknown : unknown type	
media-available	Parameter type: <Transport::MauAvailable> (other unknown available not-available remote-fault invalid-signal remote-jabber remote-link-loss remote-test off-line auto-neg-error) Possible values: - other : MAU in other state - unknown : MAU's true state is unknown - available : - not-available : MAU is fully functional - remote-fault : power down - invalid-signal : reset the MAU - remote-jabber : power down - remote-link-loss : power down - remote-test : power down - off-line : power down - auto-neg-error : power down	Specifies whether the media is available for the MAU or not. <i>This element is always shown.</i>
jabber-state	Parameter type: <Transport::MauJabber> (other unknown no-jabber jabbering) Possible values: - other : if not in any state - unknown : MAU's true state is unknown - no-jabber : MAU not jabbering - jabbering : MAU is jabbering	The jabber-state indicates whether this entity is jabbering, not jabbering, unknown or other state. <i>This element is always shown.</i>
b100basefxfd	Parameter type: <Ether::B100BaseFXFD> (yes no) Possible values: - yes : 100basefxfd supported - no : 100basefxfd not supported	X fiber over PMT full duplex <i>This element is only shown in detail mode.</i>
b100baselx10	Parameter type: <Ether::B100BaseLX10> (yes no) Possible values: - yes : 100baselx10 supported - no : 100baselx10 not supported	two single-mode fibers over long wavelength, 10km, 100 base <i>This element is only shown in detail mode.</i>
b100basebx10d	Parameter type: <Ether::B100BaseBX10D> (yes no) Possible values: - yes : 100basebx10d supported - no : 100basebx10d not supported	one single-mode fiber OLT long wavelength, 10km, 100 base <i>This element is only shown in detail mode.</i>
b100basebx10u	Parameter type: <Ether::B100BaseBX10U> (yes no)	one single-mode fiber ONU, long wavelength, 10km, 100 base <i>This element is only shown in</i>

name	Type	Description
	Possible values: - yes : 100basebx10u supported - no : 100basebx10u not supported	<i>detail mode.</i>
b100basetxfd	Parameter type: <Ether::B100BaseTXFD> (yes no) Possible values: - yes : 100basetxfd supported - no : 100basetxfd not supported	UTP 100M full duplex <i>This element is only shown in detail mode.</i>
b1000basetfd	Parameter type: <Ether::B1000BaseTFD> (yes no) Possible values: - yes : 1000basetfd supported - no : 1000basetfd not supported	UTP 1G full duplex <i>This element is only shown in detail mode.</i>
b10gbasetfd	Parameter type: <Ether::B10GBaseTFD> (yes no) Possible values: - yes : 10gbasetfd supported - no : 10gbasetfd not supported	UTP 10G full duplex <i>This element is only shown in detail mode.</i>
b1000basesxfd	Parameter type: <Ether::B1000BaseSXF> (yes no) Possible values: - yes : 1000basesxfd supported - no : 1000basesxfd not supported	fiber over short-wavelength laser full duplex <i>This element is only shown in detail mode.</i>
b1000baselx10	Parameter type: <Ether::B1000BaseLX10> (yes no) Possible values: - yes : 1000baselx10 supported - no : 1000baselx10 not supported	two single-mode fibers over long wavelength, 10km, 1000 base <i>This element is only shown in detail mode.</i>
b1000baselxfd	Parameter type: <Ether::B1000BaseLXFD> (yes no) Possible values: - yes : 1000baselxfd supported - no : 1000baselxfd not supported	fiber over long-wavelength laser full duplex <i>This element is only shown in detail mode.</i>
b1000basebx10u	Parameter type: <Ether::B1000BaseBX10U> (yes no) Possible values: - yes : 1000basebx10u supported - no : 1000basebx10u not supported	one single-mode fiber ONU over long wavelength, 10km, 1000 base <i>This element is only shown in detail mode.</i>
b1000basebx10d	Parameter type: <Ether::B1000BaseBX10D> (yes no) Possible values: - yes : 1000basebx10d supported - no : 1000basebx10d not supported	one single-mode fiber OLT over long wavelength, 10km, 1000 base <i>This element is only shown in detail mode.</i>
b10gbaser	Parameter type: <Ether::B10GBaseR> (yes no) Possible values: - yes : 10GbaseR supported - no : 10GbaseR not supported	two single-mode fiber 10G base <i>This element is only shown in detail mode.</i>

159 Ethernet Status Commands

name	Type	Description
b10gbaselr	Parameter type: <Ether::B10GBaseLR> (yes no) Possible values: - yes : 10GbaseLR supported - no : 10GbaseLR not supported	two single-mode fiber 10km 10G base <i>This element is only shown in detail mode.</i>
b10gbaseer	Parameter type: <Ether::B10GBaseER> (yes no) Possible values: - yes : 10GbaseER supported - no : 10GbaseER not supported	two single-mode fiber 30km 10G base <i>This element is only shown in detail mode.</i>
b2500basex	Parameter type: <Ether::B2500BaseX> (yes no) Possible values: - yes : b2500BaseX supported - no : b2500BaseX not supported	single-mode fiber 2.5G base <i>This element is only shown in detail mode.</i>
auto-neg-supported	Parameter type: <Ether::TruthValue> (true false) Possible values: - true : autonegotiation is supported - false : autonegotiation is not supported	Specifies whether or not auto-negotiation is supported on this MAU. <i>This element is always shown.</i>
auto-neg-status	Parameter type: <Ether::AutoNegStatus> (other configuring complete disabled paralleldetectfail) Possible values: - other : unknown auto-negotiation status - configuring : auto-negotiation still ongoing - complete : auto-negotiation completed - disabled : auto-negotiation disabled - paralleldetectfail : parallel detection failed	Displays the auto-negotiation status of this MAU. <i>This element is always shown.</i>
cap100base-tfd	Parameter type: <Ether::ACAP_100BaseTFD> (yes no) Possible values: - yes : 100BaseTFD supported - no : 100BaseTFD not supported	electrical 100M full duplex autonegotiation capable <i>This element is only shown in detail mode.</i>
cap1000base-xfd	Parameter type: <Ether::ACAP_1000BaseXFD> (yes no) Possible values: - yes : 1000BaseXFD supported - no : 1000BaseXFD not supported	optical 1G full duplex autonegotiation capable <i>This element is only shown in detail mode.</i>
cap1000base-tfd	Parameter type: <Ether::ACAP_1000BaseTFD> (yes no) Possible values: - yes : 1000BaseTFD supported - no : 1000BaseTFD not supported	electrical 1G full duplex autonegotiation capable <i>This element is only shown in detail mode.</i>
cap10gbase-tfd	Parameter type: <Ether::ACAP_10GBaseTFD> (yes no)	electrical 10G full duplex autonegotiation capable <i>This element is only shown in</i>

name	Type	Description
	Possible values: - yes : 10gBaseTFD supported - no : 10gBaseTFD not supported	<i>detail mode.</i>

159.3 SFP status commands

Command Description

This command displays the Ethernet SFP parameters

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet sfp [ (if-index) [ index <Transport::Index> ] ]
```

Command Parameters

Table 159.3-1 "SFP status commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the sfp
index	Parameter type: <Transport::Index> Format: - port to which the MAU is connected - range: [1...2147483647]	identify sfp, among others connected to same interface

Command Output

Table 159.3-2 "SFP status commands" Display parameters

Specific Information		
name	Type	Description
sfp-status	Parameter type: <Transport::SFPstatus> (operational-up interface-down no-nokia-label los type-mismatch	identifies the status of the sfp <i>This element is always shown.</i>

name	Type	Description
	local-power-off brother-power-off active-power-off) Possible values: - operational-up : SFP is operational up - interface-down : SFP is not plugged in, interface is down - no-nokia-label : SFP is plugged in but in power down because no Nokia label - los : SFP is plugged in but detected LOS.Note:if ALS enabled,when RX is LOS,disable TX.when RX out of LOS,enable TX. if ALS disabled,always enable TX - type-mismatch : SFP real type mismatch with configured type - local-power-off : local SFP power off since temperature over - brother-power-off : brother SFP power off since temperature over - active-power-off : SFP power down actively by operator	
sfp-inventory	Parameter type: <Transport::SFPinventory> - specification of Sfp inventory. - length: 1<=x<=128	indicates the information of the sfp vendor <i>This element is only shown in detail mode.</i>

159.4 Ethernet Counters Near End Line Current 15 Min

Command Description

- Represents for the current interval the FCS failure count.*
- Represents for the current interval the frame too Long count.*
- Represents for interval MAC sublayer transmit error.*
- Represents for interval MAC sublayer receive error.*
- Measured in seconds, that statistics for this entry have been counted.*
- Indicates the validity of the corresponding PM data.*
- Store the time interval.*

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

- The command has the following syntax:
- > show ethernet counters near-end line current-interval [(if-index)]

Command Parameters

Table 159.4-1 "Ethernet Counters Near End Line Current 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 159.4-2 "Ethernet Counters Near End Line Current 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	Represents for the current 15 minute interval the LOS failure count <i>This element is always shown.</i>
fcs	Parameter type: <Counter> - 32 bit counter	Represents for the current 15 minute interval the FCS failure count <i>This element is always shown.</i>
too-long	Parameter type: <Counter> - 32 bit counter	Represents for the current 15 minute interval the frame too Long count <i>This element is always shown.</i>
mac-trans	Parameter type: <Counter> - 32 bit counter	Represents for the internal MAC sublayer transmit error <i>This element is always shown.</i>
mac-rec	Parameter type: <Counter> - 32 bit counter	Represents for the internal MAC sublayer receive error <i>This element is always shown.</i>
in-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes received <i>This element is only shown in detail mode.</i>
in-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets received <i>This element is only shown in detail mode.</i>
in-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets received <i>This element is only shown in detail mode.</i>
in-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total discarded packets at receive <i>This element is only shown in detail mode.</i>
in-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at receive <i>This element is only shown in detail mode.</i>
out-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes transmitted <i>This element is only shown in detail mode.</i>
out-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets transmitted <i>This element is only shown in detail mode.</i>
out-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets transmitted <i>This element is only shown in detail mode.</i>
out-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets discarded at transmit <i>This element is only shown in detail mode.</i>
out-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at transmit

159 Ethernet Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
mea-time	Parameter type: <ETHITF::MeaTime> - the specification of measuredtime - range: [0...86400]	Measured in seconds, that statistics for this entry have been counted <i>This element is always shown.</i>
inv-data-flag	Parameter type: <ETHITF::DataFlag> - the specification of invalid-data-flag - range: [0...1]	Indicates the validity of the corresponding PM data <i>This element is always shown.</i>
val-int	Parameter type: <ETHITF::Val15m> - the specification of validintervals - range: [0...96]	Store the time interval <i>This element is always shown.</i>

159.5 Ethernet Counters Near End Line Current Day

Command Description

Represents for the current 1day the FCS failure count.

Represents for the current 1 day the frame too Long count.

Represents for 1day MAC sublayer transmit error.

Represents for 1dayl MAC sublayer receive error.

Measured in seconds, that statistics for this entry have been counted.

Indicates the validity of the corresponding PM data.

Store the time interval.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

> show ethernet counters near-end line current-1day [(if-index)]

Command Parameters

Table 159.5-1 "Ethernet Counters Near End Line Current Day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 159.5-2 "Ethernet Counters Near End Line Current Day" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	Represents for the current 1day the LOS failure count <i>This element is always shown.</i>
fcs	Parameter type: <Counter> - 32 bit counter	Represents for the current 1day the FCS failure count <i>This element is always shown.</i>
too-long	Parameter type: <Counter> - 32 bit counter	Represents for the current 1 day the frame too Long count <i>This element is always shown.</i>
mac-trans	Parameter type: <Counter> - 32 bit counter	Represents for 1day MAC sublayer transmit error <i>This element is always shown.</i>
mac-rec	Parameter type: <Counter> - 32 bit counter	Represents for 1day MAC sublayer receive error <i>This element is always shown.</i>
in-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes received <i>This element is only shown in detail mode.</i>
in-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets received <i>This element is only shown in detail mode.</i>
in-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets received <i>This element is only shown in detail mode.</i>
in-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total discarded packets at receive <i>This element is only shown in detail mode.</i>
in-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at receive <i>This element is only shown in detail mode.</i>
out-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes transmitted <i>This element is only shown in detail mode.</i>
out-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets transmitted <i>This element is only shown in detail mode.</i>
out-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets at transmit <i>This element is only shown in detail mode.</i>
out-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets discarded at transmit <i>This element is only shown in detail mode.</i>
out-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at transmit <i>This element is only shown in detail mode.</i>
mea-time	Parameter type: <ETHIF::MeaTime>	Measured in seconds, that

name	Type	Description
	- the specification of measuredtime - range: [0...86400]	statistics for this entry have been counted <i>This element is always shown.</i>
inv-data-flag	Parameter type: <ETHITF::DataFlag> - the specification of invalid-data-flag - range: [0...1]	Indicates the validity of the corresponding PM data <i>This element is always shown.</i>
val-day	Parameter type: <ETHITF::Val1day> - the specification of 1day-valid-intervals - range: [0...30]	Store the time interval <i>This element is always shown.</i>

159.6 Ethernet Counters Near End Line Previous 15 Min

Command Description

Represents for the previous interval the FCS failure count.

Represents for the previous interval the frame too Long count.

Represents for previous interval MAC sublayer transmit error.

Represents for previous interval MAC sublayer receive error.

Measured in seconds, that statistics for this entry have been counted.

Indicates the validity of the corresponding PM data.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet counters near-end line previous-interval [ (if-index) [ interval-no  
<ETHITF::IntervalNumber15min> ] ]
```

Command Parameters

Table 159.6-1 "Ethernet Counters Near End Line Previous 15 Min" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <ETHITF::IntervalNumber15min> Format: - the specification of 15min-interval-number - range: [1...96]	15 minute interval number

Command Output

Table 159.6-2 "Ethernet Counters Near End Line Previous 15 Min" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	Represents for the previous 15 minute interval the LOS failure count <i>This element is always shown.</i>
fcs	Parameter type: <Counter> - 32 bit counter	Represents for the previous 15 minute interval the FCS failure count <i>This element is always shown.</i>
too-long	Parameter type: <Counter> - 32 bit counter	Represents for the previous 15 minute interval the frame too Long count <i>This element is always shown.</i>
mac-trans	Parameter type: <Counter> - 32 bit counter	Represents for the internal MAC sublayer transmit error <i>This element is always shown.</i>
mac-rec	Parameter type: <Counter> - 32 bit counter	Represents for the internal MAC sublayer receive error <i>This element is always shown.</i>
in-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes received <i>This element is only shown in detail mode.</i>
in-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets received <i>This element is only shown in detail mode.</i>
in-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets received <i>This element is only shown in detail mode.</i>
in-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total discarded packets at receive <i>This element is only shown in detail mode.</i>
in-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at receive <i>This element is only shown in detail mode.</i>
out-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes transmitted <i>This element is only shown in detail mode.</i>
out-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets transmitted <i>This element is only shown in detail mode.</i>
out-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets transmitted <i>This element is only shown in detail mode.</i>
out-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets discarded at transmit <i>This element is only shown in detail mode.</i>

159 Ethernet Status Commands

name	Type	Description
out-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at transmit <i>This element is only shown in detail mode.</i>
mea-time	Parameter type: <ETHITF::MeaTime> - the specification of measuredtime - range: [0...86400]	Measured in seconds, that statistics for this entry have been counted <i>This element is always shown.</i>
inv-data-flag	Parameter type: <ETHITF::DataFlag> - the specification of invalid-data-flag - range: [0...1]	Indicates the validity of the corresponding PM data <i>This element is always shown.</i>

159.7 Ethernet Counters Near End Line Previous Day

Command Description

Represents for the previous 1day the FCS failure count.

Represents for the previous 1 day the frame too Long count.

Represents for previous 1day MAC sublayer transmit error.

Represents for previous 1day MAC sublayer receive error.

Measured in seconds, that statistics for this entry have been counted.

Indicates the validity of the corresponding PM data.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet counters near-end line previous-1day [ (if-index) [ interval-no <ETHITF::IntervalNumber1day> ] ]
```

Command Parameters

Table 159.7-1 "Ethernet Counters Near End Line Previous Day" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
interval-no	Parameter type: <ETHITF::IntervalNumber1day> Format: - the specification of 1day-interval-number - range: [1...30]	1 day interval number

Command Output

Table 159.7-2 "Ethernet Counters Near End Line Previous Day" Display parameters

Specific Information		
name	Type	Description
los	Parameter type: <Counter> - 32 bit counter	Represents for the previous 1day the LOS failure count <i>This element is always shown.</i>
fcs	Parameter type: <Counter> - 32 bit counter	Represents for the previous 1day the FCS failure count <i>This element is always shown.</i>
too-long	Parameter type: <Counter> - 32 bit counter	Represents for the previous 1day the frame too Long count <i>This element is always shown.</i>
mac-trans	Parameter type: <Counter> - 32 bit counter	Represents for the Previous 1 day MAC sublayer transmit error <i>This element is always shown.</i>
mac-rec	Parameter type: <Counter> - 32 bit counter	Represents for the previous 1day MAC sublayer receive error <i>This element is always shown.</i>
in-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes received <i>This element is only shown in detail mode.</i>
in-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets received <i>This element is only shown in detail mode.</i>
in-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets received <i>This element is only shown in detail mode.</i>
in-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total discarded packets at receive <i>This element is only shown in detail mode.</i>
in-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at receive <i>This element is only shown in detail mode.</i>
out-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total bytes transmitted <i>This element is only shown in detail mode.</i>
out-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets transmitted <i>This element is only shown in detail mode.</i>
out-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored packets transmitted <i>This element is only shown in detail mode.</i>
out-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total packets discarded at transmit <i>This element is only shown in detail mode.</i>
out-drop-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	Represents for the total errored and discarded packets at transmit <i>This element is only shown in detail mode.</i>

name	Type	Description
		<i>detail mode.</i>
mea-time	Parameter type: <ETHITF::MeaTime> - the specification of measuredtime - range: [0...86400]	Measured in seconds, that statistics for this entry have been counted <i>This element is always shown.</i>
inv-data-flag	Parameter type: <ETHITF::DataFlag> - the specification of invalid-data-flag - range: [0...1]	Indicates the validity of the corresponding PM data <i>This element is always shown.</i>

159.8 Ethernet PM Interval Per Interface Status Command

Command Description

This command displays the number of available pm intervals per ethernet interface.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet eth-int [ (if-index) ]
```

Command Parameters

Table 159.8-1 "Ethernet PM Interval Per Interface Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

	- a signed integer	data has been stored <i>This element is always shown.</i>
valid-1days	Parameter type: <SignedInteger> - a signed integer	nbr of prev 1Days for which valid data has been stored <i>This element is always shown.</i>

159.9 Ethernet Lt Dot3 Status Command

Command Description

This command displays the statistics for a collection of Ethernet-like interfaces attached to a particular system. There will be one row in this table for each Ethernet-like interface in the system. The parameter stats-index gives an index value that uniquely identifies an interface to an Ethernet-like medium.

The alignment-error parameter gives a count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC.

The fcs-error parameter gives a count of frames received on a particular interface that are an integral number of octets in length, but do not pass the FCS check. This count does not include frames received with frame-too-long or frame-too-short error. The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC.

The internal-mac-tx-error parameter gives a count of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the late collisions object, the excessive collisions object, or the carrier sense errors object. The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted.

The internal-mac-rx-error parameter gives a count of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the frame toolongs object, the alignment errors object, or the FCS errors object. The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of receive errors on a particular interface that are not otherwise counted.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet dot3stats [ (stats-index) ]
```

Command Parameters

159.10 Ethernet RMON Counters Status Command

Command Description

This command displays the statistics for a collection of Ethernet-like interfaces attached to a particular system. There will be one row in this table for each Ethernet-like interface in the system. The parameter stats-index gives an index value that uniquely identifies an interface to an Ethernet-like medium.

The alignment-error parameter gives a count of frames received on a particular interface that are not an integral number of octets in length and do not pass the FCS check. The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the LLC. This counter does not increment for 8-bit wide group encoding schemes. Discontinuities in the value of this counter can occur at re-initialization of the management system.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet etherstats [ (stats-index) ]
```

Command Parameters

Table 159.10-1 "Ethernet RMON Counters Status Command" Resource Parameters

Resource Identifier	Type	Description
(stats-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> lt-link : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::LtBackPlPortId>) Possible values: - lt : lt-slot - lt-link : lt-slot-port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::LtBackPlPortId> - the lt backplane port number	index of the interface to an ethernet-like medium

Command Output

Table 159.10-2 "Ethernet RMON Counters Status Command" Display parameters

Specific Information		
name	Type	Description
entry-status	Parameter type: <ETHIF::CounterEntryStatus> (valid invalid) Possible values: - valid : counters for this ifIndex are valid - invalid : entry represents one of the device's addresses	The status of the entry. Valid indicates the counters have actual values, invalid means the counters are unreliable. <i>This element is always shown.</i>
drop-events	Parameter type: <Counter32> - 64 bit counter	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected. <i>This element is only shown in detail mode.</i>
broadcast-pkts	Parameter type: <Counter32> - 64 bit counter	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets. <i>This element is only shown in detail mode.</i>
multicast-pkts	Parameter type: <Counter32> - 64 bit counter	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address. <i>This element is only shown in detail mode.</i>
oversize-pkts	Parameter type: <Counter32> - 64 bit counter	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets). <i>This element is only shown in detail mode.</i>
undersize-pkts	Parameter type: <Counter32> - 64 bit counter	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) <i>This element is only shown in detail mode.</i>
fragments	Parameter type: <Counter32> - 64 bit counter	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). <i>This element is only shown in detail mode.</i>

159 Ethernet Status Commands

name	Type	Description
jabbers	Parameter type: <Counter32> - 64 bit counter	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). <i>This element is only shown in detail mode.</i>
packets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of packets (including bad packets, broadcast packets, and multicast packets) received. <i>This element is always shown.</i>
octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). <i>This element is always shown.</i>
total-64-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets). <i>This element is only shown in detail mode.</i>
total-65to127-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets). <i>This element is only shown in detail mode.</i>
total-128to255-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets). <i>This element is only shown in detail mode.</i>
total-256to511-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets). <i>This element is only shown in detail mode.</i>
total-512to1023-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of packets (including bad packets) received that were between 512 and 1023

name	Type	Description
		octets in length inclusive (excluding framing bits but including FCS octets). <i>This element is only shown in detail mode.</i>
total-1024to1518-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets). <i>This element is only shown in detail mode.</i>

159.11 Ethernet Statistics Line Status Command

Command Description

This command allow the operator to display the ethernet line counter statistics.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet statistics line [ (if-index) ]
```

Command Parameters

Table 159.11-1 "Ethernet Statistics Line Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the ethernet line

Command Output

Table 159.11-2 "Ethernet Statistics Line Status Command" Display parameters

Specific Information		
name	Type	Description
in-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the total number of octets received on the interface,including framing characters <i>This element is always shown.</i>
in-discard-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a

name	Type	Description
		higher-layer protocol. <i>This element is only shown in detail mode.</i>
in-ucast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-nucast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	for packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. <i>This element is only shown in detail mode.</i>
in-bcast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
in-mcast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. <i>This element is only shown in detail mode.</i>
pkts-unknown-proto	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	for packet-oriented interfaces, the number of packets received via the interface which were discarded because of an unknown or unsupported protocol. <i>This element is only shown in detail mode.</i>
out-octets	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the total number of octets transmitted out of the interface, including framing characters. <i>This element is always shown.</i>
out-disc-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. <i>This element is only shown in</i>

159 Ethernet Status Commands

name	Type	Description
		<i>detail mode.</i>
out-ucast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-nucast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast or broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-err-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	for packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. <i>This element is only shown in detail mode.</i>
out-mcast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer. <i>This element is only shown in detail mode.</i>
out-bcast-pkts	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer. <i>This element is only shown in detail mode.</i>

159.12 Ethernet Ont Port Operational Status Command

Command Description

This command reports current operational parameters for the ONT Ethernet

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet ont operational-data [ (uni-idx) ]
```

Command Parameters

Table 159.12-1 "Ethernet Ont Port Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	identification of the uni interface index

Specific Information		
name	Type	Description
loop-status	Parameter type: <Gpon::loopback> (loopback no-loopback) Possible values: - loopback : enable UNI port loopback mode - no-loopback : disable UNI port loopback mode	indication of loopback status of the ethernet uni <i>This element is always shown.</i>
timeout-value	Parameter type: <Gpon::loopbackTimeout> - loopback time, zero means no-timeout for loopback - unit: sec - range: [0...43200]	configured timeout value for loopback mode of the ethernet uni <i>This element is always shown.</i>
loop-remaining time	Parameter type: <Gpon::loopbackTimeout> - loopback time, zero means no-timeout for loopback - unit: sec - range: [0...43200]	remaining time before loopback removed automatically <i>This element is always shown.</i>

159.16 Epon Ont Ethernet Status Command

Command Description

This command displays epon ont Ethernet port operational status.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet eont port
```

159.17 Epon Ont Ethernet Port Information Command

Command Description

This command displays information of a specific Ont Ethernet Port

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet eont port information [ (uni-index) ]
```

Command Parameters

Table 159.17-1 "Epon Ont Ethernet Port Information Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlot> / <Epon::EontPort> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlot> - Epon Ont Slot - range: [1...16] Field type <Epon::EontPort> - Epon Ont Port - range: [1...64]	ONT UNI interface

Command Output

Table 159.17-2 "Epon Ont Ethernet Port Information Command" Display parameters

Specific Information		
name	Type	Description
audetect-oper	Parameter type: <Epon::AutoDetect> (enable disable) Possible values: - enable : enable auto negotiation - disable : disable auto negotiation	operational state of the auto negotiation <i>This element is always shown.</i>

Only Show Details: auto negotiation operational state		
name	Type	Description
global-oper	Parameter type: <Epon::global> (yes no) Possible values: - yes : global supported - no : global not supported	operational state of auto negotiation global <i>This element is only shown in detail mode.</i>
other-oper	Parameter type: <Epon::other> (yes no) Possible values: - yes : other supported - no : other not supported	operational state of auto negotiation other <i>This element is only shown in detail mode.</i>
unkown-oper	Parameter type: <Epon::unkown> (yes no) Possible values: - yes : unknown supported - no : unknown not supported	operational state of auto negotiation unknown <i>This element is only shown in detail mode.</i>
autoneg10t-oper	Parameter type: <Epon::autoneg10t> (yes no) Possible values: - yes : 10t supported - no : 10t not supported	operational state of auto negotiation 10t <i>This element is only shown in detail mode.</i>
autoneg10tfd-oper	Parameter type: <Epon::autoneg10tfd> (yes no) Possible values: - yes : 10tfd supported - no : 10tfd not supported	operational state of auto negotiation 10tfd <i>This element is only shown in detail mode.</i>
autoneg100t4-oper	Parameter type: <Epon::autoneg100t4> (yes no) Possible values: - yes : 100t4 supported - no : 100t4 not supported	operational state of auto negotiation 100t4 <i>This element is only shown in detail mode.</i>
autoneg100tx-oper	Parameter type: <Epon::autoneg100tx> (yes no) Possible values: - yes : 100tx supported - no : 100tx not supported	operational state of auto negotiation 100tx <i>This element is only shown in detail mode.</i>
autoneg100txfd-oper	Parameter type: <Epon::autoneg100txfd> (yes no) Possible values: - yes : 100txfd supported - no : 100txfd not supported	operational state of auto negotiation 100txfd <i>This element is only shown in detail mode.</i>

name	Type	Description
autoneg100t2-oper	Parameter type: <Epon::autoneg100t2> (yes no) Possible values: - yes : 100t2 supported - no : 100t2 not supported	operational state of auto negotiation 100t2 <i>This element is only shown in detail mode.</i>
autoneg100t2fd-oper	Parameter type: <Epon::autoneg100t2fd> (yes no) Possible values: - yes : 100t2fd supported - no : 100t2fd not supported	operational state of auto negotiation 100t2fd <i>This element is only shown in detail mode.</i>
autoneg1000x-oper	Parameter type: <Epon::autoneg1000x> (yes no) Possible values: - yes : 1000x supported - no : 1000x not supported	operational state of auto negotiation 1000x <i>This element is only shown in detail mode.</i>
autoneg1000xfd-oper	Parameter type: <Epon::autoneg1000xfd> (yes no) Possible values: - yes : 1000xfd supported - no : 1000xfd not supported	operational state of auto negotiation 1000xfd <i>This element is only shown in detail mode.</i>
autoneg1000t-oper	Parameter type: <Epon::autoneg1000t> (yes no) Possible values: - yes : 1000t supported - no : 1000t not supported	operational state of auto negotiation 1000t <i>This element is only shown in detail mode.</i>
autoneg1000tfd-oper	Parameter type: <Epon::autoneg1000tfd> (yes no) Possible values: - yes : 1000tfd supported - no : 1000tfd not supported	operational state of auto negotiation 1000tfd <i>This element is only shown in detail mode.</i>
fdxpause-oper	Parameter type: <Epon::fdxpause> (yes no) Possible values: - yes : fdxpause supported - no : fdxpause not supported	operational state of auto negotiation fdxpause <i>This element is only shown in detail mode.</i>
fdxapause-oper	Parameter type: <Epon::fdxapause> (yes no) Possible values: - yes : fdxapause supported - no : fdxapause not supported	operational state of auto negotiation fdxapause <i>This element is only shown in detail mode.</i>
fdxspause-oper	Parameter type: <Epon::fdxspause> (yes no) Possible values: - yes : fdxspause supported - no : fdxspause not supported	operational state of auto negotiation fdxspause <i>This element is only shown in detail mode.</i>
fdxbpause-oper	Parameter type: <Epon::fdxbpause> (yes no)	operational state of auto negotiation fdxbpause <i>This element is only shown in</i>

159 Ethernet Status Commands

name	Type	Description
	Possible values: - yes : fdxbpause supported - no : fdxbpause not supported	<i>detail mode.</i>
remfault1-oper	Parameter type: <Epon::remfault1> (yes no) Possible values: - yes : remfault1 supported - no : remfault1 not supported	operational state of auto negotiation remfault1 <i>This element is only shown in detail mode.</i>
remfault2-oper	Parameter type: <Epon::remfault2> (yes no) Possible values: - yes : remfault2 supported - no : remfault2 not supported	operational state of auto negotiation remfault2 <i>This element is only shown in detail mode.</i>
isoethernet-oper	Parameter type: <Epon::isoethernet> (yes no) Possible values: - yes : isoethernet supported - no : isoethernet not supported	operational state of auto negotiation isoethernet <i>This element is only shown in detail mode.</i>

159.18 Epon Ont Ethernet Port Fdb Command

Command Description

This command displays Fdb table of Ont Ethernet Port

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet eont port fdb [ (uni-idx) [ vlan <Vlan::Index> ] [ mac-address <Vlan::MacAddr> ] ]
```

Command Parameters

Table 159.18-1 "Epon Ont Ethernet Port Fdb Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlotId> / <Epon::EontPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlotId> - Epon Ont Slot Field type <Epon::EontPortId> - Epon Ont Port	ONT UNI interface
vlan	Parameter type: <Vlan::Index> Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndexStacked> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndexStacked>	user vlan on an ont ethernet port

Resource Identifier	Type	Description
	- service vlan identity - range: [1...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	
mac-address	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	mac address on an ont ethernet port

Command Output

Table 159.18-2 "Epon Ont Ethernet Port Fdb Command" Display parameters

Specific Information		
name	Type	Description
status	Parameter type: <Vlan::FdbEntryStatus> (other invalid learned self static) Possible values: - other : entry does not determine the forwarding of frames - invalid : entry is being removed - learned : entry has been learned dynamically - self : entry represents one of the device's addresses - static : entry has been configured by a manager	Fdb entry status on an ont ethernet port <i>This element is always shown.</i>

159.19 Epon Ont Ethernet Status Command

Command Description

This command indicates the Epon performance counters of an ont ethernet Port.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet eont tc-layer
```

159.20 Epon Ont Ethernet Current 15min Status Command

Command Description

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet eont tc-layer current-15min [ (uni-idx) ]
```

Command Parameters

Table 159.20-1 "Epon Ont Ethernet Current 15min Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlotId> / <Epon::EontPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlotId> - Epon Ont Slot Field type <Epon::EontPortId> - Epon Ont Port	ONT UNI interface

Command Output

Table 159.20-2 "Epon Ont Ethernet Current 15min Status Command" Display parameters

Specific Information		
name	Type	Description
elapsed-time	Parameter type: <SignedInteger> - a signed integer	Elapsed time in interval <i>This element is always shown.</i>

name	Type	Description
measure-time	Parameter type: <SignedInteger> - a signed integer	Measured time in interval <i>This element is always shown.</i>
octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction <i>This element is always shown.</i>
frames-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in upstream direction <i>This element is always shown.</i>
broadcastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Broadcast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
crcerrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
pauseframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	pause Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
segment1octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment2octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment3octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment4octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment5octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment6octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment7octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction <i>This element is always shown.</i>
frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in downstream direction <i>This element is always shown.</i>
broadcastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Broadcast Frames transferred in downstream direction <i>This element is only shown in</i>

159 Ethernet Status Commands

name	Type	Description
		<i>detail mode.</i>
crcerrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
pauseframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	pause Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
segment1octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment2octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment3octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment4octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment5octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment6octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment7octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
unicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Unicast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
unicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Unicast Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
multicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Multicast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
multicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Multicast Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
drpframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Discard Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>

name	Type	Description
drpframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Discard Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
errframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Error Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
errframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Error Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
undframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
undframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
ovrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
ovrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
statuschange	Parameter type: <Epon::OctetCounter> - Epon Frames counter	port status change times <i>This element is only shown in detail mode.</i>
dropevents-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
dropevents-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
fragments-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
fragments-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
jabberframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>

159.21 Epon Ont Ethernet Current 1Day Status Command

Command Description

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> show ethernet eont tc-layer current-1day [ (uni-idx) ]
```

Command Parameters

Table 159.21-1 "Epon Ont Ethernet Current 1Day Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlotId> / <Epon::EontPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlotId> - Epon Ont Slot Field type <Epon::EontPortId> - Epon Ont Port	ONT UNI interface

Command Output

jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>

159.22 Epon Ont Ethernet Previous 15min Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show ethernet eont tc-layer previous-15min (uni-idx) interval-num [(interval-num)]

Command Parameters

Table 159.22-1 "Epon Ont Ethernet Previous 15min Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlotId> / <Epon::EontPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlotId> - Epon Ont Slot Field type <Epon::EontPortId> - Epon Ont Port	ONT UNI interface
(interval-num)	Format: - Previous interval reference - range: [1...192]	Previous interval reference

Command Output

Table 159.22-2 "Epon Ont Ethernet Previous 15min Status Command" Display parameters

Specific Information

name	Type	Description
measure-time	Parameter type: <SignedInteger> - a signed integer	Measured time in interval <i>This element is always shown.</i>
octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction <i>This element is always shown.</i>
frames-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in upstream direction <i>This element is always shown.</i>
broadcastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Broadcast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
crcerrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
pauseframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	pause Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
segment1octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment2octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment3octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment4octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment5octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment6octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment7octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction <i>This element is always shown.</i>
frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in downstream direction <i>This element is always shown.</i>
broadcastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Broadcast Frames transferred in downstream direction <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
crcerrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
pauseframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	pause Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
segment1octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment2octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment3octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment4octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment5octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment6octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment7octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
unicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Unicast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
unicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Unicast Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
multicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Multicast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
multicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Multicast Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
drpframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Discard Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>

name	Type	Description
drpframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Discard Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
errframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Error Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
errframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Error Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
undframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
undframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
ovrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
ovrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
statuschange	Parameter type: <Epon::OctetCounter> - Epon Frames counter	port status change times <i>This element is only shown in detail mode.</i>
dropevents-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
dropevents-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
fragments-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
fragments-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
jabberframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>

159.23 Epon Ont Ethernet Previous 1day Status Command

Command Description

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> show ethernet eont tc-layer previous-1day (uni-idx) interval-num [(interval-num)]

Command Parameters

Table 159.23-1 "Epon Ont Ethernet Previous 1day Status Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlotId> / <Epon::EontPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlotId> - Epon Ont Slot Field type <Epon::EontPortId> - Epon Ont Port	ONT UNI interface
(interval-num)	Format: - Previous interval reference - range: [1...2]	Previous interval reference

Command Output

Table 159.23-2 "Epon Ont Ethernet Previous 1day Status Command" Display parameters

Specific Information

159 Ethernet Status Commands

name	Type	Description
measure-time	Parameter type: <SignedInteger> - a signed integer	Measured time in interval <i>This element is always shown.</i>
octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in upstream direction <i>This element is always shown.</i>
frames-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in upstream direction <i>This element is always shown.</i>
broadcastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Broadcast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
crcerrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
pauseframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	pause Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
segment1octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment2octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment3octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment4octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment5octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment6octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
segment7octets-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in upstream direction <i>This element is only shown in detail mode.</i>
octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	octets transferred in downstream direction <i>This element is always shown.</i>
frames-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Total Frames transferred in downstream direction <i>This element is always shown.</i>
broadcastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Broadcast Frames transferred in downstream direction <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
crcerrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	CRC error Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
pauseframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	pause Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
segment1octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	64 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment2octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	65-127 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment3octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	128-255 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment4octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	256-511 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment5octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	512-1023 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment6octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1024-1518 Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
segment7octets-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1519+ Octet Frames in downstream direction <i>This element is only shown in detail mode.</i>
unicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Unicast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
unicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Unicast Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
multicastframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Multicast Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
multicastframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Multicast Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
drpframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Discard Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>

159 Ethernet Status Commands

name	Type	Description
drpframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Discard Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
errframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Error Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
errframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	Error Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
undframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
undframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	less than 64 bytes Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
ovrframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames transferred in upstream direction <i>This element is only shown in detail mode.</i>
ovrframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	1526+ Frames transferred in downstream direction <i>This element is only shown in detail mode.</i>
statuschange	Parameter type: <Epon::OctetCounter> - Epon Frames counter	port status change times <i>This element is only shown in detail mode.</i>
dropevents-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
dropevents-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	drop event in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
fragments-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
fragments-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	fragment frames in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
jabberframes-up	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in upstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>
jabberframes-down	Parameter type: <Epon::OctetCounter> - Epon Frames counter	jabber frames in downstream direction on a ONT ethernet port <i>This element is only shown in detail mode.</i>

160- Ethernet Lt Operational Data Status

Commands

160.1 Ethernet Lt Operational Data Status Command Tree	160-6677
160.2 Ethernet Port Operational Status Command	160-6678
160.3 Ethernet BridgePort Operational Status Command	160-6680
160.4 Ethernet Port Interface Operational Status Command	160-6682
160.5 Ethernet IGMP Operational Status Command	160-6684
160.6 Ethernet Port Ip Bridge Operational Status Command	160-6687
160.7 Ethernet QoS Opertaional Status Command	160-6689

160.1 Ethernet Lt Operational Data Status

Command Tree

Description

This chapter gives an overview of nodes that are handled by "Ethernet Lt Operational Data Status Commands".

Command Tree

```
----show
  ----oper-data-port
    - (if-index)
      ----ethernet
      ----bridge-port
        - (port)
      ----interface-port
      ----igmp
        - (port)
      ----ip-bridge-port
        - (ip-bridge-port)
      ----qos
```

160.2 Ethernet Port Operational Status Command

Command Description

This command displays the Ethernet Port Operational data.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

> show oper-data-port (if-index) ethernet

Command Parameters

Table 160.2-1 "Ethernet Port Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 160.2-2 "Ethernet Port Operational Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <If::ifAdminStatus> (not-appl up down testing) Possible values: - not-appl : not-applicable - up : admin status is up - down : admin status is down - testing : no operational packets can be passed	specifies state of the interface <i>This element is only shown in detail mode.</i>

name	Type	Description
opr-state	Parameter type: <ETHITF::combinedCol> (up down testing unknown dormant) Possible values: - up : up,traffic can pass - down : down,no traffic is passing - testing : testing,no traffic is passing - unknown : unknown - dormant : dormant,no traffic is passing	current operational state of the interface. <i>This element is only shown in detail mode.</i>

160.3 Ethernet BridgePort Operational Status Command

Command Description

This command displays the Bridge Port Operational data.

User Level

The command can be accessed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> show oper-data-port (if-index) bridge-port [ (port) ]
```

Command Parameters

Table 160.3-1 "Ethernet BridgePort Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (dsl : <Eqpt::VpiId> : <Eqpt::VciId> dsl) Possible values: - dsl : vdsl board Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	identity of the PVC

Command Output

Table 160.3-2 "Ethernet BridgePort Operational Status Command" Display parameters

Specific Information		
name	Type	Description
pvid	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	default vlan id for untagged frames <i>This element is only shown in detail mode.</i>
default-priority	Parameter type: <Vlan::Priority> - priority of ethernet frames - range: [0...7]	port dynamic or static (if no dynamic) default priority <i>This element is only shown in detail mode.</i>
qos-profile	Parameter type: <Vlan::QosProfileName> (none name : <Vlan::IgnoredQosProfileName>) Possible values: - none : no profile name to associate - name : enter profile name to be associated Field type <Vlan::IgnoredQosProfileName> - name of the QoS profile - length: 1<=x<=64	qos profile name <i>This element is always shown.</i>

160.4 Ethernet Port Interface Operational Status Command

Command Description

This command displays the Ethernet port interface operational data.

User Level

The command can be accessed by operators with transport privileges.

Command Syntax

The command has the following syntax:

> show oper-data-port (if-index) interface-port

Command Parameters

Table 160.4-1 "Ethernet Port Interface Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 160.4-2 "Ethernet Port Interface Operational Status Command" Display parameters

Specific Information		
name	Type	Description
admin-state	Parameter type: <Eth::EthAdminStatus> (not-applicable up down testing) Possible values: - not-applicable : not-applicable	the desired state of the interface <i>This element is always shown.</i>

name	Type	Description
	- up : admin status is up - down : admin status is down - testing : no operational packets can be passed	
oper-state	Parameter type: <If::ifOperStatus> (up down testing unknown dormant no-value) Possible values: - up : up,traffic can pass - down : down,no traffic is passing - testing : testing,no traffic is passing - unknown : unknown - dormant : dormant,no traffic is passing - no-value : no entry in the table	the operational state of the interface <i>This element is only shown in detail mode.</i>

160.5 Ethernet IGMP Operational Status Command

Command Description

This command displays the Ethernet IGMP operational data.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show oper-data-port (if-index) igmp [ (port) ]
```

Command Parameters

Table 160.5-1 "Ethernet IGMP Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::Vpild> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::Vpild> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> :	identification of the port or virtual channel

Resource Identifier	Type	Description
	<Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan.ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId>	

Resource Identifier	Type	Description
	- the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier - the ONT SLOT identifier Field type <Eqpt::OntSlotId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 160.5-2 "Ethernet IGMP Operational Status Command" Display parameters

Specific Information		
name	Type	Description
curr-num-group	Parameter type: <Gauge> - gauge	Indicates the current group number in this port <i>This element is only shown in detail mode.</i>
curr-preview-num	Parameter type: <Counter> - 32 bit counter	Indicates the number of preview multicast group that igmp channel joins currently <i>This element is only shown in detail mode.</i>
curr-uncfg-num	Parameter type: <Counter> - 32 bit counter	Indicates the current unconfig group number in this port <i>This element is only shown in detail mode.</i>

160.6 Ethernet Port Ip Bridge Operational Status Command

Command Description

This command displays the Ethernet Port Ip Bridge Operational data.

User Level

The command can be accessed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> show oper-data-port (if-index) ip-bridge-port [ (ip-bridge-port) ]
```

Command Parameters

Table 160.6-1 "Ethernet Port Ip Bridge Operational Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
(ip-bridge-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	identification of the port or virtual channel

Resource Identifier	Type	Description
	- the shelf number - Field type <Eqpt::SlotId> - the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

Table 160.6-2 "Ethernet Port Ip Bridge Operational Status Command" Display parameters

Specific Information		
name	Type	Description
rx-pkts	Parameter type: <Equipm::Octet-8> - a binary string - length: 8	show the number of received packets <i>This element is always shown.</i>
rx-drop-pkts	Parameter type: <Equipm::Octet-8> - a binary string - length: 8	show the number of received packets which are dropped <i>This element is always shown.</i>
tx-pkts	Parameter type: <Equipm::Octet-8> - a binary string - length: 8	show the number of transmitted packets <i>This element is always shown.</i>

160.7 Ethernet QoS Opertaional Status Command

Command Description

This command displays the Ethernet QoS operational data.

User Level

The command can be accessed by operators with qos privileges.

Command Syntax

The command has the following syntax:

```
> show oper-data-port (if-index) qos
```

Command Parameters

Table 160.7-1 "Ethernet QoS Opertaional Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 160.7-2 "Ethernet QoS Opertaional Status Command" Display parameters

Specific Information		
name	Type	Description
frame-net-bw	Parameter type: <SignedInteger> - a signed integer	Represents the approximate bandwidth available for Ethernet frames, which is guaranteed to be available by the physical layer. This approximation is made by the configurable ATM overhead factor. <i>This element is only shown in detail mode.</i>
m-cast-avail-bw	Parameter type: <SignedInteger>	Represents the bandwidth

160 Ethernet Lt Operational Data Status Commands

name	Type	Description
	- a signed integer	available for multicast services, calculated by the ISAM. This value is what is left from frame-net-bw after deducting from it res-data-bw and res-voice-bw. The minimum of m-cast-avail-bw and m-cast-max-bw will be the actual limitation for user multicast bandwidth usage per DSL link. <i>This element is only shown in detail mode.</i>
m-cast-used-bw	Parameter type: <SignedInteger> - a signed integer	Shows the bandwidth currently in use by pre-configured multicast streams. <i>This element is only shown in detail mode.</i>

161- Debug Status Commands

161.1 Debug Status Command Tree	161-6692
161.2 SW Error Log Status Command	161-6693

161.1 Debug Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Debug Status Commands".

Command Tree

```
----show
  ----debug-sw
    ----sw-error-log
      - (sw-error-log-index)
```

161.2 SW Error Log Status Command

Command Description

This command can be used to retrieve SW error log data.

To analyse critical SW problems, an emergency build can be delivered to a customer, which makes use of the generic error logging. This means that, when the system detects critical SW problems, it can provide info related to these problems in the SW error log.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show debug-sw sw-error-log [ (sw-error-log-index) ]
```

Command Parameters

Table 161.2-1 "SW Error Log Status Command" Resource Parameters

Resource Identifier	Type	Description
(sw-error-log-index)	Format: - index for the sw error log - range: [1...64]	the error string identification

Command Output

Table 161.2-2 "SW Error Log Status Command" Display parameters

Specific Information		
name	Type	Description
errordata	Parameter type: <Debug::errorTracingLogString> - ascii character string - length: x<=80	textual description of the error <i>This element is always shown.</i>

162- Trouble-Shooting Status Commands

162.1 Trouble-Shooting Status Command Tree	162-6695
162.2 Trouble-shooting Statistics To One Port	162-6696
162.3 Trouble-shooting Statistics on a Port (DSL or Ethernet) or PVC Interface	162-6698
162.4 Trouble-shooting Statistics To One VlanPort	162-6700
162.5 Summary Trouble-shooting Statistics To Vlan Ports	162-6702
162.6 Extensive Trouble-shooting Statistics To Vlan Ports	162-6705
162.7 Trouble-shooting Statistics Over Channel-pair	162-6709
162.8 Extensive Trouble-shooting ipv4-antispoofing Statistics To One UNI Port	162-6712
162.9 Trouble-shooting Statistics To One VlanPort	162-6714
162.10 Summary Trouble-shooting Statistics To Vlan Ports	162-6716
162.11 Extensive Trouble-shooting Statistics To Vlan Ports	162-6719
162.12 Trouble-shooting PBIT Statistics	162-6723
162.13 Trouble-shooting PBIT Statistics	162-6724

162.1 Trouble-Shooting Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Status Commands".

Command Tree

```

----show
  ----trouble-shooting
    ----statistics
      ----interface
        - (if-index)
      ----user
        - (port)

        - pbit

```

162.2 Trouble-shooting Statistics To One Port

Command Description

This command allows the operator to show the trouble-shooting counters. When this show command is invoked, all commands in underlying nodes are automatically executed. For specific help information, use the corresponding help command of the underlying node. The help information related to underlying nodes will not be available in this node.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics interface [ (if-index) ]
```

Command Parameters

Table 162.2-1 "Trouble-shooting Statistics To One Port" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier	interface index of the port

Resource Identifier	Type	Description
	Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	

162.3 Trouble-shooting Statistics on a Port (DSL or Ethernet) or PVC Interface

Command Description

This command allows the operator to show the trouble-shooting counters. When this show command is invoked, all commands in underlying nodes are automatically executed. For specific help information, use the corresponding help command of the underlying node. The help information related to underlying nodes will not be available in this node.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics interface (if-index) user [ (port) ]
```

Command Parameters

Table 162.3-1 "Trouble-shooting Statistics on a Port (DSL or Ethernet) or PVC Interface" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	interface index of the port

Resource Identifier	Type	Description
	Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	
(port)	Format: (port : <Eqpt::VpiId> : <Eqpt::VciId> port) Possible values: - port : dsl or ethernet port Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	specifies the port or the atm pvc

162.4 Trouble-shooting Statistics To One VlanPort

Command Description

This command allows the operator to show extensive and summary counters of VLAN port. When this show command is invoked, all commands in underlying nodes are automatically executed. For specific help information, use the corresponding help command of the underlying node. The help information related to underlying nodes will not be available in this node.

Both the summary and detailed counters are shown through the underlying nodes.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics interface (if-index) user (port) vlan [ (vlan-id) ]
```

Command Parameters

Table 162.4-1 "Trouble-shooting Statistics To One VlanPort" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni	interface index of the port

Resource Identifier	Type	Description
	- vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	
(port)	Format: (port : <Eqpt::VpiId> : <Eqpt::VciId> port) Possible values: - port : dsl or ethernet port Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	specifies the port or the atm pvc
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan associated to the bridge port

162.5 Summary Trouble-shooting Statistics To Vlan Ports

Command Description

This command shows summary counters of VLAN port.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics interface (if-index) user (port) vlan (vlan-id) summary
```

Command Parameters

Table 162.5-1 "Summary Trouble-shooting Statistics To Vlan Ports" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier	interface index of the port

Resource Identifier	Type	Description
	Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	
(port)	Format: (port : <Eqpt::VpId> : <Eqpt::VcId> port) Possible values: - port : dsl or ethernet port Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VcId> - atm VCI	specifies the port or the atm pvc
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan associated to the bridge port

Command Output

Table 162.5-2 "Summary Trouble-shooting Statistics To Vlan Ports" Display parameters

Specific Information		
name	Type	Description
up-forward	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded by l2-forwarding engine or l2 user interface <i>This element is only shown in detail mode.</i>
dn-forward	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that are discarded on the condition that the user interface has been found <i>This element is only shown in</i>

162 Trouble-Shooting Status Commands

name	Type	Description
		<i>detail mode.</i>
up-bcast-fwd	Parameter type: <Debug::SignedTrafficCounter> (not-supported <SignedInteger>) Possible values: - not-supported : not support the counter Field type <SignedInteger> - a signed integer	the number of broadcast frames received from the user side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-ucast-fwd	Parameter type: <Debug::SignedTrafficCounter> (not-supported <SignedInteger>) Possible values: - not-supported : not support the counter Field type <SignedInteger> - a signed integer	the number of unicast frames received from the user side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-bcast-fwd	Parameter type: <Debug::SignedTrafficCounter> (not-supported <SignedInteger>) Possible values: - not-supported : not support the counter Field type <SignedInteger> - a signed integer	the number of broadcast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-ucast-fwd	Parameter type: <Debug::SignedTrafficCounter> (not-supported <SignedInteger>) Possible values: - not-supported : not support the counter Field type <SignedInteger> - a signed integer	the number of unicast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>

162.6 Extensive Trouble-shooting Statistics To Vlan Ports

Command Description

This command shows extensive counters of VLAN port.

The extensive counters are only given when the counters are enabled via the related configuration command.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics interface (if-index) user (port) vlan (vlan-id) extensive
```

Command Parameters

Table 162.6-1 "Extensive Trouble-shooting Statistics To Vlan Ports" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier	interface index of the port

Resource Identifier	Type	Description
	obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	
(port)	Format: (port : <Eqpt::VpId> : <Eqpt::VciId> port) Possible values: - port : dsl or ethernet port Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI	specifies the port or the atm pvc
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan associated to the bridge port

Command Output

Table 162.6-2 "Extensive Trouble-shooting Statistics To Vlan Ports" Display parameters

Specific Information		
name	Type	Description
up-inv-dasa	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side which have an invalid destination or source mac address <i>This element is only shown in detail mode.</i>
up-macport-lmt-exc	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side which mac@ could not be learned <i>This element is only shown in detail mode.</i>
up-macfdb-lmt-exc	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side which maxmac is reached <i>This element is only shown in detail mode.</i>
up-inv-prot	Parameter type: <Counter> - 32 bit counter	number of frames received from the user side with an invalid protocol <i>This element is only shown in detail mode.</i>

name	Type	Description
up-ip-spoofing	Parameter type: <Counter> - 32 bit counter	number of frames received from the user side with an ip address not matching the assigned ip address <i>This element is only shown in detail mode.</i>
up-acl-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded for acl <i>This element is only shown in detail mode.</i>
up-policer-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded due to policing <i>This element is only shown in detail mode.</i>
up-queue-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded in the uplink queue <i>This element is only shown in detail mode.</i>
up-ipv6-spoofing	Parameter type: <Counter> - 32 bit counter	number of frames received from the user side with an IPv6 address not matching the assigned IP address <i>This element is only shown in detail mode.</i>
up-tpid-discard	Parameter type: <SignedInteger> - a signed integer	number of frames received from the user side with an tpid not matching the assigned tpid <i>This element is only shown in detail mode.</i>
dn-mcast-fwd	Parameter type: <Counter> - 32 bit counter	number of multicast frames received from the network side and successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-nonmcast-fwd	Parameter type: <Counter> - 32 bit counter	number of non-multicast (including broadcast) frames received from the network side and successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-mcast-discard	Parameter type: <Counter> - 32 bit counter	number of multicast frames received from the network side, routed to the vlan Port and then discarded for any reason, even if this reason is not related to the vlan port functionality <i>This element is only shown in detail mode.</i>
dn-nonmcast-discard	Parameter type: <Counter> - 32 bit counter	number of non-multicast frames received from the network side, routed to the vlan port and then discarded for any reason, even if

162 Trouble-Shooting Status Commands

name	Type	Description
		this reason is not related to the Vlan Port functionality <i>This element is only shown in detail mode.</i>
dn-acl-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that are discarded for acl/ccl filtering <i>This element is only shown in detail mode.</i>
dn-policer-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that is discarded due to policing on l2 forwarder interface <i>This element is only shown in detail mode.</i>
dn-queue-discard	Parameter type: <Counter> - 32 bit counter	number of frames received from the network side, routed to the vlan port and then discarded because of queue overflow <i>This element is only shown in detail mode.</i>

162.7 Trouble-shooting Statistics Over Channel-pair

Command Description

This command allows the operator to show the trouble-shooting counters. When this show command is invoked, all commands in underlying nodes are automatically executed. For specific help information, use the corresponding help command of the underlying node. The help information related to underlying nodes will not be available in this node.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics channel-pair [ (chanpair-idx) ]
```

Command Parameters

Table 162.7-1 "Trouble-shooting Statistics Over Channel-pair" Resource Parameters

Resource Identifier	Type	Description
(chanpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	interface index of the channel pair

Command Output

Table 162.7-2 "Trouble-shooting Statistics Over Channel-pair" Display parameters

Specific Information		
name	Type	Description
up-bcast-fwd	Parameter type: <Counter> - 32 bit counter	the number of broadcast frames received from the user side that are successfully forwarded by the I2-forwarding engine

162 Trouble-Shooting Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
dn-bcast-fwd	Parameter type: <Counter> - 32 bit counter	the number of broadcast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-ucast-fwd	Parameter type: <Counter> - 32 bit counter	the number of Unicast frames received from the user side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-ucast-fwd	Parameter type: <Counter> - 32 bit counter	the number of Unicast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded by l2-forwarding engine or l2 user interface <i>This element is only shown in detail mode.</i>
dn-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that are discarded on the condition that the user interface has been found <i>This element is only shown in detail mode.</i>
up-mcast-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received multicast frames upstream on a channel pair <i>This element is only shown in detail mode.</i>
dn-mcast-fwd	Parameter type: <Counter> - 32 bit counter	the number of multicast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-frame-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet frames upstream on a channel pair <i>This element is only shown in detail mode.</i>
dn-frame-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet frames downstream on a channel pair <i>This element is only shown in detail mode.</i>
up-byte-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet bytes upstream on a channel pair <i>This element is only shown in detail mode.</i>

name	Type	Description
dn-byte-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet bytes downstream on a channel pair <i>This element is only shown in detail mode.</i>
up-illegalsize	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet frames with illegal size upstream on a channel pair including oversize and undersize packets <i>This element is only shown in detail mode.</i>
dn-illegalsize	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet frames with illegal size downstream on a channel pair including oversize and undersize packets <i>This element is only shown in detail mode.</i>
up-crc-error	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet frames with CRC error upstream on a channel pair <i>This element is only shown in detail mode.</i>
dn-crc-error	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet frames with CRC error downstream on a channel pair <i>This element is only shown in detail mode.</i>

162.8 Extensive Trouble-shooting

ipv4-antispoofing Statistics To One UNI Port

Command Description

This command allows the operator to show the number of frames received from the uni that are discard for ipv4-antispoofing.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics uni-interface [ (if-index) ]
```

Command Parameters

Table 162.8-1 "Extensive Trouble-shooting ipv4-antispoofing Statistics To One UNI Port" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <pre>(<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId>)</pre> Possible values: - ont : ont Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier	interface index of the port

Resource Identifier	Type	Description
	Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	

Command Output

Table 162.8-2 "Extensive Trouble-shooting ipv4-antispoofing Statistics To One UNI Port" Display parameters

Specific Information		
name	Type	Description
ipv4-spoofing frame	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are successfully forwarded by the l2-forwarding engine <i>This element is always shown.</i>

162.9 Trouble-shooting Statistics To One VlanPort

Command Description

This command allows the operator to show extensive and summary counters of VLAN port. When this show command is invoked, all commands in underlying nodes are automatically executed. For specific help information, use the corresponding help command of the underlying node. The help information related to underlying nodes will not be available in this node.

Both the summary and detailed counters are shown through the underlying nodes.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics vlanport bridgeport-id (port-interface) vlan-id [ (subscr-vlan) ]
```

Command Parameters

Table 162.9-1 "Trouble-shooting Statistics To One VlanPort" Resource Parameters

Resource Identifier	Type	Description
(port-interface)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	user port interface

Resource Identifier	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE

162.10 Summary Trouble-shooting Statistics To Vlan Ports

Command Description

This command shows summary counters of VLAN port.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting statistics vlanport bridgeport-id (port-interface) vlan-id (subscr-vlan) summary
```

Command Parameters

162.11 Extensive Trouble-shooting Statistics To Vlan Ports

Command Description

This command shows extensive counters of VLAN port.

The extensive counters are only given when the counters are enabled via the related configuration command.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show trouble-shooting statistics vlanport bridgeport-id (port-interface) vlan-id (subscr-vlan) extensive

Command Parameters

Table 162.11-1 "Extensive Trouble-shooting Statistics To Vlan Ports" Resource Parameters

Resource Identifier	Type	Description
(port-interface)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpId> : <Eqpt::VcId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId>	user port interface

Command Output

Table 162.11-2 "Extensive Trouble-shooting Statistics To Vlan Ports" Display parameters

Specific Information		
name	Type	Description
up-inv-dasa	Parameter type: <Counter>	the number of frames received

name	Type	Description
	- 32 bit counter	from the user side which have an invalid destination or source mac address <i>This element is only shown in detail mode.</i>
up-macport-lmt-exc	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side which mac@ could not be learned <i>This element is only shown in detail mode.</i>
up-macfdb-lmt-exc	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side which maxmac is reached <i>This element is only shown in detail mode.</i>
up-inv-prot	Parameter type: <Counter> - 32 bit counter	number of frames received from the user side with an invalid protocol <i>This element is only shown in detail mode.</i>
up-ip-spoofing	Parameter type: <Counter> - 32 bit counter	number of frames received from the user side with an ip address not matching the assigned ip address <i>This element is only shown in detail mode.</i>
up-acl-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded for acl <i>This element is only shown in detail mode.</i>
up-policer-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded due to policing <i>This element is only shown in detail mode.</i>
up-queue-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded in the uplink queue <i>This element is only shown in detail mode.</i>
up-ipv6-spoofing	Parameter type: <Counter> - 32 bit counter	number of frames received from the user side with an IPv6 address not matching the assigned IP address <i>This element is only shown in detail mode.</i>
up-tpid-discard	Parameter type: <SignedInteger> - a signed integer	number of frames received from the user side with an tpid not matching the assigned tpid <i>This element is only shown in detail mode.</i>
dn-mcast-fwd	Parameter type: <Counter> - 32 bit counter	number of multicast frames received from the network side and successfully forwarded by the l2-forwarding engine <i>This element is only shown in</i>

162 Trouble-Shooting Status Commands

name	Type	Description
		<i>detail mode.</i>
dn-nonmcast-fwd	Parameter type: <Counter> - 32 bit counter	number of non-multicast (including broadcast) frames received from the network side and successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-mcast-discard	Parameter type: <Counter> - 32 bit counter	number of multicast frames received from the network side, routed to the vlan Port and then discarded for any reason, even if this reason is not related to the vlan port functionality <i>This element is only shown in detail mode.</i>
dn-nonmcast-discard	Parameter type: <Counter> - 32 bit counter	number of non-multicast frames received from the network side, routed to the vlan port and then discarded for any reason, even if this reason is not related to the Vlan Port functionality <i>This element is only shown in detail mode.</i>
dn-acl-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that are discarded for acl/ccl filtering <i>This element is only shown in detail mode.</i>
dn-policer-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that is discarded due to policing on l2 forwarder interface <i>This element is only shown in detail mode.</i>
dn-queue-discard	Parameter type: <Counter> - 32 bit counter	number of frames received from the network side, routed to the vlan port and then discarded because of queue overflow <i>This element is only shown in detail mode.</i>

162.12 Trouble-shooting PBIT Statistics

Command Description

This command allows the operator to show the trouble-shooting pbit counters.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting pbitstatistics
```

162.13 Trouble-shooting PBIT Statistics

Command Description

This command allows the operator to show the trouble-shooting pbit counters.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting pbitstatistics vlanport [ (if-index) [ pbit <Debug::Pbit> ] ]
```

Command Parameters

163.1 Trouble-Shooting Pbit Counter Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Pbit Counter Commands".

Command Tree

```
----show
  ----trouble-shooting
    ----pbit
      ----statistics
        ----interface
          - (if-index)
          - pbit
```

163.2 Trouble-shooting PBIT Statistics

Command Description

This command allows the operator to show the trouble-shooting pbit counters.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> show trouble-shooting pbit statistics interface [ (if-index) [ pbit <Debug::Pbit> ] ]
```

Command Parameters

Table 163.2-1 "Trouble-shooting PBIT Statistics" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	interface index of the vlan

164.1 Trouble-Shooting Pon Status Command Tree
164.2 Trouble-shooting Statistics over Pon Port

164-6733
164-6734

164.1 Trouble-Shooting Pon Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Pon Status Commands".

Command Tree

```
----show
  ----trouble-shooting
    ----pon
      ----statistics
        ----interface
          - (if-index)
```

164.2 Trouble-shooting Statistics over Pon Port

Command Description

This command allows the operator to show the trouble-shooting counters over pon ports.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show trouble-shooting pon statistics interface [(if-index)]

Command Parameters

Table 164.2-1 "Trouble-shooting Statistics over Pon Port" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g-pon - x-pon : xgs-pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	interface index of the pon port

Command Output

Table 164.2-2 "Trouble-shooting Statistics over Pon Port" Display parameters

Specific Information

name	Type	Description
up-bcast-fwd	Parameter type: <Counter> - 32 bit counter	the number of broadcast frames received from the user side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-bcast-fwd	Parameter type: <Counter> - 32 bit counter	the number of broadcast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-ucast-fwd	Parameter type: <Counter> - 32 bit counter	the number of Unicast frames received from the user side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
dn-ucast-fwd	Parameter type: <Counter> - 32 bit counter	the number of Unicast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the user side that are discarded by l2-forwarding engine or l2 user interface <i>This element is only shown in detail mode.</i>
dn-discard	Parameter type: <Counter> - 32 bit counter	the number of frames received from the network side that are discarded on the condition that the user interface has been found <i>This element is only shown in detail mode.</i>
up-mcast-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received multicast frames upstream on a PON port <i>This element is only shown in detail mode.</i>
dn-mcast-fwd	Parameter type: <Counter> - 32 bit counter	the number of multicast frames received from the network side that are successfully forwarded by the l2-forwarding engine <i>This element is only shown in detail mode.</i>
up-frame-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet frames upstream on a PON port <i>This element is only shown in detail mode.</i>
dn-frame-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet frames downstream on a PON port <i>This element is only shown in detail mode.</i>
up-byte-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet bytes upstream on a PON port

164 Trouble-Shooting Pon Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
dn-byte-fwd	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet bytes downstream on a PON port <i>This element is only shown in detail mode.</i>
up-illegalsize	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet frames with illegal size upstream on a PON port including oversize and undersize packets <i>This element is only shown in detail mode.</i>
dn-illegalsize	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet frames with illegal size downstream on a PON port including oversize and undersize packets <i>This element is only shown in detail mode.</i>
up-crc-error	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of received Ethernet frames with CRC error upstream on a PON port <i>This element is only shown in detail mode.</i>
dn-crc-error	Parameter type: <OctetCounter64> - 64 bit counter,range:[0-9223372036854775808]	the number of transmitted Ethernet frames with CRC error downstream on a PON port <i>This element is only shown in detail mode.</i>

165- *Trouble-Shooting Color Counter Commands*

165.1 Trouble-Shooting Color Counter Command Tree	165-6738
165.2 Trouble-shooting Color Statistics	165-6739

165.1 Trouble-Shooting Color Counter Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Color Counter Commands".

Command Tree

```
----show
  ----trouble-shooting
    ----color
      ----statistics
        ----interface
          - (if-index)
```

165.2 Trouble-shooting Color Statistics

Command Description

This command allows the operator to show the trouble-shooting color counters.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show trouble-shooting color statistics interface [(if-index)]

Command Parameters

Table 165.2-1 "Trouble-shooting Color Statistics" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan>	interface index of the vlan port

166.2 Maintenance Domain on NT Status Command

Command Description

This command displays Maintenance Domain (MD) data.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm md-config-data domain [ (domain-index) ]
```

Command Parameters

Table 166.2-1 "Maintenance Domain on NT Status Command" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index

Command Output

Table 166.2-2 "Maintenance Domain on NT Status Command" Display parameters

Specific Information		
name	Type	Description
format:name	Parameter type: <Cfm::FormatString> (mac : <Cfm::MacAddress> string : <Cfm::PrintableString> dns : <Cfm::PrintableString> none) Possible values: - mac : mac address - string : string - dns : dns - none : No MD name. Field type <Cfm::PrintableString> - all characters except for characters 0 to 31 - length: 1<=x<=43 Field type <Cfm::MacAddress> - MAC address plus 2 hex octets, e.g. 11:22:33:44:55:66:77:88 - length: 8	unique identifier for a Maintenance Domain (MD) name which contains the format and value <i>This element is always shown.</i>
level	Parameter type: <Cfm::MdLevelType>	Maintenance Domain (MD) level

name	Type	Description
	- Maintenance Domain (MD) level - range: [0...7]	<i>This element is always shown.</i>

166.3 Maintenance Association on NT Status Command

Command Description

This command displays the Maintenance Association (MA) data.

An MA is contained within a Maintenance Domain (MD) and is identified by the combination of MD index and MA index.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm ma-config-data domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] ]
```

Command Parameters

Table 166.3-1 "Maintenance Association on NT Status Command" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association (MA) index

Command Output

Table 166.3-2 "Maintenance Association on NT Status Command" Display parameters

Specific Information		
name	Type	Description
vlan	Parameter type: <Network::StackedVlan> (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity	VlanId for the Maintenance Association (MA) <i>This element is always shown.</i>

name	Type	Description
	- range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093,4094,4095,4096] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	
bridgeport	Parameter type: <Cfm::InterfaceZeroIndex> (none <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - none : no port - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	IfIndex of UNI <i>This element is always shown.</i>
mhf-creation	Parameter type: <Cfm::CfmMhfCreationType> (mhf-none mhf-default) Possible values: - mhf-none : No MHF creation for this VLAN ID	MIP Half Function (MHF) creation control for an MA <i>This element is always shown.</i>

name	Type	Description
	- mhf-default : MHF creation for this VLAN ID on related bridge ports	
maformat:maname	Parameter type: <Cfm::MaFormattedString> (pvid : <Cfm::MaNamePvid> string : <Cfm::MaNameCharstr> uint16 : <Cfm::MaNameUint16> vpnid : <Cfm::MaVpnid> icc : <Cfm::MaNameIcc>) Possible values: - pvid : pvid - string : string - uint16 : unsigned - vpnid : vpnId - icc : raw ascii Field type <Cfm::MaNamePvid> - MaName Pvid Range [0...4094] - length: x<=4 Field type <Cfm::MaNameCharstr> - Raw ascii up to 45 Characters, except the character code 0-31 decimal - length: x<=45 Field type <Cfm::MaNameUint16> - MaName Uint16 Range [0...65535] - length: x<=5 Field type <Cfm::MaVpnid> - MaName VpnId 7 Octet Format : xxx:xxxx, where x is a between 00 and FF eg:11FF33:AABBCCDD - length: 15 Field type <Cfm::MaNameIcc> - MaName Icc Raw ascii exactly 13 characters - length: 13	unique identifier for a Maintenance Association (MA) name which contains the format and value <i>This element is always shown.</i>
ccmint	Parameter type: <Cfm::CfmMaCcmInterval> (0 3.33ms 10ms 100ms 1 10 60 600) Possible values: - 0 : CCM Rx disable - 3.33ms : CCM Interval 3.33 mSecs - 10ms : CCM Interval 10 mSecs - 100ms : CCM Interval 100 mSecs - 1 : CCM Interval 1 secs - 10 : CCM Interval 10 secs - 60 : CCM Interval 1 Min - 600 : CCM Interval 10 Min	MA CCM Interval <i>This element is always shown.</i>
ccmaware	Parameter type: <Cfm::CfmMaCcmAware> (ccm-aware ccm-unaware) Possible values: - ccm-aware : turn on the CCM frame processing on reception - ccm-unaware : turn off the CCM frame processing on reception	MA CCM Aware <i>This element is always shown.</i>

name	Type	Description
ltm-filtering	Parameter type: <Cfm::CfmMaLtmFilter> (enable disable) Possible values: - enable : enable ltm-filtering - disable : disable ltm-filtering	MA LTM Filter <i>This element is always shown.</i>
dualtag	Parameter type: <Cfm::CfmMaDualTagAwareShow> (aware unaware) Possible values: - aware : Process CFM Messages upto 2 vlan tags in C-Vlan CC mode, refer documentation for hardware support information. - unaware : disables dual-tag-aware	MA DualTag Aware <i>This element is always shown.</i>
mhf-location	Parameter type: <Cfm::CfmMaMhfLocationType> (default ltuplink vbp onu ltuplink-vbp ltuplink-onu vbp-onu ltuplink-vbp-onu) Possible values: - default : default value: for GPON board, MIP is set on onu; for DSL board, MIP is set on vbp. - ltuplink : MIP is set on lt uplink - vbp : MIP is set on olt virtual bridgeport - onu : MIP is set on onu - ltuplink-vbp : MIPs are set on lt up link and virtual bridgeport - ltuplink-onu : MIPs are set on lt uplink and onu - vbp-onu : MIPs are set on virtual bridgeport and onu - ltuplink-vbp-onu : MIPs are set on olt uplink, virtual bridgeport and onu	MA Mhf Location <i>This element is always shown.</i>
ccmadmin	Parameter type: <Cfm::CfmMaCcmAdminState> (unlock lock) Possible values: - unlock : sets CCM AdminState to activate(unlock) ccm function - lock : sets CCM AdminState to de-activate(lock) ccm function	MA CCM AdminState <i>This element is always shown.</i>

166.4 Maintenance Association End Point on NT Status Command

Command Description

This command displays the Maintenance association End Point (MEP) data.

A MEP is contained within a Maintenance Association (MA) and is identified by the combination of Maintenance Domain (MD) index, MA index and MEP ID.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm mep-config-data domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] ]
```

Command Parameters

Table 166.4-1 "Maintenance Association End Point on NT Status Command" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association (MA) index
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance association End Point (MEP) ID

Command Output

name	Type	Description
location	Parameter type: <Cfm::location> (user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId>	Maintenance association End Point (MEP) location <i>This element is always shown.</i>

name	Type	Description
	user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> slot : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / vuni) Possible values: - user : User bridge-port location - slot : slot location - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	
cci-enable	Parameter type: <Cfm::MepCcmEnableDisable> (cci-enable	Enable/Disable CCM generation on the current MEP

166 CFM Status Commands

name	Type	Description
	cci-disable) Possible values: - cci-enable : Enable CCM generation on the current MEP - cci-disable : Disable CCM generation on the current MEP	<i>This element is always shown.</i>
ccm-priority	Parameter type: <Cfm::MepCcmPriority> - Priority value for CCMs transmitted by the MEP - range: [0...7]	Priority value for CCMs transmitted by the MEP <i>This element is always shown.</i>
ais-enable	Parameter type: <Cfm::MepAisEnableDisable> (ais-enable ais-disable) Possible values: - ais-enable : AIS generation is enabled on the current MEP - ais-disable : AIS generation is disabled on the current MEP	Enable/Disable AIS generation on the current MEP <i>This element is always shown.</i>
ais-meg-level	Parameter type: <Cfm::MepAisMegLevel> - Meg Level for AIS frames transmitted by the MEP - range: [0...7]	ais meg level by the MEP <i>This element is always shown.</i>
ais-period	Parameter type: <Cfm::MepAisPeriod> - Period of the AIS frames transmitted by the MEP, 0 (per second), 1 (per minute) - range: [0...1]	ais period by the MEP <i>This element is always shown.</i>
ais-priority	Parameter type: <Cfm::MepAisPriority> - Priority value for AIS frames transmitted by the MEP - range: [0...7]	ais priority by the MEP <i>This element is always shown.</i>
equipment	Parameter type: <Cfm::MepEquipmentType> (default olt onu) Possible values: - default : Gpon Onu or Dsl - olt : Gpon LT - onu : Gpon Onu	Mep equipment <i>This element is always shown.</i>
ais-autoshut	Parameter type: <Cfm::MepAisAutoShut> (portshut-enable portshut-disable) Possible values: - portshut-enable : shutdown enabled on the current MEP - portshut-disable : shutdown disabled on the current MEP	Shutdown the BP port or not <i>This element is always shown.</i>
low-pri-defect	Parameter type: <Cfm::MepLowPriorityDefect> (all-def mac-rem-err-xcon rem-err-xcon err-xcon xcon no-xcon) Possible values: - all-def : For DefRDICCM, DefMACstatus, DefRemoteCCM, DefErrorCCM, and DefXconCCM - mac-rem-err-xcon : Only DefMACstatus, DefRemoteCCM, DefErrorCCM, and DefXconCCM (default) - rem-err-xcon : Only DefRemoteCCM, DefErrorCCM, and DefXconCCM - err-xcon : Only DefErrorCCM and DefXconCCM - xcon : Only DefXconCCM - no-xcon : No defects DefXcon or lower are to be reported	The lowest priority defect that is allowed to generate fault alarm <i>This element is always shown.</i>
fng-alarm-time	Parameter type: <Cfm::MepFngAlarmTime> - multiples of 250 ticks are	The time in ticks(1 tick=10ms) that defects must be present

name	Type	Description
	supported(250,500,750,1000).default = 250 ticks(2.5sec) - unit: 1/100 sec - range: [250...1000]	before a Fault alarm is issued. <i>This element is always shown.</i>
fng-reset-time	Parameter type: <Cfm::MepFngResetTime> - multiples of 250 ticks are supported(250,500,750,1000). default = 1000 ticks(10sec) - unit: 1/100 sec - range: [250...1000]	The time in ticks (1tick = 10ms) that defects must be absent before re-enabling a Fault Alarm. <i>This element is always shown.</i>
direction	Parameter type: <Cfm::CfmDirectionType> (down up) Possible values: - down : points away from bridge (MIPs are always down) - up : points towards bridge	Maintenance EndPoint direction <i>This element is always shown.</i>
mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address of the Maintenance End Point (MEP) <i>This element is always shown.</i>
slm-responder	Parameter type: <Cfm::MepSlmShowEnableDisable> (enabled disabled) Possible values: - enabled : slm responder is enabled on the current mep - disabled : slm responder is disabled on the current mep	status of slm responder on the current mep <i>This element is always shown.</i>
dm-responder	Parameter type: <Cfm::MepDmShowEnableDisable> (enabled disabled) Possible values: - enabled : dm responder is enabled on the current mep - disabled : dm responder is disabled on the current mep	status of dm responder on the current mep <i>This element is always shown.</i>
lm-responder	Parameter type: <Cfm::MepLmShowEnableDisable> (disabled enabled-per-vlan enabled-per-pbit) Possible values: - disabled : lm responder is disabled on the current mep - enabled-per-vlan : lm responder is enabled per vlan on the current mep - enabled-per-pbit : lm responder is enabled per vlan per pbit on the current mep	status of lm responder on the current mep <i>This element is always shown.</i>
slm-initiator	Parameter type: <Cfm::MepSlmInitShowEnableDisable> (enabled disabled) Possible values: - enabled : slm initiator is enabled on the current mep - disabled : slm initiator is disabled on the current mep	status of slm initiator on the current mep <i>This element is always shown.</i>
lm-initiator	Parameter type: <Cfm::MepLmInitShowEnableDisable> (disabled enabled-per-vlan enabled-per-pbit) Possible values: - disabled : lm initiator is disabled on the current mep - enabled-per-vlan : lm initiator is enabled per vlan on the current mep - enabled-per-pbit : lm initiator is enabled per vlan per pbit on the current mep	status of lm initiator on the current mep <i>This element is always shown.</i>

166.5 CFM Stack on NT Status Command

Command Description

This command displays CFM stack table entries by specifying any of the following: location (user bridgeport or slot), VLAN, MD level, and direction. The information displayed is for the associated MPs (MIPs and MEPs).

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm stack [ (location) [ equipment <Cfm::MepEquipmentType> ] [ vlan <Network::StackedVlan> ] [ level
<Cfm::MdLevelType> ] [ direction <Cfm::CfmDirectionType> ] ]
```

Command Parameters

Table 166.5-1 "CFM Stack on NT Status Command" Resource Parameters

Resource Identifier	Type	Description
(location)	Format: (user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> slot : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip user : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / vuni) Possible values: - user : User bridge-port location - slot : slot location - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	Maintenance Point (MEP or MIP) location

Resource Identifier	Type	Description
	- the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Ng2::ChannelGroup> - channel group number - Field type <Ng2::SubchannelGroup> - subchannel group number - Field type <Ng2::OntId> - the ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier	
equipment	Parameter type: <Cfm::MepEquipmentType> Format: (default olt onu) Possible values: - default : Gpon Onu or Dsl - olt : Gpon LT - onu : Gpon Onu	Mep equipment type
vlan	Parameter type: <Network::StackedVlan> Format: (<Network::UVlanIndex> stacked : <Network::SVlanIndex> : <Network::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Network::UVlanIndex> - unstacked vlan identity - range: [1...4093] Field type <Network::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Network::CVlanIndex> - customer vlan identity - range: [0...4093]	VlanId associated with the MA
level	Parameter type: <Cfm::MdLevelType>	Maintenance Domain (MD) level

Resource Identifier	Type	Description
	Format: - Maintenance Domain (MD) level - range: [0...7]	
direction	Parameter type: <Cfm::CfmDirectionType> Format: (down up) Possible values: - down : points away from bridge (MIPs are always down) - up : points towards bridge	Maintenance Point (MEP or MIP) direction

Command Output

Table 166.5-2 "CFM Stack on NT Status Command" Display parameters

Specific Information		
name	Type	Description
domain-index	Parameter type: <Cfm::CfmDomainIndexType> - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index <i>This element is always shown.</i>
association-index	Parameter type: <Cfm::CfmMaIndexType> - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association (MA) index <i>This element is always shown.</i>
mep-id	Parameter type: <Cfm::MepIdType> - MA End Point (MEP) ID. Unique within an MA - range: [0,1...8191,65535]	MEP Id or zero for MIP <i>This element is always shown.</i>
mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address of the location <i>This element is always shown.</i>

166.6 Maintenance Association End Point CCM Database show Command

Command Description

This command displays the Maintenance association End Point (MEP) CCM Database.

The CCM Database is maintained per Remote MEP and is identified by the combination of Maintenance Domain (MD) index, MA index , MEP ID and Remote MEP ID.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm ccm-database domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] [ remote-mep <Cfm::MepIdType> ] ]
```

Command Parameters

Table 166.6-1 "Maintenance Association End Point CCM Database show Command" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association (MA) index
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance association End Point (MEP) ID
remote-mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Remote Maintenance association End Point (MEP) ID

Command Output

Table 166.6-2 "Maintenance Association End Point CCM Database show Command" Display

parameters

Specific Information		
name	Type	Description
state	Parameter type: <Cfm::RemoteMepState> (rmep-idle rmep-start rmep-failed rmep-ok) Possible values: - rmep-idle : Remote MEP Idle State - rmep-start : Remote MEP Start State - rmep-failed : Remote MEP Failed State - rmep-ok : Remote MEP Ok State	Current state of the Remote MEP state machine <i>This element is always shown.</i>
failed-ok-time	Parameter type: <Cfm::ElapsedTime> - Time elapsed since last Ok or Failed RMEP received	Time at which the Remote MEP state machine entered either the rMepFailed or rMepOk state <i>This element is always shown.</i>
mac-addr	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	The MAC address of the remote MEP <i>This element is always shown.</i>
rdi	Parameter type: <Cfm::RemoteMepRdi> (rdi-set rdi-not-set) Possible values: - rdi-set : RDI bit is set - rdi-not-set : RDI bit is not set	State of the RDI bit in the last received CCM <i>This element is always shown.</i>
status	Parameter type: <Cfm::RemoteMepStatus> (rmep-active rmep-not-active) Possible values: - rmep-active : Remote MEP is active - rmep-not-active : Remote MEP is not active	Indicates whether the Remote MEP is active <i>This element is always shown.</i>
port-status	Parameter type: <Cfm::RemoteMepPortStatus> (ps-no-tlv ps-blocked ps-up) Possible values: - ps-no-tlv : No CCM received or No Port Status TLV present in the received CCM - ps-blocked : Port Status Blocked - ps-up : Port Status Up	An enumerated value of the Port status TLV received in the last CCM <i>This element is only shown in detail mode.</i>
interface-status	Parameter type: <Cfm::RemoteMepInterfaceStatus> (is-no-tlv is-up is-down is-testing is-unknown is-dormant is-not-present is-lower-layer-down) Possible values: - is-no-tlv : No CCM received or No Interface Status TLV present in the received CCM - is-up : Interface Status Up - is-down : Interface Status Down - is-testing : Interface Status Testing	An enumerated value of the Interface status TLV received in the last CCM <i>This element is only shown in detail mode.</i>

name	Type	Description
	- is-unknown : Interface Status Unknown - is-dormant : Interface Status Dormant - is-not-present : Interface Status Not Present - is-lower-layer-down : Interface Status Lower Layer Down	
chassis-id-format	Parameter type: <Cfm::LldpChassisIdSubtype> (not-applic chassis-component interface-alias port-component mac-address network-address interface-name local <SignedInteger>) Possible values: - not-applic : not applicable - chassis-component : Reference IETF RFC 2737 - interface-alias : Reference IETF RFC 2863 - port-component : Reference IETF RFC 2737 - mac-address : - network-address : - interface-name : Reference IETF RFC 2863 - local : An alph-numeric string. Field type <SignedInteger> - a signed integer	Format of the Chassis ID received in the last CCM <i>This element is only shown in detail mode.</i>
chassis-id	Parameter type: <Cfm::LldpChassisIdType> - a variable length octet string 0..16 - length: x<=16	The Chassis ID received in the last CCM <i>This element is only shown in detail mode.</i>
mgmt-addr-domain	Parameter type: <Object> - an object identifier	Identifies the type and format of the management address of the Remote MEP <i>This element is only shown in detail mode.</i>
mgmt-addr	Parameter type: <Cfm::MgmtAddrType> - a variable length octet string 0..50 - length: x<=50	The management address of the Remote MEP <i>This element is only shown in detail mode.</i>

166.7 Maintenance Association End Point on NT Runtime Info Command

Command Description

This command displays the Maintenance association End Point (MEP) runtime information.

A MEP is contained within a Maintenance Association (MA) and is identified by the combination of Maintenance Domain (MD) index, MA index and MEP ID.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm mep-info domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] ]
```

Command Parameters

Table 166.7-1 "Maintenance Association End Point on NT Runtime Info Command" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association (MA) index
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance association End Point (MEP) ID

Command Output

Table 166.7-2 "Maintenance Association End Point on NT Runtime Info Command" Display parameters

Specific Information		
name	Type	Description
direction	Parameter type: <Cfm::CfmDirectionType>	Maintenance EndPoint direction

name	Type	Description
	(down up) Possible values: - down : points away from bridge (MIPs are always down) - up : points towards bridge	<i>This element is always shown.</i>
mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address of the Maintenance End Point (MEP) <i>This element is only shown in detail mode.</i>
cci-enable	Parameter type: <Cfm::MepCcmEnableDisable> (cci-enable cci-disable) Possible values: - cci-enable : Enable CCM generation on the current MEP - cci-disable : Disable CCM generation on the current MEP	Enable/Disable CCM generation on the current MEP <i>This element is only shown in detail mode.</i>
ccm-priority	Parameter type: <Cfm::MepCcmPriority> - Priority value for CCMs transmitted by the MEP - range: [0...7]	Priority value for CCMs transmitted by the MEP <i>This element is only shown in detail mode.</i>
ais-enable	Parameter type: <Cfm::MepAisEnableDisable> (ais-enable ais-disable) Possible values: - ais-enable : AIS generation is enabled on the current MEP - ais-disable : AIS generation is disabled on the current MEP	Enable/Disable AIS generation on the current MEP <i>This element is only shown in detail mode.</i>
ais-meg-level	Parameter type: <Cfm::MepAisMegLevel> - Meg Level for AIS frames transmitted by the MEP - range: [0...7]	AIS meg level by the MEP <i>This element is only shown in detail mode.</i>
ais-period	Parameter type: <Cfm::MepAisPeriod> - Period of the AIS frames transmitted by the MEP, 0 (per second), 1 (per minute) - range: [0...1]	AIS period by the MEP <i>This element is only shown in detail mode.</i>
ais-priority	Parameter type: <Cfm::MepAisPriority> - Priority value for AIS frames transmitted by the MEP - range: [0...7]	AIS priority by the MEP <i>This element is only shown in detail mode.</i>
equipment	Parameter type: <Cfm::MepEquipmentType> (default olt onu) Possible values: - default : Gpon Onu or Dsl - olt : Gpon LT - onu : Gpon Onu	Mep equipment <i>This element is only shown in detail mode.</i>
ais-autoshut	Parameter type: <Cfm::MepAisAutoShut> (portshut-enable portshut-disable) Possible values: - portshut-enable : shutdown enabled on the current MEP - portshut-disable : shutdown disabled on the current MEP	Shutdown the BP port or not <i>This element is only shown in detail mode.</i>
low-pri-defect	Parameter type: <Cfm::MepLowPriorityDefect> (all-def mac-rem-err-xcon rem-err-xcon err-xcon xcon no-xcon) Possible values:	The lowest priority defect that is allowed to generate fault alarm <i>This element is only shown in detail mode.</i>

name	Type	Description
	- all-def : For DefRDICCM, DefMACstatus, DefRemoteCCM, DefErrorCCM, and DefXconCCM - mac-rem-err-xcon : Only DefMACstatus, DefRemoteCCM, DefErrorCCM, and DefXconCCM (default) - rem-err-xcon : Only DefRemoteCCM, DefErrorCCM, and DefXconCCM - err-xcon : Only DefErrorCCM and DefXconCCM - xcon : Only DefXconCCM - no-xcon : No defects DefXcon or lower are to be reported	
fng-state	Parameter type: <Cfm::FngState> (fng-reset fng-defect fng-report-defect fng-defect-reported fng-defect-clearing) Possible values: - fng-reset : No defect has been present since the dot1agCfmMepFngResetTime timer expired, or since the state machine was last reset - fng-defect : A defect is present, but not for a long enough time to be reported (dot1agCfmMepFngAlarmTime) - fng-report-defect : A momentary state during which the defect is reported by sending a dot1agCfmFaultAlarm notification, if that action is enabled - fng-defect-reported : A defect is present, and some defect has been reported - fng-defect-clearing : No defect is present, but the dot1agCfmMepFngResetTime timer has not yet expired	Current state of the MEP Fault Notification Generator State Machine <i>This element is always shown.</i>
highest-pri-defect	Parameter type: <Cfm::MepHighestPrDefect> (none def-rdi-ccm def-mac-status def-remote-ccm def-error-ccm def-xcon-ccm) Possible values: - none : No defects since FNG_RESET - def-rdi-ccm : A remote MEP has reported the RDI bit in its last CCM - def-mac-status : Either some remote MEP is reporting its Interface Status TLV as not isUp, or all remote MEPs are reporting a Port Status TLV that contains some value other than psUp - def-remote-ccm : The MEP is not receiving valid CCMs from at least one of the remote MEPs - def-error-ccm : The MEP has received at least one invalid CCM whose CCM Interval has not yet timed out - def-xcon-ccm : The MEP has received at least one CCM from either another MAID or a lower MD Level whose CCM Interval has not yet timed out	The highest priority defect that has been present since the MEPs Fault Notification Generator State Machine was last in the FNG_RESET state <i>This element is always shown.</i>
def-rdi-ccm	Parameter type: <Cfm::MepDefectRDICCM> (not-present present) Possible values: - not-present : DefRDICCM is not present - present : DefRDICCM is present	Status of the RDICCM defect for this MEP <i>This element is only shown in detail mode.</i>

name	Type	Description
def-mac-status	Parameter type: <Cfm::MepDefectMACstatus> (not-present present) Possible values: - not-present : DefMACstatus is not present - present : DefMACstatus is present	Status of the MACstatus defect for this MEP <i>This element is only shown in detail mode.</i>
def-remote-ccm	Parameter type: <Cfm::MepDefectRemoteCCM> (not-present present) Possible values: - not-present : DefRemoteCCM is not present - present : DefRemoteCCM is present	Status of the RemoteCCM defect for this MEP <i>This element is only shown in detail mode.</i>
def-error-ccm	Parameter type: <Cfm::MepDefectErrorCCM> (not-present present) Possible values: - not-present : DefErrorCCM is not present - present : DefErrorCCM is present	Status of the ErrorCCM defect for this MEP <i>This element is only shown in detail mode.</i>
def-xcon-ccm	Parameter type: <Cfm::MepDefectXconCCM> (not-present present) Possible values: - not-present : DefXconCCM is not present - present : DefXconCCM is present	Status of the XconCCM defect for this MEP <i>This element is only shown in detail mode.</i>
sent-ccms	Parameter type: <Cfm::UnsignedIntType> - Unsigned Integer. - range: [0...4294967295]	Total number of Continuity Check messages transmitted <i>This element is always shown.</i>
ccm-sequence-errors	Parameter type: <Cfm::UnsignedIntType> - Unsigned Integer. - range: [0...4294967295]	The total number of out-of-sequence CCMs received from all remote MEPs <i>This element is always shown.</i>
error-ccm-last-frame	Parameter type: <Cfm::CCmErrorFrame> - CCM Error Packet information	The last-received CCM that triggered an DefErrorCCM fault <i>This element is only shown in detail mode.</i>
xcon-ccm-last-frame	Parameter type: <Cfm::CCmErrorFrame> - CCM Error Packet information	The last-received CCM that triggered a DefXconCCM fault <i>This element is only shown in detail mode.</i>

166.8 LT CFM SLM Responder Statistics Table

Command Description

This command displays the CFM SLM Responder Statistics.

The SLM Responder Statistics Table is maintained per Test Instance basis and is identified by the combination of Maintenance Domain (MD) index, MA index , MEP ID ,RespRemoteMep Id , RespRemoteMep TestId and RespRemoteMep Mac address.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm slm-responder-stats domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] [ slm-initiator-mep <Cfm::MepIdType> ] [ slm-initiator-mac <Vlan::MacAddr> ] [ test-id
<Cfm::UnsignedIntType> ] ]
```

Command Parameters

Table 166.8-1 "LT CFM SLM Responder Statistics Table" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association (MA) index
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance association End Point (MEP) ID
slm-initiator-mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Responder Remote Maintenance association End Point (MEP) ID
slm-initiator-mac	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address of the remote MEP which initiated the SLM
test-id	Parameter type: <Cfm::UnsignedIntType> Format:	Test identifier in the SLM message sent by the remote MEP

Resource Identifier	Type	Description
	- Unsigned Integer. - range: [0...4294967295]	

Command Output

Table 166.8-2 "LT CFM SLM Responder Statistics Table" Display parameters

Specific Information		
name	Type	Description
txfcf	Parameter type: <Cfm::UnsignedIntType> - Unsigned Integer. - range: [0...4294967295]	The number of synthetic frames(SLM) transmitted by the SLM initiator as part of a given test ID.The value is obtained from the SLM packet sent by the initiator <i>This element is always shown.</i>
txfcb	Parameter type: <Cfm::UnsignedIntType> - Unsigned Integer. - range: [0...4294967295]	The number of synthetic frames(SLR) transmitted by the SLM responder as part of a given test ID.The value is a local counter maintained by the responder <i>This element is always shown.</i>

166.9 PM proactive show

Command Description

This command is used to show the PM test results.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm
```

166.10 Proactive CFM PM show command for the current 15 min

Command Description

This command displays the PM proactive loss measurement for the current 15 min.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm curr-15min-stats
```

166.11 Proactive CFM PM show command for the current 15 min

Command Description

This command displays the PM proactive loss measurement for the current 15 min.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm curr-15min-stats domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] [ session-id <Cfm::SessionIdType> ] ]
```

Command Parameters

Table 166.11-1 "Proactive CFM PM show command for the current 15 min" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance domain.
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance association.
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance End Point.
session-id	Parameter type: <Cfm::SessionIdType> Format: - Session Id for PM proactive - range: [1...3600]	PM Proactive test SessionId.

Command Output

Table 166.11-2 "Proactive CFM PM show command for the current 15 min" Display parameters

Specific Information		
name	Type	Description
test-type	Parameter type: <Cfm::PmTestType>	Y1731 PM Test type

name	Type	Description
	(single-ended-slm single-ended-lm) Possible values: - single-ended-slm : sets test type to SLM - single-ended-lm : sets test type to LM	<i>This element is only shown in detail mode.</i>
interval(sec)	Parameter type: <Cfm::PmIntervalType> - PM interval (sec) SLM: [1...10] LM: [60 or 300] - range: [1...10,60,300]	Interval in which PM packets are transmitted. <i>This element is only shown in detail mode.</i>
measurement-intvl(sec)	Parameter type: <Cfm::PmMeasurementIntervalType> (not-applicable <Cfm::PmMeasurementInterval>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::PmMeasurementInterval> - Measurement interval - unit: seconds - range: [60,300]	The time for which the synthetic loss calculation is made periodically. <i>This element is only shown in detail mode.</i>
dest-mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address of the PM responder(Target). <i>This element is only shown in detail mode.</i>
elapsed-time(sec)	Parameter type: <Cfm::PmCurr15MinTimeElapsedType> - Elapsed time - unit: seconds	Time elapsed since the start of the PM proactive test <i>This element is only shown in detail mode.</i>
measured-time(sec)	Parameter type: <Cfm::Pm15MinTimeMeasuredType> - Measured time - unit: seconds	Time measured since the start of the PM proactive test <i>This element is only shown in detail mode.</i>
data-tlv-size	Parameter type: <Cfm::PmDataSizeType> (not-applicable <Cfm::PmDataSize>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::PmDataSize> - Datasize for the SLM proactive test - range: [0...1500]	Data size of the SLM proactive test <i>This element is only shown in detail mode.</i>
priority	Parameter type: <Vlan::Priority> - priority of ethernet frames - range: [0...7]	Vlan Priority for PM proactive messages being transmitted <i>This element is only shown in detail mode.</i>
valid-intervals	Parameter type: <Cfm::PmCurr15MinValidIntervalsType> - The number of previous 15 min intervals for which valid data was collected for this test. - range: [0...96]	The number of previous 15 min intervals for which valid data was collected for this test. <i>This element is only shown in detail mode.</i>
invalid-data-flag	Parameter type: <Cfm::PmInvalidDataFlagType> - Indicates the validity of the corresponding PM data. - range: [0...1]	Indicates the validity of the corresponding PM data. It is set to 1 when the PM data is incomplete or invalid and set to 0 when the PM data is complete and valid. <i>This element is only shown in detail mode.</i>
pdu-sent	Parameter type: <Counter>	Number of Y1731 PM PDUs sent

166 CFM Status Commands

name	Type	Description
	- 32 bit counter	by this MEP in the current 15 minutes <i>This element is only shown in detail mode.</i>
pdu-rcvd	Parameter type: <Counter> - 32 bit counter	Number of Y1731 PM PDUs received by this MEP in the current 15 minutes <i>This element is only shown in detail mode.</i>
pdu-discarded	Parameter type: <Counter> - 32 bit counter	Number of Y1731 PM PDUs discarded by this MEP in the current 15 minutes <i>This element is only shown in detail mode.</i>
test-id	Parameter type: <Cfm::PmTestIdType> (not-applicable <Cfm::PmTestId>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::PmTestId> - Test Id for PM proactive - range: [1...65535]	PM Proactive test Id. <i>This element is only shown in detail mode.</i>
remote-mep	Parameter type: <Cfm::PmMepIdType> (unavailable not-applicable <Cfm::MepId>) Possible values: - unavailable : No SLR received yet - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::MepId> - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Responder Maintenance Association End Point. <i>This element is only shown in detail mode.</i>

Only Show Details: loss calculation		
name	Type	Description
total-tx-near	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages TXed in the near-end <i>This element is only shown in detail mode.</i>
total-tx-far	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages TXed in the far end <i>This element is only shown in detail mode.</i>
total-rx-near	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages RXed in the near-end <i>This element is only shown in detail mode.</i>
total-rx-far	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages RXed in the far-end <i>This element is only shown in detail mode.</i>
loss-near	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total loss of PM proactive messages in the near-end <i>This element is only shown in detail mode.</i>
loss-far	Parameter type: <Cfm::Pm8byteOctetType>	Total loss of PM proactive

name	Type	Description
	- Pdu count	messages in the far-end <i>This element is only shown in detail mode.</i>
un-ack	Parameter type: <Cfm::Pm8byteOctetWithNAType> (not-applicable <Cfm::Pm8byteOctet>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::Pm8byteOctet> - Pdu count	Total number of SLM frames that are unacknowledged <i>This element is only shown in detail mode.</i>

Only Show Details: frame loss ratio - near end		
name	Type	Description
flr-min-near	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent Field type <Cfm::PmPercentage> - Frame loss ratio in percentage - unit: percentage - range: [0.00...100.00,655.35]	Frame loss ratio(in %) minimum in the near end <i>This element is only shown in detail mode.</i>
flr-avg-near	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent Field type <Cfm::PmPercentage> - Frame loss ratio in percentage - unit: percentage - range: [0.00...100.00,655.35]	The average of accumulated Frame Loss Ratio (%) within the test duration of 15 minutes. <i>This element is only shown in detail mode.</i>
flr-max-near	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent Field type <Cfm::PmPercentage> - Frame loss ratio in percentage - unit: percentage - range: [0.00...100.00,655.35]	Frame loss ratio(in %) maximum in the near end <i>This element is only shown in detail mode.</i>

Only Show Details: frame loss ratio - far end		
name	Type	Description

166.12 Proactive CFM PM show command for the current 1 day

Command Description

This command displays the PM Proactive loss measurement for the current day.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm curr-day-stats
```

166.13 Proactive CFM PM show command for the current 1 day

Command Description

This command displays the PM Proactive loss measurement for the current day.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm curr-day-stats domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep <Cfm::MepIdType> ] [ session-id <Cfm::SessionIdType> ] ]
```

Command Parameters

166.14 Proactive CFM PM show command for the previous 15 min

Command Description

This command displays the PM proactive loss measurement for the previous 15 min.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm prev-15min-stats
```

166.15 Proactive CFM PM show command for the previous 15 min

Command Description

This command displays the PM proactive loss measurement for the previous 15 min.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm prev-15min-stats domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] [ session-id <Cfm::SessionIdType> ] [ interval-number
<Cfm::PmPrevious15MinIntervalNumberType> ] ]
```

Command Parameters

Table 166.15-1 "Proactive CFM PM show command for the previous 15 min" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance domain.
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance association.
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance End Point.
session-id	Parameter type: <Cfm::SessionIdType> Format: - Session Id for PM proactive - range: [1...3600]	PM Proactive test SessionId.
interval-number	Parameter type: <Cfm::PmPrevious15MinIntervalNumberType> Format: - Previous 15 min interval number - range: [1...96]	PM Proactive Previous 15 min interval number.

Command Output

Table 166.15-2 "Proactive CFM PM show command for the previous 15 min" Display parameters

Specific Information		
name	Type	Description
test-type	Parameter type: <Cfm::PmTestType> (single-ended-slm single-ended-lm) Possible values: - single-ended-slm : sets test type to SLM - single-ended-lm : sets test type to LM	Y1731 PM Test type <i>This element is only shown in detail mode.</i>
interval(sec)	Parameter type: <Cfm::PmIntervalType> - PM interval (sec) SLM: [1...10] LM: [60 or 300] - range: [1...10,60,300]	Interval in which PM packets are transmitted. <i>This element is only shown in detail mode.</i>
measurement-intvl(sec)	Parameter type: <Cfm::PmMeasurementIntervalType> (not-applicable <Cfm::PmMeasurementInterval>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::PmMeasurementInterval> - Measurement interval - unit: seconds - range: [60,300]	The time for which the synthetic loss calculation is made periodically. <i>This element is only shown in detail mode.</i>
dest-mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address of the PM responder(Target). <i>This element is only shown in detail mode.</i>
measured-time(sec)	Parameter type: <Cfm::Pm15MinTimeMeasuredType> - Measured time - unit: seconds	Time measured since the start of the PM proactive test <i>This element is only shown in detail mode.</i>
data-tlv-size	Parameter type: <Cfm::PmDataSizeType> (not-applicable <Cfm::PmDataSize>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::PmDataSize> - Datasize for the SLM proactive test - range: [0...1500]	Data size of the SLM proactive test <i>This element is only shown in detail mode.</i>
priority	Parameter type: <Vlan::Priority> - priority of ethernet frames - range: [0...7]	Vlan Priority for PM proactive messages being transmitted <i>This element is only shown in detail mode.</i>
invalid-data-flag	Parameter type: <Cfm::PmInvalidDataFlagType> - Indicates the validity of the corresponding PM data. - range: [0...1]	Indicates the validity of the corresponding PM data. It is set to 1 when the PM data is incomplete or invalid and set to 0 when the PM data is complete and valid. <i>This element is only shown in detail mode.</i>
pdu-sent	Parameter type: <Counter> - 32 bit counter	Number of Y1731 PM PDUs sent by this MEP in the previous 15 minutes <i>This element is only shown in detail mode.</i>
pdu-rcvd	Parameter type: <Counter>	Number of Y1731 PM PDUs

166 CFM Status Commands

name	Type	Description
	- 32 bit counter	received by this MEP in the previous 15 minutes <i>This element is only shown in detail mode.</i>
pdu-discarded	Parameter type: <Counter> - 32 bit counter	Number of Y1731 PM PDUs discarded by this MEP in the previous 15 minutes <i>This element is only shown in detail mode.</i>
test-id	Parameter type: <Cfm::PmTestIdType> (not-applicable <Cfm::PmTestId>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::PmTestId> - Test Id for PM proactive - range: [1...65535]	PM Proactive test Id. <i>This element is only shown in detail mode.</i>
remote-mep	Parameter type: <Cfm::PmMepIdType> (unavailable not-applicable <Cfm::MepId>) Possible values: - unavailable : No SLR received yet - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::MepId> - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Remote Maintenance Association End Point. <i>This element is only shown in detail mode.</i>

Only Show Details: loss calculation		
name	Type	Description
total-tx-near	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages TXed in the near-end <i>This element is only shown in detail mode.</i>
total-tx-far	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages TXed in the far end <i>This element is only shown in detail mode.</i>
total-rx-near	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages RXed in the near-end <i>This element is only shown in detail mode.</i>
total-rx-far	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total no of PM proactive messages RXed in the far-end <i>This element is only shown in detail mode.</i>
loss-near	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total loss of PM proactive messages in the near-end <i>This element is only shown in detail mode.</i>
loss-far	Parameter type: <Cfm::Pm8byteOctetType> - Pdu count	Total loss of PM proactive messages in the far-end <i>This element is only shown in detail mode.</i>
un-ack	Parameter type: <Cfm::Pm8byteOctetWithNAType> (not-applicable	Total number of SLM frames that are unacknowledged

name	Type	Description
	<Cfm::Pm8byteOctet>) Possible values: - not-applicable : For single-ended-lm, the value of this object is not-applicable Field type <Cfm::Pm8byteOctet> - Pdu count	<i>This element is only shown in detail mode.</i>

Only Show Details: frame loss ratio - near end		
name	Type	Description
flr-min-near	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent Field type <Cfm::PmPercentage> - Frame loss ratio in percentage - unit: percentage - range: [0.00...100.00,655.35]	Frame loss ratio(in %) minimum in the near end <i>This element is only shown in detail mode.</i>
flr-avg-near	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent Field type <Cfm::PmPercentage> - Frame loss ratio in percentage - unit: percentage - range: [0.00...100.00,655.35]	The average of accumulated Frame Loss Ratio (%) within the test duration of 15 Minutes. <i>This element is only shown in detail mode.</i>
flr-max-near	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent Field type <Cfm::PmPercentage> - Frame loss ratio in percentage - unit: percentage - range: [0.00...100.00,655.35]	Frame loss ratio(in %) maximum in the near end <i>This element is only shown in detail mode.</i>

Only Show Details: frame loss ratio - far end		
name	Type	Description
flr-min-far	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent Field type <Cfm::PmPercentage> - Frame loss ratio in percentage - unit: percentage - range: [0.00...100.00,655.35]	Frame loss ratio(in %) minimum in the far end <i>This element is only shown in detail mode.</i>
flr-avg-far	Parameter type: <Cfm::PmPercentageType> (invalid <Cfm::PmPercentage>) Possible values: - invalid : Negative Loss ratio or Loss ratio more than 100 percent	The average of accumulated Frame Loss Ratio (%) within the test duration of 15 Minutes. <i>This element is only shown in detail mode.</i>

166.16 Proactive CFM PM show command for the previous 1 day

Command Description

This command displays the PM Proactive loss measurement for the previous 1 day.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm prev-day-stats
```

166.17 Proactive CFM PM show command for the previous 1 day

Command Description

This command displays the PM Proactive loss measurement for the previous 1 day.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> show cfm y1731pm prev-day-stats domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] [ session-id <Cfm::SessionIdType> ] [ interval-number
<Cfm::PmPrevious1DayIntervalNumberType> ] ]
```

Command Parameters

Table 166.17-1 "Proactive CFM PM show command for the previous 1 day" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance domain.
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance association.
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance End Point.
session-id	Parameter type: <Cfm::SessionIdType> Format: - Session Id for PM proactive - range: [1...3600]	PM Proactive test SessionId.
interval-number	Parameter type: <Cfm::PmPrevious1DayIntervalNumberType> Format: - Previous 15 min interval number - range: [1...7]	PM Proactive Previous 1 day interval number.

Command Output

166.18 Maintenance Association End Point Y1731 AIS Info Command

Command Description

This command displays AIS information of Maintenance association End Point (MEP) located on ONU UNI.

A MEP is contained within a Maintenance Association (MA) and is identified by the combination of Maintenance Domain (MD) index, MA index and MEP ID.

User Level

The command can be accessed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> show cfm mep-y1731ais-info domain [ (domain-index) [ association <Cfm::CfmMaIndexType> ] [ mep
<Cfm::MepIdType> ] ]
```

Command Parameters

Table 166.18-1 "Maintenance Association End Point Y1731 AIS Info Command" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain (MD) index
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association (MA) index
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance association End Point (MEP) ID

Command Output

Table 166.18-2 "Maintenance Association End Point Y1731 AIS Info Command" Display parameters

Specific Information		
name	Type	Description
enable	Parameter type: <Cfm::MepAisEnableDisable>	Enable/Disable AIS generation

166 CFM Status Commands

name	Type	Description
	(ais-enable ais-disable) Possible values: - ais-enable : AIS generation is enabled on the current MEP - ais-disable : AIS generation is disabled on the current MEP	on the current MEP <i>This element is always shown.</i>
meg-level	Parameter type: <Cfm::MepAisMegLevel> - Meg Level for AIS frames transmitted by the MEP - range: [0...7]	AIS meg level by the MEP <i>This element is always shown.</i>
period	Parameter type: <Cfm::MepAisPeriod> - Period of the AIS frames transmitted by the MEP, 0 (per second), 1 (per minute) - range: [0...1]	AIS period by the MEP <i>This element is always shown.</i>
priority	Parameter type: <Cfm::MepAisPriority> - Priority value for AIS frames transmitted by the MEP - range: [0...7]	AIS priority by the MEP <i>This element is always shown.</i>
port-shut	Parameter type: <Cfm::MepAisAutoShut> (portshut-enable portshut-disable) Possible values: - portshut-enable : shutdown enabled on the current MEP - portshut-disable : shutdown disabled on the current MEP	Auto shut down bridge port is enabled on the current MEP <i>This element is always shown.</i>

167.2 IPoA/E IW Interworking Port Status Command	167-6797

167.1 IPoA/E IW Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "IPoA/E IW Status Commands".

Command Tree

```
----show
  ----ipoa/e-iw
    ----port
      - (interworking-port)
```

167.2 IPoA/E IW Interworking Port Status Command

Command Description

This command displays the status of ipoa/oe iwl port's L2 connectivity.

User Level

The command can be accessed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> show ipoa/e-iw port [ (interworking-port) ]
```

Command Parameters

Table 167.2-1 "IPoA/E IW Interworking Port Status Command" Resource Parameters

Resource Identifier	Type	Description
(interworking-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI	index of rack/shelf/slot/port user-bridgeport

```

168.2 Megaco LineTest Available Session Status Command

Command Description

This command allows the operator to check whether there is an available session to line test.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

> show linetest cluster (clusterid) avail-sess

Command Parameters

Table 168.2-1 "Megaco LineTest Available Session Status Command" Resource Parameters

Resource Identifier	Type	Description
(clusterid)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster

Command Output

Table 168.2-2 "Megaco LineTest Available Session Status Command" Display parameters

Specific Information		
name	Type	Description
available-sess	Parameter type: <LineTest::Session> - session number - range: [0...16]	the available seession to do line test <i>This element is always shown.</i>
max-session	Parameter type: <LineTest::Session> - session number - range: [0...16]	the max number of session <i>This element is always shown.</i>

168.3 Megaco LineTest Session Status Command

Command Description

This command displays session related parameters.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

> show linetest cluster (clusterid) ltsession [(sessionid)]

Command Parameters

Table 168.3-1 "Megaco LineTest Session Status Command" Resource Parameters

Resource Identifier	Type	Description
(clusterid)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(sessionid)	Format: - available session id - range: [1]	uniquely identify of session

Command Output

Table 168.3-2 "Megaco LineTest Session Status Command" Display parameters

Specific Information		
name	Type	Description
session-status	Parameter type: <LineTest::SessionStatus> (idle revcmd runcmd revinfo testover stateerror testhold) Possible values: - idle : indicate the session is not initialized, you can create it - revcmd : indicate the session receives test cmd - runcmd : indicate the session runs test cmd - revinfo : indicate the session receives info cmd - testover : indicate the session test is finished - stateerror : something is wrong	the status of session <i>This element is always shown.</i>

name	Type	Description
	- testhold : indicate the session is held for sub test of talking test or 1 round is finished in continuous test	

168.4 Megaco LineTest Line Status Command

Command Description

This command displays all parameters on a specific line id of a session.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> show linetest cluster (clusterid) ltline [ (sessionid) [ lineid <Itf::LineTestMegacoLineId> ] ]
```

Command Parameters

Table 168.4-1 "Megaco LineTest Line Status Command" Resource Parameters

Resource Identifier	Type	Description
(clusterid)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(sessionid)	Format: - available session id - range: [1]	uniquely identify of session
lineid	Parameter type: <Itf::LineTestMegacoLineId> Format: <Eqpt::NodeId> / <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> / <Eqpt::MegacoPortId> Field type <Eqpt::NodeId> - the Node number Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number Field type <Eqpt::MegacoPortId> - the port number of Megaco	line id

Command Output

Table 168.4-2 "Megaco LineTest Line Status Command" Display parameters

Specific Information		
name	Type	Description
line-status	Parameter type: <LineTest::LineStatus>	the test result status

name	Type	Description
	(none intest testover rstpartlyready testrejected) Possible values: - none : null - intest : put the line in test - testover : the line tested, and the result is ready for polling, it is read-only - rstpartlyready : defined for dp/dtmf test - testrejected : line test not supported for shared line	<i>This element is always shown.</i>
comm-status	Parameter type: <LineTest::LTComErrCode> (unfinished finish stop-by-timeout cancel-by-operator break-by-user ppfailed linebusy ltime-no-operator linestatus-error out-memory timer-operfail type-empty type-logic-err type-unknown para-lineid-err para-oper-err pare-serialnum-err line-intesting otherfail ended-by-oper onhook-by-oper paraval-err llurelay-err shared-line-rejected service-unavailable rejected-pwrthold session-timeout invalid-portid miss-message redundancy-ports end-sequence-num port-disable poltfail port-unknown-state outofmem new-timer-err start-timer-err send-msg-err get-ipudp-err enable-lock disable-unlock disable-lock abort-timer-err empty-test-type	the test result status <i>This element is always shown.</i>

168 LineTest Status Commands

name	Type	Description
	mismatch-with-mode disable-net-unlock disable-unlock-gk disable-unlock-oc disable-unlock-ot disable-net-lock disable-lock-gk disable-lock-oc disable-lock-ot not-support mta-testing board-intesting finish-pass finish-fail) Possible values: - unfinished : the line test is not finished yet - finish : the total logic result outcome - stop-by-timeout : if reset all cmd is arrived, the later coming test request is wrong - cancel-by-operator : as an error flag to construct the result package - break-by-user : stop while testing by user - ppfailed : pp failed, hardware failed - linebusy : the line is busy in used - ltime-no-operator : in continuous/talking test, long time no further operator(600s) - linestatus-error : timer operator failed - out-memory : fail to apply result buffer in lt board - timer-operfail : operation fail of timer - type-empty : no test type in test request - type-logic-err : measurement no supported - type-unknown : the test command is illegal - para-lineid-err : the lineid in test command is not valid - para-oper-err : illegal operation - pare-serialnum-err : error session id - line-intesting : the line is in another line test - otherfail : some other fail - ended-by-oper : the test was over because of end operation of operator - onhook-by-oper : the test was over because operator on hook - paraval-err : for dtmf test, test para less than 1 - llurelay-err : llurelay config not valid for MELT - shared-line-rejected : line test not supported for shared line - service-unavailable : the test was over because service is unavailable - rejected-pwrthold : NBLT could not be started due to max power consumption threshold reached - session-timeout : test session time out - invalid-portid : lineid is not valid - miss-message : line test message is not received - redundancy-ports : redundancy port ids for the testtype only support 1 port every test - end-sequence-num : end command used wrong session id - port-disable : line test board is not available - poltfail : line test board failed - port-unknown-state : this line is in an unknown state	

name	Type	Description
	- outofmem : xVPS or NT run out of memory - new-timer-err : create timer failed - start-timer-err : start timer failed - send-msg-err : send message failed - get-ipudp-err : get line ip/udp failed - enable-lock : line enable but locked - disable-unlock : line disable and unlocked - disable-lock : line disable and locked - abort-timer-err : abort timer failed - empty-test-type : the test type bitmap is empty - mismatch-with-mode : test type mismatch with test mode - disable-net-unlock : adminstate:unlock, operstate:disable from mgc - disable-unlock-gk : adminstate:unlock, operstate:disable from tg(ground key) - disable-unlock-oc : adminstate:unlock, operstate:disable from tg(over current) - disable-unlock-ot : adminstate:unlock, operstate:disable from tg(over temperature) - disable-net-lock : adminstate:lock, operstate:disable from mgc - disable-lock-gk : adminstate:lock, operstate:disable from tg(ground key) - disable-lock-oc : adminstate:lock, operstate:disable from tg(over current) - disable-lock-ot : adminstate:lock, operstate:disable from tg(over temperature) - not-support : line test is no supported for the port - mta-testing : the port is undergoing in mta test now - board-intesting : the board is in another line test - finish-pass : gr909 group test passed - finish-fail : gr909 group test failed	
val-num	Parameter type: <LineTest::RpValNum> - available results numbers - range: [0...72]	available results numbers <i>This element is always shown.</i>
hook-chag-status	Parameter type: <LineTest::LineHookChagStat> (others offhook-to-onhook onhook-to-offhook) Possible values: - others : no hook state change - offhook-to-onhook : the tested line has hook state change from off hook to on hook - onhook-to-offhook : the tested line has hook state change from on hook to off hook	line hook state change <i>This element is always shown.</i>

168.5 Megaco LineTest LineId ExtReport Status Command

Command Description

This command displays parameters for lineid report multi results.

User Level

The command can be accessed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> show linetest cluster (clusterid) lineid-ext-rept [ (sessionid) [ lineid <Itf::LineTestMegacoLineId> ] [ test-name(unit) <LineTest::TestTypeMegaco> ] [ result-index <LineTest::RpRsIndex> ] ]
```

Command Parameters

Table 168.5-1 "Megaco LineTest LineId ExtReport Status Command" Resource Parameters

Resource Identifier	Type	Description
(clusterid)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(sessionid)	Format: - available session id - range: [1]	uniquely identify of session
lineid	Parameter type: <Itf::LineTestMegacoLineId> Format: <Eqpt::NodeId> / <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> / <Eqpt::MegacoPortId> Field type <Eqpt::NodeId> - the Node number Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number Field type <Eqpt::MegacoPortId> - the port number of Megaco	line id
test-name(unit)	Parameter type: <LineTest::TestTypeMegaco> Format: (feeded-ac-tr(mv) feeded-ac-tg(mv) feeded-ac-rg(mv)	test type

Resource Identifier	Type	Description
	foreign-ac-tr(mv) foreign-ac-tg(mv) foreign-ac-rg(mv) feeded-dc-tr(mv) foreign-dc-tr(mv) foreign-dc-tg(mv) foreign-dc-rg(mv) feed-current(ua) feeded-dc-rt(mv) resist-tr(ohm) resist-rt(ohm) resist-tg(ohm) resist-rg(ohm) resist-tbat(ohm) resist-rbat(ohm) capacitanc-tr(nf) capacitanc-rt(nf) capacitanc-tg(nf) capacitanc-rg(nf) impedance-tr(ohm) impedance-tg(ohm) impedance-rg(ohm) low-capacit-phone force-ring-subscrib dialton-delay(ms) msocket-detection ac-current-tr(ua) ac-current-tg(ua) ac-current-rg(ua) dc-current-tr(ua) dc-current-tg(ua) dc-current-rg(ua) noise-lv-0.001dbm howler-test-park status-monitored cable-pair-ident talking-father line-reverse-sub p-meter-pulse-sub ring-subscrib-sub dpdtmf-signal-sub userloop-sub(ohm) feeded-dc-tg(mv) feeded-dc-rg(mv) impedance-rt(ohm) isdn-loopback ringer-ren(mren) dialtone-delay-db(ms) gr909-roh gr909-hazardous-p gr909-femf gr909-resistive-f diagnosis-call(1/10s) Possible values: - feeded-ac-tr(mv) : feeded ac rms voltage of user line (tip-ring) - feeded-ac-tg(mv) : feeded ac rms voltage of user line	

Resource Identifier	Type	Description
	(tip-ground) - feeded-ac-rg(mv) : feeded ac rms voltage of user line (ring-ground) - foreign-ac-tr(mv) : foreign ac rms voltage of user line (tip-ring) - foreign-ac-tg(mv) : foreign ac rms voltage of user line (tip-ground) - foreign-ac-rg(mv) : foreign ac rms voltage of user line (ring-ground) - feeded-dc-tr(mv) : feeded dc voltage of user line (tip-ring) - foreign-dc-tr(mv) : foreign dc voltage of user line (tip-ring) - foreign-dc-tg(mv) : foreign dc voltage of user line (tip-ground) - foreign-dc-rg(mv) : foreign dc voltage of user line (ring-ground) - feed-current(ua) : feeding current (tip-ring) - feeded-dc-rt(mv) : feeded dc voltage of user line (ring-tip) - resist-tr(ohm) : insulating resistance of user line (tip-ring) - resist-rt(ohm) : insulating resistance of user line (ring-tip) - resist-tg(ohm) : insulating resistance of user line (tip-ground) - resist-rg(ohm) : insulating resistance of user line (ring-ground) - resist-tbat(ohm) : insulating battery resistance of user line (tip-bat) - resist-rbat(ohm) : insulating battery resistance of user line (ring-bat) - capacitanc-tr(nf) : capacitance of user line (tip-ring) - capacitanc-rt(nf) : capacitance of user line (ring-tip) - capacitanc-tg(nf) : capacitance of user line (tip-ground) - capacitanc-rg(nf) : capacitance of user line (ring-ground) - impedance-tr(ohm) : impedance of user circuit (tip-ring) - impedance-tg(ohm) : impedance of user circuit (tip-ground) - impedance-rg(ohm) : impedance of user circuit (ring-ground) - low-capacit-phone : low capacitance phone detect - force-ring-subscrib : force ring subscriber test - dialton-delay(ms) : dial tone delay of user circuit only in idle - msocket-detection : termination (m socket detection) - ac-current-tr(ua) : ac current test normal test (tip-ring) - ac-current-tg(ua) : ac current test normal test (tip-ground) - ac-current-rg(ua) : ac current test normal test (ring-ground) - dc-current-tr(ua) : dc current test normal test (tip-ring) - dc-current-tg(ua) : dc current test normal test (tip-ground) - dc-current-rg(ua) : dc current test normal test (ring-ground) - noise-lv-0.001dbm : noise level normal test - howler-test-park : howler test under normal test condition only in parking - status-monitored : status monitored test - cable-pair-ident : cable pair identification test - talking-father : talking test (father test item) - line-reverse-sub : line reverse test, subtest of talking test - p-meter-pulse-sub : private meter pulses test, subtest of talking test - ring-subscrib-sub : ring subscriber with auto ring test,	

Resource Identifier	Type	Description
	subtest of talking test - dpdtmf-signal-sub : dp/dtmf signal test, subtest of talking test - userloop-sub(ohm) : resistance of user loop (tip-ring), subtest of talking test - feeded-dc-tg(mv) : feeded dc voltage of user line (tip-ground) - feeded-dc-rg(mv) : feeded dc voltage of user line (ring-ground) - impedance-rt(ohm) : impedance of user circuit (ring-tip) - isdn-loopback : isdn loop back test - ringer-ren(mren) : gr909 ringer equivalency number testing - dialtone-delay-db(ms) : gr909 draw and break dial tone delay testing - gr909-roh : gr909 receiver off hook testing - gr909-hazardous-p : gr909 Hazardous Potential testing - gr909-femf : gr909 Foreign ElectroMotive Force testing - gr909-resistive-f : gr909 resistive faults testing - diagnosis-call(1/10s) : diagnosis call test	
result-index	Parameter type: <LineTest::RpRsIndex> Format: - index of multi results - range: [1...20]	Index of multi results

Command Output

Table 168.5-2 "Megaco LineTest LineId ExtReport Status Command" Display parameters

168 LineTest Status Commands

name	Type	Description
	- receiveroffhook - testnotpassed - gndreported - resoutofrange - linestatus-unsupported - not-applicable - pass - fail - hw-setting-failed - pattern-check-failed - call-fail-busy - call-fail-other) Possible values: - success : pp success - ppnom-measurefail : pp measurement fail - ppnom-hookdet : pp hook detected - ppnom-alreadrun : pp already running - ppnom-notimple : pp not implemented - ppnet-offhook : pp off hook detected - ppnet-inval-opmode : pp invalid opmode - ppnet-other : pp other error - ppnet-vin-unsupp : pp vin unsupported - ppnet-slic-unsupp : pp slic unsupported - testbeyd-cdethres : test beyond cde threshold - test-timeout : test timeout - test-interrupted : test course was interrupted - test-errother : test other error - test-errvin : error coursed vy vinetic chip - test-erronhook : test ended by on hook event - test-erroffhook : test ended by off hook event - testbeyd-confthre : test result beyond the threshold that operator configed - degraded-accuracy : the accuracy of the results are degraded because of low leakage resistance - thermal-fault : a thermal fault was detected during the test - exc-ac-induct : excessive ac induction was detected during the test - cmsaturation : common mode saturation was detected during the test - diffsaturation : differential saturation was detected during the test - exec-foreign-vol : a large foreign voltage prevented the respective tests from being executed - capoutofrange : capacitor were too large to be measured - exec-low-res : test has not been executed due to the presence of a very low fault resistance - receiveroffhook : test failed because the measured voltage never settled to within tolerancelimits - testnotpassed : test result beyond the threshold that operator configed - gndreported : a single resistance to ground - resoutofrange : resistance were too large to be measured - linestatus-unsupported : test not executed because of the unsupported line status - not-applicable : test not executed because it not applicable - pass : gr909 sub test/voice diagnosis call test passed - fail : gr909 sub test/voice diagnosis call test failed	

name	Type	Description
	- hw-setting-failed : E1 loopback setting failed - pattern-check-failed : E1 loopback pattern check failed - call-fail-busy : diagnosis call test failed because term is busy - call-fail-other : diagnosis call test failed for other reason	
value	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type. The specific range is dependent on the specific line test item. The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>
value2	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type. The specific range is dependent on the specific line test item. The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>
value3	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type. The specific range is dependent on the specific line test item. The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>
value4	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type. The specific range is dependent on the specific line test item. The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>

168.6 SINGLE LineTest Available Session Status Command

Command Description

This command allows the operator to check whether there is an available session to line test.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

> show linetest single avail-sess

Command Output

Table 168.6-2 "SINGLE LineTest Available Session Status Command" Display parameters

Specific Information		
name	Type	Description
available-session	Parameter type: <LineTest::Session> - session number - range: [0...16]	the available seession to do line test <i>This element is always shown.</i>
max-session	Parameter type: <LineTest::Session> - session number - range: [0...16]	the max number of session <i>This element is always shown.</i>

168.7 SINGLE LineTest Session Status Command

Command Description

This command displays session related parameters.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

> show linetest single ltsession [(sessionid)]

Command Parameters

Table 168.7-1 "SINGLE LineTest Session Status Command" Resource Parameters

Resource Identifier	Type	Description
(sessionid)	Format: - available session id - range: [1...16]	uniquely identify of session

Command Output

Table 168.7-2 "SINGLE LineTest Session Status Command" Display parameters

Specific Information		
name	Type	Description
session-status	Parameter type: <LineTest::SessionStatus> (idle revcmd runcmd revinfo testover stateerror testhold) Possible values: - idle : indicate the session is not initialized, you can create it - revcmd : indicate the session receives test cmd - runcmd : indicate the session runs test cmd - revinfo : indicate the session receives info cmd - testover : indicate the session test is finished - stateerror : something is wrong - testhold : indicate the session is held for sub test of talking test or 1 round is finished in continuous test	the status of session <i>This element is always shown.</i>
input-err-code	Parameter type: <LineTest::SessionErrCode>	the input error code of session

168 LineTest Status Commands

name	Type	Description
	(noerr paramnuminconsis paramnumoutrange typeneednparam nontestingtype missingparamconf missingtimeout timeoutnotenough linenuminconsis linenumoutrange invalidlineid duplicatedline missingtesttype invalidtesttype thresholdnumerr neednothreshold threshfornon typemismatchmode linenummismatch wrongstatusforsub notonetestitem lineidinnontest modenotsupportrep sessionstateerr internalerror inactivetimeroutrange) Possible values: - noerr : no error - paramnuminconsis : the actual input param number in ltTestParamTable is not equal to ltTestParamNum - paramnumoutrange : the input param number is out of range, from 0 to 4 is allowed - typeneednparam : the input test param is meaningless, because those test types not need any test para - nontestingtype : the input test param for those test types which are not in current test session - missingparamconf : missing test param configuration for those test types which must have test param - missingtimeout : missing ltTimeOutPeriod value - timeoutnotenough : the input ltTimeOutPeriod is not enough for test - linenuminconsis : the actual input line number in ltLineIdTable is not equal to ltLineNum - linenumoutrange : the input line number is out of range, from 1 to 72 is allowed - invalidlineid : the input lineId is invalid - duplicatedline : the same lineId configed twice - missingtesttype : missing ltTestTypeHigh and ltTestTypeLow - invalidtesttype : the input ltTestTypeHigh and ltTestTypeLow is incorrect - thresholdnumerr : input too many threshold, the number of threshold from 0 to 39 is allowed - neednothreshold : the input threshold is meaningless, because those test types do not need any threshold - threshfornon : the input threshold for those test types which are not in current test session	<i>This element is always shown.</i>

name	Type	Description
	- typemismatchmode : the input test type does not match with the test mode - linenummismatch : the input line number is not match test mode and test type. All talking test, cable pair test, block test and continuous test only support one line for certain test - wrongstatusforsub : the line status for subtest is not in holding or the line which has no father test first - notonetestitem : block test and continous test must be only one test type - lineidinnontest : the input lineId is not in testing status - modenotsupportrep : repeate test can only be done in continous test mode - sessionstateerr : the command not allowed in current session state - internalerror : internal system error - inactivetimeroutrange : the input session inactive timer is out of range, 0 and from 120 to 65535 is allowed	

168.8 SINGLE LineTest Line Status Command

Command Description

This command displays all parameters on a specific line id of a session.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show linetest single lline [ (sessionid) [ lineid <Itf::LineTestSingleLineId> ] ]
```

Command Parameters

Table 168.8-1 "SINGLE LineTest Line Status Command" Resource Parameters

Resource Identifier	Type	Description
(sessionid)	Format: - available session id - range: [1...16]	uniquely identify of session
lineid	Parameter type: <Itf::LineTestSingleLineId> Format: <Eqpt::NodeId> / <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::NodeId> - the Node number Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	line id

Command Output

Table 168.8-2 "SINGLE LineTest Line Status Command" Display parameters

Specific Information		
name	Type	Description
line-status	Parameter type: <LineTest::LineStatus> (none intest testover	the test result status <i>This element is always shown.</i>

name	Type	Description
	rstpartlyready testrejected) Possible values: - none : null - intest : put the line in test - testover : the line tested, and the result is ready for polling, it is read-only - rstpartlyready : defined for dp/dtmf test - testrejected : line test not supported for shared line

name	Type	Description
	disable-unlock-oc disable-unlock-ot disable-net-lock disable-lock-gk disable-lock-oc disable-lock-ot not-support mta-testing board-intesting finish-pass finish-fail) Possible values: - unfinished : the line test is not finished yet - finish : the total logic result outcome - stop-by-timeout : if reset all cmd is arrived, the later coming test request is wrong - cancel-by-operator : as an error flag to construct the result package - break-by-user : stop while testing by user - ppfailed : pp failed, hardware failed - linebusy : the line is busy in used - ltime-no-operator : in continuous/talking test, long time no further operator(600s) - linestatus-error : timer operator failed - out-memory : fail to apply result buffer in lt board - timer-operfail : operation fail of timer - type-empty : no test type in test request - type-logic-err : measurement no supported - type-unknown : the test command is illegal - para-lineid-err : the lineid in test command is not valid - para-oper-err : illegal operation - pare-serialnum-err : error session id - line-intesting : the line is in another line test - otherfail : some other fail - ended-by-oper : the test was over because of end operation of operator - onhook-by-oper : the test was over because operator on hook - paraval-err : for dtmf test, test para less than 1 - llurelay-err : llurelay config not valid for MELT - shared-line-rejected : line test not supported for shared line - service-unavailable : the test was over because service is unavailable - rejected-pwrthold : NBLT could not be started due to max power consumption threshold reached - session-timeout : test session time out - invalid-portid : lineid is not valid - miss-message : line test message is not received - redundancy-ports : redundancy port ids for the testtype only support 1 port every test - end-sequence-num : end command used wrong session id - port-disable : line test board is not available - poltfail : line test board failed - port-unknown-state : this line is in an unknown state - outofmem : xVPS or NT run out of memory - new-timer-err : create timer failed - start-timer-err : start timer failed	

name	Type	Description
	- send-msg-err : send message failed - get-ipudp-err : get line ip/udp failed - enable-lock : line enable but locked - disable-unlock : line disable and unlocked - disable-lock : line disable and locked - abort-timer-err : abort timer failed - empty-test-type : the test type bitmap is empty - mismatch-with-mode : test type mismatch with test mode - disable-net-unlock : adminstate:unlock, operstate:disable from mgc - disable-unlock-gk : adminstate:unlock, operstate:disable from tg(ground key) - disable-unlock-oc : adminstate:unlock, operstate:disable from tg(over current) - disable-unlock-ot : adminstate:unlock, operstate:disable from tg(over temperature) - disable-net-lock : adminstate:lock, operstate:disable form mgc - disable-lock-gk : adminstate:lock, operstate:disable from tg(ground key) - disable-lock-oc : adminstate:lock, operstate:disable from tg(over current) - disable-lock-ot : adminstate:lock, operstate:disable from tg(over temperature) - not-support : line test is no supported for the port - mta-testing : the port is undergoing in mta test now - board-intesting : the board is in another line test - finish-pass : gr909 group test passed - finish-fail : gr909 group test failed	
comm-status-text	Parameter type: <LineTest::comm-status-text> - the text mapper of comm-stat - length: x<=256	the test result status <i>This element is always shown.</i>
val-num	Parameter type: <LineTest::RpValNum> - available results numbers - range: [0...72]	available results numbers <i>This element is always shown.</i>
hook-chag-status	Parameter type: <LineTest::LineHookChagStat> (others offhook-to-onhook onhook-to-offhook) Possible values: - others : no hook state change - offhook-to-onhook : the tested line has hook state change from off hook to on hook - onhook-to-offhook : the tested line has hook state change from on hook to off hook	line hook state change <i>This element is always shown.</i>
stop-time	Parameter type: <LineTest::GaugeTimeInSecs> - the time (yyyy-mm-dd:hour:minutes:secs)	line test stop time <i>This element is always shown.</i>
rem-time-searcht	Parameter type: <LineTest::SearchToneRemainingTime> - search tone remaining time - unit: second - range: [0...7200]	search tone remaining time <i>This element is always shown.</i>

168.9 SINGLE LineTest LineId ExtReport Status Command

Command Description

This command displays parameters for lineid report multi results.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show linetest single lineid-ext-rept [ (sessionid) [ lineid <Itf::LineTestSingleLineId> ] [ test-name(unit)
<LineTest::TestTypeSip> ] [ result-index <LineTest::RpRsIndex> ] ]
```

Command Parameters

Table 168.9-1 "SINGLE LineTest LineId ExtReport Status Command" Resource Parameters

Resource Identifier	Type	Description
(sessionid)	Format: - available session id - range: [1...16]	uniquely identify of session
lineid	Parameter type: <Itf::LineTestSingleLineId> Format: <Eqpt::NodeId> / <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::NodeId> - the Node number Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	line id
test-name(unit)	Parameter type: <LineTest::TestTypeSip> Format: (feeded-ac-tr(mv) feeded-ac-tg(mv) feeded-ac-rg(mv) foreign-ac-tr(mv) foreign-ac-tg(mv) foreign-ac-rg(mv)	test type

Resource Identifier	Type	Description

168 LineTest Status Commands

name	Type	Description
	presence of a very low fault resistance - receiveroffhook : test failed because the measured voltage never settled to within tolerancelimits - testnotpassed : test result beyond the threshold that operator configed - gndreported : a single resistance to ground - resoutofrange : resistance were too large to be measured - linestatus-unsupport : test not executed because of the unsupported line status - not-applicable : test not executed because it not applicable - pass : gr909 sub test/voice diagnosis call test passed - fail : gr909 sub test/voice diagnosis call test failed - hw-setting-failed : E1 loopback setting failed - pattern-check-failed : E1 loopback pattern check failed - call-fail-busy : diagnosis call test failed because term is busy - call-fail-other : diagnosis call test failed for other reason	
value	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type.The specific range is dependent on the specific line test item.The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>
value2	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type.The specific range is dependent on the specific line test item.The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>
value3	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type.The specific range is dependent on the specific line test item.The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>
value4	Parameter type: <LineTest::ExtRpVal> - line test result value of the specified line and test type.The specific range is dependent on the specific line test item.The following is the max range. - range: [-2147483647...2147483647]	line test result value of the specified line and test type <i>This element is always shown.</i>
value-vi	Parameter type: <LineTest::ExtRpVi> - the validity flag of line test result value. - range: [-2147483647...2147483647]	line test validity identifier for all result values <i>This element is always shown.</i>

168.10 SINGLE LineTest Chipset Data Command

Command Description

This command displays the manufacturer, hardware version and firmware version of board's chipset.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

> show linetest single chipsetdata-for-slot [(ltboardposition)]

Command Parameters

Table 168.10-1 "SINGLE LineTest Chipset Data Command" Resource Parameters

Resource Identifier	Type	Description
(ltboardposition)	Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	uniquely identify of linetest slot

Command Output

Table 168.10-2 "SINGLE LineTest Chipset Data Command" Display parameters

Specific Information		
name	Type	Description
vendorid	Parameter type: <LineTest::VendorString> - uniquely identifies board vendor id - length: x<=32	the manufacturer identifier of board <i>This element is always shown.</i>
hardware-version	Parameter type: <LineTest::HardwareVersionString> - uniquely identifies board hardware version - length: x<=232	the hardware-version of the board <i>This element is always shown.</i>
firmware-version	Parameter type: <LineTest::FirmwareVersionString> - uniquely identifies board firmware version - length: x<=32	the firmware-version of the board <i>This element is always shown.</i>

168.11 SINGLE LineTest Session busy port Command

Command Description

This command displays busy port of session.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show linetest single busy-status [ (sessionid) [ lineid <Itf::LineTestSingleLineId> ] ]
```

Command Parameters

Table 168.11-1 "SINGLE LineTest Session busy port Command" Resource Parameters

Resource Identifier	Type	Description
(sessionid)	Format: - available session id - range: [1...16]	uniquely identify of session
lineid	Parameter type: <Itf::LineTestSingleLineId> Format: <Eqpt::NodeId> / <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::NodeId> - the Node number Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	line id

Command Output

Table 168.11-2 "SINGLE LineTest Session busy port Command" Display parameters

Specific Information		
name	Type	Description
busy-status	Parameter type: <LineTest::LTBusyStatus>	busy reason of busy port

name	Type	Description
	(tobetest inmeasurement insearchtone testover) Possible values: - tobetest : the port will be test - inmeasurement : the port is in LineTestMeasurement - insearchtone : the port is in SearchTone - testover : the port is test finished	<i>This element is always shown.</i>

168.12 MELT Selftest Status Command

Command Description

This command displays the status of selftest operation on MELT board.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

> show linetest single melt-selftest [(lt-slotno)]

Command Parameters

Table 168.12-1 "MELT Selftest Status Command" Resource Parameters

Resource Identifier	Type	Description
(lt-slotno)	Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical slot position

Command Output

Table 168.12-2 "MELT Selftest Status Command" Display parameters

Specific Information		
name	Type	Description
selftest-status	Parameter type: <LineTest::MeltSelfTestStatus> (idle teststart testongoing testfinishedandpassed testfinishedandfailed testunfinished) Possible values: - idle : idle state - teststart : test start state - testongoing : test ongoing state - testfinishedandpassed : test finished and passed state	the test result status <i>This element is always shown.</i>

name	Type	Description
	- testfinishedandfailed : test finished and failed state - testunfinished : test unfinished state	

168.13 MELT reset Status Command

Command Description

This command displays the status of reset operation on MELT board.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show linetest single melt-reset [ (lt-slotno) ]
```

Command Parameters

Table 168.13-1 "MELT reset Status Command" Resource Parameters

Resource Identifier	Type	Description
(lt-slotno)	Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	the physical slot position

Command Output

Table 168.13-2 "MELT reset Status Command" Display parameters

Specific Information		
name	Type	Description
reset-status	Parameter type: <LineTest::MeltResetStatus> (idle resetstart resetongoing resetfinished resetunavailable) Possible values: - idle : Initial state - resetstart : the MELT reset operation is triggered - resetongoing : MELT reset is in progress - resetfinished : MELT reset is completed - resetunavailable : MELT reset function is not available	the test result status <i>This element is always shown.</i>

168.14 MELT hardware Status Command

Command Description

This command displays the status of hardware operation on MELT board.

User Level

The command can be accessed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show linetest single hw-status [ (if-index) ]
```

Command Parameters

Table 168.14-1 "MELT hardware Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 168.14-2 "MELT hardware Status Command" Display parameters

Specific Information		
name	Type	Description
hw-status	Parameter type: <LineTest::OperationalStatus> (operational not-operational) Possible values: - operational : MELT Hw is operational - not-operational : MELT Hw is not operational	the test result status <i>This element is always shown.</i>

169- LACP status commands

169.1 LACP status commands Tree	169-6838
169.2 LACP Port Status Command	169-6839
169.3 LACP Group Status Command	169-6845
169.4 LACP Member Port Status Command	169-6848

169.1 LACP status commands Tree

Description

This chapter gives an overview of nodes that are handled by "LACP status commands".

Command Tree

```
----show
  ----link-agg
    ----port-info
      - (port)
    ----group-info
      - (group)
  ----member-port
    - (group)
    - port
```

169.2 LACP Port Status Command

Command Description

This command displays information for a member port of a Link Aggregation Group.

User Level

The command can be accessed by operators with lacp privileges.

Command Syntax

The command has the following syntax:

```
> show link-agg port-info [ (port) ]
```

Command Parameters

Table 169.2-1 "LACP Port Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 169.2-2 "LACP Port Status Command" Display parameters

Specific Information		
name	Type	Description
aggregate	Parameter type: <Lacp::AggregateFlag> (aggregate individual) Possible values: - aggregate : aggregate - individual : individual	specifies whether the aggregation port is able to aggregate or only able to operate as an individual link. <i>This element is always shown.</i>

Only Show Details: aggregate/individual parameters		
name	Type	Description
actor-sys-id	Parameter type: <Lacp::MacAddr> - mac address (aa:bb:cc:a1:02:03)	specifies MAC addr that defines the value of the system id for the

169 LACP status commands

name	Type	Description
	- length: 6	system that contains this aggregation port. <i>This element is only shown in detail mode.</i>
actor-key	Parameter type: <Lacp::LacpKey> - link aggregate key - range: [0...65535]	current operational value of the key for the aggregation port. <i>This element is only shown in detail mode.</i>
partner-sys-priority	Parameter type: <Lacp::PartnerSysPriority> - the lacp system priority - range: [0...65535]	operational value of priority associated with the partner's system id. <i>This element is only shown in detail mode.</i>
partner-sys-id	Parameter type: <Lacp::MacAddr> - mac address (aa:bb:cc:a1:02:03) - length: 6	specifies MAC addr value representing the current value of the aggregation port's protocol partner's system id. <i>This element is only shown in detail mode.</i>
partner-key	Parameter type: <Lacp::LacpKey> - link aggregate key - range: [0...65535]	current operational value of the key for the protocol partner. <i>This element is only shown in detail mode.</i>
actual-aggregator-port	Parameter type: <Itf::LaGroupZeroIndex> (none <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Possible values: - none : no port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	specifies the aggregator that this aggregation port has currently selected <i>This element is only shown in detail mode.</i>
attached-aggreg-port	Parameter type: <Itf::LaGroupZeroIndex> (none <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Possible values: - none : no port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	specifies the aggregator that this aggregation port is currently attached to. zero indicates that the aggregation port is not currently attached to an aggregator. <i>This element is only shown in detail mode.</i>
actor-port	Parameter type: <Lacp::ActorPort> - la aggregate actor port - range: [0...65535]	port number locally assigned to the aggregation port. <i>This element is only shown in detail mode.</i>
actor-admin-port-pri	Parameter type: <Lacp::ActorPortAdminPriority> - la aggregate port priority	the admin priority for the port. <i>This element is only shown in</i>

name	Type	Description
	- range: [0...65535]	<i>detail mode.</i>
actor-oper-port-pri	Parameter type: <Lacp::ActorPortOperPriority> - la aggregate port priority - range: [0...65535]	the operational priority for the port. <i>This element is only shown in detail mode.</i>
partner-port	Parameter type: <Lacp::PartnerOperPort> - la aggregate partner operational port - range: [0...65535]	operational port number assigned to this aggregation port by the aggregation port's protocol partner. <i>This element is only shown in detail mode.</i>
partner-port-priority	Parameter type: <Lacp::PartnerPortPriority> - la aggregate port priority - range: [0...65535]	priority value assigned to this aggregation port by the partner. <i>This element is only shown in detail mode.</i>
actor-synch-state	Parameter type: <Lacp::ActorOperLacpSynchState> (synchronised not-synchronised) Possible values: - synchronised : actor is synchronised - not-synchronised : actor is not synchronised	actor oper lacp synch state <i>This element is only shown in detail mode.</i>
actor-collect-state	Parameter type: <Lacp::ActorOperLacpCollectState> (collecting not-collecting) Possible values: - collecting : the actor is collecting - not-collecting : the actor is not collecting	actor oper lacp collecting state <i>This element is only shown in detail mode.</i>
actor-distribute-state	Parameter type: <Lacp::ActorOperLacpDistributeState> (distributing not-distributing) Possible values: - distributing : the actor is distributing - not-distributing : the actor is not distributing	actor oper lacp distributing state <i>This element is only shown in detail mode.</i>
actor-defaulted-state	Parameter type: <Lacp::ActorOperLacpDefaultedState> (is-defaulted is-not-defaulted) Possible values: - is-defaulted : the actor is defaulted - is-not-defaulted : the actor is not defaulted	actor oper lacp defaulted state <i>This element is only shown in detail mode.</i>
actor-expired-state	Parameter type: <Lacp::ActorOperLacpExpiredState> (is-expired is-not-expired) Possible values: - is-expired : actor is in lacp expired state - is-not-expired : actor is not in lacp expired state	actor oper lacp expired state <i>This element is only shown in detail mode.</i>
partner-synch-state	Parameter type: <Lacp::PartnerOperLacpSynchState> (synchronised not-synchronised) Possible values: - synchronised : the partner is synchronised - not-synchronised : the partner is not synchronised	partner oper lacp synch state <i>This element is only shown in detail mode.</i>
partner-collect-state	Parameter type: <Lacp::PartnerOperLacpCollectState> (collecting not-collecting) Possible values: - collecting : the partner is collecting - not-collecting : the partner is not collecting	partner oper lacp collecting state <i>This element is only shown in detail mode.</i>

169 LACP status commands

name	Type	Description
partn-distribute-state	Parameter type: <Lacp::PartnerOperLacpDistributeState> (distributing not-distributing) Possible values: - distributing : the partner is distributing - not-distributing : the partner is not distributing	partner oper lacp distributing state <i>This element is only shown in detail mode.</i>
partn-defaulted-state	Parameter type: <Lacp::PartnerOperLacpDefaultedState> (is-defaulted is-not-defaulted) Possible values: - is-defaulted : the partner is defaulted - is-not-defaulted : the partner is not defaulted	partner oper lacp defaulted state <i>This element is only shown in detail mode.</i>
partner-expired-state	Parameter type: <Lacp::PartnerOperLacpExpiredState> (is-expired is-not-expired) Possible values: - is-expired : partner is in lacp expired state - is-not-expired : partner is not in lacp expired state	partner oper lacp expired state <i>This element is only shown in detail mode.</i>

Only Show Details: link aggregation control protocol statistics		
name	Type	Description
lacp-pdus-rx	Parameter type: <Counter> - 32 bit counter	number of valid LACPDUs received on this aggregation port. <i>This element is only shown in detail mode.</i>
marker-rx	Parameter type: <Counter> - 32 bit counter	nbr of valid marker PDUs received on this aggregation port. <i>This element is only shown in detail mode.</i>
marker-response-rx	Parameter type: <Counter> - 32 bit counter	nbr of valid marker response PDUs received on this aggregation port. <i>This element is only shown in detail mode.</i>
unknown-rx	Parameter type: <Counter> - 32 bit counter	nbr of frames rx that either: carry the slow protocols ethernet type value, but contain an unknown PDU, or: are addressed to the slow protocols group MAC addr, but do not carry the slow protocols ethernet type. <i>This element is only shown in detail mode.</i>
illegal-rx	Parameter type: <Counter> - 32 bit counter	nbr of frames rx that carry the slow protocols ethernet type value, but contain a badly formed PDU or an illegal value of protocol subtype. <i>This element is only shown in detail mode.</i>
lacp-pdus-tx	Parameter type: <Counter> - 32 bit counter	number of LACPDUs transmitted on this aggregation port. <i>This element is only shown in detail mode.</i>
marker-tx	Parameter type: <Counter> - 32 bit counter	number of marker PDUs transmitted on this aggregation port. <i>This element is only shown in detail mode.</i>

name	Type	Description
marker-response-tx	Parameter type: <Counter> - 32 bit counter	<i>detail mode.</i> nbr of marker response PDUs transmitted on this aggregation port. <i>This element is only shown in detail mode.</i>
Only Show Details: debugging information		
name	Type	Description
rx-state	Parameter type: <Lacp::RxState> (present expired defaulted initialize lacpdisabled portdisabled) Possible values: - present : present - expired : expired - defaulted : defaulted - initialize : initialize - lacpdisabled : lacp Disabled - portdisabled : port Disabled	specifies receive state machine for the aggregation port <i>This element is only shown in detail mode.</i>
last-rx-time	Parameter type: <TimeTicks> - a timeout value - unit: msec	specifies the value of a Time Since SystemReset when the last LACPDU was received by this Aggregation Port <i>This element is only shown in detail mode.</i>
mux-state	Parameter type: <Lacp::MuxState> (detached waiting attached collecting distributing collect-distributing) Possible values: - detached : detached - waiting : waiting - attached : attached - collecting : collecting - distributing : distributing - collect-distributing : collecting and distributing	specifies the mux state machine for the aggregation port <i>This element is only shown in detail mode.</i>
mux-reason	Parameter type: <PrintableString> - printable string	specifies the reason for the most recent change of mux machine state. <i>This element is only shown in detail mode.</i>
actor-churn-state	Parameter type: <Lacp::ChurnState> (no-churn churn churn-monitor) Possible values: - no-churn : no churn - churn : churn - churn-monitor : churn monitor	specifies the state of the actor churn detection machine for the aggregation port. <i>This element is only shown in detail mode.</i>
actor-churn-count	Parameter type: <Counter> - 32 bit counter	nbr of times the actor churn state machine has entered the

169 LACP status commands

name	Type	Description
		ACTOR_CHURN state. <i>This element is only shown in detail mode.</i>
actor-sync-transit-cnt	Parameter type: <Counter> - 32 bit counter	nbr of times the actor's mux state machine has entered the IN_SYNC state. <i>This element is only shown in detail mode.</i>
actor-lag-id-chg-count	Parameter type: <Counter> - 32 bit counter	nbr of times the actor's perception of the lag id for this aggregation port has changed. <i>This element is only shown in detail mode.</i>
partner-churn-state	Parameter type: <Lacp::ChurnState> (no-churn churn churn-monitor) Possible values: - no-churn : no churn - churn : churn - churn-monitor : churn monitor	specifies the state of the partner churn detection machine for the aggregation port. <i>This element is only shown in detail mode.</i>
partner-churn-count	Parameter type: <Counter> - 32 bit counter	nbr of times the partner churn state machine has entered the PARTNER_CHURN state. <i>This element is only shown in detail mode.</i>
partn-sync-transit-cnt	Parameter type: <Counter> - 32 bit counter	nbr of times the partner's mux state machine has entered the IN_SYNC state. <i>This element is only shown in detail mode.</i>
partner-lag-id-chg-cnt	Parameter type: <Counter> - 32 bit counter	nbr of times the partner's perception of the lag id for this aggregation port has changed. <i>This element is only shown in detail mode.</i>

169.3 LACP Group Status Command

Command Description

This command displays information about a Link Aggregation Group, The operator identifies the group by means of the primary port.

User Level

The command can be accessed by operators with lacp privileges.

Command Syntax

The command has the following syntax:

```
> show link-agg group-info [ (group) ]
```

Command Parameters

Table 169.3-1 "LACP Group Status Command" Resource Parameters

Resource Identifier	Type	Description
(group)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the link aggregation group

Command Output

Table 169.3-2 "LACP Group Status Command" Display parameters

Specific Information		
name	Type	Description
actor-system-id	Parameter type: <Lacp::MacAddr> - mac address (aa:bb:cc:a1:02:03) - length: 6	specifies MAC addr that defines the value of the system id for the system that contains this aggregator. <i>This element is always shown.</i>
actor-sys-priority	Parameter type: <Lacp::ActorSysOperPriority> - the lacp agg actor system priority - range: [0...65535]	the lacp operational system priority. <i>This element is always shown.</i>
actor-oper-key	Parameter type: <Lacp::LacpKey>	the current operational value of

169 LACP status commands

name	Type	Description
	- link aggregate key - range: [0...65535]	the key for the aggregator. <i>This element is always shown.</i>
partner-sys-id	Parameter type: <Lacp::MacAddr> - mac address (aa:bb:cc:a1:02:03) - length: 6	Specifies MAC address for the current protocol partner of this aggregator <i>This element is always shown.</i>
partner-sys-priority	Parameter type: <Lacp::PartnerSysPriority> - the lacp system priority - range: [0...65535]	Specifies priority value associated with the partner's system id. <i>This element is always shown.</i>
partner-oper-key	Parameter type: <Lacp::LacpKey> - link aggregate key - range: [0...65535]	The current operational value for the aggregator's current protocol partner. <i>This element is always shown.</i>
rdncy-primary	Parameter type: <Itf::EthernetPortIndex> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The primary port in a LAG. <i>This element is always shown.</i>
rdncy-secondary	Parameter type: <Itf::EthernetPortIndex> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	The secondary port in a LAG. <i>This element is always shown.</i>
rdncy-active-slot	Parameter type: <Lacp::EqptSlotIndex> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId>) Possible values: - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number	The active slot in a LAG. <i>This element is always shown.</i>

name	Type	Description
	Field type <Eqpt::SlotId> - the LT slot number	

169.4 LACP Member Port Status Command

Command Description

This command displays information about a Link Aggregation Group member port status. The operator identifies the group by means of the primary port.

User Level

The command can be accessed by operators with lacp privileges.

Command Syntax

The command has the following syntax:

```
> show link-agg member-port [ (group) [ port <Itf::EthernetPortIndex> ] ]
```

Command Parameters

Table 169.4-1 "LACP Member Port Status Command" Resource Parameters

Resource Identifier	Type	Description
(group)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the link aggregation group
port	Parameter type: <Itf::EthernetPortIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	Interface index of the port

Command Output

Table 169.4-2 "LACP Member Port Status Command" Display parameters

Specific Information		
name	Type	Description
standby	Parameter type: <Lacp::StandbyStatus> (active standby) Possible values: - active : active - standby : standby	specifies whether aggregation port is in active or standby. <i>This element is always shown.</i>

170- LACP status commands

170.1 LACP status commands Tree	170-6851
170.2 LACP Group Status Command	170-6852
170.3 LACP Group Status Command	170-6854
170.4 LACP Group Status Command	170-6856

170.1 LACP status commands Tree

Description

This chapter gives an overview of nodes that are handled by "LACP status commands".

Command Tree

```
----show
  ----link-agg
    ----resource
      ----group
        - (group)
      ----board-iwf-info
        - (slot)
        - iwf-id
      ----iwf-group-info
        - (slot)
        - iwf-id
        - master-group
```

170.2 LACP Group Status Command

Command Description

This command displays information about a Link Aggregation Group, The operator identifies the group by means of the primary port.

User Level

The command can be accessed by operators with lacp privileges.

Command Syntax

The command has the following syntax:

```
> show link-agg resource group [ (group) ]
```

Command Parameters

Table 170.2-1 "LACP Group Status Command" Resource Parameters

Resource Identifier	Type	Description
(group)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the link aggregation group

Command Output

Table 170.2-2 "LACP Group Status Command" Display parameters

Specific Information		
name	Type	Description
admin-master-iwf	Parameter type: <Lacp::ResourceMasterIwf> - display adminMasterIwf or operMasterIwf - length: x<=8	indicate the lag is binded to the iwf based on the primary port, or is a dummy lag. <i>This element is always shown.</i>
oper-master-iwf	Parameter type: <Lacp::ResourceMasterIwf> - display adminMasterIwf or operMasterIwf - length: x<=8	indicate which iwf the lag is binded to. <i>This element is always shown.</i>
ing-bandwidth(mbps)	Parameter type: <Lacp::IngressBandWidth> - bandwidth of the lag	the ingress band width of the lag. <i>This element is always shown.</i>

name	Type	Description
	- unit: Mbit/sec	
cross-iwf-link-used	Parameter type: <Lacp::CrossIwfLink> - the number of used cross-iwf inter-link on the lag. - range: [0...8]	indicate the number of cross-iwf inter-link is used on the lag <i>This element is always shown.</i>

170.3 LACP Group Status Command

Command Description

This command displays information about a Link Aggregation Group, The operator identifies the group by means of the primary port.

User Level

The command can be accessed by operators with lacp privileges.

Command Syntax

The command has the following syntax:

```
> show link-agg resource board-iwf-info [ (slot) [ iwf-id <Lacp::RsIwfId> ] ]
```

Command Parameters

Table 170.3-1 "LACP Group Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	slot index of the link aggregation resource
iwf-id	Parameter type: <Lacp::RsIwfId> Format: - indicate resource iwf id. - range: [1...2]	indicate the resource iwf id.

Command Output

Table 170.3-2 "LACP Group Status Command" Display parameters

Specific Information		
name	Type	Description
bandwidth-total(mbps)	Parameter type: <Lacp::IngressBandWidth> - bandwidth of the lag - unit: Mbit/sec	indicating the total ingress-bandwidth of the iwf. <i>This element is always shown.</i>
bandwidth-used(mbps)	Parameter type: <Lacp::IngressBandWidth> - bandwidth of the lag - unit: Mbit/sec	indicating the used ingress-bandwidth of the iwf. <i>This element is always shown.</i>

name	Type	Description
bandwidth-free(mbps)	Parameter type: <Lacp::IngressBandWidth> - bandwidth of the lag - unit: Mbit/sec	indicating the free ingress-bandwidth of the iwf. <i>This element is always shown.</i>
crossiwf-links-total	Parameter type: <Lacp::CrossIwfLink> - the number of used cross-iwf inter-link on the lag. - range: [0...8]	indicates the total cross-iwf inter-link on the iwf. <i>This element is always shown.</i>
crossiwf-links-used	Parameter type: <Lacp::CrossIwfLink> - the number of used cross-iwf inter-link on the lag. - range: [0...8]	indicates the used cross-iwf inter-link on the iwf. <i>This element is always shown.</i>
crossiwf-links-free	Parameter type: <Lacp::CrossIwfLink> - the number of used cross-iwf inter-link on the lag. - range: [0...8]	indicates the free cross-iwf inter-link on the iwf. <i>This element is always shown.</i>

170.4 LACP Group Status Command

Command Description

This command displays information about a Link Aggregation Group, The operator identifies the group by means of the primary port.

User Level

The command can be accessed by operators with lacp privileges.

Command Syntax

The command has the following syntax:

```
> show link-agg resource iwfb-group-info [ (slot) [ iwfb-id <Lacp::RsIwfbId> ] [ master-group <Itf::LaGroupIndex> ] ]
```

Command Parameters

Table 170.4-1 "LACP Group Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: It : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - It : It-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	slot index of the link aggregation resource
iwfb-id	Parameter type: <Lacp::RsIwfbId> Format: - indicate resource iwfb id. - range: [1...2]	indicate the iwfb id.
master-group	Parameter type: <Itf::LaGroupIndex> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	indicate the master residential group id.

Command Output

Table 170.4-2 "LACP Group Status Command" Display parameters

Specific Information		
name	Type	Description
used-bandwidth(mbps)	Parameter type: <Lacp::IngressBandWidth> - bandwidth of the lag - unit: Mbit/sec	indicating the resource bandwidth used of the iwf. <i>This element is always shown.</i>

171- MSTP Status Commands

171.1 MSTP Status Command Tree	171-6859
171.2 MSTP Bridge Status Command	171-6860
171.3 MSTP Instance Status Command	171-6862
171.4 MSTP Network Port Status Command	171-6864
171.5 MSTP Port Instance Status Command	171-6867

171.1 MSTP Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "MSTP Status Commands".

Command Tree

```
----show
  ----xstp
    ----bridge
    ----instance
      - (instance)
    ----port
      - (port)
    ----port-instance
      - (port)
      - instance
```

171.2 MSTP Bridge Status Command

Command Description

This command displays all common spanning tree instances for the whole bridge.

User Level

The command can be accessed by operators with mstp privileges.

Command Syntax

The command has the following syntax:

```
> show xstp bridge
```

Command Output

Table 171.2-2 "MSTP Bridge Status Command" Display parameters

Specific Information		
name	Type	Description
root-id	Parameter type: <Mstp::MstpBridgeId> - the mstp bridge id - length: 8	the bridgeId of the CIST root used in the PDUs originated by this node. <i>This element is only shown in detail mode.</i>
root-cost	Parameter type: <Mstp::MstpRootCost> - root cost	cost of the path to the CIST Root seen from the bridge <i>This element is only shown in detail mode.</i>
root-port	Parameter type: <Itf::LaGroupZeroIndex> (none <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Possible values: - none : no port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	port which offers the lowest path cost to the Root bridge <i>This element is only shown in detail mode.</i>
hold-time	Parameter type: <SignedInteger> - a signed integer	interval between no more than two PDUs are transmitted <i>This element is only shown in detail mode.</i>
max-age	Parameter type: <SignedInteger>	max age of STP information

name	Type	Description
	- a signed integer	learned on a port before it is discarded <i>This element is only shown in detail mode.</i>
hello-time	Parameter type: <SignedInteger> - a signed integer	time between transmission of PDUs on a port when it is the root <i>This element is only shown in detail mode.</i>
fwd-delay	Parameter type: <SignedInteger> - a signed integer	time how long a port stays in a state before moving to the forwarding state <i>This element is only shown in detail mode.</i>
regional-root-id	Parameter type: <Mstp::MstpBridgeId> - the mstp bridge id - length: 8	the bridgeId of the CIST regional root used in the PDUs originated by this node. <i>This element is only shown in detail mode.</i>
regional-root-cost	Parameter type: <Mstp::MstpRootCost> - root cost	cost of the path to the CIST regional Root seen from the bridge <i>This element is only shown in detail mode.</i>
bridge-mac-addr	Parameter type: <Sys::MacAddr> - a mac-address (example : 01:02:03:04:05:06) - length: 6	the bridgeId of the CIST regional root used in the PDUs originated by this node. <i>This element is only shown in detail mode.</i>
root-bridge-chg	Parameter type: <Counter> - 32 bit counter	the bridgeId of the CIST regional root used in the PDUs originated by this node. <i>This element is only shown in detail mode.</i>

171.3 MSTP Instance Status Command

Command Description

This command displays all parameters of a multiple spanning tree instance.

User Level

The command can be accessed by operators with mstp privileges.

Command Syntax

The command has the following syntax:

```
> show xstp instance [ (instance) ]
```

Command Parameters

Table 171.3-1 "MSTP Instance Status Command" Resource Parameters

Resource Identifier	Type	Description
(instance)	Format: - MSTP Instance - range: [1...64]	mstp instance number

Command Output

Table 171.3-2 "MSTP Instance Status Command" Display parameters

Specific Information		
name	Type	Description
root-cost	Parameter type: <Mstp::MstpRootCost> - root cost	cost of the path to the MSTI Regional Root seen by the bridge <i>This element is always shown.</i>
root-port	Parameter type: <Itf::LaGroupZeroIndex> (none <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Possible values: - none : no port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	port which offers the lowest path cost to the MSTI Region Root bridge <i>This element is always shown.</i>
regional-root-id	Parameter type: <Mstp::MstpBridgeId>	the bridgeId of the MSTI regional

171 MSTP Status Commands

name	Type	Description
	- the mstp bridge id - length: 8	root id used in the PDUs originated by this node. <i>This element is always shown.</i>
root-bridge-chg	Parameter type: <Counter> - 32 bit counter	The number of times this Bridge has detected a Root Bridge change for this spanning tree instance. <i>This element is only shown in detail mode.</i>

171.4 MSTP Network Port Status Command

Command Description

This command displays all mstp port information.

User Level

The command can be accessed by operators with mstp privileges.

Command Syntax

The command has the following syntax:

```
> show xstp port [ (port) ]
```

Command Parameters

Table 171.4-1 "MSTP Network Port Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the lag

Command Output

Table 171.4-2 "MSTP Network Port Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Mstp::MstpPortState> (disabled discarding learning forwarding) Possible values: - disabled : disabled - discarding : discarding - learning : learning - forwarding : forwarding	state of the port <i>This element is always shown.</i>

name	Type	Description
p2p-port	Parameter type: <Mstp::Boolean> (yes no) Possible values: - yes : true - no : false	point-to-point status of the LAN segment <i>This element is always shown.</i>
edge-port	Parameter type: <Mstp::Boolean> (yes no) Possible values: - yes : true - no : false	operational value of the edge port parameter <i>This element is always shown.</i>
designated-root	Parameter type: <Mstp::MstpBridgeId> - the mstp bridge id - length: 8	bridge identifier of the MSTI regional root <i>This element is always shown.</i>
designated-port	Parameter type: <Mstp::DesignatedPort> - designated port 2 byte octet string - length: 2	port identifier of the port on the designated bridge <i>This element is always shown.</i>
designated-bridge	Parameter type: <Mstp::MstpBridgeId> - the mstp bridge id - length: 8	bridge identifier of designated bridge <i>This element is always shown.</i>
designated-cost	Parameter type: <Mstp::MstpShowPathCost> - port designated path cost	path cost of the designated port <i>This element is always shown.</i>
current-port-role	Parameter type: <Mstp::MstpCistPortRole> (disabled alternate backup root designated) Possible values: - disabled : disabled - alternate : alternate - backup : backup - root : root - designated : designated	current port role of the port for this spanning tree instance <i>This element is always shown.</i>
selected-port-role	Parameter type: <Mstp::MstpCistPortRole> (disabled alternate backup root designated) Possible values: - disabled : disabled - alternate : alternate - backup : backup - root : root - designated : designated	selected port role of the port for this spanning tree instance <i>This element is always shown.</i>
regional-path-cost	Parameter type: <Mstp::MstpShowPathCost> - port designated path cost	contribution of this port to the path cost <i>This element is only shown in detail mode.</i>
regional-root	Parameter type: <Mstp::MstpBridgeId> - the mstp bridge id - length: 8	bridge id of the bridge recorded as the CIST Regional Root <i>This element is only shown in detail mode.</i>
bpdu-tx	Parameter type: <Counter> - 32 bit counter	BPDUs transmitted on this port for this spanning tree instance

171 MSTP Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
bpdu-rx	Parameter type: <Counter> - 32 bit counter	<i>This element is only shown in detail mode.</i>
bpdu-invalid-rx	Parameter type: <Counter> - 32 bit counter	invalid BPDUs received on this port <i>This element is only shown in detail mode.</i>
prot-migration	Parameter type: <Counter> - 32 bit counter	migration count from one STP protocol version to another <i>This element is only shown in detail mode.</i>

171.5 MSTP Port Instance Status Command

Command Description

This command displays all mstp port instances.

User Level

The command can be accessed by operators with mstp privileges.

Command Syntax

The command has the following syntax:

```
> show xstp port-instance [ (port) [ instance <Mstp::MstpInstance> ] ]
```

Command Parameters

Table 171.5-1 "MSTP Port Instance Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the lag
instance	Parameter type: <Mstp::MstpInstance> Format: - MSTP Instance - range: [1...64]	mstp instance

Command Output

Table 171.5-2 "MSTP Port Instance Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Mstp::MstpPortState> (disabled discarding learning forwarding) Possible values:	state of the port <i>This element is always shown.</i>

171 MSTP Status Commands

name	Type	Description
	- disabled : disabled - discarding : discarding - learning : learning - forwarding : forwarding	
designated-root	Parameter type: <Mstp::MstpBridgeId> - the mstp bridge id - length: 8	bridge identifier of the MSTI regional root <i>This element is always shown.</i>
designated-bridge	Parameter type: <Mstp::MstpBridgeId> - the mstp bridge id - length: 8	bridge identifier of designated bridge <i>This element is always shown.</i>
designated-port	Parameter type: <Mstp::DesignatedPort> - designated port 2 byte octet string - length: 2	port identifier of the port on the designated bridge <i>This element is always shown.</i>
designated-cost	Parameter type: <Mstp::MstpShowPathCost> - port designated path cost	path cost of the designated port <i>This element is always shown.</i>
current-port-role	Parameter type: <Mstp::MstpMstiPortRole> (disabled alternate backup root designated master) Possible values: - disabled : disabled - alternate : alternate - backup : backup - root : root - designated : designated - master : master	current port role of the port for this spanning tree instance <i>This element is always shown.</i>
selected-port-role	Parameter type: <Mstp::MstpMstiPortRole> (disabled alternate backup root designated master) Possible values: - disabled : disabled - alternate : alternate - backup : backup - root : root - designated : designated - master : master	selected port role of the port for this spanning tree instance <i>This element is always shown.</i>
bpdu-tx	Parameter type: <Counter> - 32 bit counter	BPDUs transmitted on this port for this spanning tree instance <i>This element is only shown in detail mode.</i>
bpdu-rx	Parameter type: <Counter> - 32 bit counter	<i>This element is only shown in detail mode.</i>
bpdu-invalid-rx	Parameter type: <Counter> - 32 bit counter	invalid BPDUs received on this port <i>This element is only shown in detail mode.</i>
fwd-transition	Parameter type: <Counter> - 32 bit counter	transition count to the forwarding state <i>This element is only shown in detail mode.</i>

172- *Application Intelligence Status Commands*

172.1 Application Intelligence Status Command Tree	172-6871
172.2 Application show command	172-6872
172.3 AI Platform show command	172-6874
172.4 Application 'download and installation' show command	172-6876

172.1 Application Intelligence Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Application Intelligence Status Commands".

Command Tree

```
----show
  ----ai
    ----application
      - (application)
    ----platform
      - (slot)
      - virtualplatform
    ----platform-application
      - (slot)
      - virtualplatform
      - application
```

172.2 Application show command

Command Description

This command is used to show the operational data related to an Application.

A usagecounter displays the number of times this Application is configured for download and installation on AI Platforms.

Note that the command displays also an Application number. The number is assigned by the system itself. This number is used when assigning a unique identification to Application related alarms. When used, then the Application name itself will also be available in the alarm as additional-info.

User Level

The command can be accessed by operators with ai privileges.

Command Syntax

The command has the following syntax:

> show ai application [(application)]

Command Parameters

Table 172.2-1 "Application show command" Resource Parameters

Resource Identifier	Type	Description
(application)	Format: - a name for the Application - range: [a-zA-Z0-9!#\$%&()*+-./:;=?@[]~] - length: 1<=x<=31	The name of the Application

Command Output

Table 172.2-2 "Application show command" Display parameters

Specific Information		
name	Type	Description
number	Parameter type: <AI::SignedShort> - An unsigned integer (0..65535) - range: [0...65535]	a unique number assigned to the Application <i>This element is always shown.</i>
usagecounter	Parameter type: <AI::Counter> - an unsigned integer	counts the requests for installation and download of the Application on AI Platforms <i>This element is always shown.</i>
embeddedname	Parameter type: <AI::ApplicationName> - a name for the Application - range: [a-zA-Z0-9!#\$%&()*+-./:;=?@[]~] - length: 1<=x<=31	the name available in the Application SW package itself <i>This element is always shown.</i>

172.3 AI Platform show command

Command Description

This command is used to show operational data related to the AI Platform.

User Level

The command can be accessed by operators with ai privileges.

Command Syntax

The command has the following syntax:

```
> show ai platform [ (slot) [ virtualplatform <AI::VirtualPlatform> ] ]
```

Command Parameters

Table 172.3-1 "AI Platform show command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (nt-a nt-b) Possible values: - nt-a : nt-a slot - nt-b : nt-b slot	slot Id of the AI Platform
virtualplatform	Parameter type: <AI::VirtualPlatform> Format: - AI Virtual Platform Index within the Slot - range: [1]	virtual Id within the slot of the AI Platform

Command Output

Table 172.3-2 "AI Platform show command" Display parameters

Specific Information		
name	Type	Description
adminstate	Parameter type: <AI::AdminState> (unlocked locked) Possible values: - unlocked : The identified resource is allowed to be used - locked : The identified resource is not allowed to be used	determines if the AI Platform shall be started up <i>This element is always shown.</i>
operstate	Parameter type: <AI::OperState> (enabled disabled) Possible values: - enabled : The identified resource is operational	operational state of the AI Platform <i>This element is always shown.</i>

name	Type	Description
	- disabled : The identified resource is not operational or the status is not known	
oamadminstate	Parameter type: <AI::AdminState> (unlocked locked) Possible values: - unlocked : The identified resource is allowed to be used - locked : The identified resource is not allowed to be used	determines if an external OAM mngt interface shall be provided <i>This element is always shown.</i>
oamoperstate	Parameter type: <AI::OperState> (enabled disabled) Possible values: - enabled : The identified resource is operational - disabled : The identified resource is not operational or the status is not known	operational state of the external OAM IP interface <i>This element is always shown.</i>

172.4 Application 'download and installation' show command

Command Description

This command is used to show the status of the download and installation of an Application on a specified AI Platform.

User Level

The command can be accessed by operators with ai privileges.

Command Syntax

The command has the following syntax:

```
> show ai platform-application [ (slot) [ virtualplatform <AI::VirtualPlatform> ] [ application <AI::ApplicationName> ] ]
```

Command Parameters

Table 172.4-1 "Application 'download and installation' show command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (nt-a nt-b) Possible values: - nt-a : nt-a slot - nt-b : nt-b slot	slot Id of the AI Platform
virtualplatform	Parameter type: <AI::VirtualPlatform> Format: - AI Virtual Platform Index within the Slot - range: [1]	virtual Id within the slot of the AI Platform
application	Parameter type: <AI::ApplicationName> Format: - a name for the Application - range: [a-zA-Z0-9!#\$%&()*+-./:;=?@[]_~] - length: 1<=x<=31	the unique Application name

Command Output

Table 172.4-2 "Application 'download and installation' show command" Display parameters

Specific Information		
name	Type	Description
adminstate	Parameter type: <AI::AdminState>	determines if the Application

name	Type	Description
	(unlocked locked) Possible values: - unlocked : The identified resource is allowed to be used - locked : The identified resource is not allowed to be used	shall be downloaded and installed <i>This element is always shown.</i>
installstate	Parameter type: <AI::InstallState> (noaction successful scheduled inprogress perm-fail) Possible values: - noaction : There is no ongoing action to download/install the Application - successful : The Application is successfully downloaded and installed - scheduled : The Application is scheduled to be downloaded - inprogress : A download/installation of the application is ongoing - perm-fail : An attempt to download/install the application failed with a non-recoverable reason	state of the Application download and installation <i>This element is always shown.</i>
err-reason	Parameter type: <PrintableString> - printable string	error reason for the Application download and/or installation <i>This element is always shown.</i>

173- Distributed Service Status Commands

173.1 Distributed Service Status Command Tree	173-6879
173.2 Service Access Mapping Status Command	173-6880
173.3 APIPE-PVC Statistics Command	173-6882

173.1 Distributed Service Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Distributed Service Status Commands".

Command Tree

```
----show
  ----dist-service
    ----accessport-svc
      - (access-port)
    ----statistics
      ----apipe-pvc
        - (port-index)
```

173.2 Service Access Mapping Status Command

Command Description

This command displays the Service Access Mapping to operator.

User Level

The command can be accessed by operators with drouter privileges.

Command Syntax

The command has the following syntax:

```
> show dist-service accessport-svc [ (access-port) ]
```

Command Parameters

Table 173.2-1 "Service Access Mapping Status Command " Resource Parameters

Resource Identifier	Type	Description
(access-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier Field type <Eqpt::OntSlotId>	access port index

Resource Identifier	Type	Description
	- the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier	

Command Output

Table 173.2-2 "Service Access Mapping Status Command " Display parameters

Specific Information		
name	Type	Description
service-id	Parameter type: <Drouter::ServiceId> - Service ID - range: [1...2147483647]	specifies the service id mapped to access port. <i>This element is always shown.</i>

173.3 APIPE-PVC Statistics Command

Command Description

This command displays the APIPE-PVC statistics.

User Level

The command can be accessed by operators with drouter privileges.

Command Syntax

The command has the following syntax:

```
> show dist-service statistics apipe-pvc [ (port-index) ]
```

Command Parameters

Table 173.3-1 "APIPE-PVC Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(port-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiMandatoryId> : <Eqpt::VciMandatoryId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiMandatoryId> - atm VPI Field type <Eqpt::VciMandatoryId> - atm VCI	the ATM PVC

Command Output

Table 173.3-2 "APIPE-PVC Statistics Command" Display parameters

Specific Information		
name	Type	Description
apipe-tot-in-cells	Parameter type: <Counter> - 32 bit counter	The total number of valid ATM cells received by this VCL including both CLP=0 and CLP=1 cells. <i>This element is always shown.</i>

name	Type	Description
apipe-tot-out-cells	Parameter type: <Counter> - 32 bit counter	The total number of valid ATM cells transmitted by this VCL. This includes both CLP=0 and CLP=1 cells. <i>This element is always shown.</i>
apipe-us-disc	Parameter type: <Counter> - 32 bit counter	The total number of ATM cells that are discarded in the upstream direction. <i>This element is always shown.</i>
apipe-ds-disc	Parameter type: <Counter> - 32 bit counter	The total number of ATM cells that are discarded in the downstream direction. <i>This element is always shown.</i>

174- IPv6 Users Status Commands

174.1 IPv6 Users Status Command Tree	174-6885
174.2 IPv6 Users Status Command	174-6886

174.1 IPv6 Users Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "IPv6 Users Status Commands".

Command Tree

```
----show
  ----ipv6
    ----users
      - (client)
      - prefixandlength
```

174.2 IPv6 Users Status Command

Command Description

This command displays the ipv6 users information.

User Level

The command can be accessed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> show ipv6 users [ (client) [ prefixandlength <ipv6::PrefixAndLength> ] ]
```

Command Parameters

Table 174.2-1 "IPv6 Users Status Command" Resource Parameters

Resource Identifier	Type	Description
(client)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan>	The index value that uniquely identifies the interface on which this prefix is configured

Resource Identifier	Type	Description
	vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - vlan-port : vlan port - vlan-port:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VcId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId>	

Resource Identifier	Type	Description
	- the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
prefixandlength	Parameter type: <ipv6::PrefixAndLength> Format: <ipv6::Prefix> / <ipv6::PrefixLength> Field type <ipv6::Prefix> - IPv6-address Field type <ipv6::PrefixLength> - length of IPv6 address or prefix - range: [0...128]	client ipv6 prefix assigned by dhcp server

Command Output

Table 174.2-2 "IPv6 Users Status Command" Display parameters

Specific Information		
name	Type	Description
prefixorigin	Parameter type: <ipv6::PrefixOrigin> (other manual wellknown dhcp routeradv) Possible values: - other : indicates a prefix that acquired by other ways - manual : indicates a prefix that was manually configured - wellknown : indicates a well-known prefix - dhcp : indicates a prefix that was assigned by a DHCP - routeradv : indicates a prefix learned from a router advertisement	the origin of this prefix <i>This element is always shown.</i>
validlifetime	Parameter type: <ipv6::PrefixAdvValidLifetime> (session-being-deleted <ipv6::PrefixAdvValidLifetime>) Possible values: - session-being-deleted : session being deleted Field type <ipv6::PrefixAdvValidLifetime> - The remaining length of time, in seconds, that this prefix will continue to be valid - unit: sec - range: [0...4294967295]	the remaining length of time, in seconds, that this prefix will continue to be valid <i>This element is always shown.</i>
forwarderid	Parameter type: <Vlan::StackedVlan> (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values:	the id of the forwarder to which this session belongs <i>This element is always shown.</i>

name	Type	Description
	- stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093,4094] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093,4094,4095,4096]	

175- Bcmp Statistics Commands

175.1 Bcmp Statistics Command Tree	175-6891
175.2 Bcmp Statistics Command	175-6892

175.1 Bcmp Statistics Command Tree

Description

This chapter gives an overview of nodes that are handled by "Bcmp Statistics Commands".

Command Tree

```
----show
  ----bcmp
    ----counters
      - (epon-ont-idx)
```

175.2 Bcmp Statistics Command

Command Description

This command displays the bcmp counters from user side.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show bcmp counters [ (epon-ont-idx) ]
```

Command Parameters

Table 175.2-1 "Bcmp Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(epon-ont-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	the index value that uniquely identifies the EPON ONU

Command Output

Table 175.2-2 "Bcmp Statistics Command" Display parameters

Specific Information		
name	Type	Description
rx-reg-cnt	Parameter type: <Counter> - 32 bit counter	the number of Rx BCMP Register packets <i>This element is always shown.</i>
rx-tick-cnt	Parameter type: <Counter> - 32 bit counter	the counter of Rx BCMP TICK packets <i>This element is always shown.</i>
tx-reg-res-cnt	Parameter type: <Counter> - 32 bit counter	the counter of Rx BCMP Response packets

175 Bcmp Statistics Commands

name	Type	Description
		<i>This element is always shown.</i>
tx-para-chg-cnt	Parameter type: <Counter> - 32 bit counter	the counter of Rx BCMP Parameter Change packets <i>This element is always shown.</i>
rx-discard-cnt	Parameter type: <Counter> - 32 bit counter	the counter of Rx BCMP Discard packets <i>This element is always shown.</i>

176- E1 Line Operational status Commands

176.1 E1 Line Operational status Command Tree	176-6895
176.2 E1 line status Command	176-6896
176.3 E1 diagnostic status Command	176-6898

176.1 E1 Line Operational status Command Tree

Description

This chapter gives an overview of nodes that are handled by "E1 Line Operational status Commands".

Command Tree

```
----show
  ----e1
    ----line-status
      - (if-index)
    ----diagnostest-status
      - (if-index)
```

176.2 E1 line status Command

Command Description

This command display the E1 line operational status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show e1 line-status [ (if-index) ]
```

Command Parameters

Table 176.2-1 "E1 line status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 176.2-2 "E1 line status Command" Display parameters

Specific Information		
name	Type	Description
data-rate	Parameter type: <E1::DataRate> - the actual data rate retrieved on the E1 interface - range: [0...2048]	Retrieves the actual data rate on the e1 interface <i>This element is always shown.</i>
line-coding	Parameter type: <E1::LineCoding> (ami hdb3) Possible values: - ami : Specifies Alternate Mark Inversion (AMI) as the linecode type - hdb3 : Specifies High-Density Bipolar 3 (HDB3) as the	the actual Encoding type used by the E1 interface <i>This element is always shown.</i>

name	Type	Description
	linecode type	
framing-mode	Parameter type: <E1::FramingMode> (unframed framed) Possible values: - unframed : Unframed E1 type - framed : Framed E1 type	the actual framing mode configures on the E1 interface <i>This element is always shown.</i>
crc	Parameter type: <E1::Crc> (disable enable) Possible values: - disable : no CRC4 - enable : Enable CRC4	the actual CRC configures on the E1 interface <i>This element is always shown.</i>
multi-framing	Parameter type: <E1::MultiFraming> (disable enable) Possible values: - disable : No multi framing - enable : Enable multi framing	specifies multiframing mode is used or not <i>This element is always shown.</i>
transmit-clk-src	Parameter type: <E1::TransmitClkSrc> (external internal) Possible values: - external : Specifies that the network clock source is used - internal : Specifies that the internal clock source is used	specifies clock source used by the e1 interface <i>This element is always shown.</i>
oper-status	Parameter type: <E1::OperationalStatus> (active no-active) Possible values: - active : Specifies the line is in active state - no-active : Specifies the line is in not in service	shows the line operational status of the e1 interface <i>This element is always shown.</i>
line-impedance	Parameter type: <E1::LineImpedance> (75ohms 120ohms) Possible values: - 75ohms : indicates the line impedance value unbalanced 75ohms - 120ohms : indicates the line impedance value balanced 120 ohms	Retrieves the Nominal line impedance value <i>This element is always shown.</i>

176.3 E1 diagnostic status Command

Command Description

This command display the E1 line diagnostic test status.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show e1 diagnostest-status [ (if-index) ]
```

Command Parameters

Table 176.3-1 "E1 diagnostic status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Command Output

Table 176.3-2 "E1 diagnostic status Command" Display parameters

Specific Information		
name	Type	Description
bertest-status	Parameter type: <E1::BERTestStatus> (none running aborted completed) Possible values: - none : no test started - running : BERT started and running - aborted : BERT aborted before completion - completed : BERT completed	the current status of the BER test <i>This element is always shown.</i>

name	Type	Description
ber-testpattern	Parameter type: <E1::BERTestPattern> (framed-twopow11 framed-twopow15 unframed-twopow11 unframed-twopow15 none) Possible values: - framed-twopow11 : Framed Pseudo-random repeating test pattern with 2 ¹¹ bits - framed-twopow15 : Framed Pseudo-random repeating test pattern with 2 ¹⁵ bits - unframed-twopow11 : Unframed Pseudo-random repeating test pattern with 2 ¹¹ bits - unframed-twopow15 : Unframed Pseudo-random repeating test pattern with 2 ¹⁵ bits - none : No-Pattern	the actual BER test pattern used to preform the BER test <i>This element is always shown.</i>
ber-elapsedtime	Parameter type: <E1::BERTimeElapsed> - Maximum time allowed to perform BER test - range: [0...245700]	Time elapsed <i>This element is always shown.</i>
ber-biterror	Parameter type: <E1::BERBitError> - Number of bit error	Number of bit error <i>This element is always shown.</i>
ber-bitreceived	Parameter type: <E1::BERBitReceived> - Number of bit received	Number of bit received <i>This element is always shown.</i>
loop-back	Parameter type: <E1::LoopBackType> (no-loop local-payload remote-payload remote-line local-line) Possible values: - no-loop : no loopback - local-payload : LOCAL-Payload - remote-payload : Remote-payload - remote-line : Remote-line - local-line : Local-Line	the actual loop back type used by the e1 interface <i>This element is always shown.</i>

177- E1 Line Counters Command

177.1 E1 Line Counters Command Tree	177-6901
177.2 E1 Current Interval Performance Data Status Command	177-6902
177.3 E1 Current 1 Day Performance Data Status Command	177-6904
177.4 E1 Previous Interval Performance Data Status Command	177-6906
177.5 E1 Previous 1 Day Performance Data Status Command	177-6908

177.1 E1 Line Counters Command Tree

Description

This chapter gives an overview of nodes that are handled by "E1 Line Counters Command".

Command Tree

```
----show
  ----e1-counters
    ----current-interval
      - (if-index)
      - side
    ----current-1day
      - (if-index)
      - side
    ----previous-interval
      - (if-index)
      - side
      - int-no
    ----previous-1day
      - (if-index)
      - side
      - int-no
```

177.2 E1 Current Interval Performance Data Status Command

Command Description

This command displays the current interval performance data of an E1 interface.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show e1-counters current-interval [ (if-index) [ side <E1::SegmentSide> ] ]
```

Command Parameters

Table 177.2-1 "E1 Current Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
side	Parameter type: <E1::SegmentSide> Format: near-end Possible values: - near-end : the near end side	the particular side of an SHDSL unit in an SHDSL segment

Command Output

Table 177.2-2 "E1 Current Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
eles	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>

name	Type	Description
e1ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
e1sefs	Parameter type: <Counter> - 32 bit counter	number of severely errored framed seconds <i>This element is always shown.</i>
e1uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1css	Parameter type: <Counter> - 32 bit counter	number of controlled slip seconds <i>This element is always shown.</i>
e1pcv	Parameter type: <Counter> - 32 bit counter	number of path code violation <i>This element is always shown.</i>
e1les	Parameter type: <Counter> - 32 bit counter	number of line error seconds <i>This element is always shown.</i>
e1bes	Parameter type: <Counter> - 32 bit counter	number of bursty error seconds <i>This element is always shown.</i>
e1lcv	Parameter type: <Counter> - 32 bit counter	number of line code violation <i>This element is always shown.</i>
e1va-int	Parameter type: <E1::IntervalNumber> - performance Data Interval number - range: [0...96]	the number of previous intervals for which data has been stored <i>This element is always shown.</i>
e1inv-flag	Parameter type: <E1::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding PM data in current 15 minutes <i>This element is always shown.</i>
e1time-elapsed	Parameter type: <E1::TimeElapsed> - Monitored Seconds - range: [0...86400]	Time elapsed <i>This element is always shown.</i>

177.3 E1 Current 1 Day Performance Data Status Command

Command Description

This command displays the current 1 day performance data of an E1 interface.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show e1-counters current-1day [ (if-index) [ side <E1::SegmentSide> ] ]
```

Command Parameters

Table 177.3-1 "E1 Current 1 Day Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
side	Parameter type: <E1::SegmentSide> Format: near-end Possible values: - near-end : the near end side	the particular side of an SHDSL unit in an SHDSL segment

Command Output

Table 177.3-2 "E1 Current 1 Day Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
eles	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>

name	Type	Description
e1ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
e1sefs	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
e1uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1css	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1pcv	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1les	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1bes	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1lcv	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1va-int	Parameter type: <E1::IntervalNumber> - performance Data Interval number - range: [0...96]	the number of previous intervals for which data has been stored <i>This element is always shown.</i>
e1inv-flag	Parameter type: <E1::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding PM data in current day <i>This element is always shown.</i>
e1time-elapsed	Parameter type: <E1::TimeElapsed> - Monitored Seconds - range: [0...86400]	Time Elapsed <i>This element is always shown.</i>

177.4 E1 Previous Interval Performance Data Status Command

Command Description

This command displays the previous interval performance data of an E1 interface.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show e1-counters previous-interval [ (if-index) [ side <E1::SegmentSide> ] [ int-no <E1::IntervalNumber> ] ]
```

Command Parameters

Table 177.4-1 "E1 Previous Interval Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
side	Parameter type: <E1::SegmentSide> Format: near-end Possible values: - near-end : the near end side	the particular side of an SHDSL unit in an SHDSL segment
int-no	Parameter type: <E1::IntervalNumber> Format: - performance Data Interval number - range: [0...96]	the performance interval number

Command Output

Table 177.4-2 "E1 Previous Interval Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
elmonsecs	Parameter type: <E1::MoniSecs> - Monitored Seconds - range: [0...86400]	The amount of time in the 15-Min interval over which the performance monitoring information is actually counted <i>This element is always shown.</i>
e1es	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>
e1ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
e1sefs	Parameter type: <Counter> - 32 bit counter	number of severely errored framed seconds <i>This element is always shown.</i>
e1uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1css	Parameter type: <Counter> - 32 bit counter	number of controlled slip seconds <i>This element is always shown.</i>
e1pcv	Parameter type: <Counter> - 32 bit counter	number of path code violation <i>This element is always shown.</i>
e1les	Parameter type: <Counter> - 32 bit counter	number of line error seconds <i>This element is always shown.</i>
e1bes	Parameter type: <Counter> - 32 bit counter	number of bursty error seconds <i>This element is always shown.</i>
e1lcv	Parameter type: <Counter> - 32 bit counter	number of line code violation <i>This element is always shown.</i>
e1inv-flag	Parameter type: <E1::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding PM data in current 15 minutes <i>This element is always shown.</i>
e1time-stamp	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	indicates the start of the interval <i>This element is always shown.</i>

177.5 E1 Previous 1 Day Performance Data Status Command

Command Description

This command displays the previous 1 day performance data of an E1 interface.

User Level

The command can be accessed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> show e1-counters previous-1day [ (if-index) [ side <E1::SegmentSide> ] [ int-no <E1::Interval1DayNumber> ] ]
```

Command Parameters

Table 177.5-1 "E1 Previous 1 Day Performance Data Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
side	Parameter type: <E1::SegmentSide> Format: near-end Possible values: - near-end : the near end side	the particular side of an SHDSL unit in an SHDSL segment
int-no	Parameter type: <E1::Interval1DayNumber> Format: - a performance interval one day number - range: [1...30]	the performance interval number

Command Output

Table 177.5-2 "E1 Previous 1 Day Performance Data Status Command" Display parameters

Specific Information		
name	Type	Description
elmonsecs	Parameter type: <E1::PreviousInterval1DayMoniSecs> - Monitored Seconds - range: [0...86410]	The amount of time in the 1 day interval over which the performance monitoring information is actually counted <i>This element is always shown.</i>
e1es	Parameter type: <Counter> - 32 bit counter	number of errored seconds <i>This element is always shown.</i>
e1ses	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
e1sefs	Parameter type: <Counter> - 32 bit counter	number of severely errored seconds <i>This element is always shown.</i>
e1uas	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1css	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1pcv	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1les	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1bes	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1lcv	Parameter type: <Counter> - 32 bit counter	number of unavailable seconds <i>This element is always shown.</i>
e1inv-flag	Parameter type: <E1::IntervalInvalidDataFlag> (true false) Possible values: - true : data is not valid - false : data is valid	validity flag of the corresponding PM data in current day <i>This element is always shown.</i>
e1time-stamp	Parameter type: <Xdsl::PmTimeStamp> - Timestamp for Pm interval(yyyymmdd:hour:minutes)	specifies the start time of interval <i>This element is always shown.</i>

178- Dual-Parenting Protection Group Status Commands

178.1 Dual-Parenting Protection Group Status Command Tree	178-6911
--	----------

178.1 Dual-Parenting Protection Group Status

Command Tree

Description

This chapter gives an overview of nodes that are handled by "Dual-Parenting Protection Group Status Commands".

Command Tree

```
----show
  ----dual-parenting
```

179- Dual-Parenting Protection Group Status Commands

179.1 Dual-Parenting Protection Group Status Command Tree	179-6913
179.2 Dual-Parenting Protection Group Status Commands	179-6914

179.1 Dual-Parenting Protection Group Status

Command Tree

Description

This chapter gives an overview of nodes that are handled by "Dual-Parenting Protection Group Status Commands".

Command Tree

```
----show
  ----dual-parenting
    ----protection-group
      - (local-port-index)
```

179.2 Dual-Parenting Protection Group Status Commands

Command Description

This commands shows the dual-parenting protection group status. The following information is shown for each group :

- *local-port-index*: describes local-port in the dual-parenting protection group.
- *prot-type*: describes the protection type of the dual-parenting protection group.
- *peer-node-name*: describes the peer-node-name in the dual-parenting protection group.
- *protection-group-id*: describes the protection group id of the in the dual-parenting protection group.
- *local-port-state*: describes the the operational status of the local-port in dual-parenting protection group.
- *local-node-ip*: describes the the local-node-ip in dual-parenting protection group.
- *peer-node-ip*: describes the peer-node-ip in the dual-parenting protection group.
- *prot-group-status*: describes the connection status.
- *abnormal-reason*: describes the abnormal reason.

User Level

The command can be accessed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> show dual-parenting protection-group [ (local-port-index) ]
```

Command Parameters

Table 179.2-1 "Dual-Parenting Protection Group Status Commands" Resource Parameters

Resource Identifier	Type	Description
(local-port-index)	Format: (pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId>) Possible values: - pon : pon-aid - chpair : chpair-aid Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	the local port identifier of the dual-parenting in the protection group

Resource Identifier	Type	Description
	Field type <Eqpt::ChannelPairId> - the channel pair identifier	

Command Output

Table 179.2-2 "Dual-Parenting Protection Group Status Commands" Display parameters

Specific Information		
name	Type	Description
prot-type	Parameter type: <Equipm::DualParentProtGrpType> (primary secondary) Possible values: - primary : primary node - secondary : secondary node	show protection group node-type (primary or secondary) <i>This element is always shown.</i>
peer-node-name	Parameter type: <Equipm::DualParentProtGrpPeerNodeName> - a printable string - length: 1<=x<=127	show peer-node-name in the dual-parenting protection group. <i>This element is always shown.</i>
protection-group-id	Parameter type: <SignedInteger> - a signed integer	index of dual-parenting Prot Group Table <i>This element is always shown.</i>
local-port-state	Parameter type: <RedPort::ProtectionStatus> ((active-up act-up) (active-down act-down) (inactive-up inact-up) (inactive-down inact-down)) Possible values: - active-up : - act-up : - active-down : - act-down : - inactive-up : - inact-up : - inactive-down : - inact-down :	specifies the status of the local port in the dual-parenting protection group. <i>This element is always shown.</i>
local-node-ip	Parameter type: <Ip::V4Address> - IPv4-address	specifies the status of the dual-parenting protection group. <i>This element is always shown.</i>
peer-node-ip	Parameter type: <Ip::V4Address> - IPv4-address	specifies the status of the dual-parenting protection group. <i>This element is always shown.</i>
prot-group-status	Parameter type: <RedPort::DualParentProtGroupConnStatus> (null prot-group-disabled prot-group-abnormal prot-group-normal) Possible values: - null : NULL - prot-group-disabled : protection group is disabled - prot-group-abnormal : protection group is abnormal - prot-group-normal : protection group is normal	show dual-parenting protection group status. <i>This element is always shown.</i>
abnormal-reason	Parameter type: <RedPort::DualParentProtGroupAbnormalReason> (no reason checking	abnormal reason for the dual-parenting protection group. <i>This element is always shown.</i>

179 Dual-Parenting Protection Group Status Commands

name	Type	Description
	syncing sync-failed pg-connect-failure pg-info-conflict qos-info-conflict vpmgnt-info-conflict link-failure forced-switch-over port-admin-down board-failure hunting) Possible values: - no reason : no reason - checking : verifying static data by apps - syncing : bulksync processing - sync-failed : sync failed - pg-connect-failure : socket connect or pg bind with socket failed - pg-info-conflict : pred verify static data failed - qos-info-conflict : qos verify static data failed - vpmgnt-info-conflict : vpmgnt verify static data failed - link-failure : ponlos, tx-fail or wdog - forced-switch-over : operator requested switchover - port-admin-down : port was set admin down - board-failure : board failure or p2p fail - hunting : hunting ONT	
swo-reason	Parameter type: <RedPort::SwitchReason> (no-switch-over port-admin-change forced-switch-over link-failure board-failure) Possible values: - no-switch-over : no switch over has been performed yet - port-admin-change : port was set admin down - forced-switch-over : operator requested switchover - link-failure : link failure - board-failure : board failure	specifies the dual-parenting last switchover reason. <i>This element is always shown.</i>
num-swo	Parameter type: <SignedInteger> - a signed integer	specifies the number of times a dual-parenting switchover occurred. <i>This element is always shown.</i>

180.1 Multicast Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Multicast Status Commands".

Command Tree

```
----show
  ----mcast-control
    ----mcast-svc-context
    ----system
    ----channel
      ----counter
        - (port)
      ----miscellaneous
        - (port)
      ----protocol
        - (port)
    ----module
      ----counter
        - (slot-index)
      ----time
        - (slot-index)
      ----miscellaneous
        - (slot-index)
  ----ipv4
    ----grp-to-package
      - (grp-ip-addr)
      - src-ip-addr
      - vlan-id
    ----module-mcast-channel
      - (slot)
      - grp-ip-addr
      - src-ip-addr
      - vlan-id
    ----package-to-src
      - (package-id)
```

180.2 IGMP System Status Command

Command Description

This command displays the next Multicast Service Context Profile Index available.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control mcast-svc-context
```

Command Output

Table 180.2-2 "IGMP System Status Command" Display parameters

Specific Information		
name	Type	Description
next	Parameter type: <Igmp::McastSvcCtxtNextPointer> - mcast service context profile index - range: [0...64]	The next available id for multicast service context profile. <i>This element is always shown.</i>

180.3 IGMP System Status Command

Command Description

This command displays the IGMP system-related parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control system
```

Command Output

Table 180.3-2 "IGMP System Status Command" Display parameters

Specific Information		
name	Type	Description
startup-query-intvl	Parameter type: <Igmp::SysStartUpQueryInt> - interval at which general membership queries transmitted - unit: sec - range: [1...3175]	The interval between general membership queries sent on startup. <i>This element is always shown.</i>
startup-query-count	Parameter type: <Igmp::SystemStartupQueryCount> - queries sent out on startup separated by query interval - range: [1...10]	The number of queries sent out on startup separated by the query interval. <i>This element is always shown.</i>
stats-intvl	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This statistics indicates the network time of when the system-wide statistics were last reset. <i>This element is always shown.</i>
src-ipaddr	Parameter type: <Ip::V4Address> - IPv4-address	This object specifies the source IP address which is contained in every multicast IP datagrams transmitted on all IGMP control channels. <i>This element is always shown.</i>
router-present-timeout	Parameter type: <SignedInteger> - a signed integer	When the system acts as host on the network side of the IGMP proxy, this value is the time how long the system shall wait after hearing a Version 1 Query before it shall send any IGMPv2 messages. <i>This element is always shown.</i>
grp-memb-intvl	Parameter type: <SignedInteger>	The interval that must pass before

name	Type	Description
	- a signed integer	the system decides there are no more members of a group on a network. <i>This element is always shown.</i>

180.4 IGMP Channel Sources Status Command

Command Description

This command displays the IGMP channel source.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control channel counter [ (port) ]
```

Command Parameters

Table 180.4-1 "IGMP Channel Sources Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	<pre> <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier </pre>	

Resource Identifier	Type	Description
	Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Command Output

Table 180.4-2 "IGMP Channel Sources Status Command" Display parameters

Specific Information		
name	Type	Description
noperm-join	Parameter type: <Counter> - 32 bit counter	no of times perm bitmap failure has occurred. <i>This element is always shown.</i>
bitrate-fail	Parameter type: <Counter> - 32 bit counter	no of times IGMP join message failed <i>This element is always shown.</i>
inval-classd	Parameter type: <Counter> - 32 bit counter	indicates the count of IP address states <i>This element is always shown.</i>
numsec-ovld-protappl	Parameter type: <Counter> - 32 bit counter	no of 1sec int for overload protection has been applied <i>This element is always shown.</i>
num-fail	Parameter type: <Counter> - 32 bit counter	Indicates the count of failure join <i>This element is always shown.</i>
sysnum-fail	Parameter type: <Counter> - 32 bit counter	Indicates the count of failure IGMP join <i>This element is always shown.</i>
sysrate-fail	Parameter type: <Counter> - 32 bit counter	Indicates the count of failure IGMP join because of low Bandwidth <i>This element is always shown.</i>

180.5 IGMP Channel Miscellaneous Status

Command

Command Description

This command displays the IGMP channel source.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control channel miscellaneous [ (port) ]
```

Command Parameters

Table 180.5-1 "IGMP Channel Miscellaneous Status Command" Resource Parameters

Resource Identifier	Type	Description

Specific Information		
name	Type	Description
curr-num-group	Parameter type: <Gauge> - gauge	current group number in this port(ADSL,PVC) <i>This element is always shown.</i>
curr-preview-num	Parameter type: <Counter> - 32 bit counter	count of prev mcast grp that igmp channel joins currently <i>This element is always shown.</i>
curr-uncfg-num	Parameter type: <Counter> - 32 bit counter	current unconfig group number in this port(ADSL,PVC) <i>This element is always shown.</i>

180.6 IGMP Channel Protocol Status Command

Command Description

This command shows the IGMP protocol statistics for an IGMP channel

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control channel protocol [ (port) ]
```

Command Parameters

Table 180.6-1 "IGMP Channel Protocol Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identification of the port, vlanport or virtual channel

rx-unknown-message short name: rx-msg/unknown	Parameter type: <Counter> - 32 bit counter	number of unknown multicast packets received <i>This element is always shown.</i>
rx-bad-length	Parameter type: <Counter> - 32 bit counter	number of bad length multicast packet received/dropped <i>This element is only shown in detail mode.</i>
rx-bad-ip-checksum	Parameter type: <Counter> - 32 bit counter	number of wrong IP checksum multicast packet received/dropped <i>This element is only shown in detail mode.</i>
rx-bad-checksum	Parameter type: <Counter> - 32 bit counter	number of wrong checksum mcast packets received/dropped <i>This element is only shown in detail mode.</i>
rx-wrong-src-ip-addr	Parameter type: <Counter> - 32 bit counter	number of multicast signals received where the src-ip-addr of the multicast channel violates the ASM/SSM rules <i>This element is only shown in detail mode.</i>

180.7 IGMP Module Counter Status Command

Command Description

This command displays the IGMP module counters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control module counter [ (slot-index) ]
```

Command Parameters

Table 180.7-1 "IGMP Module Counter Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical slot id

Command Output

Table 180.7-2 "IGMP Module Counter Status Command" Display parameters

Specific Information		
name	Type	Description
total-msg	Parameter type: <Counter> - 32 bit counter	The total number of messages received from users, including IGMP messages and invalid messages. <i>This element is always shown.</i>
total-igmp-msg	Parameter type: <Counter> - 32 bit counter	The total number of IGMP messages, which includes join and leave requests from users, (both successful and unsuccessful). <i>This element is always shown.</i>
total-req	Parameter type: <Counter>	The total number of join requests

name	Type	Description
	- 32 bit counter	from users, which includes successful and unsuccessful attempts. <i>This element is always shown.</i>
success-req	Parameter type: <Counter> - 32 bit counter	The total number of successful join requests from users which includes new joins (which make a new connection) and re-joins (which already have a connection). <i>This element is always shown.</i>
unsuccess-req	Parameter type: <Counter> - 32 bit counter	The total number of unsuccessful new join requests from users. The failures could be due to the following reasons: permission bitmap failure, bitrate failure, lack of resource or invalid group address. <i>This element is only shown in detail mode.</i>
total-leave-req	Parameter type: <Counter> - 32 bit counter	The total number of leave requests from users. <i>This element is only shown in detail mode.</i>
total-inval-msg	Parameter type: <Counter> - 32 bit counter	The total number of invalid messages from users. These messages could be invalid for the following reasons: invalid IGMP message type, invalid IGMP message CRC, invalid IGMP message size, non-IGMP frame received, unexpected IGMP Query (GSQ or GMQ) received, RFC 1483 errors, MAC layer errors, or IP layer errors. <i>This element is only shown in detail mode.</i>
num-connects	Parameter type: <Counter> - 32 bit counter	The total number of connects due to successful new IGMP join requests from users. <i>This element is always shown.</i>
num-disconnects	Parameter type: <Counter> - 32 bit counter	The total number of disconnects to users. They can be due to GSQ or GMQ timer expiry or the triggering of fast channel changes. <i>This element is only shown in detail mode.</i>
peak-connects-sec	Parameter type: <Counter> - 32 bit counter	The peak number of multicast branch connections performed per second since the statistics were last cleared. <i>This element is only shown in detail mode.</i>
peak-disconnects-sec	Parameter type: <Counter> - 32 bit counter	The peak number of disconnects to users performed per second. <i>This element is only shown in</i>

180 Multicast Status Commands

name	Type	Description
		<i>detail mode.</i>
peak-msg-sec	Parameter type: <Counter> - 32 bit counter	The peak number of messages received from users per second. <i>This element is only shown in detail mode.</i>
gmq	Parameter type: <Counter> - 32 bit counter	The total number of GMQ requests from network. <i>This element is only shown in detail mode.</i>
gsq	Parameter type: <Counter> - 32 bit counter	The total number of GSQ requests from network. <i>This element is only shown in detail mode.</i>
gssq	Parameter type: <Counter> - 32 bit counter	The total number of GSSQ requests from network. <i>This element is only shown in detail mode.</i>
ovrld-app	Parameter type: <Counter> - 32 bit counter	The number of seconds during which module overload protection has been applied affecting all IGMP channels which are terminated at the IGMP module. <i>This element is only shown in detail mode.</i>
total-mld-msg	Parameter type: <Counter> - 32 bit counter	The number of total mld message. <i>This element is only shown in detail mode.</i>

180.8 IGMP Module Time Status Command

Command Description

This command displays the IGMP module time-related parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control module time [ (slot-index) ]
```

Command Parameters

Table 180.8-1 "IGMP Module Time Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical slot id

Command Output

Table 180.8-2 "IGMP Module Time Status Command" Display parameters

Specific Information		
name	Type	Description
peak-connects	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This will show "1970-01-01:00:00:00" by default. In case the peak number of connect occurs , it displays the time at which the event occurred <i>This element is always shown.</i>
peak-disconnects	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This will show "1970-01-01:00:00:00" by default. In case the peak number of disconnect occurs , it displays the time at which the event occurred

180 Multicast Status Commands

name	Type	Description
		<i>This element is always shown.</i>
peak-msg	Parameter type: <Igmpp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	This will show "1970-01-01:00:00:00" by default. In case the peak number of messages received occurs, it displays the time at which the event occurred <i>This element is always shown.</i>
stats-intval	Parameter type: <Igmpp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	The network time, when the module-wide statistics were last reset. <i>This element is only shown in detail mode.</i>

180.9 IGMP Module Miscellaneous Status Command

Command Description

This command displays the IGMP module parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control module miscellaneous [ (slot-index) ]
```

Command Parameters

Table 180.9-1 "IGMP Module Miscellaneous Status Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical slot id

Command Output

Table 180.9-2 "IGMP Module Miscellaneous Status Command" Display parameters

Specific Information		
name	Type	Description
curr-root-conn	Parameter type: <Gauge> - gauge	The number of the connected groups. <i>This element is always shown.</i>
con-cfgd	Parameter type: <Gauge> - gauge	The number of the connected groups who are configured in multicast source table. <i>This element is always shown.</i>
con-un-cfgd	Parameter type: <Gauge> - gauge	The number of the connected groups who aren't configured in

180 Multicast Status Commands

name	Type	Description
		multicast source table. <i>This element is always shown.</i>
con-no-memb	Parameter type: <Gauge> - gauge	The number of the connected groups who is in reserve state(no member). <i>This element is always shown.</i>

180.10 IGMP Group to Package Status Command

Command Description

This command shows the IGMP group to package parameters

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control ipv4 grp-to-package [ (grp-ip-addr) [ src-ip-addr <Ip::V4Address> ] [ vlan-id <Igmp::SrcVlanId> ] ]
```

Command Parameters

Table 180.10-1 "IGMP Group to Package Status Command" Resource Parameters

Resource Identifier	Type	Description
(grp-ip-addr)	Format: - multicast-address (range: 224.0.0.3....239.255.255.255)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr)
vlan-id	Parameter type: <Igmp::SrcVlanId> Format: - the multicast vlan id - range: [1...4094]	identifies a particular vlan id

Command Output

Table 180.10-2 "IGMP Group to Package Status Command" Display parameters

Specific Information		
name	Type	Description
index	Parameter type: <Igmp::PackageIndex> - index of the package - range: [1...1024]	index used to identify the packages <i>This element is always shown.</i>

180.11 Show Multicast Channel Statistics

Command

Command Description

This command shows the distribution of statistics information maintained by IGMP channels. The operator should know the slot index (the range is 1/1/0 to 1/1/18), the class D address (the range is 224.0.0.3 to 239.255.255.255) and the source-ip-addr of the mcast server. The following statistics objects measure the popularity of a multicast channel (when and how much the multicast channel is being watched by end users). The term "subscribe" in this context means how many IGMP channels have a group member connected to this multicast source.

- **peak-nbr-subs-channels:** This statistic indicates the peak number of subscribed IGMP channels for which leaf multicast VCLs have connected to the source since the last statistics reset.
- **peak-time:** This statistic indicates the network time, in seconds, when the peak number of subscribed IGMP channels for the source occurred.
- **curr-subs-channels:** This statistic indicates the current number of subscribed IGMP channels for the source.
- **connect-fail-counter:** This statistic indicates the number of times that an attempt to create a multicast connection has failed and the number of times that a multicast connection failure has occurred. The reason for failure is likely because there is insufficient bandwidth in the internal backplane of the Nokia 7302 or 7330 ISAM FTTN to transport the data traffic from the root endpoint of the network interface to the leaf endpoint of the access interface.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control ipv4 module-mcast-channel [ (slot) [ grp-ip-addr <Igmp::MulticastAddress> ] [ src-ip-addr <Ip::V4Address> ] [ vlan-id <Igmp::McastChannelVlan> ] ]
```

Command Parameters

Table 180.11-1 "Show Multicast Channel Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(slot)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identifies an IGMP module by the logical SlotId
grp-ip-addr	Parameter type: <Igmp::MulticastAddress> Format:	ip address identifying the multicast group

Resource Identifier	Type	Description
	- multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr)
vlan-id	Parameter type: <Igmp::McastChannelVlan> Format: - vlan id for multicast - range: [1...4093]	vlanid of the multicast channel which is configured in it

Command Output

Table 180.11-2 "Show Multicast Channel Statistics Command" Display parameters

Specific Information		
name	Type	Description
peak-nbr-subs-channels short name: pk-nr-sub-ch	Parameter type: <Counter> - 32 bit counter	The peak number of subscribed IGMP channels which have members connected to the source since the last statistics reset. It is only for those groups configured in Multicast Channel table. <i>This element is always shown.</i>
peak-time	Parameter type: <Igmp::McastSrcPeakTime> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	The network time indicating when the peak number of subscribed IGMP channels for the source occurred. It is only for those groups configured in Multicast Channel Table. <i>This element is always shown.</i>
curr-subs-channels	Parameter type: <Gauge> - gauge	Indicates the current number of subscribed IGMP channels for the multicast stream/channel. <i>This element is only shown in detail mode.</i>
nbr-connect-fail short name: nr-con-nok	Parameter type: <Counter> - 32 bit counter	Indicates the number of times that an attempt to create a multicast connection fails. <i>This element is always shown.</i>
user-success-join	Parameter type: <Counter> - 32 bit counter	indicates the number of times that users successfully joined a group. <i>This element is only shown in detail mode.</i>

180.12 IGMP package to multicast source

Command

Command Description

This command shows the IGMP package to multicast source parameters.

User Level

The command can be accessed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> show mcast-control ipv4 package-to-src [ (package-id) ]
```

Command Parameters

Table 180.12-1 "IGMP package to multicast source Command" Resource Parameters

Resource Identifier	Type	Description
(package-id)	Format: - index of the package - range: [1...1024]	name used to identify the packages

Command Output

Table 180.12-2 "IGMP package to multicast source Command" Display parameters

Specific Information		
name	Type	Description
group-address	Parameter type: <Ip::V4Address> - IPv4-address	the multicast group address <i>This element is always shown.</i>
source-address	Parameter type: <Ip::V4Address> - IPv4-address	the multicast group source address <i>This element is always shown.</i>
vlan-id	Parameter type: <Igmp::SrcVlanId> - the multicast vlan id - range: [1...4094]	the multicast vlan id <i>This element is always shown.</i>

181- Security Status Commands

181.1 Security Status Command Tree	181-6944
181.2 Operator Information Status Command	181-6946
181.3 Domain Status Command	181-6948
181.4 User Sessions Status Command	181-6949
181.5 Connection Profile Status Command	181-6956
181.6 RADIUS Authentication Server Status Command	181-6957
181.7 RADIUS Authentication Server Statistics Command	181-6959
181.8 RADIUS Accounting Server Statistics Command	181-6962
181.9 RADIUS Accounting Server Status Command	181-6965
181.10 RADIUS Dynamic Authentication Client Status Command	181-6966
181.11 RADIUS Next Available Index Command	181-6968
181.12 RADIUS Client Status Command	181-6969
181.13 Tacacs authentication Server Status Command	181-6970
181.14 TACACS Authentication Server Statistics Command	181-6972
181.15 Tacacs authorization Server Status Command	181-6975
181.16 TACACS Authorization Server Statistics Command	181-6977
181.17 Tacacs Accounting Server Status Command	181-6979
181.18 TACACS Accounting Server Statistics Command	181-6980
181.19 PAE Authenticator Status Command	181-6982
181.20 EAPOL Statistics Command	181-6986
181.21 Diagnostic Information Status Command	181-6989
181.22 Session Statistics Command	181-6994
181.23 PAE Port System Status Command	181-6997
181.24 MAC Address related EAPOL Status Command	181-6999
181.25 MAC Address related EAPOL Status Command	181-7001
181.26 MAC Address related EAPOL Status Command	181-7006
181.27 SSH Server Status Command	181-7011
181.28 SSH Server Key Generation Progress Status Command	181-7012
181.29 SSH Authentication Key Status Command	181-7013
181.30 SSH Authentication Key Generation Progress Status Command	181-7014
181.31 PM File Upload Status Command	181-7015
181.32 5-min CDR File Upload Status Command	181-7017

181.1 Security Status Command Tree

Description

This chapter gives an overview of nodes that are handled by "Security Status Commands".

```

181.2 Operator Information Status Command

Command Description

This command displays information about operators managed by the local authentication server. Operators managed by a remote authentication server (for example Radius) are never shown.

User Level

The command can be accessed by operators with all,admin privileges.

Operators without security read or write permissions can never see the information about other operators.

Command Syntax

The command has the following syntax:

```
> show security operator [ (name) ]
```

Command Parameters

Table 181.2-1 "Operator Information Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - the name of an operator - range: [a-z0-9+] - length: 1<=x<=11	the name of the operator

Command Output

Table 181.2-2 "Operator Information Status Command" Display parameters

Specific Information		
name	Type	Description
last-login	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	the time of the last successful login <i>This element is always shown.</i>
last-failed	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	the time of the last unsuccessful login attempt <i>This element is always shown.</i>
failed-logins	Parameter type: <UnsignedInteger> - an unsigned integer	the number of unsuccessful login attempts since the last successful login <i>This element is always shown.</i>
last-passwd-change	Parameter type: <Sys::Time> - the time (yyyy-mm-dd:hour:minutes:secs) - unit: UTC	the time the password was changed for the last time. It does not matter if the change was made by this operator itself or by another operator.

181 Security Status Commands

name	Type	Description
		<i>This element is always shown.</i>

181.3 Domain Status Command

Command Description

This command displays the domain status.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

> show security aaa domain [(name)]

Command Parameters

Table 181.3-1 "Domain Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the domain - length: 1<=x<=64	name of the domain

Command Output

Table 181.3-2 "Domain Status Command" Display parameters

Specific Information		
name	Type	Description
active-sessions	Parameter type: <Gauge> - gauge	the number of active sessions <i>This element is always shown.</i>

181.4 User Sessions Status Command

Command Description

This command displays the details of user sessions.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security aaa user-session [ (index) [ user <Aaa::DisplayString> ] [ domain <Aaa::DisplayString> ] ]
```

Command Parameters

Table 181.4-1 "User Sessions Status Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - a signed integer	index to the domain user session table
user	Parameter type: <Aaa::DisplayString> Format: - a description - length: 1<=x<=64	user name
domain	Parameter type: <Aaa::DisplayString> Format: - a description - length: 1<=x<=64	domain name

Command Output

Table 181.4-2 "User Sessions Status Command" Display parameters

Specific Information		
name	Type	Description
interface	Parameter type: <Itf::ComplexPortType> (xdsl-line : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> voicefxs : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> xdsl-channel : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-if : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> atm-pvc : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> :	the interface on which the session is established. <i>This element is only shown in detail mode.</i>

181 Security Status Commands

name	Type	Description
	Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id Field type <Eqpt::VlanId> - VLAN id Field type <Eqpt::LogicalId> - logical id Field type <Eqpt::VrfId> - VRF id	
protocol	Parameter type: <Aaa::Protocol> (ppp dot1x) Possible values: - ppp : ppp used to establish user sess - dot1x : dot1x used to establish user sess	the protocol at user side that was used to establish this user session <i>This element is only shown in detail mode.</i>
auth-type	Parameter type: <Aaa::Authenticator> (local radius : <Aaa::RadPolicyName>) Possible values: - local : authenticator type is local - radius : authenticator type is RADIUS Field type <Aaa::RadPolicyName> - name of the radius policy - length: 1<=x<=64	the Authentication type used for establishing this user session <i>This element is only shown in detail mode.</i>
auth-server	Parameter type: <Aaa::IgnoredRadAuthServer> (none name : <Aaa::RadAuthServerName>) Possible values: - none : no radius server for authentication - name : use a radius server for authentication Field type <Aaa::RadAuthServerName> - name of the RADIUS auth server - length: 1<=x<=64	the name of the radius authentication server used for this user session <i>This element is only shown in detail mode.</i>
acc-server	Parameter type: <Aaa::RadAccServer> (none name : <Aaa::RadAccServerName>) Possible values: - none : no radius server for accounting - name : use a radius server for accounting Field type <Aaa::RadAccServerName> - name of the RADIUS accounting server - length: 1<=x<=64	the name of the radius accounting server used for this user session <i>This element is only shown in detail mode.</i>
accounting-id	Parameter type: <Aaa::DisplayString> - a description - length: 1<=x<=64	the accounting id that is sent to the radius accounting server for this user session. It will be NULL in case of no accounting.

name	Type	Description
		<i>This element is only shown in detail mode.</i>
vrf-index	Parameter type: <Aaa::VrfIndex> - a vrf index. Vrf index must be 0 if not support VRF. - range: [0...127]	the vrf to which the ip-address of this user session belongs to <i>This element is only shown in detail mode.</i>
ip-pool-index	Parameter type: <Aaa::DomainUserSessIpAddrPoolIndex> - local IP Pool for allocating Ip address to user session - range: [0...256]	the ip-pool that was used to allocate an ip-address to the user session <i>This element is only shown in detail mode.</i>
ip-addr	Parameter type: <Aaa::InetAddress> - IPv4-address	the IPAddress allocated to the user session <i>This element is always shown.</i>

181.5 Connection Profile Status Command

Command Description

This command displays the status of connection profiles.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security aaa conn-profile [ (name) ]
```

Command Parameters

Table 181.5-1 "Connection Profile Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of connection profile

Command Output

Table 181.5-2 "Connection Profile Status Command" Display parameters

Specific Information		
name	Type	Description
number-of-users	Parameter type: <AsamProfileRefCount> - number of entities using this particular profile - range: [0...65535]	The number of entities using this profile. The profile can only be deleted when this number is 0. <i>This element is always shown.</i>
index	Parameter type: <AsamProfileIndex> - a profile index - range: [1...250]	connection profile index <i>This element is always shown.</i>

181.6 RADIUS Authentication Server Status Command

Command Description

This command displays the state of the RADIUS authentication server.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security radius auth-server state [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.6-1 "RADIUS Authentication Server Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the RADIUS auth server - length: 1<=x<=64	name of RADIUS authentication server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which this auth server belongs

Command Output

Table 181.6-2 "RADIUS Authentication Server Status Command" Display parameters

Specific Information		
name	Type	Description
auth-state	Parameter type: <Aaa::OperState> (up down unknown) Possible values: - up : Operational state up	The operational state of the authentication server. <i>This element is always shown.</i>

181 Security Status Commands

name	Type	Description
	- down : Operational state down - unknown : Operational state unknown	

181.7 RADIUS Authentication Server Statistics

Command

Command Description

This command displays the details of RADIUS authentication server statistics.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security radius auth-server auth-stats [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.7-1 "RADIUS Authentication Server Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the RADIUS auth server - length: 1<=x<=64	name of RADIUS authentication server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which this auth server belongs

Command Output

Table 181.7-2 "RADIUS Authentication Server Statistics Command" Display parameters

Specific Information		
name	Type	Description
auth-server-id	Parameter type: <Aaa::RadAuthServerIndex> - uniquely identify a radius auth server - range: [1...256]	authentication server id <i>This element is always shown.</i>
rndtrp-time short name: rndtrp	Parameter type: <TimeTicks> - a timeout value - unit: msec	The time interval between the most recent Access-Reply/Access-Challenge

181 Security Status Commands

name	Type	Description
		and the Access-Request that matched it from this RADIUS authentication server. <i>This element is always shown.</i>
num-access-req short name: num-acr-rq	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Access-Request packets sent to this server. This does not include retransmissions. <i>This element is always shown.</i>
num-access-retrn short name: num-acr-ret	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Access-Request packets retransmitted to this RADIUS authentication server. <i>This element is always shown.</i>
num-access-acpts short name: num-acr-acp	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Access-Accept packets (valid or invalid) received from this server. <i>This element is always shown.</i>
num-access-rej short name: num-acr-rj	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Access-Reject packets (valid or invalid) received from this server. <i>This element is always shown.</i>
num-access-challenges short name: num-acr-chlg	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Access-Challenge packets (valid or invalid) received from this server. <i>This element is only shown in detail mode.</i>
num-malf-access-resp short name: num-acr-res	Parameter type: <Counter> - 32 bit counter	The number of malformed RADIUS Access-Response packets received from this server. Malformed packets include packets with an invalid length, Bad authenticators or Signature attributes or unknown types are not included as malformed access responses. <i>This element is only shown in detail mode.</i>
num-bad-authenticators short name: num-bad-auth	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Access-Response packets containing invalid authenticators or signature received from this server. <i>This element is only shown in detail mode.</i>
num-pending-req short name: num-pd-rq	Parameter type: <Gauge> - gauge	The number of RADIUS Access-Request packets destined for this server that have not yet timed out or received a response. <i>This element is only shown in detail mode.</i>
num-timeouts short name: num-tout	Parameter type: <Counter> - 32 bit counter	The number of authentication timeouts to this server. <i>This element is only shown in detail mode.</i>
num-unknown	Parameter type: <Counter>	The number of RADIUS packets

181 Security Status Commands

name	Type	Description
short name: num-ukwn	- 32 bit counter	of unknown type which were received from this server on the authentication port. <i>This element is only shown in detail mode.</i>
num-packets-dropped short name: num-pkt-dpd	Parameter type: <Counter> - 32 bit counter	The number of RADIUS packets of which were received from this server on the authentication port and dropped. <i>This element is only shown in detail mode.</i>

181.8 RADIUS Accounting Server Statistics

Command

Command Description

This command displays the RADIUS accounting server statistics.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security radius acc-server acc-stats [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.8-1 "RADIUS Accounting Server Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the RADIUS accounting server - length: 1<=x<=64	name of the RADIUS accounting server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which the RADIUS Acc Server belongs

Command Output

Table 181.8-2 "RADIUS Accounting Server Statistics Command" Display parameters

Specific Information		
name	Type	Description
rndtrip-time short name: rndtp	Parameter type: <TimeTicks> - a timeout value - unit: msec	The time interval between the most recent accounting-response and the accounting-request that matched it from this RADIUS accounting server. <i>This element is always shown.</i>

name	Type	Description
num-acc-req short name: num-acrq	Parameter type: <Counter> - 32 bit counter	The number of RADIUS accounting-request packets sent. This does not include retransmissions. <i>This element is always shown.</i>
num-req-retrans short name: num-rq-rtn	Parameter type: <Counter> - 32 bit counter	The number of RADIUS accounting-request packets retransmitted to this RADIUS accounting server. Retransmissions include retries where the identifier and acct-delay have been updated, as well as those in which they remain the same. <i>This element is always shown.</i>
num-resp short name: num-rec	Parameter type: <Counter> - 32 bit counter	The number of RADIUS packets received on the accounting port from this server. <i>This element is always shown.</i>
num-malf-resp short name: num-rsp	Parameter type: <Counter> - 32 bit counter	The number of malformed RADIUS accounting-response packets received from this server. Malformed packets include packets with an invalid length. Bad authenticators and unknown types are not included as malformed accounting responses. <i>This element is only shown in detail mode.</i>
num-bad-authenticators short name: num-bad-auth	Parameter type: <Counter> - 32 bit counter	The number of RADIUS accounting-response packets which contained invalid authenticators received from this server. <i>This element is only shown in detail mode.</i>
num-pending-reqts short name: num-pd-rqt	Parameter type: <Gauge> - gauge	The number of RADIUS accounting-request packets sent to this server that have not yet timed out or received a response. <i>This element is always shown.</i>
num-timeouts short name: num-tout	Parameter type: <Counter> - 32 bit counter	The number of accounting timeouts to this server. <i>This element is only shown in detail mode.</i>
num-unknown short name: num-ukwn	Parameter type: <Counter> - 32 bit counter	The number of RADIUS packets of unknown type which were received from this server on the accounting port. <i>This element is only shown in detail mode.</i>
num-packets-dropped short name: num-pkt-dpd	Parameter type: <Counter> - 32 bit counter	The number of RADIUS packets which were received from this server on the accounting port and dropped. <i>This element is only shown in detail mode.</i>

181.9 RADIUS Accounting Server Status Command

Command Description

This command displays the state of the RADIUS accounting server.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security radius acc-server state [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.9-1 "RADIUS Accounting Server Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the RADIUS accounting server - length: 1<=x<=64	name of the RADIUS accounting server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	Router to which the RADIUS Acc Server belongs

Command Output

Table 181.9-2 "RADIUS Accounting Server Status Command" Display parameters

Specific Information		
name	Type	Description
acc-state	Parameter type: <Aaa::OperState> (up down unknown) Possible values: - up : Operational state up - down : Operational state down - unknown : Operational state unknown	Specifies the operational state of the accounting server. <i>This element is always shown.</i>

181.10 RADIUS Dynamic Authentication Client Status Command

Command Description

This command displays the statistics of the RADIUS Dynamic Authentication Client.

The conceptual table lists the statistics of the RADIUS Dynamic Authorization Clients with which the server shares a secret.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security radius dyn-authclient-stats [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.10-1 "RADIUS Dynamic Authentication Client Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of dynamic auth client name - length: 1<=x<=64	name of the RADIUS Dynamic Authorization client
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which the RADIUS Dyn Auth Client belongs

Command Output

Table 181.10-2 "RADIUS Dynamic Authentication Client Status Command" Display parameters

Specific Information		
name	Type	Description
num-disconnect-reqs	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Disconnect-Request packets recieved from this Dynamic Authorization Client.

name	Type	Description
		<i>This element is always shown.</i>
num-disconnect-acks	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Disconnect-ACK packets sent to this Dynamic Authorization Client. <i>This element is always shown.</i>
num-access-naks	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Disconnect-NAK packets sent to this Dynamic Authorization Client. <i>This element is always shown.</i>
num-malf-disconn-req	Parameter type: <Counter> - 32 bit counter	The number of malformed RADIUS Disconnect-Request packets received from this Dynamic Authorization client. Bad authenticators and unknown types are not included as malformed Disconnect-Requests. Malformed packets include packets with an invalid length. <i>This element is only shown in detail mode.</i>
num-bad-auth-in-req	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Disconnect-Request packets which contained invalid Signature attributes received from this Dynamic Authorization Client. <i>This element is only shown in detail mode.</i>
num-disconn-pkts-drop	Parameter type: <Counter> - 32 bit counter	The number of incoming Disconnect-Requests from this Dynamic Authorization Client silently discarded for some reason other than malformed, bad authenticators or unknown types. <i>This element is only shown in detail mode.</i>
num-pkts-unknown-type	Parameter type: <Counter> - 32 bit counter	The number of incoming packets of unknown types which were received on the Dynamic Authorization port. <i>This element is only shown in detail mode.</i>

181.11 RADIUS Next Available Index Command

Command Description

This command displays the next available index.

The index is used to uniquely identify an entry in this table. The next-free-index shows the unique number in a RADIUS policy that can be used to create a new entry in the RADIUS server. The value 0 indicates that no unassigned entry is available. To obtain the RADIUS server index value for a new entry, the manager issues a management protocol retrieval operation to obtain the current value of this object. After each retrieval, the agent modifies the value to the next unassigned index.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security radius next-free-index [ (name) ]
```

Command Parameters

Table 181.11-1 "RADIUS Next Available Index Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the radius policy - length: 1<=x<=64	name of the RADIUS policy

Command Output

Table 181.11-2 "RADIUS Next Available Index Command" Display parameters

Specific Information		
name	Type	Description
next-free-index	Parameter type: <Aaa::RadServerSetNextFreeIndex> - unique nbr in radius policy for creating radServerSet. - range: [0...2]	A unique number within a radius policy that can be used for creating a new radus server set. <i>This element is always shown.</i>

181.12 RADIUS Client Status Command

Command Description

This command displays the RADIUS client parameters.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

> show security radius radius-client

Command Output

Table 181.12-2 "RADIUS Client Status Command" Display parameters

Specific Information		
name	Type	Description
auth-invl-server-addr	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Access-Response packets received from unknown addresses. <i>This element is always shown.</i>
acc-invl-server-addr	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Accounting-Response packets received from unknown addresses. <i>This element is always shown.</i>
dynauth-ser-inv-addr	Parameter type: <Counter> - 32 bit counter	The number of RADIUS Disconnect-Request packets received from unknown addresses. <i>This element is always shown.</i>
acc-ser-get-nxt-idx	Parameter type: <Aaa::RadAccServerGetNextFreeIndex> - next free index for creating a radius accounting server - range: [0...256]	The next free index value that can be used for creating a new entry in the radius accounting server. <i>This element is always shown.</i>
dyn-auth-get-nxt-idx	Parameter <Aaa::RadDynAuthClntGetNextFreeIndex> - next free index for creating a radius dyn auth client - range: [0...256]	type: The next free index value that can be used for creating a new entry in the radius dyn auth client. <i>This element is always shown.</i>

181.13 Tacacs authentication Server Status

Command

Command Description

This command displays the state of the tacacs authentication server.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security tacacs authen-server state [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.13-1 "Tacacs authentication Server Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ authentication server - length: 1<=x<=64	name of the TACACS authentication server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	Router to which the TACACS authen Server belongs

Command Output

Table 181.13-2 "Tacacs authentication Server Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Aaa::OperState> (up down unknown) Possible values: - up : Operational state up	Specifies the operational state of the authen server. <i>This element is always shown.</i>

name	Type	Description
	- down : Operational state down - unknown : Operational state unknown	

181.14 TACACS Authentication Server Statistics Command

Command Description

This command displays the TACACS authentication server statistics.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security tacacs authen-server statistics [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.14-1 "TACACS Authentication Server Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ authentication server - length: 1<=x<=64	name of the TACACS authentication server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which the TACACS Authentication Server belongs

Command Output

Table 181.14-2 "TACACS Authentication Server Statistics Command" Display parameters

Specific Information		
name	Type	Description
server-id	Parameter type: <Aaa::TacAuthenServerIndex> - Index used to uniquely identify a tacacs authentication server - range: [1...256]	authentication server id <i>This element is always shown.</i>
round-trip-time short name: rtt	Parameter type: <TimeTicks> - a timeout value	The time interval (in hundredths of a second) between the most

name	Type	Description
	- unit: msec	recent START/REPLY or CONTINUE/REPLY. <i>This element is always shown.</i>
start packets short name: start	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication START packets sent to authentication server. <i>This element is always shown.</i>
continue packets short name: cont	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication CONTINUE packets sent to authentication server. <i>This element is always shown.</i>
replies short name: rep	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication REPLY packets received from authentication server. <i>This element is always shown.</i>
pass-replies short name: pass	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication PASS REPLY packets received from authentication server, indicating authentication passed. <i>This element is always shown.</i>
fail-replies short name: fail	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication FAIL REPLY packets received from authentication server, indicating authentication failed. <i>This element is only shown in detail mode.</i>
get-password-replies short name: get-pw	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication GET PASSWORD REPLY packets from authentication server. <i>This element is always shown.</i>
error-replies short name: err	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication ERROR REPLY packets received from authentication server. <i>This element is only shown in detail mode.</i>
other-replies short name: other	Parameter type: <Counter> - 32 bit counter	"The number of TACACS+ other authentication REPLY packets received from authentication server including GetData, GetUser, Restart or Follow message. <i>This element is always shown.</i>
timeout-requests short name: t-out	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authentication START or CONTINUE packets destined for authentication server that have not yet received a reply after waiting timer expires. <i>This element is only shown in detail mode.</i>
malformed-responses	Parameter type: <Counter>	The number of malformed

181 Security Status Commands

name	Type	Description
short name: mal	- 32 bit counter	TACACS+ authentication response packets. It includes such packets with invalid length, message type, etc. The number of TCP error relevant packets is excluded from this counter. <i>This element is only shown in detail mode.</i>

181.15 Tacacs authorization Server Status

Command

Command Description

This command displays the state of the tacacs authorization server.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security tacacs author-server state [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.15-1 "Tacacs authorization Server Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ authorization server - length: 1<=x<=64	name of the TACACS authorization server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	Router to which the TACACS author Server belongs

Command Output

Table 181.15-2 "Tacacs authorization Server Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Aaa::OperState> (up down unknown) Possible values: - up : Operational state up	Specifies the operational state of the author server. <i>This element is always shown.</i>

181 Security Status Commands

name	Type	Description
	- down : Operational state down - unknown : Operational state unknown	

181.16 TACACS Authorization Server Statistics Command

Command Description

This command displays the TACACS authorization server statistics.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security tacacs author-server statistics [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.16-1 "TACACS Authorization Server Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ authorization server - length: 1<=x<=64	name of the TACACS authorization server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which the TACACS Authorization Server belongs

Command Output

Table 181.16-2 "TACACS Authorization Server Statistics Command" Display parameters

Specific Information		
name	Type	Description
server-id	Parameter type: <Aaa::TacAuthorServerIndex> - Index used to uniquely identify a tacacs authorization server - range: [1...256]	authorization server id <i>This element is always shown.</i>
round-trip-time short name: rtt	Parameter type: <TimeTicks> - a timeout value	"The time interval between the between the most recent

181 Security Status Commands

name	Type	Description
	- unit: msec	authorization REQUEST and REPLY. <i>This element is always shown.</i>
requests short name: req	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authorization REQUEST packets sent. <i>This element is always shown.</i>
replies short name: rep	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authorization REPLY packets received from authorization server. <i>This element is always shown.</i>
pass-replies short name: pass	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authorization PASS REPLY packets received from authorization server. <i>This element is always shown.</i>
fail-replies short name: fail	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authorization FAIL REPLY packets received from authorization server. <i>This element is only shown in detail mode.</i>
follow-replies short name: fol	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authorization FOLLOW REPLY packets received from authorization server. <i>This element is only shown in detail mode.</i>
error-replies short name: err	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authorization ERROR REPLY packets received from authorization server. <i>This element is only shown in detail mode.</i>
timeout-requests short name: t-out	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ authorization REQUEST packets sent to this server that have not received a reply yet after waiting timer expires. <i>This element is only shown in detail mode.</i>
malformed-responses short name: mal	Parameter type: <Counter> - 32 bit counter	The number of malformed TACACS+ authorization response packets. It includes such packets with invalid length, message type, etc. The number of TCP error relevant packets is excluded from this counter. <i>This element is only shown in detail mode.</i>

181.17 Tacacs Accounting Server Status Command

Command Description

This command displays the state of the tacacs Accounting server.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security tacacs acc-server state [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.17-1 "Tacacs Accounting Server Status Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ accounting server - length: 1<=x<=64	name of the TACACS accounting server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	Router to which the TACACS Acc Server belongs

Command Output

Table 181.17-2 "Tacacs Accounting Server Status Command" Display parameters

Specific Information		
name	Type	Description
state	Parameter type: <Aaa::OperState> (up down unknown) Possible values: - up : Operational state up - down : Operational state down - unknown : Operational state unknown	Specifies the operational state of the accounting server. <i>This element is always shown.</i>

181.18 TACACS Accounting Server Statistics

Command

Command Description

This command displays the TACACS accounting server statistics.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security tacacs acc-server statistics [ (name) [ router-instance <Ihub::Router> ] ]
```

Command Parameters

Table 181.18-1 "TACACS Accounting Server Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - name of the TACACS+ accounting server - length: 1<=x<=64	name of the TACACS accounting server
router-instance	Parameter type: <Ihub::Router> Format: (base <Ihub::Router>) Possible values: - base : base router Field type <Ihub::Router> - vprn service-id - range: [1...2147483647]	router to which the TACACS Acc Server belongs

Command Output

Table 181.18-2 "TACACS Accounting Server Statistics Command" Display parameters

Specific Information		
name	Type	Description
server-id	Parameter type: <Aaa::TacAccServerIndex> - Index used to uniquely identify a tacacs accounting server - range: [1...256]	accounting server id <i>This element is always shown.</i>
round-trip-time short name: rtt	Parameter type: <TimeTicks> - a timeout value - unit: msec	The time interval between the most recent accounting request and reply.

name	Type	Description
		<i>This element is always shown.</i>
requests short name: req	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ accounting REQUEST packets sent. <i>This element is always shown.</i>
replies short name: rep	Parameter type: <Counter> - 32 bit counter	"The number of TACACS+ REPLY accounting packets received from accounting server. <i>This element is always shown.</i>
successful-replies short name: suc	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ accounting SUCC REPLY packets received from accounting server. <i>This element is always shown.</i>
error-replies short name: err	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ accounting ERROR REPLY packets received from accounting server. <i>This element is only shown in detail mode.</i>
follow-replies short name: fol	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ accounting FOLLOW REPLY packets received from accounting server. <i>This element is only shown in detail mode.</i>
timeout-requests short name: t-out	Parameter type: <Counter> - 32 bit counter	The number of TACACS+ accounting REQUEST packets sent to accounting server that have not received a reply yet, after waiting timer expires. <i>This element is only shown in detail mode.</i>
malformed-responses short name: mal	Parameter type: <Counter> - 32 bit counter	The number of malformed TACACS+ accounting response packets. It includes such packets with invalid length, message type, etc. The number of TCP error relevant packets is excluded from this counter. <i>This element is only shown in detail mode.</i>

181.19 PAE Authenticator Status Command

Command Description

This command displays the details of authentication configuration.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae authenticator [ (port) ]
```

Command Parameters

Table 181.19-1 "PAE Authenticator Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the identification of the bridge port

Resource Identifier	Type	Description
	Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

Table 181.19-2 "PAE Authenticator Status Command" Display parameters

Specific Information		
name	Type	Description
auth-pae-state	Parameter type: <Aaa::AuthPaeState> (initialize disconnected connecting authenticating authenticated aborting held force-auth force-unauth) Possible values: - initialize : - disconnected : - connecting : - authenticating : - authenticated : - aborting : - held : - force-auth : - force-unauth :	the current state of the authenticator PAE state machine <i>This element is always shown.</i>

181 Security Status Commands

name	Type	Description
mac-auth-enabled	Parameter type: <Aaa::MacAuthState> (mac-auth no-mac-auth) Possible values: - mac-auth : enable 802.1x mac authentication - no-mac-auth : disable 802.1x mac authentication	if the 802.1x mac authentication enabled <i>This element is only shown in detail mode.</i>
auth-backend-state	Parameter type: <Aaa::AuthBackendState> (request response success fail timeout idle initialize) Possible values: - request : - response : - success : - fail : - timeout : - idle : - initialize :	the current state of the backend authentication state machine <i>This element is always shown.</i>
admin-contr-direct	Parameter type: <Aaa::PaeControlledDirections> both Possible values: - both :	describes which directions for the port are configured to be controlled <i>This element is only shown in detail mode.</i>
oper-contr-direct	Parameter type: <Aaa::PaeControlledDirections> both Possible values: - both :	describes which directions for the port are currently be controlled <i>This element is only shown in detail mode.</i>
port-status	Parameter type: <Aaa::PaeControlledPortStatus> (authorized unauthorized) Possible values: - authorized : - unauthorized :	the current port status <i>This element is always shown.</i>
re-auth-period	Parameter type: <Aaa::paeReauthPeriod> - re-authentication Period - unit: sec - range: [1...65535]	the actual re-authentication period, value in seconds <i>This element is only shown in detail mode.</i>
re-auth-enabled	Parameter type: <Aaa::TruthValue> (true false) Possible values: - true : - false :	true if re-authentication is enabled <i>This element is only shown in detail mode.</i>
key-tx-enabled	Parameter type: <Aaa::TruthValue> (true false) Possible values: - true : - false :	true if key transmission is enabled <i>This element is only shown in detail mode.</i>
handshake-mode	Parameter type: <Aaa::PortHandShakeMode> (handshake no-handshake) Possible values:	the handshake period <i>This element is only shown in detail mode.</i>

name	Type	Description
	- handshake : enable handshake for this port - no-handshake : disable handshake for this port	
handshake-period	Parameter type: <Aaa::PortHandShakePeriod> - handshake time interval - unit: sec - range: [5...90]	true if handshake mode is enabled <i>This element is only shown in detail mode.</i>

181.20 EAPOL Statistics Command

Command Description

This command displays EAPOL statistics.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae eapol-stats [ (port) ]
```

Command Parameters

Table 181.20-1 "EAPOL Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the port or virtual channel

Resource Identifier	Type	Description
	Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

Table 181.20-2 "EAPOL Statistics Command" Display parameters

Specific Information		
name	Type	Description
rx-frames	Parameter type: <Counter> - 32 bit counter	the number of valid EAPOL frames of any type that have been received by this Authenticator <i>This element is always shown.</i>
tx-frames	Parameter type: <Counter> - 32 bit counter	the number of EAPOL frames of any type that have been transmitted by this Authenticator <i>This element is always shown.</i>
starts	Parameter type: <Counter> - 32 bit counter	the number of EAPOL Start frames that have been received by this Authenticator <i>This element is always shown.</i>
logoffs	Parameter type: <Counter> - 32 bit counter	the number of EAPOL Logoff frames that have been received by this Authenticator <i>This element is always shown.</i>
rx-response-ids	Parameter type: <Counter> - 32 bit counter	the number of EAP Resp/Id frames that have been received by this Authenticator <i>This element is only shown in</i>

181 Security Status Commands

name	Type	Description
		<i>detail mode.</i>
rx-responses	Parameter type: <Counter> - 32 bit counter	number of valid EAP Response frames (other than Resp/Id frames) that have been received by this Authenticator <i>This element is only shown in detail mode.</i>
tx-request-ids	Parameter type: <Counter> - 32 bit counter	the number of EAP Req/Id frames that have been transmitted by this Authenticator <i>This element is only shown in detail mode.</i>
tx-requests	Parameter type: <Counter> - 32 bit counter	the number of EAP Request frames (other than Rq/Id frames) that have been transmitted by this Authenticator <i>This element is only shown in detail mode.</i>
invalid-frames	Parameter type: <Counter> - 32 bit counter	the number of EAPOL frames that have been received by this Authenticator in which the frame type is not recognized <i>This element is always shown.</i>
inv-length-frames	Parameter type: <Counter> - 32 bit counter	the number of EAPOL frames that have been received by this Authenticator in which the Packet Body Length field is invalid <i>This element is only shown in detail mode.</i>
last-eap-version	Parameter type: <SignedInteger> - a signed integer	the protocol version number carried in the most recently received EAPOL frame <i>This element is only shown in detail mode.</i>
last-src-mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	the source MAC address carried in the most recently received EAPOL frame <i>This element is only shown in detail mode.</i>

181.21 Diagnostic Information Status Command

Command Description

This command displays diagnostic information.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae diagnostics [ (port) ]
```

Command Parameters

Table 181.21-1 "Diagnostic Information Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the identification of the bridge port

Resource Identifier	Type	Description
	Field type <Eqpt::Vpild> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

Table 181.21-2 "Diagnostic Information Status Command" Display parameters

Specific Information		
name	Type	Description
to-connecting-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions to the CONNECTING state from any other state <i>This element is always shown.</i>
log-off-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message <i>This element is always shown.</i>
authenticating-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant <i>This element is only shown in</i>

name	Type	Description
		<i>detail mode.</i>
authenticated-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Suppliant (authSuccess = TRUE) <i>This element is always shown.</i>
timeout-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE) <i>This element is always shown.</i>
failed-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE) <i>This element is only shown in detail mode.</i>
re-authenticating-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE) <i>This element is only shown in detail mode.</i>
eap-start-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Suppliant <i>This element is only shown in detail mode.</i>
eap-authing-logoff-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Suppliant <i>This element is only shown in detail mode.</i>
re-authenticated-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request

181 Security Status Commands

name	Type	Description
		(reAuthenticate = TRUE) <i>This element is only shown in detail mode.</i>
eap-connecting-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant <i>This element is only shown in detail mode.</i>
eap-authed-logoff-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant <i>This element is only shown in detail mode.</i>
access-req-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine sends an initial Access-Request packet to the Authentication server <i>This element is only shown in detail mode.</i>
access-challenge-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). This indicates that the Authentication Server has communication with the Authenticator <i>This element is only shown in detail mode.</i>
eap-req-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). This indicates that the Authenticator chose an EAP-method. <i>This element is only shown in detail mode.</i>
resp-non-eap-nak-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the state machine to transition from REQUEST to

name	Type	Description
		RESPONSE, and the response is not an EAP-NAK). This indicates that the Supplicant can respond to the Authenticator's chosen EAP-method <i>This element is only shown in detail mode.</i>
eap-success-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). This indicates that the Supplicant has successfully authenticated to the Authentication Server <i>This element is only shown in detail mode.</i>
num-eap-failure	Parameter type: <Counter> - 32 bit counter	the number of times that the state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). This indicates that the Supplicant has not authenticated to the Authentication Server. <i>This element is only shown in detail mode.</i>

181.22 Session Statistics Command

Command Description

This command displays statistics for the sessions.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae session-stats [ (port) ]
```

Command Parameters

Table 181.22-1 "Session Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	the identification of the bridge port

Resource Identifier	Type	Description
	Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

Table 181.22-2 "Session Statistics Command" Display parameters

Specific Information		
name	Type	Description
rx-octets	Parameter type: <Counter> - 32 bit counter	the number of octets transmitted in user data frames on this port during the session <i>This element is always shown.</i>
tx-octets	Parameter type: <Counter> - 32 bit counter	the number of octets transmitted in user data frames on this port during the session <i>This element is always shown.</i>
rx-user-frames	Parameter type: <Counter> - 32 bit counter	the number of user data frames received on this port during the session <i>This element is always shown.</i>
tx-user-frames	Parameter type: <Counter> - 32 bit counter	the number of user data frames transmitted on this port during the session <i>This element is always shown.</i>
ses-id	Parameter type: <Vlan::AdminString> - char string - length: x<=80	a unique identifier for the session <i>This element is only shown in detail mode.</i>
auth-method	Parameter type: <Aaa::AuthenticMethod>	the authentication method used to

181 Security Status Commands

name	Type	Description
	(remote-auth-server local-auth-server) Possible values: - remote-auth-server : - local-auth-server :	establish the session <i>This element is only shown in detail mode.</i>
ses-time	Parameter type: <TimeTicks> - a timeout value - unit: msec	the duration of the session <i>This element is always shown.</i>
term-cause	Parameter type: <Aaa::TerminateCause> (supplicant-logoff port-failure supplicant-restart reauth-failed auth-cntr-forceunauth port-reinit port-admin-disabled mac-mismatch others username-mismatch password-mismatch auth-control-forceauth auth-server-terminated time-limit-cut idle-cut not-terminated-yet) Possible values: - supplicant-logoff : - port-failure : - supplicant-restart : - reauth-failed : - auth-cntr-forceunauth : - port-reinit : - port-admin-disabled : - mac-mismatch : - others : - username-mismatch : - password-mismatch : - auth-control-forceauth: - auth-server-terminated: - time-limit-cut : - idle-cut : - not-terminated-yet :	reason for the session termination <i>This element is only shown in detail mode.</i>
user-name	Parameter type: <Vlan::AdminString> - char string - length: x<=80	the name representing the identity of the Supplicant PAE <i>This element is only shown in detail mode.</i>

181.23 PAE Port System Status Command

Command Description

This command displays the PAE system parameters for a port or virtual channel

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae port-details [ (port) ]
```

Command Parameters

Table 181.23-1 "PAE Port System Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of the port or virtual channel

Resource Identifier	Type	Description
	Field type <Eqpt::Vpild> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Command Output

Table 181.23-2 "PAE Port System Status Command" Display parameters

Specific Information		
name	Type	Description
prot-ver	Parameter type: <SignedInteger> - a signed integer	The protocol version associated with this Port. <i>This element is always shown.</i>
capabilities	Parameter type: <Aaa::Capabilities> (auth-capable supp-capable) Possible values: - auth-capable : - supp-capable :	Indicates the PAE functionality that this Port supports <i>This element is always shown.</i>
reauth	Parameter type: <Aaa::TruthValue> (true false) Possible values: - true : - false :	Specifies currently in use by the Authenticator PAE state machine. <i>This element is always shown.</i>

181.24 MAC Address related EAPOL Status Command

Command Description

This command displays the EAPOL data for each MAC address.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae mac-address [ (last-src-mac) ]
```

Command Parameters

Table 181.24-1 "MAC Address related EAPOL Status Command" Resource Parameters

Resource Identifier	Type	Description
(last-src-mac)	Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	the source MAC address carried in the most recently received EAPOL frame

Command Output

Table 181.24-2 "MAC Address related EAPOL Status Command" Display parameters

Specific Information		
name	Type	Description
port	Parameter type: <Itf::BridgePortItf> (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId>	the port identification <i>This element is always shown.</i>

181 Security Status Commands

name	Type	Description
	ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE	
user-name	Parameter type: <Vlan::AdminString> - char string - length: x<=80	the name representing the identity of the Supplicant PAE <i>This element is only shown in detail mode.</i>
port-status	Parameter type: <Aaa::PaeControlledPortStatus> (authorized unauthorized) Possible values: - authorized : - unauthorized :	the current port status <i>This element is always shown.</i>

181.25 MAC Address related EAPOL Status Command

Command Description

This command show the current status for the authenticator PAE per mac-address.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae mac-authenticator [ (port) [ mac-address <Vlan::MacAddr> ] ]
```

Command Parameters

Table 181.25-1 "MAC Address related EAPOL Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	The Port number associated with the mac-address.

Resource Identifier	Type	Description
	- the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
mac-address	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	The source MAC address carried in the MAC based Authentication

Command Output

Table 181.25-2 "MAC Address related EAPOL Status Command" Display parameters

Specific Information		
name	Type	Description
mac-auth-state	Parameter type: <Aaa::AuthPaeState> (initialize disconnected connecting authenticating authenticated aborting held force-auth force-unauth) Possible values: - initialize :	The current value of the mac-based-enabled Authenticator PAE state machine. <i>This element is always shown.</i>

name	Type	Description
	- disconnected : - connecting : - authenticating : - authenticated : - aborting : - held : - force-auth : - force-unauth :	
backend-state	Parameter type: <Aaa::AuthBackendState> (request response success fail timeout idle initialize) Possible values: - request : - response : - success : - fail : - timeout : - idle : - initialize :	the current value of the mac-based-enabled Backend Authenticator PAE state machine <i>This element is always shown.</i>
mac-auth-status	Parameter type: <Aaa::PaeControlledPortStatus> (authorized unauthorized) Possible values: - authorized : - unauthorized :	controlled mac-based-enabled status for mac. <i>This element is always shown.</i>
admin-contr-direct	Parameter type: <Aaa::PaeControlledDirections> both Possible values: - both :	admin controlled directions parameter for the mac. <i>This element is only shown in detail mode.</i>
oper-contr-direct	Parameter type: <Aaa::PaeControlledDirections> both Possible values: - both :	operational controlled directions parameter for the mac. <i>This element is only shown in detail mode.</i>
key-tx-enabled	Parameter type: <Aaa::TruthValue> (true false) Possible values: - true : - false :	if the mac-based-enabled keyTransmission enabled. <i>This element is only shown in detail mode.</i>
rx-octets	Parameter type: <Counter> - 32 bit counter	the number of octets transmitted in user data frames on this mac during the session <i>This element is only shown in detail mode.</i>
tx-octets	Parameter type: <Counter> - 32 bit counter	the number of octets transmitted in user data frames on this mac during the session <i>This element is always shown.</i>
rx-user-frames	Parameter type: <Counter> - 32 bit counter	the number of user data frames received on this mac during the session <i>This element is always shown.</i>

181 Security Status Commands

name	Type	Description
tx-user-frames	Parameter type: <Counter> - 32 bit counter	the number of user data frames transmitted on this mac during the session <i>This element is always shown.</i>
ses-id	Parameter type: <Vlan::AdminString> - char string - length: x<=80	a unique identifier for the session <i>This element is only shown in detail mode.</i>
auth-method	Parameter type: <Aaa::AuthenticMethod> (remote-auth-server local-auth-server) Possible values: - remote-auth-server : - local-auth-server :	the authentication method used to establish the session <i>This element is only shown in detail mode.</i>
ses-time	Parameter type: <TimeTicks> - a timeout value - unit: msec	the duration of the session <i>This element is always shown.</i>
term-cause	Parameter type: <Aaa::TerminateCause> (supplicant-logoff port-failure supplicant-restart reauth-failed auth-cntr-forceunauth port-reinit port-admin-disabled mac-mismatch others username-mismatch password-mismatch auth-control-forceauth auth-server-terminated time-limit-cut idle-cut not-terminated-yet) Possible values: - supplicant-logoff : - port-failure : - supplicant-restart : - reauth-failed : - auth-cntr-forceunauth : - port-reinit : - port-admin-disabled : - mac-mismatch : - others : - username-mismatch : - password-mismatch : - auth-control-forceauth: - auth-server-terminated: - time-limit-cut : - idle-cut : - not-terminated-yet :	reason for the session termination <i>This element is only shown in detail mode.</i>
user-name	Parameter type: <Vlan::AdminString> - char string - length: x<=80	the name representing the identity of the Supplicant PAE <i>This element is only shown in detail mode.</i>
user-vlan-id	Parameter type: <AsamProfileName> - a profile name - range: [a-zA-Z0-9-_.]	The User pvid or vlan id distributed from Radius Server in VSA

name	Type	Description
	- length: 1<=x<=32	<i>This element is only shown in detail mode.</i>
dyn-attach-fwd	Parameter type: <AsamProfileName> - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	The network forward vlan id returned from Radius Server of this mac on this port in VSA <i>This element is only shown in detail mode.</i>
qos-profile	Parameter type: <AsamProfileName> - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	The Qos profile name returned from Radius Server of this mac on this port in VSA <i>This element is only shown in detail mode.</i>
fwd-type	Parameter type: <AsamProfileName> - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	The forward type returned from Radius Server of this mac on this port in VSA <i>This element is only shown in detail mode.</i>

181.26 MAC Address related EAPOL Status Command

Command Description

show the diagnostics objects for the authenticator PAE.

User Level

The command can be accessed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> show security pae mac-diagnostics [ (port) [ mac-address <Vlan::MacAddr> ] ]
```

Command Parameters

Table 181.26-1 "MAC Address related EAPOL Status Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	the identification of the bridge port

Resource Identifier	Type	Description
	- the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
mac-address	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	The source MAC address carried in the MAC based Authentication

Command Output

Table 181.26-2 "MAC Address related EAPOL Status Command" Display parameters

Specific Information		
name	Type	Description
to-connecting-cnt	Parameter type: <Counter> - 32 bit counter	Counts the number of times that the mac-based-enabled state machine transitions to the CONNECTING state from any other state <i>This element is always shown.</i>
log-off-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message

181 Security Status Commands

name	Type	Description
		<i>This element is always shown.</i>
authenticating-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the state mac-based-enabled machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Suppliant <i>This element is only shown in detail mode.</i>
authenticated-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Suppliant (authSuccess = TRUE) <i>This element is always shown.</i>
timeout-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout (authTimeout = TRUE) <i>This element is always shown.</i>
failed-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure (authFail = TRUE) <i>This element is only shown in detail mode.</i>
re-authenticating-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATING to ABORTING, as a result of a reauthentication request (reAuthenticate = TRUE) <i>This element is only shown in detail mode.</i>
eap-start-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Suppliant

name	Type	Description
		<i>This element is only shown in detail mode.</i>
eap-authing-logoff-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant <i>This element is only shown in detail mode.</i>
re-authenticated-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATED to CONNECTING, as a result of a reauthentication request (reAuthenticate = TRUE) <i>This element is only shown in detail mode.</i>
eap-connecting-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant <i>This element is only shown in detail mode.</i>
eap-authed-logoff-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant <i>This element is only shown in detail mode.</i>
access-resp-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine sends an initial Access-Request packet to the Authentication server <i>This element is only shown in detail mode.</i>
access-challenge-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine receives an initial Access-Challenge packet from the Authentication server (i.e., aReq becomes TRUE, causing exit from the RESPONSE state). This indicates that the Authentication Server has communication with the Authenticator

181 Security Status Commands

name	Type	Description
		<i>This element is only shown in detail mode.</i>
eap-req-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine sends an EAP-Request packet (other than an Identity, Notification, Failure or Success message) to the Supplicant (i.e., executes txReq on entry to the REQUEST state). This indicates that the Authenticator chose an EAP-method. <i>This element is only shown in detail mode.</i>
resp-non-eap-nak-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK (i.e., rxResp becomes TRUE, causing the mac-based-enabled state machine to transition from REQUEST to RESPONSE, and the response is not an EAP-NAK). This indicates that the Supplicant can respond to the Authenticator's chosen EAP-method <i>This element is only shown in detail mode.</i>
eap-success-cnt	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine receives an EAP-Success message from the Authentication Server (i.e., aSuccess becomes TRUE, causing a transition from RESPONSE to SUCCESS). This indicates that the Supplicant has successfully authenticated to the Authentication Server <i>This element is only shown in detail mode.</i>
num-eap-failure	Parameter type: <Counter> - 32 bit counter	the number of times that the mac-based-enabled state machine receives an EAP-Failure message from the Authentication Server (i.e., aFail becomes TRUE, causing a transition from RESPONSE to FAIL). This indicates that the Supplicant has not authenticated to the Authentication Server. <i>This element is only shown in detail mode.</i>

181.27 SSH Server Status Command

Command Description

This command displays the SSH Server related parameters

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show security ssh server

Command Output

Table 181.27-2 "SSH Server Status Command" Display parameters

Specific Information		
name	Type	Description
public-key	Parameter type: <PrintableString> - printable string	public key of the server <i>This element is always shown.</i>
fingerprint-hex	Parameter type: <PrintableString> - printable string	server public key fingerprint in hex format <i>This element is always shown.</i>
fingerprint-bubble-bab	Parameter type: <PrintableString> - printable string	server public key fingerprint in bubble-babble format <i>This element is always shown.</i>
server-host-key	Parameter type: <SSH::ServerHostKey> (dsa rsa dsa1024 rsa1024) Possible values: - dsa : dsa 2048 bit key-pair - rsa : rsa 2048 bit key-pair - dsa1024 : dsa 1024 bit key-pair - rsa1024 : rsa 1024 bit key-pair	selected host key algorithm <i>This element is always shown.</i>

181.28 SSH Server Key Generation Progress Status Command

Command Description

This command displays the SSH Server Key Generation Progress Status

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show security ssh server-key-status

Command Output

Table 181.28-2 "SSH Server Key Generation Progress Status Command" Display parameters

Specific Information		
name	Type	Description
status	Parameter type: <SSH::KeyGenStatus> (ongoing successful failed) Possible values: - ongoing : ssh key generation in progress - successful : ssh key generation successful - failed : ssh key generation failed	key generation status <i>This element is always shown.</i>
key-type	Parameter type: <SSH::RegeneratedKey> (dsa rsa dsa1024 rsa1024 rsa1024 none) Possible values: - dsa : generated 2048 bit dsa key-pair - rsa : generated 2048 bit rsa key-pair - dsa1024 : generated 1024 bit dsa key-pair - rsa1024 : generated 1024 bit rsa key-pair - rsa1024 : generated 1024 bit rsa key-pair - none : key-pair not generated	ssh server key-pair type <i>This element is always shown.</i>

181.29 SSH Authentication Key Status Command

Command Description

This command displays the ssh authentication key related parameters

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show security ssh auth-key [(key-type)]

Command Parameters

Table 181.29-1 "SSH Authentication Key Status Command" Resource Parameters

Resource Identifier	Type	Description
(key-type)	Format: (dsa2048 rsa2048) Possible values: - dsa2048 : dsa 2048 bit key-pair - rsa2048 : rsa 2048 bit key-pair	to display the ssh authentication key parameters

Command Output

Table 181.29-2 "SSH Authentication Key Status Command" Display parameters

Specific Information		
name	Type	Description
public-key	Parameter type: <PrintableString> - printable string	public key of the ssh authentication key-pair <i>This element is always shown.</i>
public-key-b64	Parameter type: <PrintableString> - printable string	ssh authentication public key in b64/OpenSSH format <i>This element is always shown.</i>
fingerprint-hex	Parameter type: <PrintableString> - printable string	ssh authentication public key fingerprint in hex format <i>This element is always shown.</i>

181.30 SSH Authentication Key Generation

Progress Status Command

Command Description

This command displays the auth-key type and auth-key generation status

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show security ssh auth-key-status

Command Output

Table 181.30-2 "SSH Authentication Key Generation Progress Status Command" Display parameters

Specific Information		
name	Type	Description
key-type	Parameter type: <SSH::AuthRegeneratedKey> (dsa2048 rsa2048 none) Possible values: - dsa2048 : dsa 2048 public key - rsa2048 : rsa 2048 public key - none : key-pair not generated	ssh authentication key-pair algorithm type <i>This element is always shown.</i>
status	Parameter type: <SSH::AuthKeyGenStatus> (idle ongoing successful failed) Possible values: - idle : ssh auth-key generation is in idle - ongoing : ssh auth-key generation in progress - successful : ssh auth-key generation successful - failed : ssh auth-key generation failed	ssh authentication key-pair generation status <i>This element is always shown.</i>

181.31 PM File Upload Status Command

Command Description

This command displays PM file upload status

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show security pmfile upload [(upload-index)]

Command Parameters

Table 181.31-1 "PM File Upload Status Command" Resource Parameters

Resource Identifier	Type	Description
(upload-index)	Format: - the unique internal identifier of PM file upload entry (1-VOICE, 2-DSL, 3-CDR) 1) 1-VOICE / 2-DSL : To enable the VoIP / DSL performance monitoring counter reporting by means of PM file upload. The configuration of an entry in this table enables the VoIP / DSL PM counter reporting by means of PM file upload. Autonomous PM upload needs explicitly to be enabled/disabled. Manual PM file upload becomes automatically enabled when creating an entry with identifier 1-VOICE or 2-DSL. 2) 3-CDR : To enable the VoIP 5-min interval statistics counters and CDR data reporting by means of PM file upload. Autonomous CDR data PM file upload becomes automatically enabled when creating an entry with identifier 3-CDR. Manual PM file upload is not supported. - range: [1...3]	the unique internal identifier of PM file upload entry

Command Output

Table 181.31-2 "PM File Upload Status Command" Display parameters

Specific Information		
name	Type	Description
upload-progress	Parameter type: <SwMngt::pmFileUploadProgress> (idle ongoing finish-success finish-fail) Possible values:	the progress of PM file upload process <i>This element is always shown.</i>

181 Security Status Commands

name	Type	Description
	- idle : No PM File upload triggered - ongoing : PM file upload is ongoing - finish-success : PM file upload finished successfully - finish-fail : PM file upload finished but failed	
upload-error	Parameter type: <SwMngt::pmFileUploadError> (no-error file-not-exist server-unavailable name-pswd-wrong access-violation application-error undefined) Possible values: - no-error : PM file transfer has no error - file-not-exist : PM file does not exist - server-unavailable : upload server is not available - name-pswd-wrong : username or password is not correct - access-violation : access violation - application-error : internal application error - undefined : the error is not defined	the root cause in case of a failing PM file upload <i>This element is always shown.</i>

181.32 5-min CDR File Upload Status Command

Command Description

Obsolete command.

User Level

The command can be accessed by operators with security privileges.

Command Syntax

The command has the following syntax:

> show security cdr-pm-file upload

Obsolete command.

182- Alarm Management Commands

182.1 Alarm Management Command Tree	182-7019
182.2 Alarm Management Command	182-7020
182.3 Snapshot Management Command	182-7021
182.4 Alarm Delta Log Management Command	182-7023
182.5 Log Management Command	182-7024
182.6 Alarm Filetransfer Manual Clearance Management Command	182-7025
182.7 Alarm Failed Login Manual Clearance Management Command	182-7026

182.1 Alarm Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Alarm Management Commands".

Command Tree

- admin**
 - alarm**
 - (clr-logging)
 - (clr-persist-loss)
 - (clr-xhub-config-loss)
 - (clr-xvps-conf-loss)
 - (clr-inv-xvps-pair)
 - snap-shot**
 - (start)
 - delta-log**
 - (clr-indeterminate)
 - (clr-warning)
 - (clr-minor)
 - (clr-major)
 - (clr-critical)
 - log**
 - (clr-error-log)
 - (clr-set-log-table)
 - clear-alarm**
 - filetransfer**
 - ip-address
 - login-failure**
 - ip-address
 - session-id

182.2 Alarm Management Command

Command Description

This command allows the operator to manage alarms.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> admin alarm [ (clr-logging) ] [ (clr-persist-loss) ] [ (clr-xhub-config-loss) ] [ (clr-xvps-conf-loss) ] [ (clr-inv-xvps-pair) ]
```

Command Parameters

Table 182.2-2 "Alarm Management Command" Command Parameters

Parameter	Type	Description
(clr-logging)	Format: clr-logging Possible values: - clr-logging : clear log table - logging will start from index 1	<i>optional parameter</i> clear log table - logging will start from index 1
(clr-persist-loss)	Format: clr-persist-loss Possible values: - clr-persist-loss : clear the loss of persistent data alarm	<i>optional parameter</i> clear the loss of persistent data alarm
(clr-xhub-config-loss)	Format: clr-xhub-config-loss Possible values: - clr-xhub-config-loss : clear the xhub configuration loss alarm	<i>optional parameter</i> clear the xhub configuration loss alarm
(clr-xvps-conf-loss)	Format: clr-xvps-conf-loss Possible values: - clr-xvps-conf-loss : clear the xvps configuration loss alarm	<i>optional parameter</i> clear the xvps configuration loss alarm
(clr-inv-xvps-pair)	Format: clr-inv-xvps-pair Possible values: - clr-inv-xvps-pair : clear the invalid xvps pair redundancy data alarm	<i>optional parameter</i> clear the invalid xvps pair redundancy data alarm

182.3 Snapshot Management Command

Command Description

This command allows the operator to create a snapshot for a particular severity level.

The owner-id can be read by other users to see who has created the snapshot.

This command will fail if the snapshot is already in use. The snapshot is only kept for a limited time and is automatically cleared.

*The snapshot is displayed with the **show alarm snapshot** command.*

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> admin alarm snap-shot [ (start) ]
```

Command Parameters

Table 182.3-2 "Snapshot Management Command" Command Parameters

Parameter	Type	Description
(start)	Format: (start : indeterminate : <Alarm::alarmSnapShotOwner> start : warning : <Alarm::alarmSnapShotOwner> start : minor : <Alarm::alarmSnapShotOwner> start : major : <Alarm::alarmSnapShotOwner> start : critical : <Alarm::alarmSnapShotOwner> start : <SignedInteger> : <Alarm::alarmSnapShotOwner> stop) Possible values: - start : start reading the snap shot table - stop : stop reading the snap shot table Possible values: - indeterminate : not a definite known severity level - warning : just to inform as a warning - minor : not service affecting - major : service affecting - critical : service breaking Field type <SignedInteger> - a signed integer Field type <Alarm::alarmSnapShotOwner> - string to identify the owner (example: Tom),the string should has less than or equal to 128 characters - length: 1<=x<=128	<i>optional parameter</i> start or stop the snap shot

182.4 Alarm Delta Log Management Command

Command Description

This command allows the operator to manage the alarm delta logs.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> admin alarm delta-log [ (clr-indeterminate) ] [ (clr-warning) ] [ (clr-minor) ] [ (clr-major) ] [ (clr-critical) ]
```

Command Parameters

Table 182.4-2 "Alarm Delta Log Management Command" Command Parameters

Parameter	Type	Description
(clr-indeterminate)	Format: clr-indeterminate Possible values: - clr-indeterminate : clear indeterminate delta-log table - logging will start from index 1	<i>optional parameter</i> clear indeterminate delta-log table - set index to 1
(clr-warning)	Format: clr-warning Possible values: - clr-warning : clear warning delta-log table - set index to 1	<i>optional parameter</i> clear warning delta-log table - set index to 1
(clr-minor)	Format: clr-minor Possible values: - clr-minor : clear minor delta-log table - set index to 1	<i>optional parameter</i> clear minor delta-log table - set index to 1
(clr-major)	Format: clr-major Possible values: - clr-major : clear major delta-log table - set index to 1	<i>optional parameter</i> clear major delta-log table - set index to 1
(clr-critical)	Format: clr-critical Possible values: - clr-critical : clear critical delta-log table - set index to 1	<i>optional parameter</i> clear critical delta-log table - set index to 1

182.5 Log Management Command

Command Description

This command allows the operator to manage logs.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> admin alarm log [ (clr-error-log) ] [ (clr-set-log-table) ]
```

Command Parameters

Table 182.5-2 "Log Management Command" Command Parameters

Parameter	Type	Description
(clr-error-log)	Format: clr-error-log Possible values: - clr-error-log : clear the error log : index starts from 1	<i>optional parameter</i> clear the error log : index starts from 1
(clr-set-log-table)	Format: clr-set-log-table Possible values: - clr-set-log-table : clear the set log table : index starts from 1	<i>optional parameter</i> clear the set log table : index starts from 1

182.6 Alarm Filetransfer Manual Clearance Management Command

Command Description

This command allows the operator to manage the filetransfer alarm that should be cleared manually

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> admin alarm clear-alarm filetransfer ip-address <Alarm::IpAddress>
```

Command Parameters

Table 182.6-2 "Alarm Filetransfer Manual Clearance Management Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Alarm::IpAddress> Format: - IPv4-address	<i>optional parameter</i> identify where the alarm index1 occurred

182.7 Alarm Failed Login Manual Clearance Management Command

Command Description

This command allows the operator to manage the failed login alarm that should be cleared manually

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

> admin alarm clear-alarm login-failure ip-address <Alarm::IpAddress> session-id <Alarm::ClearAlarmIndex2>

Command Parameters

Table 182.7-2 "Alarm Failed Login Manual Clearance Management Command" Command Parameters

Parameter	Type	Description
ip-address	Parameter type: <Alarm::IpAddress> Format: - IPv4-address	<i>optional parameter</i> identify where the alarm index1 occurred
session-id	Parameter type: <Alarm::ClearAlarmIndex2> Format: - index value - range: [1...2147483647]	<i>optional parameter</i> identify where the alarm index2 occurred

183- ATM Management Commands

183.1 ATM Management Command Tree	183-7028
183.2 ATM Port Management Command	183-7029

183.1 ATM Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "ATM Management Commands".

Command Tree

```
----admin
  ----atm
    ----port
      - (port)
      - f5-loopback-ete
```

183.2 ATM Port Management Command

Command Description

This command allows the operator to configure ATM port management. An f5 loopback end-to-end test can be started by giving the parameter **f5-loopback-ete** a value of **start**.

The result of this test is displayed with the **info** command.

User Level

The command can be accessed by operators with atm privileges, and executed by operators with atm privileges.

Command Syntax

The command has the following syntax:

```
> admin atm port (port) [ f5-loopback-ete <Atm::F5LoopbackTestStatus> ]
```

Command Parameters

Table 183.2-1 "ATM Port Management Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiMandatoryId> : <Eqpt::VciMandatoryId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiMandatoryId> - atm VPI Field type <Eqpt::VciMandatoryId> - atm VCI	the port under test

Table 183.2-2 "ATM Port Management Command" Command Parameters

Parameter	Type	Description
f5-loopback-ete	Parameter type: <Atm::F5LoopbackTestStatus> Format: start Possible values: - start : start the test	<i>optional parameter</i> the f5 end-to-end loopback test

184- IGMP Management Commands

184.1 IGMP Management Command Tree	184-7032
184.2 IGMP Management Command	184-7033
184.3 IGMP Multicast Sources Management Command	184-7034
184.4 IGMP Multicast Channel Management Command	184-7035
184.5 IGMP Multicast Channel Management Command	184-7036
184.6 IGMP Slot Management Command	184-7038
184.7 IGMP Join/leave Debug Management Command	184-7039
184.8 IGMP Channel Management Command	184-7042

184.1 IGMP Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "IGMP Management Commands".

Command Tree

- admin**
 - igmp**
 - (clear-all-stats)
 - (clear-preview-cntr)
 - (collect-cdr)
 - X mcast-src**
 - (slot-index)
 - address
 - (clear-statistics)
 - mcast-channel**
 - (slot-index)
 - grp-ip-addr
 - src-ip-addr
 - (clear-statistics)
 - mcast-chn**
 - (slot-index)
 - grp-ip-addr
 - src-ip-addr
 - vlan-id
 - (clear-statistics)
 - module**
 - (slot-index)
 - (clear-statistics)

 - (port)
 - version
 - grp-ip-addr
 - src-ip-addr
 - (trigger)
 - channel**
 - (port)
 - (clear-statistics)

184.2 IGMP Management Command

Command Description

This command allows the operator to manage IGMP.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> admin igmp [ (clear-all-stats) ] [ (clear-preview-cntr) ] [ (collect-cdr) ]
```

Command Parameters

Table 184.2-2 "IGMP Management Command" Command Parameters

Parameter	Type	Description
(clear-all-stats)	Format: clear-all-stats Possible values: - clear-all-stats : clear all statistics	<i>optional parameter</i> clears all statistics
(clear-preview-cntr)	Format: reset-pre-count Possible values: - reset-pre-count : reset all preview time for all multicast source	<i>optional parameter</i> reset preview time for all mcast src in 1day/1wk/1month
(collect-cdr)	Format: collect-cdr Possible values: - collect-cdr : trigger to collect CDRs manually	<i>optional parameter</i> to trigger to collect CDRs manually

184.3 IGMP Multicast Sources Management

Command

Command Description

Obsolete command, replaced by `admin igmp mcast-channel`.

This command allows the operator to manage the IGMP multicast sources.

User Level

The command can be accessed by operators with `igmp` privileges, and executed by operators with `igmp` privileges.

Command Syntax

The command has the following syntax:

```
> admin igmp mcast-src (slot-index) address <Igmp::MulticastAddress> [ (clear-statistics) ]
```

Obsolete command, replaced by `admin igmp mcast-channel`.

Command Parameters

Table 184.3-1 "IGMP Multicast Sources Management Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identify an IGMP module by the logical SlotId
address	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	mcast src address in network-byte order (big-endian)

Table 184.3-2 "IGMP Multicast Sources Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the statistics	<i>optional parameter</i> clear the statistics

184.4 IGMP Multicast Channel Management Command

Command Description

This command allows the operator to manage the IGMP multicast channels.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> admin igmp mcast-channel (slot-index) grp-ip-addr <Igmp::MulticastAddress> src-ip-addr <Ip::V4Address> [
(clear-statistics) ]
```

Command Parameters

Table 184.4-1 "IGMP Multicast Channel Management Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identify an IGMP module by the logical SlotId
grp-ip-addr	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr)

Table 184.4-2 "IGMP Multicast Channel Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the statistics	<i>optional parameter</i> clear the statistics

184.5 IGMP Multicast Channel Management Command

Command Description

This command allows the operator to manage the IGMP multicast channels.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> admin igmp mcast-chn (slot-index) grp-ip-addr <Igmp::MulticastAddress> src-ip-addr <Ip::V4Address> vlan-id
<Igmp::McastChannelVlan> [ (clear-statistics) ]
```

Command Parameters

Table 184.5-1 "IGMP Multicast Channel Management Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identify an IGMP module by the logical SlotId
grp-ip-addr	Parameter type: <Igmp::MulticastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel,value 0.0.0.0 means ASM(any-src-ip-addr)
vlan-id	Parameter type: <Igmp::McastChannelVlan> Format: - vlan id for multicast - range: [1...4093]	specifies the VLAN in which the multicast channel is configured.

Table 184.5-2 "IGMP Multicast Channel Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format:	<i>optional parameter</i>

Parameter	Type	Description
	clear-statistics Possible values: - clear-statistics : clear the statistics	clear the statistics

184.6 IGMP Slot Management Command

Command Description

This command allows the operator to manage IGMP related to a slot.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> admin igmp module (slot-index) [ (clear-statistics) ]
```

Command Parameters

Table 184.6-1 "IGMP Slot Management Command" Resource Parameters

Resource Identifier	Type	Description
(slot-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId>) Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	identify an IGMP module by the logical slot id

Table 184.6-2 "IGMP Slot Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the statistics	<i>optional parameter</i> clear the statistics

184.7 IGMP Join/leave Debug Management Command

Command Description

This command enables the operator to trigger an igmp join/leave for debugging.

User Level

The command can be accessed by operators with all,admin privileges.

Command Syntax

The command has the following syntax:

```
> admin igmp debug (port) version <Igmp::Version> grp-ip-addr <Igmp::McastAddress> src-ip-addr
<Ip::V4Address> (trigger)
```

Command Parameters

Table 184.7-1 "IGMP Join/leave Debug Management Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId>	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier	

Resource Identifier	Type	Description
	Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
version	Parameter type: <Igmp::Version> Format: (v2 v3) Possible values: - v2 : igmp version 2 - v3 : igmp version 3	igmp version v2 or v3
grp-ip-addr	Parameter type: <Igmp::McastAddress> Format: - multicast-address (range: 224.0.0.3....239.255.255.255, except for 224.0.0.22)	ip address identifying the multicast group
src-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	ip address of the multicast server originating the multicast channel, value 0.0.0.0 means ASM(any-src-ip-addr), range:0.0.0.0....223.255.255.255

Table 184.7-2 "IGMP Join/leave Debug Management Command" Command Parameters

Parameter	Type	Description
(trigger)	Format: (join leave) Possible values: - join : trigger igmp join - leave : trigger igmp leave	optional parameter trigger join or leave

184.8 IGMP Channel Management Command

Command Description

This command allows the operator to manage the IGMP channel.

User Level

The command can be accessed by operators with igmp privileges, and executed by operators with igmp privileges.

Command Syntax

The command has the following syntax:

```
> admin igmp channel (port) [ (clear-statistics) ]
```

Command Parameters

Table 184.8-1 "IGMP Channel Management Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	identification of the port, vlanport or virtual channel

Resource Identifier	Type	Description
	<pre> <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier </pre>	

Resource Identifier	Type	Description
	Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 184.8-2 "IGMP Channel Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the statistics	<i>optional parameter</i> accept/ignore request to clear statistics of the table

185- *PPPoX Management Commands*

185.1 PPPoX Management Command Tree	185-7046
185.2 PPPoX Engine Port Management Command	185-7047

185.1 PPPoX Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoX Management Commands".

Command Tree

```
----admin
  ----pppox-relay
    ----engine
      - (vlan-id)
      - (remove-all-ports)
```

185.2 PPPoX Engine Port Management Command

Command Description

This command deletes all ports for a specific engine.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> admin pppox-relay engine (vlan-id) [ (remove-all-ports) ]
```

Command Parameters

Table 185.2-1 "PPPoX Engine Port Management Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan identity

Table 185.2-2 "PPPoX Engine Port Management Command" Command Parameters

Parameter	Type	Description
(remove-all-ports)	Format: remove-all-ports Possible values: - remove-all-ports : remove all ports	<i>optional parameter</i> remove all ports for a specific engine

186- *PPPoEL2 Statistics Management Commands*

186.1 PPPoEL2 Statistics Management Command Tree	186-7049
186.2 PPPoEL2 Statistics Management Command	186-7050

186.1 PPPoEL2 Statistics Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoEL2 Statistics Management Commands".

Command Tree

```
----admin
  ----pppoel2-stats
    - (vlan-port)
    - (clear-statistics)
```

186.2 PPPoEL2 Statistics Management Command

Command Description

This command allows the operator to reset the PPPoE L2 statistics counters on vlan-port interface.

User Level

The command can be accessed by operators with pppoe privileges, and executed by operators with pppoe privileges.

Command Syntax

The command has the following syntax:

```
> admin pppoel2-stats (vlan-port) (clear-statistics)
```

Command Parameters

Table 186.2-1 "PPPoEL2 Statistics Management Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip :	identification of the port

Resource Identifier	Type	Description
	<Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - vlan-port : vlan port - vlan-port:ng2 : an NGPON2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier	

186 PPPoEL2 Statistics Management Commands

Resource Identifier	Type	Description
	Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 186.2-2 "PPPoEL2 Statistics Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the statistics	<i>optional parameter</i> Reset the counter

187- *PPPoE Management Commands*

187.1 PPPoE Management Command Tree	187-7054
187.2 PPPoE Management Command	187-7055

187.1 PPPoE Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "PPPoE Management Commands".

Command Tree

```
----admin
  ----pppoe-client
    ----emulation
      - (ifindex)
      - client-id
      - [no] command
```

187.2 PPPoE Management Command

Command Description

This command allows the operator to manage the specific PPPoE client emulation.

User Level

The command can be accessed by operators with `pppoe` privileges, and executed by operators with `pppoe` privileges.

Command Syntax

The command has the following syntax:

```
> admin pppoe-client emulation (ifindex) client-id <PPPoE::ClientId> [ no command | command
<PPPoE::pppoeClientEmulationCmd> ]
```

Command Parameters

Table 187.2-1 "PPPoE Management Command" Resource Parameters

Resource Identifier	Type	Description
(ifindex)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /	interface index of the PPPoE client port

Resource Identifier	Type	Description
	<code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip :</code> <code><Eqpt::UnstackedVlan></code> <code> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /</code> <code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni :</code> <code><Eqpt::UnstackedVlan></code> <code> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /</code> <code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /</code> <code><Eqpt::LLId> : <Eqpt::UnstackedVlan></code> <code> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> /</code> <code><Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> /</code> <code><Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan-port:ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> :</code> <code><Eqpt::UnstackedVlan></code> <code> vlan-port:ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> /</code> <code><Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked :</code> <code><Eqpt::SVlan> : <Eqpt::CVlan></code> <code> vlan-port:ng2 : <Eqpt::ChannelGroupId> /</code> <code><Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni)</code> Possible values: - vlan-port : vlan port - vlan-port:ng2 : an NGPON2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId>	

Resource Identifier	Type	Description
	- the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
client-id	Parameter type: <PPPoE::ClientId> Format: - the PPPoE client id - range: [1]	the PPPoE client id

Table 187.2-2 "PPPoE Management Command" Command Parameters

Parameter	Type	Description
[no] command	Parameter type: <PPPoE::pppoeClientEmulationCmd> Format: (start stop) Possible values: - start : start the PPPoE emulation - stop : abort emulation and terminate the PPPoE session	<i>optional parameter with default value: "none"</i> start or stop the PPPoE emulation

188- xDSL Management Commands

188.1 xDSL Management Command Tree	188-7059
188.2 xDSL Line Management Command	188-7060

188.1 xDSL Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "xDSL Management Commands".

Command Tree

```
----admin
  ----xdsl-line
    - (if-index)
    - loop-diagnostic
    - force-autoswitch
```

188.2 xDSL Line Management Command

Command Description

This command allows the operator do manage an xDSL Line.

Loop Diagnostic Indications:

start : start diagnostics on XDSL line.

stop : stop diagnostics on XDSL line.

completed : diagnostic results ready for retrieval.

failed : diagnostic failed.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> admin xdsl-line (if-index) [ loop-diagnostic <Xdsl::LoopDiagMode> ] [ force-autoswitch
<Xdsl::AutoSwitchRequestMode> ]
```

Command Parameters

Table 188.2-1 "xDSL Line Management Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 188.2-2 "xDSL Line Management Command" Command Parameters

Parameter	Type	Description
loop-diagnostic	Parameter type: <Xdsl::LoopDiagMode> Format: (stop start) Possible values: - stop : stop the loop diagnostic test	<i>optional parameter</i> controls the loop diagnostic test

Parameter	Type	Description
	- start : start the diagnostic test	
force-autoswitch	Parameter type: <Xdsl::AutoSwitchRequestMode> Format: (none switchtoatm switchtoptm) Possible values: - none : default value - switchtoatm : ForceFully switch the line to ATM - switchtoptm : ForceFully switch the line to PTM	<i>optional parameter</i> Force the AutoSwitch Mode to Line

189- Gpon xDSL Management Commands

189.1 Gpon xDSL Management Command Tree	189-7063
189.2 Gpon xDSL Line Management Command	189-7064

189.1 Gpon xDSL Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Gpon xDSL Management Commands".

Command Tree

```
----admin
  ----ont-xdsl-line
    - (if-index)
    - loop-diagnostic
```

189.2 Gpon xDSL Line Management Command

Command Description

This command allows the operator do manage an xDSL Line.

Loop Diagnostic Indications:

start : start diagnostics on XDSL line.

stop : stop diagnostics on XDSL line.

completed : diagnostic results ready for retrieval.

failed : diagnostic failed.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> admin ont-xdsl-line (if-index) [ loop-diagnostic <Xdsl::LoopDiagMode> ]
```

Command Parameters

Table 189.2-1 "Gpon xDSL Line Management Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId>	interface index of the port

Resource Identifier	Type	Description
	- the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Table 189.2-2 "Gpon xDSL Line Management Command" Command Parameters

Parameter	Type	Description
loop-diagnostic	Parameter type: <Xdsl::LoopDiagMode> Format: (stop start) Possible values: - stop : stop the loop diagnostic test - start : start the diagnostic test	<i>optional parameter</i> controls the loop diagnostic test

190- Software Management Commands

190.1 Software Management Command Tree	190-7067
190.2 Software Management Command	190-7068
190.3 OSWP Software Management Command	190-7069

    - [no] tftp-server
    - [no] source-image
  ----ls-migration
    - (activate)
    - (abort-download)
    ----download
      - server-ip
      - package
      - default-config

```

190.2 Software Management Command

Command Description

This command allows the operator to manage the software of the system.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mnngt [ (clr-db-rollback-alm) ] [ (clr-sw-rollback-alm) ]
```

Command Parameters

Table 190.2-2 "Software Management Command" Command Parameters

Parameter	Type	Description
(clr-db-rollback-alm)	Format: clr-db-rollback-alm Possible values: - clr-db-rollback-alm : clear the implicit database rollback alarm	<i>optional parameter</i> clear the implicit database rollback alarm
(clr-sw-rollback-alm)	Format: clr-sw-rollback-alm Possible values: - clr-sw-rollback-alm : clear the implicit software rollback alarm	<i>optional parameter</i> clear the implicit software rollback alarm

190.3 OSWP Software Management Command

Command Description

This command allows the operator to manage the OSWP software packages.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt oswp (index) [ download <SwMngt::oswpName> ] [ activate <SwMngt::activationType> ]
[ (commit) ] [ (verify) ] [ (abort-download) ] [ (abort-verify) ]
```

Command Parameters

Table 190.3-1 "OSWP Software Management Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: - id of one of the two oswps - range: [1...2]	index to the swm oswp table

Table 190.3-2 "OSWP Software Management Command" Command Parameters

Parameter	Type	Description
download	Parameter type: <SwMngt::oswpName> Format: - path and name of the oswp ,file name less than 160 char - range: [a-zA-Z0-9-_/:*] - length: 1<=x<=160	<i>optional parameter</i> download a software package
activate	Parameter type: <SwMngt::activationType> Format: (with-linked-db with-default-db clear-db with-factory-db) Possible values: - with-linked-db : activate OSWP with linked database - with-default-db : activate OSWP with default database - clear-db : Reset ISAM configuration to factory defaults with ISAM shutdown => Remove and reinsert the NT card to continue - with-factory-db : ISAM configuration to factory defaults	<i>optional parameter</i> activate an OSWP package
(commit)	Format: commit Possible values:	<i>optional parameter</i> commit the OSWP

190 Software Management Commands

Parameter	Type	Description
	- commit : commit the OSWP	
(verify)	Format: verify Possible values: - verify : verify the downloaded oswp	<i>optional parameter</i> verify the downloaded oswp
(abort-download)	Format: abort-download Possible values: - abort-download : abort the download of an oswp	<i>optional parameter</i> abort the download of an oswp
(abort-verify)	Format: abort-verify Possible values: - abort-verify : abort sw load validation of an oswp	<i>optional parameter</i> abort the sw load validation of an oswp

190.4 Database Management Command

Command Description

This command allows the operator to manage the system database.

The database file name should be either `dm.tar` or `dm_complete.tar`.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt database [ download <SwMngt::DbDownloadServerId> ] [ downloadv6
<SwMngt::V6DbDownloadServerId> ] [ upload <SwMngt::DbUploadServerId> ] [ uploadv6
<SwMngt::V6DbUploadServerId> ]
```

Command Parameters

Table 190.4-2 "Database Management Command" Command Parameters

Parameter	Type	Description
download	Parameter type: <SwMngt::DbDownloadServerId> Format: <Ip::V4Address> : <SwMngt::dbPath> Field type <Ip::V4Address> - IPv4-address Field type <SwMngt::dbPath> - path for the db (eg: /path_to_db/file_name); valid file_names: [dm<something>.tar dm_complete<something>.tar] - range: [a-zA-Z0-9-_/():] - length: 1<=x<=255	<i>optional parameter</i> download the database
downloadv6	Parameter type: <SwMngt::V6DbDownloadServerId> Format: <Ip::InetAddressType> / <SwMngt::dbPath> Field type <Ip::InetAddressType> - IPv6 address Field type <SwMngt::dbPath> - path for the db (eg: /path_to_db/file_name); valid file_names: [dm<something>.tar dm_complete<something>.tar] - range: [a-zA-Z0-9-_/():] - length: 1<=x<=255	<i>optional parameter</i> download the database to IPv6 server
upload	Parameter type: <SwMngt::DbUploadServerId> Format: (actual-active : <Ip::V4Address> : <SwMngt::dbPath>	<i>optional parameter</i> upload the database

Parameter	Type	Description
	<pre> preferred-active : <Ip::V4Address> : <SwMngt::dbPath> previous-active : <Ip::V4Address> : <SwMngt::dbPath> failed-active : <Ip::V4Address> : <SwMngt::dbPath> actual-not-active : <Ip::V4Address> : <SwMngt::dbPath> preferred-not-active : <Ip::V4Address> : <SwMngt::dbPath> previous-not-active : <Ip::V4Address> : <SwMngt::dbPath> failed-not-active : <Ip::V4Address> : <SwMngt::dbPath>) Possible values: - actual-active : actual database for active OSWP - preferred-active : preferable database for active OSWP - previous-active : previous database for active OSWP - failed-active : failed database for active OSWP - actual-not-active : actual database for not-active OSWP - preferred-not-active : preferable database for not-active OSWP - previous-not-active : previous database for not-active OSWP - failed-not-active : failed database for not-active OSWP Field type <Ip::V4Address> - IPv4-address Field type <SwMngt::dbPath> - path for the db (eg: /path_to_db/file_name); valid file_names: [dm<something>.tar dm_complete<something>.tar] - range: [a-zA-Z0-9-_/():] - length: 1<=x<=255 </pre>	
uploadv6	<pre> Parameter type: <SwMngt::V6DbUploadServerId> Format: (actual-active : <Ip::InetAddressType> / <SwMngt::dbPath> preferred-active : <Ip::InetAddressType> / <SwMngt::dbPath> previous-active : <Ip::InetAddressType> / <SwMngt::dbPath> failed-active : <Ip::InetAddressType> / <SwMngt::dbPath> actual-not-active : <Ip::InetAddressType> / <SwMngt::dbPath> preferred-not-active : <Ip::InetAddressType> / <SwMngt::dbPath> previous-not-active : <Ip::InetAddressType> / <SwMngt::dbPath> failed-not-active : <Ip::InetAddressType> / <SwMngt::dbPath>) Possible values: - actual-active : actual database for active OSWP - preferred-active : preferable database for active OSWP - previous-active : previous database for active OSWP - failed-active : failed database for active OSWP - actual-not-active : actual database for not-active OSWP - preferred-not-active : preferable database for not-active OSWP - previous-not-active : previous database for not-active OSWP - failed-not-active : failed database for not-active OSWP Field type <Ip::InetAddressType> </pre>	<i>optional parameter</i> upload the database to IPv6 server

Parameter	Type	Description
	- IPv6 address Field type <SwMngt::dbPath> - path for the db (eg: /path_to_db/file_name); valid file_names: [dm<something>.tar dm_complete<something>.tar] - range: [a-zA-Z0-9-_/():] - length: 1<=x<=255	

190.5 File Management Command

Command Description

This command manages disk and descriptor files.

A disk file contains information about the different software files and descriptor files that are stored on the file disk. It also contains information such as the file name, file size, file type, file availability status, and file format.

The operator can remove a file from the disk in the following cases :

- 1. The file does not belong to the SWP.*
- 2. The file is not a Sw descriptor file.*
- 3. The file is not of a planned and/or detected board type(as well in the active as in the non active SWP).*

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

> admin software-mngt disk-file (path) [(remove)]

Command Parameters

Table 190.5-1 "File Management Command" Resource Parameters

Resource Identifier	Type	Description
(path)	Format: - an absolute file name - range: [.-z] - length: 1<=x<=256	an absolute file name

Table 190.5-2 "File Management Command" Command Parameters

Parameter	Type	Description
(remove)	Format: remove Possible values: - remove : remove the file	<i>optional parameter</i> remove the file

190.6 Ihub Software Management Command

Command Description

This command allows the operator to manage the database on the Ihub.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt ihub
```

190.7 IHUB Database Management Command

Command Description

This command allows the operator to manage the database on the IHUB.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt ihub database [ (save-protected) ]
```

Command Parameters

Table 190.7-2 "IHUB Database Management Command" Command Parameters

Parameter	Type	Description
(save-protected)	Format: save-protected Possible values: - save-protected : save the database	<i>optional parameter</i> save the protected database

190.8 iacm Software Management Command

Command Description

This command allows the operator to manage the database on the Iacm.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt iacm
```

190.9 IACM Database Management Command

Command Description

This command allows the operator to manage the database on the IACM.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt iacm database [ (oam-save-protected) ]
```

Command Parameters

Table 190.9-2 "IACM Database Management Command" Command Parameters

Parameter	Type	Description
(oam-save-protected)	Format: oam-save-protected Possible values: - oam-save-protected : Save oam db database	<i>optional parameter</i> save iacm database

190.10 CDE Management Command

Command Description

This command allows the operator to download and manage the CDE profile.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt cdeprof [ download <SwMngt::DownloadServerId> ] [ activate <SwMngt::CDEFileName> ]
```

Command Parameters

Table 190.10-2 "CDE Management Command" Command Parameters

Parameter	Type	Description
download	Parameter type: <SwMngt::DownloadServerId> Format: <Ip::V4Address> : <SwMngt::path> Field type <Ip::V4Address> - IPv4-address Field type <SwMngt::path> - path for the cde(example: /path_to_cde/file_name) - range: [a-zA-Z0-9-_/():] - length: 1<=x<=128	<i>optional parameter</i> download the CDE file
activate	Parameter type: <SwMngt::CDEFileName> Format: - string representing the cde profile name - length: 1<=x<=128	<i>optional parameter</i> activate the CDE profile previously downloaded

190.11 TLS CA Management Command

Command Description

This command allows the operator to download and manage the tls CA file.

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt tls-cafile [ download <SwMngt::CADownloadServerId> ] [ remove
<SwMngt::CAFileName> ] [ activate <SwMngt::CAFileName> ] [ deactivate <SwMngt::CAFileName> ]
```

Command Parameters

Table 190.11-2 "TLS CA Management Command" Command Parameters

Parameter	Type	Description
download	Parameter type: <SwMngt::CADownloadServerId> Format: <Ip::V4Address> : <SwMngt::CAFilepath> Field type <Ip::V4Address> - IPv4-address Field type <SwMngt::CAFilepath> - path for the CA file(example: /path_to_ca/file_name) - range: [a-zA-Z0-9-_/():] - length: 1<=x<=128	<i>optional parameter</i> download a TLS CA file, the supported TLS CA file types are: 'pem', '.der', '.crt', '.cer'
remove	Parameter type: <SwMngt::CAFileName> Format: - string representing the TLS CA file name - length: 1<=x<=13	<i>optional parameter</i> remove the TLS CA file and the TLS CA download record that in new status in tls-cafile table
activate	Parameter type: <SwMngt::CAFileName> Format: - string representing the TLS CA file name - length: 1<=x<=13	<i>optional parameter</i> set the TLS CA file to be 'activated' status, then the CA file can be configured to sipVspTable entry or sipServerTable entry
deactivate	Parameter type: <SwMngt::CAFileName> Format: - string representing the TLS CA file name - length: 1<=x<=13	<i>optional parameter</i> set the TLS CA file that isn't configured in any sipVspTable entry or sipServerTable entry to be 'new' status

190.12 Reborn Reformation Command

Command Description

This command allows the operator to trigger the reformation from sdfx to reborn system.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt trigger-reborn [ no tftp-server | tftp-server <SwMngt::serverId> ] [ no source-image | source-image <SwMngt::rebornImgName> ]
```

Command Parameters

Table 190.12-2 "Reborn Reformation Command" Command Parameters

Parameter	Type	Description
[no] tftp-server	Parameter type: <SwMngt::serverId> Format: - IPv4-address	<i>optional parameter with default value: ""</i> tftp server address
[no] source-image	Parameter type: <SwMngt::rebornImgName> Format: - string representing the reborn image - length: 1<=x<=64	<i>optional parameter with default value: ""</i> source image to trigger reborn

190.13 Lightspan Migration Management Command

Command Description

This command allows the operator to download package file and activate lightspan migration .

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt ls-migration [ (activate) ] [ (abort-download) ]
```

Command Parameters

Table 190.13-2 "Lightspan Migration Management Command" Command Parameters

Parameter	Type	Description
(activate)	Format: activate Possible values: - activate : start lightspan migration	<i>optional parameter</i> start the process of lightspan migration
(abort-download)	Format: abort-download Possible values: - abort-download : abort lightspan migration	<i>optional parameter</i> abort the process of lightspan migration

190.14 Lightspan Migration Management Command

Command Description

This command allows the operator to download package file and activate lightspan migration .

User Level

The command can be accessed by operators with software management privileges, and executed by operators with software management privileges.

Command Syntax

The command has the following syntax:

```
> admin software-mngt ls-migration download server-ip <SwMngt::serverId> package <SwMngt::lsMigrPkgFile>
default-config <SwMngt::lsMigrConfigFile>
```

Command Parameters

Table 190.14-2 "Lightspan Migration Management Command" Command Parameters

Parameter	Type	Description
server-ip	Parameter type: <SwMngt::serverId> Format: - IPv4-address	<i>optional parameter</i> transfer file server ip
package	Parameter type: <SwMngt::lsMigrPkgFile> Format: - name - length: 1<=x<=256	<i>optional parameter</i> migration package
default-config	Parameter type: <SwMngt::lsMigrConfigFile> Format: - name - length: 1<=x<=256	<i>optional parameter</i> default config for ls migration

191- SHDSL Management Commands

191.1 SHDSL Management Command Tree	191-7085
191.2 SHDSL Segment Configuration Command	191-7086

191.1 SHDSL Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "SHDSL Management Commands".

Command Tree

```
----admin
  ----shdsl-seg
    - (if-index)
    - unit-id
    - side
    - [no] soft-restart
```

191.2 SHDSL Segment Configuration Command

Command Description

This command allows the operator manage an SHDSL Segment.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> admin shdsl-seg (if-index) unit-id <Shdsl::UnitId> side <Shdsl::SegmentSide> [ [ no ] soft-restart ]
```

Command Parameters

Table 191.2-1 "SHDSL Segment Configuration Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port
unit-id	Parameter type: <Shdsl::UnitId> Format: (stu-c stu-r sru-1 sru-2 sru-3 sru-4 sru-5 sru-6 sru-7 sru-8) Possible values: - stu-c : the SHDSL unit is STU-C - stu-r : the SHDSL unit is STU-R - sru-1 : the SHDSL unit is SRU-1 - sru-2 : the SHDSL unit is SRU-2 - sru-3 : the SHDSL unit is SRU-3	unit identifier in an SHDSL span

Resource Identifier	Type	Description
	- sru-4 : the SHDSL unit is SRU-4 - sru-5 : the SHDSL unit is SRU-5 - sru-6 : the SHDSL unit is SRU-6 - sru-7 : the SHDSL unit is SRU-7 - sru-8 : the SHDSL unit is SRU-8	
side	Parameter type: <Shdsl::SegmentSide> Format: (network customer) Possible values: - network : the network side - customer : the customer side	the particular side of an SHDSL unit in an SHDSL segment

Table 191.2-2 "SHDSL Segment Configuration Command" Command Parameters

Parameter	Type	Description
[no] soft-restart	Parameter type: boolean	<i>optional parameter</i> soft restart for the associated side

192- Session Management Commands

192.1 Session Management Command Tree	192-7089
192.2 Forced Disconnect Session Command	192-7090

192.1 Session Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Session Management Commands".

Command Tree

```
----admin
  ----session
    - (id)
    - (disconnect)
```

192.2 Forced Disconnect Session Command

Command Description

*This command allows the operator to discontinue (or forcibly terminate) an existing CLI session.
The operator can learn about established CLI sessions using the "show session" command.*

User Level

The command can be accessed and executed by an operator with admin privilege.

Command Syntax

The command has the following syntax:
> admin session (id) (disconnect)

Command Parameters

Table 192.2-1 "Forced Disconnect Session Command" Resource Parameters

Resource Identifier	Type	Description
(id)	Format: - the session number - range: [1...13]	the session number

Table 192.2-2 "Forced Disconnect Session Command" Command Parameters

Parameter	Type	Description
(disconnect)	Format: disconnect : <Sec::DisconnectMessage> Possible values: - disconnect : disconnect the session Field type <Sec::DisconnectMessage> - disconnect msg to specify reason for forced termination - length: x<=256	<i>optional parameter</i> disconnect the session with a given message

193- System Management Commands

193.1 System Management Command Tree	193-7092
193.2 SYSLOG Management command	193-7093
193.3 Secure Shell Server Key Regeneration Command	193-7094
193.4 SSH Authentication Key Generation Command	193-7095
193.5 PM File Upload Management Command	193-7096
193.6 Remove locked IP from CLI failed login sources	193-7097
193.7 CPU Load Management Command	193-7098
193.8 Techsupport management Command	193-7100
193.9 Techsupport Generate On Demand Command	193-7101
193.10 Techsupport Clear On Demand Command	193-7103
193.11 FIPS Command	193-7104

193.1 System Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "System Management Commands".

Command Tree

```
----admin
  ----system
    ----syslog
      ----destination
        - (name)
        - (rotate)
      ----security
        ----ssh
          - generate-key
          ----generate-auth-key
            - (key-type)
        ----pmfile
          ----upload
            - (upload-index)
            - upl-interval-num
        ----manager
          - release-lock-cli
    ----cpu-load
      - (index)
      - monitor
    ----techsupport
      - (purgefiles)
      - (doactivate)
      ----gen-on-demand
        - (id)
        - [no] server-ip-addr
        - filename
        - [no] req-session-id
      ----clear-on-demand
        - session
  ----X fips
    - (run-test)
```

193.2 SYSLOG Management command

Command Description

This command allows the operator to rotate the log files explicitly. This is applicable if the destination type is configured as file.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> admin system syslog destination (name) [(rotate)]

Command Parameters

Table 193.2-1 "SYSLOG Management command" Resource Parameters

Resource Identifier	Type	Description
(name)	Format: - a profile name - range: [a-zA-Z0-9-_.] - length: 1<=x<=32	name of the syslog destination

Table 193.2-2 "SYSLOG Management command" Command Parameters

Parameter	Type	Description
(rotate)	Format: rotate Possible values: - rotate : enforce the rotation of the log files	<i>optional parameter</i> enforce the rotation of the log files

193.3 Secure Shell Server Key Regeneration

Command

Command Description

This command allows the operator to generate the public/private server key-pair.

The RSA key generation is not yet supported.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> admin system security ssh generate-key <SSH::RegenerateKey>

Command Parameters

Table 193.3-2 "Secure Shell Server Key Regeneration Command" Command Parameters

Parameter	Type	Description
generate-key	Parameter type: <SSH::RegenerateKey> Format: (dsa rsa dsa1024 rsa1024) Possible values: - dsa : generate 2048 bit dsa key-pair - rsa : generate 2048 bit rsa key-pair - dsa1024 : generate 1024 bit dsa key-pair - rsa1024 : generate 1024 bit rsa key-pair	<i>optional parameter</i> to generate ssh server key-pair

193.4 SSH Authentication Key Generation

Command

Command Description

This command allows the operator to generate the DSA/RSA authentication key-pair using 2048 bits.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> admin system security ssh generate-auth-key (key-type)

Command Parameters

Table 193.4-2 "SSH Authentication Key Generation Command" Command Parameters

Parameter	Type	Description
(key-type)	Format: (dsa2048 rsa2048) Possible values: - dsa2048 : dsa 2048 bit key-pair - rsa2048 : rsa 2048 bit key-pair	<i>optional parameter</i> to generate ssh authentication key-pair

193.5 PM File Upload Management Command

Command Description

This command allows the operator to manually upload PM file to external SFTP server

User Level

The command can be executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin system security pmfile upload (upload-index) upl-interval-num <SwMngt::pmFileUploadIntervalNum>
```

Command Parameters

Table 193.5-1 "PM File Upload Management Command" Resource Parameters

Resource Identifier	Type	Description
(upload-index)	Format: - the unique internal identifier of PM file upload entry (1-VOICE, 2-DSL, 3-CDR) 1) 1-VOICE / 2-DSL : To enable the VoIP / DSL performance monitoring counter reporting by means of PM file upload. The configuration of an entry in this table enables the VoIP / DSL PM counter reporting by means of PM file upload. Autonomous PM upload needs explicitly to be enabled/disabled. Manual PM file upload becomes automatically enabled when creating an entry with identifier 1-VOICE or 2-DSL. 2) 3-CDR : To enable the VoIP 5-min interval statistics counters and CDR data reporting by means of PM file upload. Autonomous CDR data PM file upload becomes automatically enabled when creating an entry with identifier 3-CDR. Manual PM file upload is not supported. - range: [1...3]	the unique internal identifier of PM file upload entry

Table 193.5-2 "PM File Upload Management Command" Command Parameters

Parameter	Type	Description
upl-interval-num	Parameter type: <SwMngt::pmFileUploadIntervalNum> Format: - the interval number for which a PM file must be uploaded, value 1 as the latest interval - range: [1...96]	<i>optional parameter</i> identifies previous intervals, value 1 as the latest interval

193.6 Remove locked IP from CLI failed login sources

Command Description

This command can be used to remove the lockout imposed on login to ISAM CLI from an IP address. It is applicable for CLI-SSH and CLI-Telnet login, not applicable for CLI-Craft lockout.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin system security manager release-lock-cli <Ip::V4Address>
```

Command Parameters

Table 193.6-2 "Remove locked IP from CLI failed login sources" Command Parameters

Parameter	Type	Description
release-lock-cli	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter</i> remove locked IP from CLI failed login sources

193.7 CPU Load Management Command

Command Description

This command allows the operator to initiate and terminate CPU load monitoring for a board.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin system cpu-load (index) [ monitor <Sys::operateStatusAdmin> ]
```

Command Parameters

Table 193.7-1 "CPU Load Management Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ntio-1) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	the physical number of the slot

Table 193.7-2 "CPU Load Management Command" Command Parameters

Parameter	Type	Description
monitor	Parameter type: <Sys::operateStatusAdmin> Format: (start stop)	<i>optional parameter</i> start/stop the cpu load monitoring activity

Parameter	Type	Description
	Possible values: - start : start the cpu load monitoring activity - stop : stop the cpu load monitoring activity	

193.8 Techsupport management Command

Command Description

This command allows the operator to activate and deactivate the techSupport functionality.

User Level

The command can be accessed by operators with all privileges, and executed by operators with all privileges.

Command Syntax

The command has the following syntax:

> admin system techsupport [(purgefiles)] [(doactivate)]

Command Parameters

Table 193.8-2 "Techsupport management Command" Command Parameters

Parameter	Type	Description
(purgefiles)	Format: purge Possible values: - purge : remove all captured techsupport files	<i>optional parameter</i> Remove all generated techsupport files
(doactivate)	Format: (disable enable) Possible values: - disable : deactivate the techsupport functionality - enable : activate the techsupport functionality	<i>optional parameter</i> enables/disables the techSupport activity. Default is enable in order to have techsupport files available for analysis when a reset would happen.

193.9 Techsupport Generate On Demand Command

Command Description

This command allows the operator to generate an on demand Tech Support file for a certain board.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin system techsupport gen-on-demand (id) [ no server-ip-addr | server-ip-addr <Ip::V4Address> ] filename
<Sys::TechSupportFileName> [ no req-session-id | req-session-id <Sys::TechSupportSessionId> ]
```

Command Parameters

Table 193.9-2 "Techsupport Generate On Demand Command" Command Parameters

Parameter	Type	Description
(id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId>) Possible values: - lt : lt-slot - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	<i>mandatory parameter</i> the id to generate the Tech Support On Demand File for
[no] server-ip-addr	Parameter type: <Ip::V4Address> Format: - IPv4-address	<i>optional parameter with default value: "0.0.0.0"</i> The ip address for the server to upload the Tech Support File to.
filename	Parameter type: <Sys::TechSupportFileName>	<i>mandatory parameter</i>

193 System Management Commands

Parameter	Type	Description
	Format: - TS file name - range: [a-zA-Z0-9-_.] - length: 1<=x<=13	the filename as which the Tech Support file is to be saved (max length 13 if local).
[no] req-session-id	Parameter type: <Sys::TechSupportSessionId> Format: - number identifying a Tech Support Session - range: [0...65535]	<i>optional parameter with default value: 0L</i> Used to indicate if a fixed session id is requested

193.10 Techsupport Clear On Demand Command

Command Description

This command allows the operator to clear and remove a Tech Support On Demand session from the system.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> admin system techsupport clear-on-demand session <Sys::TechSupportSessionId>

Command Parameters

Table 193.10-2 "Techsupport Clear On Demand Command" Command Parameters

Parameter	Type	Description
session	Parameter type: <Sys::TechSupportSessionId> Format: - number identifying a Tech Support Session - range: [0...65535]	<i>mandatory parameter</i> the session id to use to clear the Tech Support On Demand File for

193.11 FIPS Command

Command Description

Obsolete command.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

> admin system fips (run-test)

Obsolete command.

Command Parameters

Table 193.11-2 "FIPS Command" Command Parameters

Parameter	Type	Description
(run-test)	Format: run-test Possible values: - run-test : Run FIPS Self Test	<i>optional parameter</i> Run FIPS Self Test in the system

194- UDP/SSH debug Management Commands

194.1 UDP/SSH debug Management Command Tree	194-7106
194.2 Forced Disconnect UDP/SSH debug Command	194-7107

194.1 UDP/SSH debug Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "UDP/SSH debug Management Commands".

Command Tree

```
----admin
  ----system
    ----security
      ----kill-debug
```

194.2 Forced Disconnect UDP/SSH debug Command

Command Description

This command allows the operator to discontinue (or forcefully terminate) all UDP/SSH debug sessions.

User Level

The command can be accessed and executed by an operator with admin privilege.

Command Syntax

The command has the following syntax:

> admin system security kill-debug

195- *Trouble-Shooting Management Commands*

195.1 Trouble-Shooting Management Command Tree	195-7109
195.2 Trouble-shooting Interface Management Commands	195-7110

195.1 Trouble-Shooting Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Management Commands".

Command Tree

```
----admin
  ----trouble-shooting
    ----interface
      - (if-index)
      - (clear-statistics)
```

195.2 Trouble-shooting Interface Management Commands

Command Description

This command allows the operator to reset summary and extensive dataplane trouble-shooting counters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin trouble-shooting interface (if-index) (clear-statistics)
```

Command Parameters

Table 195.2-1 "Trouble-shooting Interface Management Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni uni:ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	interface index of the port

Resource Identifier	Type	Description
	<Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlanport : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan>) Possible values: - uni:ng2 : ng2 uni index - chpair : channel pair index - vlanport : vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE	

Resource Identifier	Type	Description

Table 195.2-2 "Trouble-shooting Interface Management Commands" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : reset trouble-shooting counters	<i>optional parameter</i> optional parameter reset all trouble-shooting counters

196- Trouble-Shooting Management Commands

196.1 Trouble-Shooting Management Command Tree	196-7114
196.2 Trouble-shooting Pon Interface Management Commands	196-7115

196.1 Trouble-Shooting Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Management Commands".

Command Tree

```
----admin
  ----trouble-shooting
    ----pon
      ----interface
        - (if-index)
        - (clear-statistics)
```

196.2 Trouble-shooting Pon Interface Management Commands

Command Description

This command allows the operator to reset summary and extensive dataplane trouble-shooting counters over a pon line.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin trouble-shooting pon interface (if-index) (clear-statistics)
```

Command Parameters

Table 196.2-1 "Trouble-shooting Pon Interface Management Commands" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g-pon - x-pon : xgs-pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	interface index of the pon port

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : reset trouble-shooting counters	<i>optional parameter</i> optional parameter reset all trouble-shooting counters

197- *Trouble-Shooting Management Commands*

197.1 Trouble-Shooting Management Command Tree	197-7118
197.2 Trouble-shooting pbit counter Interface Management Commands	197-7119

197.1 Trouble-Shooting Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Management Commands".

Command Tree

```
----admin
  ----trouble-shooting
    ----pbit
      ----interface
        - (if-index)
        - (clear-statistics)
```

197.2 Trouble-shooting pbit counter Interface Management Commands

Command Description

This command allows the operator to reset pbit trouble-shooting counters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin trouble-shooting pbit interface (if-index) (clear-statistics)
```

Command Parameters

Table 197.2-1 "Trouble-shooting pbit counter Interface Management Commands" Resource Parameters

Resource Identifier	Type	Description

198- *Trouble-Shooting Management Commands*

198.1 Trouble-Shooting Management Command Tree	198-7123
198.2 Trouble-shooting color counter Interface Management Commands	198-7124

198.1 Trouble-Shooting Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trouble-Shooting Management Commands".

Command Tree

```
----admin
  ----trouble-shooting
    ----color
      ----interface
        - (if-index)
        - (clear-statistics)
```

198.2 Trouble-shooting color counter Interface Management Commands

Command Description

This command allows the operator to reset color trouble-shooting counters.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin trouble-shooting color interface (if-index) (clear-statistics)
```

Command Parameters

Table 198.2-1 "Trouble-shooting color counter Interface Management Commands" Resource Parameters

199.2 Voice Megaco Database Management Command

Command Description

This command allows the operator to manage the voice megaco xvps database.

User Level

The command can be accessed by operators with megaco privileges, and executed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice cluster (cluster-id) database [ (save) ]
```

Command Parameters

Table 199.2-1 "Voice Megaco Database Management Command" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster

Table 199.2-2 "Voice Megaco Database Management Command" Command Parameters

Parameter	Type	Description
(save)	Format: save Possible values: - save : save the database	<i>optional parameter</i> save the database

199.3 Voice Megaco Equipment Admin Commands

Command Description

This command allows the operator to manage the Voice equipment. One ivps can manage at most 256 equipments, so the id of equipment is from 1 to 256.

If you want to manage a termination, you must configure a equipment first.

User Level

The command can be accessed by operators with megaco privileges, and executed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

> admin voice cluster (cluster-id) equipment (equip-id)

Command Parameters

Table 199.3-1 "Voice Megaco Equipment Admin Commands" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(equip-id)	Format: - id of equipment - range: [1...32]	uniquely identify of this equipment

199.4 Voice Megaco Termination Lock Management Command

Command Description

This command allows the operator to manage the voice megaco termination lock type.

User Level

The command can be accessed by operators with megaco privileges, and executed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice cluster (cluster-id) equipment (equip-id) port-id (port-id) [ lktype
<MEGACO::accTerminationLockType> ]
```

Command Parameters

Table 199.4-1 "Voice Megaco Termination Lock Management Command" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(equip-id)	Format: - id of equipment - range: [1...32]	uniquely identify of this equipment
(port-id)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> / <Eqpt::MegacoPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number Field type <Eqpt::MegacoPortId> - the port number of Megaco	unique identifier of this termination port

Table 199.4-2 "Voice Megaco Termination Lock Management Command" Command Parameters

Parameter	Type	Description
lktype	Parameter type: <MEGACO::accTerminationLockType> Format: (force graceful : <MEGACO::accTerminationLockDelay>)	<i>optional parameter</i> the termination lock type and delay time

Parameter	Type	Description
	Possible values: - force : The termination lock type is force - graceful : The termination lock type is graceful Field type <MEGACO::accTerminationLockDelay> - the delay timer before lock access termination - unit: 1 msec - range: [0...3600000]	

199.5 Voice Megaco Secondary Termination Lock Management Command

Command Description

This command allows the operator to manage the voice megaco secondary termination lock type.

User Level

The command can be accessed by operators with megaco privileges, and executed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice cluster (cluster-id) equipment (equip-id) sharedline-port-id (port-id) [ lktype
<MEGACO::accTerminationLockType> ]
```

Command Parameters

Table 199.5-1 "Voice Megaco Secondary Termination Lock Management Command" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(equip-id)	Format: - id of equipment - range: [1...32]	uniquely identify of this equipment
(port-id)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::NewSlotId> / <Eqpt::MegacoPortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::NewSlotId> - the LT slot number Field type <Eqpt::MegacoPortId> - the port number of Megaco	unique identifier of the secondary termination port

Table 199.5-2 "Voice Megaco Secondary Termination Lock Management Command" Command Parameters

Parameter	Type	Description
lktype	Parameter type: <MEGACO::accTerminationLockType> Format:	<i>optional parameter</i> the secondary termination lock

Parameter	Type	Description
	(force graceful : <MEGACO::accTerminationLockDelay>) Possible values: - force : The termination lock type is force - graceful : The termination lock type is graceful Field type <MEGACO::accTerminationLockDelay> - the delay timer before lock access termination - unit: 1 msec - range: [0...3600000]	type and delay time

199.6 Voice Megaco Media Gateway Lock Management Command

Command Description

This command allows the operator to manage the voice megaco media gateway lock type.

User Level

The command can be accessed by operators with megaco privileges, and executed by operators with megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice cluster (cluster-id) media-gateway (media-gateway-id) [ lktype
<MEGACO::mediaGatewayLockType> ] [ trigger-esa-mgc <MEGACO::mediaGatewayTriggerESAMgc> ]
```

Command Parameters

Table 199.6-1 "Voice Megaco Media Gateway Lock Management Command" Resource Parameters

Resource Identifier	Type	Description
(cluster-id)	Format: - the xvps cluster id - range: [1...8,11]	uniquely identify of this xvps cluster
(media-gateway-id)	Format: - the media gateway table index - range: [1]	uniquely identify of this media gateway

Table 199.6-2 "Voice Megaco Media Gateway Lock Management Command" Command Parameters

Parameter	Type	Description
lktype	Parameter type: <MEGACO::mediaGatewayLockType> Format: (force graceful : <MEGACO::mediaGatewayLockDelay>) Possible values: - force : The media gateway lock type is force - graceful : The media gateway lock type is graceful Field type <MEGACO::mediaGatewayLockDelay> - the timer of media gateway lock command - unit: 1 msec - range: [0...3600000]	<i>optional parameter</i> the media gateway lock type and delay time
trigger-esa-mgc	Parameter <MEGACO::mediaGatewayTriggerESAMgc> Format:	type: <i>optional parameter</i> failover to local ESA mgc or failback to external normal mgc

Parameter	Type	Description
	(failover failback) Possible values: - failover : failover to local ESA mgc - failback : failback to external normal mgc	

199.7 Voice Sip L1 Transport Statistics Commands

199.8 Voice POTS Diagnostics Management Command

Command Description

This command allows the operator to test MLT for the POTS lines on the ONT

The result of the MLT tests can be retrieved using "show voice ont pots diagnostic" command.

User Level

The command can be accessed by operators with sip,megaco privileges, and executed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice ont pots diagnostics (uni-idx) [ mode <Gpon::Mode> ] [ hazard-dc-volt-th <Gpon::HazDcTh> ] [ hazard-ac-volt-th <Gpon::HazAcTh> ] [ frgn-ac-volt-th <Gpon::FgAcTh> ] [ frgn-dc-volt-th <Gpon::FgDcTh> ] [ tipgnd-rnggnd-th <Gpon::TipRngTh> ] [ tip-ring-th <Gpon::TipRngTh> ] [ ring-min-th <Gpon::RngLoadTh> ] [ ring-max-th <Gpon::RngLoadTh> ] [ diagnostic <Gpon::Potsdgn> ]
```

Command Parameters

Table 199.8-1 "Voice POTS Diagnostics Management Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup>	ontpots index

Resource Identifier	Type	Description
	- channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Table 199.8-2 "Voice POTS Diagnostics Management Command" Command Parameters

Parameter	Type	Description
mode	Parameter type: <Gpon::Mode> Format: (deny force) Possible values: - deny : deny the test - force : force the test	<i>optional parameter</i> used to force or deny the test if line is busy
hazard-dc-volt-th	Parameter type: <Gpon::HazDcTh> Format: - Threshold for declaring Hazardous DC Voltage - range: [0,80...150]	<i>optional parameter</i> threshold for declaring Hazardous DC Voltage test pass or fail
hazard-ac-volt-th	Parameter type: <Gpon::HazAcTh> Format: - Threshold for declaring Hazardous AC Voltage - range: [0,50...150]	<i>optional parameter</i> threshold for declaring Hazardous AC Voltage test pass or fail
frgn-ac-volt-th	Parameter type: <Gpon::FgAcTh> Format: - Threshold for declaring Foreign AC Voltage - range: [0,10...50]	<i>optional parameter</i> threshold for declaring Foreign AC Voltage test pass or fail
frgn-dc-volt-th	Parameter type: <Gpon::FgDcTh> Format: - Threshold for declaring Foreign DC Voltage - range: [0...10]	<i>optional parameter</i> threshold for declaring Foreign DC Voltage test pass or fail
tipgnd-rnggnd-th	Parameter type: <Gpon::TipRngTh> Format: - Threshold for declaring Tip-Ground or Ring-Ground Resistance - range: [0...250]	<i>optional parameter</i> threshold for declaring Tip-Ground to Ring-Ground Resistance test pass or fail
tip-ring-th	Parameter type: <Gpon::TipRngTh> Format: - Threshold for declaring Tip-Ground or Ring-Ground Resistance - range: [0...250]	<i>optional parameter</i> threshold for declaring Tip and Ring Resistance test pass or fail
ring-min-th	Parameter type: <Gpon::RngLoadTh> Format: - Threshold (MIN/MAX) for declaring Ringer Load - range: [0...700]	<i>optional parameter</i> threshold (MIN) for declaring Ringer Load test pass or fail
ring-max-th	Parameter type: <Gpon::RngLoadTh> Format: - Threshold (MIN/MAX) for declaring Ringer Load - range: [0...700]	<i>optional parameter</i> threshold (MIN) for declaring Ringer Load test pass or fail
diagnostic	Parameter type: <Gpon::Potsdgn> Format:	<i>optional parameter</i> indicating desire to execute

Parameter	Type	Description
	test_initiated Possible values: - test_initiated : MLT test initiated.Only value settable by Manager	POTS port MLT test always 1

199.9 Voice POTS Pull-Break Management Command

Command Description

This command allows the operator to run Pull/Break Dialtone test for POTS lines on the ONT

The result of the Pull/Break DialTone tests can be retrieved using "show voice ont pots pb-dial-tone" command

User Level

The command can be accessed by operators with sip,megaco privileges, and executed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice ont pots pb-dial-tone (uni-idx) [ no slow-pull-timer | slow-pull-timer <Gpon::SlwPullTmr> ] [ no
no-pull-timer | no-pull-timer <Gpon::NoPullTmr> ] [ no slow-break-timer | slow-break-timer <Gpon::SlwBrkTmr>
] [ no no-break-timer | no-break-timer <Gpon::NoBrkTmr> ] [ no test-digit | test-digit <Gpon::TestDigit> ]
diagnostic <Gpon::PbDialToneDgn>
```

Command Parameters

Table 199.9-1 "Voice POTS Pull-Break Management Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup>	ontpots index

Resource Identifier	Type	Description
	- channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Table 199.9-2 "Voice POTS Pull-Break Management Command" Command Parameters

Parameter	Type	Description
[no] slow-pull-timer	Parameter type: <Gpon::SlwPullTmr> Format: - Threshold Timer which the ONT should use to determine if dialtone was obtained slowly - unit: sec - range: [0...6]	<i>optional parameter with default value: 0</i> Threshold Timer which the ONT should use to determine if dialtone was obtained slowly
[no] no-pull-timer	Parameter type: <Gpon::NoPullTmr> Format: - Threshold Timer which the ONT should use to determine if dialtone was not obtained - unit: sec - range: [0,1...10]	<i>optional parameter with default value: 0</i> Threshold Timer which the ONT should use to determine if dialtone was not obtained
[no] slow-break-timer	Parameter type: <Gpon::SlwBrkTmr> Format: - Threshold Timer which the ONT should use to determine if dialtone break was obtained slowly - unit: sec - range: [0...3]	<i>optional parameter with default value: 0</i> Threshold Timer which the ONT should use to determine if dialtone break was obtained slowly
[no] no-break-timer	Parameter type: <Gpon::NoBrkTmr> Format: - Threshold Timer which the ONT should use to determine if dialtone break was not obtained - unit: sec - range: [0,1...3]	<i>optional parameter with default value: 0</i> Threshold Timer which the ONT should use to determine if dialtone break was not obtained
[no] test-digit	Parameter type: <Gpon::TestDigit> Format: - digit that the ONT should use to break the dial tone - range: [0-9*#] - length: x<=1	<i>optional parameter with default value: ""</i> digit that the ONT should use to break the dial tone
diagnostic	Parameter type: <Gpon::PbDialToneDgn> Format: test_initiated Possible values: - test_initiated : dialtone test initiated.Only value settable by Manager	<i>optional parameter</i> desire to execute POTS make-break dialtone test always 1

199.10 Voice SIP Pull-Break Management

Command

Command Description

This command allows the operator to run the SIP Pull-Break Dial tone test for POTS lines on the ONT

The result of the SIP Pull-Break DialTone tests can be retrieved using "show voice ont pots sip-dial-tone" command.

User Level

The command can be accessed by operators with sip,megaco privileges, and executed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice ont pots sip-dial-tone (uni-idx) sip-phone-number <Gpon::SipPhNo> diagnostic <Gpon::SipDgn>
```

Command Parameters

Table 199.10-1 "Voice SIP Pull-Break Management Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPotsPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup>	ont pots index

Resource Identifier	Type	Description
	- subchannel group number Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPotsPortId> - Gpon Ont Pots Port - range: [1...24]	

Table 199.10-2 "Voice SIP Pull-Break Management Command" Command Parameters

Parameter	Type	Description
sip-phone-number	Parameter type: <Gpon::SipPhNo> Format: - Phone number to be dialed for the SIP pull-break test - range: [0-9*#] - length: x<=16	<i>optional parameter</i> Phone number to be dialed for the SIP pull-break test
diagnostic	Parameter type: <Gpon::SipDgn> Format: test_initiated Possible values: - test_initiated : Sip dialtone test initiated.Only value settable by Manager	<i>optional parameter</i> indicating desire to execute POTS SIP make-break dialtone test

199.11 GPON Voip Configuration Management

Command

Command Description

This command causes the ONT to redownload the VOIP configuration for the ONT. This is only used when the operator thinks that the ONT has been configured to retrieve the correct VOIP configuration but there was a failure in this retrieval and another manually initiated attempt should be tried

User Level

The command can be accessed by operators with sip,megaco privileges, and executed by operators with sip,megaco privileges.

Command Syntax

The command has the following syntax:

```
> admin voice ont voip-config (voip-index) (active)
```

Command Parameters

Table 199.11-1 "GPON Voip Configuration Management Command" Resource Parameters

Resource Identifier	Type	Description
(voip-index)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostId> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostId>) Possible values: - ont:ng2 : ngpon2 ont - ont : ont Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier	a unique interface index

Resource Identifier	Type	Description
	Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Gpon::IpHostID> - iphost id Field type <Ng2::IpHostID> - iphost id (ngpon2)	

Table 199.11-2 "GPON Voip Configuration Management Command" Command Parameters

Parameter	Type	Description
(active)	Format: active Possible values: - active : to activate the profile	<i>optional parameter</i> to activate the profile

200- MSTP Management Commands

200.1 MSTP Management Command Tree	200-7149
200.2 MSTP Port Management Command	200-7150

200.1 MSTP Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "MSTP Management Commands".

Command Tree

```
----admin
  ----xstp
    ----port
      - (port)
      - (clear-protocols)
```

200.2 MSTP Port Management Command

Command Description

This command allows the operator to manage MSTP related to a port.

User Level

The command can be accessed by operators with mstp privileges, and executed by operators with mstp privileges.

Command Syntax

The command has the following syntax:

```
> admin xstp port (port) [ (clear-protocols) ]
```

Command Parameters

Table 200.2-1 "MSTP Port Management Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the lag

Table 200.2-2 "MSTP Port Management Command" Command Parameters

Parameter	Type	Description
(clear-protocols)	Format: clear-protocols Possible values: - clear-protocols : clear the list of detected protocols	<i>optional parameter</i> clear the list of detected protocols

201- *Distributed Service Management Commands*

201.1 Distributed Service Management Command Tree	201-7152
201.2 APIPE-PVC Statistics Command	201-7153

201.1 Distributed Service Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Distributed Service Management Commands".

Command Tree

```
----admin
  ----dist-service
    ----statistics
      ----apipe-pvc
        - (port-index)
        - (clear)
```

201.2 APIPE-PVC Statistics Command

Command Description

This command is to reset the APIPE-PVC statistics counters.

User Level

The command can be executed by operators with drouter privileges.

Command Syntax

The command has the following syntax:

```
> admin dist-service statistics apipe-pvc (port-index) (clear)
```

Command Parameters

Table 201.2-1 "APIPE-PVC Statistics Command" Resource Parameters

Resource Identifier	Type	Description
(port-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiMandatoryId> : <Eqpt::VciMandatoryId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiMandatoryId> - atm VPI Field type <Eqpt::VciMandatoryId> - atm VCI	the ATM PVC

Table 201.2-2 "APIPE-PVC Statistics Command" Command Parameters

Parameter	Type	Description
(clear)	Format: clear Possible values: - clear : reset statistics counters	<i>optional parameter</i> optional parameter reset APIPE-PVC counters

202- Pon Management Commands

202.1 Pon Management Command Tree	202-7155
202.2 Pon Bit Error Statistics Commands	202-7156
202.3 PON Rogue Test Diagnostic Command	202-7158
202.4 PON Utilization PM Reset Command	202-7160
202.5 PON Peak Utilization PM Reset Command	202-7162
202.6 Pon RangeNumMismatch Alarm Reset Commands	202-7164
202.7 Ont on Given Pon Reboot Commands	202-7166

202.1 Pon Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Pon Management Commands".

Command Tree

```
----admin
  ----pon
    ----ber-stats
      - (pon-idx)
      - (clear-statistics)
    ----diagnostic
      - (index)
      - mode
      - bkgstucklasermode
      - bkgpatternmode
      - bkgroguetestinterval
      - alien-mantestmode
      - alien-bkgtestmode
      - alien-bkgtestinterval
    ----utilization
      - (pon-idx)
      - (clear-counters)
    ----peak-utilization
      - (pon-idx)
      - (clear-counters)
    ----clear-alarm
      - (pon-idx)
      - (clr-rng-mismatch)
    ----reboot-all-ont
      - (pon-idx)
      - (reboot-all-ont)
```

202.2 Pon Bit Error Statistics Commands

Command Description

This command allows the operator to reset the Pon Bit Error Statistics.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin pon ber-stats (pon-idx) (clear-statistics)
```

Command Parameters

Table 202.2-1 "Pon Bit Error Statistics Commands" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	pon index

Table 202.2-2 "Pon Bit Error Statistics Commands" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values:	<i>optional parameter</i> clear the pon bit error counts

Parameter	Type	Description
	- clear-statistics : clear the pon bit error counts	

202.3 PON Rogue Test Diagnostic Command

Command Description

This command is used to initiate and stop the rogue ONT discovery procedure on a PON.

Background Pattern Test is 'stop-bkg-test' by default.

Background Alien Test is 'stop-bkg-test' by default.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin pon diagnostic (index) [ mode <Gpon::PonRogueTestMode> ] [ bkgstucklasermode
<Gpon::PonBkgdRogueTestMode> ] [ bkgpatternmode <Gpon::PonBkgdRogueTestMode> ] [ bkgroguetestinterval
<Gpon::BkgdRogueTestInterval> ] [ alien-mantestmode <Gpon::PonManAlienTestMode> ] [ alien-bkgtestmode
<Gpon::PonBkgdAlienTestMode> ] [ alien-bkgtestinterval <Gpon::BkgdAlienTestInterval> ]
```

Command Parameters

Table 202.3-1 "PON Rogue Test Diagnostic Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	identification of pon

Table 202.3-2 "PON Rogue Test Diagnostic Command" Command Parameters

Parameter	Type	Description
mode	Parameter type: <Gpon::PonRogueTestMode> Format: (init-onofftest stop init-patterntest) Possible values: - init-onofftest : start the ON-OFF rogue test - stop : stop the rogue test - init-patterntest : start the Pattern rogue test	<i>optional parameter</i> enable or disable pon rogue test diagnostic
bkgstucklasermode	Parameter type: <Gpon::PonBkgdRogueTestMode> Format: (init-bkg-test stop-bkg-test) Possible values: - init-bkg-test : start the background rogue test - stop-bkg-test : stop the background rogue test	<i>optional parameter</i> enable or disable pon background stuck laser test diagnostic
bkgpatternmode	Parameter type: <Gpon::PonBkgdRogueTestMode> Format: (init-bkg-test stop-bkg-test) Possible values: - init-bkg-test : start the background rogue test - stop-bkg-test : stop the background rogue test	<i>optional parameter</i> enable or disable pon background pattern test diagnostic
bkgroguetestinterval	Parameter type: <Gpon::BkgdRogueTestInterval> Format: - Numbers divisible by 15 are permitted. - unit: Minutes - range: [60...1440]	<i>optional parameter</i> Frequency of background rogue ont test execution
alien-mantestmode	Parameter type: <Gpon::PonManAlienTestMode> Format: (init-man-test stop-man-test) Possible values: - init-man-test : start the manual Alien test - stop-man-test : stop the manual Alien test	<i>optional parameter</i> Enable or disable pon manual alien ont test diagnostic
alien-bkgtestmode	Parameter type: <Gpon::PonBkgdAlienTestMode> Format: (init-bkg-test stop-bkg-test) Possible values: - init-bkg-test : start the background Alien test - stop-bkg-test : stop the background Alien test	<i>optional parameter</i> Enable or disable pon background alien ont test diagnostic
alien-bkgtestinterval	Parameter type: <Gpon::BkgdAlienTestInterval> Format: - Numbers divisible by 30 are permitted. - unit: Minutes - range: [30...240]	<i>optional parameter</i> Frequency of background alien ont test execution

202.4 PON Utilization PM Reset Command

Command Description

This command resets the PON utilization PM counters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin pon utilization (pon-idx) (clear-counters)
```

Command Parameters

Table 202.4-1 "PON Utilization PM Reset Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	pon index

Table 202.4-2 "PON Utilization PM Reset Command" Command Parameters

Parameter	Type	Description
(clear-counters)	Format: clear-counters Possible values:	<i>optional parameter</i> clear the pon utilization pm counters

Parameter	Type	Description
	- clear-counters : clear the utilization pm counters	

202.5 PON Peak Utilization PM Reset Command

Command Description

This command resets the PON Peak utilization PM counters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin pon peak-utilization (pon-idx) (clear-counters)
```

Command Parameters

Table 202.5-1 "PON Peak Utilization PM Reset Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	pon index

Table 202.5-2 "PON Peak Utilization PM Reset Command" Command Parameters

Parameter	Type	Description
(clear-counters)	Format: clear-counters Possible values:	<i>optional parameter</i> clear the pon peak utilization pm counters

Parameter	Type	Description
	- clear-counters : clear the peak utilization pm counters	

202.6 Pon RangeNumMismatch Alarm Reset Commands

Command Description

This command allows the operator to reset the Pon RangeNumMismatch Alarm.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin pon clear-alarm (pon-idx) (clr-rng-mismatch)
```

Command Parameters

Table 202.6-1 "Pon RangeNumMismatch Alarm Reset Commands" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	pon index

Table 202.6-2 "Pon RangeNumMismatch Alarm Reset Commands" Command Parameters

Parameter	Type	Description
(clr-rng-mismatch)	Format: clr-rng-mismatch Possible values: - clr-rng-mismatch : clear alarm of ranging number mismatch	<i>optional parameter</i> clear alarm of ranging number mismatch

202.7 Ont on Given Pon Reboot Commands

Command Description

This command allows the operator to reboot all ont on the given Pon.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin pon reboot-all-ont (pon-idx) (reboot-all-ont)
```

Command Parameters

Table 202.7-1 "Ont on Given Pon Reboot Commands" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> x-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::XPonId> 25g-pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::M25GPonId>) Possible values: - 25g-pon : 25g pon - x-pon : Xgs pon Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::XPonId> - the XGS PON identifier Field type <Eqpt::M25GPonId> - the 25G PON identifier	pon index

Table 202.7-2 "Ont on Given Pon Reboot Commands" Command Parameters

Parameter	Type	Description
(reboot-all-ont)	Format: via-ploam Possible values:	<i>optional parameter</i> reboot the ont on the given pon

Parameter	Type	Description
	- via-ploam : reboot via ploam	

203- Channel Pair Management Commands

203.1 Channel Pair Management Command Tree	203-7169
203.2 NGPON2 Rogue Test Diagnostic Command	203-7170
203.3 Channel Pair Utilization PM Reset Command	203-7172
203.4 Channel Pair Peak Utilization PM Reset Command	203-7173
203.5 Pon RangeNumMismatch Alarm Reset Commands	203-7174
203.6 NGPON2 Rogue Ont Reboot Command	203-7175

203.1 Channel Pair Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Channel Pair Management Commands".

Command Tree

- admin**
 - channel-pair**
 - diagnostic**
 - **(index)**
 - mode
 - bkgstucklasermode

203.2 NGPON2 Rogue Test Diagnostic Command

Command Description

This command is used to initiate and stop the rogue ONT discovery procedure on a channel pair.

Background Pattern Test is 'stop-bkg-test' by default.

Background Alien Test is 'stop-bkg-test' by default.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin channel-pair diagnostic (index) [ mode <Gpon::PonRogueTestMode> ] [ bkgstucklasermode
<Gpon::PonBkgdRogueTestMode> ] [ bkgpatternmode <Gpon::PonBkgdRogueTestMode> ] [ bkgroguetestinterval
<Gpon::BkgdRogueTestInterval> ] [ alien-mantestmode <Gpon::PonManAlienTestMode> ] [ alien-bkgtestmode
<Gpon::PonBkgdAlienTestMode> ] [ alien-bkgtestinterval <Gpon::BkgdAlienTestInterval> ]
```

Command Parameters

Table 203.2-1 "NGPON2 Rogue Test Diagnostic Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	identification of channel pair

Table 203.2-2 "NGPON2 Rogue Test Diagnostic Command" Command Parameters

Parameter	Type	Description
mode	Parameter type: <Gpon::PonRogueTestMode> Format: (init-onofftest stop init-patterntest) Possible values: - init-onofftest : start the ON-OFF rogue test - stop : stop the rogue test	<i>optional parameter</i> enable or disable channel pair rogue test diagnostic

Parameter	Type	Description
	- init-patterntest : start the Pattern rogue test	
bkgstucklasermode	Parameter type: <Gpon::PonBkgdRogueTestMode> Format: (init-bkg-test stop-bkg-test) Possible values: - init-bkg-test : start the background rogue test - stop-bkg-test : stop the background rogue test	<i>optional parameter</i> enable or disable channel pair background stuck laser test diagnostic
bkgpatternmode	Parameter type: <Gpon::PonBkgdRogueTestMode> Format: (init-bkg-test stop-bkg-test) Possible values: - init-bkg-test : start the background rogue test - stop-bkg-test : stop the background rogue test	<i>optional parameter</i> enable or disable channel pair background pattern test diagnostic
bkgroguetestinterval	Parameter type: <Gpon::BkgdRogueTestInterval> Format: - Numbers divisible by 15 are permitted. - unit: Minutes - range: [60...1440]	<i>optional parameter</i> Frequency of background pattern test execution
alien-mantestmode	Parameter type: <Gpon::PonManAlienTestMode> Format: (init-man-test stop-man-test) Possible values: - init-man-test : start the manual Alien test - stop-man-test : stop the manual Alien test	<i>optional parameter</i> Enable or disable channelpair manual alien ont test diagnostic
alien-bkgtestmode	Parameter type: <Gpon::PonBkgdAlienTestMode> Format: (init-bkg-test stop-bkg-test) Possible values: - init-bkg-test : start the background Alien test - stop-bkg-test : stop the background Alien test	<i>optional parameter</i> Enable or disable channelpair background alien ont test diagnostic
alien-bkgtestinterval	Parameter type: <Gpon::BkgdAlienTestInterval> Format: - Numbers divisible by 30 are permitted. - unit: Minutes - range: [30...240]	<i>optional parameter</i> Frequency of background alien ont test execution

203.3 Channel Pair Utilization PM Reset Command

Command Description

This command resets the channel-pair utilization PM counters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin channel-pair utilization (chpair-idx) (clear-counters)
```

Command Parameters

Table 203.3-1 "Channel Pair Utilization PM Reset Command" Resource Parameters

Resource Identifier	Type	Description
(chpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair index

Table 203.3-2 "Channel Pair Utilization PM Reset Command" Command Parameters

Parameter	Type	Description
(clear-counters)	Format: clear-counters Possible values: - clear-counters : clear the utilization pm counters	<i>optional parameter</i> clear the channel pair utilization pm counters

203.4 Channel Pair Peak Utilization PM Reset Command

Command Description

This command resets the channel-pair peak utilization PM counters.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin channel-pair peak-utilization (chpair-idx) (clear-counters)
```

Command Parameters

Table 203.4-1 "Channel Pair Peak Utilization PM Reset Command" Resource Parameters

Resource Identifier	Type	Description
(chpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair index

Table 203.4-2 "Channel Pair Peak Utilization PM Reset Command" Command Parameters

Parameter	Type	Description
(clear-counters)	Format: clear-counters Possible values: - clear-counters : clear the peak utilization pm counters	<i>optional parameter</i> clear the channel pair peak utilization pm counters

203.5 Pon RangeNumMismatch Alarm Reset Commands

Command Description

This command allows the operator to reset the Pon RangeNumMismatch Alarm.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin channel-pair clear-alarm (chpair-idx) (clr-rng-mismatch)
```

Command Parameters

Table 203.5-1 "Pon RangeNumMismatch Alarm Reset Commands" Resource Parameters

Resource Identifier	Type	Description
(chpair-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	channel pair index

Table 203.5-2 "Pon RangeNumMismatch Alarm Reset Commands" Command Parameters

Parameter	Type	Description
(clr-rng-mismatch)	Format: clr-rng-mismatch Possible values: - clr-rng-mismatch : clear alarm of ranging number mismatch	<i>optional parameter</i> clear alarm of ranging number mismatch

203.6 NGPON2 Rogue Ont Reboot Command

Command Description

This command allows the operator to reboot all ont on the given channel pair.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin channel-pair reboot-all-ont (index) (reboot-all-ont)
```

Command Parameters

Table 203.6-1 "NGPON2 Rogue Ont Reboot Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	identification of channel pair

Table 203.6-2 "NGPON2 Rogue Ont Reboot Command" Command Parameters

Parameter	Type	Description
(reboot-all-ont)	Format: via-ploam Possible values: - via-ploam : reboot via ploam	<i>optional parameter</i> reboot the ont on the given channel-pair

204- CESUNI Management Commands

204.1 CESUNI Management Command Tree	204-7177
204.2 CESUNI Loopback Management Command	204-7178

204.1 CESUNI Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "CESUNI Management Commands".

Command Tree

```
----admin
  ----ces
    ----ont
      ----line
        - (ont-idx)
        - (loop-back)
```

204.2 CESUNI Loopback Management Command

Command Description

This command puts/releases the CESUNI port in loopback mode

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin ces ont line (ont-idx) [ (loop-back) ]
```

Command Parameters

Table 204.2-1 "CESUNI Loopback Management Command" Resource Parameters

Resource Identifier	Type	Description
(ont-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14] Field type <Gpon::OntPortId>	interface index of the ces ont uni

Resource Identifier	Type	Description
	- Gpon Ont Port - range: [1...16]	

Table 204.2-2 "CESUNI Loopback Management Command" Command Parameters

Parameter	Type	Description
(loop-back)	Format: (no-loopback line-loopback inward-loopback) Possible values: - no-loopback : no loopback - line-loopback : line loopback - inward-loopback : inward loopback	<i>optional parameter</i> This parameter specifies the Loop-back Type

205.2 Unicast Loopback message Management Command

Command Description

This command initiates the test of Unicast Loopback messages.

A number of Loopback messages can be requested to be send from a specified MEP towards a specified destination MAC address.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges, and executed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin cfm uclbm domain <Cfm::CfmDomainIndexType> association <Cfm::CfmMaIndexType> mep
<Cfm::MepIdType> dest-mac <Vlan::MacAddr> [ no nbr-msgs | nbr-msgs <Cfm::UclbmNbrMsgType> ] [ no
lbm-tlv-type | lbm-tlv-type <Cfm::TlvType> ] [ no lbm-data-len | lbm-data-len <Cfm::LbmDataLenType> ] [ no
lbm-data | lbm-data <Cfm::LbmDataType> ] [ no test-bit-pattern | test-bit-pattern <Cfm::TestBitPatternType> ] [
no vlan-priority | vlan-priority <Vlan::Priority> ] [ no vlan-drop-enable | vlan-drop-enable
<Cfm::VlanDropEnableType> ] [ no vlan-drop-pcp | vlan-drop-pcp <Cfm::VlanDropPcpType> ]
```

Command Parameters

Table 205.2-2 "Unicast Loopback message Management Command" Command Parameters

Parameter	Type	Description
domain	Parameter type: <Cfm::CfmDomainIndexType> Format: - Maintenance Domain (MD) index - range: [1...4294967295]	<i>mandatory parameter</i> Maintenance Domain Index.
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	<i>mandatory parameter</i> Maintenance Association Index.
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	<i>mandatory parameter</i> Maintenance Association End Point (MEP) ID. Unique within an MA.
dest-mac	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte	<i>mandatory parameter</i> The MAC address for the OAM target: a unicast destination MAC address in the Unicast Loopback

Parameter	Type	Description
	- length: 6	message.
[no] nbr-msgs	Parameter type: <Cfm::UcLbmNbrMsgType> Format: - The number of Unicast Loopback messages to be transmitted. For GPON LT, the range is [1..2] - range: [1...5]	<i>optional parameter with default value: 1L</i> The number of Unicast Loopback messages to be transmitted.
[no] lbm-tlv-type	Parameter type: <Cfm::TlvType> Format: (tlv-none data-tlv test-tlv) Possible values: - tlv-none : no TLV - data-tlv : data TLV - test-tlv : test TLV	<i>optional parameter with default value: "tlv-none"</i> Specifies which TLV type is to be used for LBM.
[no] lbm-data-len	Parameter type: <Cfm::LbmDataLenType> Format: - the length of the Data TLV - range: [1...1488]	<i>optional parameter with default value: 64L</i> The value specifies the length of the TLV. Specifying length zero implies no TLV will be included in LBM. Default length = 64 octets.
[no] lbm-data	Parameter type: <Cfm::LbmDataType> Format: - a binary string - length: 8	<i>optional parameter with default value: "00 : 00 : 00 : 00 : 00 : 00 : 00 : 00"</i> This is hex string of 8 bytes used repetitively to fillup Data TLV, if the Data TLV is selected to be sent. Most significant bits are used first.
[no] test-bit-pattern	Parameter type: <Cfm::TestBitPatternType> Format: (all-zeros-no-crc all-zeros-crc prbs-no-crc prbs-crc all-ones-no-crc all-ones-crc <SignedInteger>) Possible values: - all-zeros-no-crc : A bit pattern with all zero's without CRC. - all-zeros-crc : A bit pattern with all zero's with CRC. - prbs-no-crc : A Pseudo Random Bit Sequence of type (2 ³¹)-1, according ITU-T O.150, without CRC. - prbs-crc : A Pseudo Random Bit Sequence of type (2 ³¹)-1, according ITU-T O.150, with CRC. - all-ones-no-crc : A bit pattern with all one's without CRC. - all-ones-crc : A bit pattern with all one's with CRC. Field type <SignedInteger> - a signed integer	<i>optional parameter with default value: "all-zeros-no-crc"</i> To specify which bit pattern type to use in the Test TLV within a unicast LBM. Default = allZerosNoCrc
[no] vlan-priority	Parameter type: <Vlan::Priority> Format: - priority of ethernet frames - range: [0...7]	<i>optional parameter with default value: 7L</i> Priority. A 3 bit value to be used in the VLAN tag, if present in the transmitted frame. Default = 7 decimal.
[no] vlan-drop-enable	Parameter type: <Cfm::VlanDropEnableType>	<i>optional parameter with default</i>

Parameter	Type	Description
	Format: (no-drop pcp dei <SignedInteger>) Possible values: - no-drop : Packet must not be marked as drop eligible. - pcp : Priority Code Point encoding to be used. - dei : Drop eligible indicator to be used. Can only be used in context of an S-VLAN. Field type <SignedInteger> - a signed integer	<i>value: "no-drop"</i> Parameter indicating whether the packet must be marked as drop eligible.
[no] vlan-drop-pcp	Parameter type: <Cfm::VlanDropPcpType> Format: (pcp8p0d pcp7p1d pcp6p2d pcp5p3d <SignedInteger>) Possible values: - pcp8p0d : Priority encoding rule to be applied. - pcp7p1d : Priority encoding rule to be applied. - pcp6p2d : Priority encoding rule to be applied. - pcp5p3d : Priority encoding rule to be applied. Field type <SignedInteger> - a signed integer	<i>optional parameter with default value: "pcp8p0d"</i> Defines the Priority Code Point encoding rule used.

Command Output

Table 205.2-3 "Unicast Loopback message Management Command" Display parameters

Specific Information		
name	Type	Description
result	Parameter type: <Cfm::CfmOamResult> (test-done test-in-progress internal-failure) Possible values: - test-done : - test-in-progress : - internal-failure :	Result of the command. <i>This element is only shown in detail mode.</i>
lbr-in	Parameter type: <Counter> - 32 bit counter	Total number of valid, in-order Loopback Replies received. <i>This element is only shown in detail mode.</i>
lbr-in-ooo	Parameter type: <Counter> - 32 bit counter	The total number of valid, out-of-order Loopback Replies received. <i>This element is only shown in detail mode.</i>
lbr-bad-msdu	Parameter type: <Counter> - 32 bit counter	The total number of LBRs received whose mac_service_data_unit did not match (except for the OpCode) that of the corresponding LBM <i>This element is only shown in detail mode.</i>

205.3 CFM Multicast Loopback Management Command

Command Description

This CFM Management command is executed to initiate a Multicast Loopback message.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges, and executed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin cfm mclbm domain <Cfm::CfmDomainIndexType> association <Cfm::CfmMaIndexType> mep
<Cfm::MepIdType> [ no vlan-priority | vlan-priority <Vlan::Priority> ] [ no lbm-tlv-type | lbm-tlv-type
<Cfm::McLbmTlvType> ] [ no lbm-data-len | lbm-data-len <Cfm::LbmDataLenType> ] [ no lbm-data | lbm-data
<Cfm::LbmDataType> ]
```

Command Parameters

Table 205.3-1 "CFM Multicast Loopback Management Command" Resource Parameters

Resource Identifier	Type	Description
domain	Parameter type: <Cfm::CfmDomainIndexType> Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain Index.

Table 205.3-2 "CFM Multicast Loopback Management Command" Command Parameters

Parameter	Type	Description
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	<i>mandatory parameter</i> Maintenance Association Index
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	<i>mandatory parameter</i> Maintenance Association End Point (MEP) ID. Unique within an MA
[no] vlan-priority	Parameter type: <Vlan::Priority> Format: - priority of ethernet frames - range: [0...7]	<i>optional parameter with default value: 7L</i> Priority. A 3 bit value to be used in the VLAN tag, if present in the transmitted frame. Default = 7 decimal.

Parameter	Type	Description
[no] lbm-tlv-type	Parameter type: <Cfm::McLbmTlvType> Format: (tlv-none data-tlv) Possible values: - tlv-none : no TLV - data-tlv : data TLV	<i>optional parameter with default value: "tlv-none"</i> Specifies which TLV type is to be used for LBM.
[no] lbm-data-len	Parameter type: <Cfm::LbmDataLenType> Format: - the length of the Data TLV - range: [1...1488]	<i>optional parameter with default value: 64L</i> The value specifies the length of the Data TLV. Specifying length zero implies no Data TLV will be included in LBM.
[no] lbm-data	Parameter type: <Cfm::LbmDataType> Format: - a binary string - length: 8	<i>optional parameter with default value: "00 : 00 : 00 : 00 : 00 : 00 : 00 : 00"</i> This 64 bit pattern is used repetitively to fillup Data TLV, if the Data TLV is selected to be sent. Most significant bits are used first.

Command Output

Table 205.3-3 "CFM Multicast Loopback Management Command" Display parameters

Specific Information		
name	Type	Description
reply-nr	Parameter type: <Counter> - 32 bit counter	ResultNbr. of the received LBR. <i>This element is always shown.</i>
result	Parameter type: <Cfm::CfmOamResult> (test-done test-in-progress internal-failure) Possible values: - test-done : - test-in-progress : - internal-failure :	Result of the command. <i>This element is only shown in detail mode.</i>
mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address of the peer MEP that sent the LBR message. <i>This element is always shown.</i>

205.4 CFM Linktrace management command

Command Description

This CFM Management command is executed to initiate a Linktrace message

User Level

The command can be accessed by operators with alarm , oam , vlan privileges, and executed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

> admin cfm ltm

205.5 Linktrace message Management Command

Command Description

This command initiates the sending of a Linktrace message.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges, and executed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin cfm ltm domain (domain-index) association <Cfm::CfmMaIndexType> mep <Cfm::MepIdType>
target-mac <Vlan::MacAddr> [ no vlan-priority | vlan-priority <Vlan::Priority> ] [ no ttl | ttl <Cfm::TtlLtmType> ]
[ no fdb-only-bit | fdb-only-bit <Cfm::FdbOnlyType> ]
```

Command Parameters

Table 205.5-1 "Linktrace message Management Command" Resource Parameters

Resource Identifier	Type	Description
(domain-index)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain Index. Note: This is in fact not really a resourceId, but one of the mandatory parameters.

Table 205.5-2 "Linktrace message Management Command" Command Parameters

Parameter	Type	Description
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	<i>mandatory parameter</i> Maintenance Association Index.
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	<i>mandatory parameter</i> Maintenance Association End Point (MEP) ID. Unique within an MA.
target-mac	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	<i>mandatory parameter</i> MAC address within the payload of the LTM. The destination MAC address is calculated by the system.
[no] vlan-priority	Parameter type: <Vlan::Priority> Format: - priority of ethernet frames - range: [0...7]	<i>optional parameter with default value: 7L</i> Priority. A 3 bit value to be used in the VLAN tag, if present in the transmitted frame. Default = 7

Parameter	Type	Description
[no] ttl	Parameter type: <Cfm::TtlLtmType> Format: - Range of allowed ttl values. - range: [0...255]	decimal. <i>optional parameter with default value: 64L</i> The maximum number of hops the LTM may pass. Default value is 64.
[no] fdb-only-bit	Parameter type: <Cfm::FdbOnlyType> Format: (true false) Possible values: - true : sets use-fdb-only bit within an LTM to true. - false : sets use-fdb-only bit within an LTM to false.	<i>optional parameter with default value: "true"</i> Indication to use Filtering Database.

Command Output

Table 205.5-3 "Linktrace message Management Command" Display parameters

Specific Information		
name	Type	Description
receive-order-nbr	Parameter type: <Counter> - 32 bit counter	Order number of the received LTR. <i>This element is only shown in detail mode.</i>
result	Parameter type: <Cfm::CfmOamResult> (test-done test-in-progress internal-failure) Possible values: - test-done : - test-in-progress : - internal-failure :	Result of the command. <i>This element is only shown in detail mode.</i>
orig-egress-id	Parameter type: <Cfm::EgressIdType> - a binary string - length: 8	The MEP that is originating the LTM. The low-order(highest numbered) octets contain a 48-bit IEEE MAC address unique to the system in which the MEP resides. The high-order (lowest numbered) two octets are set to zero. <i>This element is only shown in detail mode.</i>
ltm-seq-nbr	Parameter type: <Counter> - 32 bit counter	The LTM Transaction Identifier of the LTM sent. <i>This element is only shown in detail mode.</i>
nbr-unexp-ltr	Parameter type: <Counter> - 32 bit counter	The total number of unexpected LTRs received during the duration of the LTM test. <i>This element is only shown in detail mode.</i>
ttl-in-ltr	Parameter type: <Cfm::TtlLtrType> - Range of allowed ttl values. - range: [0...255]	TTL value indicated in the received LTR. <i>This element is only shown in detail mode.</i>
ltr-forwarded	Parameter type: <Cfm::LtrFwdType> (true	Indicates if a LTM was forwarded by the responding

name	Type	Description
	false) Possible values: - true : FwdYes-flag within received LTR is true. - false : FwdYes-flag within received LTR is false.	maintenance point. <i>This element is only shown in detail mode.</i>
terminal-mep	Parameter type: <Cfm::TermMepType> (true false) Possible values: - true : TerminalMEP-flag within received LTR is true. - false : TerminalMEP-flag within received LTR is false.	Indicates if a LTM reached a MEP enclosing its MA. <i>This element is only shown in detail mode.</i>
last-egress-id	Parameter type: <Cfm::EgressIdType> - a binary string - length: 8	An octet field holding the Last Egress Identifier returned in the LTR Egress Identifier TLV of the LTR. This identifier identifies the MEP Linktrace Initiator that originated, or the Linktrace Responder that forwarded, the LTM to which this LTR is the response. <i>This element is only shown in detail mode.</i>
next-egress-id	Parameter type: <Cfm::EgressIdType> - a binary string - length: 8	An octet field holding the Next Egress Identifier returned in the LTR Egress Identifier TLV of the LTR. This identifier identifies the Linktrace Responder that transmitted this LTR. <i>This element is only shown in detail mode.</i>
ltr-relay	Parameter type: <Cfm::RelayActionFieldValueType> (rly-hit rly-fdb rly-mpdb <SignedInteger>) Possible values: - rly-hit : The LTM reached an MP whose MAC address matches the target MAC address. - rly-fdb : The Egress port was determined by consulting the Filtering DB. - rly-mpdb : The Egress port was determined by consulting the MIP CCM DB. Field type <SignedInteger> - a signed integer	Value returned in the Relay Action field. <i>This element is only shown in detail mode.</i>
chassis-id-format	Parameter type: <Cfm::LldpChassisIdSubtype> (not-applic chassis-component interface-alias port-component mac-address network-address interface-name local <SignedInteger>) Possible values: - not-applic : not applicable - chassis-component : Reference IETF RFC 2737 - interface-alias : Reference IETF RFC 2863	Specifies the format of the Chassis ID returned in the Sender ID TLV of the LTR, if present. <i>This element is only shown in detail mode.</i>

205 CFM Management Commands.

name	Type	Description
	- port-component : Reference IETF RFC 2737 - mac-address : - network-address : - interface-name : Reference IETF RFC 2863 - local : An alph-numeric string. Field type <SignedInteger> - a signed integer	
chassis-id	Parameter type: <Cfm::LldpChassisIdType> - a variable length octet string 0..16 - length: x<=16	The Chassis ID returned in the Sender ID TLV of the LTR, if present. <i>This element is only shown in detail mode.</i>
mgmt-addr-domain	Parameter type: <Object> - an object identifier	The TDomain that identifies the type and format of the address of the SNMP agent of the system transmitting the LTR. <i>This element is only shown in detail mode.</i>
mgmt-addr	Parameter type: <Cfm::MgmtAddrType> - a variable length octet string 0..50 - length: x<=50	<i>This element is only shown in detail mode.</i>
ltr-ingress	Parameter type: <Cfm::IngressActionFieldValueType> (ingress-no-tlv ingress-ok ingress-down ingress-blocked ingress-vid <SignedInteger>) Possible values: - ingress-no-tlv : There is no Reply Ingress TLV. - ingress-ok : The target data frame would be passed through to the MAC Relay Entity. - ingress-down : The bridge Port's MAC_Operational parameter is false - ingress-blocked : The target data frame would not be forwarded if received on this port. - ingress-vid : The ingress port is not in the member set of the LTM's VID. Field type <SignedInteger> - a signed integer	The value returned in the Ingress Action Field of the Reply Ingress TLV of the LTR. <i>This element is only shown in detail mode.</i>
ingr-mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address returned in the ingress MAC address field of the Reply ingress TLV of the LTR. <i>This element is only shown in detail mode.</i>
ingr-portid-stype	Parameter type: <Cfm::LldpPortIdSubtype> (none interface-alias port-component mac-address network-address interface-name agent-circuit-id local <SignedInteger>) Possible values: - none :	Format of the Ingress port ID. <i>This element is only shown in detail mode.</i>

name	Type	Description
	- interface-alias : - port-component : - mac-address : - network-address : - interface-name : - agent-circuit-id : - local : Field type <SignedInteger> - a signed integer	
ingr-portid	Parameter type: <Cfm::LldpPortIdType> - a variable length octet string 0..16 - length: x<=16	The Ingress port ID. <i>This element is only shown in detail mode.</i>
ltr-egress	Parameter type: <Cfm::EgressActionFieldValueType> (egress-no-tlv egress-ok egress-down egress-blocked egress-vid <SignedInteger>) Possible values: - egress-no-tlv : There is no Reply Egress TLV. - egress-ok : The target data frame would be forwarded. - egress-down : The egress port can be identified, but that bridge Port's MAC_Operational parameter is false - egress-blocked : The target data frame would not pass through the egress port. - egress-vid : The egress port can be identified, but the bridge port is not in the LTM's VID member set. Field type <SignedInteger> - a signed integer	The value returned in the Egress Action Field of the Reply Egress TLV of the LTR. <i>This element is only shown in detail mode.</i>
egr-mac	Parameter type: <Vlan::MacAddr> - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	MAC address returned in the egress MAC address field of the Reply egress TLV of the LTR. <i>This element is only shown in detail mode.</i>
egr-portid-type	Parameter type: <Cfm::LldpPortIdSubtype> (none interface-alias port-component mac-address network-address interface-name agent-circuit-id local <SignedInteger>) Possible values: - none : - interface-alias : - port-component : - mac-address : - network-address : - interface-name : - agent-circuit-id : - local : Field type <SignedInteger> - a signed integer	Format of the Egress port ID. <i>This element is only shown in detail mode.</i>
egr-portid	Parameter type: <Cfm::LldpPortIdType>	The Egress port ID.

205 CFM Management Commands.

name	Type	Description
	- a variable length octet string 0..16 - length: x<=16	<i>This element is only shown in detail mode.</i>
org-spec-tlv	Parameter type: <Cfm::OrgSpecTlvType> - a variable length octet string 0..7 - length: x<=7	All Orginization specific TLVs returned in the LTR, if any. <i>This element is only shown in detail mode.</i>

205.6 CFM Single Ended Synthetic Loss Measurement message Management Command

Command Description

This command is executed to initiate a test of Single Ended Synthetic Loss Measurement messages.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges, and executed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin cfm single-ended-slm
```

205.7 Single Ended Synthetic Loss Measurement message Management Command

Command Description

This command initiates the test of Single Ended Synthetic Loss Measurement messages.

A number of Single Ended Synthetic Loss Measurement messages can be requested to be send from a specified MEP towards a specified destination MAC address.

User Level

The command can be accessed by operators with alarm , oam , vlan privileges, and executed by operators with alarm , oam , vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin cfm single-ended-slm domain (domain) association <Cfm::CfmMaIndexType> mep <Cfm::MepIdType>
target-mac <Vlan::MacAddr> [ no send-count | send-count <Cfm::SlmSendCountType> ] [ no size | size
<Cfm::SlmPacketSizeType> ] [ no timeout | timeout <Cfm::SlmTimeoutType> ] [ no interval | interval
<Cfm::SlmIntervalType> ] [ no priority | priority <Vlan::Priority> ]
```

Command Parameters

Table 205.7-1 "Single Ended Synthetic Loss Measurement message Management Command" Resource Parameters

Resource Identifier	Type	Description
(domain)	Format: - Maintenance Domain (MD) index - range: [1...4294967295]	Maintenance Domain Index.
association	Parameter type: <Cfm::CfmMaIndexType> Format: - Maintenance Association (MA) index. Unique within an MD - range: [1...4294967295]	Maintenance Association Index.
mep	Parameter type: <Cfm::MepIdType> Format: - MA End Point (MEP) ID. Unique within an MA - range: [1...8191]	Maintenance Association End Point (MEP) ID. Unique within an MA.
target-mac	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	The MAC address for the OAM target: a unicast destination MAC address used in the SLM.

Table 205.7-2 "Single Ended Synthetic Loss Measurement message Management Command"

Command Parameters

Parameter	Type	Description
[no] send-count	Parameter type: <Cfm::SlmSendCountType> Format: - The number of Synthetic Loss Measurement messages to be transmitted. - range: [1...100]	<i>optional parameter with default value: 1L</i> The number of SLM packets to be sent. Allowed range : 1 to 100.
[no] size	Parameter type: <Cfm::SlmPacketSizeType> Format: - The Data TLV size of Synthetic Loss Measurement messages to be transmitted. - range: [0...1500]	<i>optional parameter with default value: 0L</i> Size of data TLV. Allowed range : 0 to 1500.
[no] timeout	Parameter type: <Cfm::SlmTimeoutType> Format: - The timeout for Synthetic Loss Measurement messages to be transmitted. - range: [5...10]	<i>optional parameter with default value: 5L</i> The timeout in seconds to wait for each SLR. Allowed range : 5 to 10.
[no] interval	Parameter type: <Cfm::SlmIntervalType> Format: - The interval for Synthetic Loss Measurement messages to be transmitted. - range: [1...10]	<i>optional parameter with default value: 5L</i> The interval in seconds between each SLM packet to be sent. Allowed range : 1 to 10.
[no] priority	Parameter type: <Vlan::Priority> Format: - priority of ethernet frames - range: [0...7]	<i>optional parameter with default value: 7L</i> Priority. A 3 bit value to be used in the VLAN tag. Allowed range : 0 to 7.

Command Output

Table 205.7-3 "Single Ended Synthetic Loss Measurement message Management Command"
Display parameters

Specific Information		
name	Type	Description
remote-mep	Parameter type: <Cfm::MepIdType> - MA End Point (MEP) ID. Unique within an MA - range: [0,1...8191,65535]	Remote Maintenance Association End Point Id. <i>This element is always shown.</i>
slm-transmitted	Parameter type: <Counter> - 32 bit counter	The total number of SLM messages transmitted. <i>This element is always shown.</i>
slr-received	Parameter type: <Counter> - 32 bit counter	The total number of SLR messages received. <i>This element is always shown.</i>
in-loss	Parameter type: <Cfm::SignedIntType> - Signed Integer. - range: [-2147483647...2147483647L]	The total number of Synthetic Loss Reply messages transmitted from the Remote MEP, but not received at the Local MEP. <i>This element is always shown.</i>
out-loss	Parameter type: <Cfm::SignedIntType> - Signed Integer. - range: [-2147483647...2147483647L]	The total number of Synthetic Loss Measurement messages transmitted from the Local MEP, but not received at the Remote MEP. <i>This element is always shown.</i>
un-ack	Parameter type: <Cfm::SignedIntType> - Signed Integer.	The total number of unacknowledged Synthetic Loss

205 CFM Management Commands.

name	Type	Description
	- range: [-2147483647...2147483647L]	Measurement messages. <i>This element is always shown.</i>
test-id	Parameter type: <Cfm::SlmOnDemandTestIdType> - The Test Id for On Demand Synthetic Loss Measurement messages. - range: [0...4294967295]	The Test Id for On Demand Synthetic Loss Measurement messages. <i>This element is always shown.</i>

206- Protection Group Management Commands

206.1 Protection Group Management Command Tree	206-7200
206.2 Protection Group Switchover Management Command	206-7201

206.1 Protection Group Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Protection Group Management Commands".

Command Tree

```
----admin
  ----port-protection
    - (protection-group)
    - activate
```

206.2 Protection Group Switchover Management Command

Command Description

This command allows the operator to switch over from one port to the other port in a protection group.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin port-protection (protection-group) activate <RedPort::ActivePortIndex>
```

Command Parameters

Table 206.2-1 "Protection Group Switchover Management Command" Resource Parameters

Resource Identifier	Type	Description
(protection-group)	Format: (pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId>) Possible values: - pon : pon-aid - chpair : chpair-aid Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier	the protection group identifier - namely the port identifier of the first port in the group

Table 206.2-2 "Protection Group Switchover Management Command" Command Parameters

Parameter	Type	Description
activate	Parameter type: <RedPort::ActivePortIndex> Format: (pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId>	<i>optional parameter</i> the port identifier of the desired port to switch over in the protection group

206 Protection Group Management Commands

Parameter	Type	Description
	no-interface chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId>) Possible values: - pon : pon-aid - chpair : chpair-aid - no-interface : no interface Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier	

207- Efm Oam Management Command

207.1 Efm Oam Management Command Tree	207-7204
207.2 Efm Oam Interface Management Command	207-7205

207.1 Efm Oam Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Efm Oam Management Command".

Command Tree

```
----admin
  ----efm-oam
    ----interface
      - (interface)
      - (loopback-action)
      X (traffgen-action)
      - parser-action
      - loopback-timeout
```

207.2 Efm Oam Interface Management Command

Command Description

This management command allows next actions: - Enable / disable efm oam remote loopback on a peer device via specified interface. - Start / stop internal traffic generator on specified interface in remote loopback. - Parser Action: Forward / discard the looped back packets. - Loopback Timeout: Timeout for clearing the remote loopback configuration while the remote loopback configuration is enabled. Note: loopback-action is a mandatory parameter.

User Level

The command can be accessed by operators with transport privileges, and executed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> admin efm-oam interface (interface) (loopback-action) [ (traffgen-action) ] [ parser-action <Ether::ParserAction> ] [ loopback-timeout <Ether::LoopbackTimeout> ]
```

Command Parameters

Table 207.2-1 "Efm Oam Interface Management Command" Resource Parameters

Resource Identifier	Type	Description
(interface)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	identification of EFM port / Ethernet port

Table 207.2-2 "Efm Oam Interface Management Command" Command Parameters

Parameter	Type	Description
(loopback-action)	Format: (enable-loopback disable-loopback) Possible values: - enable-loopback : initiate loopback on specified itf - disable-loopback : disable loopback on specified itf	<i>optional parameter</i> enable or disable efm oam remote loopback, this is a mandatory parameter.
(traffgen-action)	Format: (start-traff-gen stop-traff-gen)	<i>obsolete parameter that will be ignored</i> stop or start the internal traffic

207 Efm Oam Management Command

Parameter	Type	Description
	Possible values: - start-traff-gen : Starts the internal traffic generator on specified itf - stop-traff-gen : Stops the internal traffic generator on specified itf	generator
parser-action	Parameter type: <Ether::ParserAction> Format: (discard forward) Possible values: - discard : discard looped back packets - forward : forward looped back packets	<i>optional parameter</i> Loopback parser action
loopback-timeout	Parameter type: <Ether::LoopbackTimeout> Format: - A timeout value expressed in seconds - unit: seconds - range: [0...3600]	<i>optional parameter</i> Timeout value for clearing Remote Loopback configuration while the remote loopback configuration is enabled. Default value: 0 - means no timeout configured for clearing the remote loopback configuration.

208- Epon Management Command

208.1 Epon Management Command Tree	208-7208
208.2 Epon Ont Ethernet Reautodetect Management Command	208-7209

208.1 Epon Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Epon Management Command".

Command Tree

```
----admin
  ----epon
    ----diagnostic
      - (pon-idx)
      - mode
```

208.2 Epon Ont Ethernet Reautodetect Management Command

Command Description

This command allows the operator to restart auto negotiation of an Ethernet port.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin epon diagnostic (pon-idx) [ mode <Epon::mode> ]
```

Command Parameters

Table 208.2-1 "Epon Ont Ethernet Reautodetect Management Command" Resource Parameters

Resource Identifier	Type	Description
(pon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier	identification of pon

Table 208.2-2 "Epon Ont Ethernet Reautodetect Management Command" Command Parameters

Parameter	Type	Description
mode	Parameter type: <Epon::mode> Format: (stop onoff pattern) Possible values: - stop : Stop PON Rogue test - onoff : Initiate ON-OFF TEST PON Rogue Test - pattern : Initiate PATTERN TEST PON Rogue Test	<i>optional parameter</i> enable or disable pon rogue test diagnostic

209- Iphost Management Command.

209.1 Iphost Management Command. Tree
209.2 Iphost ping test Management Command

209-7211
209-7212

209.1 Iphost Management Command. Tree

Description

This chapter gives an overview of nodes that are handled by "Iphost Management Command."

Command Tree

```
----admin
  ----iphost
    ----ping
      - (index)
      - dest-ip
      - [no] count
```

209.2 Iphost ping test Management Command

Command Description

This command allows the operator to manage the iphost ping test

User Level

The command can be accessed by operators with sip,megaco,vlan privileges, and executed by operators with sip,megaco,vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin iphost ping (index) dest-ip <Gpon::destIp> [ no count | count <Gpon::PingCount> ]
```

Command Parameters

Table 209.2-1 "Iphost ping test Management Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (ont : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::IpHostID> ont:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Ng2::IpHostID>) Possible values: - ont:ng2 : ngpon2 ont - ont : ont Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Gpon::IpHostID> - iphost id Field type <Ng2::IpHostID>	an unique index related to the ping test entry

Resource Identifier	Type	Description
	- iphost id (ngpon2)	

Table 209.2-2 "Iphost ping test Management Command" Command Parameters

Parameter	Type	Description
dest-ip	Parameter type: <Gpon::destIp> Format: (explicit : <Ip::V4Address> hostname : <Gpon::hostname> uri-prof : name : <AsamProfileName> uri-prof : <Gpon:UriProfilePtr>) Possible values: - explicit : explicit ip of destination,example:10.0.0.1 - hostname : hostname of destination,example:www.google.com - uri-prof : uri profile related to destination Field type <Ip::V4Address> - IPv4-address Field type <Gpon::hostname> - host name address - length: x<=255 Possible values: - name : uri profile name Field type <Gpon:UriProfilePtr> - Index of the URI profile that contains the IP address of the server - range: [0...100] Data driven field type Possible values are depending on the actual configuration and software. The currently allowed values can be shown with online-help.	<i>mandatory parameter</i> destination ip of ping test
[no] count	Parameter type: <Gpon::PingCount> Format: - ping count - range: [0...5]	<i>optional parameter with default value: 0</i> The number of pings to attempt

Command Output

Table 209.2-3 "Iphost ping test Management Command" Display parameters

Specific Information		
name	Type	Description
ip-addr	Parameter type: <L2cp::InetAddress> - IPv4-address	The IP address of the target host be pinged <i>This element is always shown.</i>
count-tx	Parameter type: <Gpon::PingCount> - ping count - range: [0...5]	The number of pings attempted <i>This element is always shown.</i>
count-rx	Parameter type: <Gpon::PingCount> - ping count - range: [0...5]	The number of pings which received reply <i>This element is always shown.</i>
delay-min	Parameter type: <Gpon::PingDelay> - ping count - range: [0...65535]	The minimum delay of the received responses <i>This element is always shown.</i>
delay-max	Parameter type: <Gpon::PingDelay> - ping count - range: [0...65535]	The maximum delay of the received responses <i>This element is always shown.</i>
exit-status	Parameter type: <Gpon::TestCmd>	Completion status of the

209 Iphost Management Command.

name	Type	Description
	(initiate inprogress noanswer alive norun rejected noparse) Possible values: - initiate : Initiate test - inprogress : Test is in progress - noanswer : Destination did not answe - alive : Destination is alive - norun : OLT did not send command to ONT - rejected : ONT rejected command for unknown reason - noparse : ONT command parse error	command <i>This element is always shown.</i>

210- LineTest Management Commands

210.1 LineTest Management Command Tree	210-7216
210.2 MELT reset Status Command	210-7217
210.3 MELT Selftest Status Command	210-7218

210.1 LineTest Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "LineTest Management Commands".

Command Tree

```
----admin
  ----linetest
    ----single
      - (if-index)
      - melt-reset
    ----melt-selftest
      - (self-test-status)
```

210.2 MELT reset Status Command

Command Description

This command is to triggers the reset operation on MELT board.

User Level

The command can be accessed by operators with sip , xdsl privileges, and executed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

```
> admin linetest single (if-index) melt-reset <LineTest::ResetStatus>
```

Command Parameters

Table 210.2-1 "MELT reset Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	interface index of the port

Table 210.2-2 "MELT reset Status Command" Command Parameters

Parameter	Type	Description
melt-reset	Parameter type: <LineTest::ResetStatus> Format: resetstart Possible values: - resetstart : the MELT reset operation is triggered	<i>optional parameter</i> Trigger the reset operation on the MELT board.

210.3 MELT Selftest Status Command

Command Description

This command is to triggers the self test operation on MELT board.

User Level

The command can be accessed by operators with sip , xdsl privileges, and executed by operators with sip , xdsl privileges.

Command Syntax

The command has the following syntax:

> admin linetest single (if-index) melt-selftest (self-test-status)

Command Parameters

Table 210.3-1 "MELT Selftest Status Command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> Possible values: - lt : lt-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number	interface index of the port

Table 210.3-2 "MELT Selftest Status Command" Command Parameters

Parameter	Type	Description
(self-test-status)	Format: teststart Possible values: - teststart : test start state	<i>optional parameter</i> Trigger the selftest operation on the MELT board.

211- *BER LineTest Configuration Commands*

211.1 BER LineTest Configuration Command Tree
211.2 E1 BER test command

211-7220
211-7221

211.1 BER LineTest Configuration Command Tree

Description

This chapter gives an overview of nodes that are handled by "BER LineTest Configuration Commands".

Command Tree

```
----admin
  ----e1
    ----diagnos-test
      - (if-index)
      - [no] ber-test
      - [no] ber-testpattern
      - [no] ber-interval
      - [no] loop-back
```

211.2 E1 BER test command

Command Description

This command is to trigger the BER test on e1 interface.

User Level

The command can be accessed by operators with xdsl privileges, and executed by operators with xdsl privileges.

Command Syntax

The command has the following syntax:

```
> admin e1 diagnos-test (if-index) [ no ber-test | ber-test <E1::BERTest> ] [ no ber-testpattern | ber-testpattern
<E1::BERTestPattern> ] [ no ber-interval | ber-interval <E1::BERInterval> ] [ no loop-back | loop-back
<E1::LoopBackType> ]
```

Command Parameters

Table 211.2-1 "E1 BER test command" Resource Parameters

Resource Identifier	Type	Description
(if-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number	interface index of the port

Table 211.2-2 "E1 BER test command" Command Parameters

Parameter	Type	Description
[no] ber-test	Parameter type: <E1::BERTest> Format: (disable enable abort) Possible values: - disable : Disable BER test - enable : Enable BER test - abort : Abort BER test	<i>optional parameter with default value: "disable"</i> Trigger the BER test on e1 interface
[no] ber-testpattern	Parameter type: <E1::BERTestPattern> Format: (framed-twopow11 framed-twopow15	<i>optional parameter with default value: "none"</i> BER testpattern to be used for performing BER test

211 BER LineTest Configuration Commands

Parameter	Type	Description
	unframed-twopow11 unframed-twopow15 none) Possible values: - framed-twopow11 : Framed Pseudo-random repeating test pattern with 2 ¹¹ bits - framed-twopow15 : Framed Pseudo-random repeating test pattern with 2 ¹⁵ bits - unframed-twopow11 : Unframed Pseudo-random repeating test pattern with 2 ¹¹ bits - unframed-twopow15 : Unframed Pseudo-random repeating test pattern with 2 ¹⁵ bits - none : No-Pattern	
[no] ber-interval	Parameter type: <E1::BERInterval> Format: - Maximum time allowed to perform BER test - range: [0...4095]	<i>optional parameter with default value: 0</i> Maximum time allowed for BER test
[no] loop-back	Parameter type: <E1::LoopBackType> Format: (no-loop local-payload remote-payload remote-line local-line) Possible values: - no-loop : no loopback - local-payload : LOCAL-Payload - remote-payload : Remote-payload - remote-line : Remote-line - local-line : Local-Line	<i>optional parameter with default value: "no-loop"</i> Trigger the LoopBack test on e1 interface

212- Dual-Parenting Protection Group Management Commands

212.1 Dual-Parenting Protection Group Management Command Tree	212-7224
212.2 Dual-Parenting Protection Group Management Command	212-7225

212.1 Dual-Parenting Protection Group Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Dual-Parenting Protection Group Management Commands".

Command Tree

```
----admin
  ----dual-parenting
```

212.2 Dual-Parenting Protection Group Management Command

Command Description

This command allows the operator to manage dual-parenting protection group.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> admin dual-parenting

213- Dual-Parenting Protection Group Switchover Management Commands

213.1 Dual-Parenting Protection Group Switchover Management Command Tree	213-7227
213.2 Dual-Parenting Protection Group Switchover Management Command	213-7228

213.1 Dual-Parenting Protection Group Switchover Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Dual-Parenting Protection Group Switchover Management Commands".

Command Tree

```
----admin
  ----dual-parenting
    ----protection-group
      - (local-port)
      - switchover
```

213.2 Dual-Parenting Protection Group Switchover Management Command

Command Description

This command allows the operator to switch over in a dual-parenting protection group.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin dual-parenting protection-group (local-port) switchover <Equipm::DualParentProtGrpSwitchCommand>
```

Command Parameters

Table 213.2-1 "Dual-Parenting Protection Group Switchover Management Command" Resource Parameters

Resource Identifier	Type	Description
(local-port)	Format: (pon : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> chpair : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId>) Possible values: - pon : pon-aid - chpair : chpair-aid Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelPairId> - the channel pair identifier	the local port identifier of the dual-parenting in the protection group

Table 213.2-2 "Dual-Parenting Protection Group Switchover Management Command" Command Parameters

Parameter	Type	Description
switchover	Parameter <Equipm::DualParentProtGrpSwitchCommand> type:	<i>optional parameter</i> run switchover command

213 Dual-Parenting Protection Group Switchover Management Commands

Parameter	Type	Description
	Format: forced-switchover Possible values: - forced-switchover : forced switch over	

214- *Equipment Management Commands*

214.1 Equipment Management Command Tree	214-7231
214.2 Equipment Management Command	214-7232
214.3 Slot Management Command	214-7233
214.4 Slot Management Command	214-7235

214.1 Equipment Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Equipment Management Commands".

Command Tree

- admin**
 - equipment**
 - (prepare-sys-shutdown)
 - reboot-isam
 - slot**
 - **(index)**
 - reboot
 - [no] overrule
 - (clr-restart-cnt-per-lt)
 - applique**
 - **(index)**
 - reboot

214.2 Equipment Management Command

Command Description

This command allows the operator to manage the node: prepare the system for shutdown, reset the node or reset the SHub/IHub.

Note: An attempt to reset the SHub/IHub will be rejected.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment [ (prepare-sys-shutdown) ] [ reboot-isam <Equipm::SystemRestart> ]
```

Command Parameters

Table 214.2-2 "Equipment Management Command" Command Parameters

Parameter	Type	Description
(prepare-sys-shutdown)	Format: prepare-sys-shutdown Possible values: - prepare-sys-shutdown : prepare the system for shutdown	<i>optional parameter</i> prepare the system for shutdown
reboot-isam	Parameter type: <Equipm::SystemRestart> Format: (with-self-test without-self-test hot-restart) Possible values: - with-self-test : restart with selftest - without-self-test : restart without selftest - hot-restart : reboot, but don't touch the hardware	<i>optional parameter</i> reboot the full isam (with xhub if any)

214.3 Slot Management Command

Command Description

This command allows the operator to manage a slot and the units in the slot.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment slot (index) [ reboot <Equipm::BoardRestart> ] [ [ no ] overrule ] [ (clr-restart-cnt-per-lt) ]
```

Command Parameters

Table 214.3-1 "Slot Management Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> nt-a nt-b nt acu : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::EqSlotId> ext-a : <Eqpt::RackId> / <Eqpt::ShelfId> ext-b : <Eqpt::RackId> / <Eqpt::ShelfId> ctrl : <Eqpt::RackId> / <Eqpt::ShelfId> vlt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::VirtualSlotId>) Possible values: - lt : lt-slot - vlt : virtual LT slot (VVPS board can only be planned at NANT-E / FANT-F) - nt-a : nt-a slot - nt-b : nt-b slot - nt : nt slot - ext-a : nt-a slot in an extension shelf - ext-b : nt-b slot in an extension shelf - acu : acu slot - ctrl : ctrl-slot Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	the identification of the slot

Resource Identifier	Type	Description
	- the LT slot number Field type <Eqpt::VirtualSlotId> - the virtual LT slot number Field type <Eqpt::EqSlotId> - the equipment slot number	

Table 214.3-2 "Slot Management Command" Command Parameters

Parameter	Type	Description
reboot	Parameter type: <Equipm::BoardRestart> Format: (with-selftest without-selftest hot-restart) Possible values: - with-selftest : reboot the board with self test - without-selftest : reboot the board without self test - hot-restart : reboot but don't touch the hardware (not for LSM and Applique)	<i>optional parameter</i> reboot the card in the slot
[no] overrule	Parameter type: boolean	<i>optional parameter</i> overrule the software on this board
(clr-restart-cnt-per-lt)	Format: clr-restart-cnt-per-lt Possible values: - clr-restart-cnt-per-lt: clear restart counter per LT	<i>optional parameter</i> clear the restart counter per LT

214.4 Slot Management Command

Command Description

This command allows the operator to manage a slot and the units in the slot.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment applique (index) [ reboot <Equipm::BoardRestart> ]
```

Command Parameters

Table 214.4-1 "Slot Management Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (iont : <Eqpt::RackId> / <Eqpt::ShelfId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::AppliqueSlotId> lp : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::LtAppliqueSlotId> ntio-1 ntio-2) Possible values: - iont : an nt applique slot - lp : an lt applique slot - ntio-1 : an nt applique slot in a single or multiple-ntio-shelf - ntio-2 : an nt applique slot in a multiple-ntio-shelf Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::AppliqueSlotId> - the applique slot number Field type <Eqpt::LtAppliqueSlotId> - the LT Applique slot number	the identification of the applique

Table 214.4-2 "Slot Management Command" Command Parameters

Parameter	Type	Description
reboot	Parameter type: <Equipm::BoardRestart> Format: (with-selftest without-selftest	<i>optional parameter</i> reboot the card in the applique

214 Equipment Management Commands

Parameter	Type	Description
	hot-restart) Possible values: - with-selftest : reboot the board with self test - without-selftest : reboot the board without self test - hot-restart : reboot but don't touch the hardware (not for LSM and Applique)	

215- ONT Management Command

215.1 ONT Management Command Tree	215-7238
215.2 ONT Interface Management Command	215-7239
215.3 ONT Card Management Command	215-7241
215.4 ONT Software Control Management Command	215-7243
215.5 ONT Software Version Management Command	215-7244
215.6 ONT Data Store Management Command	215-7245
215.7 ONT Reboot via SN Management Command	215-7247

215.1 ONT Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "ONT Management Command".

Command Tree

```
----admin
  ----equipment
    ----ont
      ----interface
        - (index)
        - (self-test)
        - reboot
        - activate-chpair
        - chpair-role-exch
        - optitrans-disable-time
      ----slot
        - (ont-slot-idx)
        - (self-test)
      ----sw-ctrl
        - (sw-ctrl-idx)
        - (revert-sw-ver)
      ----sw-version
        - delete-version
      ----data-store
        - (index)
        - (force)
      ----sernum
        - (sernum)
        - reboot
```

215.2 ONT Interface Management Command

Command Description

This command initiate the self-test run on ont. When the test is finished, a pass/fail result is reported.

Also, this command can be used to set the target channel-pair manually for ngpon2 ont

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment ont interface (index) [ (self-test) ] [ reboot <Gpon::OntRestart> ] [ activate-chpair
<Ng2::ChannelPairIndexOrZero> ] [ chpair-role-exch <Ng2::ChPairRoleExch> ] [ optitrans-disable-time
<Gpon::DisOpticalTransTime> ]
```

Command Parameters

Table 215.2-1 "ONT Interface Management Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identification of ont

Table 215.2-2 "ONT Interface Management Command" Command Parameters

215 ONT Management Command

Parameter	Type	Description
(self-test)	Format: self-test Possible values: - self-test : initiate self-test	<i>optional parameter</i> runs the self-test on the ont
reboot	Parameter type: <Gpon::OntRestart> Format: (with-active-image via-ploam) Possible values: - with-active-image : reboot with currently active software image - via-ploam : reboot via ploam	<i>optional parameter</i> reboot the ont
activate-chpair	Parameter type: <Ng2::ChannelPairIndexOrZero> Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::ChannelPairId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::ChannelPairId> - the channel pair identifier	<i>optional parameter</i> channel-pair on which ngpon2 ont shall carry service
chpair-role-exch	Parameter type: <Ng2::ChPairRoleExch> Format: (no-action pref-with-altpref pref-with-prot) Possible values: - no-action : no action - pref-with-altpref : exchange roles of pref-channel-pair with alt-pref-ch-pair - pref-with-prot : exchange roles of pref-channel-pair with prot-channel-pair	<i>optional parameter</i> exchange roles between two channel-pairs
optitrans-disable-time	Parameter type: <Gpon::DisOpticalTransTime> Format: (permanently <Gpon::DisOpticalTransTime>) Possible values: - permanently : permanently : turn off optical transceiver forever Field type <Gpon::DisOpticalTransTime> - the specified time for OLT to command ONU to disable its own optical transceiver - unit: sec - range: [1...65535]	<i>optional parameter</i> OLT command ONU to disable its own optical transceiver for the specified time

215.3 ONT Card Management Command

Command Description

This command run a self-test on an ont pluggable card. when the test is finished, a pass/fail result is reported.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment ont slot (ont-slot-idx) [ (self-test) ]
```

Command Parameters

Table 215.3-1 "ONT Card Management Command" Resource Parameters

Resource Identifier	Type	Description
(ont-slot-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot - range: [1...14]	current operational parameters for the ont

Table 215.3-2 "ONT Card Management Command" Command Parameters

215 ONT Management Command

Parameter	Type	Description
(self-test)	Format: self-test Possible values: - self-test : initiate self-test	<i>optional parameter</i> runs the self-test on the ont card

215.4 ONT Software Control Management Command

Command Description

This command restores an automatic ont software download of a planned software version to the previous planned software version.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment ont sw-ctrl (sw-ctrl-idx) (revert-sw-ver)
```

Command Parameters

Table 215.4-1 "ONT Software Control Management Command" Resource Parameters

Resource Identifier	Type	Description
(sw-ctrl-idx)	Format: - ont software control table index - range: [1...250]	ont software control table index

Table 215.4-2 "ONT Software Control Management Command" Command Parameters

Parameter	Type	Description
(revert-sw-ver)	Format: revert-sw-ver Possible values: - revert-sw-ver : revert software version	<i>mandatory parameter</i> revert ont software version in the control table

215.5 ONT Software Version Management Command

Command Description

This command sets the ont software version that a manager wants deleted from the nt file system.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment ont sw-version [ delete-version <Gpon::OntVersion> ]
```

Command Parameters

Table 215.5-2 "ONT Software Version Management Command" Command Parameters

Parameter	Type	Description
delete-version	Parameter type: <Gpon::OntVersion> Format: - the version number of a card - length: x<=14	<i>optional parameter</i> specify an ont software version that a manager wants deleted from the nt file system

Command Output

Table 215.5-3 "ONT Software Version Management Command" Display parameters

Specific Information		
name	Type	Description
status	Parameter type: <Gpon::OntVerStatus> (unknown in-progress success failed) Possible values: - unknown : Command has never been issued - in-progress : deletion in progress - success : file successfully deleted - failed : unable to delete file	ont software version delete status. <i>This element is always shown.</i>

215.6 ONT Data Store Management Command

Command Description

This command forces an ont to save its data in flash memory.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

> admin equipment ont data-store (index) (force)

Command Parameters

Table 215.6-1 "ONT Data Store Management Command" Resource Parameters

Resource Identifier	Type	Description
(index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier	identification of ont

Table 215.6-2 "ONT Data Store Management Command" Command Parameters

Parameter	Type	Description
(force)	Format: force	<i>mandatory parameter</i> forces an ont to saves its data in

215 ONT Management Command

Parameter	Type	Description
	Possible values: - force :	flash memory

215.7 ONT Reboot via SN Management Command

Command Description

This command to reboot ont via serial number by sending PLOAM message.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment ont sernum (sernum) [ reboot <Gpon::OntReboot> ]
```

Command Parameters

Table 215.7-1 "ONT Reboot via SN Management Command" Resource Parameters

Resource Identifier	Type	Description
(sernum)	Format: <Gpon::VendorId> : <Gpon::SerialNo> Field type <Gpon::VendorId> - vendor id - 4 ASCII characters - range: [a-zA-Z0-9] - length: 4 Field type <Gpon::SerialNo> - serial num - 8 ASCII characters - range: [a-fA-F0-9] - length: 8	identification of ont

Table 215.7-2 "ONT Reboot via SN Management Command" Command Parameters

Parameter	Type	Description
reboot	Parameter type: <Gpon::OntReboot> Format: via-ploam Possible values: - via-ploam : reboot via ploam	<i>optional parameter</i> reboot the ont

216- EONT Management Command

216.1 EONT Management Command Tree	216-7249
216.2 Epon ONT reboot command	216-7250
216.3 Epon Ont Software Management Command	216-7251
216.4 Epon Ont LLID Loopback Command	216-7252
216.5 EONT Software Version Management Command	216-7253

216.1 EONT Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "EONT Management Command".

Command Tree

```
----admin
  ----equipment
    ----eont
      ----interface
        - (epon-idx)
        - reboot
      ----swdw
        - (epon-idx)
        - swctrl
        - sw-ver-dl
      ----llid
        - (llid-idx)
        - [no] loopbackadmin
      ----sw-version
        - delete-version
```

216.2 Epon ONT reboot command

Command Description

This command allows the operator to restart the ONT

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment eont interface (epon-idx) [ reboot <Epon::OntRestart> ]
```

Command Parameters

Table 216.2-1 "Epon ONT reboot command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index

Table 216.2-2 "Epon ONT reboot command" Command Parameters

Parameter	Type	Description
reboot	Parameter type: <Epon::OntRestart> Format: restart Possible values: - restart : reboot with currently active software image	<i>optional parameter</i> specifies how EPON ont must be rebooted

216.3 Epon Ont Software Management Command

Command Description

This command allows the operator to manage the ONT software

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment eont swdw (epon-idx) [ swctrl <Epon::swctrl> ] [ sw-ver-dl <Epon::swverdl> ]
```

Command Parameters

Table 216.3-1 "Epon Ont Software Management Command" Resource Parameters

Resource Identifier	Type	Description
(epon-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier	ONT index

Table 216.3-2 "Epon Ont Software Management Command" Command Parameters

Parameter	Type	Description
swctrl	Parameter type: <Epon::swctrl> Format: (act commit) Possible values: - act : active - commit : commit	<i>optional parameter</i> specification of SW version to be downloaded to ont in case sw-ver-pland equal to manual
sw-ver-dl	Parameter type: <Epon::swverdl> Format: - software version download - length: 1<=x<=16	<i>optional parameter</i> software version download

216.4 Epon Ont LLID Loopback Command

Command Description

This command allows the operator to enable or disable the ont llid loopback.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment eont llid (llid-idx) [ no loopbackadmin | loopbackadmin <Epon::LoopBack> ]
```

Command Parameters

Table 216.4-1 "Epon Ont LLID Loopback Command" Resource Parameters

Resource Identifier	Type	Description
(llid-idx)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::llid> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::llid> - Ont llid number, range 1 for EPON, range 1-8 for DPOE - range: [1...8]	identification of eont llid

Table 216.4-2 "Epon Ont LLID Loopback Command" Command Parameters

Parameter	Type	Description
[no] loopbackadmin	Parameter type: <Epon::LoopBack> Format: (enable disable) Possible values: - enable : Enable Loopback function - disable : Disable Loopback function	<i>optional parameter with default value: "disable"</i> Enable/Disable Loopback function

216.5 EONT Software Version Management Command

Command Description

This command sets the ont software version that a manager wants deleted from the nt file system.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment eont sw-version [ delete-version <Epon::EontVersion> ]
```

Command Parameters

Table 216.5-2 "EONT Software Version Management Command" Command Parameters

Parameter	Type	Description
delete-version	Parameter type: <Epon::EontVersion> Format: - eont sw version - length: x<=16	<i>optional parameter</i> specify an ont software version that a manager wants deleted from the nt file system

Command Output

Table 216.5-3 "EONT Software Version Management Command" Display parameters

Specific Information		
name	Type	Description
status	Parameter type: <Epon::OntVerStatus> (issued in-progress success failed) Possible values: - issued : Command has never been issued - in-progress : deletion in progress - success : file successfully deleted - failed : unable to delete file	ont software version delete status. <i>This element is always shown.</i>

217- Protection Group Management Commands

217.1 Protection Group Management Command Tree	217-7255
217.2 Protection Group NT switchover Command	217-7256

217.1 Protection Group Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Protection Group Management Commands".

Command Tree

```
----admin
  ----equipment
    ----protection-group
      - (prot-group-id)
      - [no] switchover
```

217.2 Protection Group NT switchover Command

Command Description

This command allows the operator to switchover in protection group of NT

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin equipment protection-group (prot-group-id) [ [ no ] switchover ]
```

Command Parameters

Table 217.2-1 "Protection Group NT switchover Command" Resource Parameters

Resource Identifier	Type	Description
(prot-group-id)	Format: - index of protection group - range: [1...109]	Index in NT ProtGroup Table

Table 217.2-2 "Protection Group NT switchover Command" Command Parameters

Parameter	Type	Description
[no] switchover	Parameter type: boolean	<i>optional parameter</i> NT switchover

218- Ethernet Management Commands

218.1 Ethernet Management Command Tree	218-7258
218.2 Ethernet Management Command	218-7259
218.3 Ethernet Statistics Commands	218-7260
218.4 Epon Ont Ethernet Reautodetect Command	218-7261
218.5 Gpon Ont Ethernet loopback Command	218-7262

218.1 Ethernet Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Ethernet Management Commands".

Command Tree

```
----admin
  ----ethernet

```

218.2 Ethernet Management Command

Command Description

This command allows the operator to manage the node: configure the ethernet parameters

User Level

The command can be accessed by operators with transport privileges, and executed by operators with transport privileges.

Command Syntax

The command has the following syntax:

> admin ethernet

218.3 Ethernet Statistics Commands

Command Description

This command allows the operator to reset the Ethernet counters.

User Level

The command can be accessed by operators with transport privileges, and executed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> admin ethernet statistics (stats-index) (clear-stats)
```

Command Parameters

Table 218.3-1 "Ethernet Statistics Commands" Resource Parameters

Resource Identifier	Type	Description
(stats-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> lt-link : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::LtBackPlPortId>) Possible values: - lt : lt-slot - lt-link : lt-slot-port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::LtBackPlPortId> - the lt backplane port number	index of the interface to an ethernet-like medium

Table 218.3-2 "Ethernet Statistics Commands" Command Parameters

Parameter	Type	Description
(clear-stats)	Format: clear-stats Possible values: - clear-stats : clear all Ethernet counters	<i>optional parameter</i> clear the ethernet counters

218.4 Epon Ont Ethernet Reautodetect Command

Command Description

This command allows the operator to restart auto negotiation of an Ethernet port.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin ethernet eont port (uni-index) [ (reautodetect) ]
```

Command Parameters

Table 218.4-1 "Epon Ont Ethernet Reautodetect Command" Resource Parameters

Resource Identifier	Type	Description
(uni-index)	Format: <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Epon::EontSlot> / <Epon::EontPort> Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Epon::EontSlot> - Epon Ont Slot - range: [1...16] Field type <Epon::EontPort> - Epon Ont Port - range: [1...64]	ONT UNI interface

Table 218.4-2 "Epon Ont Ethernet Reautodetect Command" Command Parameters

Parameter	Type	Description
(reautodetect)	Format: reautodetect Possible values: - reautodetect : restart autodetect	<i>optional parameter</i> restart autodetect

218.5 Gpon Ont Ethernet loopback Command

Command Description

This command allows the operator to enable/disable loopback mode of an Ethernet port, and set timeout for loopback.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin ethernet port (uni-idx) [ [ no ] loopback ] [ no loopback-timeout | loopback-timeout
<Gpon::loopbackTimeout> ]
```

Command Parameters

Table 218.5-1 "Gpon Ont Ethernet loopback Command" Resource Parameters

Resource Identifier	Type	Description
(uni-idx)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId> / <Gpon::OntSlotId> / <Gpon::OntPortId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier Field type <Ng2::OntId> - the ONT identifier Field type <Gpon::OntSlotId> - Gpon Ont Slot	identification of the uni interface index

Resource Identifier	Type	Description
	- range: [1...14] - Field type <Gpon::OntPortId> - Gpon Ont Port - range: [1...16]	

Table 218.5-2 "Gpon Ont Ethernet loopback Command" Command Parameters

Parameter	Type	Description
[no] loopback	Parameter type: boolean	<i>optional parameter</i> enable UNI port loopback mode
[no] loopback-timeout	Parameter type: <Gpon::loopbackTimeout> Format: - loopback time, zero means no-timeout for loopback - unit: sec - range: [0...43200]	<i>optional parameter with default value: 1800</i> the actual loopback timeout, value in seconds

219- Bridge Management Commands

219.1 Bridge Management Command Tree	219-7265
219.2 Learned Unicast MAC Address Management Command	219-7266
219.3 VLAN Management Command	219-7269

219.1 Bridge Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Bridge Management Commands".

Command Tree

```
----admin
  ----bridge
    ----learned-unicast-mac
      - (vlan-port)
      - unicast-mac-address
      - (delete)
    ----vlan-id
      - (id)
      - (delete-member-ports)
```

219.2 Learned Unicast MAC Address Management Command

Command Description

This command allows the operator to remove dynamically learned MAC addresses.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin bridge learned-unicast-mac (vlan-port) unicast-mac-address <Vlan::MacAddr> (delete)
```

Command Parameters

Table 219.2-1 "Learned Unicast MAC Address Management Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	vlan port

Resource Identifier	Type	Description
	vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Ng2::OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - vlan-port : vlan port - vlan-port:ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Ng2::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier	

Resource Identifier	Type	Description
	Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	
unicast-mac-address	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	unicast mac address

Table 219.2-2 "Learned Unicast MAC Address Management Command" Command Parameters

Parameter	Type	Description
(delete)	Format: delete Possible values: - delete : delete a unicast mac address	<i>optional parameter</i> delete a learned unicast mac address

219.3 VLAN Management Command

Command Description

This command allows the operator to remove the association between a VLAN and all its member ports.

This command is the only means to remove dynamic associations.

Removal of the port VLAN association includes removal of all MAC addresses from the filtering database for these port-VLAN associations.

Any outstanding duplicate MAC alarms for the port are cleared.

User Level

The command can be accessed by operators with vlan privileges, and executed by operators with vlan privileges.

Command Syntax

The command has the following syntax:

```
> admin bridge vlan-id (id) [ (delete-member-ports) ]
```

Command Parameters

Table 219.3-1 "VLAN Management Command" Resource Parameters

Resource Identifier	Type	Description
(id)	Format: (<Vlan::UVlanIndex> stacked : <Vlan::SVlanIndex> : <Vlan::CVlanIndex>) Possible values: - stacked : stacked vlan identity Field type <Vlan::UVlanIndex> - unstacked vlan identity - range: [1...4093,4096] Field type <Vlan::SVlanIndex> - service vlan identity - range: [2...4093] Field type <Vlan::CVlanIndex> - customer vlan identity - range: [0...4093]	vlan id

Table 219.3-2 "VLAN Management Command" Command Parameters

Parameter	Type	Description
(delete-member-ports)	Format: delete-member-ports Possible values: - delete-member-ports : remove associated bridge ports	<i>optional parameter</i> remove association between a vlan and all it's bridge ports

220- *Trap Management Commands*

220.1 Trap Management Command Tree	220-7271
220.2 Trap Manager Management Command	220-7272

220.1 Trap Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Trap Management Commands".

Command Tree

```
----admin
  ----trap
    ----manager
      - (address)
      - (reset-trap-buffer)
```

220.2 Trap Manager Management Command

Command Description

This command allows the operator to manage a trap manager.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> admin trap manager (address) [ (reset-trap-buffer) ]
```

Command Parameters

Table 220.2-1 "Trap Manager Management Command" Resource Parameters

Resource Identifier	Type	Description
(address)	Format: <Ip::V4Address> : <Trap::Port> Field type <Ip::V4Address> - IPv4-address Field type <Trap::Port> - trap port number - range: [1...65535]	the IP address of the manager

Table 220.2-2 "Trap Manager Management Command" Command Parameters

Parameter	Type	Description
(reset-trap-buffer)	Format: reset-trap-buffer Possible values: - reset-trap-buffer : reset the trap buffer	<i>optional parameter</i> reset the trap buffer

221- *Interface Management commands*

221.1 Interface Management commands Tree	221-7274
221.2 Interface Troubleshooting Ethernet Statistics Commands	221-7275

221.1 Interface Management commands Tree

Description

This chapter gives an overview of nodes that are handled by "Interface Management commands".

Command Tree

```
----admin
  ----interface
    ----trouble-shooting
      ----ethernet
        ----statistics
          - (slot-id)
          - (clr-trbt-eth-stats)
```

221.2 Interface Troubleshooting Ethernet Statistics Commands

Command Description

This command allows the operator to reset the FD-REM trouble-shooting counters at the far-end side. This Clear command is supported only for NDLT-G and NELT-B LT card, Error will be thrown for other LT cards.

User Level

The command can be accessed by operators with equipment privileges, and executed by operators with equipment privileges.

Command Syntax

The command has the following syntax:

```
> admin interface trouble-shooting ethernet statistics (slot-id) (clr-trbt-eth-stats)
```

Command Parameters

Table 221.2-1 "Interface Troubleshooting Ethernet Statistics Commands" Resource Parameters

Resource Identifier	Type	Description
(slot-id)	Format: (lt : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> lt-link : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::LtBackPlPortId>) Possible values: - lt : lt-slot - lt-link : lt-slot-port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::LtBackPlPortId> - the lt backplane port number	slot

Table 221.2-2 "Interface Troubleshooting Ethernet Statistics Commands" Command Parameters

Parameter	Type	Description
(clr-trbt-eth-stats)	Format: clr-trbt-eth-stats Possible values: - clr-trbt-eth-stats : clear all trouble shooting counters	<i>optional parameter</i> clear the trouble shooting counters

222- DHCP Management Command

222.1 DHCP Management Command Tree	222-7277
222.2 DHCP Relay User Port Management Command	222-7278
222.3 DHCP Relay User Port Management Command	222-7281

222.1 DHCP Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "DHCP Management Command".

Command Tree

```
----admin
  ----dhcp-relay
    ----port-stats
      - (vlan-port)
      - (clear-statistics)
    ----v6-port-stats
      - (vlan-port)
      - (clear-statistics)
```

222.2 DHCP Relay User Port Management Command

Command Description

This command allows the operator to manage the DHCP relay user port commands.

User Level

The command can be accessed by operators with dhcp privileges, and executed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> admin dhcp-relay port-stats (vlan-port) (clear-statistics)
```

Command Parameters

Table 222.2-1 "DHCP Relay User Port Management Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> /	Identification of the ip user interface or vlan port

Resource Identifier	Type	Description
	<Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> vlan.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan.ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : <Eqpt::SVlan> : <Eqpt::CVlan> vlan.ng2 : <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni : <Eqpt::UnstackedVlan>) Possible values: - vlan : vlan port - vlan.ng2 : ngpon2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpiId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier	

Resource Identifier	Type	Description
	Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Field type <Eqpt::OntId> - the ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 222.2-2 "DHCP Relay User Port Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the statistics	<i>optional parameter</i> clear the IPoX counters

222.3 DHCP Relay User Port Management Command

Command Description

This command allows the operator to manage the DHCP relay user port commands.

User Level

The command can be accessed by operators with dhcp privileges, and executed by operators with dhcp privileges.

Command Syntax

The command has the following syntax:

```
> admin dhcp-relay v6-port-stats (vlan-port) (clear-statistics)
```

Command Parameters

Table 222.3-1 "DHCP Relay User Port Management Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan>	identification of vlan port

Resource Identifier	Type	Description
	Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier,range 1 for EPON,range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 222.3-2 "DHCP Relay User Port Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the statistics	<i>optional parameter</i> clear the DHCP v6 counters

223- ARP-RELAY statistics Management Commands

223.1 ARP-RELAY statistics Management Command Tree	223-7285
223.2 Arp-relay statistics Management Command	223-7286

223.1 ARP-RELAY statistics Management

Command Tree

Description

This chapter gives an overview of nodes that are handled by "ARP-RELAY statistics Management Commands".

Command Tree

```
----admin
  ----arp-relay-stats
    - (vlan-port)
    - (clear-statistics)
```

223.2 Arp-relay statistics Management Command

Command Description

This command allows the operator to reset the arp-relay statistics counters.

User Level

The command can be accessed by operators with ip privileges, and executed by operators with ip privileges.

Command Syntax

The command has the following syntax:

```
> admin arp-relay-stats (vlan-port) [ (clear-statistics) ]
```

Command Parameters

Table 223.2-1 "Arp-relay statistics Management Command" Resource Parameters

Resource Identifier	Type	Description
(vlan-port)	Format: (vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip : <Eqpt::UnstackedVlan>	The VLAN port interface

Resource Identifier	Type	Description
	vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : <Eqpt::UnstackedVlan> vlan-port : <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : <Eqpt::UnstackedVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> : stacked : <Eqpt::SVlan> : <Eqpt::CVlan> vlan-port:ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - vlan-port : vlan port - vlan-port:ng2 : an NGPON2 vlan port Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PortId> - the port number Field type <Eqpt::VpId> - atm VPI Field type <Eqpt::VciId> - atm VCI Field type <Eqpt::ChannelGroupId> - the channel group identifier Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier Field type <Eqpt::PonId> - the PON identifier Field type <Eqpt::OntId> - the ONT identifier Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier Possible values: - voip : virtual uni identifier obsolete alternative replaced by vuni - vuni : virtual uni identifier Possible values: - vuni : virtual NGPON2 uni identifier Field type <Eqpt::OntSlotId> - the ONT SLOT identifier Field type <Eqpt::OntPortId> - the ONT PORT identifier Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier Field type <Eqpt::Ng2OntPortId>	

Resource Identifier	Type	Description
	- the NGPON2 ONT PORT identifier Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE Possible values: - stacked : stacked vlan identity Field type <Eqpt::UnstackedVlan> - unstacked vlan id Field type <Eqpt::SVlan> - service vlan id Field type <Eqpt::CVlan> - customer vlan id	

Table 223.2-2 "Arp-relay statistics Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear the arp-relay statistics	<i>optional parameter</i> clear arp-relay summary and detailed statistics

224- *Transport Management Commands*

224.1 Transport Management Command Tree
224.2 IP Net-to-media Management Command

224-7290
224-7291

224.1 Transport Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Transport Management Commands".

Command Tree

```
----admin
  ----transport
    ----ip-net-to-media
      - (interface-name)
      - network-addr
      - phy-addr
      - (delete)
```

224.2 IP Net-to-media Management Command

Command Description

This command allows the operator to delete the IP address out of the ARP table.

User Level

The command can be accessed by operators with transport privileges, and executed by operators with transport privileges.

Command Syntax

The command has the following syntax:

```
> admin transport ip-net-to-media (interface-name) network-addr <Ip::V4AddressHex> phy-addr <Sys::MacAddr>
[ (delete) ]
```

Command Parameters

Table 224.2-1 "IP Net-to-media Management Command" Resource Parameters

Resource Identifier	Type	Description
(interface-name)	Format: eth1 Possible values: - eth1 : control interface	name of the interface
network-addr	Parameter type: <Ip::V4AddressHex> Format: - IPv4-address	ip addr corresponding to media-dependent physical addr
phy-addr	Parameter type: <Sys::MacAddr> Format: - a mac-address (example : 01:02:03:04:05:06) - length: 6	media-dependent physical addr

Table 224.2-2 "IP Net-to-media Management Command" Command Parameters

Parameter	Type	Description
(delete)	Format: delete Possible values: - delete : delete a ip-net to media entry	<i>optional parameter</i> delete a ip-net-to-media

225- *SNTP Management Commands*

225.1 SNTP Management Command Tree	225-7293
225.2 SNTP Management Command	225-7294

225.1 SNTP Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "SNTP Management Commands".

Command Tree

```
----admin
  ----sntp
    - system-time
```

225.2 SNTP Management Command

Command Description

This command allows the operator to manage SNTP.

User Level

The command can be accessed by operators with security privileges, and executed by operators with security privileges.

Command Syntax

The command has the following syntax:

```
> admin sntp [ system-time <Sys::GaugeTimeInSecs> ]
```

Command Parameters

Table 225.2-2 "SNTP Management Command" Command Parameters

Parameter	Type	Description
system-time	Parameter type: <Sys::GaugeTimeInSecs> Format: - the time (yyyy-mm-dd:hour:minutes:secs)	<i>optional parameter</i> Set the system time. The configured time zone offset is taken into account when setting and retrieving the time

226- Transactions Management Commands

226.1 Transactions Management Command Tree	226-7296
226.2 Transaction Configuration Management Command	226-7297

226.1 Transactions Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Transactions Management Commands".

Command Tree

```
----admin
  ----transaction
    X configure-lock
```

226.2 Transaction Configuration Management Command

Command Description

This command allows the operator to manage transactions.

User Level

The command can be accessed by operators with alarm privileges, and executed by operators with alarm privileges.

Command Syntax

The command has the following syntax:

```
> admin transaction [ configure-lock <Trans::ownerIpAddr> ]
```

Command Parameters

Table 226.2-2 "Transaction Configuration Management Command" Command Parameters

Parameter	Type	Description
configure-lock	Parameter type: <Trans::ownerIpAddr> Format: (acquire release) Possible values: - acquire : prevents other managers from configuring - release : allow other managers to configure	<i>obsolete parameter that will be ignored</i> changes the status of the configuration lock. This parameter has been discarded. And will not take affect any more.Keep it for backward compatibility. And it will do nothing.

227- Security Management Commands

227.1 Security Management Command Tree	227-7299
227.2 Security 802.1x Port Authentication Management Command	227-7300

227.1 Security Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Security Management Commands".

Command Tree

```
----admin
  ----security
    ----ext-authenticator
      - (port)
      - (clear-statistics)
```

227.2 Security 802.1x Port Authentication Management Command

Command Description

This command allows the operator to manage a port or virtual channel in the scope of 802.1x authentication.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> admin security ext-authenticator (port) [ (clear-statistics) ]
```

Command Parameters

Table 227.2-1 "Security 802.1x Port Authentication Management Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	identification of the port or virtual channel

Resource Identifier	Type	Description
	- the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	

Table 227.2-2 "Security 802.1x Port Authentication Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear non-accounting statistics	<i>optional parameter</i> clear non-accounting statistics

228- *Security Management Commands*

228.1 Security Management Command Tree	228-7303
228.2 Security 802.1x Port Authentication Management Command	228-7304

228.1 Security Management Command Tree

Description

This chapter gives an overview of nodes that are handled by "Security Management Commands".

Command Tree

```
----admin
  ----security
    ----mac-diag
      - (port)
      - mac-addr
      - (clear-statistics)
```

228.2 Security 802.1x Port Authentication Management Command

Command Description

This command allows the operator to manage a port or virtual channel in the scope of 802.1x authentication.

User Level

The command can be accessed by operators with aaa privileges, and executed by operators with aaa privileges.

Command Syntax

The command has the following syntax:

```
> admin security mac-diag (port) mac-addr <Vlan::MacAddr> [ (clear-statistics) ]
```

Command Parameters

Table 228.2-1 "Security 802.1x Port Authentication Management Command" Resource Parameters

Resource Identifier	Type	Description
(port)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> : <Eqpt::VpiId> : <Eqpt::VciId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::OntSlotId> / <Eqpt::OntPortId> <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / voip <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / vuni <Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> / <Eqpt::LLId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / <Eqpt::Ng2OntSlotId> / <Eqpt::Ng2OntPortId> ng2 : <Eqpt::ChannelGroupId> / <Eqpt::SubChannelGroupId> / <Eqpt::Ng2OntId> / vuni) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId>	identification of the port or virtual channel

Resource Identifier	Type	Description
	- the LT slot number - Field type <Eqpt::PortId> - the port number - Field type <Eqpt::VpiId> - atm VPI - Field type <Eqpt::VciId> - atm VCI - Field type <Eqpt::ChannelGroupId> - the channel group identifier - Field type <Eqpt::SubChannelGroupId> - the subchannel group identifier - Field type <Eqpt::PonId> - the PON identifier - Field type <Eqpt::OntId> - the ONT identifier - Field type <Eqpt::Ng2OntId> - the NG2 ONT identifier - Possible values: - voip : virtual uni identifier - obsolete alternative replaced by vuni - vuni : virtual uni identifier - Possible values: - vuni : virtual NGPON2 uni identifier - Field type <Eqpt::OntSlotId> - the ONT SLOT identifier - Field type <Eqpt::OntPortId> - the ONT PORT identifier - Field type <Eqpt::Ng2OntSlotId> - the NGPON2 ONT SLOT identifier - Field type <Eqpt::Ng2OntPortId> - the NGPON2 ONT PORT identifier - Field type <Eqpt::LLId> - the LLID identifier, range 1 for EPON, range 1-8 for DPOE	
mac-addr	Parameter type: <Vlan::MacAddr> Format: - mac address (aa:bb:cc:a1:02:03) - unit: Byte - length: 6	mac address

Table 228.2-2 "Security 802.1x Port Authentication Management Command" Command Parameters

Parameter	Type	Description
(clear-statistics)	Format: clear-statistics Possible values: - clear-statistics : clear non-accounting statistics	<i>optional parameter</i> clear non-accounting statistics

229- *Debug commands*

229.1 Debug commands Tree
229.2 Debug commands

229-7307
229-7308

229.1 Debug commands Tree

Description

This chapter gives an overview of nodes that are handled by "Debug commands".

Command Tree

----debug-command

229.2 Debug commands

The commands of this node are to be used by Nokia certified personnel only.

Nokia can not be held responsible for any loss of data or revenue that occurs when these commands are executed by non Nokia certified personnel.

This node contains some commands which are launched either towards the LT or NT Trace and Debug shell or to the shub command shell.

The CLI commands as entered by the operator, will be translated in several Trace and Debug commands.

Those Trace and Debug commands will be executed by the Trace and Debug Shell of the specified LT or NT, or by the shub.

The result of those Trace and Debug commands will be processed, a filtered output will be displayed.

230- Remote debug Commands

230.1 Remote debug Command Tree	230-7310
230.2 Remote debug	230-7311
230.3 Remote debug ONT	230-7312

230.1 Remote debug Command Tree

Description

This chapter gives an overview of nodes that are handled by "Remote debug Commands".

Command Tree

```
----remote-debug
  ----ont
    - (ont-index)
    - (command)
```

230.2 Remote debug

Command Description

This command allows the operator to debug remotely

After this command execution, debug output will be displayed on the CLI session

User Level

The command can be accessed by operators with all,admin privileges, and executed by operators with all privileges.

Command Syntax

The command has the following syntax:

> remote-debug

230.3 Remote debug ONT

Command Description

This command allows the operator to debug ONT remotely

After executing this command, the operator has a CLI session up to the OLT, and on that session he can execute commands which are specific to an ONU. This is typically used for remote debugging on the ONU. As these latter commands are specific to an ONU and may be even proprietary and depending on the vendor of the ONU, these ONU commands are out of the scope of this OLT guide. The communication between OLT and ONU is according Remote Debug Managed Entity as defined in ITU-T G.988 (10/2012) in section 9.1.12 and further detailed in Appendix 1 section I.2.8. It is a minimum requirement that this is also supported on the ONU to make this work. Furthermore, interoperability between OLT and ONU must be supported.

User Level

The command can be accessed by operators with all,admin privileges, and executed by operators with all privileges.

Command Syntax

The command has the following syntax:

```
> remote-debug ont (ont-index) (command)
```

Command Parameters

Table 230.3-1 "Remote debug ONT" Resource Parameters

Resource Identifier	Type	Description
(ont-index)	Format: (<Eqpt::RackId> / <Eqpt::ShelfId> / <Eqpt::SlotId> / <Eqpt::PonId> / <Eqpt::OntId> ng2 : <Ng2::ChannelGroup> / <Ng2::SubchannelGroup> / <Ng2::OntId>) Possible values: - ng2 : ngpon2 style identification Field type <Eqpt::RackId> - the rack number Field type <Eqpt::ShelfId> - the shelf number Field type <Eqpt::SlotId> - the LT slot number Field type <Eqpt::PonId> - the PON identifier Field type <Ng2::ChannelGroup> - channel group number Field type <Ng2::SubchannelGroup> - subchannel group number Field type <Eqpt::OntId> - the ONT identifier	access identifier for the ont

Resource Identifier	Type	Description
	Field type <Ng2::OntId> - the ONT identifier	

Table 230.3-2 "Remote debug ONT" Command Parameters

Parameter	Type	Description
(command)	Format: - debug command to be executed on ONT. - length: 1<=x<=52	<i>optional parameter</i> debug command to be executed on ONT

231- *TcpDump Command*

231.1 TcpDump Command Tree	231-7315
231.2 TcpDump Command	231-7316
231.3 tcpdump tool	231-7317
231.4 tcpdump tool	231-7318
231.5 tcpdump tool	231-7319

231.1 TcpDump Command Tree

Description

This chapter gives an overview of nodes that are handled by "TcpDump Command".

Command Tree

```
----tcpdump
  ----start
    - vlan
  ----stop
  ----show
```

231.2 TcpDump Command

Command Description

This command allows the operator to capture packets arriving on Core-0 AI Interface.

User Level

The command can be accessed by operators with security,debug privileges, and executed by operators with security,debug privileges.

Command Syntax

The command has the following syntax:

```
> tcpdump
```

231.3 tcpdump tool

Command Description

tcpdump start: Captures packets arriving on AI port and writes to the file specified.

tcpdump stop: Stops the packet capture.

tcpdump show: Displays the packets captured.

User Level

The command can be accessed by operators with security,debug privileges, and executed by operators with security,debug privileges.

Command Syntax

The command has the following syntax:

```
> tcpdump start vlan <Vlan::VlanIndex>
```

Command Parameters

Table 231.3-2 "tcpdump tool" Command Parameters

Parameter	Type	Description
vlan	Parameter type: <Vlan::VlanIndex> Format: - vlan id - range: [1...4093]	<i>optional parameter</i> Enter the vlan id.

231.4 tcpdump tool

Command Description

tcpdump start: Captures packets arriving on AI port and writes to the file specified.

tcpdump stop: Stops the packet capture.

tcpdump show: Displays the packets captured.

User Level

The command can be accessed by operators with security, debug privileges, and executed by operators with security, debug privileges.

Command Syntax

The command has the following syntax:

> tcpdump stop

231.5 tcpdump tool

Command Description

tcpdump start: Captures packets arriving on AI port and writes to the file specified.

tcpdump stop: Stops the packet capture.

tcpdump show: Displays the packets captured.

User Level

The command can be accessed by operators with security, debug privileges, and executed by operators with security, debug privileges.

Command Syntax

The command has the following syntax:

> tcpdump show

232- Clear Commands

232.1 Clear Command Tree
232.2 Clear Command

232-7321
232-7322

232.1 Clear Command Tree

Description

This chapter gives an overview of nodes that are handled by "Clear Commands".

Command Tree

----clear

232.2 Clear Command

Command Description

This command allows the operator to clear.

To have the exact syntax of the commands, please have a look into IPD book xx.

User Level

The command can be accessed by operators with all privileges, and executed by operators with all privileges.

Command Syntax

The command has the following syntax:

> clear

233- IHUB Commands

Description

This chapter gives an overview of all IHUB commands with a reference to the document where the exact syntax and description of the command can be found

Commands

configure system security cpu-filter: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with security privileges.

configure system security cpu-protection: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with security privileges.

configure system security mgmt-ipv4-addr: See IHUB configuration Guide for more information. The command can be accessed and executed by operators with service privileges.

configure system security mgmt-ipv6-addr: See IHUB configuration Guide for more information. The command can be accessed and executed by operators with service privileges.

configure system security snmp-slot-numbering: See IHUB configuration Guide for more information. The command can be accessed and executed by operators with service privileges.

configure system security hash-control: See IHUB configuration Guide for more information. The command can be accessed and executed by operators with service privileges.

configure system security keychain: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with security privileges.

configure system security source-address: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with security privileges.

configure system lacp-priority: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with link privileges.

configure system vlan-dot1q-etype: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system privileges.

configure system sliding-win-stats: See IHUB Services guide for more information. The command can be accessed and executed by operators with system privileges.

configure system lt-link-tca-thresholds: See IHUB Services guide for more information. The command can be accessed and executed by operators with system privileges.

configure system lldp: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system privileges.

configure system port-group: See IHUB Services guide for more information. The command can be accessed and executed by operators with system privileges.

configure system ptp: See IHUB Services guide for more information. The command can be accessed and executed by operators with system privileges.

configure system user-user-hairpin: See IHUB Services guide for more information. The command can be accessed and executed by operators with system privileges.

configure system time: See the IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system privileges.

configure qos-servicerouter: See IHUB QoS Guide for more information. The command can be accessed and executed by operators with qos privileges.

configure eth-cfm: See IHUB Services Guide for more information. The command can be accessed and executed by operators with oam privileges.

configure router: See IHUB Router Configurations and Routing Protocols Guide for more information. See IHUB MPLS Guide for more information on mpls and ldp. The command can be accessed and executed by operators with service privileges.

configure subscriber-mgmt:

configure service customer: See IHUB Services Guide for more information. The command can be accessed and executed by operators with service privileges.

configure service ies: See IHUB Services Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with service privileges.

configure service vpls: See IHUB Services Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with service privileges.

configure service vprn: See IHUB Services Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with service privileges.

configure service sdp: See IHUB Services Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with service privileges.

configure service epipe: See IHUB Services Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with service privileges.

configure service pw-template: See IHUB Services Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with service privileges.

configure filter: See IHUB Router Configurations and Routing Protocols Guide for more information. The command can be accessed and executed by operators with filter privileges.

configure mirror: See IHUB Services Guide for more information. The command can be accessed and executed by operators with debug-mirror privileges.

configure lag: See IHUB Interface Guide for more information. The command can be accessed and executed by operators with link privileges.

configure port: See IHUB Interface Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with link privileges.

configure log: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with log privileges.

configure eth-ring: See IHUB Services Guide for more information. The command can be accessed and executed by operators with oam privileges.

show qos-servicerouter: See IHUB QoS Guide for more information. The command can be accessed and executed by operators with qos privileges.

show system security cpu-filter: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with security privileges.

show system security cpu-protection: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with security privileges.

show system security keychain: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with security privileges.

show system core1-cpu: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

show system core1-memory-pools: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

show system ipv6-prefix-mgmt: "System ipv6 prefix resource usage show Command."

show system vlan-dot1q-etype: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system and service privileges.

show system user-user-hairpin: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system privileges.

show system sliding-win-stats: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system privileges.

show system ntp: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system privileges.

show system lldp: See IHUB System Basics, Management and OAM Guide and IHUB Interfaces Guide for more information. The command can be accessed and executed by operators with system and service privileges.

show system lt-link-tca-thres: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with system privileges.

show eth-cfm: See IHUB Services Guide for more information. The command can be accessed and executed by operators with oam privileges.

show router: See IHUB Router Configurations and Routing Protocols Guide for more information. See IHUB MPLS Guide for more information on mpls and ldp. The command can be accessed and executed by operators with service privileges.

show subscriber-mgmt:

show mirror: See IHUB Services Guide for more information. The command can be accessed and executed by operators with debug-mirror privileges.

show service: See IHUB Services Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with service privileges.

show port: See IHUB Interface Guide and IHUB QoS Guide for more information. The command can be accessed and executed by operators with link privileges.

show filter: See IHUB Router Configurations and Routing Protocols Guide for more information. The command can be accessed and executed by operators with filter privileges.

show debug: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with debug privileges.

show lag: See IHUB Interface Guide for more information. The command can be accessed and executed by operators with link privileges.

show log: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with log privileges.

show core1-uptime: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

show ip: See IHUB configuration Guide for more information. The command can be accessed and executed by operators with service privileges.

show qsfp-port-mode: See IHUB configuration Guide for more information. The command can be accessed and executed by operators with service privileges.

show test-oam: See IHUB configuration Guide for more information. The command can be accessed and

executed by operators with service privileges.

show eth-ring: See IHUB Services Guide for more information. The command can be accessed and executed by operators with oam privileges.

admin software-mngt ihub database oam-save-protected: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

admin save: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

admin display-config: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

admin enable-tech: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

ping: See IHUB Router Configurations and Routing Protocols Guide for more information. See IHUB MPLS Guide for more information on mpls and ldp. The command can be accessed and executed by operators with service privileges.

traceroute: See IHUB Router Configurations and Routing Protocols Guide for more information. See IHUB MPLS Guide for more information on mpls and ldp. The command can be accessed and executed by operators with service privileges.

debug: For more information about the debug commands, refer the IHUB Guides of the respective domain. The command can be accessed and executed by operators with debug privileges.

monitor filter: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with filter privileges.

monitor router: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with service privileges.

monitor port: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with link privileges.

monitor lag: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with link privileges.

monitor service: See IHUB System Basics, Management and OAM Guide for more information.

tools: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

mtrace: See IHUB Router Configurations and Routing Protocols Guide for more information. The command can be accessed and executed by operators with service privileges.

mrinfo: See IHUB Router Configurations and Routing Protocols Guide for more information. The command can be accessed and executed by operators with service privileges.

mstat: See IHUB Router Configurations and Routing Protocols Guide for more information. The command can be accessed and executed by operators with service privileges.

oam: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with oam privileges.

clear alarm: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with alarm privileges.

clear filter: See IHUB Router Configurations and Routing Protocols Guide for more information. The command can be accessed and executed by operators with filter privileges.

clear lag: See IHUB Interface Guide for more information. The command can be accessed and executed by operators with link privileges.

clear log: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with log privileges.

clear port: See IHUB Interface Guide for more information. The command can be accessed and executed by operators with link privileges.

clear qos-service-router: See IHUB System Basics, Management and OAM Guide for more information. The command can be accessed and executed by operators with alarm privileges.

clear sliding-win-stats: See IHUB Qos Guide for more information. The command can be accessed and executed by operators with link privileges.

clear router: See IHUB Router Configurations and Routing Protocols Guide for more information. See IHUB MPLS Guide for more information on mpls and ldp. The command can be accessed and executed by operators with service privileges.

clear service: See IHUB Services Guide for more information. The command can be accessed and executed by operators with service privileges.

233- DPOE Commands

Description

This chapter gives an overview of all DPOE commands with a reference to the document where the exact syntax and description of the command can be found

Commands

234- Global And Environmental Commands

234.1 History Command	234-7330
234.2 Echo Command	234-7331
234.3 Telnet Command	234-7332
234.4 Telnet AI Command	234-7333
234.5 Exec Command	234-7334
234.6 Sleep Command	234-7336
234.7 Tree Command	234-7337
234.8 Write Command	234-7338
234.9 Logout Command	234-7339
234.10 Help Command	234-7340
234.11 Info Command	234-7341
234.12 Exit Command	234-7344
234.13 Back Command	234-7345
234.14 Delete Command	234-7346
234.15 In Command	234-7347
234.16 Configure Command	234-7348
234.17 Action Command	234-7350
234.18 Show Command	234-7351
234.19 Recursive Show Command	234-7352
234.20 Sample Command	234-7353
234.21 Poll Command	234-7354
234.22 Debug Command	234-7355
234.23 Sysfil Command	234-7356

234.1 History Command

Command Description

This command displays the last commands entered at the terminal.

A maximum of 20 commands can be stored. A command that is identical to the previous command is not stored.

Commands containing syntax and semantic errors are also stored in the history buffer. This way a user can correct a command without retyping the command completely.

Each command is preceded by a sequence number.

The sequence number does not increment when a command is not stored because it is identical to the previous command.

Example :

```
esam># history
1 : history
esam># echo "first command"
first command
esam># echo "second command"
second command
esam># echo "second command"
second command
esam># history
1 : history
2 : echo "first command"
3 : echo "second command"
4 : history
esam>#
```

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

This command can be executed by all users.

Command Syntax

The command has the following syntax:

> history

234.2 Echo Command

Command Description

This command echoes a string to the standard output.

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

This command can be accessed by any user.

Command Syntax

The command has the following syntax:

```
> echo [ [ no ] message ]
```

Command Parameters

Table 234.2-2 "Echo Command" Command Parameters

Options	Type	Description
[no] (message)	Format: - a long message - length: x<=512	<i>optional parameter with default value: ""</i> the string to be echoed

234.3 Telnet Command

Command Description

This command establishes a telnet session to another server.

*The telnet session will last until the connection is closed by the telnet server or when the operator enters the character **Control-^**.*

The session inactivity-time protection will not put any messages on the screen when you are executing the telnet command. Your connection will be broken without warning if the inactivity timeout expires.

User Level

The command can be accessed by operators with lanxAccess,lanxAccessext privileges.

This command can only be executed by users having read or write access to functions located in the SHub/IHub.

The command can only be executed from a telnet terminal, not from a craft terminal.

Command Syntax

The command has the following syntax:

> telnet (destination)

Command Parameters

Table 234.3-2 "Telnet Command" Command Parameters

Options	Type	Description
(destination)	Format: shub Possible values: - shub : the service hub (shub or ihub)	<i>optional parameter</i> identification of the telnet server

234.4 Telnet AI Command

Command Description

This command establishes a telnet session to the Application Intelligence platform (core2&3 on NANT-E or FANT-F).

The telnet session will last until the connection is closed by the telnet server or when the operator exits from the telnet session.

The session inactivity-time protection will not put any messages on the screen when you are executing the telnet command. Your connection will be broken without warning if the inactivity timeout expires.

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

The command can be executed from a craft terminal or a telnet terminal.

Command Syntax

The command has the following syntax:

```
> telnet-ai (destination) [ virtualplatform <AI::VirtualPlatform> ]
```

Command Parameters

Table 234.4-2 "Telnet AI Command" Command Parameters

Options	Type	Description
(destination)	Format: (nt-a nt-b) Possible values: - nt-a : the ai platform (core2-3) on NT-a - nt-b : the ai platform (core2-3) on NT-b	<i>optional parameter</i> identification of the telnet server
virtualplatform	Parameter type: <AI::VirtualPlatform> Format: - AI Virtual Platform Index within the Slot - range: [1]	<i>optional parameter</i> identification of the virtual platform

234.5 Exec Command

Command Description

This command executes CLI commands found in a text file. A file containing CLI commands is called a script file.

A script file must follow the same syntax rules as commands entered interactively. Only the tab and the question mark lose their special meaning in a script, so command expansion and single-line help are not available.

When initiating the execution of a script, the operator can choose how the system must behave in case of an error in a CLI command. By default the script will be aborted. Other command-line options are: ignore the error and proceed executing the script or prompt the operator. When prompted the operator can choose to either abort the script or ignore the error and proceed. When prompted due to an error, the operator may wish to open a separate CLI session to take some corrective action for the failed command and then revert to the session where the script is running to continue with the next command.

A command may be preceded by a minus '-' to prevent the script from being aborted in case of a semantic error; for example, when you try to delete a node instance that does not exist. In case a minus-sign precedes the command and the error is a semantic error, then the operator will not be prompted.

*By default, a command script does not interact with the user. The execution of the script will be aborted if a command or filter requires interaction with the user. Interactivity can be enabled by specifying the **interactive** option with the **exec** command.*

*The **exec** command may not be used in a command script, so command scripts may not be nested.*

*Script files are typically stored in the **/var/cmd** directory.*

*A script file can be used to restore a configuration. This can be done by reloading an initial and working configuration script. Alternatively, the complete configuration of an existing system can be captured. A configuration script is produced by means of the command **info configure <configuration node> | tee <script name>** and the script is stored in file **/var/cmd/<script name>**. Subsequently, the retrieved file needs editing as the output is not guaranteed to be in line with the CLI sequences required to configure a new system. The configuration can then be restored on an empty system with the command **exec /var/cmd/<script name>**.*

*Warning: the **/var/cmd** is cleaned when the system resets, so the configuration file must be transferred to another system with **tfpt** before resetting the system.*

Note: saving and restoring the configuration will not work for areas in which resource identifiers are assigned dynamically by the system.

User Level

*The command can be accessed by operators with **allAccess,allAccessext** privileges.*

This command can be executed by all users. However, the execution of the script will be aborted when the CLI parser tries to execute the first command in the script for which the user does not have authorization.

Command Syntax

The command has the following syntax:

```
> exec (filename) [ [ no ] interactive ] [ no at-replay | at-replay <Option::AtFailure> ]
```

Command Parameters

Table 234.5-2 "Exec Command" Command Parameters

Options	Type	Description
(filename)	Format: - an absolute or relative path name (example : /var/log) - range: [.-z-] - length: 1<=x<=128	<i>optional parameter</i> the name of the file with the script
[no] interactive	Parameter type: boolean	<i>optional parameter</i> interaction with the operator is allowed
[no] at-replay	Parameter type: <Option::AtFailure> Format: (stop continue prompt) Possible values: - stop : stop execution of the script - continue : continue with the execution of the script - prompt : prompt the operator what to do	<i>optional parameter with default value: "stop"</i> directs what to do if error is encountered in the script

234.6 Sleep Command

Command Description

This command pauses the execution for the specified number of seconds.

*This command is typically used in scripts (see : the **exec** command).*

User Level

*The command can be accessed by operators with **allAccess,allAccessext** privileges.*

This command can be executed by any user.

Command Syntax

The command has the following syntax:

> sleep (time)

Command Parameters

Table 234.6-2 "Sleep Command" Command Parameters

Options	Type	Description
(time)	Format: - the period to sleep - unit: sec - range: [1...100]	<i>optional parameter</i> the period to sleep

234.7 Tree Command

Command Description

This command displays the structure of a node and its subnodes.

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

This command can be executed by any user on a node to which he has read or write access.

The output does not contain any information related to subnodes to which the user has no access.

Command Syntax

The command has the following syntax:

```
> tree [ [ no ] detail ]
```

Command Parameters

Table 234.7-2 "Tree Command" Command Parameters

Options	Type	Description
[no] detail	Parameter type: boolean	<i>optional parameter</i> show the details

234.8 Write Command

Command Description

This command writes a message to the terminal of the addressee.

The message can be directed to a user, all user with the same user profile or to all users.

Messages are only delivered to users that are logged in. Users that are not logged in, will not receive the message.

The sender will also receive the message if it is one of the addressees.

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

This command can be used by any user.

Command Syntax

The command has the following syntax:

> write to <Option::MessageDestination> (message)

Command Parameters

Table 234.8-2 "Write Command" Command Parameters

Options	Type	Description
to	Parameter type: <Option::MessageDestination> Format: (all operator : <Sec::OperatorName> profile : <Sec::ProfileName>) Possible values: - all : all active sessions - operator : all sessions of the operator with that name - profile : all sessions of operators with that profile name Field type <Sec::OperatorName> - the name of an operator - range: [a-z0-9+] - length: 1<=x<=11 Field type <Sec::ProfileName> - the name of an operator profile - range: [a-z0-9] - length: 1<=x<=11	<i>optional parameter</i> the destination of the message
(message)	Format: - a message - length: x<=256	<i>optional parameter</i> the message

234.9 Logout Command

Command Description

This command logs the user out.

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

This command can be executed by any user.

Command Syntax

The command has the following syntax:

> logout

234.10 Help Command

Command Description

This command gives the user detailed information on a subject.

By default the command gives information on the current node.

User Level

The command can be accessed by operators with forHelp,forHelpext privileges.

This command can be executed by each user. A user will only be able to get help for nodes for which he has read or write access.

Command Syntax

The command has the following syntax:

> help

234.11 Info Command

Command Description

This command shows the configuration of the current node and all of its subnodes.

The user can select three different output formats:

- The default is hierarchical command format.
- An other format is the flat command format. The output in this format can be saved in a file with the **tee** filter and can be executed with the **exec** command. This way a saved configuration can be restored on an empty system.
- The other format is XML. The output in this format is much more suited as input for tools because it is less sensitive to further changes.

Example of the default format :

```
esam>configure>system>security# info profile
configure system security
#-----
echo "system"
#-----
profile admin
  prompt "%n%d%c "
  terminal-timeout 30
  description "default administrator group"
  aaa write
  atm write
  alarm write
  dhcp write
  equipment write
  igmp write
  ip write
  ppoe write
  qos write
  software-management write
  transport write
  vlan write
  xdsl write
  security write
exit
profile read
  prompt "%n%d%c "
  security read
exit
#-----
```

Example of the flat command format :

```
esam>configure>system>security# info profile flat
configure system security profile admin prompt "%n%d%c " terminal-timeout 30
description "default administrator group" aaa write atm write alarm write dhcp write
equipment write igmp write ip write ppoe write qos write software-management write
transport write vlan write xdsl write security write
configure system security profile read prompt "%n%d%c " security read
```

Example of the XML format :

```
esam>configure>system>security# info profile read xml
<?xml version="1.0" encoding="UTF-8"?>
<configuration-data display-level="normal">
  <hierarchy name="configure" type="static">
    <hierarchy name="system" type="static">
      <hierarchy name="security" type="static">
        <hierarchy name="profile" type="dynamic">
          <hier-id name="name" is-named="no" value="read" is-default="no"
type="Sec::ProfileName"/>
          <instance>
            <parameter name="prompt" is-default="no" type="Sec::Prompt">"%n%d%c
"/>
            <parameter name="password-timeout" units="days" is-default="yes"
type="Sec::PasswordTimeout">0</parameter>
            <parameter name="terminal-timeout" units="minutes" is-default="yes"
type="Sec::InactivityTimeout">0</parameter>
```

```

    <parameter name="description" is-default="yes"
type="Sec::ProfileDesc"></parameter>
    <parameter name="aaa" is-default="yes" type="Sec::Aaa">none</parameter>
    <parameter name="atm" is-default="yes" type="Sec::Atm">none</parameter>
    <parameter name="alarm" is-default="yes"
type="Sec::Alarm">none</parameter>
    <parameter name="dhcp" is-default="yes" type="Sec::Dhcp">none</parameter>
    <parameter name="equipment" is-default="yes"
type="Sec::Equipment">none</parameter>
    <parameter name="igmp" is-default="yes" type="Sec::Igmp">none</parameter>
    <parameter name="ip" is-default="yes" type="Sec::Ip">none</parameter>
    <parameter name="ppoe" is-default="yes" type="Sec::Ppoe">none</parameter>
    <parameter name="qos" is-default="yes" type="Sec::Qos">none</parameter>
    <parameter name="software-management" is-default="yes"
type="Sec::Sw">none</parameter>
    <parameter name="transport" is-default="yes"
type="Sec::Transport">none</parameter>
    <parameter name="vlan" is-default="yes" type="Sec::Vlan">none</parameter>
    <parameter name="xdsl" is-default="yes" type="Sec::Xdsl">none</parameter>
    <parameter name="cluster" is-default="yes"
type="Sec::Cluster">none</parameter>
    <parameter name="security" is-default="no"
type="Sec::Security">read</parameter>
</instance>
</hierarchy>
</hierarchy>
</hierarchy>
</hierarchy>
</configuration-data>
esam>configure>system>security#

```

The user can select two different output levels :

- The default is to show only the parameters which have not the default value. Static subnodes which contain (recursively) only default values are not shown. The XML format shows always all parameters.
- In the **detail** output level all nodes and all parameters shown. This output can not be used for replay.

Example of detailed information :

```

esam>configure>system>security# info profile read detail
configure system security
#-----
echo "system"
#-----
profile
  prompt "%n%d%c "
  no password-timeout
  no terminal-timeout
  no description
  no aaa
  no atm
  no alarm
  no dhcp
  no equipment
  no igmp
  no ip
  no ppoe
  no qos
  no software-management
  no transport
  no vlan
  no xdsl
  security read
exit
#-----
esam>configure>system>security#

```

User Level

The command can be accessed by operators with readAccess,readAccessext privileges.

This command can be accessed in all nodes to which the user has read access. It is not available in **admin** and **show** nodes or their subnodes.

The output will only contain information for the nodes for which the user has read access.

Command Syntax

The command has the following syntax:

```
> info [ [ no ] detail ] [ (format) ]
```

Command Parameters

Table 234.11-2 "Info Command" Command Parameters

Options	Type	Description
[no] detail	Parameter type: boolean	<i>optional parameter</i> show the details
(format)	Format: (hierarchical flat xml) Possible values: - hierarchical : show the output in hierarchical command format - flat : show the output in flat command format - xml : show the output in XML format	<i>optional parameter</i> the format in which the command output is printed

234.12 Exit Command

Command Description

This command changes the current position to the parent node of the current position. This command always succeeds, even if the current position is the top node. The command has no effect in this case.

*The option **all** changes the current position to the top node.*

User Level

*The command can be accessed by operators with **allAccess,allAccessext** privileges.*

This command can be executed by all users

Command Syntax

The command has the following syntax:

> exit [[no] all]

Command Parameters

Table 234.12-2 "Exit Command" Command Parameters

Options	Type	Description
[no] all	Parameter type: boolean	<i>optional parameter</i> set the current position to the top node

234.13 Back Command

Command Description

This command changes the current position to the previous position.

The command will always succeed, even if the previous position no longer exists. The command changes the current position to the top node in that case.

User Level

The command can be accessed by operators with `allAccess`, `allAccessext` privileges.

The command can be executed by all users.

Command Syntax

The command has the following syntax:

```
> back
```

234.14 Delete Command

Command Description

*This command deletes a file from the directory **/var/cmd**. Such file is typically created with the **tee** filter.
The command will always succeed, even if the specified file does not exist.*

User Level

*The command can be accessed by operators with **allAccess,allAccessext** privileges.
The command can be executed by all users.*

Command Syntax

The command has the following syntax:

> delete-file (file)

Command Parameters

Table 234.14-2 "Delete Command" Command Parameters

Options	Type	Description
(file)	Format: - a file name (example : errors.log) - range: [.0-z-] - length: 1<=x<=119	<i>optional parameter</i> the name of the file to be deleted

234.15 In Command

Command Description

*This command can not be directly executed by the operator. It is the default command for all nodes when no node attributes are specified, except for all subnodes of **configure** and the leaf nodes of **show**.*

This command changes the position in the command tree to the current node instance.

User Level

The command can be accessed by operators with readAccess,readAccessext privileges.

This command can be executed by any user for the nodes to which he has read or write access.

234.16 Configure Command

Command Description

This command can not be directly executed by the user. It is the default command for the **configuration** node and most of its subnodes.

This command serves four purposes :

- changing the current position in the command tree to a node instance.
- creating a node instance. The current position will be changed to the newly created node instance.
- modifying one or more attributes of a node instance. The current position in the command tree will be changed to the modified node instance.
- deleting a node instance.

The command changes the current position in the command tree to a node instance in case you specify an existing node instance and no parameters. Example : **configure equipment shelf 1/1**. The last character in the default prompt will be #.

The command creates a node instance in case the node is dynamic and the specified node instance does not exist. Example : **configure system security operator new_user password plain:"hallo#"**. Parameter values must be supplied for all mandatory parameters. Parameter values may be supplied for optional parameters. The command changes the current position in the command tree to the newly created node instance. The last character in the default prompt will be \$.

The command modifies the attributes of a node instance in case the node instance exists and if the user supplies parameters. Example : **configure system security operator existing_user description "a new description"**

The command will delete a node instance when it is a dynamic node and the node name is preceded by **no**. Example : **configure system security no operator existing_user**.

The command generates no output

Example 1 - change the current position to an existing static node :

```
esam# configure system security
esam>configure>system>security#
```

Example 2 - create a new dynamic node (note that one has to enter the mandatory parameters) :

```
esam>configure>system>security# operator new profile read password plain:&secret&
esam>configure>system>security>operator>new$
```

Example 3 - change an attribute :

```
esam>configure>system>security>operator>new$ description "just created"
esam>configure>system>security>operator>new$
```

Example 4 - change to an existing dynamic node (note that the prompt is different with example 2) :

```
esam>configure>system>security>operator>new$ back
esam>configure>system>security# operator new
esam>configure>system>security>operator>new#
```

Example 5 - delete a dynamic node

```
esam>configure>system>security>operator>new# back
esam>configure>system>security# no operator new
esam>configure>system>security#
```

Example 6 - go to the root

```
esam>configure>system>security# exit all
esam>#
```

Example 7 - request help for a non-existing static node, no parameters or subnodes will be shown

```
esam>#configure igmp channel 1/1/6/1 ?  
<CR>           : execute command  
esam>#configure igmp channel 1/1/6/1
```

Example 8 - go to a non-existing static node

```
esam>#configure igmp channel 1/1/6/1  
Error : port not available  
esam>#
```

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

A user can change the current position to each node to which he has read access.

A user can create, modify and delete nodes to which he has write access.

234.17 Action Command

Command Description

*This command can not be directly executed by the user. It is the default command for the **admin** node and most of its subnodes.*

This command serves two purposes :

- *changing the current position in the command tree to a node instance.*
- *executing an action.*

The command changes the current position in the command tree to a node instance in case you specify an existing node instance and no parameters. From the moment you specify a parameter it will try to execute the corresponding action.

User Level

The command can be accessed by operators with `allAccess`,`allAccessext` privileges.

A user can change the current position in the command tree to each node to which he has read access.

A user can execute the action in each node to which he has access.

234.18 Show Command

Command Description

This command shows the runtime data and eventually some important configuration data.

*This command can not be executed directly by the user. It is the default command for the leaf nodes of **show**. It shows the runtime data.*

When show data in no detail mode, if the length of parameter is too long for a table cell, an asterisk will be used to omit some character to fit the table cell length.

User Level

The command can be accessed by operators with readAccess,readAccessext privileges.

The user can execute this command for all nodes to which he has read access.

Command Parameters

Table 234.18-2 "Show Command" Command Parameters

Options	Type	Description
[no] detail	Parameter type: boolean	<i>optional parameter</i> show the details
[no] xml	Parameter type: boolean	<i>optional parameter</i> show the output in XML format

234.19 Recursive Show Command

Command Description

This command shows the runtime data and eventually some important configuration data.

*This command can not be executed directly by the user. It is the default command for some leaf nodes of **show**. It shows the runtime data in a recursive way (similar to **info**).*

User Level

The command can be accessed by operators with readAccess,readAccessex privileges.

The user can execute this command for all nodes to which he has read access.

Command Parameters

Table 234.19-2 "Recursive Show Command" Command Parameters

Options	Type	Description
[no] detail	Parameter type: boolean	<i>optional parameter</i> show the details
[no] xml	Parameter type: boolean	<i>optional parameter</i> show the output in XML format

234.20 Sample Command

Command Description

This command executes a test and shows the test result.

*This command can not be executed directly by the user. It is the default command for some leaf nodes of **show**. It shows the final test results.*

User Level

The command can be accessed by operators with readAccess,readAccessex privileges.

The user can execute this command for all nodes to which he has read access.

Command Parameters

Table 234.20-2 "Sample Command" Command Parameters

Options	Type	Description
[no] detail	Parameter type: boolean	<i>optional parameter</i> show the details
[no] xml	Parameter type: boolean	<i>optional parameter</i> show the output in XML format

234.21 Poll Command

Command Description

*This command can not be directly executed by the user. It is the default command for some leaf nodes in **show**.*

This command starts a test and displays at regular time intervals during the specified time period the intermediate results of the test.

*The difference between **poll** and **sample** command is that, in **poll** command the intermediate results are shown while in **sample** command only the final results are shown.*

User Level

The command can be accessed by operators with writeAccess,writeAccessext privileges.

Command Parameters

Table 234.21-2 "Poll Command" Command Parameters

Options	Type	Description
[no] detail	Parameter type: boolean	<i>optional parameter</i> show the details
[no] xml	Parameter type: boolean	<i>optional parameter</i> show the output in XML format
[no] sample-interval	Parameter type: <Option::SampleInterval> Format: - the time between two samples - unit: sec - range: [1...60]	<i>optional parameter with default value: 1</i> the time between 2 samples
[no] number-of-samples	Parameter type: <Option::SampleCount> Format: (unlimited <Option::SampleCount>) Possible values: - unlimited : sampling continues until stopped by the user Field type <Option::SampleCount> - the number of samples to be taken - range: [1...1000]	<i>optional parameter with default value: "unlimited"</i> the number of samples to be taken

234.22 Debug Command

Command Description

This command shows the runtime data and eventually some important configuration data.

*This command can not be executed directly by the user. It is the default command for the leaf nodes of **debug**. It shows the runtime data.*

User Level

*The command can be accessed by operators with **allAccess**,**allAccessext** privileges.*

The user can execute this command for all nodes to which he has read access.

Command Parameters

Table 234.22-2 "Debug Command" Command Parameters

Options	Type	Description
[no] xml	Parameter type: boolean	<i>optional parameter</i> show the output in XML format

234.23 Sysfil Command

Command Description

This command shows the syslog files and its contents in CLI session.

*It is the default command for the leaf nodes of **show system syslog list files and show system syslog file name filter options**. It shows the runtime data. Only xml option is supported for this handler type.*

User Level

The command can be accessed by operators with allAccess,allAccessext privileges.

The user can execute this command for show system syslog list/file nodes to which he has security read access.

Command Parameters

Table 234.23-2 "Sysfil Command" Command Parameters

Options	Type	Description
[no] xml	Parameter type: boolean	<i>optional parameter</i> show the output in XML format

235- CLI Filters

235.1 Count Filter	235-7358
235.2 Match Filter	235-7359
235.3 Tee Filter	235-7361
235.4 Tee Config Filter	235-7362

235.1 Count Filter

Command Description

This filter counts the number of output characters, words or lines and adds this information at the end of the output.

User Level

This filter can be used by any user.

Command Syntax

The command has the following syntax:

```
> count [ [ no ] lines ] [ [ no ] words ] [ [ no ] characters ] [ [ no ] summary ]
```

Command Parameters

Table 235.1-2 "Count Filter" Command Parameters

Parameter	Type	Description
[no] lines	Parameter type: boolean	<i>optional parameter</i> counts the number of lines
[no] words	Parameter type: boolean	<i>optional parameter</i> counts the number of words
[no] characters	Parameter type: boolean	<i>optional parameter</i> counts the number of characters
[no] summary	Parameter type: boolean	<i>optional parameter</i> only the lines with the count summary are printed

235.2 Match Filter

Command Description

This filter allows the user to filter selectively lines from the output based on the contents of these lines.

The user specifies a string with **exact:**.

The user can specify multiple search strings separated by pipe character | with **exact:**. The search for multiple strings is similar to **OR** condition.

User can search for any one of the strings (**alarm, trap, qos, vlan**) in the CLI output as follows: **info configure flat | match exact:alarm|trap|qos|vlan**.

User can search for string (**wel|come**) in the CLI output as follows: **info configure flat | match exact:wel|come**.

User can search for string (**welcome**) in the CLI output as follows: **info configure flat | match exact:\\welcome**.

User can search for string ("**welcome**") in the CLI output as follows: **info configure flat | match exact:"\\welcome"**.

User can search for any one of the strings (**wel|come, \\nokia**) in the CLI output as follows: **info configure flat | match exact:wel|come|\\nokia**.

User can specify the same within double quotes as follows: **info configure flat | match exact:"wel|come|\\nokia"**.

Refer Printable Strings under Chapter 1.5 Parameters for more information.

He can then decide if a line that contains this string is kept (**no skip**) or discarded (**skip**) or he can use the filter to keep all lines before the first match (**before**) or after (including) the first match (**after**).

The matching operation can be case-sensitive (**no case-insensitive**) or case-insensitive (**case-insensitive**).

User Level

This filter can be used by any user.

Command Syntax

The command has the following syntax:

```
> match (pattern) [ [ no ] case-insensitive ] [ [ no ] skip ]
```

Command Parameters

Table 235.2-2 "Match Filter" Command Parameters

Parameter	Type	Description
(pattern)	Format: exact : <PrintableString> Possible values: - exact : exact:<PrintableString> strings to be matched. multiple search strings can be separated with pipe ' '. use backslash followed by backslash and backslash followed by pipe to search for backslash and pipe respectively. check	<i>optional parameter</i> describes what needed(exact: pattern:)<PrintableString>

235 CLI Filters

Parameter	Type	Description
	online cli guide for more information. Field type <PrintableString> - printable string	
[no] case-insensitive	Parameter type: boolean	<i>optional parameter</i> matching is case-insensitive
[no] (skip)	Format: (skip match before after) Possible values: - skip : matched lines are skipped - match : matched lines are selected - before : lines found before the first match are selected - after : lines found after the first match are selected	<i>optional parameter with default value: "match"</i> matched lines are skipped

235.3 Tee Filter

Command Description

This filter writes the output also to a file. The file will be placed in the directory `/var/cmd`.

The user can decide if the output must be appended to the file or not.

User Level

This filter can be used by any operator.

Command Syntax

The command has the following syntax:

```
> tee (file) [ [ no ] append ]
```

Command Parameters

Table 235.3-2 "Tee Filter" Command Parameters

Parameter	Type	Description
(file)	Format: - a file name (example : info.log) - range: [a-zA-Z0-9-_.] - length: 1<=x<=13	<i>optional parameter</i> the name of the file
[no] append	Parameter type: boolean	<i>optional parameter</i> append if the file exists

235.4 Tee Config Filter

Command Description

*This filter writes the output also to a file. The file will be placed in the directory `/data/config`.
The user can decide if the output must be appended to the file or not.*

User Level

This filter can be used by any operator.

Command Syntax

The command has the following syntax:
> tee-config (file) [[no] append]

Command Parameters

Table 235.4-2 "Tee Config Filter" Command Parameters

Parameter	Type	Description
(file)	Format: - a file name (example : info.log) - range: [a-zA-Z0-9-_.] - length: 1<=x<=13	<i>optional parameter</i> the name of the config-file
[no] append	Parameter type: boolean	<i>optional parameter</i> append if the file exists

236- CLI Printers

236.1 More
236.2 No-More
236.3 Discard

236-7364
236-7365
236-7366

236.1 More

Command Description

This printer allows the user to see the command output at the pace he wants.

User Level

This printer can be used by any user.

Command Syntax

The command has the following syntax:

> more

236.2 No-More

Command Description

This printer prints all output directly to the screen.

User Level

This printer can be used by any user.

Command Syntax

The command has the following syntax:

> no-more

236.3 Discard

Command Description

This printer discards all output. This can be usefull in some scripts.

User Level

This printer can be used by any operator.

Command Syntax

The command has the following syntax:

> discard
